Topics

- **Monitoring Individual DASD Modules**
 - Updates to DASD Queue Monitoring
 - New DASD Service Time Monitoring
- **New DASD Subsystem Monitoring**
- **New Display Information and ZDMOD Parameters**

Updates to DASD Queue Monitoring

- **Current support: On a given time interval, check length of all DASD module queues**
 - If queue length exceeds user-specified threshold, z/TPF displays a warning message
 - Available since z/TPF PUT 4
- **New queue length thresholds**
 - RLTCCount – Threshold for real-time modules
 - Previous Count threshold applied to all modules
 - Redefined previous Count threshold as RLTCCount
 - NORLTCCount - Threshold for non-real-time modules
 - Skip monitoring non-real-time modules by setting to zero
 - Monitor non-real-time modules using a different threshold

DASD Queue Warning Messages

- **Separate warning messages for real-time and non-real-time modules**

- Warnings issued only if modules have exceeded the threshold
- Displays up to 10 modules with highest queues
- Sorted by queue length

- **CYDQ0002W for real-time modules**

```

CYDQ0002W 12.00.00 2 RLT DASD MODULES AT OR OVER QUEUE COUNT 6
SDA  MOD  VSN      DUPE SS  USE/T SSID QUEUE*  SERVTIME  STATUS
FCC1 0049 TX0003 004A BSS  RLT/A 107D    10        742  NORMAL
4282 0060 TX0026 005F BSS  RLT/B 104A     6        1186  NORMAL
END OF DISPLAY
  
```

- **CYDQ0003W for non-real-time modules**

```

CYDQ0003W 12.00.00 1 NORLT DASD MODULES AT OR OVER QUEUE COUNT 20
SDA  MOD  VSN      DUPE SS  USE/T SSID QUEUE*  SERVTIME  STATUS
0EE8 00D8 VALDR          BSS  GDS   0C43    21        3978  NORMAL
END OF DISPLAY
  
```

New DASD Service Time Monitoring

- **On a given time interval, check DASD service times**
 - If any service time exceeds a user-specified threshold, z/TPF displays warning messages
 - Integrated with DASD module queue monitor
 - Single scanner checks both queue length and service time thresholds
 - Same time interval as DASD module queue monitor
- **Unique service time thresholds for each device type (DEVA / B / C / D)**
 - Threshold from 50 – 99999 microseconds
 - Applies to real-time DASD modules only

DASD Service Time Warning Messages

- **Separate warning message and message number for each device type**
 - Warnings issued only if modules have exceeded the threshold
 - Displays up to 10 modules with highest service times
 - Sorted by service time
- **Example for DEVA (CYDQ0004W):**

```
CYDQ0004W 12.00.00 4 MODULES AT OR OVER 10000 MICROSECOND
SERVICE TIME
```

SDA	MOD	VSN	DUPE	SS	USE/T	SSID	QUEUE	SERVTIME*	STATUS
1845	0055	TX0015	0056	BSS	RLT/A	104A	2	318790	NORMAL
0EEE	004E	TX0008	004D	BSS	RLT/A	107D	1	307535	NORMAL
0EE5	0047	TX0001	0048	BSS	RLT/A	107D	0	43143	NORMAL
1840	0050	TX0010	004F	BSS	RLT/A	104A	4	21912	NORMAL

```
END OF DISPLAY
```

Changing Module Queue & Service Time Values

- Use **ZSONS ALTER DQMON** to change monitor values

```
ZSONS ALTER DQMON TIME-tt RLTCOUNT-rr NORLTCOUNT-nn
      DEVASERVTIME-useca DEVBSERVTIME-usecb DEVCSERVTIME-usecc
      DEVDSERVTIME-usecd ALLSERVTIME-usec (IPROC-p)
```

- **Example:** `zsons alter dqmon time-5 rltcount-6 devaservtime-15000`

```
SONS0042I 12.00.00 DASD QUEUE MONITORING SETTINGS
```

```
SCAN TIME 5 SECONDS - SCANNERS ARE ENABLED
```

```
DASD I/O QUEUE DEPTH THRESHOLDS
```

```
RLTCOUNT:      6 - ACTIVE
```

```
NORLTCOUNT:    0
```

```
DASD SERVICE TIME THRESHOLDS IN MICROSECONDS
```

```
DEVASERVTIME: 15000 - ACTIVE
```

```
DEVBSERVTIME:  0
```

```
DEVCSERVTIME:  0
```

```
DEVDSERVTIME:  0
```

```
END OF DISPLAY
```

- Scan enabled: check every 5 seconds
- Check real-time module queues and DEVA service times
- Zero thresholds are not checked

Module Queue & Service Time Values (cont.)

