Le Cloud selon CICS TS V5.1, épisode 1 : des applications

Steve Wallin

CICS Strategy and Design Manager

Service Agility, development scenario...

FASTER

"Hey Simon, I need to test my new version of the payroll **application**."

"Sure Abigail, you should get the latest payroll test **platform** from the repository, I'll send you a link."

"Thanks, I'll **deploy my app** onto that platform on the development plex later today."

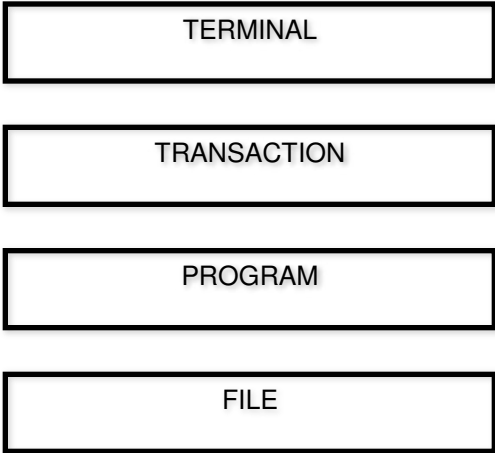

"That should be fine, just check with Oliver that the **policies** on the plex are going to be OK for your app's changes."

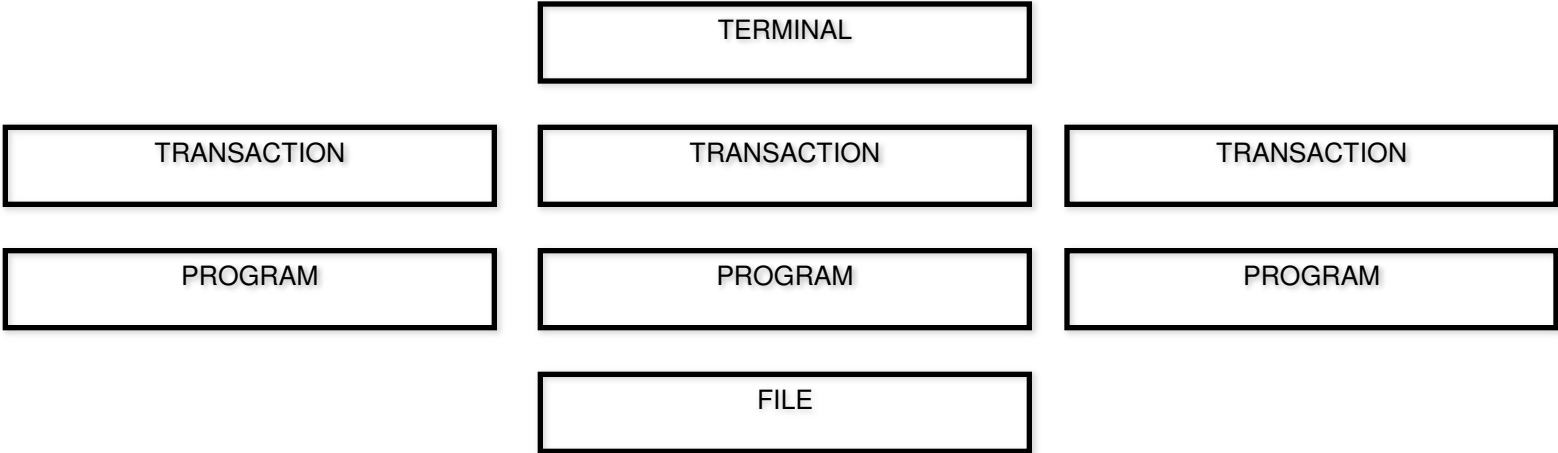

SIMPLER

Once upon a time things were simple

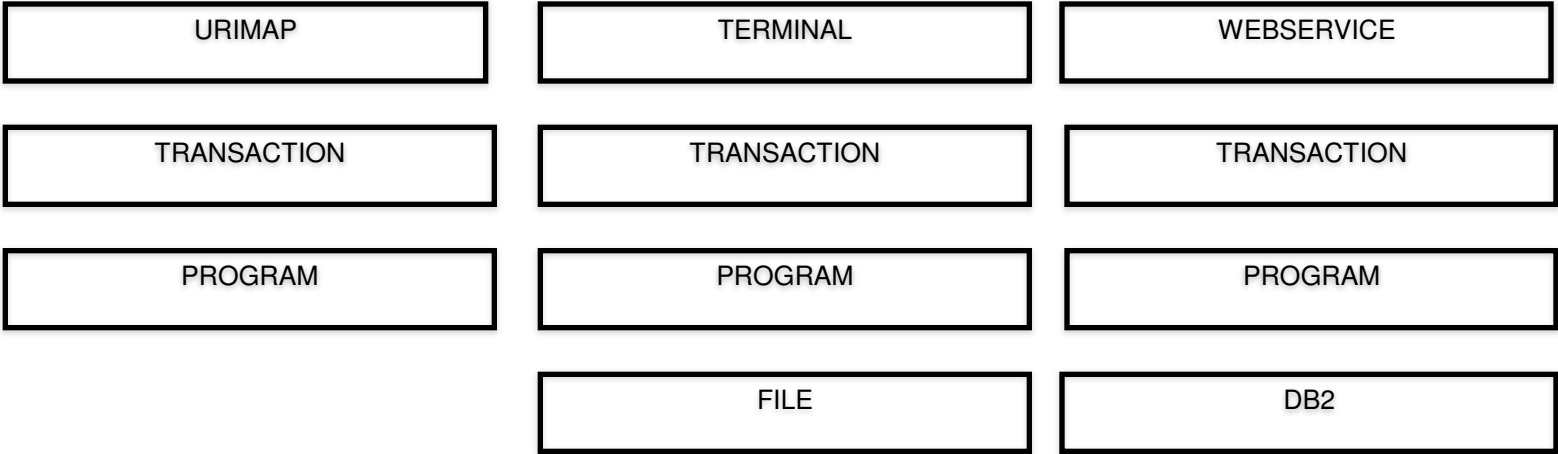

Once upon a time things were simple

Then capability was added

Then we started getting really clever

And what about those pesky* application developers

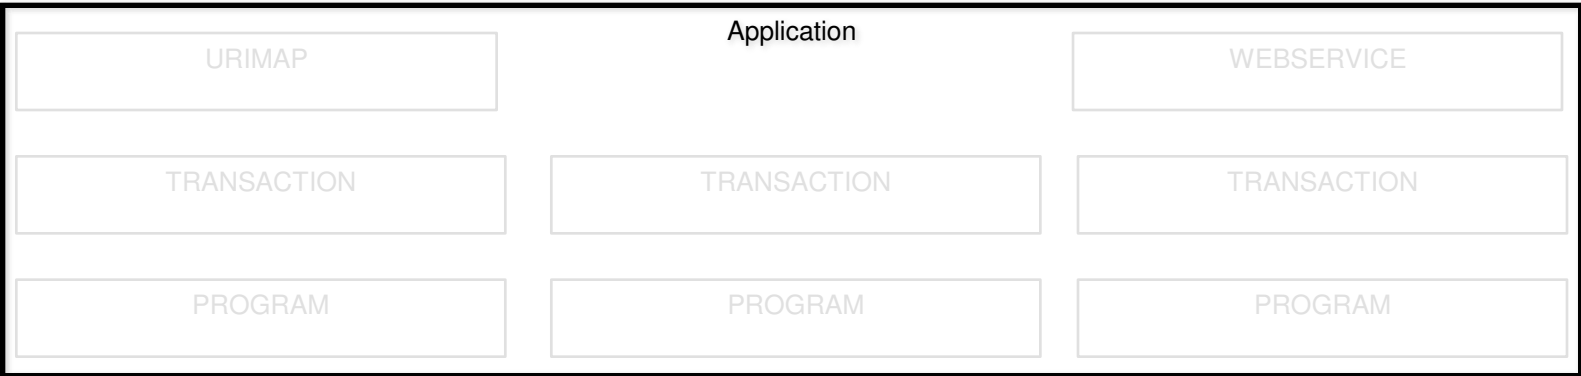

*Troublesome; annoying: *a pesky mosquito*

[http://http://www.thefreedictionary.com/pesky](http://www.thefreedictionary.com/pesky)

