SaveStateError

Error occurred while trying to save duplist state after disconnect. Will cleanup in next poll.

Level : *Warning*

Log Message : *Error while trying to save duplist state after disconnect. Will cleanup in next poll.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7oSaveStateErrorEv9*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.2*

SNMP Trap Number : 9

Variables

The SaveStateError message contains the following variables:

Table 1. SaveStateError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

FTP Module

The FTP Module provides connectivity to remote FTP servers. This section contains details for the messages delivered from the FTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the FTP Module.

MIB Name : *CASTIRON-COMP-FTP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.6*

The following table provides an alphabetical list of all notifications that can be issued by the FTP Module.

Table 1. Notifications issued by the FTP Module

Notification	Level	System	Description
AppendAfter	Info	Orchestration	Response received after issuing an append command to the file on remote server.
AppendBefore	Info	Orchestration	In process of issuing an append command to the file on remote server.
ConnectionFailure	Severe	Orchestration	The FTP operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The FTP operation failed while trying to connect to the server. This will cause a retry.

Notification	Level	System	Description
DeleteAfter	Info	Orchestration	Response received when a file was deleted from the remote server.
DeleteBefore	Info	Orchestration	In process of deleting a file to the remote server.
DeleteDupListEntry	Info	Orchestration	Duplicate list is at maximum capacity. Removing a file from the duplicate list.
DeleteInfoSummary	Info	Orchestration	A complete summary of delete file activity configuration.
DirChangeAfter	Info	Orchestration	Changed to the specified directory on remote server.
DirChangeBefore	Info	Orchestration	Changing directory on the remote server.
DuplicateFile	Info	Orchestration	The file was previously processed by FTP poll activity.
EncodingError	Severe	Orchestration	The data encoding specified is not supported by FTP activity.
EndpointInfoSummary	Info	Orchestration	A complete summary of endpoint information specified.
FileNotMoved	Warning	Orchestration	File was not moved from original location as there is already another file in the destination location and overwrite option is false.
FileProcessed	Info	Orchestration	The file is processed by FTP activity and is left in place.
FileProcessingError	Warning	Orchestration	Error occurred while processing the file.
FtpPatternConversion	Warning	Orchestration	In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
GetAfter	Info	Orchestration	Response received when a file was downloaded to the remote server.
GetBefore	Info	Orchestration	In process of downloading a file to the remote server.
GetInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
InternalException	Severe	Orchestration	A internal error occurred while executing FTP activity.
ListAfter	Info	Orchestration	Response received when the directory was listed on the remote server.
ListBefore	Info	Orchestration	In process of listing a directory on the remote server.
ListFileSummary	Info	Orchestration	A complete summary of list file activity configuration.
NListAfter	Info	Orchestration	Response received when the directory was name listed on the remote server.
NListBefore	Info	Orchestration	In process of name listing a directory on the remote server.
OperationError	Severe	Orchestration	FTP activity was unable to perform operation on FTP server.

Notification	Level	System	Description
PutAfter	Info	Orchestration	Response received when a file was uploaded to the remote server.
PutBefore	Info	Orchestration	In process of uploading a file to the remote server.
PutDuplicateFileName	Severe	Orchestration	File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
PutEmptyFileName	Severe	Orchestration	The file name specified in put activity is empty.
PutInfoSummary	Info	Orchestration	A complete summary of put file activity configuration.
RenameAfter	Info	Orchestration	Response received when a file was renamed to the remote server.
RenameBefore	Info	Orchestration	In process of renaming a file to the remote server.
RenameDupError	Severe	Orchestration	Rename operation errored as file with same name already exists.
RenameInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
SshFingerprintInfo	Info	Orchestration	SSH finger print information for communication with FTP server.
SshModeInfo	Info	Orchestration	SSH mode information for communication with FTP server.
TimeStampError	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
TimestampCommand	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
UnableToDelete	Warning	Orchestration	Error occurred while deleting file from the specified location.
UnableToMove	Warning	Orchestration	Error occurred while moving file to destination location.

ConnectionFailure

The FTP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the server "{ServerName}" after {NumberOfRetryAttempts} attempts. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6cConnectionFailureEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.1*

SNMP Trap Number : *1*

Variables

The ConnectionFailure message contains the following variables:

Table 1. ConnectionFailure Message Variables

1. **SerialNumber**

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ServerName

The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1ServerName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.1.1

6. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.1.2

7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

ConnectionRetry

The FTP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the server "{ServerName}". Error is: {Message} Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6cConnectionRetryEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.1*

SNMP Trap Number : 2

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ServerName

The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2ServerName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.5

Parent topic: [FTP Connection Notifications](#)

FTP Operation Notifications

Provides a comprehensive list of operation notifications sent from the FTP Module.

- [AppendAfter](#)
Response received after issuing an append command to the file on remote server.
- [AppendBefore](#)
In process of issuing an append command to the file on remote server.
- [DeleteAfter](#)
Response received when a file was deleted from the remote server.
- [DeleteBefore](#)
In process of deleting a file to the remote server.
- [DeleteDupListEntry](#)
Duplicate list is at maximum capacity. Removing a file from the duplicate list.
- [DeleteInfoSummary](#)
A complete summary of delete file activity configuration.
- [DirChangeAfter](#)
Changed to the specified directory on remote server.
- [DirChangeBefore](#)
Changing directory on the remote server.
- [DuplicateFile](#)
The file was previously processed by FTP poll activity.
- [EndpointInfoSummary](#)
A complete summary of endpoint information specified.
- [FileNotMoved](#)
File was not moved from original location as there is already another file in the destination location and overwrite option is false.
- [FileProcessed](#)
The file is processed by FTP activity and is left in place.
- [FileProcessingError](#)
Error occurred while processing the file.
- [FtpPatternConversion](#)
In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
- [GetAfter](#)
Response received when a file was downloaded to the remote server.
- [GetBefore](#)
In process of downloading a file to the remote server.
- [GetInfoSummary](#)
A complete summary of get file activity configuration.
- [ListAfter](#)
Response received when the directory was listed on the remote server.
- [ListBefore](#)
In process of listing a directory on the remote server.
- [ListFileSummary](#)
A complete summary of list file activity configuration.

- [NListAfter](#)
Response received when the directory was name listed on the remote server.
- [NListBefore](#)
In process of name listing a directory on the remote server.
- [OperationError](#)
FTP activity was unable to perform operation on FTP server.
- [PutAfter](#)
Response received when a file was uploaded to the remote server.
- [PutBefore](#)
In process of uploading a file to the remote server.
- [PutDuplicateFileName](#)
File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
- [PutEmptyFileName](#)
The file name specified in put activity is empty.
- [PutInfoSummary](#)
A complete summary of put file activity configuration.
- [RenameAfter](#)
Response received when a file was renamed to the remote server.
- [RenameBefore](#)
In process of renaming a file to the remote server.
- [RenameDupError](#)
Rename operation errored as file with same name already exists.
- [RenameInfoSummary](#)
A complete summary of get file activity configuration.
- [SshFingerprintInfo](#)
SSH finger print information for communication with FTP server.
- [SshModeInfo](#)
SSH mode information for communication with FTP server.
- [TimeStampError](#)
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
- [TimestampCommand](#)
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
- [UnableToDelete](#)
Error occurred while deleting file from the specified location.
- [UnableToMove](#)
Error occurred while moving file to destination location.

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. FileName

The name of the file that was processed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv25FileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.25.1

FtpPatternConversion

In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.

Level : *Warning*

Log Message : *Automatically converting old style FTP filename pattern from "{OldStylePattern}" to "{NewStylePattern}". Please republish project from Studio version 3.6 or later to eliminate this warning.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oFtpPatternConversionEv17

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 17

Variables

The FtpPatternConversion message contains the following variables:

Table 1. FtpPatternConversion Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. OldStylePattern

Old style pattern sent to FTP activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv17OldStylePattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.17.1

6. NewStylePattern

New style pattern automatically generated by FTP activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv17NewStylePattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.17.2

The RenameInfoSummary message contains the following variables:

Table 1. RenameInfoSummary Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. DirName

Directory name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32DirName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.1

6. FromFileName

Source file name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32FromFileName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.2

7. ToPath

Destination path specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32ToPath
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.3

8. OverwriteOption

Overwrite option specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32OverwriteOption
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.4

HTTP Module

The HTTP Module provides HTTP/HTTPS client and server facilities. This section contains details for the messages delivered from the HTTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the HTTP Module.

MIB Name : *CASTIRON-COMP-HTTP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.1*

The following table provides an alphabetical list of all notifications that can be issued by the HTTP Module.

Table 1. Notifications issued by the HTTP Module

Notification	Level	System	Description
AcceptEncodingType	Info	Orchestration	The type of Accept-Encoding in the request-header field.
ClientConMgrTimeout	Info	Orchestration	Setting the client connection manager timeout value. This is configurable on the JConsole.

Notification	Level	System	Description
ClientIdleTimeout	Info	Orchestration	The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.
ClientMaxTotalConn	Info	Orchestration	Setting the client connection manager maximum number of connections from the JConsole.
ClientReclaimPeriod	Info	Orchestration	The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set from the JConsole.
CommonHandlerError	Severe	Orchestration	An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
CompressFormat	Info	Orchestration	Indicates the type of Content-Encoding in the response from the server.
ConnectionRetry	Warning	Orchestration	The send request operation failed while trying to connect to the server. This will cause a retry.
ContentEncodingType	Info	Orchestration	The type of Content-Encoding used in the header in the outgoing request.
DecompressedEncoding	Info	Orchestration	Content-Encoding of the incoming request to the receive activity.
EndpointInformation	Info	Orchestration	Request for endpoint information.
GeneralRequestFailed	Severe	Orchestration	The send request failed while executing the activity.
HttpListenerStop	Info	Orchestration	Information regarding the stopping of a listener on a specific port.
HttpLoopBackValues	Info	Orchestration	Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
IdleConTimeoutStart	Info	Orchestration	The idle connection timeout thread is enabled.
IdleConTimeoutStop	Info	Orchestration	The idle connection thread is disabled.
IncomingContentEnc	Info	Orchestration	The Content-Encoding type in the request header received by the receive activity
LoopBackInitialize	Info	Orchestration	Loopback values for initializing the MBean. It is set on the JConsole.
ReadConnectionParam	Info	Orchestration	The input connection parameter is not mapped by the user.
ReadInputHeaders	Info	Orchestration	The input parameter header is not mapped by the user.
ReceiveActivate	Severe	Orchestration	The receive activity failed to activate.
ReceiveDeActivate	Severe	Orchestration	The receive activity failed to stop.
ReceiveIOError	Severe	Orchestration	An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.

Notification	Level	System	Description
ReceiveInternalError	Severe	Orchestration	An error occurred while the receive activity processed the request.
ReceiveOperationError	Severe	Orchestration	An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
ReceiveResponseBody	Info	Orchestration	The response sent by the receive activity to a request.
ReceiveSendReplyError	Severe	Orchestration	A connection problem caused an error while sending the response from the receive activity.
ReceiveURIPortInfo	Info	Orchestration	Information regarding the URI and Port where the server is listening.
RegisterKeyStore	Severe	Orchestration	An error occurred while registering the key store.
ReplyCompressFormat	Info	Orchestration	The Content-Encoding used by the send reply activity.
ReplyConnectionError	Severe	Orchestration	An error occurred while sending the response. Probable cause is a connection error.
ReplyGeneralError	Severe	Orchestration	An internal error occurred while sending the reply from the receive activity.
ReplyHandlerNull	Severe	Orchestration	Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
ReplyUnMarshalHeader	Severe	Orchestration	An error occurred while reading input headers in the reply activity.
ReplyUnknownError	Severe	Orchestration	An unknown exception occurred while sending the response to the client.
RequestActivate	Severe	Orchestration	The request activity failed to activate.
RequestIgnoredHeader	Info	Orchestration	The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
RequestParamsDetails	Info	Orchestration	Parameter details, including URL and method, used for the post activity
ResponseBodyBinary	Info	Orchestration	The response body is binary.
ResponseBodyNotBinary	Info	Orchestration	The response body is not binary.
ResponseDefinition	Info	Orchestration	Response definition received from the server for the performed post.
SendRequestConnection	Severe	Orchestration	The send request operation failed because a connection to the server could not be established.
SendRequestOperation	Severe	Orchestration	The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
ServerResponseCode	Info	Orchestration	Post response code received from the server.

Notification	Level	System	Description
SockCollectorFinish	Info	Orchestration	Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorRunInfo	Info	Orchestration	Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorSched	Info	Orchestration	Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.
StaleConnectionCheck	Info	Orchestration	Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.
UnSupportedMedia	Warning	Orchestration	Request is an unsupported media type.
UnsolicitedEncoding	Severe	Orchestration	The server reply contains Content-Encoding which is not acceptable by the client.
UnsupportedEncoding	Severe	Orchestration	The Content-Encoding in the request header is not supported by the receive activity.

- [HTTP Connection Notifications](#)
Provides a comprehensive list of connection notifications sent from the HTTP Module.
- [HTTP Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the HTTP Module.

HTTP Connection Notifications

Provides a comprehensive list of connection notifications sent from the HTTP Module.

- [ClientConMgrTimeout](#)
Setting the client connection manager timeout value. This is configurable on the JConsole.
- [ClientIdleTimeout](#)
The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.
- [ClientMaxTotalConn](#)
Setting the client connection manager maximum number of connections from the JConsole.
- [ClientReclaimPeriod](#)
The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set

from the JConsole.

- [ConnectionRetry](#)
The send request operation failed while trying to connect to the server. This will cause a retry.
- [EndpointInformation](#)
Request for endpoint information.
- [HttpLoopBackValues](#)
Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
- [ReadConnectionParam](#)
The input connection parameter is not mapped by the user.
- [ReceiveActivate](#)
The receive activity failed to activate.
- [ReceiveDeActivate](#)
The receive activity failed to stop.
- [ReceiveIOError](#)
An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.
- [ReceiveSendReplyError](#)
A connection problem caused an error while sending the response from the receive activity.
- [ReplyConnectionError](#)
An error occurred while sending the response. Probable cause is a connection error.
- [SendRequestConnection](#)
The send request operation failed because a connection to the server could not be established.
- [StaleConnectionCheck](#)
Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.

ClientMaxTotalConn

Setting the client connection manager maximum number of connections from the JConsole.

Level : *Info*

Log Message : *Setting the client connection manager maximum number of connections at {MaxConnections}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1cClientMaxTotalConnEv12*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.1*

SNMP Trap Number : *12*

Variables

The ClientMaxTotalConn message contains the following variables:

Table 1. ClientMaxTotalConn Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. MaxConnections

The maximum number of connections for the client connection manager.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1cEv12MaxConnections
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.1.1.12.1

HTTP Operation Notifications

Provides a comprehensive list of operation notifications sent from the HTTP Module.

- [AcceptEncodingType](#)
The type of Accept-Encoding in the request-header field.
- [CommonHandlerError](#)
An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
- [CompressFormat](#)
Indicates the type of Content-Encoding in the response from the server.
- [ContentEncodingType](#)
The type of Content-Encoding used in the header in the outgoing request.
- [DecompressedEncoding](#)
Content-Encoding of the incoming request to the receive activity.
- [HttpListenerStop](#)
Information regarding the stopping of a listener on a specific port.
- [IncomingContentEnc](#)
The Content-Encoding type in the request header received by the receive activity
- [ReadInputHeaders](#)
The input parameter header is not mapped by the user.
- [ReceiveOperationError](#)
An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
- [ReceiveResponseBody](#)
The response sent by the receive activity to a request.
- [ReceiveURIPortInfo](#)
Information regarding the URI and Port where the server is listening.
- [RegisterKeyStore](#)
An error occurred while registering the key store.
- [ReplyCompressFormat](#)
The Content-Encoding used by the send reply activity.
- [ReplyUnMarshalHeader](#)
An error occurred while reading input headers in the reply activity.
- [RequestActivate](#)
The request activity failed to activate.
- [RequestIgnoredHeader](#)
The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
- [RequestParamsDetails](#)
Parameter details, including URL and method, used for the post activity
- [ResponseBodyBinary](#)
The response body is binary.
- [ResponseBodyNotBinary](#)
The response body is not binary.
- [ResponseDefinition](#)
Response definition received from the server for the performed post.
- [SendRequestOperation](#)
The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
- [ServerResponseCode](#)
Post response code received from the server.
- [UnsupportedMedia](#)
Request is an unsupported media type.
- [UnsolicitedEncoding](#)
The server reply contains Content-Encoding which is not acceptable by the client.

- [UnsupportedEncoding](#)
The Content-Encoding in the request header is not supported by the receive activity.

HTTP Internal Notifications

Provides a comprehensive list of internal notifications sent from the HTTP Module.

- [GeneralRequestFailed](#)
The send request failed while executing the activity.
- [IdleConTimeoutStart](#)
The idle connection timeout thread is enabled.
- [IdleConTimeoutStop](#)
The idle connection thread is disabled.
- [LoopBackInitialize](#)
Loopback values for initializing the MBean. It is set on the JConsole.
- [ReceiveInternalError](#)
An error occurred while the receive activity processed the request.
- [ReplyGeneralError](#)
An internal error occurred while sending the reply from the receive activity.
- [ReplyHandlerNull](#)
Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
- [ReplyUnknownError](#)
An unknown exception occurred while sending the response to the client.
- [SockCollectorFinish](#)
Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorRunInfo](#)
Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorSched](#)
Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.

JD Edwards Module

JD Edwards Module. This section contains details for the messages delivered from the JD Edwards Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JD Edwards Module.

MIB Name : *CASTIRON-COMP-JDE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.15*

The following table provides an alphabetical list of all notifications that can be issued by the JD Edwards Module.

Table 1. Notifications issued by the JD Edwards Module

Notification	Level	System	Description
ActivateSuccessful	Info	Orchestration	JDE activity was activated successfully.
ActivateUnSuccessful	Info	Orchestration	The activity which was not activated successfully. Activity activated, will try to establish connectivity at activity execute time.
ActivityError	Severe	Orchestration	The specified activity was not successful.
ActivitySuccessful	Info	Orchestration	The specified activity was successful.
ClassesMissing	Severe	Orchestration	JDE is missing classes required to start the activity. Please install the libraries from the WMC.
CloseConnectionError	Severe	Orchestration	Error occurred while closing the connection to JDE.
ConnectException	Warning	Orchestration	Error while connecting to JDE.
ConnectPoolRelease	Warning	Orchestration	There was an error while closing the connection pool.
CreateSchemaError	Severe	Orchestration	Error occurred while creating request schema for the business function.
DataStructureError	Severe	Orchestration	Error occurred while creating a schema for the business function name.
DisconnectException	Warning	Orchestration	Error while disconnecting from JDE.

Notification	Level	System	Description
GetConnectionError	Severe	Orchestration	Error occurred while creating a connection to JDE.
JDEConnectError	Severe	Orchestration	The JDE operation failed because a connection to the server could not be established.
JDEInternalerror	Severe	Orchestration	Error occurred while processing the request.
JDERetryError	Warning	Orchestration	The JDE operation failed while trying to connect to the server. This will cause a retry.
MakeConnectionError	Warning	Orchestration	There was an error while creating a connection to destination.
NumberFormatError	Warning	Orchestration	There was an error due to invalid port number.
ResourceCleanError	Severe	Orchestration	Error occurred while closing the statement or result set in database.
ResponseSchemaError	Severe	Orchestration	Error occurred while creating response schema for the business function.
SetUpInfo	Warning	Orchestration	JDE activity got warning or error messages while setting up the specified activity.
UnSupportedEncoding	Severe	Orchestration	Error while processing unsupported encoding.

JD Edwards Operation Notifications

Provides a comprehensive list of operation notifications sent from the JD Edwards Module.

- [ActivateSuccessful](#)
JDE activity was activated successfully.
- [ActivityError](#)
The specified activity was not successful.
- [ActivitySuccessful](#)
The specified activity was successful.

- [ClassesMissing](#)
JDE is missing classes required to start the activity. Please install the libraries from the WMC.
- [CreateSchemaError](#)
Error occurred while creating request schema for the business function.
- [DataStructureError](#)
Error occurred while creating a schema for the business function name.
- [NumberFormatError](#)
There was an error due to invalid port number.
- [ResourceCleanError](#)
Error occurred while closing the statement or result set in database.
- [ResponseSchemaError](#)
Error occurred while creating response schema for the business function.
- [SetUpInfo](#)
JDE activity got warning or error messages while setting up the specified activity.
- [UnsupportedEncoding](#)
Error while processing unsupported encoding.

JMS Module

JMS Module. This section contains details for the messages delivered from the JMS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JMS Module.

MIB Name : *CASTIRON-COMP-JMS-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.8*

The following table provides an alphabetical list of all notifications that can be issued by the JMS Module.

Table 1. Notifications issued by the JMS Module

Notification	Level	System	Description
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
FactoryUnknownError	Severe	Orchestration	Unknown exception while looking up the connection factory
FirstID	Warning	Orchestration	The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message. Messages in the queue is tampered and will impact the delivery of messages
GetConnectRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
GetMarshallError	Severe	Orchestration	Error occurred while marshalling the JMS message.
JMSError	Severe	Orchestration	Error occurred while getting message from the provider.
LibraryNotInstalled	Severe	Orchestration	This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
MakeConnectError	Severe	Orchestration	Error occurred while creating the connection to destination.
NamingException	Severe	Orchestration	Naming exception occurred while getting message from destination.

Notification	Level	System	Description
NoMessage	Info	Orchestration	There is no message to be retrieved from the destination specified.
PollMessageError	Severe	Orchestration	Error occurred while getting a message from queue.
PollMessageRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
PoolFactoryError	Severe	Orchestration	Error occurred while looking up for connection factory.
PoolReleaseError	Severe	Orchestration	Error occurred while closing the connection pool.
PooledConnException	Warning	Orchestration	A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.
RecoveryInfo	Info	Orchestration	The activity is recovering and its skipping message with specified id as its already delivered.
RecoveryInfo	Info	Orchestration	The JMS connector is in recovery mode.
RestartError	Severe	Orchestration	Error occurred while trying to restart the subscriber on the specified topic.
SendConnectRerty	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
SendMarshallError	Severe	Orchestration	Error occurred while unmarshalling the JMS message.
SendMessageError	Severe	Orchestration	Error occurred while sending message.
SendNamingException	Severe	Orchestration	Naming exception occurred while sending message to destination.
SubscriberConfigError	Severe	Orchestration	Error occurred while configuring the subscriber activity.
SubscriberConnect	Severe	Orchestration	The JMS operation failed while trying to connect to the server.
SubscriberError	Severe	Orchestration	Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
SubscriberNameError	Severe	Orchestration	Naming exception occurred while configuring the subscriber activity.
SubscriberStartInfo	Info	Orchestration	Subscriber started successfully for the specified topic.
UnsubscribeError	Warning	Orchestration	Error occurred while unsubscribing on the topic.