- **More on monitor values...**
 - Setting TIME to zero turns off all monitoring
 - Values are MDBF subsystem and processor unique
- **Use ZSONS DISPLAY DQMON (IPROC-n) to display values**
- **Use ONLFIL SIP macro to set initial values in Keypoint B**
 - Queue thresholds:
DQRLTCOUNT=rr and DQNORLTCOUNT=nn
 - Service time thresholds:
DQSERV= [usec | (useca, usecb, usecc, used)]
 - Use existing DQMONTIME parameter for time interval

New DASD Subsystem (SSID) Monitoring

- **Issues a warning when a DASD subsystem has multiple modules with excessive queue lengths**
 - Problem may be at DASD subsystem level instead of isolated modules
 - Problems with multiple DASD subsystems could point to problems with physical control unit or other shared infrastructure
- **On given time interval, check queue lengths of all real-time modules on each DASD subsystem**
 - If more than *MODS* modules on a subsystem have exceeded the queue threshold, count this SSID for potential warning message

DASD Subsystem Warning Message

- **New SSID monitor warning message**
 - Warning issued only if more than NUM subsystems have exceeded the queue and module thresholds
 - Displays up to 10 DASD subsystems with largest number of modules exceeding the queue threshold
 - Sorted by number of modules exceeding queue threshold
- **Example: 2 SSID's have more than 10 modules with queues of 20 or more**

```
CYSS0001W 12.00.00 2 DASD SSID AT OR OVER THRESHOLDS
```

```
THRESHOLDS: NUM-2 MODS-10 RLTCOUNT-20
```

DASD	TOTAL	TOTAL	TOTAL	AT_OVER	HIGHEST	AVERAGE	AVERAGE
SSID	MODS	RLT	NORLT	RLTCOUNT*	QCOUNT	QCOUNT	SERVTIME
104A	64	48	0	14	33	21	3148
107D	64	48	0	10	28	20	2743

```
END OF DISPLAY
```

DASD Subsystem Monitor User Exit

- **USS0 user exit**
 - Called before message CYSS0001W is issued
 - Input: List of all DASD subsystems exceeding thresholds
 - Includes values displayed in CYSS0001W message for each DASD subsystem
 - Customized messages
 - Issue customer messages from user exit
 - Return code indicates to suppress or issue CYSS0001W message
 - Additional customer error handling or system management

Changing DASD Subsystem Monitor Values

- Use **ZSONS ALTER SSIDMON** to change monitor values

```
ZSONS ALTER SSIDMON RLTCOUNT-rr MODS-mm NUM-ssidnum (IPROC-p)
```

- **Example:** `zsons alter ssidmon rltcount-20 num-2`

```
SONS0043I 15.19.04 DASD SSID MONITORING SETTINGS
```

```
DQMON SCAN TIME 5 SECONDS - SSID SCANNER IS ENABLED
```

- Scan every 5 seconds - uses DQMON TIME from BSS

```
DASD SSID I/O QUEUE DEPTH THRESHOLDS
```

```
NUM SSID: 2
```

```
MODS/SSID: 10
```

```
RLTCOUNT: 20 - ACTIVE
```

```
END OF DISPLAY
```

- Warn if more than 2 SSID's exceed queue & mod thresholds
- Check for SSID's with more than 10 RLT mods with queues of 20 or more

DASD Subsystem Monitor Values (cont.)

