# Why Performance Testing?

## ‘Trust, but Verify’

A proper regression & performance testing framework gives us **peace-of-mind\*** about the capability of a software system to **continuously\*\* perform as required\*\*\***.

\*peace-of-mind:

- thorough, i.e. needs to touch upon all major functionalities & aspects of the system
- benchmark-oriented (targets to measure against & boundaries to be established)
- detail-oriented (to know where to look for answers to address issues)

\*\*continuously:

- integral part of a deployment plan and every development cycle
- from the beginning until the end of the system’s life-span

\*\*\*perform as required:

- Functionality, Reliability and (then) Speed (FRS)

Getting  
peace-of-  
mind:

Which  
questions  
does  
Regression &  
Performance  
Testing need  
to answer?

### **Validate Functionality:**

- Does the system function as required / per spec?

### **Validate Reliability/Scalability:**

- what are the maximum stress levels that the system can handle?
- what are the maximum stress levels that the system should handle?
- what is the expected stress level at average expected load?

### **Validate Speed:**

- what are the response time at maximum load?
- what are the response times at maximum expected load?
- what are the response times at average expected load?

### **Expose, Isolate & Assist (EIA) in alleviating contention issues:**

- where do we get contention?
- is this expected and acceptable (i.e. OK) or do we need to do something about it?
- what is the context of the contention and what causes it?
- how to we address it?

### **Performance-related regression testing:**

- Will a new functionality affect performance (FRS)?
- If yes, how so? (which areas are affected?)

## How do we approach this?

- We do not just want to have Testing give us an overall ‘blessing’.
- Rather, the ‘blessing’ needs to be measurable and qualified, i.e. supported by data.
- A performance that did not meet our expectations (it did not ‘grant a blessing’) is not a failure, but a qualified opportunity to improve:
  - Any test outcome (because it is qualified) gives us invaluable information,
  - be it on what is working well or on what needs to be fixed or improved.

OK, but  
what do we  
need to build  
it & bring it to  
life?

1. **Strategy:** A strategy and outline of how regression & performance testing is integrated into the deployment plan & SDLC cycle
2. **Methodology:** A systematical approach to structuring, assembling and configuring the tests.
3. **Testing Tool:** A Software Tool that can fully support the testing methodology and execute tests in perfect alignment with the methodology.

# Performance Testing Strategy

- How do we look at regression & performance testing and how to we want to approach it, i.e. why and what for?
- How do we integrate testing into the SDLC cycles to allow it to fulfill its role?
- looking at it from a project perspective, not from a technical/licensing perspective: Who will be the owner of the testing framework?
- How do we structure the framework such that can become an integral part of the SDLC?

## 2.1 User Profiles or Application Categories

- What are the User-Profiles (identify)? OR:
- What are the Application Categories/Types/Use Cases (identify)?

=> then, use the Profiles or Application Categories to define Usage Scenarios:

## 2.2 Usage-Scenarios

- Based on one or more user-profiles / Applications, what are the usage-scenarios (define)?
- How do we group those scenarios (characterize & classify)?
- How can we describe them (describe = script)?

⇒ then, use the Usage Scenarios to assemble Workload profiles:

## 2.3 Workload Profiles

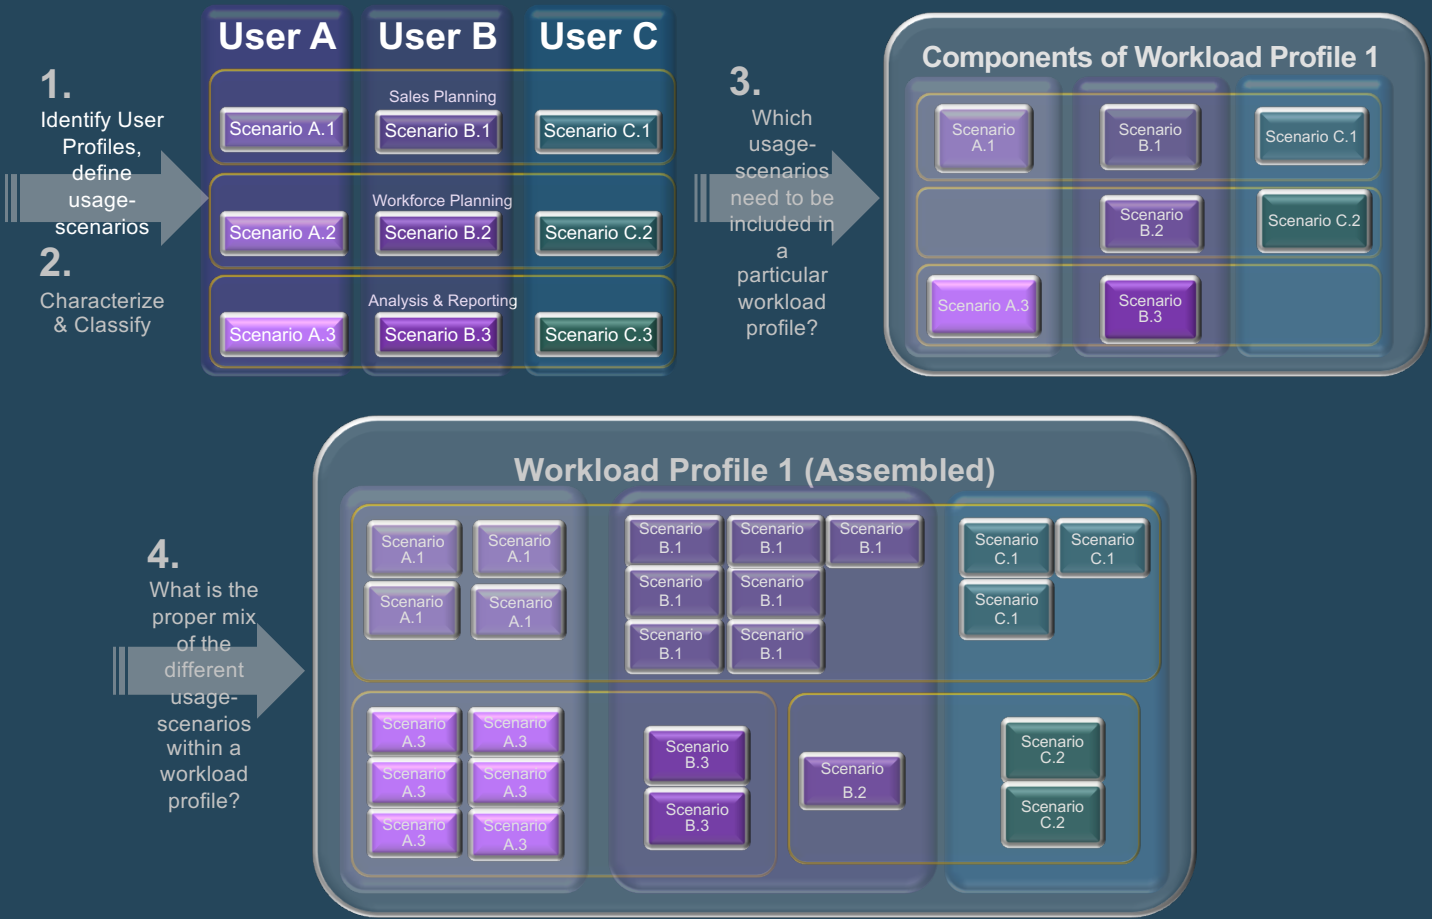

- Which Workload-Profiles do we want to cover (define & describe)?
- How do we characterize the workload-profiles (characterize & classify)?
- Which usage-scenarios need to be included in a particular workload-profile?
- How does a particular workload profile need to be assembled using its usage-scenario components?