FactoryUnknownError

Unknown exception while looking up the connection factory

Level : *Severe*

Log Message : *Exception while looking up the connection factory {Message}. The exception is unknown error message from Provider. One of the reason for the error is If the provider is ActiveMQ and the binding file name or path is not correct.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JMS-MIB::ciC8cFactoryUnknownErrorEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.8.1.1*

SNMP Trap Number : *11*

Variables

The FactoryUnknownError message contains the following variables:

Table 1. FactoryUnknownError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

PoolReleaseError

Error occurred while closing the connection pool.

Level : *Severe*

Log Message : *Exception while closing the connection pool. The Exception is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JMS-MIB::ciC8cPoolReleaseErrorEv6*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.8.1.1*

SNMP Trap Number : 6

Variables

The PoolReleaseError message contains the following variables:

Table 1. PoolReleaseError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

JMS Operation Notifications

Provides a comprehensive list of operation notifications sent from the JMS Module.

- [FirstID](#)
The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message. Messages in the queue is tampered and will impact the delivery of messages
- [NamingException](#)
Naming exception occurred while getting message from destination.
- [NoMessage](#)
There is no message to be retrieved from the destination specified.

- [RecoveryInfo](#)
The activity is recovering and its skipping message with specified id as its already delivered.
- [SendMessageError](#)
Error occurred while sending message.
- [SendNamingException](#)
Naming exception occurred while sending message to destination.
- [SubscriberConfigError](#)
Error occurred while configuring the subscriber activity.
- [SubscriberError](#)
Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
- [SubscriberNameError](#)
Naming exception occurred while configuring the subscriber activity.
- [SubscriberStartInfo](#)
Subscriber started successfully for the specified topic.
- [UnsubscribeError](#)
Error occurred while unsubscribing on the topic.

SendMessageError

Error occurred while sending message.

Level : *Severe*

Log Message : *Exception while sending message. The error code is {ErrorCode} and message is {ErrorMessage}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JMS-MIB::ciC8oSendMessageErrorEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.8.1.2*

SNMP Trap Number : *4*

Variables

The SendMessageError message contains the following variables:

Table 1. SendMessageError Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ErrorCode

The error code specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8oEv4ErrorCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.2.1.4.1

6. ErrorMessage

The error message specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8oEv4ErrorMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.2.1.4.2

JMS Internal Notifications

Provides a comprehensive list of internal notifications sent from the JMS Module.

- [GetMarshallError](#)
Error occurred while marshalling the JMS message.
- [JMSError](#)
Error occurred while getting message from the provider.
- [LibraryNotInstalled](#)
This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
- [PollMessageError](#)
Error occurred while getting a message from queue.
- [SendMarshallError](#)
Error occurred while unmarshalling the JMS message.

The MIME Module provides activities for creating and parsing Multipurpose Internet Mail Extensions. This section contains details for the messages delivered from the MIME Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the MIME Module.

MIB Name : *CASTIRON-COMP-MIME-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.10*

The following table provides an alphabetical list of all notifications that can be issued by the MIME Module.

Table 1. Notifications issued by the MIME Module

Notification	Level	System	Description
AttachmentNumber	Info	Orchestration	Activity is processing the specified attachment number.
AttachmentsFound	Info	Orchestration	The activity found specified number of attachments.
AutoGeneratedBody	Info	Orchestration	No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
BoundaryAbsent	Info	Orchestration	Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
BoundaryInfo	Info	Orchestration	Boundary of mime attachment is as specified.
BoundaryMoreThan70	Warning	Orchestration	Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
BoundarySpecified	Info	Orchestration	Activity found boundary in mime message.
DefaultContentType	Info	Orchestration	Activity did not find any content type specified. Setting content type to text/plain.
EmptyParts	Severe	Orchestration	The input parameter - parts - is empty and there is no data to serialize.
FoundBoundary	Info	Orchestration	Activity found boundary parameter in the mime message.
HeaderAbsent	Severe	Orchestration	Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
InputBodyNull	Severe	Orchestration	Input parameter body from container is NULL. This is due to internal exception.
MainAndSubType	Severe	Orchestration	The main and sub type found in content type.
MainType	Info	Orchestration	Main type specified in the serialize activity.
MimeHeaderMapped	Info	Orchestration	Optional input parameter 'mimeheader' is mapped.
MimeHeaderNotMapped	Info	Orchestration	Optional input parameter 'mimeheader' was not mapped in the activity.
NoAttachments	Severe	Orchestration	Activity did not find any attachments to serialize.
NoBoundaryFound	Warning	Orchestration	Boundary was specified in header but no boundary found in the body. Returning single body.

Notification	Level	System	Description
NoPartBody	Info	Orchestration	This part does not have any body. Setting blank body.
NumberOfParts	Info	Orchestration	The number of parts found in the mime message.
ParseActivityDone	Info	Orchestration	The activity has outputted parts output parameter.
ParseException	Severe	Orchestration	Error occurred while parsing the data.
SerialActivityDone	Info	Orchestration	The activity is done outputting mimeheader and body output parameters.
SerializeException	Severe	Orchestration	Error occurred while serializing the data.
SubType	Info	Orchestration	Sub Type found in content type of the message.
TransferEncChanged	Warning	Orchestration	The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
TransferEncLimit	Severe	Orchestration	Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
TransferEncMissing	Warning	Orchestration	Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.
TransferEncodingError	Severe	Orchestration	Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
TransferEncodingValue	Info	Orchestration	Activity found Content-Transfer-Encoding.

MIME Operation Notifications

Provides a comprehensive list of operation notifications sent from the MIME Module.

- [AttachmentNumber](#)
Activity is processing the specified attachment number.
- [AttachmentsFound](#)
The activity found specified number of attachments.

- [AutoGeneratedBody](#)
No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
- [BoundaryAbsent](#)
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
- [BoundaryInfo](#)
Boundary of mime attachment is as specified.
- [BoundaryMoreThan70](#)
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
- [BoundarySpecified](#)
Activity found boundary in mime message.
- [DefaultContentType](#)
Activity did not find any content type specified. Setting content type to text/plain.
- [EmptyParts](#)
The input parameter - parts - is empty and there is no data to serialize.
- [FoundBoundary](#)
Activity found boundary parameter in the mime message.
- [HeaderAbsent](#)
Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
- [MainAndSubType](#)
The main and sub type found in content type.
- [MainType](#)
Main type specified in the serialize activity.
- [MimeHeaderMapped](#)
Optional input parameter 'mimeheader' is mapped.
- [MimeHeaderNotMapped](#)
Optional input parameter 'mimeheader' was not mapped in the activity.
- [NoAttachments](#)
Activity did not find any attachments to serialize.
- [NoBoundaryFound](#)
Boundary was specified in header but no boundary found in the body. Returning single body.
- [NoPartBody](#)
This part does not have any body. Setting blank body.
- [NumberOfParts](#)
The number of parts found in the mime message.
- [ParseActivityDone](#)
The activity has outputted parts output parameter.
- [SerialActivityDone](#)
The activity is done outputting mimeheader and body output parameters.
- [SerializeException](#)
Error occurred while serializing the data.
- [SubType](#)
Sub Type found in content type of the message.
- [TransferEncChanged](#)
The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
- [TransferEncLimit](#)
Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
- [TransferEncMissing](#)
Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.

- [TransferEncodingError](#)
Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
- [TransferEncodingValue](#)
Activity found Content-Transfer-Encoding.

MainType

Main type specified in the serialize activity.

Level : *Info*

Log Message : *Got main-type: {MainType}*.

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MIME-MIB::ciC10oMainTypeEv22*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.10.1.2*

SNMP Trap Number : *22*

Variables

The MainType message contains the following variables:

Table 1. MainType Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. MainType

Main type specified in the serialize activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MIME-MIB::ciC10oEv22MainType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.10.1.2.1.22.1

TransferEncLimit

Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.

Level : *Severe*

Log Message : *Entities of type {MainType}/{SubType} cannot have any other Content-Transfer-Encoding apart from 7bit.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MIME-MIB::ciC10oTransferEncLimitEv16*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.10.1.2*

SNMP Trap Number : *16*

Variables

The TransferEncLimit message contains the following variables:

Table 1. TransferEncLimit Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p>

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. MainType

The main type found in the content type of message.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MIME-MIB::ciC10oEv16MainType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.10.1.2.1.16.1

6. SubType

The sub type found in the content type of message.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MIME-MIB::ciC10oEv16SubType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.10.1.2.1.16.2

The Maestro Module represents the internal operation of the Cast Iron runtime. This section contains details for the messages delivered from the Maestro Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Maestro Module.

MIB Name : *CASTIRON-COMP-MAESTRO-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.20*

The following table provides an alphabetical list of all notifications that can be issued by the Maestro Module.

Table 1. Notifications issued by the Maestro Module

Notification	Level	System	Description
AbandonedJobs	Warning	Orchestration	A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
ActInvalidLicense (Deprecated)	Severe	Orchestration	Deprecated.
ActivityFailedError	Severe	Orchestration	Encountered fault of specified type, please see rest of the log for more information.
AlreadyDeployed	Severe	Orchestration	The specified orchestration is already deployed.
CallContext	Severe	Orchestration	Maestro is not able to create call context.
CallContextDestroy	Info	Orchestration	Call context created but task never started.
CatchExpression	Severe	Orchestration	Unable to parse the catch expression.
CleanUpFailed	Warning	Orchestration	Failed to clean up the activity.
CloseInputStream	Warning	Orchestration	Could not close input stream.
CloseOutputStream	Warning	Orchestration	Could not close output stream.
CloseReader	Warning	Orchestration	Could not close reader.
CloseWriter	Warning	Orchestration	Could not close writer.
DeactivateFailed	Severe	Orchestration	Maestro failed to deactivate the specified activity.
DebugFailed	Severe	Orchestration	Debugger operation failed.
DeleteObject	Warning	Orchestration	Could not clean up object with ID.
DestroyFailed	Severe	Orchestration	Maestro failed to destroy the specified activity.
EnqueueFailed	Severe	Orchestration	Unable to enqueue the orchestration.
EntryPath	Severe	Orchestration	Could not find an entry point for the specified activity in the compiled orchestration.
ErrorMap	Severe	Orchestration	Error in map activity.
ErrorTwoPhase	Severe	Orchestration	Activity could not be converted to Two phase activity.
ExecuteError	Severe	Orchestration	Unable to execute the orchestration.
FaultInfo	Severe	Orchestration	Could not initialize FaultInfo.
ForEach	Severe	Orchestration	Error occurred in for each activity.

Notification	Level	System	Description
IOError	Warning	Orchestration	Internal error occurred because of Input/Output error.
InitializeJobInfo	Severe	Orchestration	Could not initialize job info.
InputMap	Severe	Orchestration	No input maps are there for required input parameter.
InputMapXPath	Severe	Orchestration	Could not perform input map expression.
InputMapXSLT	Severe	Orchestration	Could not perform input map XSLT.
InvokeError	Severe	Orchestration	Error occurred in module.
KeyLog	Info	Orchestration	Logged key with specified name and value.
LargeInputParam	Warning	Orchestration	Specified input parameter is over the limit and is too large to log.
LargeNonpersistentVar	Severe	Orchestration	Specified variable is too large for a non-persistent orchestration.
LargeOutputParam	Warning	Orchestration	Specified output parameter is over the limit and is too large to log.
LargeTotalVarSize	Severe	Orchestration	This job cannot be run during low-memory conditions.
LargeVariable	Warning	Orchestration	Specified variable is over the limit and is too large to log.
LicenseExpireImminent (Deprecated)	Severe	Orchestration	Deprecated.
LicenseExpireSoon (Deprecated)	Warning	Orchestration	Deprecated.
LicenseExpired (Deprecated)	Severe	Orchestration	Deprecated.
LicenseInvalid (Deprecated)	Severe	Orchestration	Deprecated.
LoaderCancel	Severe	Orchestration	Cancel of job with specified ID of specified orchestration.
LoaderDelete	Severe	Orchestration	Delete of specified orchestration failed.
LoaderDeploy	Severe	Orchestration	Deployment of specified orchestration failed.
LoaderPublish	Severe	Orchestration	Publish of specified configuration failed.
LoaderStart	Severe	Orchestration	Start of the specified orchestration failed.
LoaderStop	Severe	Orchestration	Stop of the specified orchestration failed.
LoaderSuspend	Severe	Orchestration	Suspend of the specified orchestration failed.
LoaderunDeploy	Severe	Orchestration	Undeploy of specified orchestration failed.
MBeanRegister	Severe	Orchestration	Could not register specified object with MBean server.
MBeanUnregister	Severe	Orchestration	Could not unregister specified object with MBean server.

Notification	Level	System	Description
MaxSeqNum	Warning	Orchestration	Exceeded maximum number of activity events for a job.
ModuleConfig	Severe	Orchestration	Could not read module configuration.
MonitorQuery	Severe	Orchestration	Could not query for monitor data.
MonitorVariable	Warning	Orchestration	Could not log monitor variable.
MonitorVariables	Warning	Orchestration	Could not log monitor variables.
MontiorEvents	Severe	Orchestration	Could not log monitor events.
MultipleActFactory	Severe	Orchestration	Activity Factory with specified name and version has multiple registrations, and hence not loading it.
NoActivityFactory	Severe	Orchestration	Activity Factory with specified name and version not registered.
NotDeployed	Severe	Orchestration	Orchestration not deployed.
NotDocParameter	Severe	Orchestration	Specified parameter is not an XML document.
NotDocVariable	Severe	Orchestration	Specified variable is not an XML document.
NotStopped	Severe	Orchestration	Could not undeploy as the orchestration is not stopped.
NotSuspend	Severe	Orchestration	Could not suspend as the orchestration is not running.
NullParam	Severe	Orchestration	Specified parameter is null.
NullVariable	Severe	Orchestration	Specified variable is null.
OSGISyntaxError	Severe	Orchestration	Invalid OSGI query syntax provided.
OrchCompileError	Severe	Orchestration	Unable to compile the specified orchestration.
OutputMap	Severe	Orchestration	Could not perform output map.
OutputMapXPath	Severe	Orchestration	Could not perform output map expression.
OutputMapXSLT	Severe	Orchestration	Could not perform output map transform.
ParamIndex	Warning	Orchestration	Parameter at specified index is already set.
ProgramDestroy	Severe	Orchestration	Program in non terminal state being destroyed.
ProgramStart	Severe	Orchestration	Cannot start an orchestration that is in transient state.
SocketNoReply	Warning	Orchestration	Could not receive socket reply.
SplitError	Severe	Orchestration	Error occurred in split activity.
SwitchExpEmpty	Severe	Orchestration	The condition provided for if-then activity and case label is empty.
SwitchExpression	Severe	Orchestration	Unable to parse the if-then expression.
TaskCancelled	Warning	Orchestration	Caught exception while cancelling job.
TaskEnd	Info	Orchestration	Ended job for specified orchestration.
TaskFound	Severe	Orchestration	Found task with specified state on undeploy.

Notification	Level	System	Description
TaskRemove	Severe	Orchestration	Unable to remove the task.
TaskStart	Info	Orchestration	Started job for specified orchestration.
TaskState	Severe	Orchestration	Unable to set the task state.
TaskStateTransition	Severe	Orchestration	Invalid task state transition happened, hence marking the job as faulted.
TaskStatusChanged	Info	Orchestration	Job status changed.
TooManyWaitingJobs	Severe	Orchestration	A job was aborted due to a large number of waiting jobs.
UnCaughtError	Severe	Orchestration	Uncaught Internal error occurred.
UnexpectedError	Severe	Orchestration	Unexpected Internal error occurred.
VariableNull	Warning	Orchestration	Specified variable is null.
WhileExpEmpty	Severe	Orchestration	The condition provided for while activity is empty.
WhileExpression	Severe	Orchestration	Unable to parse while expression with specified condition.
WrongActFactory	Severe	Orchestration	Activity factory with specified name and version returned wrong class.

Maestro Operation Notifications

Provides a comprehensive list of operation notifications sent from the Maestro Module.

- [AbandonedJobs](#)
A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
- [ActInvalidLicense \(Deprecated\)](#)
Activity Factory with specified name and version had a licensing failure.
- [ActivityFailedError](#)
Encountered fault of specified type, please see rest of the log for more information.
- [AlreadyDeployed](#)
The specified orchestration is already deployed.

- [CallContext](#)
Maestro is not able to create call context.
- [CallContextDestroy](#)
Call context created but task never started.
- [CatchExpression](#)
Unable to parse the catch expression.
- [CleanUpFailed](#)
Failed to clean up the activity.
- [CloseInputStream](#)
Could not close input stream.
- [CloseOutputStream](#)
Could not close output stream.
- [CloseReader](#)
Could not close reader.
- [CloseWriter](#)
Could not close writer.
- [DeactivateFailed](#)
Maestro failed to deactivate the specified activity.
- [DebugFailed](#)
Debugger operation failed.
- [DeleteObject](#)
Could not clean up object with ID.
- [DestroyFailed](#)
Maestro failed to destroy the specified activity.
- [EnqueueFailed](#)
Unable to enqueue the orchestration.
- [EntryPath](#)
Could not find an entry point for the specified activity in the compiled orchestration.
- [ErrorMap](#)
Error in map activity.
- [ErrorTwoPhase](#)
Activity could not be converted to Two phase activity.
- [ExecuteError](#)
Unable to execute the orchestration.
- [FaultInfo](#)
Could not initialize FaultInfo.
- [ForEach](#)
Error occurred in for each activity.
- [InitializeJobInfo](#)
Could not initialize job info.
- [InputMap](#)
No input maps are there for required input parameter.
- [InputMapXPath](#)
Could not perform input map expression.
- [InputMapXSLT](#)
Could not perform input map XSLT.
- [InvokeError](#)
Error occurred in module.
- [KeyLog](#)
Logged key with specified name and value.
- [LargeInputParam](#)
Specified input parameter is over the limit and is too large to log.

- [LargeNonpersistentVar](#)
Specified variable is too large for a non-persistent orchestration.
- [LargeOutputParam](#)
Specified output parameter is over the limit and is too large to log.
- [LargeTotalVarSize](#)
This job cannot be run during low-memory conditions.
- [LargeVariable](#)
Specified variable is over the limit and is too large to log.
- [LicenseExpireImminent \(Deprecated\)](#)
Imminent license expiration for specified bundle - expires on specified date - Please renew the license now to avoid service interruption.
- [LicenseExpireSoon \(Deprecated\)](#)
License for specified bundle name expires soon. Please renew the license to avoid service interruption.
- [LicenseExpired \(Deprecated\)](#)
License has expired. Please renew the license now to avoid service interruption.
- [LicenseInvalid \(Deprecated\)](#)
License for specified bundle name is invalid.
- [LoaderCancel](#)
Cancel of job with specified ID of specified orchestration.
- [LoaderDelete](#)
Delete of specified orchestration failed.
- [LoaderDeploy](#)
Deployment of specified orchestration failed.
- [LoaderPublish](#)
Publish of specified configuration failed.
- [LoaderStart](#)
Start of the specified orchestration failed.
- [LoaderStop](#)
Stop of the specified orchestration failed.
- [LoaderSuspend](#)
Suspend of the specified orchestration failed.
- [LoaderunDeploy](#)
Undeploy of specified orchestration failed.
- [MBeanRegister](#)
Could not register specified object with MBean server.
- [MBeanUnregister](#)
Could not unregister specified object with MBean server.
- [MaxSeqNum](#)
Exceeded maximum number of activity events for a job.
- [ModuleConfig](#)
Could not read module configuration.
- [MonitorQuery](#)
Could not query for monitor data.
- [MonitorVariable](#)
Could not log monitor variable.
- [MonitorVariables](#)
Could not log monitor variables.
- [MontiorEvents](#)
Could not log monitor events.
- [MultipleActFactory](#)
Activity Factory with specified name and version has multiple registrations, and hence not loading it.
- [NoActivityFactory](#)
Activity Factory with specified name and version not registered.

- [NotDeployed](#)
Orchestration not deployed.
- [NotDocParameter](#)
Specified parameter is not an XML document.
- [NotDocVariable](#)
Specified variable is not an XML document.
- [NotStopped](#)
Could not undeploy as the orchestration is not stopped.
- [NotSuspend](#)
Could not suspend as the orchestration is not running.
- [NullParam](#)
Specified parameter is null.
- [NullVariable](#)
Specified variable is null.
- [OSGISyntaxError](#)
Invalid OSGI query syntax provided.
- [OrchCompileError](#)
Unable to compile the specified orchestration.
- [OutputMap](#)
Could not perform output map.
- [OutputMapXPath](#)
Could not perform output map expression.
- [OutputMapXSLT](#)
Could not perform output map transform.
- [ParamIndex](#)
Parameter at specified index is already set.
- [ProgramDestroy](#)
Program in non terminal state being destroyed.
- [ProgramStart](#)
Cannot start an orchestration that is in transient state.
- [SocketNoReply](#)
Could not receive socket reply.
- [SplitError](#)
Error occurred in split activity.
- [SwitchExpEmpty](#)
The condition provided for if-then activity and case label is empty.
- [SwitchExpression](#)
Unable to parse the if-then expression.
- [TaskCancelled](#)
Caught exception while cancelling job.
- [TaskEnd](#)
Ended job for specified orchestration.
- [TaskFound](#)
Found task with specified state on undeploy.
- [TaskRemove](#)
Unable to remove the task.
- [TaskStart](#)
Started job for specified orchestration.
- [TaskState](#)
Unable to set the task state.
- [TaskStateTransition](#)
Invalid task state transition happened, hence marking the job as faulted.

- [TaskStatusChanged](#)
Job status changed.
- [TooManyWaitingJobs](#)
A job was aborted due to a large number of waiting jobs.
- [VariableNull](#)
Specified variable is null.
- [WhileExpEmpty](#)
The condition provided for while activity is empty.
- [WhileExpression](#)
Unable to parse while expression with specified condition.
- [WrongActFactory](#)
Activity factory with specified name and version returned wrong class.

AbandonedJobs

A timeout occurred while waiting for jobs to stop and some jobs were abandoned.

Level : *Warning*

Log Message : *Timeout waiting for jobs to stop, number of jobs abandoned: {NumberOfAbandonedJobs}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MAESTRO-MIB::ciC20oAbandonedJobsEv87*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.20.1.2*

SNMP Trap Number : *87*

Variables

The AbandonedJobs message contains the following variables:

Table 1. AbandonedJobs Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
--

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfAbandonedJobs

The number of abandoned jobs.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv87NumberOfAbandonedJobs
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.87.1

ForEach

Error occurred in for each activity.

Level : *Severe*

Log Message : *Exception in foreach activity: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MAESTRO-MIB::ciC20oForEachEv12*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.20.1.2*

SNMP Trap Number : *12*

Variables

The ForEach message contains the following variables:

Table 1. ForEach Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

OrchCompileError

Unable to compile the specified orchestration.

