

| z/TPF V1.1

TPF Users Group - Fall 2009

Title: IBM Tivoli Monitoring Agent for z/TPF and Continuous Data Collection

Name: Gerry Strait
Venue: Operations and Coverage

AIM Enterprise Platform Software
IBM z/Transaction Processing Facility Enterprise Edition 1.1.0

Any reference to future plans are for planning purposes only. IBM reserves the right to change those plans at its discretion. Any reliance on such a disclosure is solely at your own risk. IBM makes no commitment to provide additional information in the future.

© 2009 IBM Corporation

Preamble

- **The Monitoring Agent for z/TPF enables TPF customers to utilize IBM Tivoli Monitoring by providing an interface between continuous data collection data on TPF and the IBM Tivoli Monitoring environment**

Agenda

- **IBM Tivoli Monitoring Agent for z/TPF Availability and General Information**
- **High Level Diagrams**
- **Benefits of IBM Tivoli Monitoring**
- **Required APARs**
 - z/TPF APAR PJ32921
 - TPF4.1 APAR PJ32919
- **Tivoli Monitoring Screen Shots and Discussion**

IBM Tivoli Monitoring Agent for z/TPF Availability and General Information

- **General Availability occurred in May 2009**
- **Used to Display Continuous Data Collection Data on TPF**
 - Replacement for CDC client
- **Supports z/TPF and TPF4.1 with Required APARs**
- **Agent is Free Download for Licensed TPF Users**
 - <http://www.ibm.com/tpf/maint/toolsztpf.html>
 - Requires IBM Tivoli Monitoring 6.2.1 or later and associated licenses
 - IBM Tivoli Monitoring derived from OMEGAMON
- **Documentation in TPF Product Information Center**
 - <http://www.ibm.com/software/http/tpf/pubs/tpfpubs.htm>

IBM Tivoli Monitoring Agent for z/TPF Availability and General Information (continued)

- **Supports CDC Real-Time and Historical Data**
 - Historical data saved by CDC collector: TPFDF, DB2, MySQL (z/TPF)
- **Supports IBM Tivoli Monitoring Data Warehouse**
 - Historical data saved by IBM Tivoli Monitoring environment
 - Allows users to offload saving of CDC historical data
 - IBM Tivoli Monitoring historical data analysis
- **Supports User Data without Agent Modifications**
- **Agent Runs on Microsoft Windows**
- **Online Education**
 - *Available soon: Agent how-to videos

IBM Tivoli Monitoring environment Architecture Overview

Benefits of IBM Tivoli Monitoring

Enterprise Monitoring:

- TPF systems can be monitored in the same environment as other systems such as z/OS
- Mature monitoring environment with continued enhancements

Customizable Displays:

- A selection of customizable charting, graphing and table options
- Create, save and share your own data views (workspaces)
- Visual Aids: Thresholds, Filters, Alerts
- Monitor any combination of CDC metrics in a single workspace
- Monitor multiple TPF processors in a single view

Benefits of IBM Tivoli Monitoring (continued)

Situations/Alerts:

- Alerts based on user defined situations (samples included)
- Alerts generate Tivoli Events
- Alerts can run an application. For example:
 - An application for sending email notifications
 - An application for sending a text message to a mobile phone
 - A TPF Operations Server API application for sending commands into your TPF system

Tivoli Provided Examples:

<http://www-01.ibm.com/software/brandcatalog/portal/opal/details?catalog.label=1TW10TM3C>

<http://www-01.ibm.com/software/brandcatalog/portal/opal/details?catalog.label=1TW10TM37>

<http://www-01.ibm.com/software/brandcatalog/portal/opal/details?catalog.label=1TW10TM36>

Centralized Management:

