

5.1 November, 2000 PTF Pak - 001151

17 November 2000

To All ICMS Technical Support Personnel:

This document contains a summary of the PTFs that are being shipped for ICMS Release 5.1 in the first 5.1 PTF Pak, Nov-00 (001151). The Pak has been tested in a customer test environment to ensure that you are receiving a quality product.

This PTF Pak has been compiled from a number of separate PTFs. These were developed as fixes to problems that have been identified from customers, and projects

Please note PTFs should be installed into the library ICMSPTF. If you have installed an individual PTF, received after the previous 5.1 PTF Pak has been installed, then you must determine whether or not it, and/or any of its pre-requisites, need to be reapplied after you have installed this Pak.

Fix Distribution Process

The Fix distribution process for PTFs and PTF Paks is as follows.

- Problem reported by a Geography L2 on behalf of a customer.
- Problem resolved, tested and inspected.
- PTF sent to the reporting Geography L2 together with information on any pre-requisite PTFs
- The Geography L2 sends the PTF to the customer. Any changes for customer specific objects must be made prior to the PTF installation.
- The PTF Pak is built from all PTFs developed after the previous PTF Pak, tested and sent to all Geography L2s.
- The Geography L2 sends the PTF Pak to customers. Any changes for customer specific objects must be made prior to the PTF installation.

5.1 Nov-00 PTF Pak Contents

The Pak is made up of the following individual PTFs developed from 26 June to 4 November 2000.

This 5.1 PTF Pak includes, in addition to a number of individual PTFs, some 'Sysroute' PTFs (a 'resync' of an error from a lower release of ICMS), as a result of an initiative undertaken to speed up the fixing of errors, found at lower releases, in 5.1. To assist in this individual items were grouped together by object, so that in some cases a number of items were 'Sysrouted' into 5.1 under one of them. These are included with the individual PTFs in the table below. PTFs in this Pak that are a result of 'Sysroute' activity can be identified by the term 'Sysroute' in the Description

Distn #	Objects	APAR # - Description
660888	ICMSMSGF	SC32482 - Premise Mass Maintenance message is not clear
660887	ICMSMSGF	SC32481 - CATV CO Service Request message obscure
660875	LN0005	SC32487 - Cannot reactivate S/O if line number is blank
660874	SV0572	SC32480 - S&E Item Maintenance - Rate field not input capable if 'F4=Prompt' key used to select additional S&E Items
660873	LN0005	SC32479 - Telephony Service Order reactivation fails
660872	HS5002 HS5021 HS6000 HS6000A SR0207	SC32502 - Staging of CATV New Connection S/O fails
660869	PR1000	SC32478 - Service Request (with multiple S/Os) had wrong Status displayed on Service Request Scroll
660868	HE2070 HS5020 HS5020A	SC32503 - Unable to enter a STT for a New Connection CATV S/O
660860	CL1205 CL1205DF	SC32499 - Service Number Scroll display cosmetic error
660852	SV2610	SC32477 - Bulk Number Change Project not updating the Faults Master File
660851	PLCR12LC PLCR14L4 PL0622 PL0622P1	SC32646 - Bulk Terminal ID change project does not update some new database files
660850	PLDZOO02 PLDZOO03 PL4864 PL4864C PVEXLKL2 PVEXLKL3 PVPREN1	SC32645 - Bulk Cable ID change project does not update some new database files
660844	HH0111	SC32476 - Premises Feature Type Maintenance allows expiry dates, in the past, to be changed.
660843	HH0101	SC32475 - Premises Feature Type Maintenance allows expiry dates, in the past, to be changed.
660842	HW0002	SC32474 - Error on Generic Bar Code Entry For New Grouped Equipment not highlighted in reverse image
660824	GF1060	SC32486 - Generic Feed Header Scroll only displays five records at one time
660791	HE1200 HE1200DF	SC32473 - Roll / Up and down messages do not show in full on Item Location Type Scroll
660789	ICMCMMSGF	SC32472 - Poor English in message ID NLSB106
660788	EM0111	SC32471 - No description displayed for F4 prompt on fields in E911 MSAG Master Maintenance

ICMS Product Service and Support

Distn #	Objects	APAR # - Description
660787	EM0121	SC32470 - No description displayed for F4 prompt on Service Code in E911 Community & Exchange Maintenance

New Function

The following APAR does not introduce completely new function but rather significantly extends the existing function. It is for that reason alone it is mentioned here.

