Realistic Shape Optimizer : What is it ?

- **CATIA V5 Realistic Shape Optimizer (RSO) enables users to capture the actual shape resulting from simulations, or based on real-world tests of the product in operation.**
- **RSO assists users in answering key questions :**
 - Will my 3D product be the same when built ?
 - ◆ Optimize product definition
 - ◆ Connect simulation world to industrial design
 - Will my product still work under operation conditions ?
 - ◆ Check product interferences, clashes and kinematics under load conditions
 - Will my tooling fit product's shape and quality needs once built ?
 - ◆ Perform reverse analysis, reflecting physical, thermal and stress effects, to optimize tooling definition

Making virtual product closer to reality

RSO : When you need to...

■ Simulate a Mechanism under Operation Conditions :

- Check kinematics and interferences in Product by representing Parts deformation

Suspension part

CATIA V5 Generative Structural Analysis

How the part will look like when "in work"

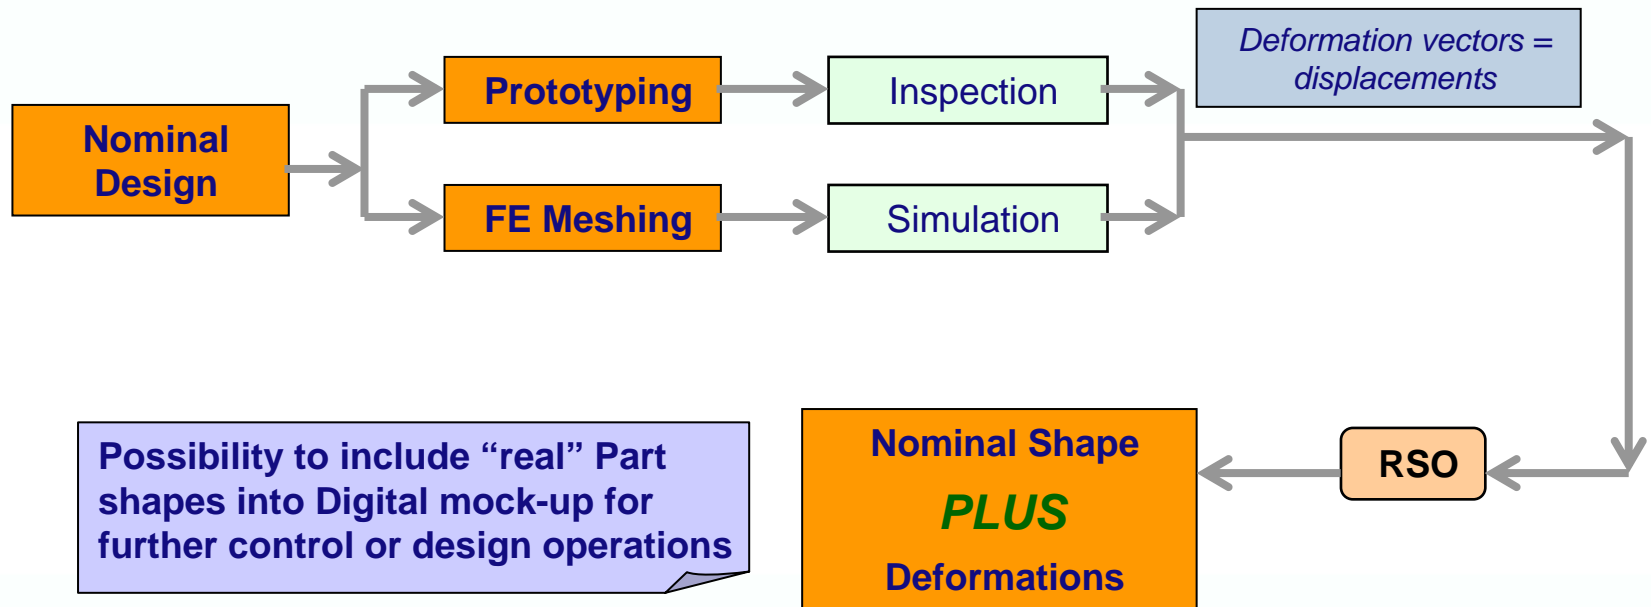

Optimize design
(body removal
operation)

Interferences

RSO : When you need to...

