Business Challenge

Firms that acquire, sell, service and securitize assets (e.g. Mortgage Backed Securities and Asset Backed Securities) are required by the secondary market investors and recent regulatory changes (e.g. Sarbanes-Oxley) to have accurate, auditable and highly available information.

However, the asset and its supporting collateral, referred to as the asset record, is composed of unstructured content, documents, and disconnected data from stove-piped systems. This fragmentation compromises a company's ability to efficiently execute critical business processes, perfect or certify the asset record, and properly respond to increasing regulatory and investor requirements. The result is inaccurate portfolio valuation, inflated processing costs, poor operational and financial performance, and increased risk.

Realizing the nature of the asset record, the challenge faced by companies operating in financial markets is how to cost effectively and efficiently audit the asset record, identify deficiencies based on operational and contractual guidelines, manage deficiency resolution across all partners, resolve conflicts, and ultimately, certify the asset record.

Solution

eResolve for Mortgage Banking is one of the family of "Live Solutions offered by Object Builders. It is an event driven XML software solution that works with your existing line of business applications and infrastructure, serving as a "trusted source of content" for the sale, servicing and securitization of assets. eResolve for Mortgage Banking supports the following processes/events:

Sale

Shipping and Deliver; Transfer of Beneficial Interest; Recordation (MERS, non-MERS)

Acquisition

Due Diligence (Legal, Servicing, Credit, Appraisal, Compliance)

Servicing

New Loan Set-Up and Transfer; Default (Bankruptcy, Foreclosure, REO); Disposition (Payoff, Subordination, Refinance); Investor Reporting; Loan Accounting (Master Servicing)

Securitization

Pooling; Structured Finance / Treasury; Off Balance Sheet Financing; Custody

eResolve for Mortgage Banking is a state-of-the-art XML application which takes full advantage of the

internet and supports rich client, thin client and web services interfaces. It provides event-driven asset record certification, and manages the resolution and reconciliation of asset record deficiencies across all partners, systems, and sources. It leverages and extends the capabilities of your existing line of business applications by seamlessly integrating into a company's infrastructure business process management tools and content management tools. This allows financial services firms to rapidly implement automated processes for collateral deficiency management and resolution.

eResolve for Mortgage Banking allows you to establish and manage your best practices associated with your critical business processes. It is 100 percent configurable and doesn't require any coding. Event handlers can be tailored to provide a real-time, single interface for perfecting asset records, resolving deficiencies, managing the workforce, and distributing asset content (data, documents, images) across partners (custodians, sellers, servicers, purchasers, and vendors). All parties have real-time visibility and control over the entire transaction lifecycle.

Value Proposition

- Facilitate compliance with investor and regulatory requirements
- Reduce working capital requirements
- Reduce operational and credit risk
- Increase process cycle efficiency
- Improve return on economic capital
- Improve forecasting and reporting
- Improve service levels