We need things to be simple again

Demonstration

Now back to those pesky* developers

*Troublesome; annoying: *a pesky mosquito*

[http://http://www.thefreedictionary.com/pesky](http://www.thefreedictionary.com/pesky)

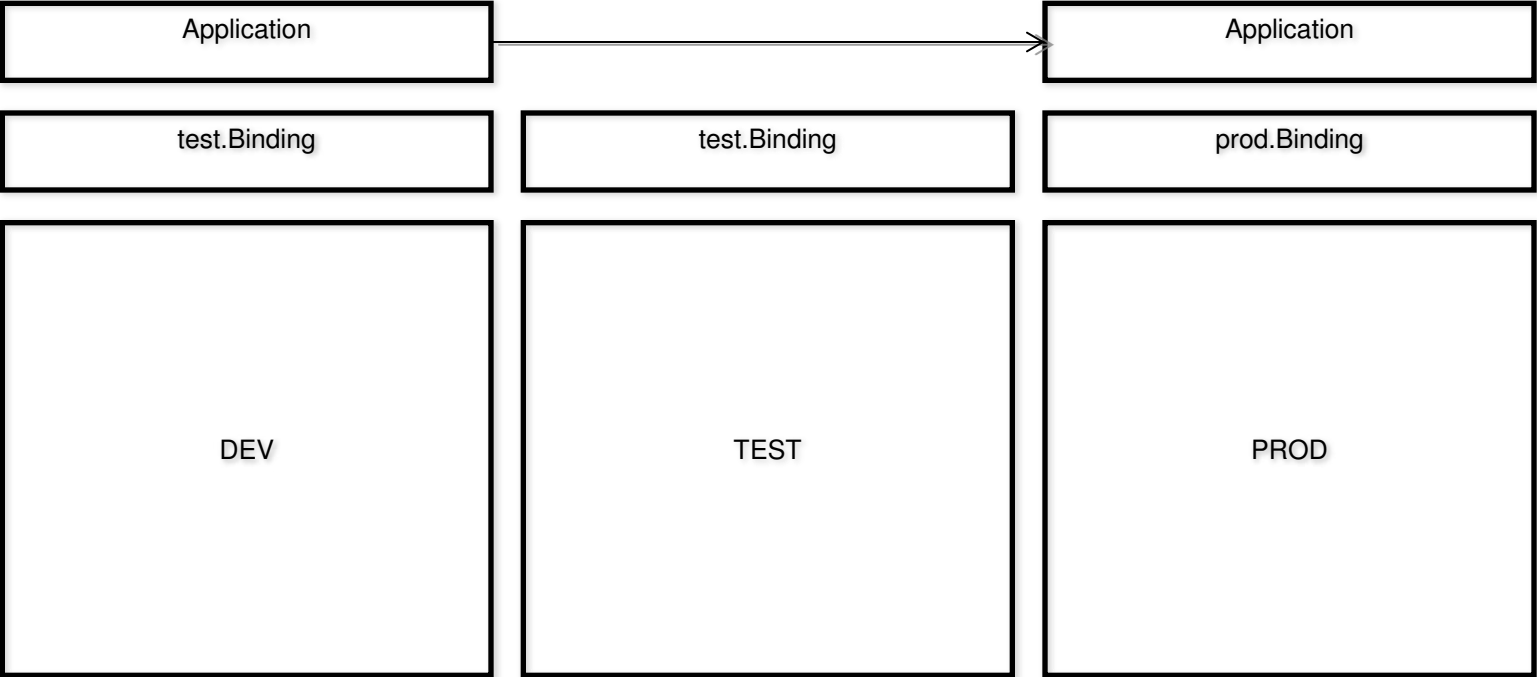

How do I move an Application from Development through Test to Production (without changing it)?