APAR SC32704 - Remove the current 16Kb limitation to a TAP3 record structure (Distn # 400750)

The maximum size of a soft coded TAP3 record structure has been increased from a maximum length of 16 Kbytes to 24 Kbytes. The reason for this change is that, in future, the size of a soft coded TAP3 record structure could go beyond the current 16Kb limitation.

Installation Instructions

For full details on how to install a PTF Pak please refer to the '*ICMS PTF Application Guide*', a copy of which can be obtained from your Geography L2.

Note: Some of the ICMS PTF Installation Objects in library ICMSPSUP were changed for 5.1. Please ensure that you are using the latest versions that were sent with the initial release of 5.1. In addition to that please check that the data area CHGCTLDTA and the command APYICMSPTF exist only in library ICMSPSUP. Any other versions must be deleted.

Pre-Requisites

The following PTFs and Paks must be installed, in the following order, prior to the installation of the Nov-00 PTF Pak:

- 400343 Mandatory PTF delivered with the base 5.1 Product

General Comments on Individual PTFs

Please take note of the comments for the following individual PTFs that are included in this PTF Pak.

Distn #	Comment
401093, 401082 and 400798	These PTFs are concerned with changes to the AS/400 APIs for the ICMS AVI. If you do not use the AVI then these changes will have no impact on your use of ICMS.
400911	There are no software changes for this PTF. The problem is caused by a data area having the wrong object authority for *PUBLIC use. What is required here is for a user with the appropriate authorisation on the system to change the data area's object authority for *PUBLIC use by running the following command for each 5.1 ICMS environment GRTOBJAUT OBJ(BLRPDA) OBJTYPE(*DTAARA) USER(*PUBLIC) AUT(*ALL)
400900	When applying this PTF the Auto Activation servers must be shut down.
400750	The file changes in this PTF must be implemented using the conversion routines supplied. Do not attempt to recreate the files using the standard CRTICMSPF or CRTICMSLF commands.
400670	This PTF has increased the length of Data Queue DUPPRT from 95 to 115. After implementation of this PTF, the old Data Queue DUPPRT (if it exists) must be deleted.
400584	As a result of this PTF the document ' <i>AS/400 Record Format for Statement Printing based on BLSTNF00</i> ' has been updated. A copy accompanies this PTF Pak Cover Letter.

Database File Changes

The DDS for the following database file or datastructure changes were shipped in this PTF Pak. Please ensure that the ICMSDDS source file exists in the ICMSPTF library.

Up to date copies of the ICMS Field Reference files (ICMSFREF*) can be found in savefile RI51001151. These have to be restored manually, and replace the current

versions presently in the library list (ICMSPTF library), **before** the changed files in this PTF Pak are recreated.

PTF	File(s)	Comments
660851	PLCR12LC PLCR14L41	New logical files for Bulk Cable ID change process

