

TOC**INDEX****VIEW****E15 OTMA Shared Queues for IMS Connect, MQSeries, and WebSphere***Jack Yuan, IBM Silicon Valley Laboratory*

The IMS OTMA architecture has provided the e-business world with a transaction-based and efficient communication protocol -- with no VTAM involvement. Though easily connected, MQSeries, WebSphere, and IMS Connect are able to send massive transactions and commands to IMS via OTMA without using the traditional SNA protocol. This session provides an in-depth overview of OTMA sysplex technology and explores the different OTMA features used by MQSeries, WebSphere, and IMS Connect.
