

A Business Partner Solution for the Cross Industry Sector

Output Management for IBM FileNet P8

ASE Technologies

COServer

Technology Description

COServer provides IBM FileNet P8 users with an output management solution. Built as a web application, COServer provides users with server side printing, emailing and faxing. Supported formats include all image formats, Microsoft Office and Adobe PDF. COServer is a full featured output management solution with load balancing, reprinting functionality and support for pre and post job-ticketing. The solution is architected to support high volume output requirements yet can be used for all of an organizations output needs. Packet assembly to large batch printing is fully supported. COServer can be programmatically accessed through COServer's HTTP request API or as a multi-select action within IBM's WorkPlace.

Features & Benefits

- Print disparate content types - no need to run originating application to print document.
- Build packets - automate customer specific deliverables.
- Add cover pages and watermarks to output - customize output for specific requirements.
- Output to email, fax, CD or directory path - select the best device for delivery.

Value Proposition

ASE's COServer is output management functionality for the IBM FileNet P8 platform that streamlines the distribution of content to end users, thus saving time and costs associated with, opening and closing individual documents, manually sorting output, expensive mail deliveries and unnecessary printing.

Printing or outputting multiple documents, such as results from a document search, requires that each file type is opened in its originating application. If the requirement is to output all documents in the search results, a process or user will need to open each document and follow the necessary steps for printing. With ASE's COServer, simply select all of the documents, either using a multi-select action within IBM's WorkPlace or selecting the documents through a custom GUI, and send the documents to the desired output device. Documents can be sent as a packet with cover page or individually sent to the appropriate output device. COServer supports

IBM Segment

- Enterprise Content Management

Business Function

- Faxing/Printing

Target Industry

- Cross Industry