- **More on SSID monitor values...**
 - Setting DQMON TIME or any SSIDMON value to zero turns off SSID monitoring
 - SSIDMON values are set in BSS only and are processor unique
- **Use ZSONS DISPLAY SSIDMON (IPROC-n) to display values**
- **Use ONLFIL SIP macro to set initial values in Keypoint B**
 - Queue threshold: SSIDRLTCOUNT=rr
 - Module threshold: SSIDMODS=mm
 - SSID's that exceed thresholds: SSIDNUM=ssidnum

New Information in Monitor Warnings and ZDMOD Displays

- Asterisk indicates sort column: SDA, MOD, VSN, QUEUE, SERVTIME
 - Symbolic module number of duplicate module
 - Device type (DEVA / B / C / D)
 - New status indicators: CPYT = ZMCPY Target module
CPYS = ZMCPY Source module
MCD = MPLF Connect Device

Input: `zdmmod disp sda-ee0 num-16`

DMOD0022I 12.00.00 DASD MODULE DISPLAY

INPUT FILTERS: SDA-EE0 NUMBER-16

NUMBER OF DASD MODULES: 4

SDA*	MOD	VSN	DUPE	SS	USE/T	SSID	QUEUE	SERVTIME	STATUS
0EE0	004D	TX0007	004E	BSS	RLT/A	FF01	0	1231	NORMAL

END OF DISPLAY

IOB Summary for ZDMOD Display of Single Module

- **New SUMMARY and OCCUR parameters summarize module queues**
 - SUMMARY displays counts of file addresses and programs on module queue
 - Optional OCCUR-nmbr only displays items that occur nmbr times or more
- **Example: Display module 58 and show summary of items with 15 or more occurrences**

```
Input: zdmod display mod-58 summary occur-15
DMOD0016I 12.00.00 DASD MODULE QUEUE SUMMARY DISPLAY
INPUT FILTERS:  MOD-58 SUMMARY OCCUR-15
SDA  MOD  VSN      DUPE SS  USE/T  SSID  QUEUE  SERVTIME  STATUS
FB12 0058 SK0018 0059 BSS  RLT/A 1076    47      1708  NORMAL
```

[MFST & SSST addresses not shown due to space constraints]

FILE ADDRESS SUMMARY:

```
23 ITEMS FOR FILE ADDRESS - 0000000011146000
16 ITEMS FOR FILE ADDRESS - 000000001115700D
```

PROGRAM SUMMARY:

```
27 ITEMS FOR PROGRAM - QHT1
15 ITEMS FOR PROGRAM - QHT2
```

END OF DISPLAY

Program QHT2 has 15 IOB's
on this module

Filter ZDMOD Displays by RLT/NORLT

- **RLT and NORLT added as optional filters to QUEUE and SSID parameters**
 - RLT: Display only real-time modules
 - NORLT: Display only non-real-time modules
- **Example: Display all real-time modules with a queue length of 10 or greater**

```
Input: zdmmod display queue-10 rlt
```

```
DMOD0023I 12.00.00 DASD MODULE DISPLAY BY QUEUE LENGTH
```

```
INPUT FILTERS:  QUEUE-10 RLT
```

```
NUMBER OF DASD MODULES:  1
```

```
SDA  MOD  VSN      DUPE SS    USE/T  SSID  QUEUE*  SERVTIME  
STATUS
```

```

```

```
NORMAL
```

```
END OF DISPLAY
```

Filter ZDMOD Displays by Service Time

- **SERVTIME** added as optional filter to **MOD**, **SDA**, **VSN** and **SSID** parameters
 - ZDMOD DISPLAY [MOD | SDA | VSN] NUMBER-numb (SERVTIME-usec)
 - ZDMOD DISPLAY SSID-ssid (SERVTIME-usec) (RLT | NORLT)
- **SERVTIME** added as separate parameter
 - ZDMOD DISPLAY SERVTIME-usec (RLT | NORLT | DEVA | DEVB | DEVC | DEVD)
 - Optional filters to check only real-time, non-real-time, or device-specific modules
- **Example: Display all DEVB modules with a service time of 30000 microseconds or greater**

```
Input: zdmmod display servtime-30000 devb
```

```
DMOD0017I 12.00.00 DASD MODULE DISPLAY BY SERVICE TIME
```

```
INPUT FILTERS:  SERVTIME-30000 DEVB
```

```
NUMBER OF DASD MODULES:  2
```

Trademarks

- **IBM is a trademark of International Business Machines Corporation in the United States, other countries, or both.**
- **Other company, product, or service names may be trademarks or service marks of others.**
- **Notes**
- **Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.**
- **All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.**
- **This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.**
- **All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.**
- **Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.**
- **Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.**
- **This presentation and the claims outlined in it were reviewed for compliance with US law. Adaptations of these claims for use in other geographies must be reviewed by the local country counsel for compliance with local laws.**
