2024 TPF Users Group Conference  
May 5-8, New Orleans, LA

**IBM Z**

# PJ47009 (Mar 2024) Managing common deployment files

Use the ZDFLV command to see information about versions of a file loaded to the zTPF system.

- Location of each version on z/TPF
- Location and timestamp on Linux on IBM Z
- Activation number and status
- Load time
- File size

This command is very useful for several personas.

# User Story – Developer loads the wrong file

- A developer is making changes to an application that relies on a file that influences an application's behavior.
- The developer loads their new version of the file (the wrong version!).
- The application's behavior is not as expected.

## **As-Is:**

- It is very difficult to determine that the wrong file was loaded.

## **To-Be:**

- The developer uses the ZDFLV command to determine that the wrong file was loaded. It was loaded from the system build directory instead of their workspace.

# User Story – Developer loads the wrong file

```
zdf1v addGuest84.srvc.json info-all
```

```
DFLV0002I 14.59.51 EXTENDED FILE VERSION INFORMATION  
FILE- /sys/tpf_pbfiles/tpf-fdes/addGuest84.srvc.json
```

```
* LOADSET- TEST0001 STAT- ACT ACT_NUM- 4 HI_ACT- N/A  
sourcepath=/ztpf/linuxbin/blddrv/adbi/jam/addGuest84.srvc.json _  
loadtime=01-29-24 17.18.04  
sourcetime=01-28-24 16.27.08  
LOCATION- /sys/tpf_pbfiles/tpf-fdes/.addGuest84.srvc.json/.4  
SIZE-91 bytes
```

# User Story – Developer on shared test system

- A developer is making changes to an application that relies on a file that influences an application's behavior.
- The developer loads their new version of the file (the correct version!).
- The application's behavior is not as expected.

## **As-Is:**

- It is very difficult to determine that the wrong file was used at run time.

## **To-Be:**

- The developer uses the ZDFLV command to determine that the wrong file was used at run time.

# User Story – Developer on shared test system

```
zdf1v tpf-fdes/addGuest84.srvc.json LOADSET-ALL  
DFLV0001I 15.33.15 STANDARD FILE VERSION INFORMATION  
FILE-/sys/tpf_pbfiles/tpf-fdes/addGuest84.srvc.json
```

```
* LOADSET-NEWFILE2 STAT- ACT ACT_NUM- 9 HI_ACT- N/A  
sourcepath=/another_user/abdi/jam/addGuest84.srvc.json _
```

```
LOADSET-NEWFILE STAT- ACT ACT_NUM- 8 HI_ACT- N/A  
sourcepath=/developer/abdi/jam/addGuest84.srvc.json _
```

```
LOADSET- BASE STAT- ACT ACT_NUM- 0 HI_ACT- N/A  
sourcepath=/ztpf/linuxbin/blddrv/abdi/jam/addGuest84.srvc.json
```

- **Asterisk** indicates the version that is currently active for the ECB that processed the command.
- Selectively activated loadsets might use a different version of the file.

# User Story – Operator loading a fix

- An operator loads a fix that contains several files to a production system.

## **As-Is:**

- The operator has to trust that the loadset contains the correct versions of the files to be loaded.
- The application does not behave as expected and causes an incident to occur in the production environment.

## **To-Be:**

- After doing the load, the operator uses the ZDFLV command to verify the correct files are loaded before deploying the application changes.
- Deployment automation could also use the ZDFLV command to verify the correct artifacts are loaded before continuing the deployment script.

# User Story – Operator loading a fix

```

* LOADSET- TPFMA6Q STAT- ACT ACT_NUM- 2 HI_ACT- N/A
sourcepath=/usr_instead_of_build_dir/base/tpf-fdes/myfile1.xml
```

# User Story – Tester verifies a set of files for test case

- A tester loads a subset of required files to a test system to run a test case.

## **As-Is:**

- The tester has to trust that the loadset contains the correct versions of the files and which files from the base will be used.
- The application does not behave as expected.

## **To-Be:**

- The tester uses the ZDFLV command to verify the files in a specified directory are the correct versions.

# User Story – Tester verifies a set of files for test case

```
zdf1v *.jar start-/sys/tpf_pbfiles/apps/sshd
```

```
DFLV0006I 15.40.18 THE LIST OF CURRENT MATCHING FILES
```

# PJ48019 (Very Soon!) ZMDES DISP wildcard support

- You can use wildcard characters to specify the descriptor file name.
- A question mark (?) matches any single character, and an asterisk (\*) matches any number of characters.

```
