Absolute Value function

The **Absolute Value** function determines the absolute value of the parameter.

Parameter: number

The number for which an absolute value is determined. This can be a source node, the result of another function, or a value you specify.

Returns: number

The absolute value of the parameter.

Example:

10 is the result for both 10 and -10.

Add function

The **Add** function adds all the parameters.

Parameter: number1, [number2 - 1000]

Each parameter can be a source node, the result of another function, or a value you specify. At least one parameter is required.

Returns: number

The sum of all parameters.

Parent topic: [Mapping Function Reference](#)

AES Decrypt function

The **AES Decrypt** function decrypts fields and content using the Advanced Encryption Standard (AES) algorithm with 128 bit strength. 128-bit encryption level requires an 8-byte key, which must be a 32-character hexadecimal string.

Parameter: data, key

Data that is passed as the encrypted content is decrypted to the original content using the AES key.

Returns: string

The decrypted content is returned and stored as a string.

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

Align Center function

The **Align Center** function centers a string within a padding string. If the padding for both sides is uneven, the lesser amount of padding is placed on the left.

Parameter: string1

The string to be aligned. This can come from a source node, the result of another function, or a value you specify.

Parameter: string2

A padding string. This string must be long enough to create a result and must contain the character or characters to use for padding. This can come from a source node, the result of another function, or a value that you specify. You can use the [Padding String](#) function to produce a padding string.

Returns: string

The padded and centered string.

Example:

```
align-center('widgets', '-----') = '-widgets--'
```

Align Left function

The **Align Left** function places a string within a padding string starting from the left-most character.

Parameter: string1

The string to be aligned. This can come from a source node, the result of another function, or a value you specify.

Parameter: string2

A padding string. This string must be long enough to create a result and must contain the character or characters to use for padding. This can come from a source node, the result of another function, or a value that you specify. You can use the [Padding String](#) function to produce a padding string.

Returns: string

The padded and left-aligned string.

```
Example: align-left('widgets', '-----') = 'widgets---'
```

Example:

```
align-center('widgets', '-----') = '-widgets--'
```

Average function

The **Average** function determines the average value for the sets of numeric nodes in all parameters.

If you use literal numbers or the results of other functions as parameters to this function, the numbers are added to the total. They are also counted as nodes to determine the average.

Parameter: input, input...

The numeric nodes to calculate an average from. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information, see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#). Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you may get an unexpected result. For more information, see [Limitations in Combining Other Math Functions or Literals](#).

Returns: number

The average value of all parameters. This returns NaN (not a number) in the following cases:

- If any parameters are not numeric nodes.
- If both the sum of all values and the count of node sets are zero (the average of 0 / 0).

Base64 Encode and Decode functions

Base64 refers to a specific MIME content transfer encoding. Base64 encoding represents arbitrary sequences of octets in a form that requires case sensitivity but need not be humanly readable.

A 65-character subset of US-ASCII is used, enabling 6 bits to be represented per printable character. The 65th character, "=", is used to signify a special processing function.

The encoding process represents 24-bit groups of input bits as output strings of 4 encoded characters. Proceeding from left to right, a 24-bit input group is formed by concatenating 3 8-bit input groups. These 24 bits are then treated as 4 concatenated 6-bit groups, each of which is translated into a single digit in the base 64 alphabet.

Each 6-bit group is used as an index into an array of 64 printable characters. The character referenced by the index is placed in the output string.

Base64 Alphabet

Value	Encoding	Value	Encoding	Value	Encoding	Value	Encoding
0	A	17	R	34	i	51	z
1	B	18	S	35	j	52	0
2	C	19	T	36	k	53	1
3	D	20	U	37	l	54	2
4	E	21	V	38	m	55	3
5	F	22	W	39	n	56	4
6	G	23	X	40	o	57	5
7	H	24	Y	41	p	58	6
8	I	25	Z	42	q	59	7
9	J	26	a	43	r	60	8
10	K	27	b	44	s	61	9
11	L	28	c	45	t	62	+

12 M	29 d	46 u	63 /
13 N	30 e	47 v	
14 O	31 f	48 w	(pad) =
15 P	32 g	49 x	
16 Q	33 h	50 y	

Special processing is performed if fewer than 24 bits are available at the end of the data being encoded. A full encoding quantum is always completed at the end of a quantity. When fewer than 24 input bits are available in an input group, zero bits are added (on the right) to form an integral number of 6-bit groups. Padding at the end of the data is performed using the '=' character. Since all base 64 input is an integral number of octets, only the following cases can arise:

- The final quantum of encoding input is an integral multiple of 24 bits; here, the final unit of encoded output will be an integral multiple of 4 characters with no "=" padding,
- The final quantum of encoding input is exactly 8 bits; here, the final unit of encoded output will be two characters followed by two "=" padding characters.
- The final quantum of encoding input is exactly 16 bits; here, the final unit of encoded output will be three characters followed by one "=" padding character.

