

IBM Tivoli Netcool Performance Manager for Wireless 9.2.1

Creating a stored busy hour report

IBM Tivoli® Netcool® Performance Manager for Wireless version 9.2.1

Creating a stored busy hour report

Assumptions

You have basic knowledge of the wireless telecommunications industry.

You know how to navigate the IBM Tivoli Netcool Performance Manager for Wireless graphical user interface.

You know how to make a basic IBM Tivoli Netcool Performance Manager for Wireless report.

Assumptions

You have basic knowledge of the wireless telecommunications industry.

You know how to navigate the ITNPMW graphical user interface.

You know how to make a basic ITNPMW report.

Objectives

Upon completion of this module, you should be able to:

- Describe IBM Tivoli Netcool Performance Manager for Wireless 9.2.1 Stored Busy Hour Reporting
- Create an IBM Tivoli Netcool Performance Manager for Wireless stored busy hour report

Objectives

Upon completion of this module, you should be able to:

Describe IBM Tivoli Netcool Performance Manager for Wireless (ITNPMW) 9.2.1 stored busy hour reporting

Create an ITNPMW stored busy hour report

Module outline

- Busy hour overview
- Creating an IBM Tivoli Netcool Performance Manager for Wireless stored busy hour report
- Summary

Module outline

ITNPMW stored busy hour reporting overview

Creating an ITNPMW stored busy hour report

Summary

What is a busy hour

- Definition of **busy hour**
- The time periods of a busy hour
- Computing **busy hour**

What is a busy hour

A **busy hour** represents the period with the greatest value for any performance metric as represented by a field for a defined period of time.

The time period can be daily, weekly, or monthly.

When a **busy hour** is computed, it yields a single busy hour value for the defined period.

Stored busy hour reporting

- IBM Tivoli Netcool Performance Manager for Wireless can compute and store data for the busiest hour
- Stored busy hour (SBH) table updates
- Database's stored busy hour tables

Stored busy hour reporting

ITNPMW can compute and store data for the busiest hour of the day, week, or month based on a busy hour definition that includes: the designated busy hour determiner and associated fields values.

Stored busy hour (SBH) tables are updated, usually nightly, for the defined time period.

Upon generation the busy hour data is stored as fields within the database's stored busy hour tables for future reference.

Valid stored busy hour (SBH) report field type combinations

Valid field type combinations supported in IBM Tivoli Netcool Performance Manager for Wireless stored busy hour report definitions:

- SBH fields
- SBH and Attribute fields
- SBH and Summary fields
- SBH, Attribute, and Summary fields

Valid Stored Busy Hour (SBH) Report Field Type Combinations

The following field type combinations are supported in ITNPMW stored busy hour report definitions:

SBH fields

SBH and Attribute fields

SBH and Summary fields

SBH, Attribute, and Summary fields

Stored busy hour reporting overview

- Similar creation process as basic report
- Field selection window
 - Selecting field type
 - Fields selected

ITNPMW stored busy hour reporting overview

Similar creation process as basic report

Key difference is in Field Selection window -

Select field type to filter interface to display configured stored busy hours

Field selected are either stored busy hour determiner or value

The screenshot displays the 'define report' configuration screen in the Tivoli Netcool Performance Manager. The interface is organized into several sections:

- Step 1: DataSource Selection:** Shows the selected data source as 'student138.ibm.com-rs'.
- Step 2: Focal Entity Type:** A dropdown menu is set to 'Cell'. A 'Browse Entities' button is located to the right of the dropdown. Arrows indicate the flow from the dropdown to the 'Browse Entities' button and then to the 'next' button.
- Step 3: Field Selections:** Currently shows 'None Selected'.
- Step 4: Date-Time Selection:** Currently shows 'None Selected'.
- Step 5: Filtering:** Currently shows 'None Selected'.
- Optional: Extended Functions:** Currently shows 'None Selected'.

At the bottom of the main configuration area, there are four buttons: 'Save', 'Run', 'Filter & Run', and 'Cancel'. On the right side, there is a 'How Do I?' help box with a list of topics and a note that links to online help.

Steps 1 and 2: Selecting the datasource and focal entity type

Step 1: Data source selection

Select the data source in the same manner as a basic report

Step 2: focal entity type

The focal entity must be the same as the focal entity of the stored busy hour definition. Once the focal entity is selected click the Next button.

Step 3: Field selections

In this section of the report definition you must select the busy hour definition of interest and the associated fields of interest for display in the stored busy hour report.

Click the **more** button in **Step 3: Field Selection** to access the available stored busy hour definitions.

