## Risk Management Cockpit

### Solution Description

As a result of the recent economic and market changes, the financial services industry has been forced to rethink their business and technology strategies. Financial organizations must improve agility, manage risk and meet increasingly stringent regulatory standards.

IBM's Risk Management Cockpit solution is founded on the combined banking expertise, solutions and assets of industry leaders. The solution helps financial services companies move from their point solutions of information delivery, integration and data integrity to a broad data and technical foundation.

The IBM Global Services Risk Management Cockpit Solution combines IBM's Banking Data Warehouse, consulting services, infrastructure software and hardware with Cognos 8 Business Intelligence reporting and analysis software. With this combination, companies receive an enterprise-wide, scalable platform for on-demand analytics that feature extensive predefined financial industry content. This solution also utilizes predefined data, process and policy models that help organizations speed their software deployments and drive faster return on investment.

### Features & Benefits

The Risk Management Cockpit solution unparalleled data warehousing capabilities. The solution includes a complete data warehouse, including databases, front-end tools, servers and consulting. The comprehensive pre-defined templates contain approximately 80 percent of the data structures a financial institution would typically need in its data warehouse. These templates allow customers to perform analytics on customer relationships, profitability, risk management and much more.

### Value Proposition

The Risk Management Cockpit solution provides banks with:

- A component-model approach for integrating a best-of-breed solution
- Seamless technology architecture that showcases the business value of each component and facilitates the development of a business case
- Expedited accelerator development environment for a personalized proof of concept using specific data, analytics and metrics
- Access to industry and technology experts to facilitate development

The solution enables banks to gain visibility in order to translate strategies into plans, monitor execution and provide insight to improve operational performance.
