12-13 May 2016
12 May: 09:00 – 17:00
13 May: 09:00 – 14:00

IBM Client Center Technology Solutions
IBM Madrid
Santa Hortensia, 26-28
28002 Madrid

OVERVIEW
IBM® Security Guardium® is pleased to announce the official published release of the Proof of Technology (PoT) for Version 10 in Madrid from 12-13 May, free for Business Partners. The PoT consists of LAB Exercises with associated PowerPoint presentations. From this set, appropriate Lab exercises will be selected based on the customer needs. The general details are as follows.

OBJECTIVE
The objective of the IBM® Security Guardium® V10 PoT is to promote familiarity with its new and important features. This will be accomplished by working with a selected number of Lab exercises which will be in step-by-step workbook format. This gives clients a feel of how to use Guardium to safeguard critical enterprise information, to reduce operational costs by automating compliance processes, to simplify governance with centralized policies for heterogeneous infrastructures and to continuously monitor access changes to high-value databases. Some Labs will be optional and some will be read only. Each of the Labs will focus on a specific Guardium feature.

AGENDA
Welcome and Introduction
IBM Security Guardium Overview
- Lab 1 - Database Auto-Discovery