Level : *Severe*

Log Message : *Unable to compile the orchestration {OrchName}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MAESTRO-MIB::ciC20oOrchCompileErrorEv7*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.20.1.2*

SNMP Trap Number : 7

Variables

The OrchCompileError message contains the following variables:

Table 1. OrchCompileError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. OrchName

The name of the orchestration which was not compiled.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv7OrchName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.7.1

NetSuite Module

The NetSuite Module provides access to the NetSuite online service. This section contains details for the messages delivered from the NetSuite Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the NetSuite Module.

MIB Name : *CASTIRON-COMP-NETSUITE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.11*

The following table provides an alphabetical list of all notifications that can be issued by the NetSuite Module.

Table 1. Notifications issued by the NetSuite Module

Notification	Level	System	Description
ConnectionFailed	Severe	Orchestration	The NetSuite operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to pool. Continuing the activity.
ConnectionRetry	Warning	Orchestration	The NetSuite operation failed while trying to connect to the server. The operation will be retried.
CustomFieldError	Severe	Orchestration	Error occurred and returned specified soap fault while getting custom fields for the recordType.
IOError	Severe	Orchestration	Unexpected IO error occurred while performing operation with NetSuite.
SoapError	Severe	Orchestration	Error occurred while creating SOAP message.
StreamError	Severe	Orchestration	Unexpected IO exception occurred while streaming the message.
TransformationError	Severe	Orchestration	An error occurred while processing a message for NetSuite.
UnknownError	Severe	Orchestration	Unknown error while invoking an operation on NetSuite.

PeopleSoft Module

The PeopleSoft Module provides access to Oracle's PeopleSoft applications. This section contains details for the messages delivered from the PeopleSoft Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the PeopleSoft Module.

MIB Name : *CASTIRON-COMP-PEOPLESOFT-MIB*

MIB OID : *1.3.6.1.4.1.13336.2.2.3.9*

The following table provides an alphabetical list of all notifications that can be issued by the PeopleSoft Module.

Table 1. Notifications issued by the PeopleSoft Module

Notification	Level	System	Description
ActivateFailureBlank	Severe	Orchestration	Activity could not be started as the specified name was blank.

Notification	Level	System	Description
ActivateSuccess	Info	Orchestration	Activity name specified was successfully activated.
ActivateUnsuccessful	Info	Orchestration	Error occurred while connecting to PeopleSoft system while activating activity. Activity activated, will try to establish connectivity at activity execute time.
ActivityFailure	Severe	Orchestration	Activity name specified failed to execute.
ActivitySuccessful	Info	Orchestration	Activity name specified executed successfully. The response output parameter was successfully generated.
ConfigURI	Info	Orchestration	Information regarding the URI and Port where the PeopleSoft Receive is listening.
ConnectionError	Severe	Orchestration	The peoplesoft operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
ConnectionRetry	Warning	Orchestration	The peoplesoft operation failed while trying to connect to the server. This will cause a retry.
CreateOnlyKeys	Warning	Orchestration	Only Create Keys was specified and no other properties were specified. Create might not have created the record.
DataLengthMore	Warning	Orchestration	The data set for specified field name has length exceeding the field length. This may cause loss of data.
DeleteFail	Warning	Orchestration	The activity failed to delete specified item number.
GetNoReturn	Info	Orchestration	Activity name specified could not find any record.
ItemNumberBlank	Warning	Orchestration	Item number returned is empty.
MakeConnectError	Warning	Orchestration	Error occurred while creating the connection to destination.
MessageNameVersion	Severe	Orchestration	Message name and version got does not match that set in activity.
MissingLibraries	Severe	Orchestration	Peoplesoft activity is missing required libraries. Please install them from WMC.
NoOperationOnRecord	Warning	Orchestration	Activity could not find any record to do specified operation on it.
OutOfRange	Warning	Orchestration	Activity is trying to delete an item which is out of range.
PoolReleaseError	Warning	Orchestration	Error occurred while closing the connection pool.
ReceiveActivate	Severe	Orchestration	Error occurred while activating PeopleSoft Receive.
ReceiveDeActivate	Severe	Orchestration	Error occurred while deactivating PeopleSoft Receive.
ReceiveError	Severe	Orchestration	Peoplesoft receive activity was unsuccessful in receiving the request.

Notification	Level	System	Description
ReceiveGeneralError	Severe	Orchestration	Error occurred while sending the response from PeopleSoft Receive.
ReceiveIOError	Severe	Orchestration	IO Error occurred while processing request in PeopleSoft Receive.
ReceiveInfo	Info	Orchestration	Got document from specified host with specified name and version.
ReceiveProcess	Severe	Orchestration	Error occurred while processing request in PeopleSoft Receive.
ReceiveSuccessful	Info	Orchestration	Peoplesoft receive activity successfully received the request.
RunningInfo	Warning	Orchestration	Faced few warnings or errors while running Peoplesoft activity.
RunningMessages	Warning	Orchestration	Received messages while executing the activity.
SetupInfo	Warning	Orchestration	Faced few warnings or errors while setting up Peoplesoft activity.

ActivateUnsuccessful

Error occurred while connecting to PeopleSoft system while activating activity. Activity activated, will try to establish connectivity at activity execute time.

Level : *Info*

Log Message : *Error connecting to PeopleSoft system while activating activity {ActivityName}, error is: {Message}. Activity activated, will try to establish connectivity at activity execute time*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cActivateUnsuccessfulEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.1*

SNMP Trap Number : *1*

Variables

The ActivateUnsuccessful message contains the following variables:

Table 1. ActivateUnsuccessful Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

The activity name which failed to connect to Peoplesoft system.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv1ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.1.1.1.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage

PeopleSoft Operation Notifications

Provides a comprehensive list of operation notifications sent from the PeopleSoft Module.

- [ActivateFailureBlank](#)
Activity could not be started as the specified name was blank.
- [ActivateSuccess](#)
Activity name specified was successfully activated.
- [ActivityFailure](#)
Activity name specified failed to execute.
- [ActivitySuccessful](#)
Activity name specified executed successfully. The response output parameter was successfully

- generated.
- [ConfigURI](#)
Information regarding the URI and Port where the PeopleSoft Receive is listening.
 - [CreateOnlyKeys](#)
Only Create Keys was specified and no other properties were specified. Create might not have created the record.
 - [DataLengthMore](#)
The data set for specified field name has length exceeding the field length. This may cause loss of data.
 - [DeleteFail](#)
The activity failed to delete specified item number.
 - [GetNoReturn](#)
Activity name specified could not find any record.
 - [ItemNumberBlank](#)
Item number returned is empty.
 - [MessageNameVersion](#)
Message name and version got does not match that set in activity.
 - [NoOperationOnRecord](#)
Activity could not find any record to do specified operation on it.
 - [OutOfRange](#)
Activity is trying to delete an item which is out of range.
 - [ReceiveError](#)
Peoplesoft receive activity was unsuccessful in receiving the request.
 - [ReceiveGeneralError](#)
Error occurred while sending the response from PeopleSoft Receive.
 - [ReceiveInfo](#)
Got document from specified host with specified name and version.
 - [ReceiveProcess](#)
Error occurred while processing request in PeopleSoft Receive.
 - [ReceiveSuccessful](#)
Peoplesoft receive activity successfully received the request.
 - [RunningInfo](#)
Faced few warnings or errors while running Peoplesoft activity.
 - [RunningMessages](#)
Received messages while executing the activity.

Level : *Info*

Log Message : *Got document from {From} with Message Name: {MessageName}, Message Version: {MessageVersion}, Message Type: {MessageType} and Originating Time Stamp: {TimeStamp}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oReceiveInfoEv13*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.2*

SNMP Trap Number : *13*

Variables

The ReceiveInfo message contains the following variables:

Table 1. ReceiveInfo Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. From

The name of the host where receive activity got the document.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13From
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.1

6. MessageName

The name of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.2

7. MessageVersion

The version of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.3

8. MessageType

The type of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.4

9. TimeStamp

The originating time stamp of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13TimeStamp
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.5

Platform Module

The Platform module provides notifications for elements generally not associated with projects or the runtime such as hardware, network, security, and resources. This section contains details for the messages delivered from the Platform Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Platform Module.

MIB Name : *CASTIRON-COMP-PLATFORM-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.23

The following table provides an alphabetical list of all notifications that can be issued by the Platform Module.

Table 1. Notifications issued by the Platform Module

Notification	Level	System	Description
AccessViolation	Info	Security	An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
AuthFailure	Severe	Security	An attempt to authenticate with the appliance failed.
AuthLogOut	Info	Security	Event showing logging out of the user.
AuthSuccess	Info	Security	Attempt to authenticate with the appliance was successful.
DiskUsageCritOk	Info	Resources	Disk space usage is below the critical threshold.
DiskUsageCritical	Severe	Resources	Disk space usage has exceeded the critical threshold.

Notification	Level	System	Description
DiskUsageWarnOk	Info	Resources	Disk space usage is below the warning threshold.
DiskUsageWarning	Warning	Resources	Disk space usage has exceeded the warning threshold.
FanFailed	Severe	Hardware	A cooling fan is not operating correctly.
FanRestored	Info	Hardware	A cooling fan has resumed proper operation.
GrantRole	Info	Security	grant new role created.
GroupCreated	Info	Security	New group created.
GroupDeleted	Info	Security	Group deleted.
HighAvailFailover	Info	Hardware	The High Availability failover feature has taken effect; failover is complete.
HighAvailNotReady	Warning	Hardware	The HA system is not Highly Available.
HighAvailReady	Info	Hardware	The HA system is Highly Available.
HighAvailVersionError	Severe	Resources	The version of CIOS running on Standby does not match that running on Active.
IntrusionInform	Warning	Hardware	The appliance case has been opened.
IntrusionSevere	Severe	Hardware	The appliance case has been opened, which could result in system failure. Please contact Cast Iron Support.
LargeFileWarning	Warning	Resources	Large file taking up space on heavily loaded disk.
NetworkAutohost	Warning	Network	The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.
NetworkInvalidRoute	Warning	Network	Could not add a requested network route.
NetworkLinkDown	Warning	Network	The network link is down (offline).
NetworkLinkUp	Info	Network	The network link is up (online).
OrcmonArchiveError	Severe	Resources	Job log archive error.
OrcmonDatabaseError	Severe	Resources	Job log database error.
OrcmonDiskFull	Warning	Resources	Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
OrcmonDiskFullNoPurge	Severe	Resources	Failed to purge any job logs to recover disk space.
OrcmonDiskTrigger	Info	Resources	Job log purge was initiated due to an available disk space trigger.
OrcmonExportCdError	Severe	Resources	Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
OrcmonExportError	Severe	Resources	Failure uploading archive file to FTP server.
OrcmonExportFTP	Info	Resources	Exporting archive file to FTP server.
OrcmonExportLocal	Info	Resources	Exporting job log data to a local archive file.

Notification	Level	System	Description
OrcmonExportStoreErr	Severe	Resources	Failure uploading archive file to FTP server: Could not store file.
OrcmonExportedJobs	Info	Resources	Exported jobs from the job log.
OrcmonPurgeByCompl	Info	Resources	Job log purge has been triggered based on the number of stored completed jobs.

FanFailed

A cooling fan is not operating correctly.

The most likely cause is that the fan has become disconnected or has failed. The recommended action is to 1) confirm the appliance with the corresponding AffectedAppliance serial number has an indicator LED (usually orange), 2) confirm the fan is properly connected, and 3) contact Cast Iron Support for assistance replacing the fan.

Level : *Severe*

Log Message : *Fan {FanID} on appliance {AffectedAppliance} is not functional. Current={CurrentSpeed} RPM. Minimum={MinimumSpeed} RPM.*

SystemRecoveryReboot

Operational failure was detected. System is rebooting to recover.

The Cast Iron appliance continually monitors the health of components within the system. If a component has a momentary failure, the system may choose to reboot to recover from the situation. In the case of a recurring error, further reboots are not used until an hour has passed; instead the runtime is restarted. See the CLI command "system autoreboot" for information about controlling this behavior.

Level : *Warning*

Log Message : *Operational failure was detected on appliance {AffectedAppliance}. System is rebooting to recover. Uptime {Days} days, {Hours}:{Minutes}.*

rm_network_notifications_list.html)

NetworkAutohost

The Autohost feature has added the appliance's hostname and IP address to `/etc/hosts`.

The appliance requires the ability to resolve its own hostname to an IP address. The mapping is validated each time the appliance's network subsystem is started, and may be determined by DNS lookup or from an entry which was manually added via the CLI. If the appliance cannot determine the mapping this way, the autohost feature automatically adds a "best-guess" entry. While this automatic entry may work in many circumstances, it is not guaranteed to allow proper appliance operation in all environments. This notification may indicate a misconfiguration in the network. Therefore it is recommended that the user examine the appliance's network configuration and either enter the appliance's IP address and hostame to DNS, or manually add an entry to `/etc/hosts` by using the CLI command "net add etchost".

Level : *Warning*

Log Message : *Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}.*

System : *Network*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23nNetworkAutohostEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.5*

SNMP Trap Number : *3*

Variables

The NetworkAutohost message contains the following variables:

Table 1. NetworkAutohost Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

Platform Resources Notifications

Provides a comprehensive list of resources notifications sent from the Platform Module.

- [DiskUsageCritOk](#)
Disk space usage is below the critical threshold.
- [DiskUsageCritical](#)
Disk space usage has exceeded the critical threshold.
- [DiskUsageWarnOk](#)
Disk space usage is below the warning threshold.
- [DiskUsageWarning](#)
Disk space usage has exceeded the warning threshold.
- [HighAvailVersionError](#)
The version of CIOS running on Standby does not match that running on Active.
- [LargeFileWarning](#)
Large file taking up space on heavily loaded disk.
- [OrcmonArchiveError](#)
Job log archive error.
- [OrcmonDatabaseError](#)
Job log database error.
- [OrcmonDiskFull](#)
Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
- [OrcmonDiskFullNoPurge](#)
Failed to purge any job logs to recover disk space.
- [OrcmonDiskTrigger](#)
Job log purge was initiated due to an available disk space trigger.
- [OrcmonExportCdError](#)
Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
- [OrcmonExportError](#)
Failure uploading archive file to FTP server.

- [OrcmonExportFTP](#)
Exporting archive file to FTP server.
- [OrcmonExportLocal](#)
Exporting job log data to a local archive file.
- [OrcmonExportStoreErr](#)
Failure uploading archive file to FTP server: Could not store file.
- [OrcmonExportedJobs](#)
Exported jobs from the job log.
- [OrcmonPurgeByCompl](#)
Job log purge has been triggered based on the number of stored completed jobs.
- [OrcmonPurgeByErrored](#)
Job log purge has been triggered based on the number of stored errored jobs.
- [OrcmonPurgeByTime](#)
Job log purge has been triggered based on the amount of time since the last purge.
- [OrcmonPurgeByTimeNP](#)
Job log purge has been triggered based on the amount of time since collection began.
- [OrcmonPurgeFailed](#)
Job log purge/archive failed.
- [SwapUsageCritOk](#)
Swap space usage is below the critical threshold.
- [SwapUsageCritical](#)
Swap space usage has exceeded the critical threshold.
- [SwapUsageWarnOk](#)
Swap space usage is below the warning threshold.
- [SwapUsageWarning](#)
Swap space usage has exceeded the warning threshold.

OrcmonExportedJobs

Exported jobs from the job log.

Level : *Info*

Log Message : *Job log purged {NumExported} jobs.*

System : *Resources*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23rOrcmonExportedJobsEv14*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.6*

SNMP Trap Number : *14*

Variables

The OrcmonExportedJobs message contains the following variables:

Table 1. OrcmonExportedJobs Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. NumExported

Number of jobs exported.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23rEv14NumExported
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.6.1.14.1

Platform Security Notifications

Provides a comprehensive list of security notifications sent from the Platform Module.

- [AccessViolation](#)
An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
- [AuthFailure](#)
An attempt to authenticate with the appliance failed.
- [AuthLogOut](#)
Event showing logging out of the user.
- [AuthSuccess](#)
Attempt to authenticate with the appliance was successful.
- [GrantRole](#)
grant new role created.
- [GroupCreated](#)
New group created.
- [GroupDeleted](#)
Group deleted.

- [RevokeRole](#)
User role revoked.
- [UpdateStatus](#)
Update user status as active or inactive.
- [UpdateUser](#)
Update display name of a user.
- [UserCreated](#)
New user created.
- [UserDeleted](#)
User deleted.

SAP Module

The SAP Module provides activities to access SAP servers. This section contains details for the messages delivered from the SAP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the SAP Module.

MIB Name : *CASTIRON-COMP-SAP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.19*

The following table provides an alphabetical list of all notifications that can be issued by the SAP Module.

Table 1. Notifications issued by the SAP Module

Notification	Level	System	Description
AddingServerInfo	Info	Orchestration	Adding server gateway.
BAPIActivationError	Severe	Orchestration	Error occurred while activating the BAPI activity.
BAPIParseError	Severe	Orchestration	Error occurred while parsing schema for the specified BAPI.
BAPIReturnError	Severe	Orchestration	Error returned by specified BAPI in the type field.
CompleteFunctionExec	Info	Orchestration	This is the name of the function which is executed by the BAPI or RFC activity
ConnectError	Severe	Orchestration	The SAP operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The SAP operation failed while trying to connect to the server. This will cause a retry.
ConnectionPoolError	Severe	Orchestration	Connection Pool returned null connection.
CreateTID	Info	Orchestration	Creating a specified TID in the TID manager.
CreateTrcDirFailed	Warning	Orchestration	Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.
FuncRetStructNotFound	Info	Orchestration	This is to report that activity is not able to find the return structure for the function
FunctionLookup	Info	Orchestration	This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
FunctionLookupComp	Info	Orchestration	This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
GatewayCommWarning	Warning	Orchestration	Error occurred, while communicating to SAP Gateway.

Notification	Level	System	Description
GatewayRegisterError	Info	Orchestration	Server gateway specified already exists.
GatewayRemoveInfo	Info	Orchestration	Removing server gateway.
IDOCExtensionError	Severe	Orchestration	IDOC contains more than one type of IDOC extension type.
IDOCSentInfo	Info	Orchestration	IDOC with specified TID was sent to SAP.
IDOCTypeError	Severe	Orchestration	Received IDOC contains more than one type of IDOC type.
InitializationError	Severe	Orchestration	Error occurred while initializing the send IDOC activity.
InvalidRFCName	Severe	Orchestration	Unable to find specified RFC name.
InvalidTIDError	Severe	Orchestration	TID was not set in the task context.
ListenerInstanceInfo	Info	Orchestration	SAP listener instance was started for SAP gateway.
ListenerStartInfo	Info	Orchestration	SAP listener started again for specified host.
ListenerStopWarning	Warning	Orchestration	Error occurred while stopping the listener for specified host.
NoHandlerError	Warning	Orchestration	Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
NoSegmentWarning	Warning	Orchestration	The specified IDOC number contains no data segment.
NonReturnStruct	Severe	Orchestration	No return structure returned by the specified BAPI.
ParseError	Severe	Orchestration	Error occurred while parsing schema for the RFC.
PoolAddInfo	Info	Orchestration	Adding Connection pool with the specified name.
PoolExistInfo	Info	Orchestration	Connection pool with specified name already exists.
ProcessDocError	Severe	Orchestration	Error occurred while processing the IDOC.
RFCActivationError	Severe	Orchestration	Error occurred while activating the RFC activity.
ReceiveTIDNotFound	Severe	Orchestration	Specified TID was not found in TID manager.
RemoveInfo	Info	Orchestration	Removing connection pool with specified name.
RollbackWarning	Warning	Orchestration	Error occurred while rolling back the transaction. Ignoring and continuing the activity.
SAPActivityError	Severe	Orchestration	Error occurred while processing SAP activity.
SAPValidationError	Severe	Orchestration	Input data was not valid for specified RFC. The items specified were invalid.
SapLibNotFound	Severe	Orchestration	Sap activity is not able to activate because the sap provided libraries are not installed.
SendIDOCActivation	Severe	Orchestration	Error occurred while activating the Send IDOC activity.

Notification	Level	System	Description
SendIDOCCreateInfo	Info	Orchestration	Created the specified TID for starting a transaction in send IDOC activity.
SendIDOCValidation	Severe	Orchestration	Input data was not valid for IDOC. The specified item(s) were invalid.
SerializingError	Severe	Orchestration	Error occurred while creating IDOC from input parameter.
StartFunctionExec	Info	Orchestration	This is the name of the function which is going to be executed by the BAPI or RFC activity
StartWarning	Info	Orchestration	Error occurred while starting the server.
TIDCheck	Info	Orchestration	SAP TIP check for specified ID is requested by SAP.
TIDCommit	Info	Orchestration	SAP TID has been committed by SAP.
TIDCommitUnknown	Severe	Orchestration	SAP attempting to confirm an unknown or uncommitted TID.
TIDCommittedInfo	Info	Orchestration	Specified TID was committed to SAP.
TIDCommittingInfo	Info	Orchestration	Committing TID to SAP.
TIDConfirmed	Info	Orchestration	SAP TID has been confirmed and deleted from the TID manager.
TIDRollback	Info	Orchestration	SAP TID has been rolled back.
TIDSentInfo	Info	Orchestration	Sending the IDOC with specified TID to SAP.
TIDUnknown	Severe	Orchestration	SAP has requested rollback for unknown TID.
TransactionalError	Severe	Orchestration	Unable to find the BAPI transaction RFCs.
UnicodeGateway	Info	Orchestration	The unicode instance property is set through JCONSOLE.
ValidationError	Severe	Orchestration	Error occurred while validating the input data.
ValidationInfo	Info	Orchestration	Validation is on/off for the specified field value.

The SAP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the SAP server after {NumberOfRetryAttempts} attempts. Error is: Error Group {ErrorGroup}, Error Key {ErrorKey}, Error Message {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19cConnectErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.1*

SNMP Trap Number : *1*

Variables

The ConnectError message contains the following variables:

Table 1. ConnectError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.1

6. ErrorGroup

The group mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorGroup
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.2

7. ErrorKey

The key mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.3

8. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

ConnectRetry

The SAP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the SAP server. Error is: Error Group: {ErrorGroup} Error Key {ErrorKey} Error Message {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {RetryAttemptNumber} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19cConnectRetryEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.1*

SNMP Trap Number : 2

Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ErrorGroup

The group mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorGroup
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.1

6. ErrorKey

The key mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.2

7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

8. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.4

9. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.5

10. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.6

SAP Operation Notifications

Provides a comprehensive list of operation notifications sent from the SAP Module.

- [AddingServerInfo](#)
Adding server gateway.
- [BAPIActivationError](#)
Error occurred while activating the BAPI activity.
- [BAPIParseError](#)
Error occurred while parsing schema for the specified BAPI.
- [BAPIReturnError](#)
Error returned by specified BAPI in the type field.
- [CompleteFunctionExec](#)
This is the name of the function which is executed by the BAPI or RFC activity
- [CreateTID](#)
Creating a specified TID in the TID manager.
- [CreateTrcDirFailed](#)
Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.

