

CICS Transaction Server V4.2

CICS TS V4.2 Java

Fraser Bohm - fbohm@uk.ibm.com,
CICS TS Development Lead

IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal at IBM's sole discretion.

Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision.

The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Agenda

- JVM Options in CICS TS 4.2
 - JVM Pool
 - JVMSERVER
- 64 Bit JVM Support
- OSGi for application management
- Java Web Services with Axis2

CICS Transaction Server for z/OS V4.2

Events

- System Events
- Assured Events
- Lifecycle Management

Management

- Transaction Tracking
- Workload Management
- Password Phrases

Java

- 64-bit Applications
- Multithreaded Server
- OSGi Management

Scalability

- More Threadsafe
- Optimised Threadsafe
- 64-bit Exploitation

Connectivity

- Axis2 Web Services
- Web Services Offload
- HTTP & IP Extensions

***new and enhanced
capability across five
major technology areas***

CICS Transaction Server for z/OS V4.2

Events

- Discover Faster
- React Quicker
- Compete Better

Management

- Understand More
- Control Better
- Manage Easier

Java

- Perform Better
- Manage Easier
- Innovate Quicker

Scalability

- Process More
- Lower Costs
- Perform Better

Connectivity

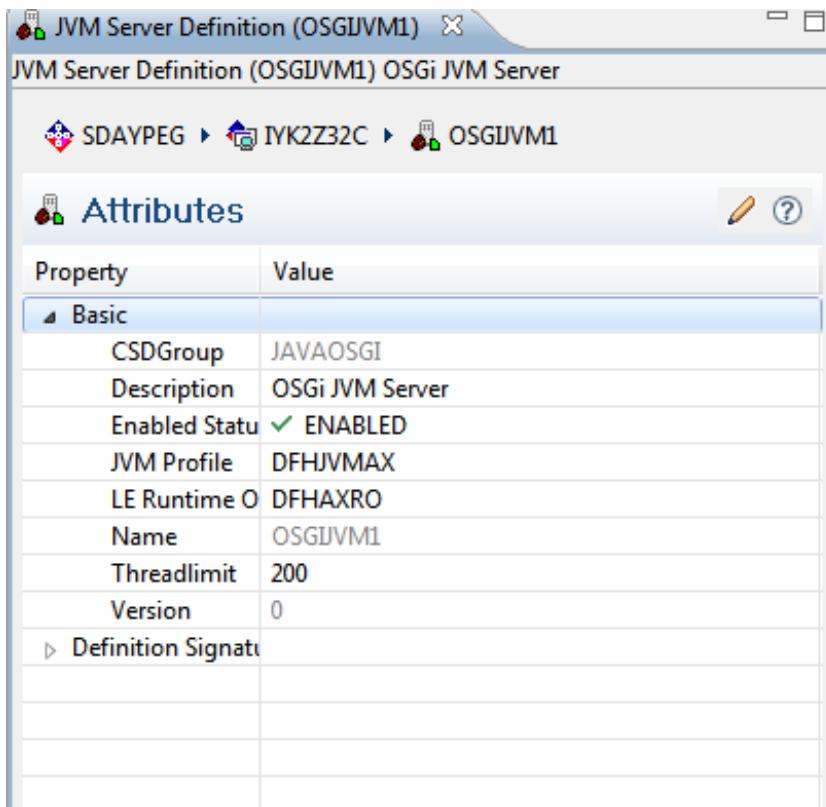

- Connect Easier
- Lower Costs
- Manage Better

*delivering a smarter
transaction processing
experience for everybody*

Overview of Java program support in CICS

- “Traditional” pooled JVMs
 - Multiple JVMs in a CICS region
 - Single-thread, program isolation
 - J8 (CICS Key) or J9 (User key) TCBs
 - MAXJVMTCBs in SIT
 - No JVM definition except in JVM profile via PROGRAM
 - EJB and CORBA support
- “New” JVMSERVERs
 - Supports JCICS interfaces for CICS Java programs
 - Can have multiple JVM Servers per region
 - Multi-threaded, up to 256 parallel tasks
 - Facilitates data-sharing between Java applications
 - Industry-standard
 - T8 TCBs
 - JVMSERVER and PROGRAM definitions required
 - Requires deployment as OSGi bundle within a CICS BUNDLE
 - **No** EJB or CORBA support

Defining a JVM server

- JVM Profile
 - JVM profile in HFS in JVMPROFILEDR
 - DFHJVMAX is default
- LE Runtime Options
 - LE storage options
 - Defaults to DFHAXRO
- Threadlimit
 - Max number of T8 threads

Support for Java 6 64-bit JVMs

Support for Java 6 64-bit JVMs

- CICS now supports 64-bit JVMs
 - Both Pooled JVMs and JVMSERVERs
 - Java 6.0.1 only
 - If JAVA_HOME points to other than JVM then abend ASJJ
 - DFHSJ0900 09/27/2010 11:00:07 IYK2ZIK1 Illegal Java version. CICS requires Java version 1.6.0 but has found Java version 1.5.0.
 - Java byte codes do not need recompilation (write once run anywhere)
 - Support for 31-bit JVMs dropped
 - If JAVA_HOME points to a 31-bit installation, then abend ASJD
 - DFHSJ0503 09/27/2010 10:50:21 IYK2ZIK1 DFHJVMPR Attempt to load DLL libjvm.so has failed. Runtime error message is EDC5253S An AMODE64 application is attempting to load an AMODE31 DLL load module. (errno2=0xC40B0013)
 - Java 6.0.1
 - IBM zEnterprise optimized version of Java 6 JVM
 - Exploits new z196 instruction set
 - Improved GC
 - Improved JIT – (stores -interpreter profiling information in class cache)
 - Significant performance improvements
 - Download from z/OS Java website

Support for Java 6 64-bit JVMs

- Pooled JVMs
 - Support for many more JVMs per CICS region
 - 100+ can be possible
 - Larger heap sizes
 - Reduces impact of Garbage Collection
 - Profile changes
 - JAVA_HOME=/usr/lpp/java6_64/J6.0_64
 - USSHOME replaces CICS_HOME system initialization parameter

Support for Java 6 64-bit JVMs

■ JVMSERVER

- Messages now DFHSJxxxx instead of DFHLExxxx
- Much larger heaps possible
- Garbage Collection runs after an allocation failure
 - CJGC transaction is no longer used
 - Default GC policy uses more efficient gencon model
 - Heap dynamically sized by JVM
 - -Xcompressedrefs option uses 32-bit pointers to address 64-bit storage
 - Works for heaps up to 25GB
 - Reduces CPU consumption but only recommended for use with single JVM server regions

Support for Java 6 64-bit JVMs

- **MEMLIMIT**
 - Java stack and heap are now allocated in above the bar storage
 - Above the bar requirement per Pooled JVM
 - `-Xmx` value in JVM profile
 - `HEAP64` value in DFHJVMRO (default 8M)
 - `LIBHEAP64` value in DFHJVMRO (default 1M)
 - `STACK64` value in DFHJVMRO (default 1M) times 5 (application thread plus system threads)

Support for Java 6 64-bit JVMs

- **MEMLIMIT**
 - Above the bar requirement per JVMSERVER
 - `-Xmx` value in JVM profile (default 512M)
 - `HEAP64` value in DFHAXRO (default 50M)
 - `LIBHEAP64` value in DFHAXRO (default 1M)
 - `STACK64` value in DFHAXRO (default 1M) times number of threads
 - `THREADLIMIT` plus system threads
 - Number of GC helper threads depends on `-Xgcthreads` parameter
 - » Default is one less than the number of physical CPUs available

Support for Java 6 64-bit JVMs

- JDBC and SQLJ
 - DB2 8.1 or 9.1 required to support 64-bit applications
 - DB2 FP4 required for CICS TS 4.2 Java
 - DB2 not yet supported for OSGi JVM server
- WMQ
 - 64-bit driver required
 - OSGi bundle required for JVM server
- Middleware bundles (MQ and DB2)
 - Need to be added to JVM servers using `OSGI_BUNDLES` and `LIBPATH_SUFFIX` settings in JVM profile
- Native DLLs (JNI)
 - All native DLLs must be recompiled with LP64 compiler option and bound as AMODE(64)
 - LE will not allow an AMODE(31) DLL to be loaded by an AMODE(64) DLL