- Simulate a Mechanism under Operation Conditions

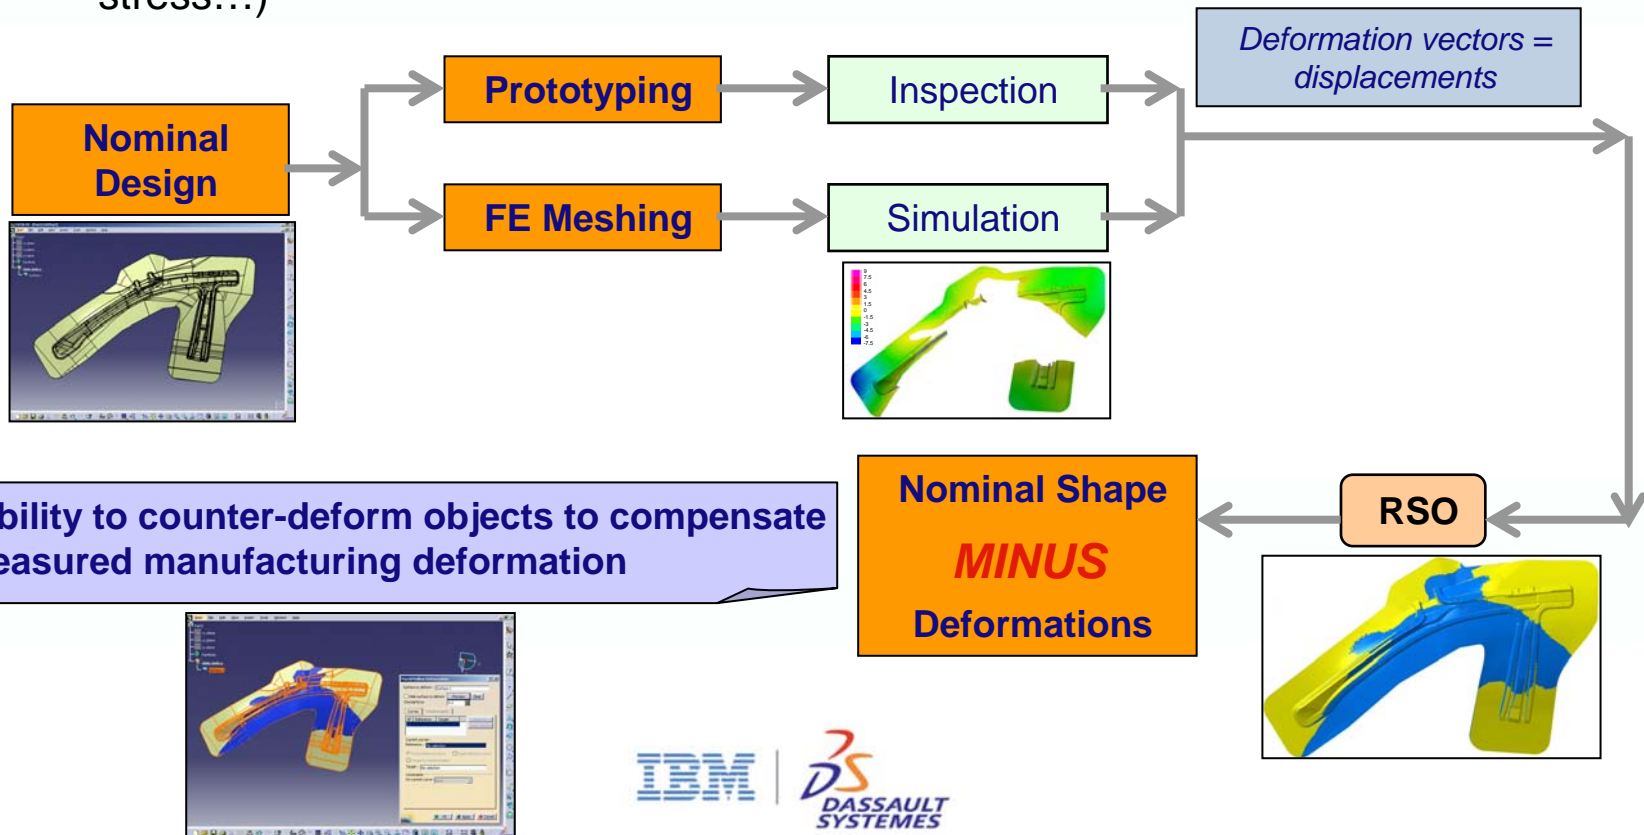

Design the “wrong” Tool
to get the “right” Part

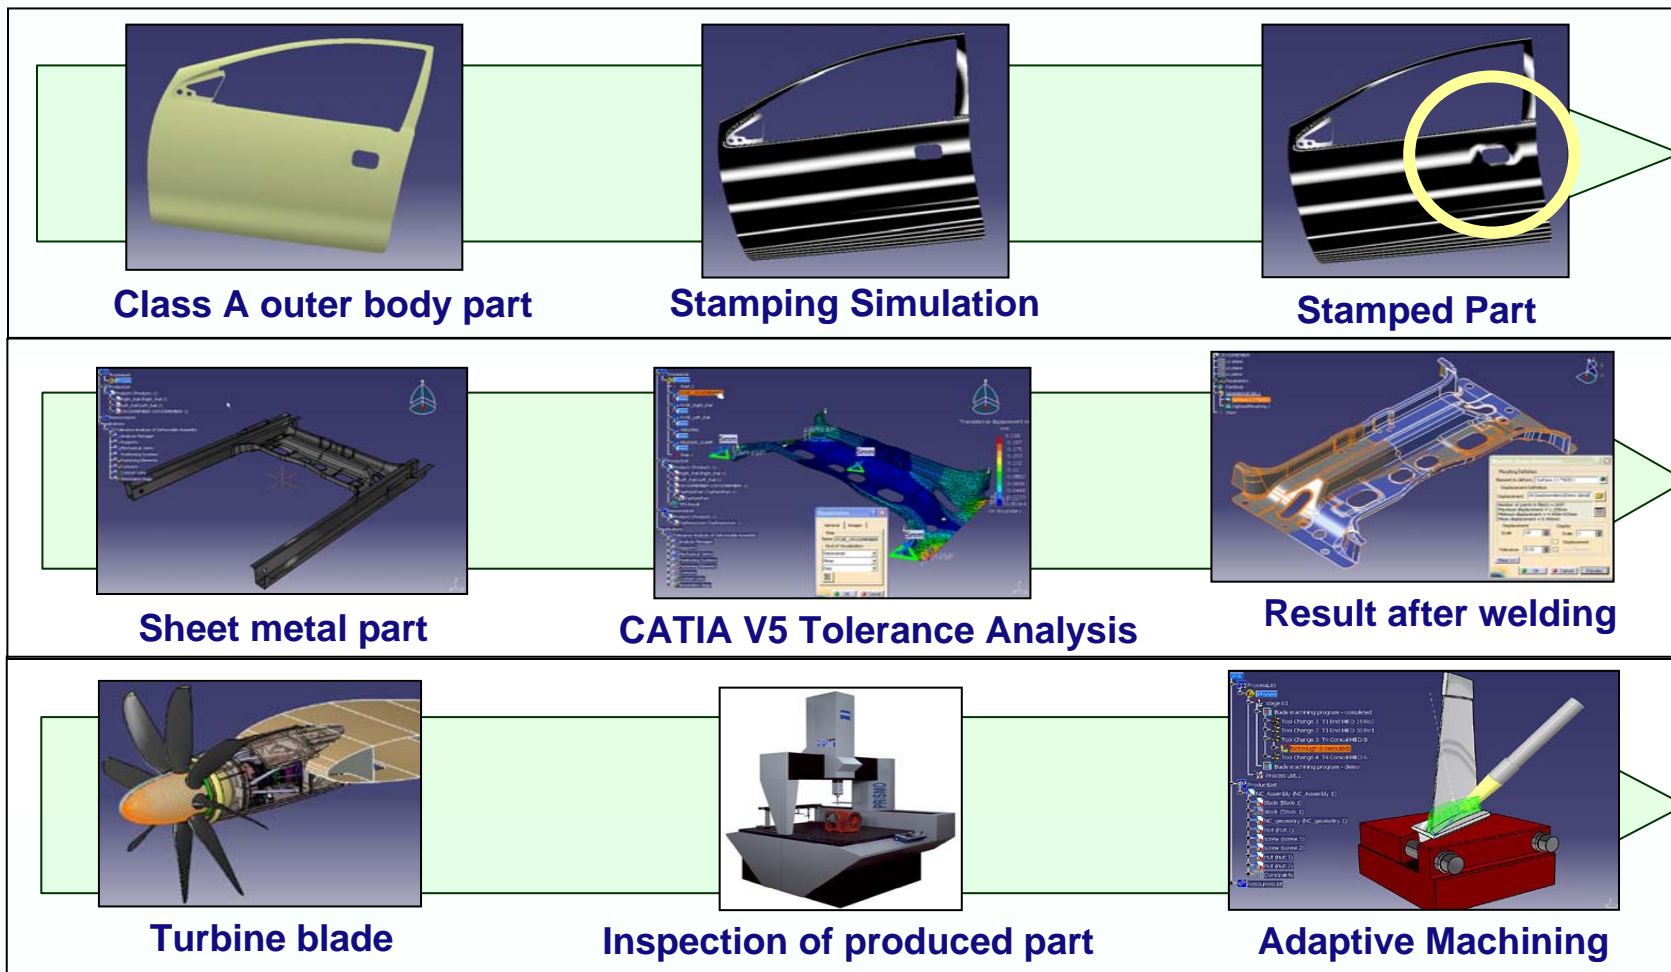

RSO : When you need to...

■ Assess Impact of Manufacturing Process on the Part :

- Part Design : optimize definition based on measurement “as built” compared to CAD initial definition
- Tooling Design (Casting, Die, Mold) : integrate counter-deformation by anticipating physical effects (stamping springback, thermal shrinkage, mechanical stress...)

Many Industrial Cases...

Nominal design

Analysis / Inspection

Part "as built"

Many Industrial Cases...

Turbine blade

FE Analysis (CAA partners)

RSO

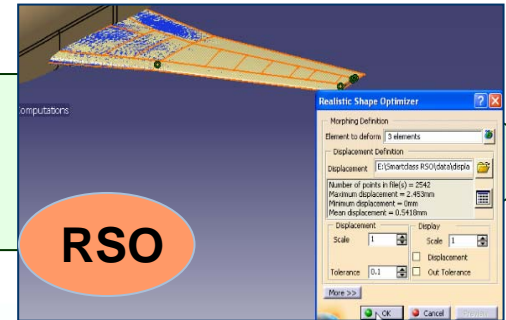

How the part will look like when "running"