- [FuncRetStructNotFound](#)
This is to report that activity is not able to find the return structure for the function
- [FunctionLookup](#)
This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [FunctionLookupComp](#)
This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [GatewayCommWarning](#)
Error occurred, while communicating to SAP Gateway.
- [GatewayRegisterError](#)
Server gateway specified already exists.
- [GatewayRemoveInfo](#)
Removing server gateway.
- [IDOCExtensionError](#)
IDOC contains more than one type of IDOC extension type.
- [IDOCSentInfo](#)
IDOC with specified TID was sent to SAP.
- [IDOCTypeError](#)
Received IDOC contains more than one type of IDOC type.
- [InvalidRFCName](#)
Unable to find specified RFC name.
- [ListenerInstanceInfo](#)
SAP listener instance was started for SAP gateway.
- [ListenerStartInfo](#)
SAP listener started again for specified host.
- [ListenerStopWarning](#)
Error occurred while stopping the listener for specified host.
- [NoHandlerError](#)
Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
- [NoSegmentWarning](#)
The specified IDOC number contains no data segment.
- [NonReturnStruct](#)
No return structure returned by the specified BAPI.
- [ParseError](#)
Error occurred while parsing schema for the RFC.
- [ProcessDocError](#)
Error occurred while processing the IDOC.
- [RFCActivationError](#)
Error occurred while activating the RFC activity.
- [ReceiveTIDNotFound](#)
Specified TID was not found in TID manager.
- [RollbackWarning](#)
Error occurred while rolling back the transaction. Ignoring and continuing the activity.
- [SAPActivityError](#)
Error occurred while processing SAP activity.
- [SAPValidationError](#)
Input data was not valid for specified RFC. The items specified were invalid.
- [SapLibNotFound](#)
Sap activity is not able to activate because the sap provided libraries are not installed.
- [SendIDOCActivation](#)
Error occurred while activating the Send IDOC activity.
- [SendIDOCCreateInfo](#)
Created the specified TID for starting a transaction in send IDOC activity.

- [SendIDOCValidation](#)
Input data was not valid for IDOC. The specified item(s) were invalid.
- [StartFunctionExec](#)
This is the name of the function which is going to be executed by the BAPI or RFC activity
- [StartWarning](#)
Error occurred while starting the server.
- [TIDCheck](#)
SAP TIP check for specified ID is requested by SAP.
- [TIDCommit](#)
SAP TID has been committed by SAP.
- [TIDCommitUnknown](#)
SAP attempting to confirm an unknown or uncommitted TID.
- [TIDCommittedInfo](#)
Specified TID was committed to SAP.
- [TIDCommittingInfo](#)
Committing TID to SAP.
- [TIDConfirmed](#)
SAP TID has been confirmed and deleted from the TID manager.
- [TIDRollback](#)
SAP TID has been rolled back.
- [TIDSentInfo](#)
Sending the IDOC with specified TID to SAP.
- [TIDUnknown](#)
SAP has requested rollback for unknown TID.
- [TransactionalError](#)
Unable to find the BAPI transaction RFCs.
- [UnicodeGateway](#)
The unicode instance property is set through JCONSOLE.
- [ValidationError](#)
Error occurred while validating the input data.
- [ValidationInfo](#)
Validation is on/off for the specified field value.

IDOCSentInfo

IDOC with specified TID was sent to SAP.

Level : *Info*

Log Message : *Idoc with the TID {TID} is sent successfully to sap.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19oIDOCSentInfoEv26*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.2*

SNMP Trap Number : *26*

Variables

The IDOCSentInfo message contains the following variables:

Table 1. IDOCSentInfo Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. TID

The TID which was sent.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv26TID
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.26.1

StartFunctionExec

This is the name of the function which is going to be executed by the BAPI or RFC activity

Level : *Info*

Log Message : *About to execute function {FunctionName}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19oStartFunctionExecEv43*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.2*

SNMP Trap Number : *43*

Variables

The StartFunctionExec message contains the following variables:

Table 1. StartFunctionExec Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. FunctionName

Name of the BAPI or RFC

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv43FunctionName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.43.1

TransactionalError

Unable to find the BAPI transaction RFCs.

Level : *Severe*

Log Message : *Unable to find the BAPI transaction RFC's.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19oTransactionalErrorEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.2*

SNMP Trap Number : *17*

Variables

The TransactionalError message contains the following variables:

Table 1. TransactionalError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

STS Module

The SAML STS Module This section contains details for the messages delivered from the STS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the STS Module.

MIB Name : *CASTIRON-COMP-STS-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.27*

The following table provides an alphabetical list of all notifications that can be issued by the STS Module.

Table 1. Notifications issued by the STS Module

Notification	Level	System	Description
ActivationFailed	Severe	Orchestration	Activation of Get SAML 2.0 token failed
AssertionEmpty	Severe	Orchestration	Received empty response from Security Token Service. Cannot get the SAML Assertion.
InputBodyConsidered	Info	Orchestration	RequestSecuirtyToken from Map Inputs is sent as request body because data sent in Map Inputs holds higher priority than in Configure Panel

Notification	Level	System	Description
RequestLocation	Info	Orchestration	Location of request being sent to Security Token Service
UriDeprecated	Warning	Orchestration	Security Token Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.

- [STS Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the STS Module.

Salesforce.com Module

The Salesforce.com Module provides access to the Salesforce.com online service. This section contains details for the messages delivered from the Salesforce.com Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Salesforce.com Module.

MIB Name : *CASTIRON-COMP-SFDC-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.3*

The following table provides an alphabetical list of all notifications that can be issued by the Salesforce.com Module.

Table 1. Notifications issued by the Salesforce.com Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	There was a problem in activating the activity.
ActivityOutput	Info	Orchestration	The activity has completed its operation and outputted param objects in output parameter.
BatchPollStart	Info	Orchestration	Starting a batch poll for index range specified.

Notification	Level	System	Description
ConnectFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
ConnectionFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
ConnectionTryAgain	Info	Orchestration	Not able to connect to Salesforce endpoint. Trying to establish a new session.
EndpointNull	Severe	Orchestration	The endpoint object provided to Salesforce.com activity is null.
ExecuteError	Severe	Orchestration	An error occurred while executing the activity.
ExecuteProblem	Severe	Orchestration	An error occurred while executing the query.
InitializeProblem	Warning	Orchestration	Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
InputParamMapped	Info	Orchestration	The optional input parameter in the activity is mapped.
InputParamNotMapped	Info	Orchestration	The optional input parameter in the activity is not mapped.
InvalidQuery	Severe	Orchestration	The query provided to Salesforce.com was invalid.
InvalidSFDCField	Severe	Orchestration	The field is invalid in Salesforce.com.
InvalidSFDCObject	Severe	Orchestration	The object is invalid in Salesforce.com
LargeData	Severe	Orchestration	The activity was not able to get data as id limit has exceeded.
LargeDataError	Severe	Orchestration	An error occurred due to large data which activity cannot handle.
LoginFailure	Severe	Orchestration	Failure while performing a login into Salesforce.com.
MarshalError	Severe	Orchestration	An error occurred while writing output parameters in the activity.
MetadataError	Severe	Orchestration	Unable to obtain meta data from Salesforce.com.
MetadataObjectError	Severe	Orchestration	Unable to obtain meta data for the object from Salesforce.com.
NoDatafound	Info	Orchestration	No data was found by the activity in the interval specified.
OptionalInputError	Severe	Orchestration	Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
ParameterOutput	Info	Orchestration	The activity has completed its operation and outputted objects in output parameter.

Notification	Level	System	Description
ParameterResults	Info	Orchestration	The activity has completed its operation and outputted result objects in output parameter.
PollActivateError	Severe	Orchestration	The poll activity failed to activate.
PollOutput	Info	Orchestration	The number of objects outputted for a batch poll.
PollReturnedNothing	Info	Orchestration	The poll activity did not return any ids for specified interval.
PollReturnedResults	Info	Orchestration	Poll activity returned these number of ids for interval specified.
SessionInvalid	Info	Orchestration	Salesforce session timed out and activity is establishing a new session.
SfdcErrorInternal	Severe	Orchestration	An internal error occurred in Salesforce.com connector.
ShortPoll	Info	Orchestration	The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
StillRun	Info	Orchestration	There is a problem in connectivity and messages will be picked up from this time when connectivity is established.
TimeTooClose	Info	Orchestration	The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
UnexpectedSFDCFault	Severe	Orchestration	Salesforce.com returned an unexpected fault that is not declared in the method signature.
UnmarshalError	Severe	Orchestration	An error occurred while reading input parameters in the activity.

Salesforce.com Connection Notifications

Provides a comprehensive list of connection notifications sent from the Salesforce.com Module.

- [ConnectionFailed](#)
The Salesforce.com operation failed because a connection to the server could not be established.
- [ConnectionRetry](#)
The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
- [ConnectionTryAgain](#)
Not able to connect to Salesforce endpoint. Trying to establish a new session.
- [LoginFailure](#)
Failure while performing a login into Salesforce.com.
- [OptionalInputError](#)
Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
- [SessionInvalid](#)
Salesforce session timed out and activity is establishing a new session.
- [StillRun](#)
There is a problem in connectivity and messages will be picked up from this time when connectivity is established.

ConnectionFailed

The Salesforce.com operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to Salesforce.com after {NumberOfRetryAttempts} attempts. Error is: {Message}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3cConnectionFailedEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.1*

SNMP Trap Number : *4*

Variables

The ConnectionFailed message contains the following variables:

Table 1. ConnectionFailed Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv4NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.1.1.4.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Parent topic: [Salesforce.com Connection Notifications](#)

ConnectionRetry

The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to Salesforce.com. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3cConnectionRetryEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.1*

SNMP Trap Number : 3

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.2

7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.3

8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.4

Salesforce.com Operation Notifications

Provides a comprehensive list of operation notifications sent from the Salesforce.com Module.

- [ActivateError](#)
There was a problem in activating the activity.
- [ActivityOutput](#)
The activity has completed its operation and outputted param objects in output parameter.
- [BatchPollStart](#)
Starting a batch poll for index range specified.
- [ConnectFailed](#)
The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
- [ExecuteError](#)
An error occurred while executing the activity.
- [ExecuteProblem](#)
An error occurred while executing the query.
- [InitializeProblem](#)
Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
- [InputParamMapped](#)
The optional input parameter in the activity is mapped.
- [InputParamNotMapped](#)
The optional input parameter in the activity is not mapped.
- [InvalidQuery](#)
The query provided to Salesforce.com was invalid.
- [InvalidSFDCField](#)
The field is invalid in Salesforce.com.
- [InvalidSFDCObject](#)
The object is invalid in Salesforce.com

- [LargeData](#)
The activity was not able to get data as id limit has exceeded.
- [LargeDataError](#)
An error occurred due to large data which activity cannot handle.
- [MetadataError](#)
Unable to obtain meta data from Salesforce.com.
- [MetadataObjectError](#)
Unable to obtain meta data for the object from Salesforce.com.
- [NoDatafound](#)
No data was found by the activity in the interval specified.
- [ParameterOutput](#)
The activity has completed its operation and outputted objects in output parameter.
- [ParameterResults](#)
The activity has completed its operation and outputted result objects in output parameter.
- [PollActivateError](#)
The poll activity failed to activate.
- [PollOutput](#)
The number of objects outputted for a batch poll.
- [PollReturnedNothing](#)
The poll activity did not return any ids for specified interval.
- [PollReturnedResults](#)
Poll activity returned these number of ids for interval specified.
- [ShortPoll](#)
The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
- [TimeTooClose](#)
The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
- [UnexpectedSFDCFault](#)
Salesforce.com returned an unexpected fault that is not declared in the method signature.

Variables

The BatchPollStart message contains the following variables:

Table 1. BatchPollStart Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. BatchSize

The batch size for the poll.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv13BatchSize
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.2.1.13.1

6. StartIndex

The start index specified.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv13StartIndex
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.2.1.13.2

7. EndIndex

The end index specified.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv13EndIndex
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.2.1.13.3

Level : *Severe*

Log Message : *Problem with querying. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3oInvalidQueryEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.2*

SNMP Trap Number : *4*

Variables

The InvalidQuery message contains the following variables:

Table 1. InvalidQuery Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Scheduler Module

The Scheduler Module allows jobs to be started on a regular basis. This section contains details for the messages delivered from the Scheduler Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Scheduler Module.

MIB Name : *CASTIRON-COMP-SCHEDULER-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.5

The following table provides an alphabetical list of all notifications that can be issued by the Scheduler Module.

Table 1. Notifications issued by the Scheduler Module

Notification	Level	System	Description
ActivityException	Severe	Orchestration	There was an error running scheduler activity.
SchedulerUnknownType	Warning	Orchestration	The group configured in the activity is unknown.
SchedulerWarning	Warning	Orchestration	There was an error in scheduler activity. Continuing to schedule further jobs.

- [Scheduler Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the Scheduler Module.

Siebel Module

The Siebel Module provides access to Oracle's Siebel CRM. This section contains details for the messages delivered from the Siebel Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Siebel Module.

MIB Name : *CASTIRON-COMP-SIEBEL-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.17*

The following table provides an alphabetical list of all notifications that can be issued by the Siebel Module.

Table 1. Notifications issued by the Siebel Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	Error occurred while activating the specified activity.
ConfigURI	Severe	Orchestration	Specified activity name is listening on the specified uri and port.
ConnectError	Severe	Orchestration	The invoke operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while setting up connection pool for specified activity.
ConnectionRetry	Warning	Orchestration	The invoke operation failed while trying to connect to the server. This will cause a retry.
DataException	Severe	Orchestration	Data error occurred while executing the activity.
GeneralError	Severe	Orchestration	General error occurred while sending the response.
IOError	Severe	Orchestration	IO error occurred while processing request.
InternalError	Severe	Orchestration	Internal error occurred while processing request.
InvokeActivate	Warning	Orchestration	Error in setup of repository/connection-pool in activate of specified activity. Setup will be done at activity execution time.
InvokeDeactivateError	Warning	Orchestration	Error occurred while deactivating the specified activity.
InvokeException	Severe	Orchestration	Error occurred while executing the activity.
InvokeSuccessful	Info	Orchestration	Activity has successfully executed activity and outputted output parameter RESPONSE.
MissingLibraries	Severe	Orchestration	Config file jas.ini needs to be present before the JD Edwards Invoke activity can be run. Please upload jas.ini file and run again.
ReceiveDeactivateErr	Severe	Orchestration	Error occurred while deactivating the specified activity.
ReceiveError	Severe	Orchestration	Error occurred while receiving in the specified activity name.
ReceiveSuccessful	Info	Orchestration	Receive activity successfully received request and outputted output parameter RESPONSE.
RepositoryError	Warning	Orchestration	Error occurred while setting up repository for specified activity.

Notification	Level	System	Description
UnSupportedEncoding	Severe	Orchestration	Error occurred while processing unsupported encoding.

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.17.1.1*

SNMP Trap Number : 2

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.2

7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.3

8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.4

ConnectionPoolError

Error occurred while setting up connection pool for specified activity.

Level : *Warning*

Log Message : *Error while setting up connection pool for {ActivityName} activity. The error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SIEBEL-MIB::ciC17oConnectionPoolErrorEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.17.1.2*

SNMP Trap Number : *2*

Variables

The ConnectionPoolError message contains the following variables:

Table 1. ConnectionPoolError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

Activity name which caused the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17oEv2ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.2.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Web Service Module

The Web Service Module provides activities to act as a Web Service client or server. This section contains details for the messages delivered from the Web Service Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Web Service Module.

MIB Name : *CASTIRON-COMP-WS-MIB*

The following table provides an alphabetical list of all notifications that can be issued by the Web Service Module.

Table 1. Notifications issued by the Web Service Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Web Service activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The webservice operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The webservice operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Web Service activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Web Service activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Web Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WSFaultString	Severe	Orchestration	The fault string returned by the WebService activity.
WebServiceException	Severe	Orchestration	Error occurred while processing Web Service activity.

ConnectFailed

The webservice operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Error sending SOAP request to location: {LocationName}. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WS-MIB::ciC18cConnectFailedEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.18.1.1*

SNMP Trap Number : 2

Variables

The ConnectFailed message contains the following variables:

Table 1. ConnectFailed Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18cEv2LocationName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.18.1.1.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

WebSphere MQ Module

The WebSphere MQ module provides activities for communicating with IBM WebSphere MQ servers. This section contains details for the messages delivered from the WebSphere MQ Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the WebSphere MQ Module.

MIB Name : *CASTIRON-COMP-MQ-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.13*

The following table provides an alphabetical list of all notifications that can be issued by the WebSphere MQ Module.

Table 1. Notifications issued by the WebSphere MQ Module

Notification	Level	System	Description
ConnectRetry	Warning	Orchestration	The MQ operation failed while trying to connect to the server. This will cause a retry.
ConnectionError	Severe	Orchestration	The MQ operation failed because a connection to the server could not be established.
DetailsOpen	Info	Orchestration	Opening the queue with set all privileges as specified.
DuplicateFound	Info	Orchestration	Discarding the duplicate message found in get activity.
FormatError	Severe	Orchestration	The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
FormatWarning	Warning	Orchestration	Activity expected string data (MQFMT_STRING), but the message is of another format.
GetFailure	Severe	Orchestration	The get activity was not able to get messages from queue.
InputParamNull	Severe	Orchestration	The input parameter specified is of zero length.
InternalFailure	Severe	Orchestration	There was an internal error in MQ activity.
MQConnectionInfo	Info	Orchestration	The complete information about MQ Endpoint details.
MQMDFormatError	Severe	Orchestration	MQMD header input parameter format is incorrect.

Notification	Level	System	Description
MQProtocolWarning	Warning	Orchestration	Received warning from queue manager with specified MQ reason code.
MQPutDetails	Info	Orchestration	Putting in queue with set all privileges as specified.
MQPutFailure	Severe	Orchestration	MQ was unable to put message on queue due to specified error code.
MQRFHHeaderError	Severe	Orchestration	MQRFH2 header input parameter format is incorrect.
MessageDelievered	Info	Orchestration	The MQ message was successfully delivered to the specified queue.
MessageRetrieved	Info	Orchestration	Retrieved a message from the queue.
NoMessage	Info	Orchestration	There is no message available on the queue.
NoMessageFailure	Severe	Orchestration	The MQ operation failed as there was no message on queue on server.
NoMessageRetry	Warning	Orchestration	The MQ operation failed as there was no message on queue on server. This will cause a retry.
PollFailure	Severe	Orchestration	The poll activity was not able to get messages from queue.
RFHFormatError	Severe	Orchestration	Error encountered unmarshaling the MQRFH2 header.
ReasonCode	Info	Orchestration	The reason code for the MQ exception caught.

Table 1. ConnectRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. QueueManager

The name of the queue manager which activity was not able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2QueueManager
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.1

6. ErrorCode

The error code returned by the MQ server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2ErrorCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2IntervalForRetries

- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.5

WebSphere MQ Operation Notifications

Provides a comprehensive list of operation notifications sent from the WebSphere MQ Module.

- [DetailsOpen](#)
Opening the queue with set all privileges as specified.
- [DuplicateFound](#)
Discarding the duplicate message found in get activity.
- [FormatError](#)
The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
- [FormatWarning](#)
Activity expected string data (MQFMT_STRING), but the message is of another format.
- [GetFailure](#)
The get activity was not able to get messages from queue.
- [MQMDFormatError](#)
MQMD header input parameter format is incorrect.
- [MQProtocolWarning](#)
Received warning from queue manager with specified MQ reason code.
- [MQPutDetails](#)
Putting in queue with set all privileges as specified.
- [MQPutFailure](#)
MQ was unable to put message on queue due to specified error code.
- [MQRFHHeaderError](#)
MQRFH2 header input parameter format is incorrect.
- [MessageDelievered](#)
The MQ message was successfully delivered to the specified queue.
- [MessageRetrieved](#)
Retrieved a message from the queue.
- [NoMessage](#)
There is no message available on the queue.
- [NoMessageFailure](#)
The MQ operation failed as there was no message on queue on server.
- [NoMessageRetry](#)
The MQ operation failed as there was no message on queue on server. This will cause a retry.
- [PollFailure](#)
The poll activity was not able to get messages from queue.
- [RFHFormatError](#)
Error encountered unmarshaling the MQRFH2 header.
- [ReasonCode](#)
The reason code for the MQ exception caught.

MQProtocolWarning

Received warning from queue manager with specified MQ reason code.

Level : *Warning*

Log Message : *Received warning from queue manager. MQ reason code is {ReasonCode}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13oMQProtocolWarningEv16*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.2*

SNMP Trap Number : *16*

Variables

The MQProtocolWarning message contains the following variables:

Table 1. MQProtocolWarning Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ReasonCode

The reason code for the MQ exception.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv16ReasonCode
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.2.1.16.1

MQPutDetails

Putting in queue with set all privileges as specified.

Level : *Info*

Log Message : *Putting in queue with set all privileges as {Value}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13oMQPutDetailsEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.2*

SNMP Trap Number : *17*

Variables

The MQPutDetails message contains the following variables:

Table 1. MQPutDetails Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Value

Value of set all privileges set to true or false.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv17Value
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.17.1

RFHFormatError

Error encountered unmarshaling the MQRFH2 header.

Level : *Severe*

Log Message : *Error encountered unmarshaling the MQRFH2 header: {Message}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13oRFHFormatErrorEv12*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.2*

SNMP Trap Number : *12*

Variables

The RFHFormatError message contains the following variables:

Table 1. RFHFormatError Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p> <p>Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.</p> <ul style="list-style-type: none">• Type : OID• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

ReasonCode

The reason code for the MQ exception caught.

Level : *Info*

Log Message : *MQ Exception caught, reason code is {ReasonCode}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13oReasonCodeEv13*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.2*

SNMP Trap Number : *13*

Variables

The ReasonCode message contains the following variables:

Table 1. ReasonCode Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ReasonCode

The reason code for the MQ exception.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv13ReasonCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.13.1

Workday Module

The Workday Module provides activities to act as a Workday client. This section contains details for the messages delivered from the Workday Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Workday Module.

MIB Name : *CASTIRON-COMP-WD-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.24*

The following table provides an alphabetical list of all notifications that can be issued by the Workday Module.

Table 1. Notifications issued by the Workday Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Workday activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The workday operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The workday operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Workday activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Workday activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Workday Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WDFaultString	Severe	Orchestration	The fault string returned by the Workday activity.
WorkdayException	Severe	Orchestration	Error occurred while processing Workday activity.

ConnectFailed

The workday operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Error sending SOAP request to location: {LocationName}. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WD-MIB::ci24cConnectFailedEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.24.1.1*

SNMP Trap Number : *2*

Variables

The ConnectFailed message contains the following variables:

Table 1. ConnectFailed Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv2LocationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

Parent topic: [Workday Connection Notifications](#)

ConnectRetry

The workday operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to send the SOAP request to {LocationName}. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will retry again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WD-MIB::ciC24cConnectRetryEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.24.1.1*

SNMP Trap Number : *1*

Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1LocationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.5

ValidateInitialize

There was an error while initializing the validate activity.

