## About the release notes

The release notes contain the latest information about IBM® DB2® Information Integrator Classic Event Publisher, Version 8.2.

The release notes are in three parts:

- The first part details the diagnostic information that you can give to support if you encounter a problem with Classic Event Publisher.
- The second part contains the details of the problems, limitations, and workarounds that were known at the time of publication and apply to the latest version of the product. Read these notes to become familiar with any known outstanding issues with this release of DB2 Information Integrator Classic Event Publisher.
- The third part describes the product fixes and enhancements included in the Version 8.2 PTFs.

---

## DB2 Information Integrator support on the web

For more information about DB2 Information Integrator and the latest support issues, see the DB2 Information Integrator support Web page at [www.ibm.com/software/data/integration/db2ii/support.html](http://www.ibm.com/software/data/integration/db2ii/support.html).

---

## Troubleshooting

When you encounter a problem and contact support, be prepared to provide some or all of the following diagnostic information:

### All applicable configuration files captured within the server log

For example:

- The data server
- The correlation server
- The user override

You can use the MTO DISPLAY commands to capture the server log. See Appendix C in the *DB2 Information Integrator Administration Guide and Reference for Classic Federation and Event Publishing* for the MTO commands to use.

You can also send the configuration files in the SCACCONF data set that is referenced in the data server JCL.

### Other information that you might need to provide

- The entire data server output
- All applicable DBDs, copybooks, queries, and USE grammar
- A trace file.

Tracing can be done only at the correlation server.

For additional diagnostics, you might need to provide the IMS<sup>™</sup> transaction logs and CICS<sup>®</sup> logs.

For information about tracing, see the section about server logging in the *DB2 Information Integrator Administration Guide and Reference for Classic Federation and Event Publishing*.

- A system dump.

In the event of an abend, the full system dump is not automatically generated. If the abend is reproducible, you can add the appropriate SYSMDUMP DD to generate the dump. If a SYSMDUMP is requested, the dump is routed to the data set that is defined in the SYSMDUMP DD.

- Formatted messages from queues. The ep\_extras.zip file contains a program and queue definitions that will read the message queues.

### Abend problems on z/OS<sup>®</sup>

Include the PSW and REGS at the time of the error and the SAS/C function call trace stack. You can find the PSW and REGS in the data server output, under JESMSG LG and JESYSMSG. You can find the SAS/C function call trace stack in the data server output in SYSTEMR or in the system generated DDs, for example: SYSnnnnn.

If the problem is an abend, traceback information from the call stack is sent to Standard Output at the time of error. Traceback information is sent to the job log, if you are running in batch mode.

### Meta utility problems

Provide the SYSOUTs from the problem run.

---

## Known limitations, problems, and workarounds

The following information describes the currently known limitations, problems, and workarounds for DB2 Information Integrator Classic Event Publisher.

---

### Data Mapper character support

Values specified in Data Mapper input fields must be in SBCS characters. The valid characters that you can enter in the Data Mapper tool are A-Z, 0-9, \_, #, \$, and @. The Data Mapper does not restrict the use of invalid characters.

---

### Metadata utility

Ensure that you are using the correct USEGRAMMAR with the metadata utility. The metadata utility does not validate the LENGTH and DATATYPE of USEGRAMMAR. For a remote IMS data source, the metadata utility does not validate BYTES of DBD and LENGTH of USEGRAMMAR.

---

### Local memory queues

Using local memory queues for communication between the correlation server and the distribution service leads to a memory leak in the LCL module, resulting in a Server SOC4. Memory allocation in the server uses a global pool of memory of the size set by the MESSAGE POOL SIZE parameter in the server configuration. Memory for local queues is allocated from this pool in chunks called *subpools*. The subpool memory is not returned to the main pool after usage and even after the memory is freed.

The logger also uses the LCL module to communicate with the different services that log information. The memory leak also occurs when the trace levels for the correlation server, the distribution service, or both are set to a value less than 4 and very large transactions are run.

Use Cross Memory (XM) or TCP/IP for communication between the correlation server and the distribution service. Both XM and TCP/IP cause no known problems with memory allocation and manage this allocation.

Because the logger uses the LCL module for communication, set the trace levels for configured services to 4 when you run large transactions that produce large messages.