# Performance Testing Methodology

## Creating Usage Scenarios,

## Defining & Assembling Workload Profiles

### Creation of Usage Scenarios based on User Profiles

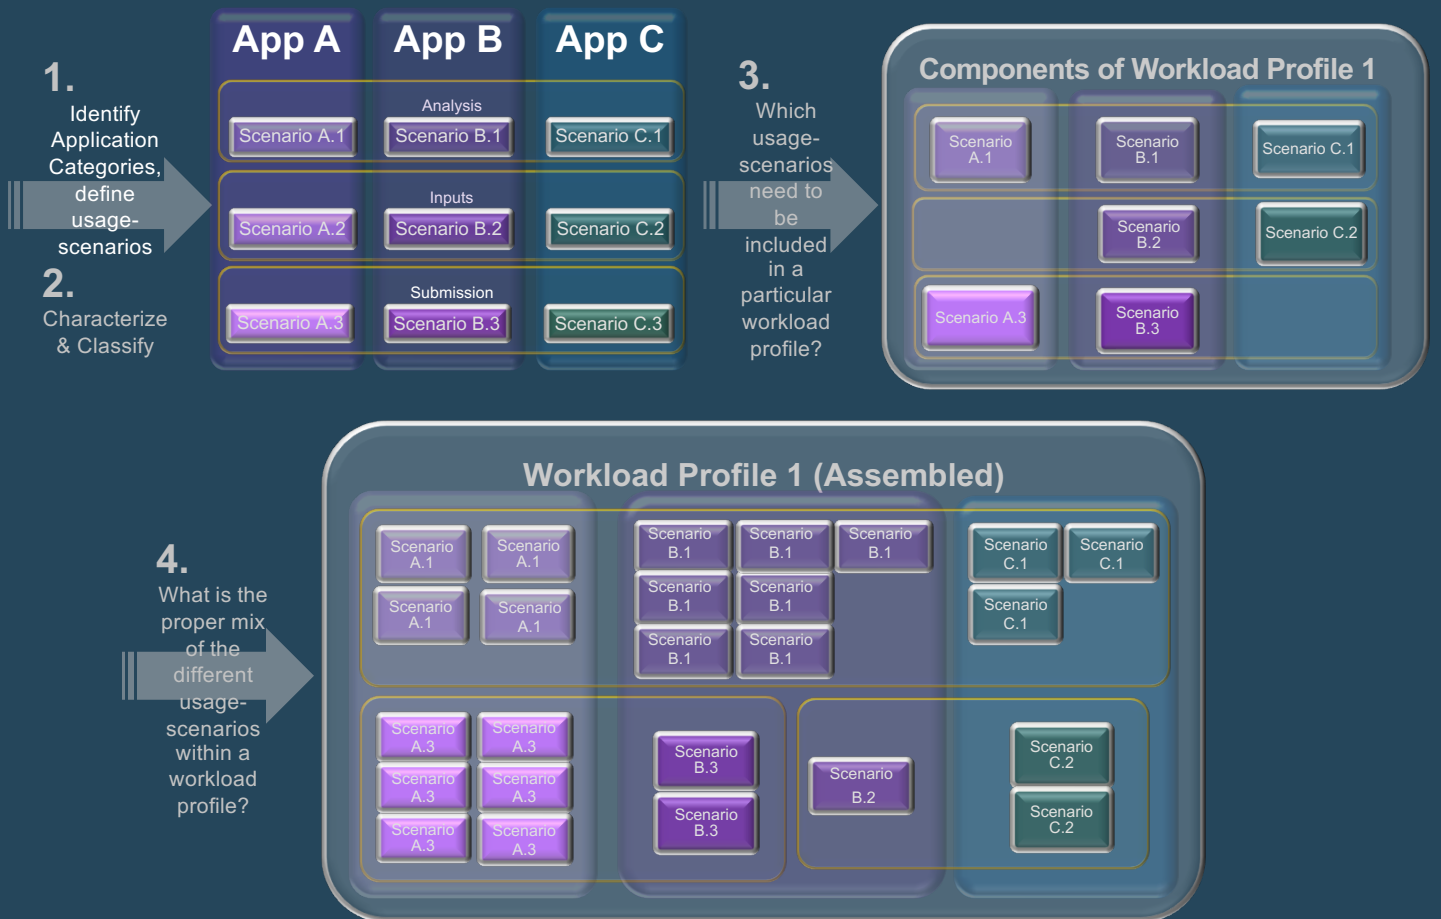

# Performance Testing Methodology

## Creating Usage Scenarios,

## Defining & Assembling Workload Profiles

### Creation of Usage Scenarios based on Application Categories

# Performance Testing Methodology

## Guidance on Development of User-profiles / Application Use Scenarios

The Application Use Scenarios can be assigned to the following transaction types that are representative of the application/system one wants to test:

- Business Critical (BC),
- High Resource consumption (HR),
- Most Commonly used (MC), and
- High Frequency (HF).