Level : *Severe*

Log Message : *Failed to initialize the Xml Validate Activity: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-XML-MIB::ciC12oValidateInitializeEv5*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.12.1.2*

SNMP Trap Number : 5

Variables

The ValidateInitialize message contains the following variables:

Table 1. ValidateInitialize Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.1.3.3

Uncategorized Notifications

This topic provides details about messages that have not formally been categorized in an existing module.

These notifications are used for events which have not yet been assigned their own OID. Use the information specified in the Message variable to identify individual notifications.

SNMP Name : *CASTIRON-IA-MIB::ciIaUncategorizedEv*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.1.1.10*

SNMP Trap Number : *1*

Variables

The uncategorized message contains the following variables:

Table 1. Uncategorized Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error. See the table below for a list of descriptions.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

6. LoggerName

Name of the logger used to send the notification. See table below.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaEvLoggerName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.10.1.1

Uncategorized Messages

This table lists the most commonly encountered uncategorized notifications. When one of these notifications is categorized, a replacement value is provided and the message remains in the uncategorized messages list for reference purposes.

Table 2. Uncategorized Messages

Severity	System	LoggerName	Message	Replacement

Log Message Reference

Alphabetized list of all log messages, with links to the details.

Message	Module	Level	Notification
A connection error occurred while sending the receive activity response. Exception: {Message}	HTTP	Severe	ReceiveSendReplyError
A connection error occurred while sending the response. Error is {Message}	HTTP	Severe	ReplyConnectionError
A general error occurred while sending the response. Exception: {Message}	HTTP	Severe	ReplyGeneralError
A select statement was issued to control table {TableName} to check for duplicate rows.	Database	Info	SelectStatement
About to execute function {FunctionName}	SAP	Info	StartFunctionExec
Access Violation by user: {Username}. Target: {Target}. Action Performed: {Action}.	Platform	Info	AccessViolation
Activation of Get SAML 2.0 token failed	STS	Severe	ActivationFailed
Activity could not be converted into TwoPhase activity	Master	Severe	ErrorTwoPhase

Message	Module	Level	Notification
Activity could not get activated. Error is: {Message}	Sal esf orc e.c om	S e v e r e	Activat eError
Activity expected string data (MQFMT_STRING), but the message is of format "{Format}".	We bS phe re MQ	W a r n i n g	Format Warnin g
Activity failed as data to get is larger than activity can handle. Error is: {Message}	Sal esf orc e.c om	S e v e r e	LargeD ataErr or
Activity {ActivityName} activated successfully	JD Ed war ds	I n f o	Activat eSucc essful
Activity {ActivityName} activated successfully	Peo ple Sof t	I n f o	Activat eSucc ess
Activity {ActivityName} activated successfully.	Do min o	I n f o	Activat eSucc ess
Activity {ActivityName} could not find any record	Peo ple Sof t	I n f o	GetNo Return
Activity {ActivityName} is stopped successfully.	Do min o	I n f o	StopSu ccess

Message	Module	Level	Notification
Activity {ActivityName} not started as {Name} is blank	PeopleSoft	Severe	ActivateFailureBlank
ActivityFactory (name - {ActivityName}, version - {ActivityVersion}) not registered	Mastero	Severe	NoActivityFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) has multiple registrations, not loading	Mastero	Severe	MultipleActFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) returned wrong class {ActivityClass}	Mastero	Severe	WrongActFactory
Adding Connection Pool with name {PoolName}	SAP	Info	PoolAddInfo
Adding Server Gateway {GatewayName}.	SAP	Info	AddingServerInfo
Additional property {PropertyName} set to {PropertyValue} so setup connection pool.	Email	Info	NewConnectEventime
An I/O error occurred while processing the request. Exception: {Message}	HTTP	Severe	ReceiveIOError

Message	Module	Level	Notification
An error occurred handling a receive request. Exception: {Message}	HTTP	Severe	CommonHandlerError
An error occurred while archiving job logs. The error message is: {Message}	Platform	Severe	OrcmonArchiveError
An error occurred while closing the connection in the exception path. The exception is {Message}	Database	Warning	JDBCConnectionClose
An error occurred while connecting to the database. The exception is {Message}	Database	Warning	ConnectionError
An error occurred while connecting to the database. The exception is {Message} The job is retrying: {RetryAttemptNumber} out of {TotalRetryAttempts} attempts to connect to the database . Another attempt will be made after {IntervalForRetries} secs.	Database	Warning	ConnectionRetry
An error occurred while executing a query on the job log database. The error message is: {Message}	Platform	Severe	OrcmonDatabaseError

Message	Module	Level	Notification
An error occurred while processing the message for the parameterized query activity at row number {RowNumber}. The error is: {Message}	Database	Severe	Param Query Error
An error occurred while processing the request. Exception: {Message}	HTTP	Severe	ReceiveInternalError
An error occurred while reading headers. Exception: {Message}	HTTP	Severe	ReplyUnmarshalHeader
An error occurred while setting the key store. Exception: {Message}	HTTP	Severe	RegisterKeyStore
An error occurred while trying to execute activity {ActivityName}. Error is: {Message}	Domain	Severe	ActivityFailure
An error occurred while trying to process an unsupported Accept-Charset encoding. Exception: {Message}	HTTP	Severe	ReceiveOperationError
An exception occurred while activating the activity. The exception is :{Message}	HTTP	Severe	RequestActivate

Message	Module	Level	Notification
An exception occurred while activating the parameterized query activity. The exception is: {Message}	Database	Severe	Param Query Activate
An exception occurred while activating the stored procedure activity. The exception is: {Message}	Database	Severe	Stored ProcActivate
An exception occurred while deleting the row from the control table. The exception is {Message}	Database	Severe	ErrorDeletePost
An exception occurred while deleting the row from the control table. The exception is: {Message}	Database	Severe	Delete RowsError
An exception occurred while processing a SingleTableNotification job. Data error at row number {RowNumber} of table {TableName}. The Error is {Message}	Database	Severe	ErrorSingleTableJob
An exception occurred while processing an outbound job in the stored procedure activity. Data error at row number: {RowNumber}. The error is {Message}	Database	Severe	Stored ProcException
An exception occurred while processing the inbound job: {Message}	Database	Severe	InboundOperationError

Message	Module	Level	Notification
An insert statement was issued to the control table. {TableName}	Database	Info	InsertTableStatement
An internal error occurred: {Message}.	WebSphere MQ	Severe	InternalFailure
An unexpected result returned from the buffer table. Expecting rows to be present in the result, instead the result is empty.	Database	Warning	UnexpectedEmptyRows
An unknown exception occurred while sending the response to the client. Exception: {Message}	HTTP	Severe	ReplyUnknownError
Append data to file "{FileName}" completed with return code {ResponseCode}.	FTP	Info	AppendAfter
Appending data to file "{FileName}".	FTP	Info	AppendBefore
Archiver created successfully, now performing archiving.	Archive	Info	ArchiverCreated
Archiving done successfully.	Archive	Info	ArchiveDone

Message	Module	Level	Notification
Attempt to upgrade Cast Iron firmware on appliance {AffectedAppliance} from version {OldVersion} to version {NewVersion} failed: {Message}.	Platform	Severe	UpgradeFailed
Authentication failure for user {Username}, from host {Host}.	Platform	Severe	AuthFailure
Authentication success for user {UserName}, from host {Host} with session id {SessionId}.	Platform	Info	AuthSuccess
Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}.	Platform	Warning	NetworkAutohost
Automatically converting old style FTP filename pattern from "{OldStylePattern}" to "{NewStylePattern}". Please republish project from Studio version 3.6 or later to eliminate this warning.	FTP	Warning	FtpPatternConversion
Binding parameters supplied are invalid.	Archive	Severe	IncorrectParameters
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.	MIME	Info	BoundaryAbsent

Message	Module	Level	Notification
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.	MI ME	Warning	BoundaryMoreThan70
Boundary is: \"{Boundary}\".	MI ME	Info	BoundaryInfo
Boundary specified in header but no boundary found in the body. Returning single body.	MI ME	Warning	NoBoundaryFound
Call context created but task never started; destroying task {TaskID}	Mastero	Info	CallContextDestroy
Call to function {FunctionName} is complete	SAP	Info	CompleteFunctionExec
Cancel of job {JobID} of Orchestration {OrchName} failed: {Message}.	Mastero	Severe	LoaderCancel
Cannot complete this job due to low memory, please try redeploying this orchestration	Mastero	Severe	LargeTotalVarSize
Cannot start an orchestration that is in transient state: {State}	Mastero	Severe	ProgramStart

Message	Module	Level	Notification
Caught exception while canceling job: {Message}	Mastero	Warning	TaskCancelled
Changed directory to "{DirectoryName}" completed with return code {ResponseCode}.	FTP	Info	DirChangeAfter
Changing to directory "{DirectoryName}".	FTP	Info	DirChangeBefore

Introduction

About WebSphere DataPower Cast Iron Management API Guide

The Management API guide is written for developers and IT personnel who want to manage Integration Appliance and the Cloud by using applications or scripts.

This guide assumes that you have an intermediate level of expertise in integration projects and some experience in supporting and managing an IT environment.

Integration Appliance and Cloud documentation

To view PDF documents, download Adobe Reader version 5 or higher from Adobe Systems Inc., see <http://www.adobe.com>.

You can access documentation from the Documentation CD.

The documentation set includes the following books:

Command Line Interface Reference

Reference information about commands available from the Command Line Interface (CLI).

Getting Started Guide

An overview of Integration Appliance and Studio, and summary information about using Studio to create integration projects that run on the Integration Appliance

HA Overview Guide

A high-level overview about High Availability (HA) pairs. This guide includes information about HA pair states, configuration requirements, commands, and troubleshooting issues.

Management API Guide

Information for the Management API for the Cloud and Integration Appliances.

Documentation conventions

The following table describes the conventions that are used in this document.

Convention	Description
<code><Hostname> command</code>	Examples of using commands are shown in this document in this format.
<code>enter exactly as shown</code>	Procedures might also include instructions on what you should enter for particular fields, prompts, or commands. Information in this font must be typed exactly as shown.
<code>net set interface dataaddress <port-address></code>	Placeholders are shown between angle brackets (<>) and generally indicate the type of information you should supply in the command.
Menu > Submenu	Instructions that use menu commands use the greater than symbol (>) to indicate submenus, for example, "click Configuration > Notifications".

Other resources

In addition to the product information, IBM® provides these other resources:

- Online help

- Information centers
- Knowledge Base
- Product Support

Online help

Online help is accessible from Studio and the Web Management Console.

IBM website

You can access the IBM Corporation website at: <http://www.ibm.com>.

The site contains information about the IBM Corporation, its background, and products. The site also provides contact information for sales and technical support.

Contacting IBM support

IBM support provides assistance with product defects. Before contacting IBM support, the following criteria must be met:

- Your company has an active maintenance contract.
- You are authorized to submit problems.

Submit the problem in one of two ways:

- Electronically through the Service Request (SR) problem submission tool. You must sign in with your IBM ID and password.
- Telephone. Refer to the directory of worldwide contacts in the IBM Software Support Handbook for the appropriate software support phone number to call.

Overview of the Management API guide

An overview of the Management API. The API provides management capabilities for Clouds and Integration Appliances.

The Management API is implemented as a web service. This web service provides a way to manage WebSphere® DataPower Cast Iron® Appliances (Integration Appliances) and WebSphere Cast Iron Cloud (Cloud) projects through your applications or scripts.

The API provides Integration Appliance and Cloud management in the following areas:

Deployment

Provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can import or export repositories.

Security

Provides operations to create, get, list, and delete users, roles, and permissions. You can log in and log out by using the security WSDL.

Staging

Checks whether the staging database is started and starts or stops the staging database. (Applies to appliances only.)

System Administration

Sets or gets the appliance name or network configuration. You can also run system commands or get system information. (Applies to appliances only.)

Job Monitoring

Searches for job, gets job count, and gets job details. You can also set and get job monitoring properties.

Logs and Notifications

Saves, gets, and deletes notification policies. You can also get and set email and SNMP endpoints, set and get log levels, and get log count.

The Management API complies with the following web services standards:

- Web Services Interoperability Organization (WS-I) Basic Profile 1.0
- SOAP 1.1
- Web Services Description Language (WSDL) 1.1
- XML Schema 1.1

You can create client applications that call web services operations to manage and monitor Integration Appliances and Cloud projects. Communication between the client application and the Integration Appliance or Cloud project is accomplished by using HTTP or HTTPS.

The Management API is defined in WSDL files. Client applications call web services operations by sending SOAP messages. SOAP messages are formatted in XML and so are programming language neutral.

Examples of SOAP messages

This section provides examples of logging in, getting a user and logging out using the Management API - Security WSDL.

The following code is an example of a SOAP request to log in.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header/>
  <soapenv:Body>
    <sec:login>
      <sec:username>webuser@mycompany.com</sec:username>
      <sec:password>D3nu9noB</sec:password>
    </sec:login>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP reply to the request to log in.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:sessionId>8F059BEEA3611033D27773A95404641</ns2:sessionId>
    </ns2:loginResponse>
  </S:Body>
</S:Envelope>
```

The *sessionId* is required to perform other SOAP operations after you log in to an Integration Appliance or the Cloud.

The following code is an example of a SOAP request to get a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getUser>
      <sec:username>webuser</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP response to the request to get a user.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>8F059BEEA3611033D277773A95404641</ns3:id>
        <ns3:name>webuser</ns3:name>
        <ns3:encPasswd>{SHA}c1O20r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webuser@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

The following code is an example of a SOAP request to logout.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:logout/>
  </soapenv:Body>
</soapenv:Envelope>
```

Cloud examples

The following examples apply to the Cloud only.

The previous examples used SOAP operations that ran in a tenant in the Cloud or an Integration Appliance. To run operations in environments within a tenant in the Cloud, you use the `setCurrentScope` operation to set the scope to the environment where you want to run SOAP operations.

The following example sets the scope to the development environment and then starts a project located in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>63Y93HD6D856EB5812EB71216C3547W7</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScope>
      <sec:scopeName>Development</sec:scopeName>
    </sec:setCurrentScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeResponse>
  </S:Body>
</S:Envelope>
```

The following example is a SOAP request to start a configuration in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>63Y93HD6D856EB5812EB71216C3547W7</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/
types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:startResponse>
  </S:Body>
</S:Envelope>
```

WSDL files

Client-side web services use the WSDL file to create stubs that enable client-side applications to interact with an Integration Appliance or Cloud project.

The WSDL files specify the operations that a client application can use to install, manage, and monitor an Integration Appliance or Cloud project.

The Management API is defined in six WSDL files:

- security.wsdl
- staging.wsdl
- deployment.wsdl
- system.wsdl
- orcmon.wsdl
- lognotif.wsdl

You can download the WSDL files from the following locations for an Integration Appliance:

- Security: <https://<appliance>/ws/security?wsdl>
- Staging: <https://<appliance>/ws/staging?wsdl>
- Deployment: <https://<appliance>/ws/deployment?wsdl>
- System: <https://<appliance>/ws/system?wsdl>
- Orcmon: <https://<appliance>/ws/orcmon?wsdl>
- Lognotif: <https://<appliance>/ws/lognotif?wsdl>

You can download the WSDL files from the following locations for the Cloud:

- Security: <https://cloud2.castiron.com/ws/security?wsdl>
- Staging: <https://cloud2.castiron.com/ws/staging?wsdl>
- Deployment: <https://cloud2.castiron.com/ws/deployment?wsdl>
- System: <https://cloud2.castiron.com/ws/system?wsdl>
- Orcmon: <https://cloud2.castiron.com/ws/orcmon?wsdl>
- Lognotif: <https://cloud2.castiron.com/ws/lognotif?wsdl>

E

environment

In the Cloud, an environment is a subdivision of a tenant. A typical tenant contains development, staging, and production environments. An environment has its own administrators, users, roles, and role groups. After a project is completed in the Modify tab, it is published to an environment where it can be deployed, tested, and run. The administrator role of an environment can assign users to roles and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the environment.

[TOP](#)

R

role

Role is a way to provide users with a pre-defined set of permissions. When an administrator assigns a role to a user the user is able to access all of the projects to which the role is has permissions. The user can also perform all of the actions for which the role has permissions. In the Cloud, the user gets access to any tenants and environments to which the role has permissions.

roleGroup

Use to combine roles into a single entity which can then be assigned to users. A user assigned to a roleGroup inherits all of the access and permissions that the roles in the roleGroup are given.

[TOP](#)

S

scope

In the Cloud, scope refers to either a tenant or an environment within a tenant. You use `setCurrentScope` to set the scope to where you want to run SOAP operations. Scope applies to the Cloud only.

[TOP](#)

T

tenant

The Cloud is a multi-tenant cloud as opposed to a single-tenant cloud. Each tenant can be divided into environments such as development, staging, and production. The administrator role of the tenant can assign users to environments, roles, and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the tenant and environments within the tenant.

[TOP](#)

Security

Information about the security WSDL.

The security WSDL provides operations to create, get, list and delete users, roles, and permissions. You log in and log out by using the security WSDL.

addRoleToRoleGroup

Adds the specified role as a member to the specified group.

Applies to Clouds and Integration Appliances.

Parameters:

role

The name of the role.

group

The name of the group to which the role is to be added.

Returns:

True if the role is successfully added to the group.

Feedback | Notices

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00006.html>

changePassword

Changes the password for the specified username.

Parameters:

username

The username for which the password is to be changed.

oldPassword

The old password for the username.

newPassword

The new password for the username.

Returns:

True if the password was successfully changed.

Examples:

The following example is a SOAP request to change the password for a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B0097A43C5527FA552C3DDBA7EF74CE9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:changePassword>
      <sec:username>webman</sec:username>
      <sec:oldPassword>Oldpw12g</sec:oldPassword>
      <sec:newPassword>Newpw24e</sec:newPassword>
    </sec:changePassword>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:changePasswordResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:changePasswordResponse>
  </S:Body>
</S:Envelope>
```

clearPrivileges

Clears privileges for the specified target, such as a user.

Applies to Clouds and Integration Appliances.

Parameter:

target

The specified target.

Returns:

True if the privileges are cleared for the specified target.

Examples:

The following code is an example of a SOAP request to create a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B87CDEE24C7AE5EE4B1C00158EBC483D</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:clearPrivileges>
      <sec:target>pubuser</sec:target>
    </sec:clearPrivileges>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:clearPrivilegesResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <return>true</return>
    </ns2:clearPrivilegesResponse>
  </S:Body>
</S:Envelope>
```

createRole

Creates a role.

Applies to Clouds and Integration Appliances.

Parameters:

role

The specified roleName for the role that you want created.

displayName

The name to be displayed in the WMC.

email

The email address for the role.

Returns:

True if the role is created.

Examples:

The following example is a SOAP request to create a role. The input for the request is the session ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>

createUser

Creates a user name.

Applies to Clouds and Integration Appliances.

Parameters:

username

The user ID to create.

password

The password for username.

displayName

The name to display in the WMC.

email

The email address for username.

Returns:

True if the username was successfully created.

Examples:

The following code is an example of a SOAP request to create a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:createUser>
      <sec:username>webman</sec:username>
      <sec:password>Connect2WS</sec:password>
      <sec:displayName>WebServiceUser</sec:displayName>
      <sec:email>webman@mycompany.com</sec:email>
    </sec:createUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createUserResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:createUserResponse>
  </S:Body>
</S:Envelope>
```

currentScope

Returns the current scope for this thread.

Applies to Clouds only.

Returns:

The current scope.

Examples:

The following example is a SOAP request for the current scope. The input for the request is the session ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>85F500F8283BBD9E4F31DCE3FD894442</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:currentScope/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:currentScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scope>
        <active>true</active>
        <category>enterprise</category>
        <displayName>mycompany.com</displayName>
        <id>B47EAECF6AD14AA028B4EA038CB742D0</id>
        <index>0</index>
        <name>mycompany.com</name>
        <parentId>00000000000000000000000000000000</parentId>
        <type>TENANT</type>
      </ns2:scope>
    </ns2:currentScopeResponse>
  </S:Body>
</S:Envelope>

deleteRole

Deletes a specified role.

Applies to Clouds and Integration Appliances.

Parameter:

role

The specified roleName to delete.

Returns:

True if the role is deleted.

Examples:

The following example is a SOAP request to delete a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

deleteUser

Deletes the user with the specified username.

Applies to Clouds and Integration Appliances.

Parameter:

username

The user to delete from the tenant, environment, or project.

Returns:

True if the user was successfully deleted.

Examples:

The following example is a SOAP request to delete a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

getRole

Gets the specified role.

Applies to Clouds and Integration Appliances.

Parameter:

role

The specified role to return.

Returns:

The specified role

Examples:

The following example is a SOAP request to get a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BC77BA76E338CFA6B0063218A0AE4656</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getRole>
      <sec:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</sec:name>
    </sec:getRole>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRoleResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:group>
        <ns3:id>903273B869AC8CA9D99F4C8448694680</ns3:id>
        <ns3:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</ns3:name>
        <ns3:displayName>Publisher Group</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>false</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:createdTime>2010-04-10T00:08:23Z</ns3:createdTime>
        <ns3:scopeId>A347B0C49C8CFA462D4F28A4C05B47C2</ns3:scopeId>
        <ns3:scopeType>Environment</ns3:scopeType>
        <ns3:groupType>Publisher</ns3:groupType>
      </ns2:group>
    </ns2:getRoleResponse>
  </S:Body>
</S:Envelope>
```

For each role the following information is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs. If you create your own group, it is a custom group. For information about the built-in groups, see [WMC Help > Permissions > About Built-in Groups](#).

    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getRoleById>
      <sec:id>8F52644BBA2491693D440F2FA12A4B3D</sec:id>
    </sec:getRoleById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is a SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRoleByIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security"
xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:group>
        <ns3:id>8F52644BBA2491693D440F2FA12A4B3D</ns3:id>
        <ns3:name>securitymonitor</ns3:name>
        <ns3:displayName>monitor</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>security@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-23T19:14:30.066Z</ns3:createdTime>
        <ns3:scopeId>A6EFAF24DB7168A4206F605CA6E14B1D</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
        <ns3:groupType>Custom</ns3:groupType>
      </ns2:group>
    </ns2:getRoleByIdResponse>
  </S:Body>
</S:Envelope>
```

For each role the following information is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs.

        <ns3:groupType>Custom</ns3:groupType>
      </ns2:roles>
    </ns2:getRolesResponse>
  </S:Body>
</S:Envelope>

```

```
</S:Body>
</S:Envelope>
```

For each role the following is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs.

getRolesInRoleGroup

Returns a list of all the roles in the specified role group.

