

A Business Partner Solution for the Cross Industry Sector

Configuration Snapshot of your IBM FileNet solutions

Erilis

Erilis System Analyser

Technology Description

The Erilis System Analyser generates configurable documentation of your complete IBM FileNet P8 system, allowing you to snapshot multiple configurations in an offline, complete, portable and user understandable format. You can review the output, analyse it for configuration errors or inconsistencies, and compare it with other configurations. This allows you to review, discuss, and understand your configuration at a point in time.

You'll gain an understanding of how your systems are configured and be able to regenerate documentation as systems change and grow. You'll know how the entire system is configured to assist in disaster recovery, change management and ensure that the systems are configured as they should be, without navigating property pages or multiple administration tools. The tool provides a single, usable source of truth for all of your IBM FileNet P8 configurations.

The tool will analyse release 3.x and 4.x versions of the IBM FileNet P8 platform and supports the IBM FileNet Content Engine, IBM FileNet Process Engine and IBM FileNet Application Engine configurations. Process definitions, IBM InfoSphere Enterprise Records (formerly IBM FileNet Records Manager), IBM FileNet Business Process Framework and IBM FileNet eForms extensions are available to provide a complete view of your application and system details.

Features & Benefits

- Allows you to take a human readable snapshot of your configuration to store offline, review and analyse without needing an understanding of the system administration tools.
- Generate documentation for your content management structures, process management structures, workflow definitions, Workplace / WorkplaceXT, FileNet Business Process Framework, IBM InfoSphere Enterprise Records, and FileNet eForms configurations to provide a holistic view of all elements of your ECM solutions.
- A configuration snapshot of all your systems is complete in minutes, giving you an accurate and up to date view of all aspects of your solutions. Developers and administrators can immediately understand how your systems work, saving time and effort when you need to extend your system or understand how it is currently configured to fix a problem.

IBM Segment

- Cross referenced and permuted lists ensure you can find information quickly, without having to navigate the online user interface of the IBM software. You'll immediately know where pieces of your solution are referenced, and be able to determine what the impact of any change will be.
- By referring to historical views of the systems, looking at how your systems have changed and how they compare to other implementations you can be sure that your development, production and other systems are configured as they should be, without having to memorise property pages or compare XML data streams.

Value Proposition

The Erilis System Analyser is designed to take the complexity out of managing your ECM solution, without needing tools other than those already on your desktop. The Analyser makes it easy to generate documentation for you to understand, review and discuss your systems, simplifying any upgrade or addition of new functionality. The documentation can be created in Microsoft Word format or customised to suit your needs.

By documenting your systems, you can confidently plan future development activities. Developers will have complete and accurate records of how your system is configured and will be able to reuse elements you've already created. By understanding what you already have, you'll reduce the effort to manage and extend your existing solution.

Company Description

Erilis is an Australian consulting, training, and project delivery organisation that specialises in the implementation of solutions using the IBM FileNet suite of products. We provide expertise in best practice design and delivery of solutions using the IBM products, improving efficiency, reducing project costs, and ensuring organisations get the most benefit from their use of the software.

This brochure was developed to assist you in identifying products from select Business Partners that may be of interest to you as you consider your information technology needs. Any reliance by you on this publication is at your sole risk and will not create any liability or obligation on the part of IBM.
