

IBM System z Technology Summit

How to streamline your DB2
for zOS utility processing

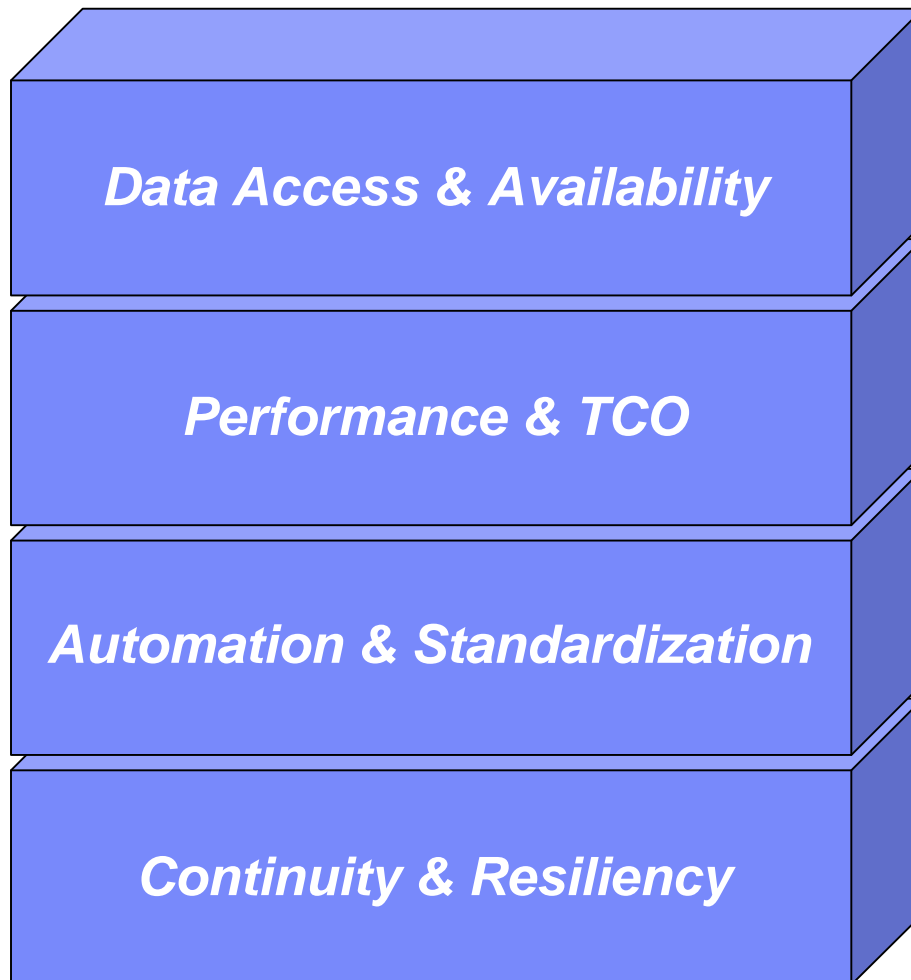

Topics

- **Trends in Database/Utility Management**
- **IBM's Investment in Utility Management**
 - New Products
 - New Features
 - Day 1 support for new releases of DB2 for z/OS
 - Combined technology of products
- **Utilities Discussed in Detail**
 - DB2 10 REORG Support
- **Detailed Examples**
 - Avoid REORGs Using the DB2 10 for z/OS Automation Tool Exceptions
 - New DB2 Utilities Enhancement Tool Utility Syntax Monitor feature
 - DB2 10 for z/OS Online REORG of LOBs Using DB2 Automation Tool
- **Questions**

Trends in Database/Utility Management

- Data growth puts pressure on IT infrastructure, SLAs, staff, and performance
- According to IDC, the amount of data is exploding. Structured data is growing 32% per year, unstructured data is growing 63% and replicated data is growing 49%. Companies are compelled to take the right steps to protect their valuable data and maintain high database availability
 - Average data growth per year is approximately 30%
 - Large critical application data growth rate is > 50%
- In the last 10 years the number of objects needing performance management has increased:
 - The number of objects that need management has increased 3X
 - the number of objects per DBA has increased 4X
- Focus on reducing CPU and elapsed time
- Running multiple databases on a server has become the norm
- 90% of customers have more than one DBMS → Resource/skill issues, consistent administration efforts, increased cost in administration, greater need to automate routine operations

