How do I add an average line (baseline) to a visualization?

Suppose you have a Line visualization showing units sold by month:

How does each point relate to the average? Is it above or below? To answer this question, we can add an Average baseline, like this:

- A Page preview ∨ : ⇒ Properties 🖾 🕤 Visualization ~ CONDITIONAL Double-click to edit text Render variable \sim GENERAL com.ibm.vis.line Туре Autochart ~ MISCELLANEOUS Name Line Alternate text None ~ VISUALIZATION Size 700px 400px \sim LINE Show markers Select Marker shape Circle ✓ COLOR PALETTE Series color ✓ ANNOTATIONS Show value labels Value label format Value April May June July August September October November December Month Value label font Value label color Contrast label color Label shadow Baselines \sim ITEM AXIS Show item axis title
- 1. Select the Line visualization and click the ellipsis button next to the Baselines property:

2. In the resulting dialog, click *New* and select *Query calculation*:

D	Baselines	×
	Baselines	
D		Add a new baseline to define its properties.
0		
D		
5		
D		
	+ 🖂	
	Query calculation	
c	Layout calculation	ОК
	Category Index	
	Numeric Value	
	Percent on Axis (%)	

3. Enter the following:

- a. Name: Average
- b. Expression Definition:

avera	ge (tota	al([C].	[C_Pei	cent_d	ifference	_by_	_month_	_data_	module]	.[Sh
eet1]	[Units	s Sold]) for	report)					

ame: Average	
ailable Components:	
	Expression Definition:
 See Percent difference by month data module Percent_difference_by_Month.xlsx 	average(total[[C]. [C_Percent_difference_by_month_data_module].[Sheet1]. [Units_Sold]) for report)
	(i) Information:
