

# SESSION ABSTRACT

## **E50 IMS and High Availability**

*Pete Sadler*

Do you have continuous availability? Do you want continuous availability? Do you have the right stuff? The requirements for application service hours are becoming more demanding. Continuous availability doesn't happen when you implement the 53 (or is it 153?) different pieces of technology. In trying to ensure continuous availability of IMS based services – considering how to survive both planned changes and unplanned interruptions – the correct frame of mind is crucial. This presentation examines a management approach to ensuring favorable exploitation of the technologies available and control of the execution environment.