Applies to Clouds and Integration Appliances.

Parameter:

name

The specified role group.

Returns:

The list of roles for the specified role group.

getRoleUsers

Returns a list of all the users that are members of the specified role.

Applies to Clouds and Integration Appliances.

Parameter:

name

The specified role.

Returns:

The list of users for the specified role.

getScope

Gets the specified scope in the specified parent scope.

Applies to Clouds only.

Parameters:

scopeType

The type of scope, which is either tenant or environment.

name

The name of the scope.

parentScopeId

The ID of the parent scope.

Returns:

The specified scope.

Examples:

The following example is a SOAP request to get the specified scope in the specified parent scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>AA91E56114D36B296D82660639B6482F</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScope>
      <sec:scopeType>ENV</sec:scopeType>
      <sec:name>Staging</sec:name>
      <sec:parentScopeId>88673D5DF2583806B037576D94F34BBA</
sec:parentScopeId>
    </sec:getScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scope>
        <active>true</active>
        <displayName>Staging</displayName>
        <id>A51EDD44BE6C10B2D1335A9D634D407D</id>
        <index>1</index>
        <name>Staging</name>
        <parentId>88673D5DF2583806B037576D94F34BBA</parentId>
        <type>ENV</type>
      </ns2:scope>
    </ns2:getScopeResponse>
  </S:Body>
</S:Envelope>
```

getScopeById

Gets the scope as specified by the ID.

Applies to Clouds only.

Parameter:

scopeID

The ID for the scope.

Returns:

The scope as specified by the ID.

Examples:

The following code is an example of a SOAP request to get a scope by its ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B60EA6425F8FCB16BB6E96063D09408E</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScopeById>
      <sec:scopeId>9378E8C3C5E5DCACA77D9F7B6BE24B98</sec:scopeId>
    </sec:getScopeById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopeByIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scope>
        <active>true</active>
        <category>enterprise</category>
        <displayName>mycompany.com</displayName>
        <id>9378E8C3C5E5DCACA77D9F7B6BE24B98</id>
        <index>0</index>
        <name>castiron.com</name>
        <parentId>00000000000000000000000000000000</parentId>
        <type>TENANT</type>
      </ns2:scope>
    </ns2:getScopeByIdResponse>
  </S:Body>
</S:Envelope>
```

getScopesByParentId

Using the ID of the parent scope, returns a list of all the child scopes.

Applies to Clouds only.

Parameter:

parentScopeId

The ID for the parent scope.

Returns:

A list of child scopes.

Examples:

The following example is a SOAP request to get scopes by using the ID of the parent scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/
schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B0097A43C5527FA552C3DDBA7EF74CE9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScopesByParentId>
      <sec:parentScopeId>BB173AE61484BD7359D8910789EA4E88</
      sec:parentScopeId>
    </sec:getScopesByParentId>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request. The parent scope is a tenant and the child scopes are the environments in the tenant.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopesByParentIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security"
xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scopes>
        <active>true</active>
        <displayName>Staging</displayName>
        <id>9203C78275503796DB49CB5E6CF34111</id>
        <index>1</index>
        <name>Staging</name>
        <parentId>BB173AE61484BD7359D8910789EA4E88</parentId>
        <type>ENV</type>
      </ns2:scopes>
      <ns2:scopes>
        <active>true</active>
        <displayName>Development</displayName>
        <id>A26D2319BAE05E9513117949CF274A09</id>
        <index>0</index>
        <name>Development</name>
        <parentId>BB173AE61484BD7359D8910789EA4E88</parentId>
        <type>ENV</type>
      </ns2:scopes>
    </ns2:scopes>
  </S:Body>
</S:Envelope>
```

```
<active>true</active>
<displayName>Production</displayName>
<id>B56005332F3E41A3F1456F5F40594A06</id>

<type>ENV</type>
</ns2:scopes>
</ns2:getScopesByParentIdResponse>
</S:Body>
</S:Envelope>
```

For each child scope, the following information is returned:

active

True or false. True means that the scope is active.

displayName

The name displayed in the WMC for the role.

id

The ID for the child scope.

index

The position in the index of the child scope.

name

The name of the child scope.

parentId

The ID of the parent scope.

type

The type of scope.

    <sec:getUser>
      <sec:username>webman</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>965AAB3FED8D3CCBBE4DC8EE0E2944EA</ns3:id>
        <ns3:name>webman</ns3:name>
        <ns3:encPasswd>{SHA}c1020r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webman@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

For each user the following information is returned:

id

The ID for the user.

name

The name for the user.

encPasswd

The SHA encoded password for the user.

displayName

The name displayed in the WMC for the role.

isActive

True if the user is logged in, false if not.

isMutable

True or false. True means that the object can be updated, false if not.

isVisible

True or false. True means that the object is visible in the WMC, false if not.

email

The email address for the user.

createdTime

The date and time the user was created.

failedLoginCount

The number of failed attempts to log in by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled (15 - 30 - 60 - 120).

scopeId

The scope ID for the scope where the user is located. Does not apply for Integration Appliances.

scopeType

The type of scope, either tenant or environment. Does not apply for Integration Appliances.

  <ns3:id>B77F69E6D9488E2607B02076B4F848DC</ns3:id>
  <ns3:name>support@mycompany.com</ns3:name>
  <ns3:encPasswd>{SHA}Ek2MpQlE1+fGMEYolkSF6lpbNIk=</ns3:encPasswd>
  <ns3:displayName>support@mycompany.com</ns3:displayName>
  <ns3:isActive>false</ns3:isActive>
  <ns3:isMutable>false</ns3:isMutable>
  <ns3:isVisible>true</ns3:isVisible>
  <ns3:email>support@mycompany.com</ns3:email>
  <ns3:createdTime>2010-02-12T21:50:35Z</ns3:createdTime>
  <ns3:failedLoginCount>0</ns3:failedLoginCount>
  <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
  <ns3:scopeType>Tenant</ns3:scopeType>
</ns2:users>
</ns2:getUsersResponse>
</S:Body>
</S:Envelope>

```

For each user the following information is returned:

id

The ID for the user.

name

The name for the user.

encPasswd

The SHA encoded password for the user.

displayName

The name displayed in the WMC for the user.

isActive

True or false depending on whether the user is logged in.

isMutable

True or false. True means that the object can be updated, false if not.

isVisible

True or false. True means that the object is visible in the WMC, false if not.

email

The email address for the user.

createdTime

The date and time the user was created.

failedLoginCount

The number of failed attempts to log in to the tenant by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled.

scopeId

The scope ID for the scope where the user is located. Applies to Clouds only.

scopeType

The type of scope, either tenant or environment. Applies to Clouds only.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00036.html>

grantRole

Grants a specified role to a specified user.

Applies to Clouds and Integration Appliances.

Parameters:

userName
The specified userName to whom the specified roleName is to be granted.

role
The specified roleName to be granted to the specified userName.

Returns:
True if the role is granted to the user.

The following example is a SOAP request to grant a role.

```
Request:
<soapenv:Envelope
xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"xmlns:sec="
http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header>

hasPrivilege

Returns true if a privilege exists for the specified user, target, and action.

Applies to Clouds and Integration Appliances.

Parameters:

username
The specified user.

target
The specified target.

action
The specified action.

Returns:
True if the privilege exists.

isRealmUser

Returns true if the specified user belongs to the realm that corresponds to the session ID.

Applies to Clouds and Integration Appliances.

Parameter:

username
The specified user.

Returns:
True if the user belongs to the realm.

Examples:

The following example is a SOAP request to check if the specified user belongs to the realm.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:isRealmUser>
      <sec:username>admin@mycompany.com</sec:username>
    </sec:isRealmUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:isRealmUserResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:isRealmUser>true</ns2:isRealmUser>
    </ns2:isRealmUserResponse>
  </S:Body>
</S:Envelope>
```

isUserEnabled

Checks to see if the specified username is enabled. An enabled user is authenticated.

Applies to Clouds and Integration Appliances.

Parameter:

username
The username to be checked.

Returns:
True if the specified username is enabled.

Examples:

The following example is a SOAP request to check if the specified user is enabled.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>

listGrantableRoles

Returns a list of roles that can be granted (excludes conditional roles).

Applies to Clouds and Integration Appliances.

Returns:

The list of roles.

Examples:

The following example is a SOAP request to list the grantable roles.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

listUsers

Returns a list of all users.

Applies to Clouds and Integration Appliances.

Returns:

A list of all users.

Examples:

The following example is a SOAP request for the list of users.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
```

```
<soapenv:Body>
  <sec:listUsers/>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request for the list of users:

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:listUsersResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:users>foo@mycompany.com</ns2:users>
      <ns2:users>httpclient@mycompany.com</ns2:users>
      <ns2:users>admin@mycompany.com</ns2:users>
      <ns2:users>webman@mycompany.com</ns2:users>
      <ns2:users>support@mycompany.com</ns2:users>
    </ns2:listUsersResponse>
  </S:Body>
</S:Envelope>
```

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00045.html>

login

Logs in to an Integration Appliance or a Cloud.

Parameters:

username

The user ID that you use to log in to an Integration Appliance or Cloud.

password

The password for username.

Returns:

The session ID.

Examples:

The following code is an example of a SOAP request that you can use to log in to the web service:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header/>
  <soapenv:Body>
    <sec:login>
      <sec:username>webman@mycompany.com</sec:username>
      <sec:password>My6word3S</sec:password>
```

```
</sec:login>
</soapenv:Body>
</soapenv:Envelope>
```

The password must be at least eight characters long and contain a combination of three of the following characters:

- Alphabet characters
- Uppercase alphabet characters
- Numbers
- Special characters

The following code is an example of a SOAP response to a successful login request:

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:sessionId>8F059BWEA3611033D277773A95404641</ns2:sessionId>
    </ns2:loginResponse>
  </S:Body>
</S:Envelope>
```

The session ID is required to run the other operations in the Management API after logging in.

updateRole

Updates the specified role.

Applies to Clouds and Integration Appliances.

Parameters:

role

The specified roleName to be updated.

displayName

The name to be displayed in the WMC.

email

The email address for roleName.

Returns:

True if the role is updated.

updateUser

Updates a user.

Applies to Clouds and Integration Appliances.

Parameters:

username

The user name for the tenant associated with the session ID.

displayName

The name to display in the WMC.

email

The email address for the username.

Returns:

True if the user was successfully updated.

Examples:

The following example is a SOAP request to update a user. The input for the request is the session ID and the username. The email address is being updated in this example.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:updateUser>
      <sec:username>webman</sec:username>
      <sec:displayName>?</sec:displayName>
      <sec:email>webman@mycompany.com</sec:email>
    </sec:updateUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:updateUserResponse xmlns:ns2="http://www.approuter.com/
```

```
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
  <ns2:success>true</ns2:success>
</ns2:updateUserResponse>
</S:Body>
</S:Envelope>
```

The email address was successfully updated.

userExists

Checks if the specified username exists.

Applies to Clouds and Integration Appliances.

Parameter:

username
The username for which the check is made.

Returns:
True if the username exists.

Examples:

The following example is a SOAP request to check if a user exists. The input for the request is the session ID and the username.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>99E1848F7661D4FC066AD5F97AB44C0C</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:userExists>
      <sec:username>webman</sec:username>
    </sec:userExists>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:userExistsResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:userExists>true</ns2:userExists>
    </ns2:userExistsResponse>
  </S:Body>
</S:Envelope>
```

```
</ns2:userExistsResponse>
</S:Body>
</S:Envelope>
```

Deployment

Information about the deployment WSDL.

The deployment WSDL provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can also import or export repositories.

This section contains the following topics:

- [cancelJob](#)
- [cloneConfiguration](#)
- [createAssets](#)
- [createConfiguration](#)
- [createRepeatingRule](#)
- [createRule](#)
- [createUserConfiguration](#)
- [deleteConfiguration](#)
- [deleteProject](#)
- [deleteRule](#)
- [deleteUserConfiguration](#)
- [downloadProject](#)
- [exportRepository](#)
- [getAllProjects](#)
- [getAssetGroupDisplayString](#)
- [getAssetGroupScript](#)
- [getAssetGroupWarnings](#)
- [getAssetProperties](#)
- [getAssetPropertiesBindings](#)
- [getConfiguration](#)
- [getConfigurationGroups](#)
- [getProject](#)
- [getRule](#)
- [getRules](#)
- [getUserConfiguration](#)
- [getUserConfigurations](#)
- [importRepository](#)
- [publishProject](#)
- [resume](#)
- [saveOrchestrationValues](#)

- [saveProperties](#)
- [setConfigurationGroups](#)
- [start](#)
- [stopAndCancel](#)
- [stopAndWait](#)
- [suspend](#)
- [undeploy](#)

[Feedback](#) | [Notices](#)

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00092.html>

cancelJob

Cancels the specified job group.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project.

Version

The version number for the project.

configName

The name used to identify a configuration, such as Default.

jobId

The ID for the job.

Together projectName, Version, and configName uniquely identify a configuration.

You can obtain the jobId by first running the searchJobs operation (orcmon.wsdl).

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00093.html>

cloneConfiguration

Clones the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

oldConfigName

The name of the configuration being cloned.

newConfigName

The name of the cloned configuration.

Returns:

The cloned configuration.

Examples:

The following code is an example of a SOAP request to clone a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>855BE295392375C8551C8B98D6EA4774</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:cloneConfiguration>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:oldConfigName>GenericProject_2_Cloud</dep:oldConfigName>
      <dep:newConfigName>GenericProject_3_Cloud</dep:newConfigName>
    </dep:cloneConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:cloneConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:cloneConfigurationResponse>
  </S:Body>
</S:Envelope>
```

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00094.html>

createAssets

Creates assets by using the specified script.

The endpoint is specified as a project URL, such as project-url:// Endpoints/TargetDB. The module ID is typically either <http://www.approuter.com/module/webservice/> or <http://www.approuter.com/module/database/>

Database assets must be enclosed as specified in the following table.

Database	Enclosure
DB2® AS/400®	" "
Informix®	[]
Microsoft SQL	[]
Oracle	" "
Sybase	" "

The following table lists the assets that can be created for the databases.

Database	Asset
DB2 As/400, Informix, Microsoft, Sybase	Applies to Clouds, Integration Appliances. Buffer tables, control tables, and triggers.
Local Staging Database	Buffer tables, control table, index tables, and triggers
Oracle	Buffer tables, control tables, sequences, and triggers

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

username

The user ID for the endpoint.

password

The password for the endpoint.

assetType

The type of asset.

script

The script to run against the endpoint.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00095.html>

createConfiguration

Creates the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration.

Examples:

The following example is a SOAP request to create a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363W</dep:configName>
    </dep:createConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:createConfigurationResponse>
  </S:Body>
</S:Envelope>
```

createRepeatingRule

Creates a repeating rule for downtime for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

stopDate

The date the configuration is to be stopped.

restartDate

The date the configuration is to be restarted.

downtimeType

The type or reason for the downtime.

repeat

Specifies that the downtime rule be repeated.

repeatInterval

Specifies the amount of time between repeats of the downtime rule.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The new repeating rule for the specified configuration.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00097.html>

createRule

Creates a downtime rule for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

stopDate

The date the configuration is to be stopped.

restartDate

The date the configuration is to be restarted.

downtimeType

The type or reason for the downtime.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The new downtime rule for the specified configuration.

Examples:

The following code is an example of a SOAP request to create a rule. Dates must conform to ISO 8601.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createRule>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>Default</dep:configName>
      <dep:stopDate>2010-04-17T07:00:00.066Z</dep:stopDate>
      <dep:restartDate>2010-04-17T08:00:00.066Z</dep:restartDate>
      <dep:downtimeType>stop</dep:downtimeType>
    </dep:createRule>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRuleResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:ruleId>2</ns2:ruleId>
    </ns2:createRuleResponse>
  </S:Body>
</S:Envelope>
```

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00098.html>

createRuleTZ

Creates a downtime rule for the specified configuration, which includes timezone as well.

Applies to Clouds and Integration Appliances.

Parameters:

projectName
The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

stopDate

The date the configuration is to be stopped.

restartDate

The date the configuration is to be restarted.

downtimeType

The type or reason for the downtime. The values for this property are `stop`, `stopAndCancel`, and `suspend`

Stop (allows jobs to finish) - At the specified time, this action prevents a new orchestration job from starting, while allowing the current jobs to finish processing. This action allows all jobs to end.

Stop (cancel running jobs) - At the specified time, this action prevents a new orchestration job from starting and stops all jobs that are currently running. This action immediately stops all jobs.

Suspend - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.

Together `projectName`, `version`, and `configName` uniquely identify a configuration.

Returns:

The new downtime rule for the specified configuration.

Examples:

The following code is an example of a SOAP request to create a rule. Dates must conform to ISO 8601.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createRuleTZ>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>Default</dep:configName>
      <dep:stopDate>2010-04-17T07:00:00.066Z</dep:stopDate>
      <dep:restartDate>2010-04-17T08:00:00.066Z</dep:restartDate>
      <dep:downtimeType>stop</dep:downtimeType>
      <dep:timeZone>PDT</dep:timeZone>
    </dep:createRuleTZ>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRuleTZResponse
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types"
xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
```

```
xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types"

downloadProject

Downloads the specified project as a byte array.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified project in a compressed file.

exportRepository

Exports the project repository in XML format.

Applies to Integration Appliances only.

Returns:

The project repository in XML format.

getAllProjects

Gets all the projects.

Applies to Clouds and Integration Appliances.

Returns:

All the projects.

Examples:

The following example is a SOAP request to get all projects.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00106.html>

getAssetGroupDisplayString

Gets the asset display string for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either [http:// www.approuter.com/module/webservice/](http://www.approuter.com/module/webservice/) or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset display string.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00107.html>

getAssetGroupScript

Gets the asset script for the given configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either <http://www.approuter.com/module/webservice/> or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset script.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

getAssetGroupWarnings

Gets the asset warnings for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as `project-url://Endpoints/TargetDB`. The module ID is typically either `http://www.approuter.com/module/webservice/` or `http://www.approuter.com/module/database/`

Applies to Clouds and Integration Appliances.

Parameters:

`projectName`

The name of the specified project.

`version`

The version number for the specified project.

`configName`

The configuration name for the specified project.

`ModuleID`

The module ID for the assets.

`endpointUrl`

The endpoint URL for the assets.

`propNames`

The names of the property assets.

Together `projectName`, `version`, and `configName` uniquely identify a configuration.

Returns:

The asset warnings.

Feedback | Notices

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00109.html>

getAssetProperties

Gets the asset property values for the specified configuration and endpoint.

The endpoint is specified as a project URL, for example `project-url://Endpoints/TargetDB`. The module ID is typically either `http://www.approuter.com/module/webservice/` or `http://www.approuter.com/module/database/`

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The values for the asset properties.

getAssetPropertiesBindings

Gets the asset properties for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either [http:// www.approuter.com/module/webservice/](http://www.approuter.com/module/webservice/) or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset properties.

getConfiguration

Gets the specified project.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

Returns:

The specified project.

Examples:

The following example is a SOAP request to get a specified project:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:getConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

```
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getConfigurationResponse xmlns:ns2="http://www.approuter.com/

getConfigurationGroups

Gets the display names for the groups with permission for the given configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The group display names.

Examples:

The following example is a SOAP request to get configuration groups with permission for the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AACA96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getConfigurationGroups>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:getConfigurationGroups>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getConfigurationGroupsResponse xmlns:ns2="http://www.approuter.com/

getRule

Gets the downtime rule for the specified downtime rule ID.

Applies to Clouds and Integration Appliances.

Parameters:

ruleId

The specified downtime rule ID.

Returns:

The downtime rule.

Examples:

The following code is an example of a SOAP request to get a rule.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getRule>
      <dep:ruleId>2</dep:ruleId>
    </dep:getRule>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRuleResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00115.html>

getRules

Gets the downtime rules for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The downtime rules for the specified configuration.

Examples:

The following code is an example of a SOAP request to get rules.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getRules>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>Default</dep:configName>
    </dep:getRules>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRulesResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
```

```
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
  <ns2:rules>
    <ns3:configUrl>config-url://GenericProject_1_Cloud:1.0:Default</
    ns3:configUrl>
    <ns3:downtimeType>stop</ns3:downtimeType>
    <ns3:envId>
      <guidString>A7FFE81243A1E319FCAED0DFABF9470B</guidString>
    </ns3:envId>
    <ns3:isActive>true</ns3:isActive>
    <ns3:repeatInterval>0</ns3:repeatInterval>
    <ns3:repeatType>none</ns3:repeatType>
    <ns3:repeatingRule>false</ns3:repeatingRule>
    <ns3:restartDate>2010-04-17T08:00:00.066Z</ns3:restartDate>
    <ns3:ruleId>2</ns3:ruleId>
    <ns3:stopDate>2010-04-17T07:00:00.066Z</ns3:stopDate>
  </ns2:rules>
</ns2:getRulesResponse>
</S:Body>
</S:Envelope>
```

getUserConfiguration

Gets the specified configuration for the specified user.

Applies to Clouds and Integration Appliances.

Parameters:

userName

The name of the specified user.

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration for specified user.

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00117.html>

getUserConfigurations

Gets the configurations for the specified user.

Applies to Clouds and Integration Appliances.

Parameter:

userName
The name of the specified user.

Returns:
The configurations for the specified user.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00118.html>

importRepository

Imports the project repository in XML format.

Applies to Integration Appliances only.

Parameters:

importType
The type of import.

data
The project repository in XML format.

Returns:
Success or failure

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00119.html>

publishProject

Publishes the given project and creates a default configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

content

The project in a compressed file (a .par file).

Returns:

Success or failure.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00120.html>

resume

Resumes the specified configuration

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to resume running a configuration that was paused.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:resume>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:resume>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:resumeResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/
types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:resumeResponse>
  </S:Body>
</S:Envelope>
```

saveOrchestrationValues

Saves the specified values for the specified orchestration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

values

The specified values to save for the specified orchestration.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to save the values for the specified orchestration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AACA96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:saveOrchestrationValues>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
      <dep:values>
        <enabled>true</enabled>
        <syncLoggingEnabled>false</syncLoggingEnabled>
        <loggingLevel>errorValues</loggingLevel>
        <maxJobs>1</maxJobs>
        <orchestrationRelativeurl>orchestrationRelativeurl>project-url://
        Orchestrations/
        Receive</orchestrationRelativeurl>
        <state>stopped</state>
      </dep:values>
    </dep:saveOrchestrationValues>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:saveOrchestrationValuesResponse xmlns:ns2="http://
    www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://
    www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://
    www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://
    www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:saveOrchestrationValuesResponse>
  </S:Body>
</S:Envelope>
```

saveProperties

Saves the specified properties for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

configName

The configuration name for the specified project.

properties

The specified properties to save for the specified configuration.