Boolean function

The **Boolean** function evaluates the parameter and returns either 'true' or 'false' depending on the datatype of the input:

- string – *true* unless the string is empty
- number – *true* if the number is not zero, *false* if the number is zero

Parameter: anysimpletype

The value to be evaluated. This can come from a source node, the result of another function, or a value that you specify.

Returns: boolean

Either *true* or *false*.

Ceiling function

The **Ceiling** function rounds the parameter up to the next closest integer.

Parameter: number

The number to round up to an integer. This can come from a source node, the result of another function, or a value that you specify.

Returns: number

The closest integer that is greater than the parameter.

Example:

```
ceiling(4.2) = 5
```

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Ceiling.html

Concatenate function

The **Concatenate** function joins all parameter strings into a single result in the order you specify the parameters.

Parameters: string1, string2, [string3-string1000]

Each parameter can be a source node, the result of another function, or a value that you specify. The order of the parameters determines the order in which the parameters are joined (that is, the first parameter displays as left-most in the resulting string).

Note: You must specify at least two parameters in order for the function to be valid. While configuring the properties of the **Concatenate** function in the Function Properties dialog box, you cannot click Delete for the top two parameters in the list. (The Delete button is not active for the top two parameters.) You can only click Delete, if there are more than two parameters in the list and only for the parameters at the bottom of the list. To delete a parameter from the top two positions of the list, first move the parameter down the list clicking Down and then click Delete.

Returns: string

The joined strings.

Cast From Base64Binary function

The **Cast From Base64Binary** function casts from one specific XML Schema data type to another XML Schema data type.

About this task

Casts from the XML Schema data type: `xs:base64Binary` to the XML Schema data type: `xs:string`. The data is not converted, only the type associated with the data is changed.

Parameter: `base64Binary`

The data to cast from the XML Schema data type: `xs:base64Binary`.

Returns: `string`

The data that has been cast to the XML Schema data type `xs:string`.

CopyOf function

The **CopyOf** function copies the entire contents of the source node to the destination node.

The **CopyOf** function () copies the entire contents of the source node (the entire subtree of the source node including all children) to the destination node.

Attention: The XML Schema of the destination node must match the XML Schema of the source node for the CopyOf function to correctly copy the values of the source nodes to the destination nodes.

For example, if the Call Procedure activity returns the following result set nodes (through the any node) during run time:

- results/result/resultSet/column1, where column1 is an integer.
- results/result/resultSet/column2, where column2 is an integer.

The XML Schema of the destination nodes in the To Orchestration pane, must match the expected XML Schema of the result set that is returned from the Call Procedure activity, as shown in the following figure:

In the preceding figure, the CopyOf function () is linking the source result node and the destination result node.

Parameter: input

The name of the source nodes to copy.

Returns: anySimpleType

The resulting subtree of XML data.

Parent topic: [Mapping Function Reference](#)

Count Function

The **Count** function determines the number of nodes in all of the sets of nodes in parameters.

For recurring nodes, this function determines the actual number of occurrences.

This function accepts any source node as a parameter. This includes structure or choice nodes which you normally cannot map.

If you use literal numbers as parameters in this function, the numbers are considered one node and incremented by a count of one.

Parameter: input, input...

The sets of nodes to count. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. For more information see [Limitations in Combining Other Math Functions or Literals](#).

Returns: number

The total number of nodes in the parameters.

Parent topic: [Mapping Function Reference](#)

Decode Configuration Property of Type Password

The **Decode Configuration Property** of type Password decodes base64-encoded passwords between two orchestrations.

The calling orchestration sends a user ID and a password. The decode password configuration property ensures that the receiving orchestration receives a base64-encoded password which it can decode.

Parent topic: [Mapping Function Reference](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Decode_Password_Configuration_Property.html

Digest/Hash function

The **Digest/Hash** function produces a digital summary of information called a message digest. Message digests provide a digital identifier for a digital document. The message digest produced by the Digest/Hash function is Base64 encoded.

Message digest functions are mathematical functions that process information to produce a message digest for each unique document. Identical documents have the same message digest, which can be used to ensure that the message received is the same as the message sent.

There are three **Digest/Hash** functions in Studio:

- **Digest/Hash the Input Data with MD5**
- **Digest/Hash the Input Data with SHA-1**
- **Digest/Hash the Input Data with SHA-256**

The input is the document or string for which you want a digest. For example, MD5 ("Austin was happy that the band played on") =NjJhODJhNTViZmI3Y2YwZDc2NDkxYjc0ZTkzZDlmMTQ=

MD5 is defined in RFC 1321. IBM® Cast Iron® uses the MD5 algorithm included in the JDK security package. The algorithm takes a message of undefined length and outputs a message digest of 128 bits.

SHA-1 is defined by the Federal Information Processing Standards Publication 180-1 (FIPS PUB 180-1). IBM Cast Iron uses the SHA-1 algorithm included in the JDK security package. SHA-1 takes an input message of any length less than 264 bits and produces a message digest of 160-bits.

