

SESSION ABSTRACT

E83 IMS Web Connectivity - Ready, Set, Go!

Margaret Wilson

Would you like to be able to quickly setup access to your existing IMS transactions from the Web? This session tells you about the integrated use of a set of products to create end-to-end web connectivity. Connectivity to IMS OS/390 data is through the execution of an existing IMS transaction. The IMS connection used is IMS Connect (formerly called IMS TCP/IP OTMA Connector or ITOC). You will see a VisualAge for Java created servlet that accesses IMS data through a TCP/IP connection to the host component and contains an IMS bean that provides the java servlet connectivity to the IMS data by parsing the existing IMS program source. You'll see how easily this can be accomplished and how quickly you too can be using e-business technology in your workplace.