Together projectName, version, and configName uniquely identify a configuration.

setConfigurationGroups

Sets the groups with permission for the specified project.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

groupIds

The IDs for the groups.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Orcmon

Information about the orcmon WSDL.

Using the orcmon WSDL, you can search for jobs, get a job count, and get job details. You can also set and get job monitoring properties.

This section contains the following topics:

- [getJobCount](#)
- [getJobDetails](#)
- [getMonitoringProperties](#)
- [purgeJobs](#)
- [searchJobs](#)
- [setMonitoringProperties](#)

Feedback | Notices

 Last updated: Wednesday, December 16, 2015

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00130.html>

getJobCount

Returns the number of jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run. For the default configuration, this value should be 'Default'.

orchName

The name of the orchestration where the jobs run.

jobId (optional)

The ID of the jobs for which a count is returned.

jobKey (optional)

The job key for the jobs for which a count is returned.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

â€“Setting status as negative gets all status.

“Setting specific status value gets jobs with that status:

- SUCCESS = 0
- ERRORED = 1
- RUNNING = 2
- CANCELLING = 3
- TERMINATED = 4
- CANCELLED = 5
- SUSPENDED = 6
- CRASHED = 7
- SUSPENDING = 8
- UNKNOWN = 101

Returns:

The number of jobs.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00131.html>

getJobDetails

Returns the details for the job with the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the job runs.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the job runs.

orchName

The name of the orchestration where the job runs.

jobId

The ID of the job for which the details are returned.

Returns:

The job details for the job that has the specified parameters.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00132.html>

getMonitoringProperties

Gets the properties for managing orchestration monitoring data.

Applies to Integration Appliances only.

Returns:

The monitoring properties.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00133.html>

purgeJobs

Purges jobs that have the specified parameters.

Applies to Integration Appliances only.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run.

orchName

The name of the orchestration where the jobs run.

jobId

The ID of the job to be purged.

jobKey

The job key for the jobs to be purged.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

exportJobs

Whether to return the purged jobs - true or false.

Returns:

The purged jobs if exportJobs is set to true.

searchJobs

Returns the jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run.

orchName

The name of the orchestration where the jobs run.

jobId

The ID of the jobs to be returned.

jobKey

The job key for the jobs to be returned.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

page

0-based page numbering.

pageSize

The number of lines per page.

Returns:

The jobs that have the specified parameters.

Examples:

The following code is an example of a SOAP request to search jobs.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:orc="http://www.approuter.com/schemas/2008/1/orcmon">
  <soapenv:Header>
    <orc:sessionId>8341133D57E9259C94D44E53A5F6B43C2</orc:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <orc:searchJobs>
      <orc:projectName>CloudProvideProject_2</orc:projectName>
      <orc:version>1.0</orc:version>
      <orc:configName>Default</orc:configName>
      <orc:orchName>ProvideOnCloud</orc:orchName>
      <orc:jobId></orc:jobId>
      <orc:jobKey></orc:jobKey>
      <orc:minStartDate></orc:minStartDate>
      <orc:maxStartDate></orc:maxStartDate>
      <orc:status>errored</orc:status>
      <orc:page>0</orc:page>
      <orc:pageSize>1</orc:pageSize>
    </orc:searchJobs>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:searchJobsResponse xmlns:ns2="http://www.approuter.com/

setMonitoringProperties

Sets the properties for managing orchestration monitoring data.

Applies to Integration Appliances only.

Parameter:

properties

The properties for managing orchestration monitoring data.

Returns:

A list of warning and error messages.

Lognotif

Information about the lognotif WSDL.

Using the lognotif WSDL, you can save, get, and delete notification policies. You can also get and set email and SNMP endpoints, set and get log levels, and get a log count.

This section contains the following topics:

- [createNotificationPolicy](#)
- [deleteNotificationPolicy](#)
- [getEmailEndpoint](#)
- [getLogCount](#)
- [getLogLevel](#)
- [getNotificationPolicies](#)
- [getNotificationPolicy](#)
- [getSnmpEndpoint](#)
- [searchLogs](#)
- [setEmailEndpoint](#)

createNotificationPolicy

Creates and saves a notification policy.

Applies to Clouds and Integration Appliances.

Parameter:

policy

The name of the policy.

Returns:

The notification policy ID of the policy was successfully created. If not successful, returns a -1.

Examples:

The following example is a SOAP request to create a notification policy.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:createNotificationPolicy>
      <log:name>TestNotif</log:name>
      <log:logComponent>orchestration</log:logComponent>
      <log:logLevel>error</log:logLevel>
      <log:emailAddresses>user@mydomain.com</log:emailAddresses>
      <log:isSnmp>>false</log:isSnmp>
    </log:createNotificationPolicy>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createNotificationPolicyResponse xmlns:ns2="http://
www.approuter.com/schemas/2008/1/lognotif" xmlns:ns3="http://
www.approuter.com/schemas/2008/1/lognotif/types">
      <ns2:policyId>688128</ns2:policyId>
    </ns2:createNotificationPolicyResponse>
  </S:Body>
</S:Envelope>
```

deleteNotificationPolicy

Deletes a notification policy.

Applies to Clouds and Integration Appliances.

Parameter:

policyId

The specified ID for the notification policy to be deleted.

Returns:

Success or failure.

Examples:

The following is a SOAP request to delete the notification policy with the specified ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>

getEmailEndpoint

Gets the email endpoint for notifications based on the session ID.

Applies to Integration Appliances only.

Returns:

The email endpoint.

Examples:

The following example is a SOAP request to get an email endpoint.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00140.html>

getLogCount

Gets the number of logs for the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

logComponent

The specified component for which logs are generated.

logLevel

The level of logging to be done for the specified component.

maxDaysOld

The maximum number of days to go back to get logs. Use 1 for no maximum.

status

The specified status of logs to be included in the count. The default values are:

- All
- Resolved
- Unresolved

Returns:

The number of logs that match the specified parameters.

Examples:

The following example is a SOAP request to get a log count.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getLogCount>
      <log:logComponent>orchestration</log:logComponent>
      <log:logLevel>error</log:logLevel>
      <log:maxDaysOld>3</log:maxDaysOld>
      <log:status>all</log:status>
    </log:getLogCount>
```

```
</soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getLogCountResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
lognotif/types">
      <ns2:logCount>8</ns2:logCount>
    </ns2:getLogCountResponse>
  </S:Body>
</S:Envelope>
```

getLogLevel

Gets the log level for the specified log component.

The default log levels are:

- All. (Note: The actual level of logs retrieved for the All level is determined by the logging level set in the WMC. For more information, see "Specify System Log Settings" in the WMC).
- Fatal
- Severe
- Warning
- Info

Applies to Clouds and Integration Appliances.

Parameter

logComponent
The specified component for which logs are generated.

Returns:
The log level for the specified component.

Examples

The following example is a SOAP request to get the log level for orchestrations.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>AD2E025868AC1392A44E6E27E4594EF9</log:sessionId>
```

```

</soapenv:Header>
<soapenv:Body>
  <log:getLogLevel>
    <log:logComponent>orchestration</log:logComponent>
  </log:getLogLevel>
</soapenv:Body>
</soapenv:Envelope>

```

The following is the SOAP reply to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:getLogLevelResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/lognotif/types" xmlns:ns3="http://www.approuter.com/
schemas/2008/1/lognotif">
      <ns3:logLevel>warning</ns3:logLevel>
    </ns3:getLogLevelResponse>
  </S:Body>
</S:Envelope>

```

searchLogs

Gets the logs for the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

logComponent

The specified component for which logs are generated. **logComponent** is one of:

- hardware
- resources
- network
- security
- orchestration
- deployment
- all

logLevel

The level of logging to be done for the specified component. **logLevel** is one of:

- critical
- error
- warning
- info
- all

maxDaysOld

The maximum number of days to go back to get logs. Use -1 for no maximum.

status

The specified status of logs to be included in the search. **status** is one of:

- resolved
- unresolved
- all

page

Uses 0-based page numbering. Log pagination starts with zero. Maximum size of page should be documented as 2,147,483,647.

pageSize

Specifies the size of the log pages that are returned. Maximum size of pageSize should be documented as 2,147,483,647.

Returns:

The logs that match the specified parameters.

Examples:

The following example is a SOAP request to search the logs for logs that match the specified parameters.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>AD2E025868AC1392A44E6E27E4594EF9</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:searchLogs>
      <log:logComponent>orchestration</log:logComponent>
      <log:logLevel>error</log:logLevel>
      <log:maxDaysOld>6</log:maxDaysOld>
      <log:status>all</log:status>
      <log:page>1</log:page>
      <log:pageSize>5</log:pageSize>
    </log:searchLogs>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">

setEmailEndpoint

Sets the email endpoint for notifications.

Applies to Integration Appliances only.

Parameter:

emailEndpoint
The email endpoint.

Returns:
Success or failure.

Examples:

The following example is a SOAP request to set an email endpoint.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/
envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif"
xmlns:typ="http://www.approuter.com/schemas/2008/1/lognotif/types">

```

```

<soapenv:Header>
  <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
</soapenv:Header>
<soapenv:Body>
  <log:setEmailEndpoint>
    <log:emailEndpoint>
      <typ:active>true</typ:active>
      <typ:credentials>
        <typ:password>test</typ:password>
        <typ:user>test</typ:user>
      </typ:credentials>
      <typ:host>hq-exch-01</typ:host>
      <typ:port>123</typ:port>
      <typ:sender>user@mydomain.com</typ:sender>
      <typ:subject>Notification</typ:subject>
    </log:emailEndpoint>
  </log:setEmailEndpoint>
</soapenv:Body>
</soapenv:Envelope>

```

The following is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setEmailEndpointResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
lognotif/types">
      <ns2:success>true</ns2:success>
    </ns2:setEmailEndpointResponse>
  </S:Body>
</S:Envelope>

```

System

Information about the system WSDL.

The system WSDL applies to Integration Appliances only. Using system WSDL you can set or get an appliance name or network configuration. You can also run system commands or get system information.

This section contains the following topics:

- [downloadPostmortem](#)
- [executeCommand](#)
- [getApplianceName](#)
- [getNetworkConfiguration](#)
- [getResourceUtilizationData](#)
- [setApplianceName](#)
- [setNetworkConfiguration](#)

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00148.html>

downloadPostmortem

Downloads the postmortem file.

Use the information in this file to resolve Integration Appliance issues.

Applies to Integration Appliances only.

Returns:

The postmortem file.

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00149.html>

executeCommand

Runs the specified system command.

Applies to Integration Appliances only.

Parameter:

command
The specified system command to run.

Returns:

Success or failure.

Enums:

The system commands are defined as enumerated constants.

The following table lists the system commands.

Command	Description
removeJobHistory	Removes job histories from the Integration Appliance.
removeProjects	Removes projects from the Integration Appliance.
removeRunningJobs	Stops and removes running jobs from the Integration Appliance.
generatePostmortem	Generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores. Use this information to debug Integration Appliance issues. Run this command before rebooting the Integration Appliance.
restart	Restarts the Integration Appliance routing subsystem.
reboot	Shuts down all routing services and then reboots the Integration Appliance.

getApplianceName

Gets the appliance name.

Applies to Integration Appliances only.

Returns:

The appliance name.

Examples:

The following code is an example of a SOAP request to get the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getApplianceName/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:getApplianceNameResponse xmlns:ns2="http://www.approuter.com/
schemas/router/1000/NetConfig02.xsd" xmlns:ns3="http://www.approuter.com/
schemas/2008/1/system" xmlns:ns4="http://www.approuter.com/schemas/2008/1/
util/types">
      <ns3:applianceName>TheIntegrator</ns3:applianceName>
    </ns3:getApplianceNameResponse>
  </S:Body>
</S:Envelope>
```

getNetworkConfiguration

Returns the status of the current network configuration.

Applies to Integration Appliances only.

Returns:

The network status.

Examples:

The following code is an example of a SOAP request to get the network configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>

getResourceUtilizationData

Gets the resource utilization data for the given appliance.

Applies to Integration Appliances only.

Returns:

Appliance resource utilization data.

Examples:

The following code is an example of a SOAP request to get the Integration Appliance resource utilization data.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>9705D42CDA8D28BA04CEBAB3D9C44B5A</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getResourceUtilizationData/>
  </soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getResourceUtilizationDataResponse xmlns:ns4="http://www.approuter.com/

setApplianceName

Sets the appliance name.

Applies to Integration Appliances only.

Parameter:

applianceName
The specified name for the appliance.

Returns:
Success or failure.

Examples:

The following code is an example of a SOAP request to the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00155.html>

isStagingDatabaseStarted

Returns whether the staging database is started (True or False).

Applies to Integration Appliances only.

Returns:

True if the staging database is started.

Examples:

The following code is an example of a SOAP request to check if the staging database is started.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">
  <soapenv:Header>
    <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <stag:isStagingDatabaseStarted/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <isStagingDatabaseStartedResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
      <isStarted>true</isStarted>
    </isStagingDatabaseStartedResponse>
  </S:Body>
</S:Envelope>
```

startStagingDatabase

Starts the staging database. Returns success if the database starts or failure if the database fails to start.

Applies to Integration Appliances only.

Returns:

Success or failure.

Examples:

The following code is an example of a SOAP request to start the staging database.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">
  <soapenv:Header>
    <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <stag:startStagingDatabase/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <startStagingDatabaseResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
      <success>true</success>
    </startStagingDatabaseResponse>
  </S:Body>
</S:Envelope>
```

stopStagingDatabase

Stops the staging database. Returns success if the database stops or failure if the database fails to stop.

Applies to Integration Appliances only.

Returns:

Success or failure.

Examples:

The following code is an example of a SOAP request to stop the staging database.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">
  <soapenv:Header>
    <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <stag:stopStagingDatabase/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <stopStagingDatabaseResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
      <success>true</success>
    </stopStagingDatabaseResponse>
  </S:Body>
</S:Envelope>
```

Introduction

The IBM® Cast Iron® Connector Development Kit (CDK) Developer's Guide is for developers who want to use the Cast Iron Studio (Studio) development platform to develop and deploy plug-in connectors that extract data from application systems or other data sources..

Connectors enhance the core functionality of Studio by exposing the API of an external application to the Cast Iron development platform. API's extend the scripting engine with new libraries and object types and publishes notification events from the external system to a Cast Iron physical or virtual integration appliance. Cast Iron appliances support connecting to endpoints of many types including FTP, SFTP, HTTP, HTTPS, Email (SMTP, POP), SAP, MQ, Web Services and many commercial database systems.

Each connector has an associated XML descriptor file that allows the connector to be used in Studio at design time. XML schema definition (XSD) files define the elements and attributes of the XML file.

The Cast Iron development platform features a CDK Connector Wizard that guides you through the development process. Studio provides an intuitive drag-and-drop interface that can dramatically shorten your development time.

This guide provides an overview of connectors, introduces the Cast Iron development platform components and supplies the step-by-step procedures you require to develop and deploy your own connectors.

Prerequisites

Much of the work involved in developing a connector takes place inside Studio, meaning that you should have a working knowledge of Studio and the Cast Iron products. You should also be familiar with the following languages and file formats:

- Extensible Markup Language (XML)
- Web Services Description Language (WSDL)
- Extensible Stylesheet Language Transformations (XSLT)

Note: For many activities, Studio supports a "discovery" process to determine the structure of parameters sent to, or received from an endpoint. If your input activity will be discovered at design time, you must utilize an abstract WSDL or schema element type. Declaring an element as abstract requires the use of a substitution group. If an abstract version is not available, you must modify your WSDL file or schema. Your abstract file is then substituted for the actual data type at design time. For more information on abstract files, see [Using the Add Activities window](#).

Design considerations

The recent explosive growth of application-oriented software delivered as a service over the Web makes implementing effective guidelines for your project critically important. Careful planning of design activities can help ensure the success of your project.

Before you start your development, carefully consider the following guidelines:

- Task and user analysis - Consider what tasks you want to your end-users to perform before you start your project. Using the elements supplied by your schema files and the configuration properties of your XML file, you can control the level of access your users have to Studio and its functions. For example, by defining an endpoint for your users, you can limit or increase the number of activities they can add to their orchestrations. It's also important to understand *how* your end-users perform their tasks. Providing them with information in the order they are likely to require it will help your project integrate smoothly and will result in a unified user experience.
- Naming conventions - Sometimes, when working on a project with tight deadlines, it's tempting to label the components of an application hurriedly. For example, when designing your endpoint panel, you may be inclined to define a 'type' field quickly so that you can move on to more important functional tasks. However, the benefits of intuitive naming practices are often not evident until later, when users are confronted with arbitrary and confusing naming schemes. Remember, once deployed, your connector will be used again and again, so be sure to utilize logical, consistent and intuitive naming conventions.

Before you begin

Before you begin your project, collect the following information. Having it accessible will make your development process go more smoothly:

- Connection fields - Be prepared to specify the connection field details you'll need to connect to your endpoints, such as name and type.
- Input activities - Determine which of your input activities will be discovered dynamically at design time and which will be static.
- Input and output data types - Be prepared to indicate which input and output data types will be supported by each of your activities.

How this guide is organized

This document is designed to get you started on your development project with a minimum of delay. Chapter One introduces the CDK Connector Wizard and provides the procedures you need to get your project underway. However, if you prefer to familiarize yourself with the CDK development platform before starting your development, take a few minutes to review the information in Chapter Four [CDK Components](#) before you begin.

This guide is organized into the following sections.

- [Getting started with the CDK Connector Wizard](#)

Introduces the CDK Connector Wizard and provides step-by-step instructions for building your connector.

- [Test and debug](#)

Provides procedures for testing and debugging your connector.

- [Exporting and importing a connector project](#)

Provides information on how to export or import connector projects.

- [Cast Iron CDK components](#)

Provides an overview of the Studio development platform and introduces the CDK components.

- [FAQ](#)

Provides some answers to frequently asked questions.

- [Getting help](#)

Provides information on IBM resources and tells you how to get help.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015

Getting started with the CDK Connector Wizard

The CDK Connector Wizard guides you through the development process by presenting you with a series of three windows into which you enter basic details about your connector. The Wizard then generates orchestrations that you can test, certify and deploy to Studio.

Procedure

1. Start Studio.
2. Select **File** -> **New Connector Project**.

Results

The Wizard opens in the Studio workspace and the Connector Information window is displayed.

What to do next

In the next phase, you work with the Connector Information window to add basic information about your connector.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_wizard.html

Connector Information window

During this phase, you add general information about your connector, such as name, version and description into the Connector Information window and add the WSDL or schema file that is used for your connector activity.

About this task

The Connector Information window is where you enter basic details about your connector project. The Connector Information window looks like:
Figure 1. Connector Information window

Procedure

1. In the Name text field, enter a name for your connector.
 Note: Due to the practical restrictions of NCName, characters in the Name text field cannot contain symbol characters such as ;, @, \$, %, &, /, +, ,, ;, whitespace characters or different parenthesis. Additionally, characters in the Name text field cannot begin with a number, dot or minus character although they can appear later in an NCName.
2. In the Description text field, enter a description for your connector.
3. In the Version text field, enter a version number for your connector.
4. To add a WSDL or a schema file, click on the **Browse** button and navigate to the file you want. The selected file displays in the Add WSDL/Schema Files field.
 Note: If your input activity will be discovered dynamically at design time, you must provide a WSDL or schema containing an abstract type for this step. For information on abstract files, see [Using the Add Activities window](#).
5. Click **Next**.

Results

The Add Connection Fields window is displayed.

What to do next

In the next phase, you work with the Add Connection Fields window to specify endpoint connection properties.

Feedback | Notices

Last updated: Wednesday, December 16, 2015
 file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_connectinfowindow.html

Using the Add Connection Fields window

The Add Connection Fields window is where you specify the endpoint connection parameters that are exposed to your users. Your users will use these values to connect to their endpoints.

About this task

During this design phase, you add the connection fields and corresponding details needed to connect to endpoints. The Add Connection Fields window looks like:

Figure 1. Add Connection Fields window

The screenshot shows the 'Add Connection Fields' window. At the top, it says 'Provide the Endpoint Connection Fields - These fields are used to connect to the endpoint'. Below this is a table with two columns: 'Connection Field Name' and 'Connection Field Default Value'. The first row contains 'UserName' and the second row contains 'Password'. To the right of the table are buttons for adding (+), deleting (X), and navigating (up/down arrows). A callout box points to the table with the text 'Double-click table cell to edit the Connection Field Name. Press ENTER to complete editing.' Another callout box points to the table with the text 'Double-click table cell to edit the Connection Field Default Value. Press ENTER to complete editing.' A third callout box points to the table with the text 'Provide details for the fields selected in the table shown above.' To the right of the table is a callout box with the text 'Add/Delete endpoint connection fields.' Below the table is the 'Endpoint Connection Fields Details' panel. It has a 'Name' field with 'UserName' entered, a 'Format' dropdown menu with 'STRING' selected, a 'Type' dropdown menu with 'STRING' selected, and a 'Field Constraints' section with an unchecked 'Enable Constraints' checkbox. Below the constraints are four spinners: 'ValueMinLength' (0), 'FieldMinRange' (0), 'ValueMaxLength' (250), and 'FieldMaxRange' (250).

Procedure

1. Click the **plus icon (+)**. A blank connection field is displayed in the Add Endpoint Connection Fields panel.
2. In the Add Endpoint Connection Fields panel, enter the field type, for example: Password, to specify the password associated with a username. To begin editing, double click on a row in the Connection Field Name cell to activate it, then enter your information. When you are done, press **Enter**. The field type information is displayed in the Name field.
3. In the Endpoint Connection Fields Details panel, click on the **Type** and **Format** drop-down menus and select the categories that correspond to the information you entered in the Add Endpoint Connection Fields panel. In the Add Endpoint Connection Fields panel, enter the field type, for example: Password, to specify the password associated with a username.
4. Repeat these steps to add additional connection fields. After you have added the additional fields, click **Next**.

Results

The Add Activities window is displayed.

What to do next

In the next phase, you work with the Add Activities window to define your connector activities.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_addconnectfieldswindow.html

Using the Add Activities window

The Add Activities window is where you create and define your connector activities and enter input and output data information.

About this task

During this phase, you specify if your input data will be discovered statically or dynamically at design time. For example, if your data will be discovered at design time, a **Create** activity can be used to create different object types such as Account, Contact or User. The input to the **Create** activity will vary depending on which object you want to create. In this situation, **Create** is considered to be a *browseable* activity, where input differs depending on the object you want to generate.