CICS OSGi Support

CICS OSGi Support Overview

■ OSGi

- OSGi development and packaging now required to deploy CICS applications to a JVM server¹
- Existing CICS Java applications using main() method linkage can run unchanged if wrapped in an OSGi bundle
- All JVM server applications must be thread-safe and can't use stabilised CICS EJB or CORBA functions
- Equinox used as OSGi implementation

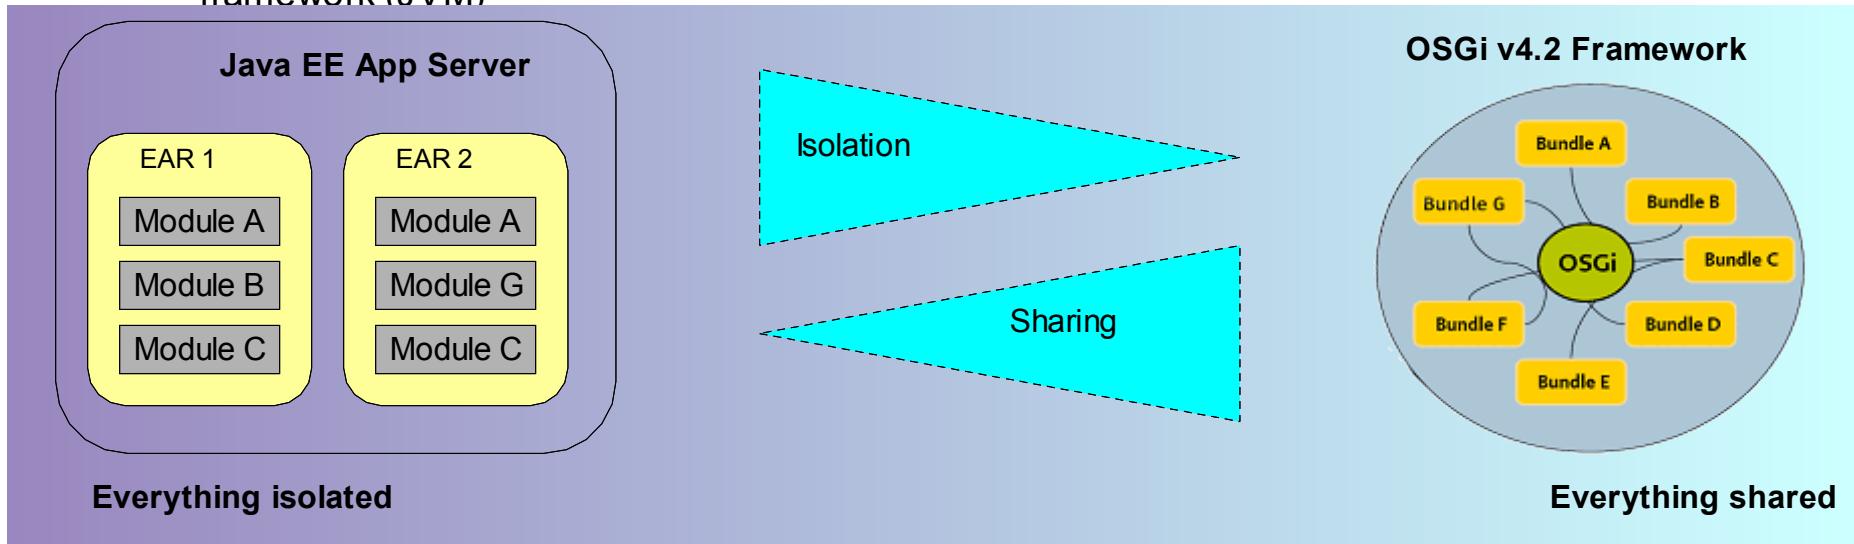

■ CICS Explorer SDK

- Provides CICS Java development toolkit for use in any Eclipse 3.6.2 IDE (i.e RAD 8.0 or vanilla Eclipse SDK)
- Can be used to develop and deploy applications for any release of CICS (CICS TS 3.2 onwards)
- Java projects are developed as Plug-in Projects and then packaged in a CICS bundle and exported to zFS
- CICS TS V3.2/V4.1 Pooled JVM applications classes/JARs can be wrapped and deployed to OSGi JVM servers

¹ Note Axis2 CICS Web Services applications do not support OSGi packaging

OSGi - Isolated and Shared Bundles

- In Java EE, modules are isolated within an application and applications are isolated from one another.
 - Makes sharing modules difficult
- OSGi 4.2 all bundles have shared visibility to the externals of all other bundles within an OSGi framework (JVM)

OSGI Bundle types in CICS

- OSGi Bundles
 - Just a jar with a few extra lines in the jar manifest file
- Application Bundles
 - Provide one or more entry points which can be LINKed too by CICS.
 - This is done by using the CICS-MainClass directive
 - Can import packages from other bundles, i.e. JCICS
- Library Bundles
 - Provide no entry points but simply export code to be used by other bundles
 - Shared library services

Manifest.mf

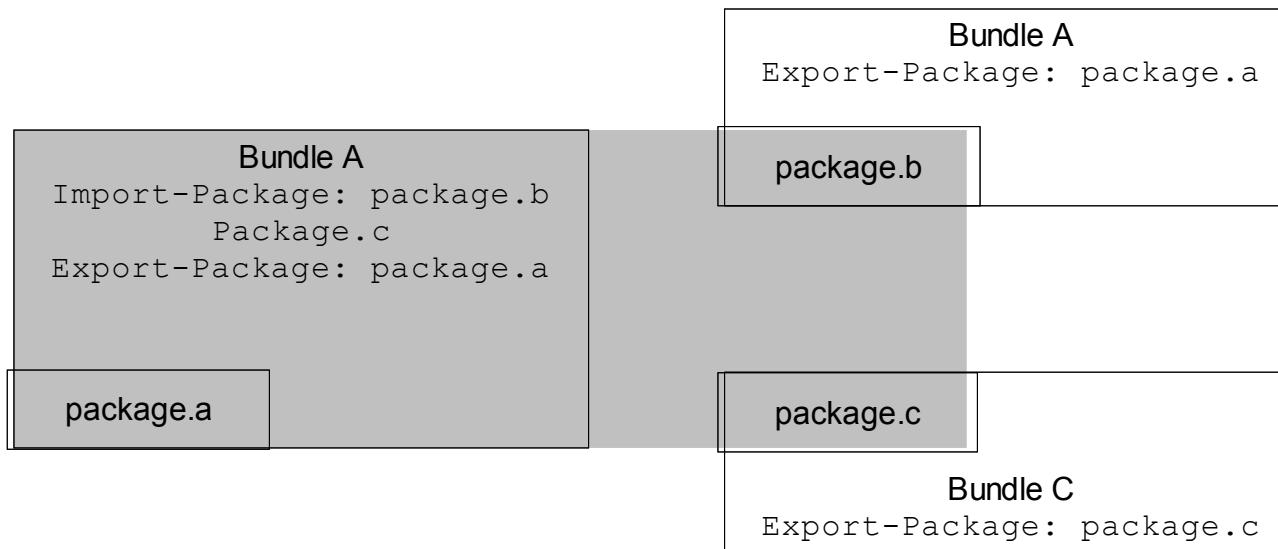

```
Bundle-SymbolicName: com.ibm.cics.server.examples.hello
Bundle-Version: 1.0.0
...
CICS-MainClass: examples.hello.HelloCICSWorld
Export-Package: my.library.classes 1.0.0
```