There is no need to create them, as the datastructure objects will be restored from WI51001151 (Object Savefile) to the ICMS PTF software library.
400771	CLTCDT05 CLTCDT06 CLTCDT07	Three new logical files to assist in improving the TAPIN Process' performance.
400750	CLICFF00 CLINTD00 CLINTD01 CLINTD02 CLINTD03 CLINTD04 CLINTD05 CLINTD06 CLINTD07 CLINTD08 CLOUCL04 CLOUCL05 CLOUFF00 CLOUTD00 CLOUTD01 CLOUTD02 CLOUTD03 CLOUTD04 CLOUTD05	File changes to support an increase in the TAP3 record stricture from 16kB to 24kB. Note: Do not attempt to recreate these files using the standard CRTICMSPF or CRTICMSLF commands. Use the conversion routines (FX400750CL & FX400748CL) supplied with this PTF Pak. For further details refer to the Pre and Post Install Implementation Instructions contained in the documentation savefile, II51001151.
400538	CMBLAC03	Fields BLIDTY (ID Type) and BLIDNO (Number) added to assist in Blacklisted Customer selection.
400512	CLTBSC04	Fields 'TAP Out Indicator' (TSOUTI) and 'TAP In Indicator' (TSTPIN) included in this file as key fields
400509	ACSERV10 BLDTSE BLDTSEL1 BLDTSEL2 BLDTSEL3 BLDTSEL4 BLDTSEL5 BLDTSEL6 BLUSOC08 HSSOCD00 HSSOCD01 HSSOCD02	Billing work file BLDTSE has had SAM address control number added. Billing work file logical BLDTSEL1 has had SAM address control number and package added. The billing work files BLDTSE* are created as and when required by ICMS. S&E Detail file BLUSOC08 logical has been modified. The key now includes Package, and Out Date, to enable quicker retrieval when searching for address level items. Installed Services logical ACSERV10 has been modified. The key now includes Package, and Expiry Date, to enable quicker retrieval when searching for address level items. Summarization of Cost workfile HSSOCD00, which is a copy of BLDTSE, has also had SAM Address Control number added.
400445	SVDEACT	Increase field for S/O Cancellation Reason Code to 5,0 numeric from 3,0 numeric
400331	BLMBRS00 BLMBRS01 BRACCT02	Three new files for the usage rememberisation performance improvements. These files are created as and when required by ICMS.
400307	PLNTSV00 PLNTSV01	DDS changed to refer to a current reference field
400287	SVD PUB03	New logical file for S/O Post Report reprinting

Process Control File Content Changes

Process control file content changes are normally done using a datafix that can be run in either Report or Update mode.

- In Report mode, the datafix will provide a report showing whether records, in the Control File, need to be updated or added, but will not perform the update.
- In Update mode the datafix will perform the update, or addition, of records in the Control file and provide a report detailing the changes

The recommended approach is for the datafix to be run in Report mode first. After that the user can make the decision, based on the report provided, whether to run the datafix in Update mode or not.

For some Control Files, e.g. the Process Control file SYPRCX00, it is possible to add the control record via an existing ICMS maintenance function.

Details for each File Content change are described in the Pre- and Post-Install Implementation Instructions contained in the PTF Pak Documentation savefile I151001151.

Distn #	Objects	File	Comments
400747	FX400747 FX400747CL FX400747DF FX400747P1	BLRXREF	Data Fix to add records to the Billing Reconciliation Cross Reference file for Bill on Demand reconciliation
400564	FX400255 FX400255CL FX400255DF FX400255P	MSXREF00	Record for Access Number Formatting program added.
400541	Via Menu Option	SYPRCX00	A new process code called 'DSPBLKMSG' is introduced for the Account Merge function. It is used to determine what form of message is displayed when the 'From' account being merged has deposits that have not been refunded. The user can decide whether they want a blocking message or a warning message simply by setting the Run Flag to either a 'Y' or 'N'.
400509	FX400509 FX400509CL FX400509DF FX400509P1	SYPRCX00	This Data Fix will add one record to the System Parameter file (SYPRCX00). This record has the key 1DAYS&ECHG and the flag associated with it will be set to 'N'o. This flag will determine if S&E items that have the same in and out dates will be charged for 1 day (flag set to 'Y'es) or charged nothing (flag set to 'N'o).
400331	FX400331	CMASTER CYCJOB CYCDEP	Records added to aid in the Usage Rememberisation Improvement
400750	FX400748 FX400748CL FX40748DF FX40748P1	CLTRTY00 CLTRRL00 CLTRDT00 CLTINP00 CLPPRL00.	New Parameters added to these files to ensure the Supplementary Service Code (SUPPLSVCCD) and Supplementary Service Action Code (SUPPLSCCAC) fields are populated.

