IBM Software Group

TPF Users Group Fall 2005

TPF Websphere MQ

Trends and Directions

Name : Allan Feldman
Venue : MQ Task Force

AIM Enterprise Platform Software
IBM z/Transaction Processing Facility Enterprise Edition 1.1.0
© IBM Corporation 2005

Requirements from Spring ballot

MQ04001	Heartbeat	Accepted
MQ04002	Shared Channel	Accepted
MQ04003	Document PUT differences	Accepted
MQ04004	Diff record ID for MQ TPFCS	Likely
MQ04005	Remove Long life ECB for server	Not Likely
MQ04006	SSL	Accepted
MQ04007	AdoptNewMCA	Accepted
MQ04008	Message user exit	Likely
MQ04009	Remote Admin	~~Accepted~~ Likely

Requirements from Spring ballot *(continued)*

MQ04010	MQ Ping	Likely
MQ04011	Remove swept pid list pid after delete ql	Likely
MQ04012	Process msgs from deac processor	Likely
MQ04013	Processor unique attributes	Likely
MQ04014	Display multiple attributes	Not Likely
MQ04015	Batch size monitor	Not Likely
MQ04017	Chl option to auto resolve/reset	Not Likely
MQ04018	Requestor Channels	Likely

Requirements from Spring ballot *(continued)*

MQ05001	Comms Trace User Exit for tape name and data length	Likely
MQ05002	New parms for trace post processor - chl name, start/end date/time, data translation	Likely
MQ05003	Hostname support on LOCALIP field of sdr chl definition	Likely
MQ05004	Port range support on LOCALIP field of sdr chl definition	Likely
MQ05005	Migrate command one CPU at a time	Accepted for future migrations
MQ05006	Trace time precision in microseconds	Likely

What's next ....

- Improved channel stability
  - ► Upgrade FAP level
    - – Also allows shared channels to be defined on other platforms
  - ► AdoptNewMCA
  - ► Heartbeats
- Remote administration
  - ► Command queue based
    - – Allows local and remote administration
  - ► PCF based

Trademarks

IBM, Websphere MQ are trademarks of International Business Machines Corporation in the United States, other countries, or both.

Other company, product, or service names may be trademarks or service marks of others.

Notes

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

This presentation and the claims outlined in it were reviewed for compliance with US law. Adaptations of these claims for use in other geographies must be reviewed by the local country counsel for compliance with local laws.
