Extend the key features of IBM Lotus Quickr to BlackBerry smartphone users

Document Based Collaboration on BlackBerry smartphones

The BlackBerry Client for IBM Lotus Quickr delivers highly secure content viewing and sharing, and folder creation to BlackBerry smartphone users.

Navigate folders and files – View, sort and filter content to locate needed files, and mark frequently used contents as favorites for quick access.

Create and view content – Set up folders, and upload files. View details such as author, date modified and created, and preview documents before downloading.

Check out, edit, check-in – Version control keeps editing in sync even when users are out of the office.

Easy to use. Easy to share.

The BlackBerry Client for IBM Lotus Quickr encourages users to participate in document based collaboration.

Simplified and intuitive user experience

- Built as a BlackBerry application means faster access to information. There's no need to launch the browser and log in, and no time spent waiting for web pages to render.
- Tight integration with core BlackBerry smartphone features and applications such as Email, and Documents To Go®. For example, easily email colleagues links to files, contact document authors without leaving the Quickr application, and open downloaded documents with Documents To Go.

Multiple language support

- The BlackBerry Client for IBM Lotus Quickr 1.1 supports English, French, Italian, German, Spanish, and Brazilian Portuguese allowing users to collaborate in their preferred language

Rapid adoption with the "Tell A Friend" feature

- BlackBerry users can send a link, and invite team members and colleagues to download and install the BlackBerry Client for IBM Lotus Quickr.

Highly Secure and Manageable for IT

Organizations can leverage the existing BlackBerry® Enterprise Solution, plus gain additional reporting and data optimization with the BlackBerry® Social Networking Application Proxy.

Information protection

- Existing permissions for IBM Lotus Quickr are respected, and shared content is only available to those who have access.
- The advanced security features of the BlackBerry® Enterprise Server employ high encryption standards to help protect intellectual property.

Managed from the BlackBerry Enterprise Server

- IT can enable or disable the "Tell A Friend" feature, or wirelessly push the application to users.
- Implement IT policies and set application permissions.

BlackBerry Social Networking Application Proxy

- Designed to optimize the data sent from IBM Lotus Quickr to BlackBerry smartphones for improved performance.
- Tracks which BlackBerry smartphones have accessed IBM Lotus Quickr and displays the services used.

Technical system requirements*

IBM® Lotus® Quickr™
IBM Lotus Quickr 8.1.1 (Java® Enterprise Edition) or
IBM Lotus Quickr 8.2 (Domino)

BlackBerry Enterprise Server
- BlackBerry® Enterprise Server for Microsoft® Exchange or for IBM® Lotus® Domino® version 4.1.6, 5.0, or 5.0.1

BlackBerry Social Networking Application Proxy server
- Separate server recommended.
- Windows Server® 2003 (32-bit) with Service Pack 2 OR Windows Server® 2008 (32-bit and 64-bit)
- The BlackBerry Social Networking Application Proxy and the IBM Lotus Quickr server should be located on the same LAN to help improve performance

BlackBerry smartphones**

BlackBerry® Curve™ Series	BlackBerry® Storm™ Series
BlackBerry® 8800 Series	BlackBerry® Tour™ smartphone
BlackBerry® Bold™ Series