Aircraft wing

CATIA V5 Generative Structural Analysis

RSO

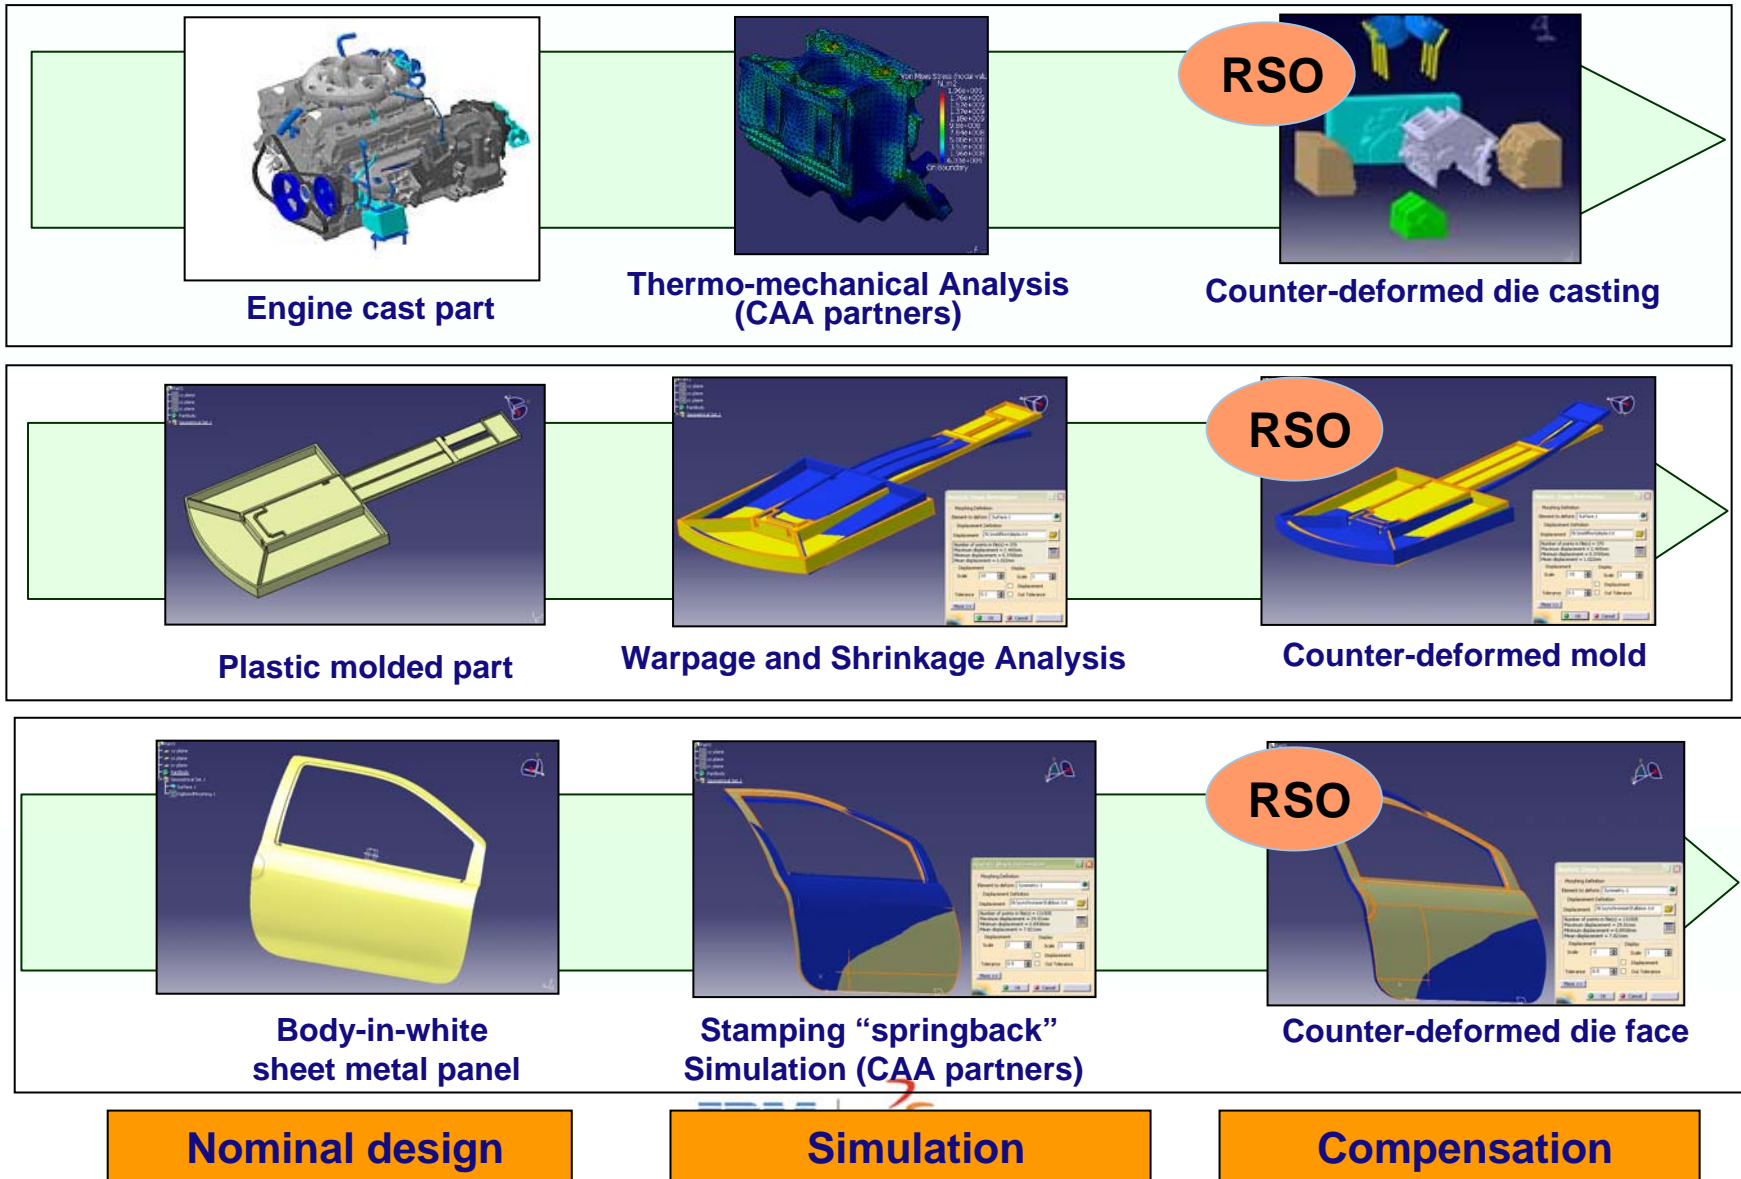

How the part will look like when "flying"

