Capitalize On The Power Of An IBM Solution

IBM Middleware On Power Systems Is The Unbeatable Combination

---

The Time To Get Smarter Is Now

- Improve the flexibility of your business processes
- Move beyond simple email for collaboration
- Extract new intelligence from your data
- Initiate a project to reduce costs by consolidating selected workloads

- ## Capitalize on the Power of an IBM Solution !

1

Protect Your Investment By Migrating Workloads Off Dying Platforms

- Some Workloads are good targets for migration
    - Databases; Java Applications; Mail Servers; Infrastructure Servers
- Both HP and Sun Unix Server products have questionable futures
    - **What is their future?**
        - How long will Intel keep Itanium Alive?
        - Oracle is a Software company, not a Hardware company. Rumors about Rock cancellation are rampant
    - Inconsistent virtualization solutions
    - **History of fork and Lift upgrades**

- IBM Power Stack has delivered a consistent solution on schedule for 10 years and counting.

IBM Is Simplifying The Migration Process Through Automated Tooling

| Discover | Map | Provision, Migrate & Configure | Test |

Discover server inventory and application dependencies

Create migration request for target server using source server data

Provision OS and software, migrate source configuration, customize per request

Accelerate the test process for web applications

End to End Automation

Workloads Targeted By Automated Tools From Solaris & HP-UX to AIX

- Databases

- J2EE Application Servers

- Home Grown Code Migration
  - ▶ Typically C/C++ through the migration factories

IBM Factories Get You Started On The Road To Consolidation

- Free Proof of Concept and cost/benefit analysis

- Includes high level architecture

- Consolidation Discovery and Analysis Tool (CDAT) now available as a free download for IBM Sales and Business Partners

Our teams conduct data center interviews and run analysis tools to assess current efficiency and make consolidation recommendations.

IBM

MIGRATE FROM
- Sun Solaris
- Tru64 UNIX
- HP-UX
- Sequent DYNIX/ptx
- SGI Irix
- DG-UX
- HP 3000 MPE
- HP VMS/OpenVMS
- HP/Tandem NSK
- Windows