SHA-256 is a 256-bit hash function and is compliant with the National Institute of Standards SP 800-131a specification. IBM Cast Iron uses the SHA-256 algorithm included in the JDK security package. The input is the document or string for which you want a digest. For example, SHA-56 ("Sample Input") = `bEzV+7Tz6afzJhY0E5u0Zt1+9uBURb/2pgi2PT9Ms/s=`. The hash value is 32 bytes or 256 bits length.

Use **Digest/Hash the Input Data with MD5** function to create a Base64 encoded digest of the input data using MD5.

Use the **Digest/Hash the Input Data with SHA-1** function to create a Base64 encoded digest of the input data using SHA-1.

Use the **Digest/Hash the Input Data with SHA-256** function to create a Base64 encoded digest of the input data using SHA-256.

Divide function

The **Divide** function returns the decimal quotient of the first parameter divided by all subsequent parameters.

Parameter: number1

The number to be divided (dividend). This can be a source node, the result of another function, or a value that you specify.

Parameter: number2, [number3-999]

The numbers to divide by (divisor). These can be source nodes, the results of other functions, or values that you specify. At least one parameter is required.

Returns: number

The result of the division operation. If the divisor is zero (positive or negative), the result is infinity (positive or negative), or NaN (not a number) if the dividend is also zero.

Extract HTTP Header Field function

The **Extract HTTP Header Field** function extracts a string with a specified delimiter. It can be used to further extract strings from HTTP headers.

Input1 – Header string, for example: *text/html; char-set=UTF-8* or *text/*;q=0.3, text/html;q=0.7, text/html;level=1*

Input2 – A string that specifies the name value, for example: *char-set*

Input3 – Specified delimiter, for example: *;* or *,*

Output – The value string. For example: *UTF-8* when *char-set* is extracted from **Content-Type** header.

Floor function

The **Floor** function rounds the parameter down to the next closest integer.

Parameter: number

The number to round down to an integer. This can come from a source node, the result of another function or a value that you specify.

Returns: number

The closest integer that is less than the parameter.

Example:

```
floor(4.7) = 4
```

Format Date String function

The **Format Date String** function converts the XML Schema data type: `xs:dateTime` to a string in the format defined by the second parameter.

Parameter: `dateTime`

The date and time as a XML Schema data type: `xs:dateTime`.

Parameter: string

This string defines the format of the date and time string returned from this function. For example, the format string could be equal to MM/dd/yyyy. For more information about the supported date and time pattern strings see the SimpleDateFormat class in the Sun J2SE 1.4.2 JavaDoc:

<http://www.science.uva.nl/ict/osdocs/java/jdk1.3/docs/api/java/text/SimpleDateFormat.html>.

Pattern Letter	Description	Example1	Example2
G	Era designation	AD	BC
y	Year	2004	2001
M	Month in a year	April	04
w	Week in a year	12	24
W	Week in a month	3	1
D	Day in a year	234	333
d	Day in a month	13	20
F	Day of week in a month	1	3
E	Day in a week	Monday	Friday
a	AM or PM designation	AM	PM
H	Hour in a day - a number between 0 and 23	12	13
k	Hour in a day - a number between 1 and 24	14	23
K	Hour in AM or PM - a number between 0 and 11	0	10
h	Hour in AM or PM - a number between 1 and 12	11	12
m	Minute in an hour	20	50
s	Second in a minute	10	30
S	Milliseconds	224	338
z	Time zone in General time zone designation	PDT	EDT
Z	Time zone in ISO-8601 time zone designation	-03:00	+02:00

Parameter: string (Optional)

This string defines the locale. For example, the English United States locale is defined with the following string: en_US.

The locale string can be defined by any of the following formats:

- LANGUAGE
- LANGUAGE_COUNTRY
- LANGUAGE_COUNTRY_VARIANT

Where LANGUAGE represents a two letter code as defined by the ISO-639 standard, COUNTRY represents a two letter code defined by the ISO-3166, and VARIANT represents a vendor or browser-specific code, for example WIN for Windows.

This parameter is optional.

To add this parameter:

1. Drop the Format Date String function into the middle pane of the Mapping Editor.
2. Double-click the function. The Function Properties pane opens.
3. Click Add. The Locale input parameter shows in the list of parameters.

Returns: string

The passed in date and time as a string in the format defined by the second parameter.

For example, if the Format Date String function was called with the following input parameters:

dateTime: 2005-02-22T16:18:00.852-08:00

format string: MM/dd/yyyy

locale string: en_US

The following string would be returned: 02/22/2005.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Format_Date_String_function.html

Format Number function

The **Format Number** function returns a string that is a number formatted to fit the specified pattern.

Parameter: number

The number to format. This can come from a source node, the result of another function, or a value that you specify.

Parameter: string

A pattern that specifies how the first parameter should be formatted. This pattern uses these symbols to define the pattern:

- Required digits = 0
- Optional digits = #
- Minus symbol = -
- Decimal symbol = .
- Grouping separator = ,. Typically used to separate groups of three digits.
- Percent symbol = %. When the percent symbol is present, the input number is multiplied by 100 and the result is shown as a percentage.
- Per mille symbol = ‰ (Unicode x2030). This symbol multiplies the number by 1000 and shows the result as a per mille.
- Positive/negative separator = ;
- Infinity = infinity
- Not a number = NaN

- \$ = \$

Patterns can have constant text as a prefix, suffix, or both. Common uses are to specify the currency symbol or some unit of measurement.

