

IBM Tivoli Analyzer for Lotus Domino

Manage the server workload and performance of your Lotus Domino environment

Autonomic Computing

- **Preconfigured health monitoring reports on key indicators of Domino server health**
- **Recommends and implements optimized server workload for Domino 6 servers**

A growing Lotus® Domino™ deployment can be a complex environment to manage. Unpredictable and inconsistent server load can result in erratically performing servers, causing loss of productivity for end users and negative impacts on business processes.

Using IBM® Tivoli® Analyzer for Lotus Domino, you can automatically monitor server performance indicators and balance the workload among existing servers. By observing trended server loads, administrators can check whether servers are being fully utilized and keep spikes in demand from resulting in performance degradation. Tivoli Analyzer for Lotus Domino can help you:

- **Maximize the performance of Domino servers**—*Tivoli Analyzer for Lotus Domino provides performance analysis and management tools that run within the Domino 6 Administrator. These tools are easy to install and configure, so administrators can get operational quickly.*
- **Address common challenges of Domino administration**—*Whether it is server monitoring, troubleshooting, predictive planning or modeling and implementing server workload balancing, Tivoli Analyzer for Lotus Domino can help administrators keep up with the demands of their client community.*
- **Lower the total cost of ownership of your Domino environment**—*Tivoli Analyzer for Lotus Domino provides administrators with information, insight, analysis and automated actions to help enhance server stability, match workload to server capacity and enhance server responsiveness.*

Tivoli Analyzer for Lotus Domino capabilities

Tivoli Analyzer for Lotus Domino has these key features:

- **Activity trends**—An innovative, powerful predictive analysis tool to graphically summarize the user and transaction trends of servers and Domino databases. This intuitive, logical interface makes it easy for you to define what information you want to be used and how to use it.
- **Workload balancing**—Models and implements optimized workloads for your Domino 6 servers based on the historical performance of transactions, database usage, disk space or any combination of a primary and secondary statistic.
- **Server health monitoring**—Gathering Domino and platform-specific performance data and analyzing key statistics provides a more complete view of individual server component performance. Drill-down information shows the current health of each component of each server. Short- and long-term recommendations for problems are provided based on the unique system characteristics and specifications of each server.
- **Ease of installation and usage**—Tivoli Analyzer for Lotus Domino installs into the Domino 6 Administrator client, using its user interface for ease of use and operation.

Tivoli Analyzer for Lotus Domino works with:

Lotus Domino 6 servers

Lotus Domino, Release 5 servers—can be included in the server health monitoring component