IBM Investment Areas for Managing Utilities

▪ **Data Access & Availability**

- Fast retrieval of information
- Reducing the amount of down time or minimizing batch window for maintenance

▪ **Performance & TCO**

- Meeting or exceeding SLA's and/or chargeback
- Reducing CPU and ET to achieve lowest TCO

▪ **Automation & Standardization**

- Reducing repeated tasks, manual effort and error
- Ensuring consistency at company level

▪ **Continuity & Resiliency**

- Ensuring data integrity
- Ensuring Day-1 support of new versions of DB2 for z/OS

How is the investment realized by IBM in the Utility Management space?

- **New Products that take advantage of existing investment to provide options for those customers with special needs**
 - Ex: DB2 Sort for z/OS
- **New features in existing products that address pain points for customers**
 - Ex: Utility Syntax Monitor in DB2 Utilities Enhancement Tool
- **Day 1 support for new releases of DB2 for z/OS**
 - Ex: DB2 10 for z/OS
- **Combining strengths of existing products to take advantage of new features**
 - Ex: REORG enhancements with Automation Tool
 - Ex: LOAD Presort with DB2 Utilities Enhancement Tool and DB2 Sort

DB2 Sort for z/OS v1.1 – GA September 24th, 2010

- DB2 Sort provides high speed utility sort processing for data stored in DB2 for z/OS. It improves sort performance while optimizing overall system efficiency by exploiting the advanced facilities of the z/OS operating system and System z.
- DB2 Sort leverages the strengths of the System z platform, DB2 for z/OS and the DB2 Utilities Suite to drive:
 - Significant savings in elapsed time and CPU during utility sort processing, especially LOAD, REORG and RUNSTATS
 - Relief from application constraints of large volumes of data in highly-transactional workloads performing numerous insert, update and delete operations against DB2 for z/OS databases
 - Continued commitment from IBM to deliver DB2 solutions to provide the highest level of ROI
- DB2 Sort provides an alternative, high performance sort engine that can be utilized by the DB2 Utilities

Performance

- Customers using DB2 Sort V1.1* may see:
 - Up to 30% in reduction of elapsed time
 - Up to 50% reduction of CPU
 - Up to 30% zIIP offload of remaining CPU

- IBM DB2 Utilities where you'll see performance benefits
 - LOAD, REORG, RUNSTATS, REBUILD INDEX, CHECK INDEX and CHECK DATA

- Workloads where there is more likely to be a benefit from utility sort processing and DB2 Sort V1.1, such as:
 - Highly-transactional workloads performing lots of insert, update, delete operations requiring RUNSTATS and REORG
 - Applications such as data warehousing applications that are performing frequent or large volumes of loading data requiring LOAD and REBUILD INDEX

**Customer results may vary. Results based on analysis done at SVL lab*

Benefits of DB2 Sort v1.1

- Will provide relief if you
 - Have large amounts of data
 - Have utility batch window constraints
 - Have to execute utility maintenance during peak business hours that may affect elapsed time and/or CPU
 - Have Sort Capacity Exceeded problems running utilities
 - Have purchased utilities from ISVs, requiring
 - Paying for multiple sets of utilities
 - Managing multiple sets of utilities
- Once installed and enabled, is used by all utility sorting
- Requires no changes to utility jobs
- Improves/reduces resource consumption for single and parallel sorts
- Can result in higher degree of utility parallelism
- Gives greater resilience with respect to inaccurate sort estimates

Monitoring Utility Syntax

- **DB2 Utilities Enhancement Tool provides new Utility Syntax Monitor**
 - Can establish and enforce company-wide utility syntax practices
 - IT staff can control who executes which IBM DB2 utilities with what parameters on which objects
 - Can also purposely fail utility if rules are violated
 - Supports DB2 V8, DB2 9 and DB2 10 Utility Syntax

- **Delivered via PTF**
 - UK60173 for all versions of DB2 for z/OS

Support for DB2 10 for z/OS and More!

