

H03 Hands-on: Creating and Deploying IMS Conversational Transactions as EJB or SOAP Service Flows (double session - offered one time only!)
Shyh-Mei Ho/Ben Sheats, IBM Silicon Valley Laboratory

WebSphere Studio Application Developer Integration Edition (WSAD-IE), the newest member of the WebSphere Studio family of products, represents the next generation of offerings that make building and integrating e-business applications faster and easier. This hands-on session walks you through how to create an IMS Conversational Service Flow composed of one or more IMS COBOL transactions. This session also shows you how to deploy an IMS Conversational Service Flow to WebSphere to make it available via EJB or SOAP.

Before attending this session, you should understand basic XML, SOAP and Web Services concepts, which can be obtained by attending session E22, Connecting to IMS using XML, SOAP and Web Services, or by prior training or experience.