- \$#,##0.00 – formats a number in the standard format for United States dollars with the dollar sign, commas for separators and at least one dollar digit and two digits for cents.
- #0.000% – formats a decimal number as a percentage with at least three decimal places.
- #,##0.00;(#,##0.00) – formats negative number with parentheses, a format commonly used in accounting.

Returns: string

The first parameter reformatted to reflect the pattern specified by the second parameter.

Examples

Patterns can have constant text as a prefix, suffix, or both. Common uses are to specify the currency symbol or some unit of measurement.

Example 1

\$#,##0.00 – formats a number in the standard format for United States dollars with the dollar sign, commas for separators and at least one dollar digit and two digits for cents.

```
format-number(12345.6789, '$#,##0.00') = '$12,345.67'
```

Example 2

#0.000% – formats a decimal number as a percentage with at least three decimal places.

```
format-number(.67890123, '#0.000%') = '67.890%'
```

When the percent symbol is present, the input number is multiplied by 100.

Example 3

#,##0.00;(#,##0.00) – formats negative number with parentheses, a format commonly used in accounting.

```
format-number(-12345.6789, '#,##0.00;(#,##0.00)') = '(12,345.67)'
```

Generate RFC2104 HMAC Compliant Signature

HMAC is a mechanism for message authentication using cryptographic hash functions.

This HMAC function uses the iterative cryptographic hash function SHA-1 with a secret shared key.

Use this function to generate a digital signature that is compliant with HMAC.

Parameter: data (type=string)

The information or message to be validated.

Parameter: key (type=string)

The key used to validate the data.

Parameter: encoding (type=string)

The encoding to apply to the data and key. This can be one of:

- **US-ASCII** - Seven-bit ASCII. Also called ISO646-US. The Basic Latin block of the Unicode character set.
- **ISO-8859-1** - ISO Latin Alphabet No. 1. Also called ISO-LATIN-1.
- **UTF-8** - Eight-bit UCS Transformation Format.
- **UTF-16BE** - Sixteen-bit UCS Transformation Format, big-endian byte order.
- **UTF-16LE** - Sixteen-bit UCS Transformation Format, little-endian byte order.
- **UTF-16** - Sixteen-bit UCS Transformation Format, byte order identified by an optional byte-order mark.

Returns: HMAC signature (type string)

The generated HMAC signature in UTF-8 encoding.

Get Current Date and Time function

The **Get Current® Date and Time** function returns the current date and time as a specific XML Schema data type.

About this task

The Get Current Date and Time function returns the current date and time (with the local timezone) as an XML Schema data type: xs:dateTime.

Parameter: none

Returns: dateTime

The current date and time as the XML Schema data type: xs:dateTime. For example, if this function is run on February 22, 2005, at 12:43 PM in the PST timezone (- 08:00) this function returns the following dateTime:

```
2005-02-22T12:43:51-08:00
```

Note: If this function is called twice in a map, it is not guaranteed that the same dateTime is returned. This function is not [stable](#) as defined by the W3C.

Length function

The **Length** function determines the number of character in the parameter.

Returns: number

The number of characters in the parameter.

Parameter: string

The string to count. This can come from a source node, the result of another function, or a value you specify.

Example

```
length('The string to count') = 19
```

Parent topic: [Mapping Function Reference](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Length.html

Lowercase function

The **Lowercase** function converts all uppercase characters to lowercase characters.

Parameter: string

The string to convert. This can come from a source node, the result of another function, or a value you specify.

Returns: string

The converted string.

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Lowercase.html

Maximum function

The **Maximum** function determines the highest value in the nodes, sets of numeric nodes, or numbers in parameters.

Parameter: input, input ...

The numeric nodes to compare. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. For more information see [Limitations in Combining Other Math Functions or Literals](#).

Returns: number

The maximum value of all nodes in the parameters. For recurring nodes, values for every occurrence in the recurring set is used to find the maximum. If any parameter is not a set of numeric nodes or is an empty node set, the function returns NaN (not a number).

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Maximum.html

Minimum function

The **Minimum** function determines the lowest value in the nodes, sets of numeric nodes, or numbers in parameters.

Parameter: input, input ...

The numeric nodes to compare. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. For more information see [Limitations in Combining Other Math Functions or Literals](#).

Returns: number

The minimum value of all nodes in the parameters. For recurring nodes, values for every occurrence in the recurring set is used to find the minimum. If any parameter is not a number, not a set of numeric nodes, or is an empty node set, the function returns NaN (not a number).

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Minimum_function.html

Modulo function

The **Modulo** function determines the remainder from dividing the first parameter by all subsequent parameters.

Returns: number

The remainder from dividing the first parameter by the remaining parameters. If the divisor is zero, returns NaN (not a number).

Parameter: number1

The number to be divided (dividend). This can come from a source node, the result of a function, or a value you specify.