The Global Classpath

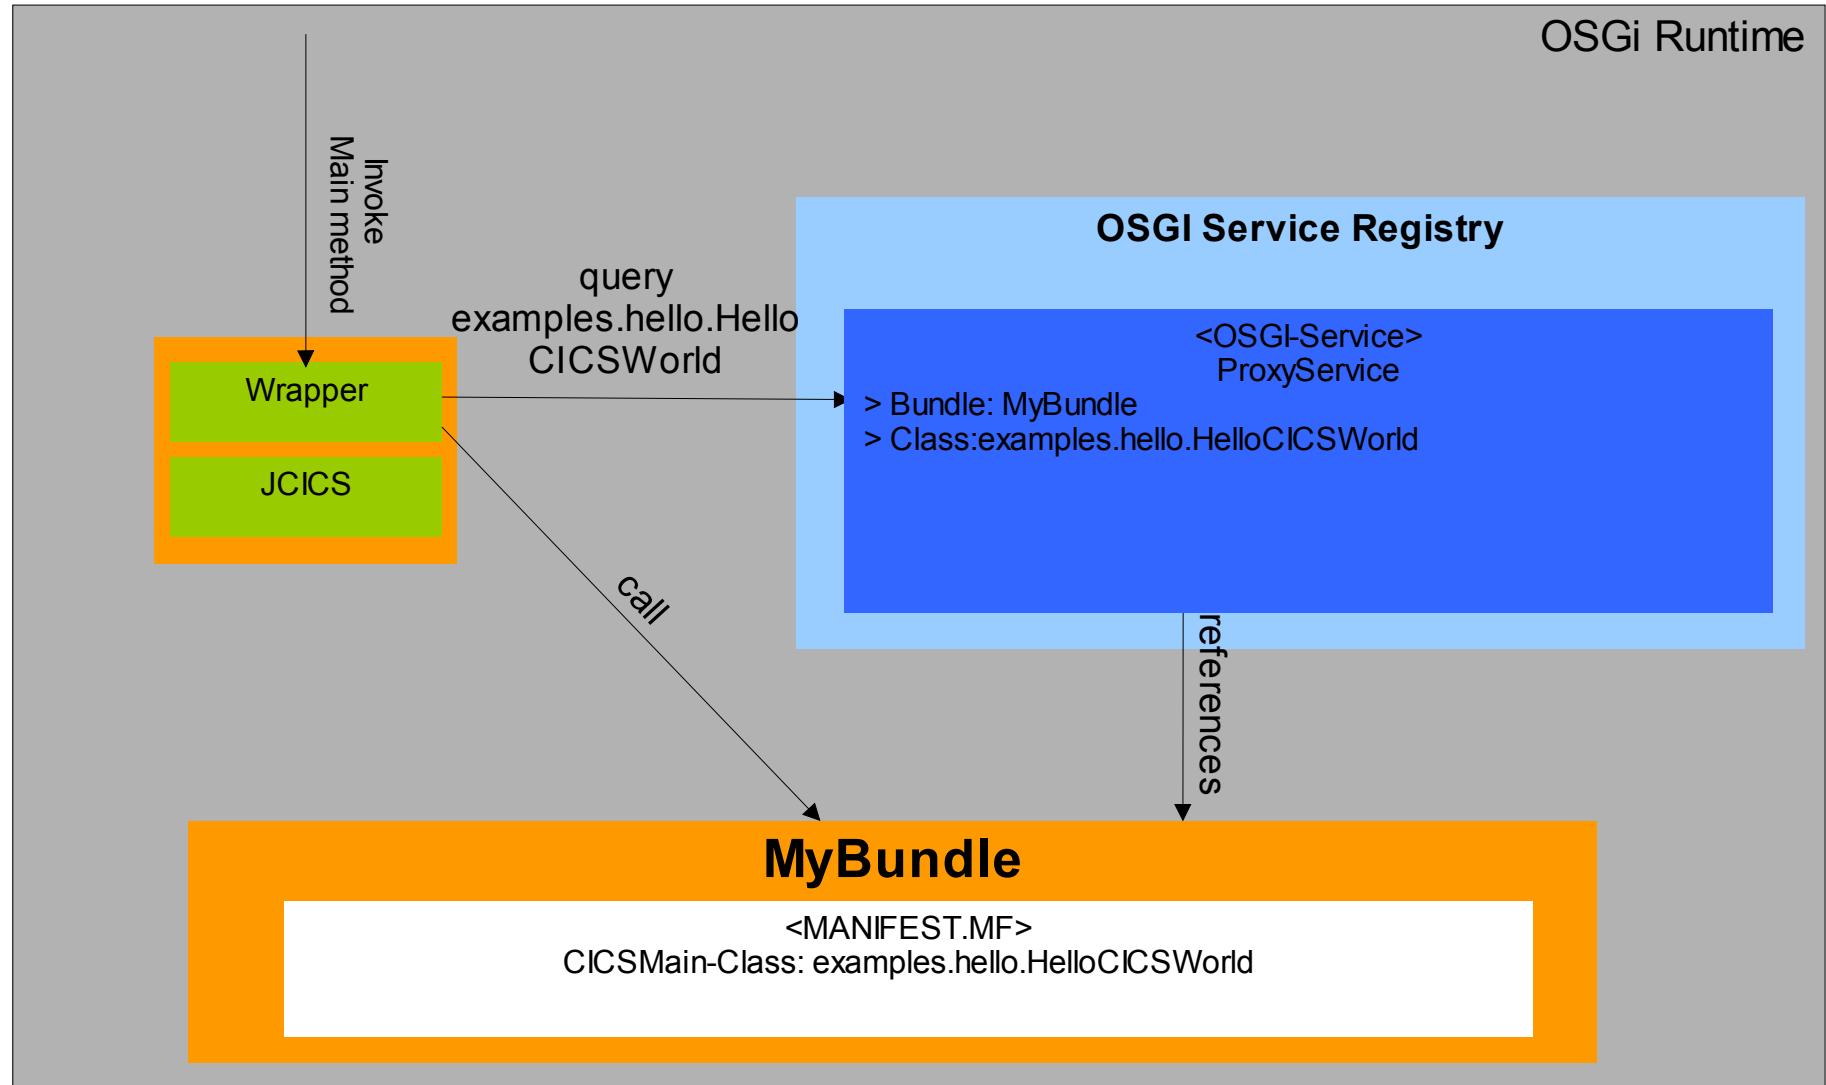

Class loading with OSGi

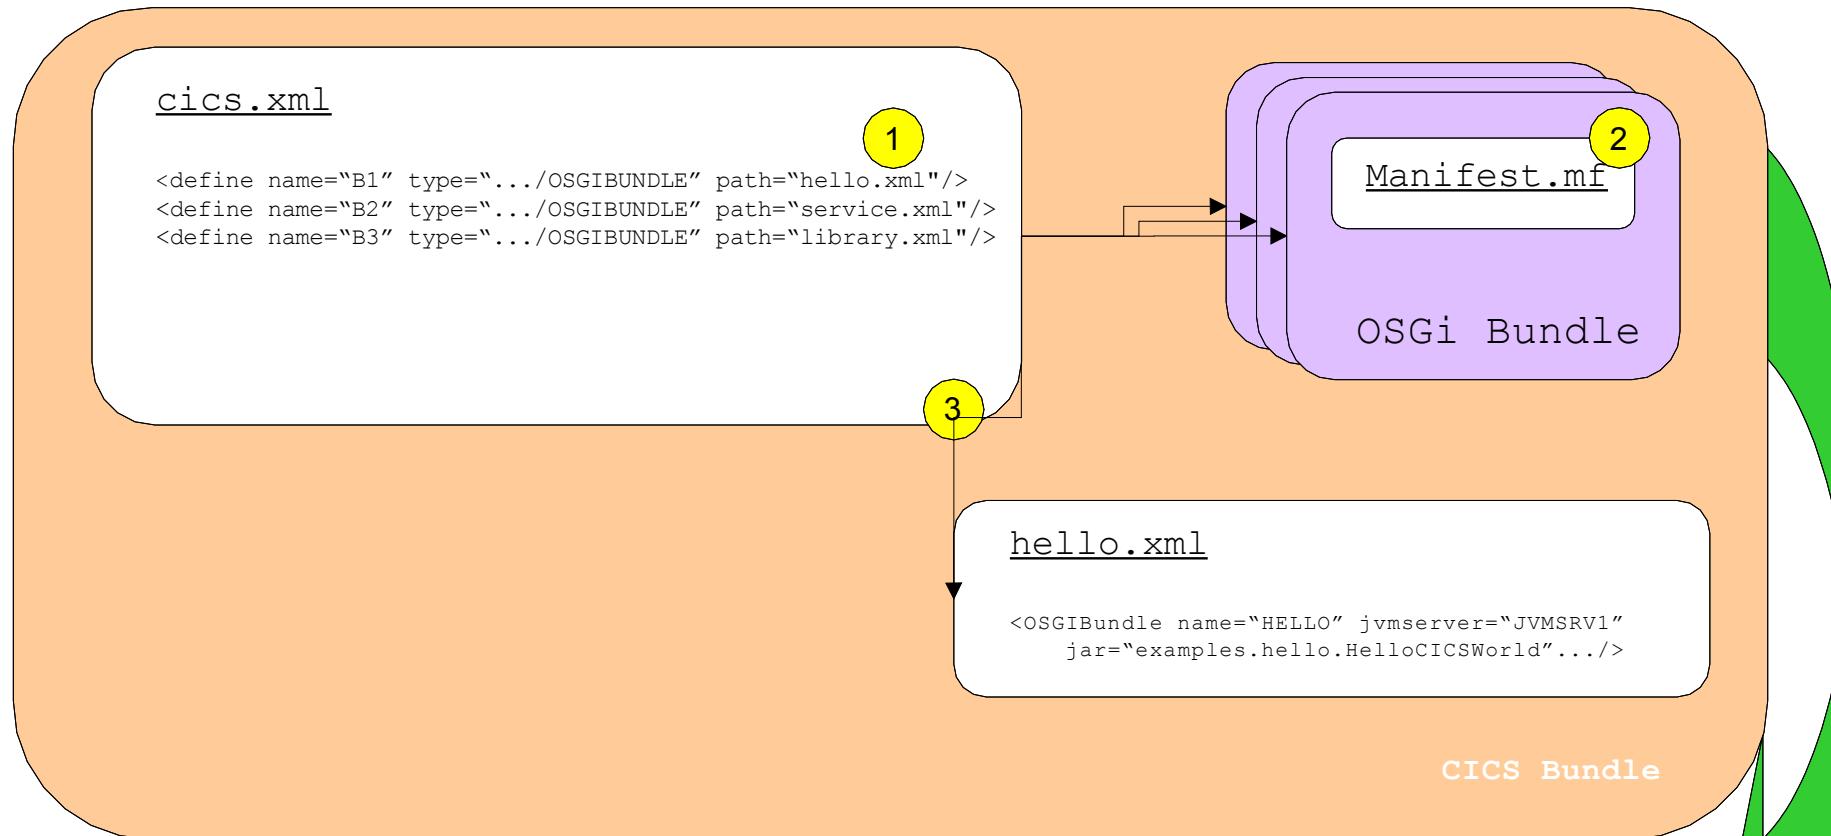

- No more CLASSPATH
 - Each bundle has its own class loader
- Class space is the classes required for the bundle
- Smallest unit is a package

JVM SERVER OSGi Details

Deployment with CICS Bundles

1. Define OSGi bundles

2. Declare PROGRAM "service(s)"

3. Define PROGRAM

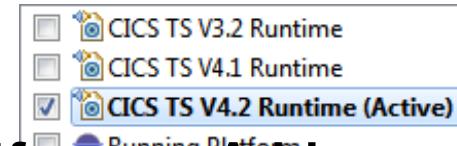

Manifest.mf

```
Bundle-SymbolicName: com.ibm.cics.server.examples.hello
Bundle-Version: 1.0.0
...
