fctbval - Overview

- **The purpose of this tool is not only to assist in detection of coding errors, but to highlight changes that would affect a database reorganization on the online system.**
- **Linux command function will:**
 - Validate – same validation as done by ZFCTB LOAD
 - Checking is the same as released with APAR PJ31376 (PUT 4)
 - Difference report – similar to Linux diff command
 - Move report – determines record moves
- **Performs functions between two FCTB.so files**
 - Usually between the BASE and ALTERNATE FCTBs
- **Satisfies the following TPFUG requirement:**
 - Req# D06002F - Offline FACE Table comparison tool

fctbval – Validate Function

- **The following validations are performed:**
 - Compare the CTSD and CONK
 - Compare the SS name, number of SSUs and the order and names of the SSUs and make sure there are no changes
 - Validate that pool types that exist in the base FCTB also exist in the alternate FCTB at the same FACE equate value
 - Validate IBM checked records and any user checked records for changes

fctbval - Command Format

- **fctbval [-m -v] {basefctb altfctb | --help}**
- **-m**
 - writes a list of records to the standard output stream (stdout) that have different database locations defined in the base FACE table (FCTB) and in the alternate FCTB. Specify this option when you plan to use the alternate FCTB for migration in preparation for a database reorganization (DBR).
- **-v**
 - displays only validation exceptions that will cause the alternate FCTB to fail during the ZFCTB LOAD command. The FCTB differences are not displayed.

fctbval - Command Format cont'd

- **basefctb**
 - is the relative path name of the FCTB shared object that is currently in production. This is referred to as the base FCTB.
- **altfctb**
 - is the relative path name of the FCTB shared object that is to be loaded. This is referred to as the alternate FCTB.
- **--help**
 - displays help information about the parameters that you can specify for the fctbval command.
- **Use “man fctbval” on zLinux for more details**

fctbval – Validation Report

```

fctbval – Diff Report

- **Differences between the two face tables will also be shown. Some examples of differences are (but not limited to):**
 - Additions/Deletions to pool sections and fixed records
 - Changes in MCHR's
 - Changes in UFT/FTIs
 - Changes in record sizes
 - Changes in duplication (simplex to duplex)
 - Changes in RAMFIL statements (additions, deletions, uniqueness)
 - Deactivated pool sections

fctbval – Diff Report cont'd

```

*****
*   FACE table diff report                                     *
*                                                                 *
*   '<' indicates this RAMFIL is from the base FACE table     *
*   '>' indicates this RAMFIL is from the alternate FACE table *
*                                                                 *
*   '<' grouped with '>' indicates a change detected in the RAMFIL *
*   A singular '<' indicates this RAMFIL has been deleted     *
*   A singular '>' indicates this RAMFIL has been added       *
*                                                                 *
*   Note: The RAMFIL statements shown in the diff listing     *
*   are a representation based upon the binary data in the   *
*   FACE table shared-object. They will not exactly match   *
*   the RAMFIL statements coded in your SIP source file.     *
*                                                                 *

fctbval – Move Report

- **Detects when records have moved from one location to another**
- **Starting record ordinals must match to be considered as being moved**
- **All records are checked for move (pools, fixed, including unique fixed)**
- **Validation is performed for move “correctness”**
 - Record “to” location must be SPARE in base FCTB
 - Record “from” location must be SPARE in alternate FCTB

Trademarks

- **IBM** is a trademark of International Business Machines Corporation in the United States, other countries, or both.
- **Linux** is a trademark of Linus Torvalds in the United States, other countries, or both.
- Other company, product, or service names may be trademarks or service marks of others.
- **Notes**
- Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.
- All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.
- This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.
- All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.
- Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.
- Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.
- This presentation and the claims outlined in it were reviewed for compliance with US law. Adaptations of these claims for use in other geographies must be reviewed by the local country counsel for compliance with local laws.