Step 3: Field selections (2 of 3)

The screenshot shows the 'Step 3: Field Selections' interface. The top section contains several dropdown menus and buttons: 'Entity' is set to 'Cell', 'Field Type' is 'Daily SBH', and 'Vendor' is 'Nokia'. There is a 'Refresh Fields' button. Below this is a table of available fields:

| Group | Name | User Defined Group | Alias | Description | Source |
|-----------------------------|-----------------------------------|--------------------|-------|------------------|--------|
| Nokia.Resource_Availability | sbhd.daily.ave_busy_tch_hscsd | | | The average of i | |
| Nokia.High_Speed_Data | sbhv.daily.ala_from_14400_to_9600 | | | The number of # | |
| Nokia.High_Speed_Data | sbhv.daily.ala_from_9600_to_14400 | | | The number of # | |
| Nokia.Resource_Availability | sbhv.daily.ave_busy_tch_hscsd | | | The average of i | |

Below the table is a section titled 'Drag the fields you wish to report on here:' with a table that has the following columns: Group, Name, Description, Source, Data Avail., Technology, Vendor, Entity, and Field Ty.

In Step 3: Field Selections (continued)

1. Set the **Entity** field to the entity level of the stored busy hour definition. In this example the level is cell.
2. Set the **Field Type** to the type of stored busy hour, either Daily SBH, Weekly SBH, or Monthly SBH.
3. Optionally set the Vendor filter to display only stored busy hour definitions for a particular vendor. In the example the applicable vendor filter is Nokia.
4. Click the **Refresh Fields** button to filter the fields view to display the applicable busy hour determiner and busy hour field values.
5. Note: The stored busy hour determiner has the prefix **sbhd** added to its name. The fields associated with the busy hour determiner have the prefix **sbhv** added to their names.

Step 3: Field selections (3 of 3)

Step 3: Field Selections

Entity: Find Entity Vendor:

Technology: Field Type: SBH Definition:

Filter: Extended Search Refresh Fields

Groups:

| Group | Name | User Defined Group | Alias | Description | Source |
|-----------------------------|-----------------------------------|--------------------|-------|------------------|--------|
| Nokia.Resource_Availability | sbhd.daily.ave_busy_tch_hscsd | | | The average of : | |
| Nokia.High_Speed_Data | sbhv.daily.ala_from_14400_to_9600 | | | The number of : | |
| Nokia.High_Speed_Data | sbhv.daily.ala_from_9600_to_14400 | | | The number of : | |
| Nokia.Resource_Availability | sbhv.daily.ave_busy_tch_hscsd | | | The average of : | |

Drag the fields you wish to report on here:

| Group | Name | Description | Source | Data Avail. | Technology | Vendor | Entity | Field Ty |
|---------------------------|--------------------------|------------------|--------|-------------|------------|--------|--------|----------|
| Nokia.Resource_Availabili | sbhd.daily.ave_busy_tch_ | The average of : | | None | GSM | Nokia | Cell | Daily SB |
| Nokia.High_Speed_Data | sbhv.daily.ala_from_144C | The number of : | | None | GSM | Nokia | Cell | Daily SB |

remove selected fields next

In Step 3: Field Selections (continued)

1. Drag and drop the desired field selections for the report run into the lower box.

Note: It is not required to include the busy hour determiner in your report but including it will make it easier to interpret the report results.

2. Click the **next** button after selecting and moving the desired report run fields.

Completing the report definition

The screenshot shows a web-based interface for defining a report. It consists of three main sections, each with an 'edit' button in the top right corner:

- Step 4: Date-Time Selection:** This section is highlighted with a black box. It contains a table with the following data:

| Selected Date-Times | |
|---------------------------------|-------------|
| 7 Day(s) | 00:00-24:00 |
| Start Of Week: Default (Sunday) | |
| Include holidays | |
| Mon,Tue,Wed,Thu,Fri,Sat,Sun | |
- Step 5: Filtering:** This section is circled in red. It shows 'None Selected'.
- Optional: Extended Functions:** This section is also highlighted with a black box. It contains a table with the following data:

| Group by | |
|---------------------|-------------------|
| Attribute And Time: | Cell_Cell_Id, Day |
| Ranking | |
| None selected | |

At the bottom of the interface, there are four buttons: 'Save', 'Run', 'Filter & Run', and 'Cancel'.

Completing the report definition

1. In **Step 4: Date Time Selection**

Select the applicable date-time parameters for your report in the same manner as a basic report.

2. In **Step 5: Filtering**

Optional: Set any applicable network, traffic, and vendor filters in the same manner as a basic report.

3. **Optional: Extended Functions**

Optional: Use the default Group By setting of FocalEntity.Entity_ID and Day or select the applicable options to focus busy hour reporting on specific attribute and time groupings.

4. Click the Save button to save the report or run the report immediately by clicking the Run or Filter & Run button.
