

# A Business Partner Solution for the Cross Industry Sector

*High Volume Ingestion of Images and Metadata to IBM Content Manager*

---

## **SYSCOM, Inc.**

*AnySourceImport (ASImport)*

---

### Technology Description

ASImport is a multi-threaded java based import utility for IBM Content Manager v8 running on any Content Manager supported platform. Input consists of a tilde delimited metadata file and an image file. Multi-level foldering and start-on document routing functions are supported. Depending on the configuration, at least 2 images per second can be achieved.

### Features & Benefits

- No other supplier supports all platforms.
- Provides ability to store images at high speeds.
- There is no volume limit.
- One metadata file can contain records for many images or you can have one metadata file per image.
- Multiple instances can be configured on the same server pointing to different input directories.
- Can run as a service or background application.
- Image types can be mixed.
- Configurable to support Content Manager autofoldering or to perform the foldering function based on other criteria.
- Can be customized to support IBM's coded data with overlay structures.
- Can be configured along with Content Manager to store into different collections based on document type or folder type.

### Value Proposition

A business may have a high volume of electronically generated images to ingest into IBM Content Manager v8. These images could be from an external scanning vendor, internally generated, or even images that are migrating from another vendor's ECM product suite. ASImport provides the ability to store images into Content Manager at high speeds in a batch style environment. This ability reduces resource needs and increases volume.

### IBM Segment

- Enterprise Content Management

### Business Function

- Import/Export

### Target Industry

- Cross Industry
