

A Business Partner Solution for Cross Industry

Insuring Peak Database Performance

DBI

DBI Performance Management Suite for DB2 LUW

Solution Description

DBI offers multiple database monitoring solutions which deliver enterprise performance metrics and captures vital information that helps keep databases running at maximum efficiency. Consisting of four solutions (i.e., Brother-Panther, Brother-Thoroughbred, Brother-Hawk, and Brother-Eagle), DBI is able to monitor and insure that peak database performance is maintained and performance problems or bottlenecks are quickly detected allowing for corrective action to be taken.

Features & Benefits

DBI Performance Management Suite for DB2 LUW includes:

Brother-Panther® provides a major breakthrough in performance analysis and change management. Brother-Panther tracks what was changed, when it was changed, and how these changes influenced performance. Comprehensive history, combined with rich analytics, enable the analysis of performance trends that over time are correlated to change events (physical design changes, profile changes, DB & DBM configuration changes, and bufferpool changes).

Brother-Thoroughbred provides database measurements for transaction times, time distributions, and service level attainments. IT groups can now measure and document their transaction performance success, as well as be equipped with the right information to understand if database performance is at fault in the event that service levels are not being attained. If the database is at fault, the DBA group can easily determine the resource bottleneck (CPU, I/O, Locks, Sorts) and rapidly solve any problems.

Brother-Hawk provides unique insight into performance issues with 24x7 monitoring of databases and alerting of performance issues before they become performance nightmares. DBI has advanced automated lights-out database monitoring, enabling customers to pursue other important business opportunities.

Brother-Eagle® provides a bird's eye view of databases and can locate database problems quickly and effectively. If there is a problem, poor performance, or inefficiency with any database in your IT organization, Brother-Eagle will find it and signal an alert.

Value Proposition

The DBI Performance Management Suite for DB2 LUW can improve performance, productivity, profitability and security while lowering utility costs, saving floor space and reducing IT costs. With the solution, companies can take back control of performance problems, achieve performance and efficiency optimization, and see the performance impacts of manual and autonomic configuration changes. Customers typically achieve up to 30-90 percent CPU utilization reductions within the first few hours, along with measurable response time improvements.

Company Description

DBI specializes in distributed DB2 LUW database performance best practices methodologies, services, and products that enable companies to accelerate business with clarity. Distributed Database Performance Management Tools from DBI make it easy to rapidly identify, isolate, and resolve performance issues, verify success, and manage performance changes and trends.