CICS-MainClass: examples.hello.HelloCICSWORLD
```

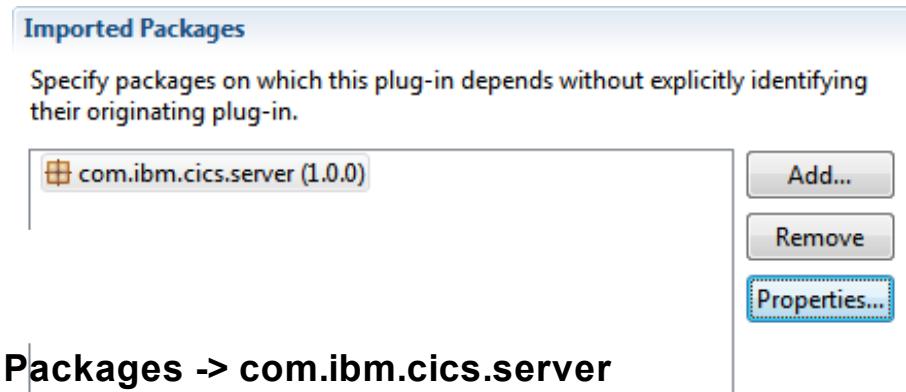

CICS Explorer SDK - Development

- 1. Install CICS Explorer SDK into Eclipse
- 2. Set Target Platform (sets JCICS and JVM levels)

— **Window -> Preferences... -> Target Platform -> Add... -> Template”**

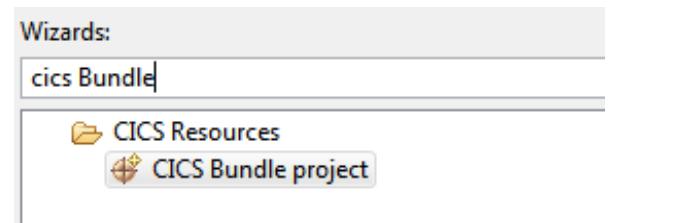

- 3. Create New OSGi Project
- **New -> Plug-in Project**
- 4. Provided access to JCICS package
- **MANIFEST.MF -> Dependencies -> Imported Packages -> com.ibm.cics.server**
- Add other bundle imports if require
- 5. Import/Create Java class