Conversions or Datafixes

The standard practice for conversions or datafixes is that they can be run in either Report or Update mode.

- In Report mode, the conversion/datafix will provide a report showing what records, if any, in the affected file(s), need to be updated, but will not perform the update.
- In Update mode the conversion/datafix will perform the update of the records in the affected files(s) and provide a report detailing the changes

The recommended approach is for the datafix to be run in Report mode first. After that the user can make the decision, based on the report provided, whether to run the datafix in Update mode or not. Please also refer to the Post Install Implementation Instructions contained in the PTF Pak Documentation savefile II51001151 for more details.

Distn #	Objects	Comments
400750	FX400750A FX400750CL FX400750DF FX40750A FX40750ABJ FX40750AP1 FX40750B FX40750BBJ FX40750BP1 FX40750C FX40750CBJ FX40750CP1 FX40750D FX40750DBJ FX40750DP1 FX40750E FX40750EP1	This conversion recreates the files CLICFF00, CLOUFF00, CLINTD00, CLOUTD00 and all their associated logical files using the newly changed DDS and ensures that existing data is retained. Please ensure that the ICMS Field Reference files (ICMSFREF*) have been restored to the ICMS PTF Library prior to running this conversion.
	FX400749CL FX400749DF FX40749A FX40749ABJ FX40749AP1	This conversion changes the attributes of the field 'CHARGETYPE' defined in file CLFLDD00. These are Field Type changed from S-Zoned to A-Alpha, Number of Digits from 3 to 0, Right Adjust Flag from 'Y' to 'N' and Zero Fill flag from 'Y' to 'N'.
	FX400748 FX400748CL FX40748DF FX40748P1	This conversion Updates the field EMRUID in file CLOUCL00. Recreates the logical file CLOUCL04 and creates the new logical file CLOUCL05.
400312	FX309634 FX309634CL FX309634DF FX309634P	Where a service order, associated to an existing service request, was created via mass service order entry no Service Order Schedule records (SVSCHED00) were created. This datafix will create the missing records.

GUI PTF Objects

This is the first 5.1 PTF Pak with GUI objects at the 5.1 PTF level. As such you must restore them into the 5.1 GUI PTF environment, not the 5.1 GUI Base environment.

The instructions below explain how to create this environment. This is a once only activity.

1. Extract the GUI folder, G001151, and its contents from the GUI savefile GI51001151 and transfer it to a PC with GUI/400 ADK installed
2. Rename the directory G001151 to **R510P**
3. Rename the files G001151.* to R510P.*
4. If any AWHOST.* files exist in the R510P directory they must be deleted
5. Open the now renamed PTF environment (R510P) in GUI/400 ADK
6. Select File/Project/Settings from the menu then update the Project Title to suit your requirements, for example 'ICMS 5.1 GUI PTF'
7. Select OK to close the dialog box
8. Select Tools/Compile from the menu and compile the Application as per normal

You have just created the ICMS 5.1 GUI PTF environment.

Client Software

This refers to the Java related objects for the

- AVI
- Customer Hierarchy, and
- MSPPP Package Builder.

The AVI objects are on a CD-ROM while the Customer Hierarchy and MSPPP Package Builder objects have been sent in a savefile

- CINT001151 for Windows NT environment
- CI98001151 for Windows 98 environment.

For each 'Client' application, the objects delivered are a complete refresh of the related software. Details on how to install them can be found in the '*ICMS PTF Application Guide*'.

Other Details

The Pak should be installed in its entirety. You cannot choose individual objects from within it and install these only. The only exception is the updating of any Content File changes as detailed above.

Feedback

If you have any issues with this PTF Pak, or suggestions for improving the process please send it via Notes E-mail to '**ICMSU Support/New Zealand/IBM@IBMNZ**', or Internet ID '**ICMSUSUP@nz1.ibm.com**'. Please use the problem reporting process for any ICMS product problems.

Regards,

Debbie Compton