- **All DB2 Utilities and Utility Management tools provided Day 1 DB2 10 for z/OS support**

- DB2 Utilities Suite
- High Performance Unload for DB2
- DB2 Automation Tool
- DB2 Sort
- DB2 Utilities Enhancement Tool

- **Example: DB2 10 support of FlashCopy support in COPY, RECOVER, REORG, LOAD and REBUILD INDEX**

- Ex: Can now run COPY utility online, create an image copy data set to be transaction-consistent image copy data set w/ NO application outage!
 - Keeps DB2 applications available and reduces CPU

Did you know?

▪ Hash support in DB2 10 enhanced by support in Utilities/Utility Management Tool

- REORG immediately after table converted to/out of hash format
- Maximizing DB2 Sort and DB2 Utilities Enhancement Tool (UET) by using PRESORT option in LOAD utility (via APAR PM22685)
 - Ability to presort data based on hash key
 - Results in much faster LOAD using fewer system resources
 - Improves application availability

▪ REORG Force Option and DB2 UET

- DB2 UET can add parameter to your utility via the Utility Syntax Monitor to ensure that online REORGs are always run with Force Option
- Enhances online REORG use to increase application availability
- Many customers avoided using online REORG because they could not obtain the necessary drain to process writers in a timely manner. This enhancement in the REORG utility allows the cancellation of the writer just before the switch phase.

DB2 10 for z/OS Utilities

DB2 10 for z/OS Utility Support

- **Topics for discussion**
- **Utility support of core DB2 10 for z/OS function:**
 - Catalog restructuring
 - Online schema
 - Inline LOBs
 - Hash access
- **REORG - - Lots of new enhancements!**
- **ALSO significant enhancements (not discussed today)**
 - LOAD/UNLOAD
 - COPY
 - RECOVER
 - RUNSTATS
 - CHECK

Catalog restructuring

- **Reduce contention for DDL/BIND/PREPARE**
- **Eliminate 64Gb limit on SPT01**
- **Eliminate hash chains & contention on DBD01 hash anchors**
- **Performed by REORG during ENFM**
- **Enables REORG SHRLEVEL CHANGE for complete catalog & directory**
- **Enables row level locking for further concurrency**