CICS Explorer SDK - Deployment

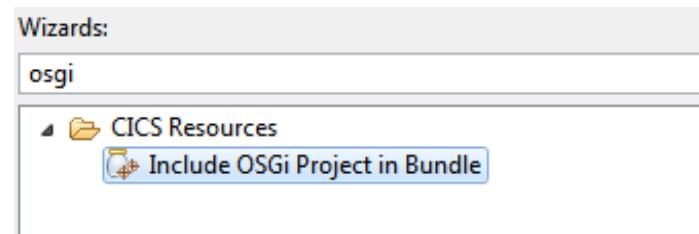

- 6. Create CICS Bundle

➤ **New -> CICS Bundle Project**

- 7. Add OSGi bundle meta date file to CICS Bundle

➤ **New -> Include OSGi Project in Bundle**

CICS Explorer SDK – Deployment 2

8. Provide CICS region userid read access to bundledir

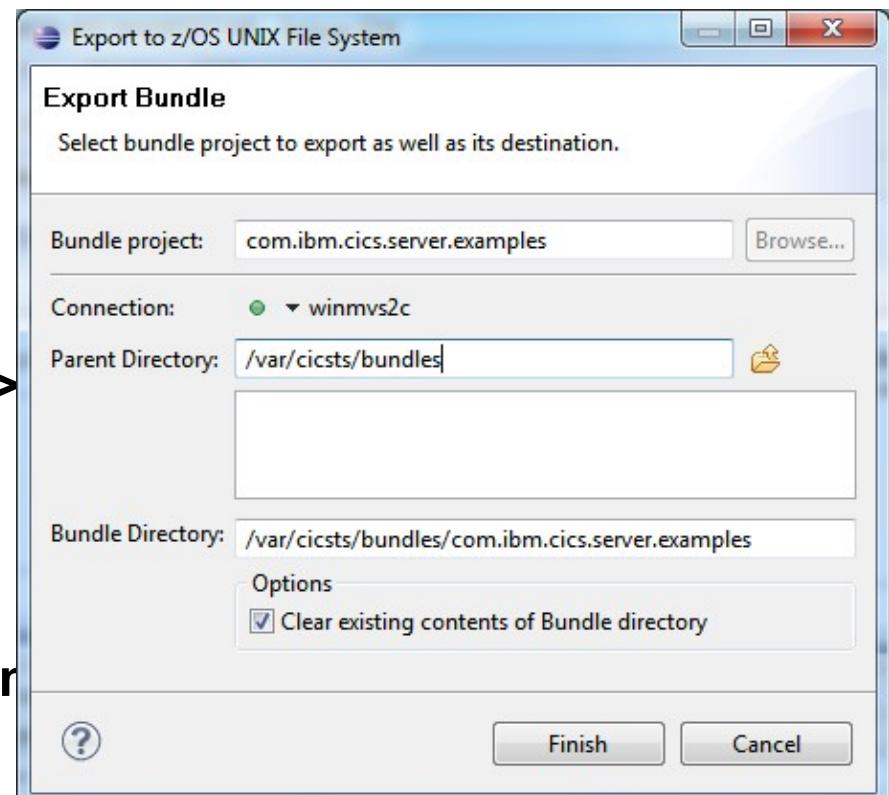

- mkdir /var/cicsts/bundles
- chmod 750 /var/cicsts/bundles¹

9. Connect CICS Explorer to USS FTP daemon

➤ **Windows -> Open Perspective ->**

10. Export CICS Bundle to CICS

➤ **-> CICS to z/OS UNIX File System**

¹ Note: CICS region userid and FTP user must be in same USS group

Defining a CICS BUNDLE

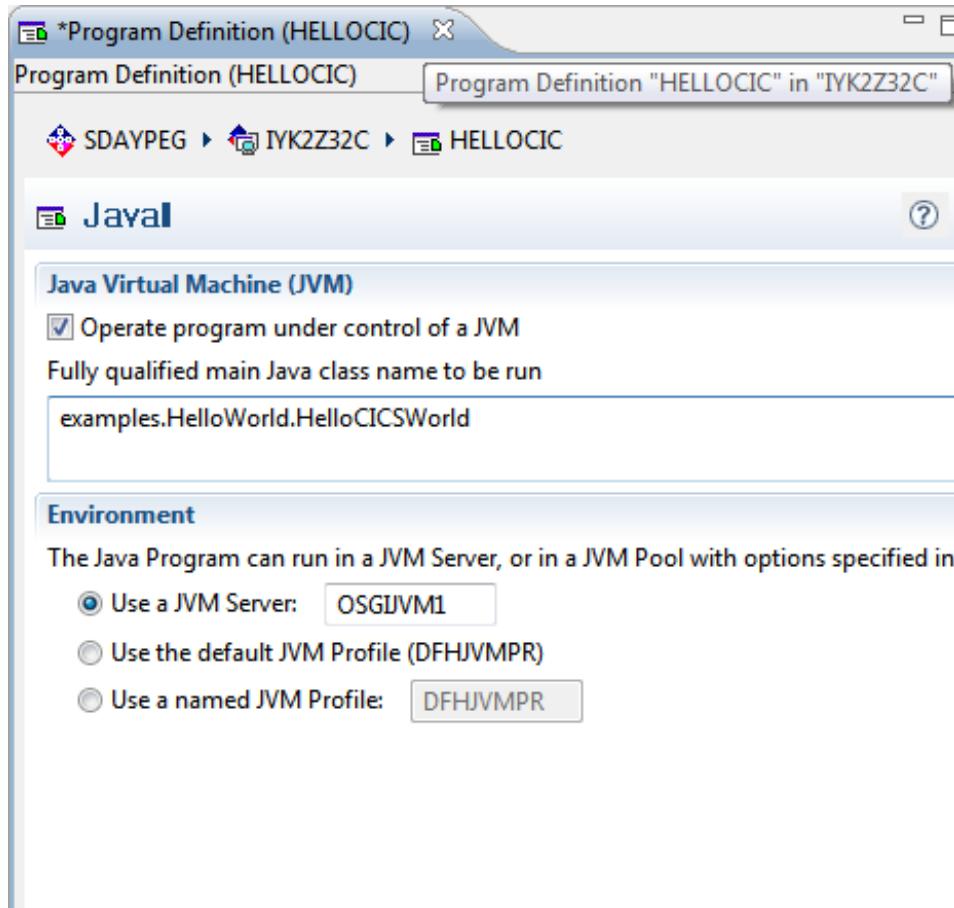

The screenshot shows the SDAYPEG interface with the path 'SDAYPEG > BUNDLE1'. The main window displays the 'Attributes' section for 'BUNDLE1'. The table lists the following properties:

Property	Value
Basic	
Basescope	
Bundle Directory	/var/cicsts/bundles/com.ibm.cics.server.examples
CSDGroup	OSGISAMP
Description	OSGi Bundle
Name	BUNDLE1
Status	ENABLED
Version	0
Definition Signature	

- **Bundle Directory**
 - Name of directory containing deployed JAR and bundle meta data files

- **Status**
 - ENABLED -> Activate on install of resource

Defining a Program to run in JVMSERVER

- JVMServer
 - Name of JVM server resource
- Main Java class
 - OSGIService defined in the OSGi bundle manifest
 - Either an alias or the full package.class name
- Also required
 - CONCURRENCY(THREADSAFE)
 - EXECKEY(CICS)

CICS Bundle Operations

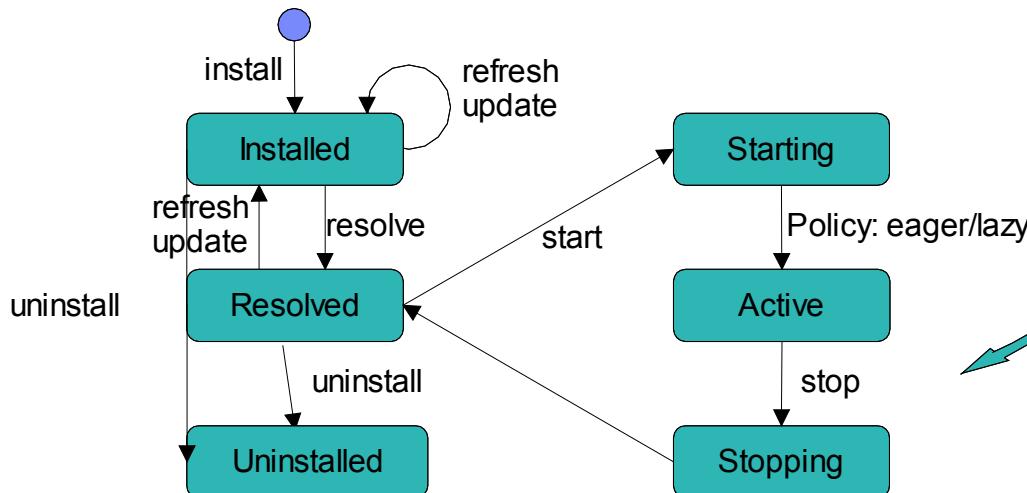

BUNDLE

BUNDLEDIR=/var/cicsts/bundledir
com.ibm.cics.bundle

INSTALL

DISCARD

OSGISERVICE

CICS-MainClass: mypkg.ClassB1

OSGIBUNDLE

Note: BUNDLEPART, OSGISERVICE and OSGIBUNDLE dynamically created based on BUNDLE lifecycle

OSGi Bundle Lifecycle

OSGi bundle state displayed in CICS Explorer OSGi bundle view

Region	Symbolic Name	State	Bundle Part	Bundle	JVM Server	Install Time	Version	Bundle ID
IYK2Z32C	com.ibm.cics.server.examples.hello	✓ ACTIVE	hello	SAMPLES	OSGIJVM1	24-Mar-2011 09:41:11	1.0.0	13
IYK2Z32C	com.ibm.cics.server.examples.jcics	✓ ACTIVE	jcics	SAMPLES	OSGIJVM1	24-Mar-2011 09:41:11	1.0.0	14
IYK2Z32C	com.ibm.cics.server.examples.web	✓ ACTIVE	cicsweb	SAMPLES	OSGIJVM1	24-Mar-2011 09:41:11	1.0.0	15
IYK2Z32C	sleep	✓ ACTIVE	sleep	SLEEP	OSGIJVM1	23-Mar-2011 21:49:46	1.1.0	12

