Business Scenario: Account Abandonment Prediction

- Business practice:
 - extend credit to customers by allowing them to overdraw their accounts by \$500 which generates fees through the overdrafts
 - incurs the risk of customers abandoning the account, generating charge-off losses
- Business goal:
 - Reduce charge-off losses by predicting which accounts are likely to default (at-risk) and pre-emptively limiting their allowable overdraft
- Solution:
 - Enable branch managers to review and manage at-risk accounts through a web-enabled embedded data mining application
