

SESSION ABSTRACT

E13 IMS V6 Shared Queues: Function and Facilities

Bill Stillwell

What are shared queues all about? Come to this session and find out. The material to be presented gives a good understanding of the following: how shared queues are different from message queuing performed by IMS in the past, the implementation of shared queues by IMS, the benefits of using shared queues. Topics to be covered include input and output message flow, the use of coupling facility structures in support of shared queues, dependent region scheduling, and more. This double session is of special interest to those wanting to find out more about the exploitation of a parallel sysplex environment by IMS.
