Today's Enterprise Challenges

What is Information Lifecycle Governance?

ILG is a set of policies that defines how an organization manages its information throughout the data lifecycle in order to reduce operational and systemic risk—without adversely impacting the value of the information.

The Data Explosion

An enormous challenge to IT organizations

1

Cost

~\$4 million annually

Cost to store, administer and back up 1 PB of data¹

2

Risk

Highly classified information

Personal information

Data subject to legal review

3

Value

Data center transformation

Big data analytics

Acquisitions and divestments

The Big Data Dilemma for Enterprises

“ Big Data is the world’s natural resource for the next century. ”

– IBM CEO Ginni Rometty

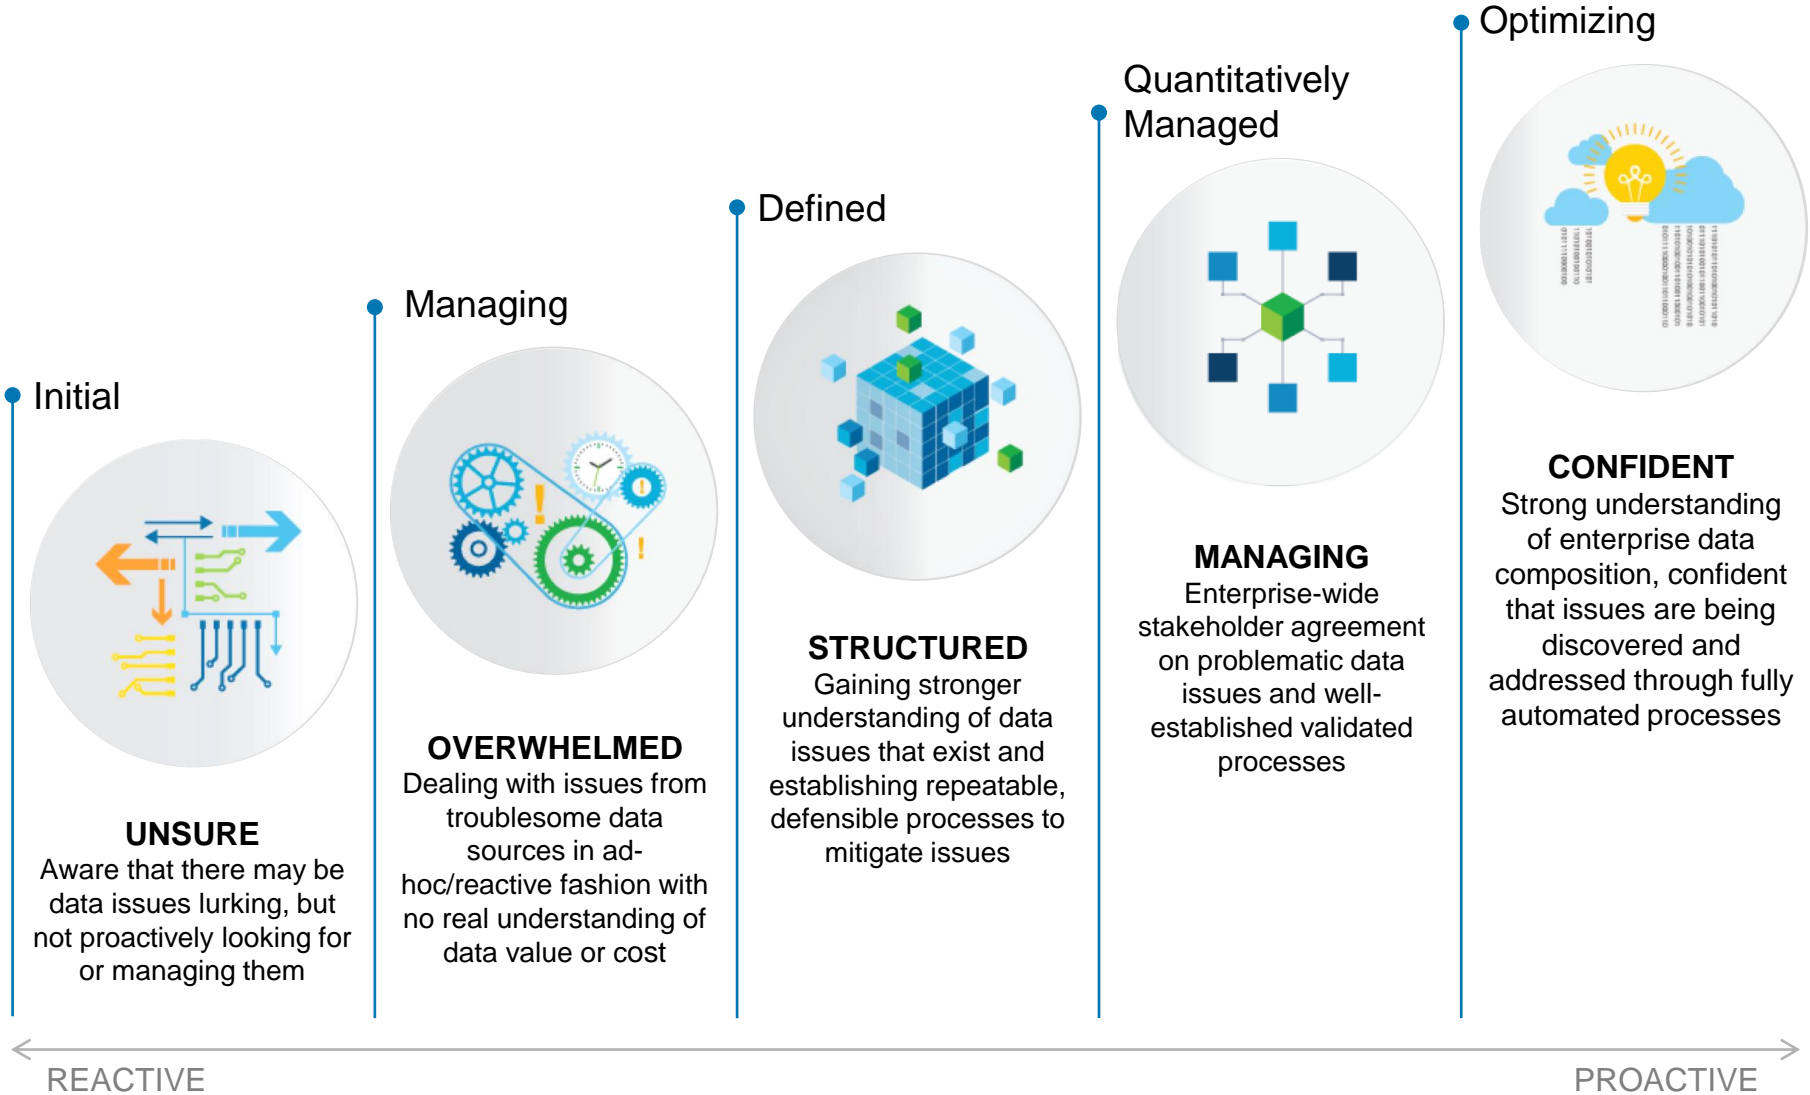

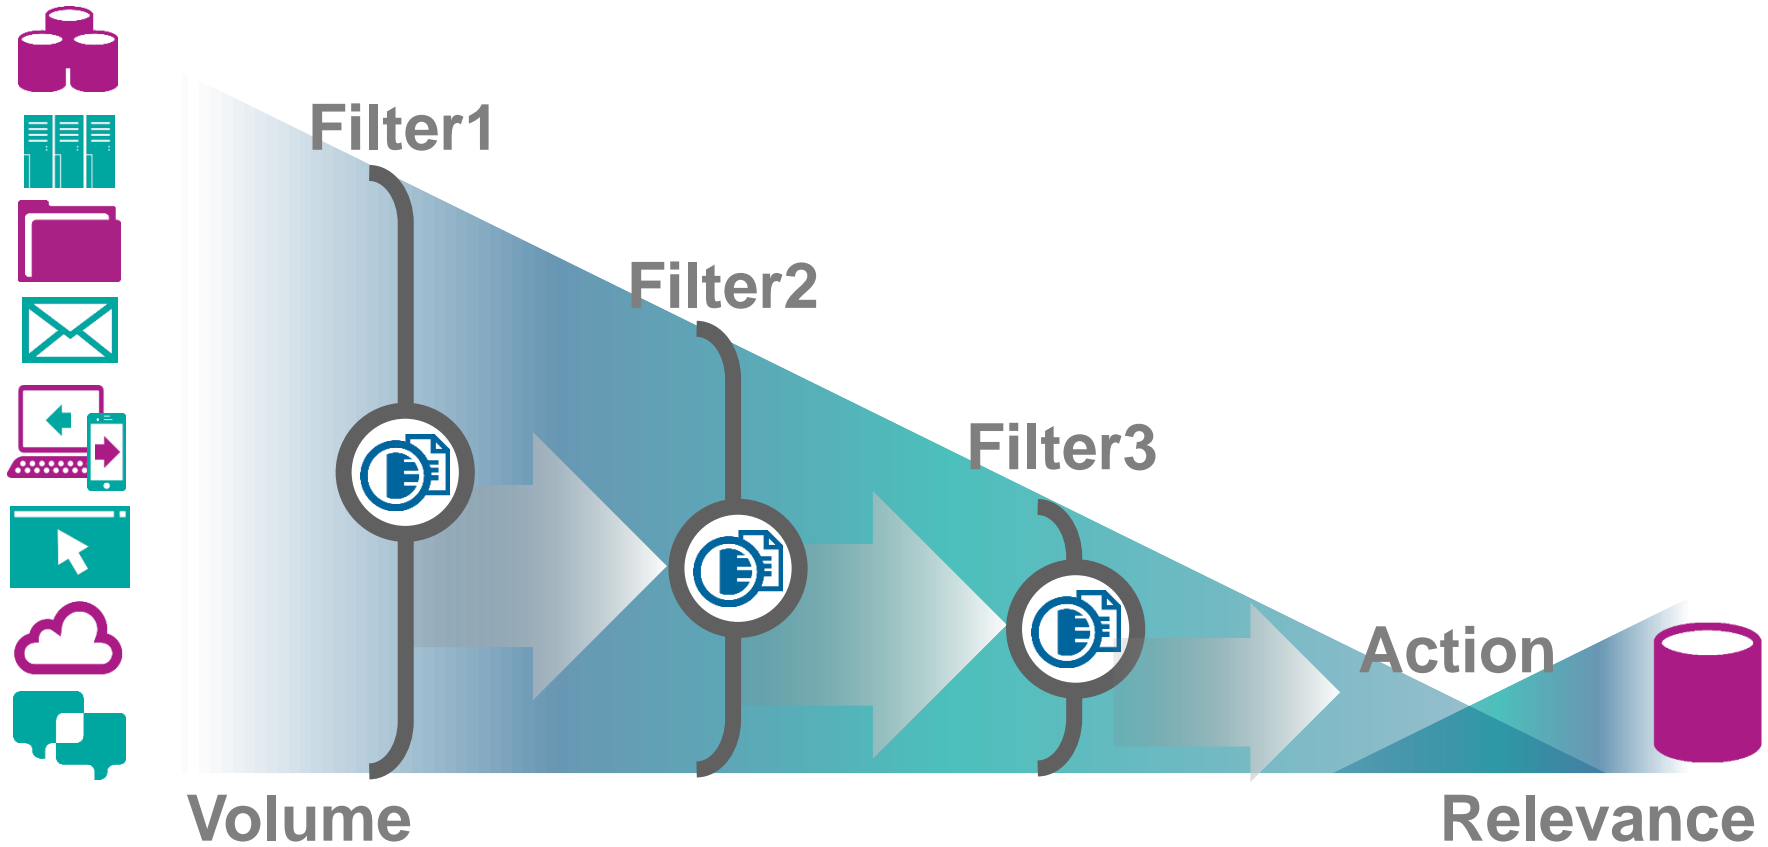

New Thinking, New Approach

Being Pragmatic

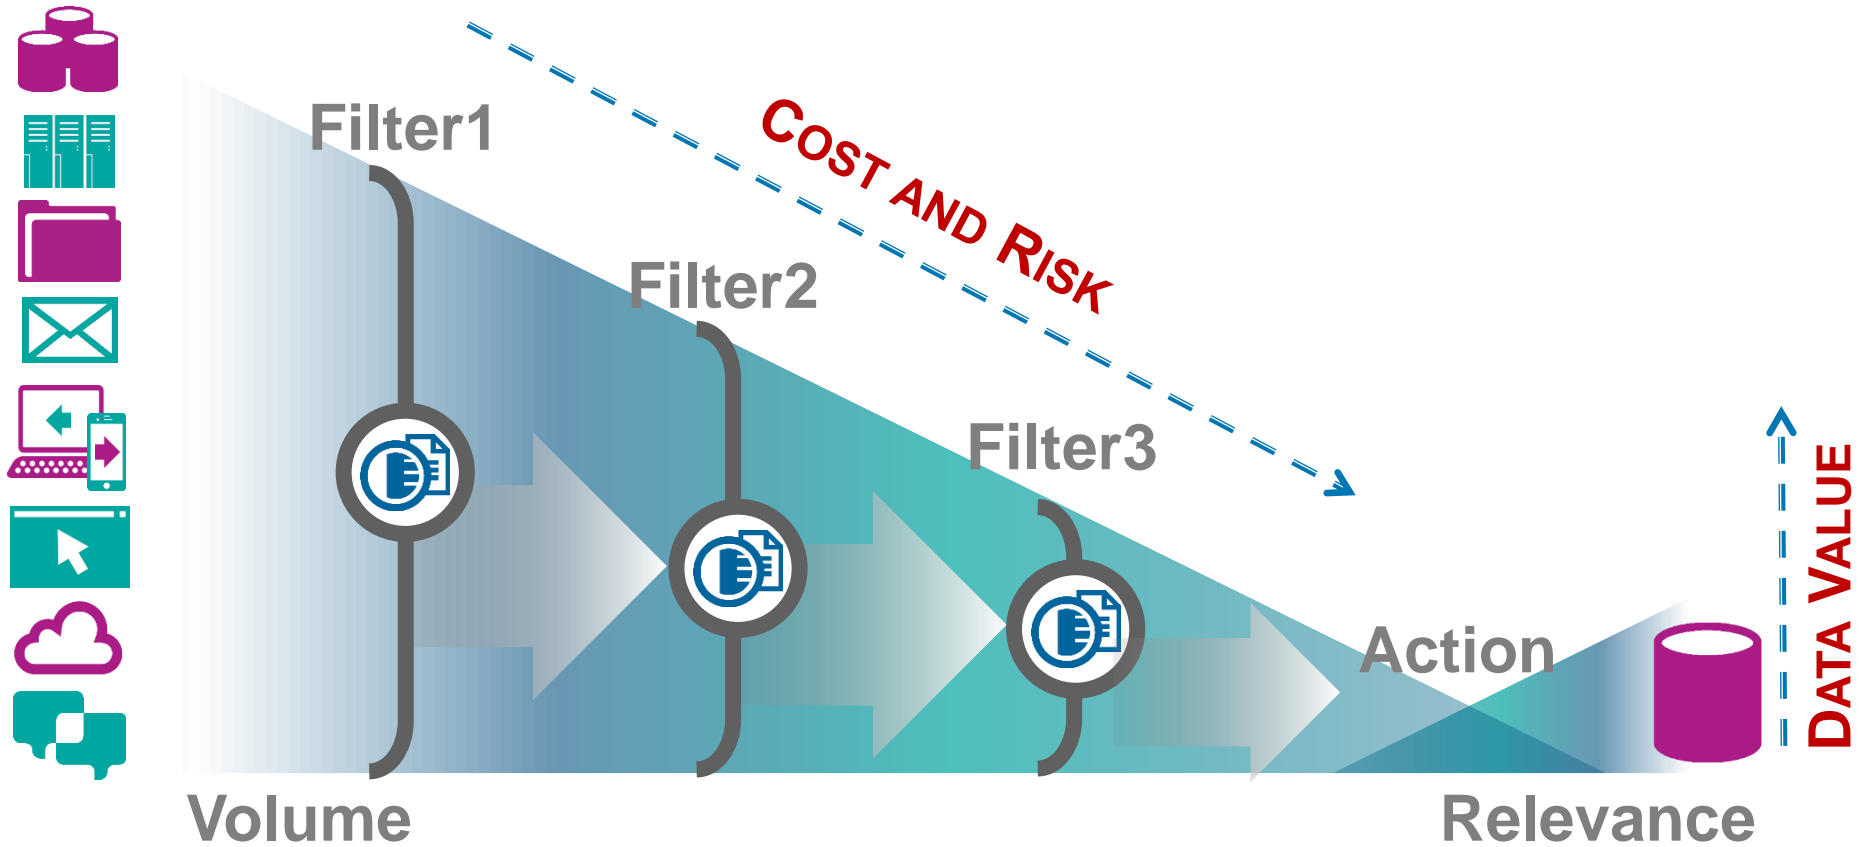

Five Phases of Information Governance Maturity

Volume to Relevance

Volume to Relevance

Volume to Relevance

Identify and Understand Business Data

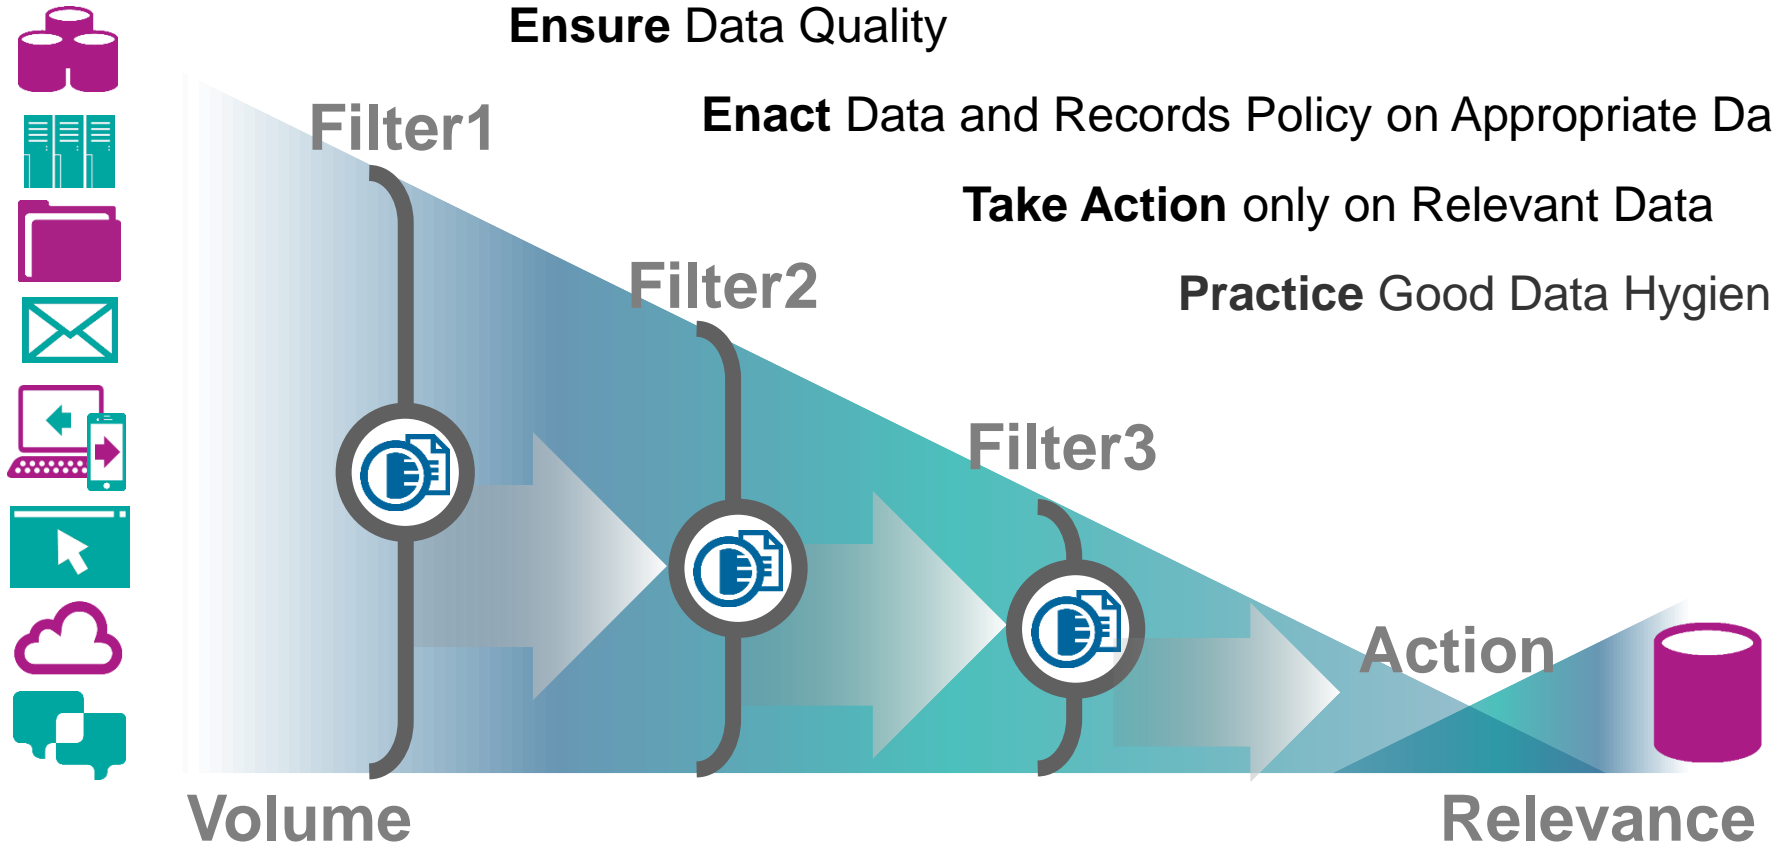

Confirm Data is Acceptable and Retainable

Ensure Data Quality

Enact Data and Records Policy on Appropriate Data

Take Action only on Relevant Data

Practice Good Data Hygiene

A Shift in the Market

From point solutions
to a more holistic approach

Why IBM?

Investing for Your Success

