A15 e-business Tools— A COBOL Programmer’s Perspective on the Writing of Java MPPs
Geoff Nicholls

Writing a MPP or BMP is second nature to many COBOL and PL/I programmers. How does this knowledge help when confronted with a request to write a MPP in Java? This topic covers the basic structure of a MPP which is written in Java and the differences you want to know about when writing programs in Java. The discussion takes into consideration the differences between the languages as well as the environments in which these programs are developed and run. You also get a bonus topic on how to use the power of IBM’s VisualAge for Java for program development!