CICS OSGi bundle resource states

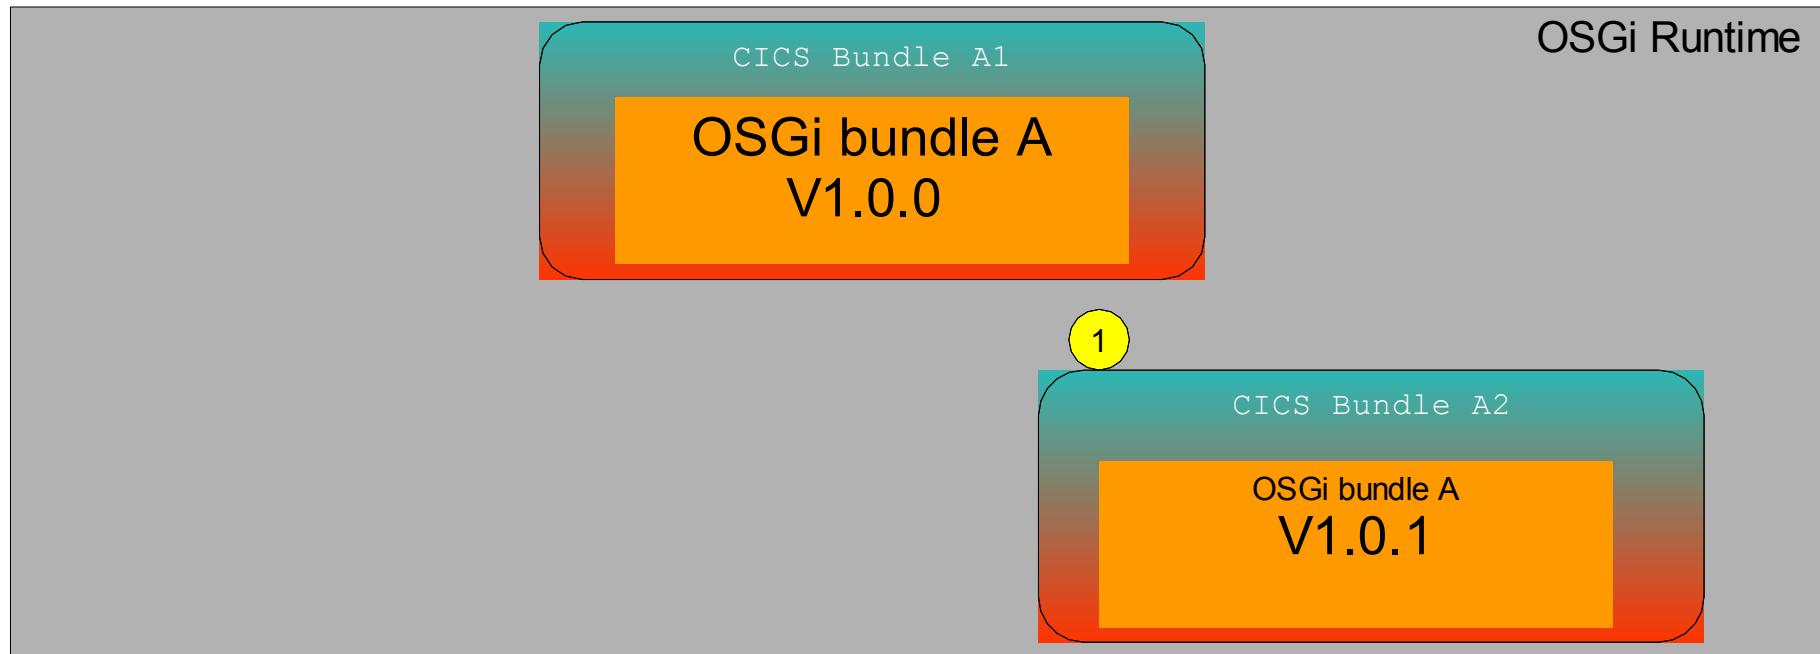

BUNDLE	BUNDLEPART	OSGIBUNDLE	OSGISERVICE
DISABLING	DISABLING	STOPPING	n/a
DISABLED	DISABLED	INSTALLED RESOLVED UNINSTALLED ²	n/a
	UNUSABLE	n/a	n/a
ENABLING	ENABLING	n/a	n/a
ENABLED	ENABLED	STARTING ¹	n/a
		ACTIVE	ACTIVE INACTIVE ³

1 – Bundle activation policy = lazy

2 – Transitory state during termination

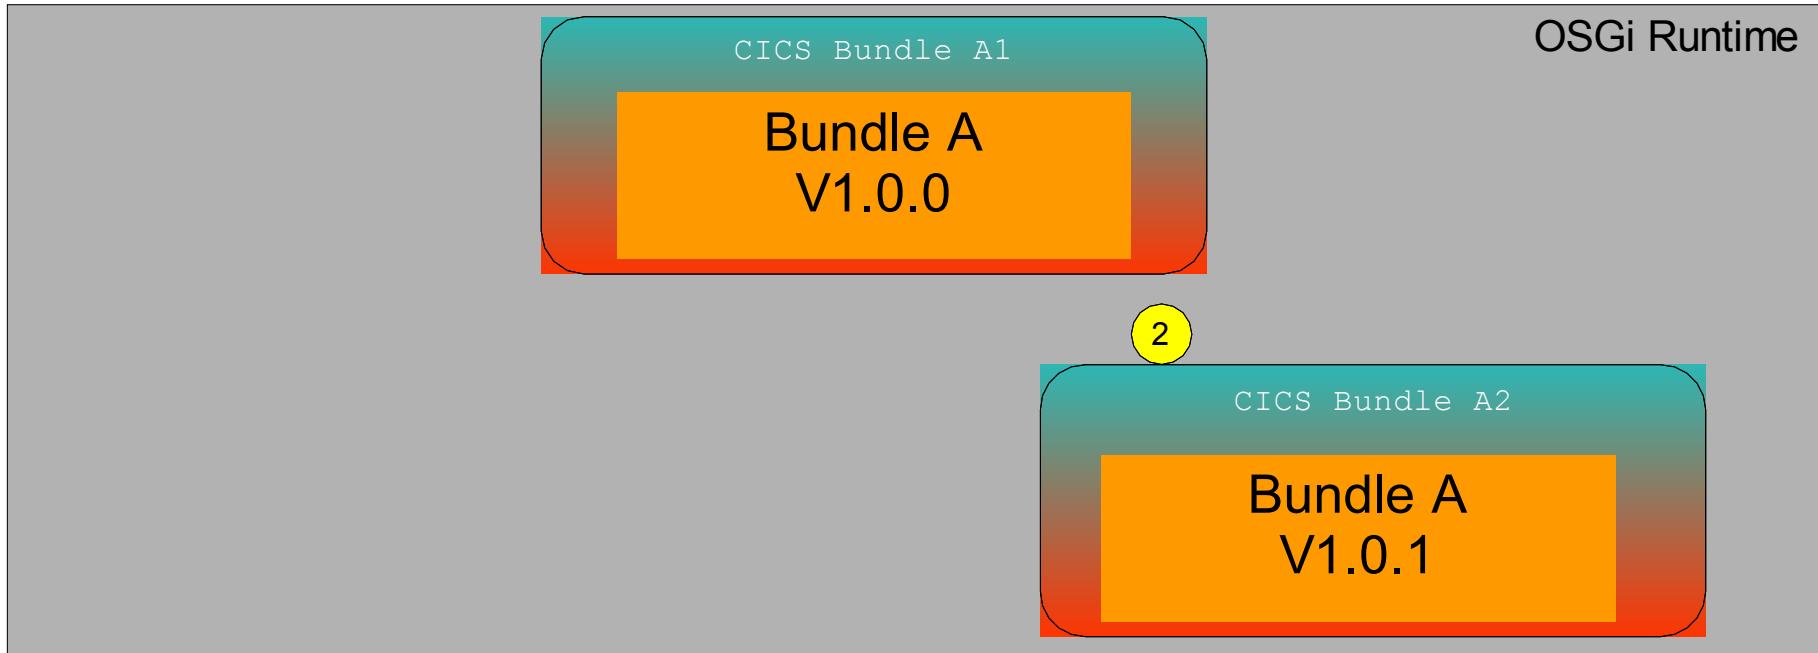

3 - Inactive OSGIService if duplicates existing active OSGI service or Main class invalid