Parameter: number2, [number3-999]

The numbers to divide with (divisor). These can come from source nodes, the results of other functions, or values you specify. At least one divisor parameter is required.

If multiple parameters are specified as divisors, the order of operations is as follows: the remainder returned from the first division operation becomes the dividend for the second operation, and so forth. See Example 2.

Example 1: Using one divisor parameter

`modulo(42, 5) = 2`

`42 / 5 = 8 R2`

Example 2: Using multiple divisor parameters

`modulo(61, 7, 2) = 1`

`61 / 7 = 8 R5`

`5 / 2 = 2 R1`

Multiply function

The **Multiply** function returns the product of all parameters.

Parameter(s): number1, number2, [number3-1,000]

The numbers to multiply. At least two parameters are required. Each parameter can come from a source node, the result of a function, or a value you specify.

Returns: number

The product of the parameters.

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Multiply.html

Not function

The **Not** function is typically used in conditions to specify negative or complimentary conditions.

Returns true if the parameter evaluates as false. Returns false if the parameter evaluates as true.

Parameter: datatype

Any number, string, date, time, or boolean value. This can come from a source node, the result of a function, or a value you specify.

Returns: boolean

The boolean inverse of the parameter. The evaluation rules depend on the datatype of the parameter.

For number datatypes:

- Positive and negative zero evaluate as false
- Any other number evaluates as true

For string, any date or any time datatypes:

- An empty string evaluates as false
- Any other string, date or time evaluates as true

For the boolean datatype:

- The evaluation returns the inverse value

Parent topic: [Mapping Function Reference](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Not.html

Number function

The **Number** function changes the datatype of the parameter to number.

Parameter: datatype

Any number, string, date, time, or boolean value. This can come from a source node, the result of a function, or a value you specify.

Returns: number

The numeric value of the parameter or NaN (not a number). The conversion rules depend on the datatype of the parameter:

For number datatypes:

- NaN for NaN, positive infinity or negative infinity
- The same number for any other value

For string, any date, or any time datatypes:

- The corresponding number if the string is in any of these formats, where n represents any set of digits:

n or -n

n. or -n.

n.n or -n.n

.n or -.n

NaN for any other value

For the boolean datatype:

- 'true' evaluates to 1
- 'false' evaluates to 0

Padding String function

The **Padding String** function returns a padding string of the specified length and characters. Padding strings are used in alignment functions.

Parameter: number

The total length to make the padding string. This can come from a source node, the result of another function, or a value you specify.

Parameter: [string]

One or more characters to use to build the padding string. If you use multiple characters and the length of the padding string is not an even multiple, these characters are truncated at the end of the string to fit the overall length. This can come from a source node, the result of another function, or a value you specify. If you omit this parameter, it defaults to the space character.

Returns: string

The string to use for padding.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Position.html

Read Date String function

The **Read Date String** function converts a string (that contains a date and time) to the XML Schema data type: `xs:dateTime`.

Purpose

Parameter: string

The date and time as a string.

Parameter: string

This string defines the format of the date and time string of the first parameter. For example, the format string could be equal to `MM/dd/yyyy`. For more information about the supported date and time pattern strings see `SimpleDateFormat` class in the Sun J2SE 1.4.2 Javadoc:

<http://www.science.uva.nl/ict/osdocs/java/jdk1.3/docs/api/java/text/SimpleDateFormat.html>.

Pattern Letter	Description	Example1	Example2
G	Era designation	AD	BC
y	Year	2004	2001
M	Month in a year	April	04
w	Week in a year	12	24
W	Week in a month	3	1
D	Day in a year	234	333
d	Day in a month	13	20
F	Day of week in a month	1	3

Pattern Letter	Description	Example1	Example2
E	Day in a week	Monday	Friday
a	AM or PM designation	AM	PM
H	Hour in a day - a number between 0 and 23	12	13
k	Hour in a day - a number between 1 and 24	14	23
K	Hour in AM or PM - a number between 0 and 11	0	10
h	Hour in AM or PM - a number between 1 and 12	11	12
m	Minute in an hour	20	50
s	Second in a minute	10	30
S	Milliseconds	224	338
z	Time zone in General time zone designation	PDT	EDT
Z	Time zone in RFC 822 time zone designation	-0300	+0200

Parameter: string (Optional)

This string defines the locale. For example, the English United States locale is defined with the following string: en_US.

The locale string can be defined by any of the following formats:

- LANGUAGE
- LANGUAGE_COUNTRY
- LANGUAGE_COUNTRY_VARIANT

Where LANGUAGE represents a two letter code as defined by the ISO-639 standard, COUNTRY represents a two letter code defined by the ISO-3166, and VARIANT represents a vendor or browser-specific code, for example WIN for Windows.

This parameter is optional.

To add this parameter:

1. Drop the Format Date String function into the middle pane of the Mapping Editor.
2. Double-click the function. The Function Properties pane opens.
3. Click Add. The Locale input parameter shows in the list of parameters.