*Troublesome; annoying: *a pesky mosquito*

<http://www.thefreedictionary.com/pesky>

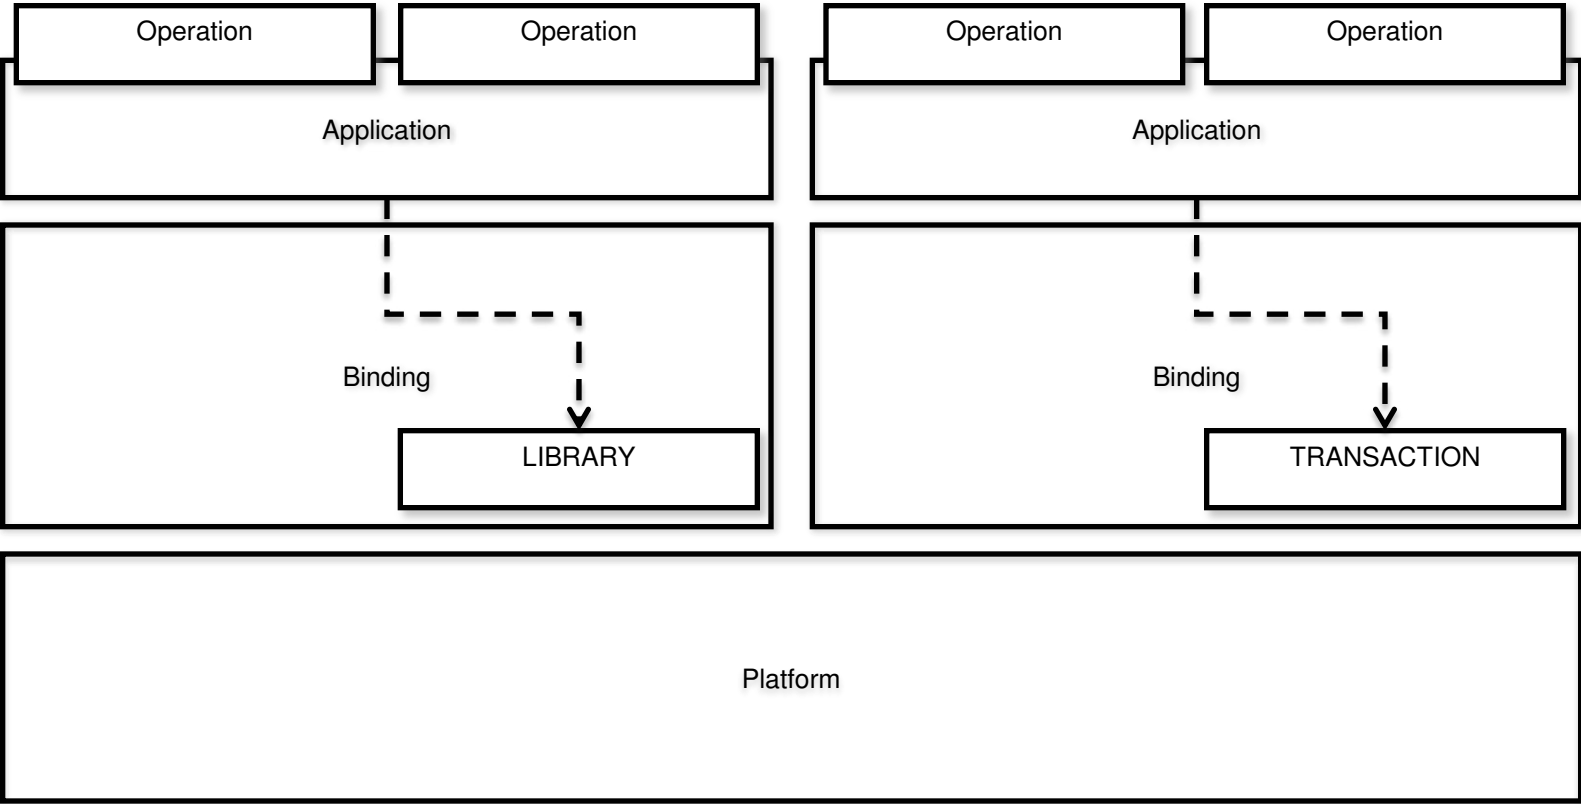

Answer: use Application Bindings

*Troublesome; annoying: *a pesky mosquito*

<http://www.thefreedictionary.com/pesky>

A Binding allows additional resource dependencies to be created

Application Binding

An Application Binding bundle

A collection of zero or more CICS bundles

A set of deployment rules

Life-cycle with Application as a single entity

Removes direct dependency between Application and Platform

Application Binding Package

Name

org.maw.banking.binding.Loans

Version

1.2.1

Binding

Application name & version

Platform name & version

Additional CICS bundles

Resources

Dependencies

Deployment Rules

CICS bundle -> region type

Getting started with cloud-style deployment

If you want to try out a cloud-style deployment for one of your existing CICS® applications, you can use this phased approach.

To try out the complete process first, using one of the sample applications supplied with CICS, you can follow through the scenario [Scenario: Deploying an application in a PaaS](#).

Stage 1: Create a platform

In CICS, you can use a Platform as a Service (PaaS) to deploy and manage Software as a Service (SaaS)-based CICS applications over multiple CICS regions. The platform provides services to the applications. In this stage of your cloud-style deployment, you can set up a platform including CICS regions where your existing CICS application is installed. To create a platform, you must be using CICSplex® SM to manage your CICS regions.

Use the CICS Explorer® or the CICS Explorer SDK to create a CICS Platform Bundle project and export it to zFS. The platform bundle is a type of management bundle that describes the platform.