Consistent user experience across use cases

- Use a UI framework to develop consistent look & feel

Streamline products that connect to data sources

- Use one platform to connect directly to all data sources

Shortened time to develop new capabilities

- Updated architecture will reduce development time and speed time to market

Seamless integration across all capabilities

- All capabilities built on a single platform reducing need for post deployment integration

Reduced time to value

- Faster deployment times lead to faster ROI

DATA SERVICES

DATA MANAGEMENT

- Metadata index, Full-text index, Search, Data Movement, Processing (de-dup, enhance metadata), Policy-based task routes, Legal-hold enforcement, Hold/Retention on Archive
- Classification on Archive
- High speed, “in-flight” access to sources without indexing/harvesting
- Multi-stage life cycles with stubbing / Stub link retrieval
- Integration of partner solution (external APIs)
- Attachment-level de-dup
- Robust capturing & search of meta-data
- Records Management Enforcement (physical and electronic)
- Basic Retention Enforcement
- Classification execution (boolean and advanced)

Governance Use Cases

Identify Compliance Issues

Large US Energy Company

Understand your data

21 types of personal, confidential, and payments information identified

Identified and classified the data for analytics and action

17% remediation of the data to resolve privacy issues

Lower eDiscovery Costs

Deepwater Horizon Case

Manage Legal Process & Regulatory Compliance

100x reduction in amount of data collected in eDiscovery

2 weeks to analyze and produce the content collection

\$2 million savings on just one case

Reduce Risk with Defensible Disposal

Large Financial Services Organization

Optimize Risk & Costs Archiving

17% reduction in data footprint

Reduced cost and risk through routine data disposal

Mitigated risk associated with unstructured data

ILG on the Move

“ IBM’s strategy and vision of connecting compliance, e-discovery, governance and risk into a **comprehensive information governance** program match many of the top concerns that organizations are struggling with. ”

“ IBM Atlas eDiscovery Process Management is one of the **best-in-class** legal-hold tools in the market. ”

ILG Solution Goals

User Experience

Provide a single interface for users throughout their process

Organizational Alignment

Get Records, Legal, Compliance, Business and IT on the same page
Reduce likelihood of manual errors

Fully Audited

Audit all actions throughout the legal process, including identification, collection, culling and export

Open

Support for 75+ different data sources and many major repositories

Information Governance

Part of a comprehensive Information Lifecycle Governance solution