Returns: dateTime

The date and time as an XML Schema data type: xs:dateTime is returned. For example, if the Read Date String function was run with the following input parameters:

date and time string: 02/22/2005/12/20/44

format string: MM/dd/yyyy/HH/mm/ss

A dateTime representing February 22, 2005 at 12:20 and 44 seconds is returned from Read Date String Function.

Parent topic: [Mapping Function Reference](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Read_Date_String.html

Replace function

The **Replace** function replaces individual characters with other individual characters.

The replacement is done at the individual character level and not the string level. Every occurrence of a character is replaced with specified replacement character as shown in the following example:

- list of characters to be replaced is equal to 'abc'
- list or replacement characters is equal to 'ABC'
- input string is equal to 'aWWWbYYYYcPPPabc'

The result string is equal to 'AWWWBYYYYCPPPPABC' because the replacement is done at the character level - every character is replaced. (If the replacement was done at the string level the resulting string would be equal to 'aWWWbYYYYcPPPABC'.)

Parameter: input

The string to search for characters to replace. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

Parameter: fromChars

A list of the character or characters to be replaced. If you need to replace several characters, they should be listed without any separation. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

Parameter: toChars

A list of character or characters to use as replacements. List the replacement characters in this parameter in the same order as characters to be replaced in the fromChars parameter because the first character from the fromChars parameter is replaced by the first character in toChars parameter and so on. For more information, see Example 2. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

Note: You can not directly replace a single character with an empty string because the toChars parameter cannot equal a empty string - a string with no characters. For a workaround, see Example 3.

Returns: string

The result of replacing all occurrences of characters in the second parameter (fromChars) that are found in the first parameter (input) with the matching characters in the third parameter (toChars).

Example 1

This example shows a simple one-to-one character replacement as shown in the following figure:

The run-time result of running this function is the following string:

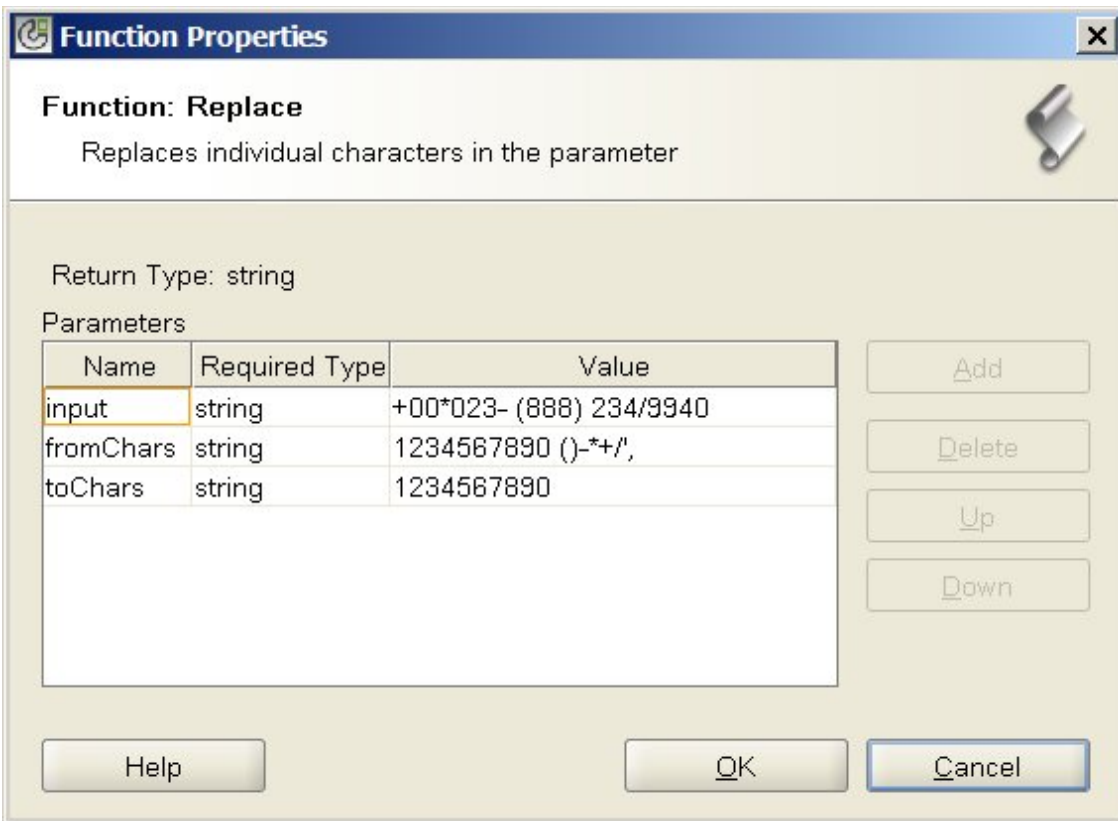

```
A list of chArActers
```

All lowercase a characters are replaced with uppercase A characters.

