

P2 Energy Solutions

Excalibur Energy Management System

Business Challenge

Today's energy and petroleum (E&P) companies are faced with the ongoing problem of replacing reserves and increasing production volumes while paying close attention to profitability. They must integrate acquisitions into the existing operations quickly so that economies can be gained and development strategies can begin. In addition, they must continue to find ways to automate activities that have been traditionally performed in a manual fashion. Public companies have the ongoing requirement to meet SOX compliance issues.

Solution Description

E&P companies need business processes and systems that can efficiently integrate new assets into current operations and provide immediate visibility into asset performance. Oil and gas information systems must not only provide a platform for managing complex and specialized work flows but also provide transparency, accuracy and controls necessary to withstand SEC reporting scrutiny. These systems must support the automation of processes and facilitate reporting and data mining.

Value Proposition

The Excalibur Energy Management System is an integrated oil and gas software solution that includes more than 30 modules spanning the areas of production management, land and lease management, operations, financial accounting, and query and reporting tools. Used by over 175 independent producers in the United States, Excalibur serves as a time-tested standard for domestic oil and gas asset management. The software can be deployed in-house, or through an application hosting model supported by P2 Energy Solutions. The system has these features:

- Constantly renews, evolves, and improves over time
- Is completely scalable and can be used by start up companies or major independent producers
- Manages the entire asset life cycle in a single integrated system
- Streamlines data management and business work flows
- Provides a standardized, consistent, and comprehensive approach to business processes and reporting

Company Description

P2 Energy Solutions focuses on the development and support of data, software and enterprise services to meet the information and business process needs of the energy industry and is the oil and gas industry's most comprehensive source of asset management solutions. With solutions deployed at more than 500 companies worldwide, P2 Energy Solutions enables clients to achieve greater productivity while maintaining effective controls.

IBM Segment

- Data Management

Business Function

- Energy and Petroleum Operations

Target Industry

- Chemical and Petroleum
- Energy and Utilities