Think of five typical role classes for the User Profiles / Application Use Scenarios:

1. Analysts,
2. Contributors/Planners,
3. Contribution Managers/Approvers,
4. Report Consumers,
5. Application/System Administrators.

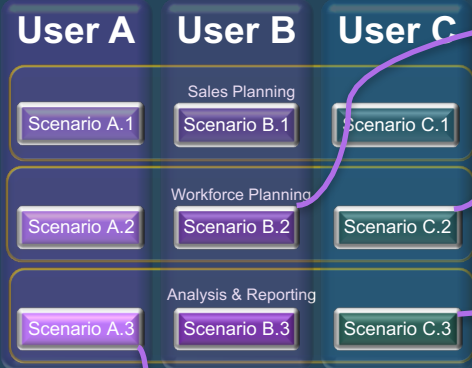

# Performance Testing Methodology

Example Workload Profile (assembled of User-profiles / Application Use Scenarios)

Number	Scenario Title	BC	HR	MC	HF	Role Class	Workload Profile 1	Workload Profile 2	Workload Profile 3	Workload Profile 4...N
							typical forecast cycle – high-intensity input, high concurrency)  Capacity Test	Overnight processing – low concurrency  Capacity Test	Mixes aspects of profiles (1) & (2) during times of medium concurrency  Capacity Test	
1.	US Workforce Planning Contributor	X		X	X	Contributor	%?	%?	%?	
2.	US Workforce Planning Manager	X		X	X	Contribution Manager	%?	%?	%?	
3.	US SG&A Analysis	X		X		Consumer	%?	%?	%?	
4.	...	X		X	X	Contributor	%?	%?	%?	
5.	...	X		X		Consumer	%?	%?	%?	
6.	User Attribute Maintenance	X	X	X		Maintenance / Administration	%?	%?	%?	
7.	Model Control 1: Actuals processing	X	X	X		Maintenance / Administration	%?	%?	%?	
8.	Model Control 2: Data Validation & Reconciliation	X	X	X		Maintenance / Administration	%?	%?	%?	
9.	...									

# Performance Testing Methodology

## Creation of Usage Scenarios based on User Profiles

Naming & Describing		Usage Scenarios Classification					Defining & Assembling Workload Profiles			
ID	Usage Scenario Title	BC	HR	MC	HF	Role Class	Workload Profile 1 typical forecast cycle – high-intensity input, high concurrency) Capacity Test	Workload Profile 2 Overnight processing – low concurrency Capacity Test	Workload Profile 3 Mixes aspects of profiles (1) & (2) during times of medium concurrency Capacity Test	Workload Profile 4...N
1.	US Workforce Planning Contributor	X		X	X	Contributor	%?	%?	%?	
2.	US Workforce Planning Manager	X		X	X	Contribution Manager	%?	%?	%?	
3.	US SG&A Analysis	X		X		Consumer	%?	%?	%?	
4.	...	X		X	X	Contributor	<div style="border: 1px solid black; padding: 5px;"> <b>Workload Profile 1 (Assembled)</b>            %? and %? and %? and %?            Scenario A.1 and Scenario B.1 and Scenario C.1            Scenario A.2 and Scenario B.2 and Scenario C.2            Scenario A.3 and Scenario B.3         </div>			
5.	...	X		X		Consumer	%?	%?	%?	
6.	User Attribute Maintenance	X	X	X		Maintenance / Administration	%?	%?	%?	
7.	Model Control 1: Actuals processing	X	X	X		Maintenance / Administration	%?	%?	%?	
8.	Model Control 2: Data Validation & Reconciliation	X	X	X		Maintenance / Administration	%?	%?	Scenario B.3	Scenario B.2
9.	...						Scenario A.3	Scenario B.3		

Performance  
Testing  
**Tool(s):**  
Use &  
Execution

**3.1 Record scenario scripts**

**3.2 Adapt/Configure use-scenario recordings to allow for parameterization as well as the use for runtime parameters**

**3.3 Create a ramp-up plan for each workload profile**

**3.4 Run Tests**

**3.4 Archive test-results  
along with used scripts/workload profiles**