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

Example 2

In this example, the first character from the fromChars parameter is replaced by the first character of the toChars parameter, the second character from the fromChars parameter is replaced by the second character of the toChars parameter, and so on. The replacement of multiple characters is shown in the following figure:

In this example, the non-numeric characters (specified at the end of the fromChars parameter) are removed from the phone number string. All the numeric characters are replaced with the same numeric character; for example, the 1 character is replaced by the 1 character. The other non-numeric characters at the end of the fromChars do not have a replacement character specified in the toChars, so they are removed from the returned string.

The run-time result of running this function is the following string:

```
000238882349940
```

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

Example 3

This example shows a workaround to the limitation that you cannot replace a single character with an empty string. This limitation exists because the toChars parameter cannot be set to an empty string - a string with no characters. You can workaround this limitation by supplying a dummy character like a hyphen (-) that is not found in the input parameter. For example, you could specify the following values for the parameters of the **Replace** function as shown in the following figure:

In this example, the input parameter is equal to '1 2 3' (1, space, 2, space, 3), the fromChars parameter is equal to '-' (hyphen, space), and the toChars parameter is equal to '-' (hyphen). During run time, the **Replace** function with these values strips the spaces from input parameter and the run-time result is the following string:

123

Attention: When you specify the strings in the Value field of the Function Properties dialog box, do not enter the quotes. Enter just the hyphen and the space and not the quote characters.

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

Round function

The **Round** function rounds a number to the closest integer.

Parameter: number

The number to be rounded. This can come from a source node, the result of another function, or a value you specify.

Returns: number

The closest integer to the parameter, rounding up if two integers are equally close. This can come from a source node, the result of another function, or a value you specify.

Example:

- `round(4.2) = 4`
- `round(4.5) = 5`

Starts With function

The **Starts With** function determines whether or not the first parameter begins with the characters in the second parameter.

Parameter: string1

The string to test. This can come from a source node, the result of another function, or a value that you specify.

Parameter: string2

The beginning string to test for. This can come from a source node, the result of another function, or a value that you specify.

Returns: boolean

True or false indicating whether the first parameter begins with the second parameter.

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

String function

The **String** function changes the datatype of the parameter to string.

Parameter: datatype

Any string, boolean, date, or numeric datatype. This can come from a source node, the result of another function, or a value that you specify.

Returns: string

The result of changing the parameter to string. The conversion rules depend on the datatype of the parameter:

- For boolean datatypes, returns the string *true* or *false*
- For date or time datatypes, returns the date or time as a string in the specific format for that datatype, such as '2003-01-20T05:00:00' for a datetime datatype.
- For number datatypes, this returns:
 - 'NaN' if the value is NaN (not a number)
 - '0' if the value is positive or negative zero.
 - 'Infinity' or '-Infinity' if the value is positive or negative infinity (respectively).
 - The corresponding numeral, with a minus sign if negative and no leading zeroes. Decimal values have at least one numeral before the decimal point and as many decimal places as needed.

Substring function

The **Substring** function extracts a portion of the parameter based on the specified character placement.

Parameter: string

The string to extract from. This can come from a source node, the result of another function, or a value you specify.

Parameter: number1

The position of the first character to extract. Characters are numbered in the string beginning from 1.

Parameter: [number2]

The total number of characters to extract. If you omit this parameter, it defaults to the length from the starting position to the end of the first parameter.

Returns: string

The substring for the specified character places.

Example

```
substring('abcde',3,2) = 'cd'
```

Substring After function

The **Substring After** function extracts all the characters in a string starting after the first occurrence of a specified substring (one or more characters) through the end of the string.

Parameter: string

The string to extract a substring from. This can come from a source node, the result of another function, or a value you specify.

Parameter: string

The character to use as a starting point for the extraction. The first occurrence of the character is used as the starting point. This parameter can come from a source node, the result of another function, or a value you specify.

Returns: string

A substring of the first parameter which starts after the first occurrence of the specified start string through the end of the string. If the start string is not present, returns an empty string.

Example

```
substring-after('12/31/1999','/') = '31/1999',
```

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Substring_After.html

Substring Before function

The **Substring Before** function extracts all the characters in a string starting at the beginning up to the first occurrence of a specified substring (one or more characters).

Parameter: string

The string to extract a substring from. This can come from a source node, the result of another function, or a value you specify.

Parameter: string

The characters to use as the ending point for the extraction. The first occurrence of these characters is used as the ending point. This can come from a source node, the result of another function, or a value you specify.

Returns: string

The substring in the first parameter starting at the beginning up to the first occurrence of the specified end string. If the end string is not present, this returns an empty string.

Example

```
substring-before('12/31/1999','/') = '12'
```

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_SubstringBefore.html

Subtract function

The **Subtract** function returns the difference of the first parameter less all subsequent parameters.

Parameter: number1

The number to subtract from. This can come from a source node, the result of another function, or a value that you specify.

Parameter: number2,, [number3-999]

The numbers to subtract. These can come from source nodes, the results of other functions, or values that you specify. You can specify multiple parameters here, but at least one parameter is required.

Returns: number

The difference of the two parameters. If either parameter is not a number, returns NaN (not a number).

Example

number 1 = 42

number 2 = 7

number 3 = 8

returns: 27

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Subtract.html

Sum function

The **Sum** function determines the sum of values in the numeric node, sets of numeric nodes, or numbers in parameters.

