

Transaction Processing Facility Operations Server Version 1 Release 2 - Program Number 5799-GKX

IBM® TPF Operations Server is a console automation and console enhancement application for TPF systems. This PC-based application provides a tool for the administration and maintenance of your TPF system through the TPF operations consoles. TPF Operations Server runs on personal computers outside the TPF system complex and allows you to monitor your TPF system, automate operational tasks, and diagnose problems.

TPF Operations Server is designed to allow you to monitor multiple TPF host systems from a single workstation. TPF console operations management can be centralized, distributed, or remote. Using local area network (LAN) technology, TPF Operations Server can provide a flexible and redundant configuration for TPF operations management. In addition to monitoring and responding to detected conditions using commands and automated commands, you can initialize, configure, recover, and shut down TPF host systems. TPF Operations Server provides integration to the Tivoli Enterprise Console® (TEC), allowing you to correlate events with other systems in your enterprise.

Support is provided for the following TPF operation console types:

- IBM 3215
- IBM 3270
- IBM Support Element/Hardware Management Console (HMC)
- Simulated consoles.