Nominal design

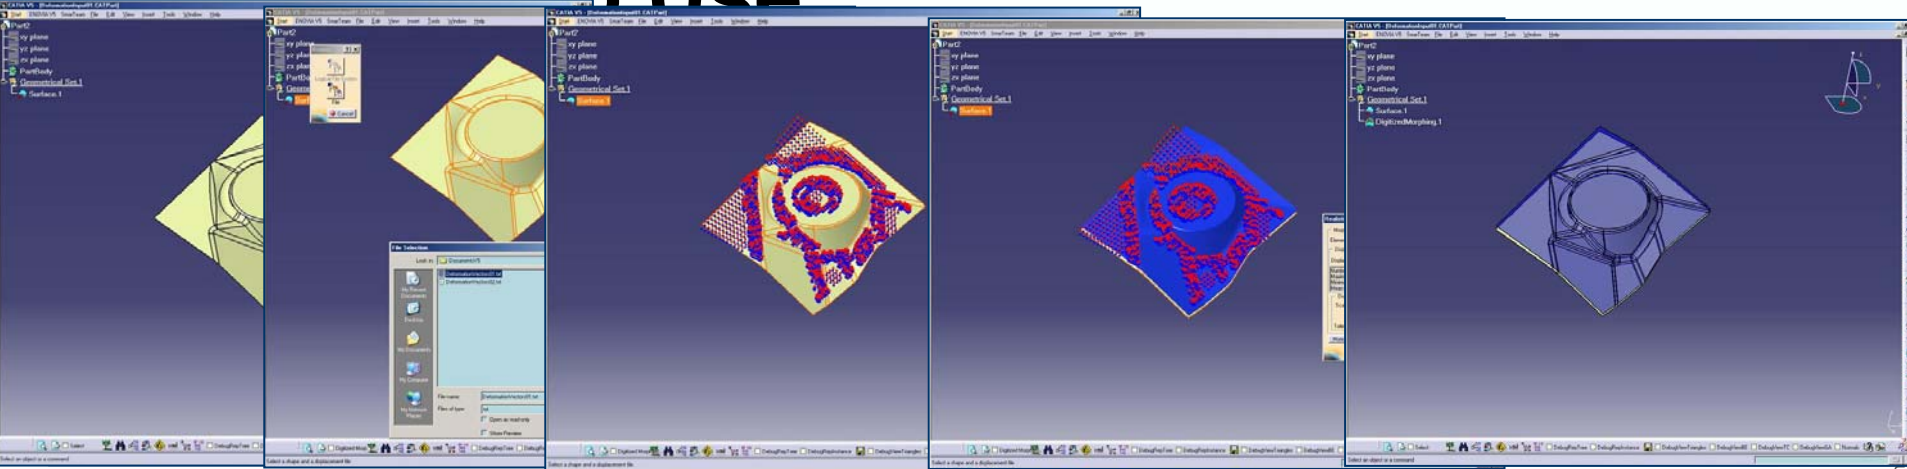

Analysis / Simulation

Part "at work"

Many Industrial Cases...

PSO - Easy to Use

Shape to be deformed

Input Points

Display Displacement Vectors

Scaling Parameter, Tolerance Polygonal preview

Compute resulting Feature

X,Y,Z,DX,DY,DZ

X,Y,Z,DX,DY,DZ

X,Y,Z,DX,DY,DZ

X,Y,Z,DX,DY,DZ

- Any ASCII File
- From CATIA V5 Analysis: Translational displacement

Let us Have a Closer Look ...

Demonstration : Generative Tooling Deformation

And the Benefits are...

- Avoid building expensive physical mock-up
- Integrate Manufacturing Constraints into Design
- Minimize Assembly Try-out
- Optimize Machining Time
- ...

→ Increase Quality

→ Save Money

Already many success stories in Automotive, Aerospace, Consumer Goods, ...

... Create your own !!!

Thank You !