Online Schema

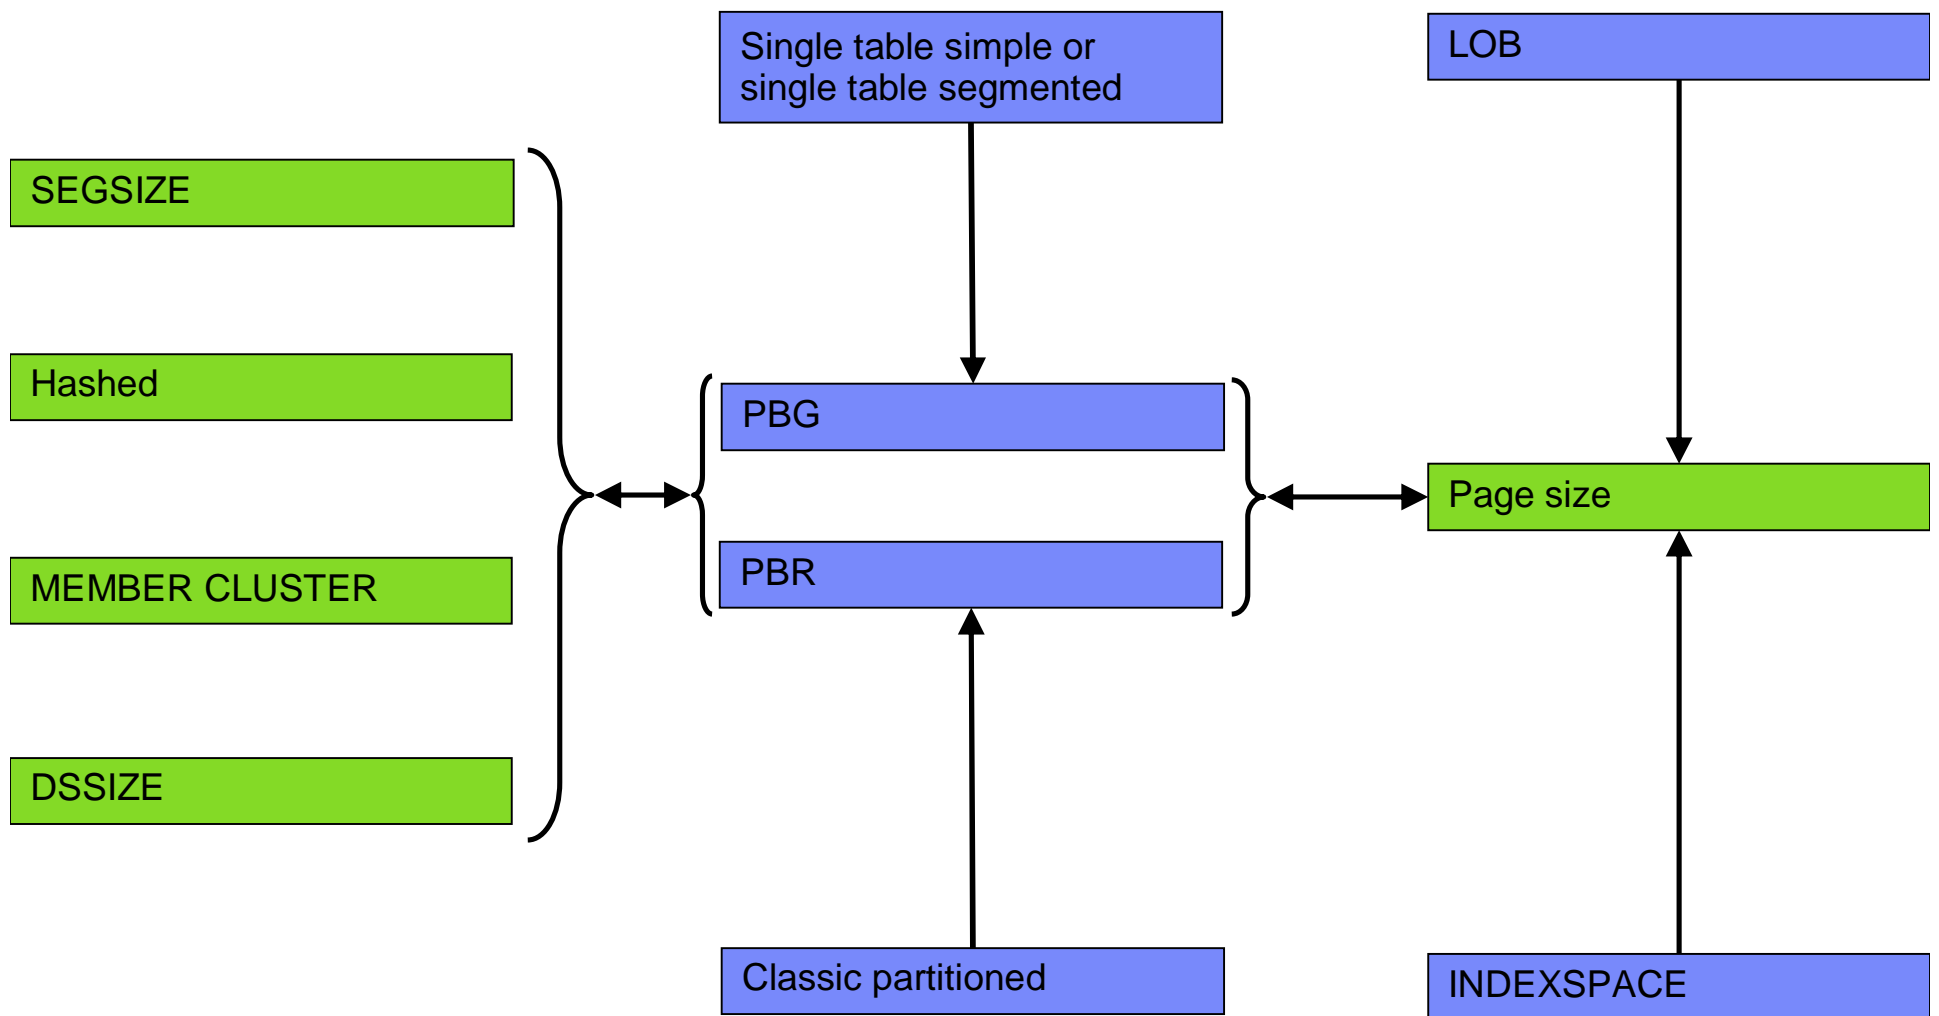

■ **V9:**

- Change of table - or index space attributes can require an outage
 - Unload data
 - Drop table space
 - Recreate table space, tables, indexes, views
 - Re-establish authorization & RI
 - Reload data
 - Undo of changes requires same process

■ **V10:**

- Execute ALTER statement
- Changes are cached and materialized on next table/index space-level REORG
 - SHRLEVEL REFERENCE or CHANGE
 - LOAD REPLACE will not materialize
- Pending changes can be dropped
- Some restrictions exist
 - Mixing DDL
 - PIT recovery

