Disclaimer

- **Any references to future plans are for planning purposes only. IBM reserves the right to change those plans at its discretion. Any reliance on such a disclosure is solely at your own risk. IBM makes no commitment to provide additional information in the future.**

Agenda

- **Code Coverage revisited**
- **Merging code coverage results**
- **Demo**
- **Questions**

Code Coverage revisited

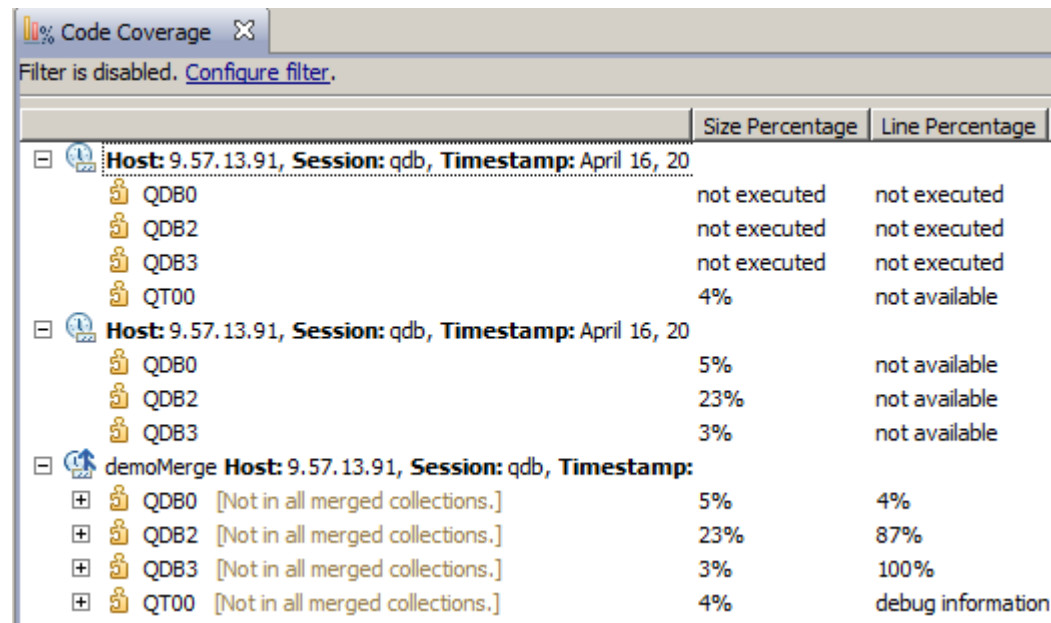

- **Code Coverage is a quality assurance tool**
- **Allows testers, QA leads, project managers to gauge the quality of testing**
 - Better testing → better quality product
- **Several code coverage milestones:**
 - Original tooling in v3.6.0 (APAR PJ37973)
 - Source analysis (line by line) in v3.6.3 (APAR PJ38995)
 - Comparing code coverage results in v4.0

So why merge results?

- **Most test plans last weeks if not months**
 - Not reasonable to use the same collection the entire time
 - A better approach:
 - Start collection, run tests 1-10
 - Start another collection, run tests 11-20
 - Or perhaps *Tester 1* runs 1-10 and *Tester 2* runs 11-20
- **At the end of your test cycle, the QA lead wants a complete picture of testing**
 - *Merge the existing results!*

Code Coverage Merge

- **Select one or more results and merge**
- **Consistent look-and-feel for merged results**
 - **Filtering, sorting, etc. all apply to merge results**

Questions?

Trademarks

- **IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at “[Copyright and trademark information](#)” at www.ibm.com/legal/copytrade.shtml.**

Notes

- **Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.**
- **All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.**
- **This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.**
- **All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.**
- **Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.**
- **Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.**
- **This presentation and the claims outlined in it were reviewed for compliance with US law. Adaptations of these claims for use in other geographies must be reviewed by the local country counsel for compliance with local laws.**
