IBM® WebSphere® Everyplace® Deployment V6 Changing the Database Administrator Password

@ business on demand.

Configuration Wizard Overview

- The Everyplace Deployment configuration wizard
  - Allows install to default many options
  - Allows additional configuration needed for production
  - Hides the underlying complexities
  - Simplifies choices

- Available options include:
  - Upgrade to Microsoft® Active Directory 2003
  - Update WSED Administrator Password
  - Update DB2® Administrator Password

Using the Configuration Wizard

- Configuration Wizard is accessible from Start Menu … Programs … IBM WebSphere … WebSphere Everyplace Deployment

- Select the configuration to change
  - ▸ Upgrade to Active Directory 2003
  - ▸ Update WSED Administrator Password
  - ▸ Update DB2 Administrator Password

Updating DB2 Administrator Password

- You must stop the WSED servers **before** you change the DB2 administrator password in the local OS and in DB2.

- Verify that you can login to all Windows DB2 services using the new password.

- Launch the configuration wizard and select the Update existing database administrator password option.

- WSED updates server configuration with new password

•These steps are described in detail in the WebSphere Everyplace Deployment InfoCenter in the section entitled Updating the Configuration.

•**Important:** Follow these steps in order. You must stop the servers before you change your password in DB2 Universal Database. If your password had expired you might need to terminate the server processes or restart the machine to verify that the servers are stopped.

•**Note:** The Everyplace® Deployment Configuration Wizard does not enable you to change the DB2 Everyplace administrator password for subscriptions that you created before you installed Everyplace Deployment. You must modify administrator passwords manually for any subscriptions you created previously.

Verifying the Configuration Change

- Run First Steps from Start Menu …
  Programs … IBM WebSphere …
  WebSphere Everyplace Deployment

- Select Verify Installation

5

Troubleshooting the Configuration Change

General

- Verify that the Everyplace Deployment servers are stopped
- Check eds_config_trace.log

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.