Application Discovery using CICS IA

Discover entry points, resource and dependencies

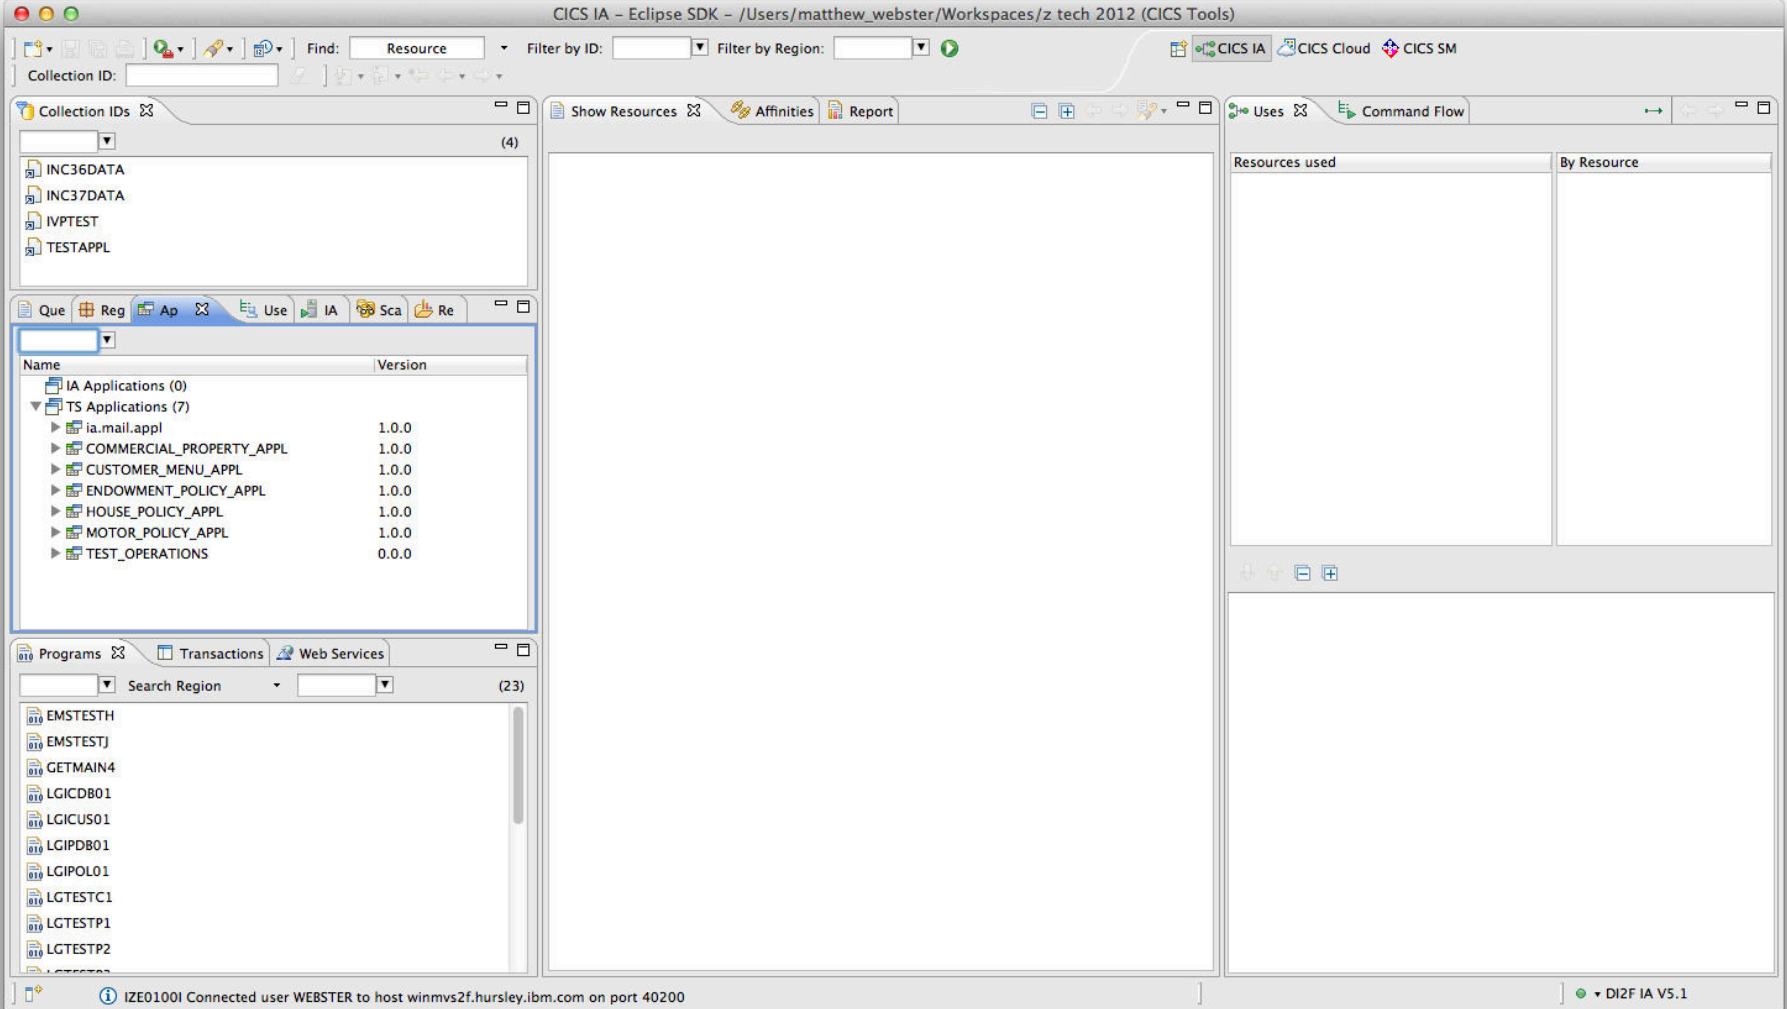

Collect information about Applications

Set temporary entry points

“Used by application”

“Collect by Application”

“CICS IA” Perspective

Summary

New Application resource simplifies development and deployment lifecycle

Application binding allows an application to be deployed to different Platforms without change

Application context simplifies management of runtime status and measurement of resource consumption
