*Session Abstract*

**A49    WWW.IMS or WebSphere Working with IMS**
*Ken Blackman*

Your business logic and data resides in IMS. Server side web enablement technology is providing new ways to open and leverage your IMS systems. WebSphere provides the infrastructure for server side Web enablement. This presentation describes different ways of using the latest web technology to work with your IMS systems. The newly announced WebSphere Version 4.0 for OS/390 and z/OS provides a Java 2 Enterprise Edition runtime environment for servlets, JSPs and Enterprise JavaBeans. This topic also includes how connectivity to IMS can be accomplished. If you are an IMS DBA, application developer, system programmer or technical support person, then this presentation will help you understand how IMS and WebSphere are used for e-business processing.