OSGi Versioning Procedure – Application Bundles

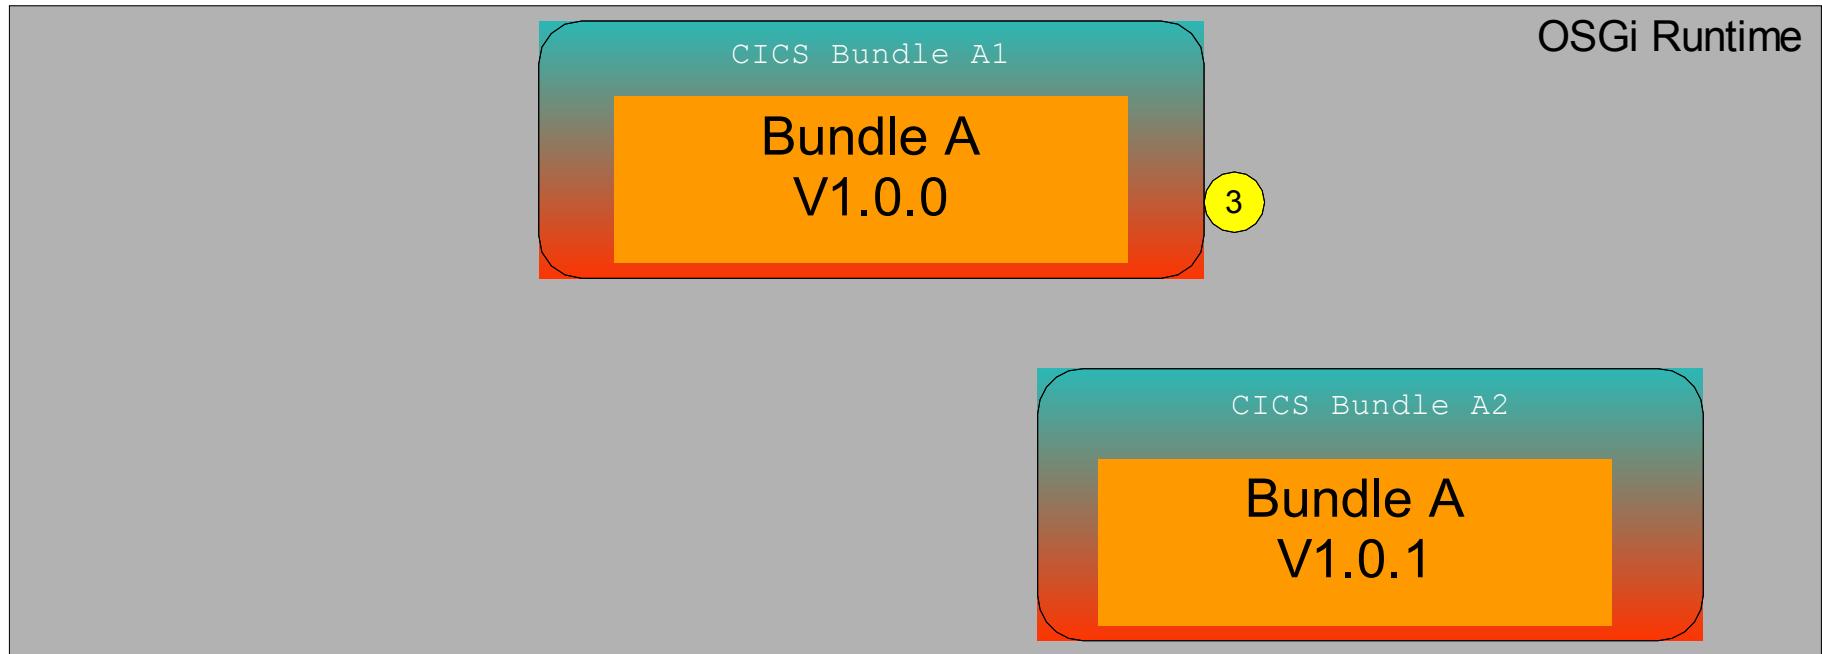

1. Install new CICS Bundle A2 containing new version of OSGi Bundle A

OSGi Versioning Procedure – Application Bundles

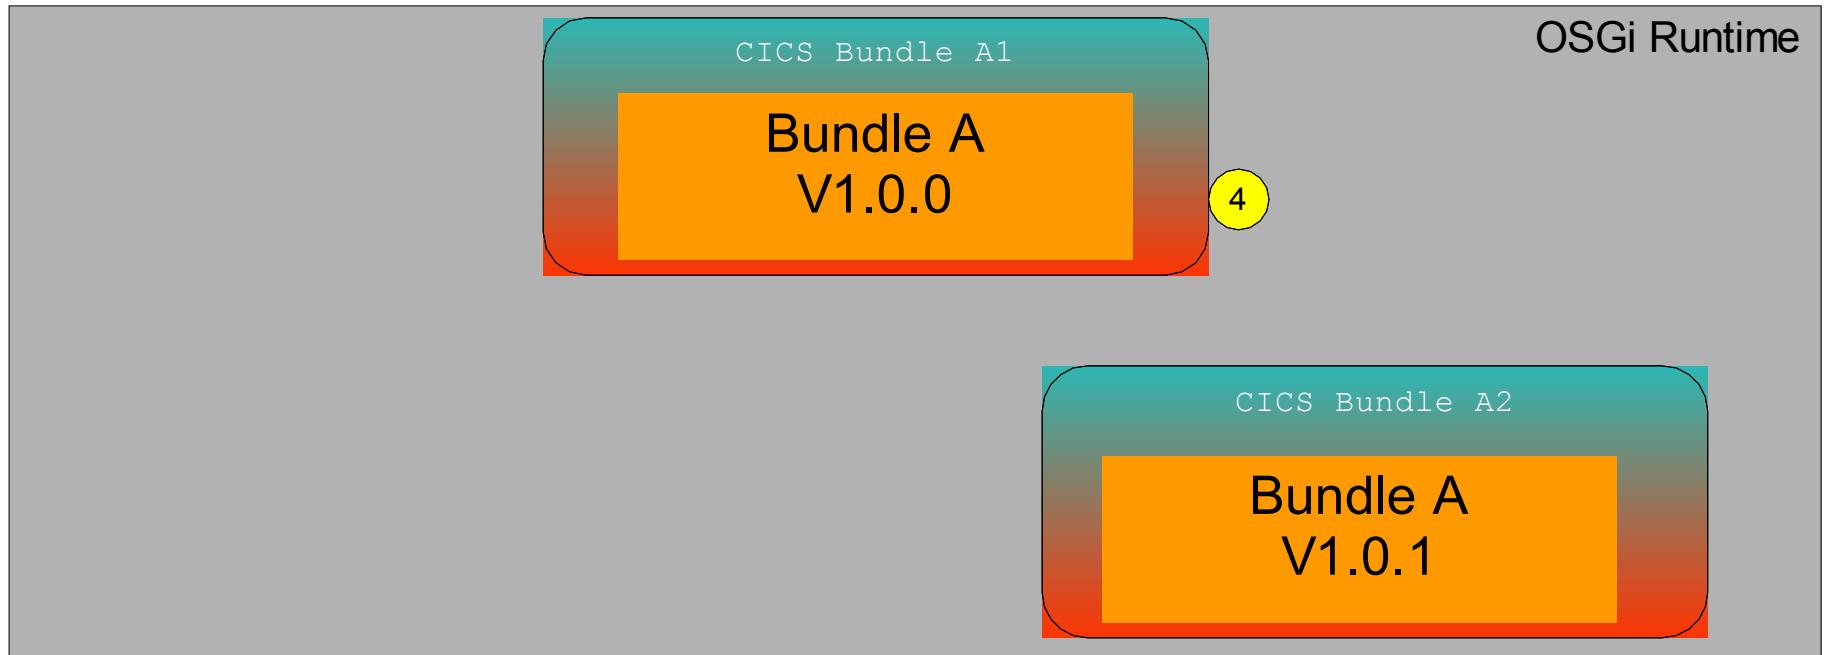

1. Install new CICS Bundle A2 containing new version of OSGi Bundle A
2. Enable CICS Bundle A2
 - OSGi bundle Resolved
 - OSGi Service/Program *Inactive* as duplicates A1

