FileNet/Maximo Integration for Energy and Utilities

Solution Description

Maintenance personnel carrying out work scheduled and managed by Maximo may not have easy access to all the information they need. As a result, asset usage is lost while workers search for relevant information or worse, have incorrect or out of date documentation. In response to the need for more accurate and accessible information, IBM has developed solutions that assist in the integration of IBM Enterprise Content Management (ECM) and Maximo Enterprise Asset Management (EAM).

Features & Benefits

Using the FileNet/Maximo Integration helps to maximize the performance and lifetime value of complex assets to more closely align them with overall business strategy. The solution helps organizations:

- Improve return on assets
- Decrease costs and risk
- Increase productivity
- Improve visibility, control and automation of asset and business service processes
- Increase asset service delivery responsiveness and revenue
- Document and manage regulatory compliance efforts
- Lower the total cost of ownership

Value Proposition

By integrating IBM ECM and Maximo EAM, customers will realize significant benefits. Minimizing unscheduled down time, or reducing down time for scheduled maintenance, improves asset revenue generation. Providing the correct information initially allows maintenance workers to “get it right” the first time, resulting in higher productivity and reduced costs. Reduction in outages not only has monetary rewards, but reduces damage to a company’s reputation and improves customer satisfaction.

IBM Segment

- Enterprise Content Management

Business Function

- Asset Usage

Target Industry

- Chemical and Petroleum
- Energy and Utilities