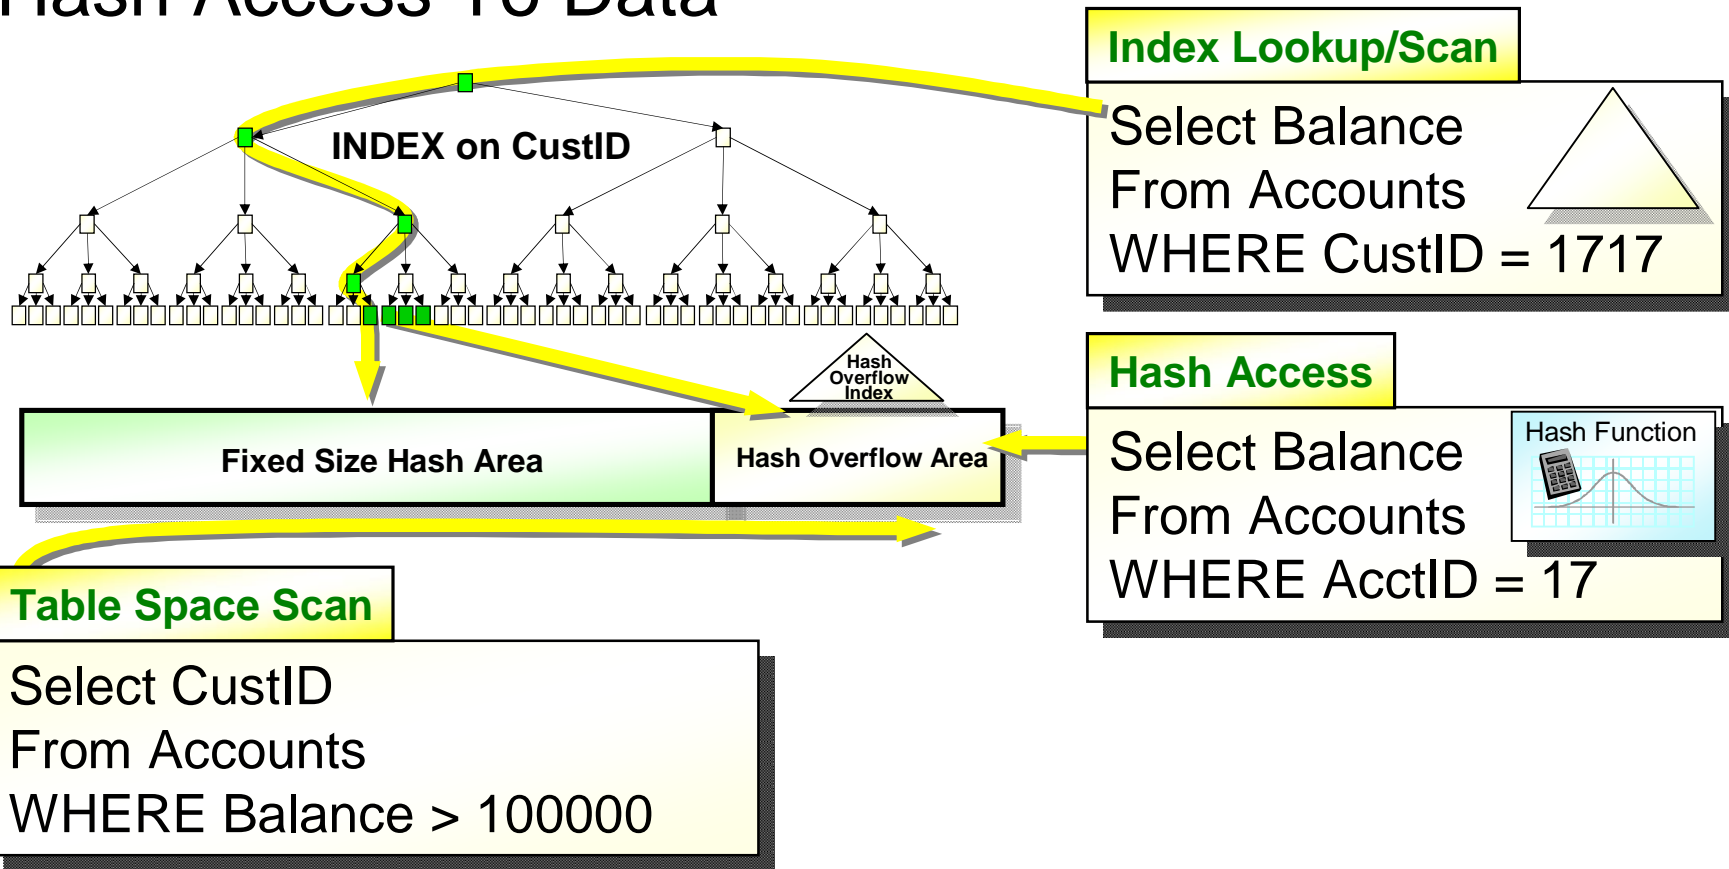

Online Schema – V10

Inline LOBs

- **Inline whole or portion of LOB with base row**
- **Improved performance for small LOBs**
- **Enables compression for inlined LOB data**
- **Immediate ALTER**
 - ALTER to increase size of inline portion sets AREO*
 - ALTER to decrease size of inline portion sets REORP
- **Requires REORG to inline existing LOB data**
 - SHRLEVEL REFERENCE supported today
 - Expect delivery of SHRLEVEL CHANGE via maintenance stream early 2011

Hash Access To Data

- **Hash Access** provides the ability to directly locate a row in a table without having to use an index
- **New AUTOESTSPACE** option on REORG to manage & size hash table spaces

REORG – improved availability & removed restrictions

- **Reduced need for REORG INDEX**
 - List prefetch of index leaf pages based on non-leaf information for range scans
- **Improved performance for part-level REORG with NPIs & REORG INDEX**
 - Index list prefetch results in up to 60% elapsed time reduction
- **Reduced need for REORG with compress on insert**
- **New REORGCLUSTERSENS RTS column**
 - If no clustering-sensitive queries then avoid REORG to restore clustering
 - DSNACCOX enhanced
- **REORG SHRLEVEL CHANGE for all cat/dir page sets**
- **REORG SHRLEVEL REFERENCE|CHANGE to remove REORP**

REORG – improved availability & removed restrictions

▪ **REORG SHRLEVEL CHANGE for LOBs**

- Independent of whether LOBs are LOG NO or LOG YES
- No mapping table required
- Base table space must be LOGGED

