Retail Distribution

UCCnet_envelope Business Object

Version 4.1.1

Note!

Before using this information and the product it supports, be sure to read the general information under “Notices and Trademarks” on page 3.

First Edition (October 2002)

This edition applies to Version 4, Release 1, Modification 1, of *IBM® CrossWorlds®* (5724-C12) and to all subsequent releases and modifications until otherwise indicated in new editions.

IBM welcomes your comments. You can send them to the following address:

IBM Canada Ltd. Laboratory
Information Development
8200 Warden Avenue
Markham, Ontario, Canada L6G 1C7

Include the title and order number of this book, and the page number or topic related to your comment.

When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

UCCnet_envelope business object

Note: This document assumes that the reader is familiar with IBM® CrossWorlds® components, the UCCnet message set, and the UCCnet Document Type Definition (DTD), and has access to UCCnet documentation and UCCnet eRoom digital workplaces.

The UCCnet DTD defines standards for the item information exchanged between UCCnet trading partners and for the requirements of the Trading Partner Interchange (TPI), which enables the exchange of data in the form of XML messages. The IBM CrossWorlds system transforms UCCnet XML messages into UCCnet_envelope business objects, which can then be manipulated in business processes.

The UCCnet_envelope business object is based on the UCCnet DTD and is typically used to exchange data between specific IBM CrossWorlds connectors and the WebSphere® Business Integration for Retail Distribution collaborations. The attributes of the business object cover both the addressing information used by the TPI server in transmitting XML messages, and the business information types that are published between trading partners in the UCCnet environment.

Business object structure

The UCCnet_envelope business object is a hierarchical business object. The following table shows its structure.

Table 1. Attributes for UCCnet_envelope business object

Name	Type	Key	Cardinality
TPIRouteInfo	TPIRouteInfo		1
XMLDeclaration	String		
DocType	String	x	
TLO	UCCnet_TLO_envelope		1

The UCCnet_envelope business object includes attributes based on the following child business objects:

TPIRouteInfo

This child business object is a flat business object. It contains attributes for routing messages in conformance with TPI, namely those that the TPI connector uses for creating and sending messages in XML format.

Table 2. Attributes for TPIRouteInfo child business object

Name	Type	Key
DocumentType	String	x
BOPrefix	String	
SenderId	String	
ReceiverId	String	
UniqueId	String	

Table 2. Attributes for *TPIRouteInfo* child business object (continued)

Name	Type	Key
OriginalName	String	
WaitForMDN	String	
BackupRequired	String	

UCCnet_TLO_envelope

This child business object is a hierarchical business object. It contains child business objects for the message header and for the body of the message. The child business object representing the body of the message contains additional child business objects that represent different types of information used for items in UCCnet. These nested child business object definitions contain exactly the same attributes, sequence, and structure that are specified in the UCCnet DTD. See UCCnet documentation for more information on the attributes required by UCCnet.

Note: In this table, spaces have been inserted in one value in the Type column to enable the entry to fit in the table cell. The actual value does not include a space.

Table 3. Attributes for *UCCnet_TLO_envelope* child business object

Name	Type	Key	Cardinality
communicationVersion	String		
messageHeader	UCCnet_envelope_messageHeader		1
body	UCCnet_envelope_body		1

Supported verbs

The UCCnet_envelope business object supports the following verbs:

- Request Processing (sending to the destination application): Create
- Event Notification (receiving from the source application): Create

Examining the object

To examine a listing of the attributes of the UCCnet_envelope business object, use the IBM CrossWorlds System Manager or IBM CrossWorlds Business Object Designer.

Notices

IBM may not offer the products, services, or features discussed in this document in all countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A.

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created

programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM CrossWorlds Lab Director
IBM RTP Laboratory
3039 Cornwallis Road
P.O. BOX 12195
Raleigh, NC 27709-2195
U.S.A

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not necessarily tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information may contain examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples may include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

COPYRIGHT LICENSE This information may contain sample application programs in source language, which illustrates programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.

Programming interface information

Programming interface information, if provided, is intended to help you create application software using this program.

General-use programming interfaces allow you to write application software that obtain the services of this program's tools.

However, this information may also contain diagnosis, modification, and tuning information. Diagnosis, modification and tuning information is provided to help you debug your application software.

Warning: Do not use this diagnosis, modification, and tuning information as a programming interface because it is subject to change.
