

	Parameter	Findings	Any Implications	Associated Actions	
<b>I</b>	<b>What we know</b>				
1	Is our application Unicode based?				
2	What are the client-devices for the application?				
	Browsers (J2EE, DHTML)				
	PDA's, Smartphone				
	PoS terminals, Magnetic Card Readers, Smartcards				
3	Does the application have to be translated				
	What do users in Albonistan expect from applications?				
	How much documentation has to be translated?				
<b>II</b>	<b>What we don't know</b>				
1	What are the characteristics of the languages to be included				
	What languages are used in Albonistan?				
	What scripts do they use?				
	Do the characters have Unicode code-spaces?				
	What are the writing directions?				
	Are there any special layout and rendering considerations?				
	Are some of these languages more important or widely used than others and therefore need to be implemented first?				
	Do we need special fonts?				
	Are there any legacy encodings or fonts?				
	If there are, are the input methods available for				

	integration?				
	Do we already have people in the country that can help answer what we don't know?				
3	Browsers				
	PDA's, Smartphones				
	PoS and Magnetic Cards				
	Smartcards (with embedded chips)				
	Will the vendors provide technical support in Albonistan?				
4	What local conventions do we need to support?				
	What are the ISO 3166 country code for Albonistan				
	What is the ISO 639 codes for the languages				
	Is their locale information available in <a href="#">CLDR</a>				
	Are any of these implemented on the platforms?				
	Is there any usability issues related to the implementation of CLDR on the platforms?				
	Does the country have any IT standards and a policy for following them?				
	Do any of the CLDR fields require any specific handling in ONION?				
5	Translation requirements				
	Can our existing translation vendors handle the languages?				
	If not, do we know translation vendors in Albonistan who can				

	do the translation?				
6	Testing requirements				
	Are there any test-cases requiring changes in our test-scripts?				
	Can someone do the testing for us?				
	Do they have in-country experts?				
	Will experts be available for short-durations during upgrade cycles?				
	Are there any compliance and certification requirements?				
	Integration testing with the rest of ONION – are there any changes to the outcomes?				
7	Equipment requirements				
	Can we get the equipments we need locally? Do any export/import regulations apply?				
	What is the communication infrastructure like inside Albonistan? Wireline and Wireless				
	Can we easily get a broadband connection?				
	What does it imply about connectivity between Albonistan and our data center at Machu Picchu, Peru?				
	How about wireless data connection?				
7	Has anyone done this before?				
	Are there many applications for Albonistan?				
	What is their sophistication?				

	Will our users understand the context of the application?				
<b>III</b>	<b>Decisions to be made in conjunction with other departments</b>				
	What are the timelines?				
	Which functions need to be implemented first?				
	Which functions will be needed in the second wave?				
	And the third wave?				
	Where will the data-centers be?				
	Will we be putting a small data center there and send only the relevant data back to Machu Picchu, or will we control everything directly from there?