▪ **REORG FORCE option to cancel blocking threads**

- FORCE ALL or just READERS
- Same process as –CANCEL THREAD so requires thread to be active in DB2 for it to be cancelled
- Threads cancelled on final drain

▪ **Reduced application outage for REORG with inline stats**

- Update catalog after dedrain

▪ **REORG support for multiple part ranges**

- REORG support retrofitted to V9 in PK87762
 - LISTDEF support is not retrofitted

REORG – improved availability & removed restrictions

▪ New **AUX** keyword on REORG of partitioned base for improved LOB handling

- Permit rows to flow between partitions
- Allows REORG REBALANCE with LOB columns
- Allows ALTER of LIMITKEY with LOB columns
- Permits move of rows between parts on PBG REORG
- Permits deletion of corresponding LOBs on REORG DISCARD
- Default is AUX NO unless LOB objects required to complete REORG
- No XML column support for classic partitioned or PBR
- No mapping table change

DB2 Automation Tool for z/OS

REORG AVOIDANCE WITH DB2 10 for z/OS EXCEPTIONS

Avoid REORGs with DB2 10 for z/OS Automation Tool Exceptions

- **The best REORG is one you don't have to run!**
- **Only REORG what needs it**
 - Which applications' performance are being impacted?
 - What is the cause of frequent REORGs?
- **Re-evaluate thresholds used to determine when REORGs are done**
 - New Exceptions within DB2 Automation Tool assist DBAs in evaluation process
- **Re-evaluate design of database objects**
 - Is your index efficient, and is it being used?
 - Would a hash table be better than an IX?

RUNSTATS versus REALTIME STATS

- **RUNSTATS was used for two things:**
 - To update information for the optimizer
 - To update the DBA on the status of an object
- **REALTIMESTATS helps you instantly know the status of an object, eliminating the need to run RUNSTATS**
- **REALTIMESTATS Exceptions in DB2 Automation Tool include:**
 - DAYS_SINCE_HASH
 - DATAISMORETHANHASH
 - UNCLUST_INS
 - UNCLUST_INS_PCT
 - CLUSTERSENS
 - HASHACCESS
 - SCANACCESS
 - INDEXACCESS

Exception Options to Determine a REORG

▪ **DAYS_SINCE_HASH**

- Number of days since hash access was used for SELECT|FETCH|UPDATE|DELETE or used to enforce RI constraints.

▪ **DATAISMORETHANHASH**

- Trigger Exception if the DATASIZE is larger than the HASHSPACE for a HASH Organized TS.

▪ **UNCLUST_INS**

- The number of inserted records since the last REORG or LOAD REPLACE that were placed more than 16 pages from the ideal candidate page with respect to the clustering IX.

▪ **UNCLUST_INS_PCT**

- Percentage of Inserted rows placed > 16 pages away from the ideal candidate page with respect to the clustering IX.

Exception Options to Determine a REORG

▪ **CLUSTERSENS**

- The number of times data has been read by SQL statements sensitive to the clustering sequence of the data since the last REORG or LOAD REPLACE.

▪ **HASHACCESS**

- Number of times data was accessed using hash access since the last CREATE, LOAD REPLACE or REORG.

▪ **SCANACCESS**

- Number of times data was accessed using a TS scan for SELECT, FETCH, searched UPDATE, searched DELETE or used to enforce RI constraints since the last CREATE, LOAD REPLACE or REORG.

▪ **INDEXACCESS**

- The number of times the index was used for SELECT, FETCH, searched UPDATE, searched DELETE, or used to enforce RI constraints.