---

### MAX TRANSPORT MESSAGE SIZE configuration parameter

The MTO commands to display the value of the configuration parameters do not display the value of the MAX TRANSPORT MESSAGE SIZE configuration parameter.

You cannot update the value of this parameter while Classic Event Publisher is running. To change the value, make the change in the server configuration file and then recycle Classic Event Publisher.

---

## Product fixes and enhancements

The following sections describe the product fixes and enhancements included in the Version 8.2 PTFs.

---

### Correlation service

- Improvements made to correlation service operations will prevent abends after long periods of operation. Two new messages are provided.
  - WTO message CACG153E:  
CACG153E MEMORY CORRUPTION DETECT AT x(*Address*) AT LINE *Line-Number* IN *Source-File-Name*
  - System message 0X00430044 (4390980):  
  
IMS internal control block memory corruption detected  
Control block is: *Control-Block-Identifier* at x'*Address*'  
Reported from: *Source-File-Name* at line *Line-Number*
- The correlation service now handles the sequence of IMS log records sent by IMS active change-capture agents and prevents out of sequence conditions.

---

### CICS/VSAM

- The record selection exit called by the correlation service is supported for VSAM processing.
- After CICS is shut down and restarted, you can successfully query CICS/VSAM tables.

---

### CA-IDMS

The metadata utility job failed with a syntax error on a reserved word specified for the area name in the CA-IDMS subschema.

---

### Data Mapper

The Japanese version of the Data Mapper is enabled

---

### Metadata utility

When processing logical DBDs that reference multiple physical DBDs and multiple IMS logical table mappings, metadata utility errors occurred.

---

## Notices

This information was developed for products and services offered in the U.S.A. IBM may not offer the products, services, or features discussed in this document in all countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing  
IBM Corporation  
North Castle Drive  
Armonk, NY 10504-1785  
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country/region or send inquiries, in writing, to:

IBM World Trade Asia Corporation  
Licensing  
2-31 Roppongi 3-chome, Minato-ku  
Tokyo 106-0032, Japan

**The following paragraph does not apply to the United Kingdom or any other country/region where such provisions are inconsistent with local law:**  
INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions; therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product, and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information that has been exchanged, should contact:

IBM Corporation  
J46A/G4  
555 Bailey Avenue  
San Jose, CA 95141-1003  
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems, and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements, or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious, and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

#### COPYRIGHT LICENSE:

This information contains sample application programs, in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM for the purposes of developing, using, marketing, or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. You may copy, modify, and distribute these sample programs in any form without payment to IBM for the purposes of developing, using, marketing, or distributing application programs conforming to IBM's application programming interfaces.

Each copy or any portion of these sample programs or any derivative work must include a copyright notice as follows:

## Contacting IBM

To contact IBM customer service in the United States or Canada, call 1-800-IBM-SERV (1-800-426-7378).

To learn about available service options, call one of the following numbers:

- In the United States: 1-888-426-4343
- In Canada: 1-800-465-9600

To locate an IBM office in your country or region, see the IBM Directory of Worldwide Contacts on the Web at [www.ibm.com/planetwide](http://www.ibm.com/planetwide).

---

## Product information

Information about DB2 Information Integrator is available by telephone or on the Web.

If you live in the United States, you can call one of the following numbers:

- To order products or to obtain general information: 1-800-IBM-CALL (1-800-426-2255)
- To order publications: 1-800-879-2755

On the Web, go to [www.ibm.com/software/data/integration/db2ii/support.html](http://www.ibm.com/software/data/integration/db2ii/support.html). This site contains the latest information about:

- The technical library
- Ordering books
- Client downloads
- Newsgroups
- Fix packs
- News
- Links to Web resources

## Comments on the documentation

Your feedback helps IBM to provide quality information. Please send any comments that you have about this book or other DB2 Information Integrator documentation. You can use any of the following methods to provide comments:

- Send your comments using the online readers' comment form at [www.ibm.com/software/data/rcf](http://www.ibm.com/software/data/rcf).
- Send your comments by e-mail to [comments@us.ibm.com](mailto:comments@us.ibm.com). Include the name of the product, the version number of the product, and the name and part number of the book (if applicable). If you are commenting on specific text, please include the location of the text (for example, a title, a table number, or a page number).