OSGi Versioning Procedure – Application Bundles

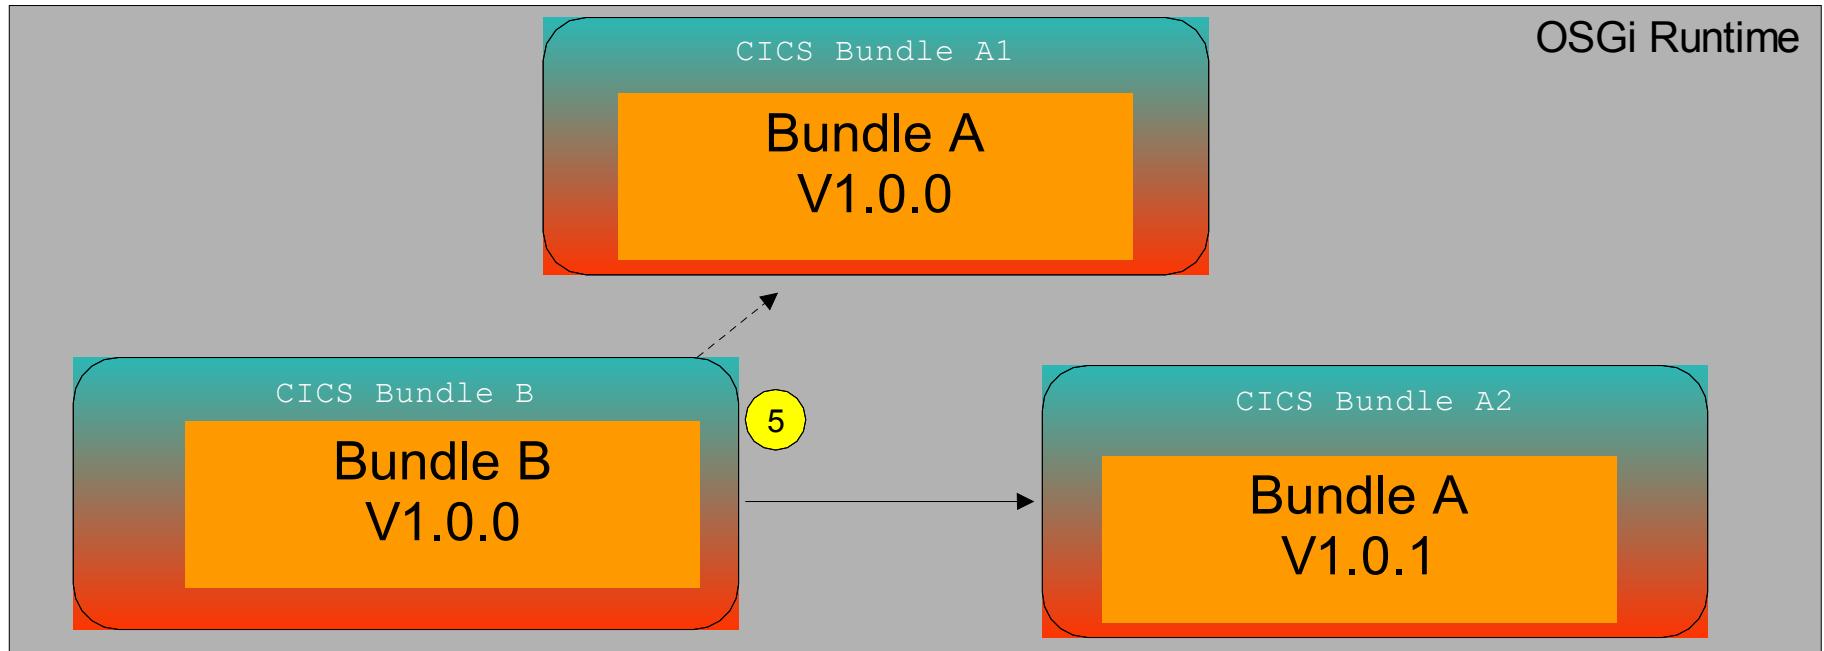

1. Install new CICS Bundle A2
2. Enable new CICS Bundle A2
3. Disable old CICS Bundle A1
 - OSGi Service Active
 - New application used for new transactions

OSGi Versioning Procedure – Application Bundles

1. Install new CICS Bundle A2
2. Enable new CICS Bundle A2
3. Disable old CICS Bundle A1
4. Uninstall old CICS Bundle A1

OSGi Versioning Procedure – Library Bundles

1. Install new CICS Bundle A2
2. Enable new CICS Bundle A2
3. Disable old CICS Bundle A1
4. Uninstall old CICS Bundle A1
5. If bundle A is imported from bundle B then recycle (disable/install) bundle B to refresh the classloader for bundle B

Java Pool and EJB Statement of Direction

- CICS TS V4.2 announce letter
 - A future release of CICS TS intends to discontinue support for session beans using Enterprise Java Beans (EJB), and the Java pool infrastructure. Customers are encouraged to migrate Java applications to the new JVM server infrastructure, and to migrate EJB applications to Java SE components and make them available through web services or the JEE Connector Architecture (JCA). CICS will continue to support Java as a first class application programming language for CICS applications, including enhancements to the CICS interfaces, the deployment infrastructure, and Java runtime environment.

Java Web Services with Axis2

Java Web Services with Axis2

- New Java application handler for provider mode
 - Configuration
- New support for provider mode Java application
 - Configuration
 - Application preparation

Provider Mode Java Application Handler

- New application handler written in Java
 - Use is optional
 - Executes in a JVMSERVER
 - Eligible for zAAP off-load processing
 - XML data conversion can be off-loaded
- Based on Axis2 technology
 - An Open Source project from the Apache organization
 - <http://ws.apache.org/axis2/>

Provider Mode Java Application Handler...

- New Java CICS provided application handler

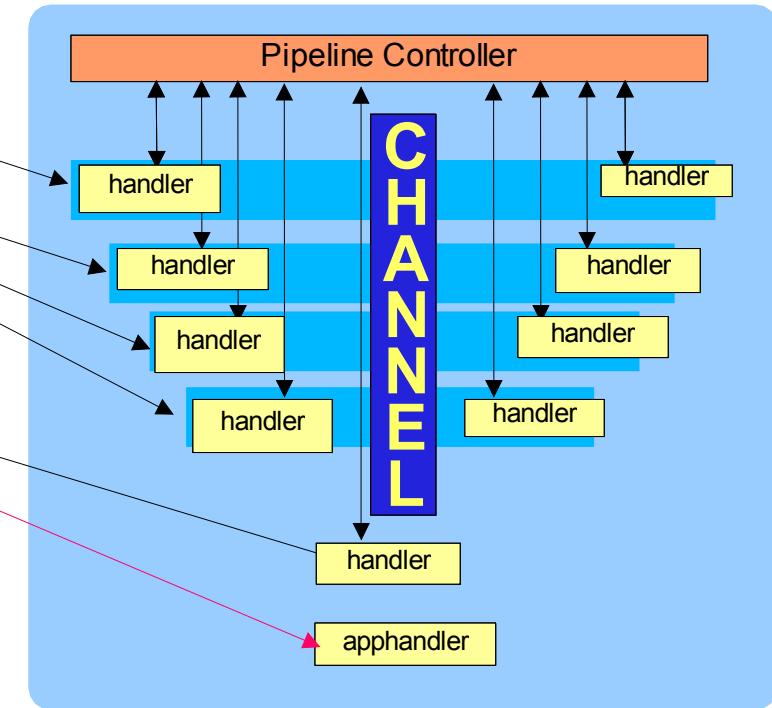

```
<transport>
  :
</transport>

<service>
  <service_handler_list>
    :
  </service_handler_list>
  <terminal_handler>
    <cics_soap_1.1_handler_java/>
  </terminal_handler>
</service>

<apphandler_class>...</apphandler_class>

<service_parameter_list />

</provider_pipeline>
```

Provider Mode Java Application Handler...

- Configuration for the Java application handler
 - PROGRAM definition for the supplied handler
 - JVM set to YES
 - JVMCLASS
 - com.ibm.cicsts.axis2.CICSAxis2ApplicationHandler
 - JVMSERVER name specified
 - Must match the name specified in the cics_soap_1.1_handler_java element in the configuration file
 - JVMSERVER
 - Define a JVMSERVER for execution
 - JVM profile updates
 - Add JAVA_PIPELINE=YES to the profile used
 - Pipeline configuration file changes
 - jvmserver
 - Repository
 - addressing

Provider Mode Java Application Handler...

- Example pipeline configuration file:

```
<service>
  <terminal_handler>
    <cics_soap_1.1_handler_java>
      <jvmserver>MYJVM</jvmserver>
      <repository>/u/zem/wsdl/axis2</repository>
      <headerprogram>
        <program_name>MYPROG</program_name>
        <namespace>http://www.example.org/headerNamespace</namespace>
        <localname>*</localname>
        <mandatory>true</mandatory>
      </headerprogram>
    </cics_soap_1.1_handler_java>
  </terminal_handler>
</service>
<apphandler_class>my.example.AppHandler</apphandler_class>
```

Provider Mode Axis2 Web Service

- Start with an existing Java application
 - POJO using JAX-WS
- Compile the Java application
 - javac TestAxis2.java
- Generate the WSDL and Bindings
 - wsigen –cp TestAxis2 – wsdl
- Package the application
 - Jar –cvf TestAxis2.jar *

Provider Mode Axis2 Web Service...

- Deploy the jar file to the Axis2 repository
 - Must be deployed to a **servicejars** directory in the repository
 - Repository is specified in the pipeline configuration file
- Define and install a URIMAP
 - Automatic install of a URIMAP cannot be used
 - Path name must follow Axis2 conventions
 - **/name_of_serviceService.name_of_portPort/suffix**
- A WEBSERVICE definition is not used

Provider Mode Axis2 Web Service...

- Restrictions
 - Axis2 applications interact with CICS with the Axis2 programming model
 - Some CICS services are not available
 - SOAPFAULT CREATE
 - WSACONTEXT GET
 - DFHWS-OPERATION container
 - DFHWS-MEP container
 - DFHWS-USERID container
 - DFHWS-TRANID container
 - Web services security

Summary

- JVM Options in CICS TS 4.2
 - JVM Pool
 - JVMSERVER
- 64 Bit JVM Support
- OSGi for application management
- Java Web Services with Axis2
