

InfoSphereTM software

Information Management Software Services *Health Check Services Offering*

HIGHLIGHTS

- *Improve job design, performance, scheduling and change management*
 - *Understand project strengths and weaknesses, ranked against institutions with similar initiatives*
 - *Enhance project preparedness and execution through strategic planning and custom recommendations*
 - *Enable technical staff success and productivity through mentoring, guidance and information sharing*
 - *Leverage IBM standard practices and methodologies*
-

Evaluating project readiness & improving infrastructure performance

The Health Check workshop is targeted to clients engaged in development efforts that are not progressing according to plan, clients seeking validation of proposed plans prior to the commencement of new projects or clients interested in assessing and optimizing performance.

Led by experienced IBM technical architects, the health check engagement concentrates on analysis of data integration goals and challenges, assessment of existing data structure and performance and development of a strategic approach for addressing these goals and challenges. Focal points include reviewing development objectives, analyzing the development and production environments, assessing client project team skill sets and setting project scope and business expectations.

Discovering opportunities

Concentrating on the core extract, transform and load (ETL) development and operational environments, the Health Check workshop provides onsite discussion and analysis of data warehouse or data integration projects with key members of client project teams. It includes analysis of IBM® InfoSphere® DataStage® (formerly InfoSphere DataStage Enterprise Edition) jobs for:

- *Design review*
- *Performance and tuning recommendations*
- *Recommendations on advanced techniques*
- *InfoSphere DataStage project and version control review*
- *Change management in development, test and production environments*
- *Scheduling and managing InfoSphere DataStage jobs in a production environment*

Information Management Software Services

IBM offers a broad set of services offerings designed to maximize

success with the InfoSphere product suite through standard practices developed across numerous successful deployments. Intended to establish a foundation of product knowledge and guidelines, these strategic workshops and offerings are customized to the customer's existing environments, standards, and methodologies.

IBM's objective is to provide the most cost effective and expedient means of achieving project goals through the utilization of the IBM InfoSphere product suite, repeatable processes, and consistent deliverables. To achieve these goals and ensure the continued success of our initiatives, IBM leverages standard methodologies, proven consulting expertise and experience refined throughout hundreds of successful client engagements.
