Abstract

This document covers key differences between IBM®WebSphere® Application Server and Oracle WebLogic Server. While both products are of high quality and will perform well even in demanding mission-critical environments, there are still some differences in their efficiency and resulting total cost of ownership. In this document, we will briefly compare the following capabilities:

- Performance
- Administrative and management tools
- License and support costs
- Licensing policies
- Virtualization and cloud support
- Standards support
- Operating system and DBMS support