- Agent is installed into IBM Tivoli Monitoring environment and managed from Tivoli Services Management window. Typically handled by systems support personnel.
- No need to install software on users machines

z/TPF APAR PJ32921

- **Requirement to use Monitoring Agent with z/TPF**
- **Historical Logging**
 - Support added for MySQL local or remote.
 - Complex name & collection interval added to DB2 tables and included in MySQL tables.
- **Improved User Data**
 - New user exit: cdcc.c (sample code provided)
 - Designed to handle one or more user data structures.
 - User data is saved to all CDC historical data repositories.
- **z/TPF CDC Fixes Included**
 - See PJ32921 APEDIT

TPF4.1 APAR PJ32919

- **Requirement to use Monitoring Agent with TPF4.1**
- **DB2 Table Changes**
 - Complex name added to DB2 tables
 - Collection interval added to DB2 tables
- **TPF CDC Fixes Included**
 - See PJ32919 APEDIT

IBM Tivoli Monitoring Agent for z/TPF Management Agent is Multi-Instance – One Instance per TPF Processor

Alert Setup

Situation Editor

The screenshot shows the 'Situations for - LPAR Utilization' window. The left pane shows a tree view with 'LPAR Utilization' expanded to 'z/TPF' and 'KPP_LPAR_Util_High_Sample' selected. The main area is divided into several sections:

- Name:** KPP_LPAR_Util_High_Sample
- Description:** This situation is provided by IBM as a sample. Do not edit.
- Formula:** A table with columns for 'Util Percent' and a formula field containing '> 95.00'. A dropdown menu is open, showing options: 'Value of expression' (selected), 'Minimum in group', 'Maximum in group', 'Count of group members', 'Sum of group', 'Average of group', 'Change in value', and 'Percent change in value'.
- Util Percent:** The utilization percentage during the 30 second Tivoli Enterprise Portal refresh period (average if the collection frequency on the z/TPF system is less than 30). Below this is a 'Situation Formula Capacity' indicator showing 4%.
- Sampling interval:** A time selector set to 0 / 0 : 0 : 30 (ddd hh mm ss).
- Sound:** An option to 'Enable critical.wav' with 'Play' and 'Edit...' buttons.
- State:** A dropdown menu set to 'Critical' (indicated by a red background) and a checked 'Run at startup' option.

At the bottom of the window are buttons for 'OK', 'Cancel', 'Apply', 'Group...', and 'Help'.

Predefined User Data User Exit on z/TPF – cdcc.c

- **Uses a “predefined” format data structure.**

```
typedef struct _PredefinedUserData {  
    char        group[CDC_PDU_GROUP_NAME_LEN];  
    char        value_description[CDC_PDU_VAL_DESC_LEN];  
    unsigned int value;  
} PredefinedUserData;
```

- `group` - can be used to classify data values
- `value_description` - used to describe data value
- `value` - used to hold integer and decimal values
- **Users populate one PredefinedUserData structure per data value and add to collection data.**
- **Can utilize Tivoli Enterprise Portal customizations and alerts on User Data.**

Predefined User Data (z/TPF only)

Collected in cdcc.c user exit on z/TPF

The screenshot shows the IBM TPF Administration console window titled "Predefined User Data - STRAITG - SYSADMIN". The interface includes a menu bar (File, Edit, View, Help), a toolbar, and a Navigator tree on the left. The Navigator tree shows a hierarchy of system components, with "Predefined User Data" selected under the "TPFP1::PP" node. The main area is divided into two panes: a "Helper" pane and a "Predefined User Data" pane.

Helper

To include data in the Predefined User Data view:

- 1) Update the cdcc.c user exit on z/TPF. Example code is provided.
- 2) Modify the frequency setting on z/TPF: ZCDCO MODIFY FREQUENCY-x
DATA-CDC_PREDEFINED_USER_DATA

Tip1: The Group column can be used to filter data. This might be a name which represents a data structure to monitor. The Description column can be used for the name of the elements within the data structure.

Tip2: This view can be used to display whole numbers and decimal values.

Predefined User Data

Group	Description	Value
sample	integer value	6.0
sample	decimal value	3.5
another	thing1	55.0
another	thing2	4.0

- **Notes**
- Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.
- All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.
- This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.
- All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.
- Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.
- Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.