REORG Avoidance Example

```

```

REORG Avoidance Example

- **Sample object AUOVRDB.AUODBASE needs one of the following:**
 - Should the index be changed to be more efficient?
 - Should the index be REORG'd?
 - Should I use a hash table instead?
- **Change Exception values and re-build Job Profile**
- **Select different Exceptions and re-build Job Profile**
- **Evaluate the objects in TRIGGERS DD in job output to make an intelligent decision on how to avoid REORGs**

Only REORG What Needs It

- **Let DB2 Automation Tool intelligently select objects to include in REORG JCL**

- **Use DB2 Automation Tool's 180+ Exceptions**
 - RTS Exceptions
 - DB2 Catalog Exceptions
 - MVS Catalog Exceptions

- **Optionally evaluate indexes independently of the tablespace**

DB2 Utilities Enhancement Tool for z/C DB2 Sort for z/OS

Using the Utility Syntax Monitor

DB2 Utilities Enhancement Tool – **New!** Utility Monitor

- **New with UK60173: Changes utility syntax at run-time based on Policy rules**
- **Passively enforce company IT policies**
- **Enables users to:**
 - ADD parameters that are not present in the utility syntax
 - REMOVE parameters that are present and should not be
 - SUBSTITUTE given parameters with different parameters
 - FAIL the utility based on object name, or user ID
- **Each action is logged or JOURNALED in UET's tables for future reference**
 - Audit who is doing what
 - See what syntax was originally specified
 - See what the original syntax was changed to

DB2 Utilities Enhancement Tool

- **New Policy Rules used to change utility syntax**
- **Optionally monitor utility syntax and/or cancel threads with the same Policy rules**
 - Default action is to cancel active threads
 - Monitor utility syntax with specific Policy parameters
- **Example: Add UET's PRESORT parameter to a LOAD utility and use DB2 Sort**
 - Utility Monitor will ADD parameter PRESORT to LOAD syntax
 - Use DB2 Sort to sort SYSREC data prior to LOAD utility running
 - Improves elapsed time, and reduces CPU consumption

Utility Monitor Policy Rules

LOAD Syntax PRESORT Performance Example

- 1,000 Partition Tablespace
- 10,000 rows of data
- Single SYSREC
- One Reader Task

When using UET's PRESORT parameter and DB2 Sort:

45% Elapsed Time Savings
76% CPU Savings

Partitions	Rows per Part	Elapsed Time	Total CPU	
1,000	10,000	09:41.70	01:07.80	Data in key order without UET
1,000	10,000	20:22.96	06:44.30	Data in random order without UET
1,000	10,000	11:11.08	01:35.17	Data in random order with UET PRESORT

The Utility Monitor and DB2 Sort

- **New with DB2 Utilities Enhancement Tool's PTF UK60173:**
 - Utility Monitor changes utility syntax at run-time based on Policy rules
- **Passively enforce company IT policies**
 - ADD parameters that are not present in the utility syntax
 - REMOVE parameters that are present and should not be
 - SUBSTITUTE given parameters with different parameters
 - FAIL the utility based on object name, or user ID
- **DB2 Sort is fully supported in the DB2 Utilities Enhancement Tool**

DB2 Automation Tool for z/OS v3.1

**Managing complexity made easy – LOBs and
REORG**

REORG LOBs Online with DB2 Automation Tool

- **What a great convenience!**
- **Reduce application downtime by reorganizing LOBs online**
- **Wildcard object names in Object Profiles without the worry of inadvertently including LOB objects**
 - No longer exclude specific LOB objects from Object Profile
 - No longer exclude LOBs using Exceptions Profile to exclude them
- **Can REORG SHRLEVEL CHANGE LOB table space:**
 - Independent of whether LOBs are LOG NO or LOG YES
 - No mapping table required
 - Base table space must be LOGGED

REORG LOBs Online with DB2 Automation Tool

- **Allow DB2 Automation Tool to generate JCL for both LOB and Non-LOB objects**
- **Wildcard object names in Object Profiles without the worry of inadvertently including LOB objects**
 - No longer exclude specific LOB objects from Object Profile
 - No longer exclude LOBs using Exceptions Profile to exclude them
- **DB2 Automation Tool will generate appropriate JCL for each kind of object**
- **Some restrictions apply:**
 - LOG NO is required for SHRLEVEL REF
 - Mapping tables are ignored for LOB tablespaces
 - SHRLEVEL REF requires inline image copy
