

This is the tutorial for the base feature of IBM File Manager for z/OS®, one of the IBM zSeries® Problem Determination tools.

- **Introduction**
- **How to view or edit using an unformatted display**
 - How to view or edit a VSAM data set
 - How to view or edit a QSAM (sequential) data set
 - How to view or edit a PDS (library) data set
- **How to view or edit using a formatted display**
 - How to view or edit a VSAM data set
 - How to view or edit a QSAM (sequential) data set
- **How to change the way data is displayed**
 - How to change the format displayed
 - How to change the location displayed

In this section, you will learn how to change the location in the display.

Option 1 displays the view entry panel

```

7 | IBM File Manager for z/OS Base Feature for z/OS V10 tutorial | © 2010 IBM Corporation

The format changed to zoom snl. Now press F2 again.

- To enter zoom mode:
 - **ZOOM** command
 - **Z** command
 - **F2** (zoom)
- You can zoom from any format:
 - CHAR, TABL, SNGL, HEX, or LHEX,
- You zoom to:
 - The record you select with your cursor, or
 - The record at the top of the display
- To exit zoom mode:
 - **F3** (exit)
 - **ZOOM** command or **Z** command
 - **F2** (zoom)
 - **F12** (cancel) or **CANCEL** (command)

You can use the ZOOM command from any format, and it “zooms” you into a record.

To exit zoom, use the ZOOM command again. It can be abbreviated to just Z. Or you can also exit Zoom with PF2.

Tips about ZOOM 2 of 3

- When you zoom, you are “stuck” on one record... you cannot move away from it...no F10 or F11
- **So, why use zoom?**
 - The scope of FIND and CHANGE commands are the one record
 - You will not accidentally alter data in any other records or move to another record

- **Use it for safety!**

- Also, you can change a variable record's length when in ZOOM CHAR

In zoom, your FIND and CHANGE commands only affect the one record. There is no risk of making changes to any other records in the file.

So use zoom for safety, to ensure that you do not make changes to other records by mistake.

And there is one other benefit. If you start in Character format, and then zoom, that puts you in the Zoom Character mode. In that mode, if you are working on a file with variable length records, you can change a record's length. You just overtype the **Record Length** field to either extend the existing record or truncate it. That can be a pretty handy trick when you need it.

Tips about ZOOM 3 of 3

■ So, what about Split Screen?

- **Shift + F2** (split) for terminals with 24 PF keys
- **START** (command) starts a new split screen session
- **F9** (swap) is still swap between split screen sessions

If you are a custom to using F2 to split screen there is no reason for concern. Splitting the screen is still available. In edit and view File Manager has a different command assigned to F2.

In File Manager edit or view, press and hold the shift key then press F2. The results is a split screen. In case you are unaware, typing the start command on the command line then pressing enter will split the screen. F9 still swaps between split screens.

The prefix area can be used to quickly change the format display from tabl to sngl and you can chose which record is displayed in sngl first. Simply place your cursor in the prefix area type fs and press enter. In this example the cursor is on record number 9 and the sngl command is typed. Press enter.

Change the display format from SNGL to HEX

```

The display format was changed to sngl. Notice the record field has the current record number displayed. Over typing the number would reposition to the record you specify. The current record is also displayed above the command line. Unlike zoom sngl format, you can change to previous and next records in this format too.

On the command line, type the FH command and press enter.

Change the display format from HEX to LHEX

In format snl, there are additional field descriptions available if you choose to use them. To use one of the field descriptions, type the abbreviation for the description on the command line and press enter.

Ref turns on or off the field reference number.

Pic turns on or off the picture clause.

Str turns on or off the structure.

Type turns on or off the data type display.

Sloc turns on or off the starting location.

Just turns on or off the justification of numeric fields.

Rdf turns on or off the display of a redefined field and is also valid in format tabl.

In this example type pic on the command line and press enter.

Change the display format from SNGL to CHAR

F1=Help F2=Zoom F3=Exit F4=CRetrieval F5=RFind F6=Find F7=Up F8=Down F9=Swap F10=Left F11=Right F12=Ca

The display format is now tabl.

Press F3 twice to return the primary option menu.

That is the end of this section, which described how to change the format displayed.

Feedback

Your feedback is valuable

You can help improve the quality of IBM Education Assistant content to better meet your needs by providing feedback.

- Did you find this module useful?
- Did it help you solve a problem or answer a question?
- Do you have suggestions for improvements?
