E13   IMS Java Application Development
Kyle Charlet, IBM Silicon Valley Laboratory

This session provides insight into IMS application development using the Java programming language. It discusses the design of the IMS Java library and shows how to write new IMS applications that process input and output messages, access IMS databases using JDBC and use transaction services to commit or rollback updates. This talk takes an in-depth and technical look at these topics using several code examples to emphasize the power of Java application development.