Note: If you want your input activity to be discoverable at design time, you must provide an abstract WSDL or schema type. An abstract WSDL or schema type describes web services in implementation-neutral terms, as opposed to a concrete WSDL or schema type that defines how an endpoint implementing a service is exposed on a network. [Figure 1](#) shows an example of a WSDL with an abstract type definition:

Figure 1. WSDL with abstract definition

```

<DescribeObjectResponse baseType="sObject"

    name="result" used="true">
    <con:field configurable="true" label="AccountNumber"
      maxCount="1" minCount="1" name="AccountNumber" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="Name" maxCount="1"
      minCount="1" name="Name" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="Website" maxCount="1"
      minCount="1" name="Website" used="true">
      <con:type>string</con:type>
    </con:field>

    <con:field configurable="true" label="Id" maxCount="1"
      minCount="1" name="Id" used="true">
      <con:type>boolean</con:type>
    </con:field>
  </responseObject>
</DescribeObjectResponse>

```

Abstract type name and namespace

Derived type name and namespace

Substitute Activity Input node

Derived type name and namespace

The Add Activities window looks like:

Figure 2. Add Activities window

Procedure

1. Click the **plus (+) icon**. A blank text field is displayed in the Add Connector Activities panel.
2. In the Add Connector Activities panel, add the new activity name. To begin editing, double click on a row in the Activity Name cell to activate it, then enter your information. When you are done, press **Enter**.
Note: Due to the practical restrictions of NCName, characters in the Name text field cannot contain symbol characters such as ;, @, \$, %, &, /, +, ,, ;, whitespace characters or different parenthesis. Additionally, characters in the Name text field cannot begin with a number, dot or minus character although they can appear later in an NCName.
3. In the Add Connector Activities panel, select the Starter Activity check box to indicate if the selected activity is a starter activity.
4. In the Dynamic Input/Output Requirement panel, specify if the input parameter, output parameter or both require dynamic discovery. If you want your input activity to be discoverable at design time, you must provide an abstract schema type.
5. If a parameter or parameters require dynamic discovery, in the Select Input/Output Data panel, use the **Select Input** or **Select Output** buttons to select input and/or output data for each activity. **Note:** Do not assign a specific input data type to more than one activity.
Note: Starter Activity only has output types. Therefore, you are allowed to select only the Output Type in the Activity Details section.
6. Repeat these steps for each new activity.
7. When you are done, click **Next**.

Results

The Final Summary window is displayed.

What to do next

View your results in the Final Summary window.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_finalsummary.html

Completing your orchestrations

You complete your orchestrations so you can export them into Studio. In addition to your connector orchestrations, you must also complete orchestrations for the Cast Iron connector interfaces.

About this task

After your development work is complete, perform the following procedure to complete your connector orchestrations. In [Cast Iron connector interfaces](#) you are introduced to the Cast Iron TestConnection, ListObjects and DescribeObjects connector interfaces and provided with procedures for completing orchestrations for each.

In the steps that follow, you complete your connector orchestrations by reading input data from the Web Services Provide Service activity, adding logic and then responding using the Send Reply output activity. The Provide Service activity supplies a web service that can be started from an outside client. During run time, the Send Reply activity returns a response to the client.

Procedure

1. In the Project toolbox tab, select an orchestration, for example CreateObjects. The orchestration is displayed in the Studio workspace.
2. In the orchestration, click on the **Provide Service** activity. The Map Outputs panel is displayed.
3. In the Map Outputs panel, click on **body**. The node type window is displayed showing the input data.
4. Using the information in the node type window, map the body data and use the data to create the object in your endpoint.
5. Select **Orchestration** -> **Validate**.

Note: The orchestration generated for **Starter Activity** has Provide Service and Invoke Service activities. As a part of implementing the **Starter Activity**, fetch the required data and pass the values to the pregenerated Invoke Service Activity, in the end. The Invoke Service activity must be the last activity in the orchestration. Also, populate the optional parameter `location` to the `callbackURL` received as a part of the `ConnectionFields` header of the pregenerated Provide Service Activity.

Results

The Validation Results window is displayed, showing the results of the validation.

What to do next

Complete orchestrations for the Cast Iron TestConnection, ListObjects and DescribeObjects connector interfaces.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completeorchestration.html

Cast Iron connector interfaces

Cast Iron connectors use three standard interfaces that you implement as orchestrations: TestConnection, ListObjects and DescribeObjects.

Orchestration templates for the TestConnection, ListObjects and DescribeObjects interfaces are automatically created by the Wizard during the Add Activities phase. You must complete the orchestrations based on your individual connector requirements. This section introduces the TestConnection, ListObjects and DescribeObjects interfaces. In [Completing the connector interface orchestrations](#), you complete an orchestration for each.

TestConnection

The TestConnection interface reflects the values you added to the Connection Information window and is used by your connector to establish an endpoint connection. After a connection is made, the connection status is returned as a boolean operator.

ListObjects

The ListObjects interface reflects the values you added to the Add Activities window and returns a list of all objects supported by a specific connector activity. For example a Salesforce create operation might support

such objects as Account, Customer, Contact, Opportunity and User, among others. The return list should correspond to a ListObjects Reply Activity schema. Below is an example of a ListObjects response in XML format:

```
<ListObjectsResponse
xmlns="http://www.approuter.com/schemas/cdk/api/">
<objectType
label="Customer"
xmlns="http://www.approuter.com/schemas/cdk/api/">Account</objectType>
<objectType
label="Account Object"
xmlns="http://www.approuter.com/schemas/cdk/api/">Customer</objectType>
<objectType
label="Customer details"
xmlns="http://www.approuter.com/schemas/cdk/api/">Contact</objectType>
<objectType
label="Opportunity details"
xmlns="http://www.approuter.com/schemas/cdk/api/">Opportunity</objectType>
<objectType
label="User details"
xmlns="http://www.approuter.com/schemas/cdk/api/">User</objectType>
</ListObjectsResponse>
```

DescribeObjects

The DescribeObjects interface provides the input and output that enables your users to successfully work with an object exposed through a connector activity. For example if a Salesforce create operation is selected, the input schema is discovered dynamically based on an object selected from ListObjects. Here is an example of a response returned by DescribeObjects:

```
<DescribeObjectResponse baseType="sObject"
baseTypeNS="urn:object.partner.soap.sforce.com"
name="create" typeNS="http://example.com/stockquote"
xmlns="http://www.approuter.com/schemas/cdk/api/"
xmlns:con="http://www.approuter.com/schemas/cdk/config/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
<object label="createInput" maxCount="1" minCount="1" name="createInput"
used="true">
<con:field configurable="true" label="ObjectName" maxCount="1"
minCount="1" name="ObjectName" used="true">
<con:type>string</con:type>
</con:field>
<con:field configurable="true" label="FirstName" maxCount="1"
minCount="1" name="FirstName" used="true">
<con:type>string</con:type>
</con:field>
<con:field configurable="true" label="LastName" maxCount="1"
minCount="1" name="LastName" used="true">
<con:type>string</con:type>
</con:field>
<con:field configurable="true" label="Phone" maxCount="1"
minCount="1" name="Phone" used="true">
<con:type>string</con:type>
</con:field>
</object>
<responseObject label="createOutput" maxCount="1"
minCount="1" name="createOutput" used="true">
<con:field configurable="true" label="Id" maxCount="1"
minCount="1" name="Id" used="true">
<con:type>string</con:type>
</con:field>
<con:field configurable="true" label="ObjectName" maxCount="1"
```

```

        minCount="1" name="ObjectName" used="true">
        <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="Status" maxCount="1"
        minCount="1" name="Status" used="true">
        <con:type>string</con:type>
    </con:field>
</responseObject>
</DescribeObjectResponse>

```

Dynamic schema discovery

The DescribeObjects schema discovery feature lets you dynamically discover a schema at runtime. The schema is imported into your orchestration when any connector activity uses a schema element as input or output. If previously imported schemas need to be discovered using `complexType QName` and substituted dynamically as input or output activities, set the attributes in DescribeObject response as shown in the following schema:

```

< xsd:schema targetNamespace = " urn.sample.stock
" xmlns:xsd = "http://www.w3.org/2001/XMLSchema" >
< xsd:element name = "TradePriceRequest" >
< xsd:complexType >
< xsd:all >
< xsd:element name = "tickerSymbol" type = "xsd:string" />
</ xsd:all >
</ xsd:complexType >
</ xsd:element >
< xsd:complexType name = "ciObject" ></ xsd:complexType >
< xsd:complexType name = " tradingPartner " >
< xsd:sequence >
< xsd:element name = "partnerName" type = "xsd:string" />
</ xsd:sequence >
</ xsd:complexType >

```

For example, to substitute the `complexType tradingPartner` in the preceding schema, set the information to discover the schema and substitute it dynamically as shown in the following example:

```

DescribeObject Response value to
@name -> tradingPartner [complexType name to be discovered]
@typeNS -> url.sample.stock [complexType namespace ]
@baseType -> http://www.approuter.com/schemas/cdk/api/ [CDK default]
@baseType -> cObject [CDK default]

```

Completing the connector interface orchestrations

During this phase, you add business logic to the Cast Iron TestConnection, ListObjects and DescribeObjects orchestrations.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetestlistdescribe.html

Completing the TestConnection orchestration

In the following steps, you map values to object types and invoke orchestration activities to test your endpoint connections.

Procedure

1. In the Studio Project toolbox tab, click on the **TestConnection** orchestration. The orchestration is displayed in the Studio workspace.
2. In the orchestration, add the logic needed to connect to your endpoint, as shown in [Figure 1](#).
3. In the orchestration, click on the **Send Reply** activity. The inputs are displayed in the From Orchestration panel.

Figure 1. TestConnection

4. Map the values displayed in the From Orchestration panel to the object types in the To Activity panel. You are now ready to test the orchestration.
5. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
6. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
7. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button. When the test is completed, the results are displayed in the Verify toolbox tab.
8. If the connection is successful, the test response will show a "true" value. To complete the orchestration, map "true" to the **success** field of the TestConnectionResponse parameter in the To Activity panel.

What to do next

If your connector activity is discoverable at design time, complete the procedures in [Completing the ListObjects orchestration](#). If your connector activity is not discoverable, you can move ahead to [Completing the DescribeObjects orchestration](#).

Completing the ListObjects orchestration

In the steps that follow, you add business logic to your ListObjects orchestration, map values to object types and invoke orchestration activities to test your endpoint connections. Only complete the procedures in this section if your orchestration activity is discoverable at design time.

Procedure

1. In the Studio Project toolbox tab, click on the **ListObjects** orchestration. The orchestration is displayed in the Studio workspace.
2. In the ListObjects orchestration, add your logic as shown in [Figure 1](#). A list of objects supported by the connector for the provided endpoint are displayed in the To Activity panel.

Figure 1. ListObjects

3. In the orchestration, select the **Send Reply** activity. The inputs are displayed in the From Orchestration panel.
4. In the From Orchestration panel, click on an activity. A list of objects supported by the operation is displayed in the To Activity panel.
5. Map the values displayed in the From Orchestration panel to the object types in the To Activity panel under ListObjectsResponse, as shown in [Figure 1](#). You are now ready to test the orchestration.
6. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
7. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
8. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

What to do next

Complete the DescribeObjects orchestration.

Feedback | Notices

Last updated: Wednesday, December 16, 2015

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetest_describe_list.html

Completing the DescribeObjects orchestration

To complete the DescribeObjects orchestration, you map outputs to input data, transform the object metadata to XML format to conform to the `ci-connector-api.xsd` file, then test the orchestration.

Procedure

1. In the Studio Project toolbox tab, click on the **DescribeObjects** orchestration. The orchestration is displayed in the Studio workspace.
2. In the orchestration, click on the **Provide Service** activity. The Map Outputs panel is displayed.
3. In the Map Outputs panel, click on **body**. The node type window is displayed showing the input data.
4. Add logic to the orchestration based on `object` and `operation_name`, as shown in [Figure 1](#) to obtain the object metadata.

Figure 1. DescribeObjects

5. Transform the object metadata to XML format to conform to the `ci-connector-api.xsd` file described in [Cast Iron CDK schema files](#). After the metadata is transformed to XML, your schema looks like this:

```

< DescribeObjectResponse
baseType = "sObject"
baseTypeNS = "urn:object.partner.soap.sforce.com"
name = "create"
typeNS = "http://example.com/stockquote"
xmlns = "http://www.approuter.com/schemas/cdk/api/"
xmlns:con = "http://www.approuter.com/schemas/cdk/config/"
xmlns:xsi = "http://www.w3.org/2001/XMLSchema-instance" >
  < object
    label = "createInput"
    maxCount = "1"
    minCount = "1"
    name = "createInput"
    used = "true" >
      < con:field
        configurable = "true"
        label = "ObjectName"
        maxCount = "1"
        minCount = "1"
        name = "ObjectName"
        used = "true" >
        < con:type > string </ con:type >
      </ con:field >
      < con:field
        configurable = "true"
        label = "FirstName"
        maxCount = "1"
        minCount = "1"
        name = "FirstName"
        used = "true" >
        < con:type > string </ con:type >
      </ con:field >
      < con:field
        configurable = "true"
        label = "LastName"
        maxCount = "1"
        minCount = "1"
        name = "LastName"
        used = "true" >
        < con:type > string </ con:type >
      </ con:field >
      < con:field
        configurable = "true"
        label = "Phone"
        maxCount = "1"
        minCount = "1"
        name = "Phone"
        used = "true" >
        < con:type > string </ con:type >
      </ con:field >
    </ object >
    < responseObject
      label = "createOutput"
      maxCount = "1"
      minCount = "1"
      name = "createOutput"
      used = "true" >
        < con:field
          configurable = "true"
          label = "Id"
          maxCount = "1"
          minCount = "1"
          name = "Id"
          used = "true" >

```

```

< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "ObjectName"
maxCount = "1"
minCount = "1"
name = "ObjectName"
used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "Status"
maxCount = "1"
minCount = "1"
name = "Status"
used = "true" >
< con:type > string </ con:type >
</ con:field >
</ responseObject >
</ DescribeObjectResponse >

```

6. In the DescribeObjects orchestration, select the **Send Reply** activity. The Map Inputs panel is displayed.
7. In the Map Inputs panel, map the generated XML to the DescribeObjectResponse parameter in the To Activity panel. You are now ready to test the orchestration.
8. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
9. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
10. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

What to do next

In the next phase, you learn how to publish your connector project to a local repository.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completingdescribeobjects.html

Publishing to a local repository

During this phase, Studio validates your orchestrations. If validation is successful, you can publish your connector to a repository on your local computer for testing and debugging.

Procedure

1. Select **File -> Publish Connector to Local Repository** or click the **Publish** toolbar icon as shown in [Figure 1](#). Studio validates the orchestrations. If validation is successful, the connector is published to the connector repository at `<user_home>/castiron/connector-repository`. If the validation fails, error messages are displayed. Correct the problems and re-publish.
2. Restart Studio. Your connector activities are displayed in the Studio Activities toolbox tab and are available for use.

Figure 1. Publish connector to a local repository

After the conclusion of your development work, your connector and connector activities are displayed in the Studio Activities toolbox tab, as shown in [Figure 2](#).

Figure 2. Connector and connector activities displayed in Studio Activities toolbox tab.

Note: Do not attempt to deploy a connector project directly to an appliance, as this will result in an error. For best results, only deploy connector projects that are displayed as endpoints inside Studio.

What to do next

In the next section, you perform runtime validation and test your endpoints.

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

Test and debug

Studio provides several facilities to test your connector components. During the test and debug phase, you perform runtime validations that test your connector and diagnose configuration or data errors. All outbound endpoints should be tested.

When you test your connector, the Studio build process checks that your XML file is well-formed and validates it against your schema files. It then generates outbound mappings, creates and sends an outbound message, receives a response and executes the inbound mappings. The CDK performs two types of tests:

- Unit testing
- Integration testing

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_testdebug1.html

Unit testing your connector components

Unit testing is key to the success of any development project and is basically a pass/fail test that verifies that components of your connector perform as expected.

About this task

During this phase, you perform a unit test that simulates the communication between a client and a web service that is exposed as a Web Service Provide activity.

Procedure

1. In the Projects toolbox tab, select an orchestration. The orchestration is displayed in the Studio workspace.
2. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
3. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed, as shown in [Figure 1](#).
4. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

Figure 1. Invoke Service window

Note: Be cautious when using the Reset button. It erases the existing content in the Invoke Service window and repopulates it with web service template information. Only click Reset when you want to start over with unit testing.

Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

What to do next

Perform integration testing to determine if your connector components are performing properly.

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_unittest.html

Integration testing your connector services and activities

During integration testing, you validate that your connector services, messages and interfaces are performing properly.

Procedure

1. In the Projects toolbox tab, select an orchestration. The orchestration is displayed in the Studio workspace.
2. In the Activities toolbox tab, select an activity and drag and drop it into your orchestration.
3. In the Studio workspace, click on the activity. The activity is highlighted.
4. In the Checklist panel, click **Pick Endpoint**. The Pick Endpoint panel is displayed.
5. In the Pick Endpoint panel, click **New**. The Create Endpoint panel is displayed.
6. In the Create Endpoint panel, enter the connection information and click **TestConnection**.
7. If the connection is successful, click **OK**.
8. In the Checklist panel, click **Configure**. The Configure panel is displayed.
9. Optional: In the Configure panel, click **Browse** to search for browseable activity. (This step is not necessary for non-browseable activity). The ListObject dialog window is displayed.
10. In the ListObjects dialog window, select a schema to become the input for the selected activity.
11. Complete the input and output mapping.
12. Test the orchestration. If you wish to view the processor activity, check the **Show CDK Connector Activity Logs** option in the Studio Preferences window, as shown in [Figure 1](#).

Figure 1. Preferences window

Results

Processor activity and final test results are displayed in the Studio Verify toolbox tab.

What to do next

In the next section, you learn how to export and import connector projects.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_integrationtest.html

Exporting and importing a connector project

Once you have created and tested your connector, you can export it to an external location so it can be used by others. You can also import a connector archive file into Studio.

You export and import connector projects using the Studio menus or by clicking on the Export or Import toolbar icons.

Note: Do not attempt to deploy a connector project directly to an appliance, as this will result in an error. For best results, only deploy connector projects that are displayed as endpoints inside Studio.

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_exporting_importing.html

Exporting your connector project

When you export your completed connector from Studio to an external location, it can be loaded and used by others. Exported connectors are packaged as standard .zip files.

About this task

You use Studio menu options or the toolbar to export your connector. If you don't specify a directory, your exported connector project is placed in a subdirectory of your project directory. If you choose to export to an archive file, the project is packaged in a .zip archive beneath your project directory.

Procedure

1. Select **File** -> **Export Connector** or click on the **Export Connector** toolbar icon. The File dialog window is displayed showing a list of available connectors.
2. In the File dialog window, select your connector and click **OK**. The Save dialog window is displayed.
3. In the Save dialog window, browse for a location to export your project, then click **Save**.

Results

Your connector is exported as a standard .zip archive.

What to do next

In the next section, you learn how to import a connector project.

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_exportyourconnectorproject.html

Importing a connector project

You can use Studio to import a connector project that has been developed as a standard compressed file archive.

About this task

You use Studio menu options or the toolbar to import a connector into Studio.

Procedure

1. Select **File** -> **Import Connector** or click on the **Import Connector** toolbar icon. The File dialog window is displayed.
2. In the File dialog window, select a connector and click **OK**.

Results

The connector is imported into Studio as a .zip archive.

What to do next

In the next section, an overview of the CDK components is presented.

Cast Iron CDK components

The Connector Developer Kit contains four major components which work together to comprise the CDK development platform.

Figure 1 shows the components and illustrates their relationship to Studio:

Figure 1. CDK components

Cast Iron CDK schema files

XML schema files provide the syntax and define how elements and attributes are represented in XML files. You import the Cast Iron CDK schema files into your Studio development environment, then create your endpoints and connections by dragging schema elements from the **Project** toolbox tab into your orchestration.

The CDK schema files are:

ci-connector-config.xsd - This file is used by Studio and the deployment engine to define the basic configuration options available to your connector. Plug-in metadata is stored as elements in your XML file and once configured, the endpoint properties define what your end-users see and the activities they are exposed to. Here is the `ci-connector-config.xsd` file:

```
<xs:schema

Cast Iron CDK XML file

Your XML file defines what activities your plug-in performs. Every activity in your XML file must be mapped to an operation defined in the WSDL file.

XML has emerged as the universal language for representing and transmitting structured data that is independent of programming language, software platform, and hardware. For your development project, you can use any text editor or a XML-compliant authoring tool to create your XML file. Your file must conform to the rules of your schema files or your plug-in will fail.

Cast Iron CDK WSDL file

A WSDL file is an XML-format file that defines network services as a set of endpoints. WSDL files describe how to access a web service and specify what operations that service performs. WSDL's are usually developed by a web service provider and may be made available through a UDDI (Universal Description, Discovery and Integration) registry.

At the outset of your project, you must import a WS-I (Web Service Interoperability)-compliant WSDL file into your development platform so your development environment can generate the objects needed to build client web service applications. Web service API's provide a set of objects or WSDL-type definitions and a set Web service operations.

Cast Iron CDK .par file

Your plug-in is packaged as a .par file. Your .par is a standard .zip file that you rename and import into Studio.

The .par file contains your plug-in. It is exported from your Studio project and is where you implement the interface operations that enable you to identify and inventory objects contained in your plug-in. When your .par is delivered, it automatically expands into a directory for your plug-in.

FAQ

Below are some frequently asked questions that can help solve problems that may arise during your development process.

Q. How do I determine if my input activity is discoverable at design time?

- **A.** If input to the activity varies based on object type, you should select discoverable and use an abstract WDSL or schema element type for input.

Q. My schema or WSDL does not contain an abstract element type. How do I add that to my file?

- **A.** WSDL's and schema's provide a mechanism to force substitution for a particular element or type. To add an abstract element to your file, add the following `complexType` element to your WSDL or schema:
`complexType name="MyObject."` Be sure you define it in the same namespace as your input types.

Q. Can I modify an existing connector?

- **A.** As long as the connector was built using the CDK Connector Wizard, you can update it by simply launching the Wizard and adding new activities to it or by revising existing activities.

Q. I have existing project. Can I run the Wizard on top of it and use the orchestrations to expose the connector activities?

- **A.** Yes. You can run the Wizard on top of existing projects, but be sure your activity names do not conflict with existing orchestration names.

Q. My connector is not displayed in Studio. Why?

- **A.** Many errors can be corrected by simply checking for errors. Check the log file under `Studio_Install_dir` for failures.

This section tells you how to get information on IBM and its products and how to reach sales and technical support personnel.

You can access the IBM Corporation web site at: <http://www.ibm.com>.

The site contains information about the IBM Corporation, its background, and products. The site also provides contact information for sales and technical support.

Before contacting IBM Support, verify that you have met the following criteria:

- Your company has an active maintenance contract.
- You are authorized to submit problems.
- You have the appliance serial number.
- You have the customer number that was used to purchase the appliance.

You can submit a software problem report to IBM in one of two ways:

1. Use the service request (SR) problem submission web page. You will need to sign in with your IBM user ID and password.
2. Contact IBM via telephone. Refer to this directory of worldwide contacts in the IBM Software Support Handbook for the appropriate software support phone number.
