A Business Partner Solution for the Cross Industry Sector
Fast and Dependable High Volume File Importing

Fairfax Data Systems, Inc.
Fast Import Tool (F.I.T.)

Technology Description

Most companies require the need to import documents from a directory, whether it is images from 3rd party scanning vendors, batch process documents, such as Explanation of Benefits (EOB) forms, or even capture solutions that require high volume commit processing. The Fairfax Fast Import Tool (F.I.T.) is the perfect solution for fast and dependable high volume import for IBM FileNet P8. F.I.T. can use an index file, database file and directory attributes, such as filename or directory name, to index documents. F.I.T. can also add documents to multiple objects stores and document classes and provides error handling and reporting. Configuration of F.I.T. is done by an administrator, which determines the indexing options, object store and document class mapping and directory to import into.

Features & Benefits

- Fast file import for high to medium volume import.
- Import into multiple object stores.
- Import into multiple document classes.
- Index data can be from a text, xml, database or file/directory attribute.
- Can be run as either a batch or service.

Value Proposition

Streamline and manage your high volume import requirements by acquiring the Fairfax Fast Import Tool (F.I.T.) tool. F.I.T. provides a way for organizations to quickly import medium to high volume documents into FileNet P8 and seamlessly integrates with IBM FileNet Content Manager. F.I.T. was designed and developed for performance and reliability and fills a void that now allows organizations to bulk import medium to high volume documents into FileNet P8. F.I.T. is ideal for customers that rely on simple high volume import, such as EOB/lock box requirements and outsourced scanning and indexing processes, which need images imported into FileNet P8. F.I.T. runs as a batch or service to allow administrators to control scheduling of imports.