Parameter: input, input ...

The numeric nodes to add. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. For more information see [Limitations in Combining Other Math Functions or Literals](#)

Returns: number

The total sum of all parameters. If any parameter is a nodeset, the total includes values for every node in the set. If any parameter is not a number or a numeric node set, returns NaN (not a number).

Parent topic: [Mapping Function Reference](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Sum.html

Trim function

The **Trim** function trims all leading and trailing spaces and replaces continuous sets of white space characters by a single space.

The string value of the parameter is normalized, as described in the following steps:

1. All tabs, carriage returns, and line feeds are replaced with spaces.
2. Contiguous sequences of spaces are reduced to a single space.
3. Trailing and leading spaces are removed.

Parameter: string

The string to trim and normalize. This can come from a source node, the result of another function, or a value you specify

Returns: string

The trimmed and normalized parameter.

Examples:

Input String Equals...	The Trim Function Returns...
' The string to trim and normalize. '	'The string to trim and normalize.'
' first line second line third line '	'first line second line third line'

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ref_Trim.html

Uppercase function

The **Uppercase** function converts all lowercase characters to the corresponding uppercase character.

Parameter: string

The string to convert. This can come from a source node, the result of another function, or a value you specify.

Returns: string

The converted string.

A

Activity

A complete, functional unit of processing within an orchestration. Activities include flow-control (logic) activities; data activities to facilitate consumption and transmission of data; and activities that enable integration with database systems, enterprise systems, Web servers, email servers, and other systems. An orchestration comprises a series of activities.

Assets

Supplemental configuration files, scripts, or other materials associated with a specific activity. For example, the buffer table scripts created for a database insert activity are assets. Assets are controlled by the Web Management Console (WMC). Access privileges to assets can be given to users beyond the users of the WMC. For example, DBAs can be given privileges to the assets associated with a database activity so that they can create the required tables or triggers.

B

Buffer table

An auxiliary table used in conjunction with various database activities, such as the single-table insert, update, or delete database activities. When you configure one of the database DML (data manipulation language) activities, Studio generates a SQL script that can be used to create the appropriate trigger on the database table; the buffer table gets populated when the triggering event (INSERT, UPDATE, DELETE) occurs. The buffer table provides the means to capture database changes and initiate processing by the orchestration.

C

Cast Iron® Studio

An integrated development environment (IDE) for creating, configuring, and publishing integration projects and the orchestrations they comprise. Studio projects run on the WebSphere® Cast Iron Appliance.

Command-line interface

A text-based alternative to the Web Management Console (WMC) for configuring, managing, and querying an Integration Appliance.

Control table

A database table that facilitates using database endpoints in integrations. As it does with buffer tables, Studio generates scripts to create control tables that can be used to ensure that inserts, updates, and deletes to specific tables occur once and only once.

Copy parameters

Copy creates new default orchestration variables that match the output from the parameters.

D

Deploy

Create an instance of an integration project (instantiate) on an Integration Appliance.

Document

Any of the XML Schema files, DTDs, and other configuration files that comprise integration projects.

Dynamic delimiter

A delimiter that is obtained from within the fields of the message itself, such as an HL7 PID (patient ID) message header that denotes the beginning of a new record in a file containing a batch of electronic health records.

E

Empty Placeholder

Appears in activities that have multiple branches as an initial placeholder for the activities in that branch. Dropping other activities on this icon removes it.

Endpoint

Represents the properties of an external system, such as a database server, FTP server, email system, or enterprise application that is either the source of data to the Integration Appliance or the target of processing by the Integration Appliance.

F

For Each

A function that iterates over a message structure.

Flat File

A file containing non-XML data. Flat Files are typically of two types: delimited, in which a comma, tab, white space, or other delimiter is used to separate variable-length fields and records; or positional, in which fields and records have a fixed width.

Flat File Schema

Defines how to interpret a specific set of Flat Files. Cast Iron Studio creates Flat File Schema (XML Schema) based on the configuration you define in the Flat File Schema Editor. A Flat File Schema is used by the Read Flat File activity to convert a source Flat File into XML.

Function

String, mathematical, and miscellaneous functions provided by Studio that you can use in defining processing in your orchestrations. In addition to the pre-built functions, Studio lets you build your own custom functions and add lookup tables.

I

Integration project

The various inputs, outputs (endpoints), mapping and schema definitions (transformations, message formats), orchestrations, and configuration information that comprise an integration solution as designed in Studio and deployed to the Integration Appliance.

J

Job

A specific run-time instance of an orchestration.

M

Map

A component that lets you bind input parameters to variables, and variables to the orchestration. Many Studio activities contain embedded maps that you must configure at design time, in the context of an orchestration, to define how actual parameters should map to variables, and how the variables should be processed in the orchestration. In addition to the embedded activity maps, Studio has a stand-alone Map Variables activity that can be used to bind any type of input and output to the orchestration

N

Node

All data input to or output from the Integration Appliance is materialized in Studio as a series of nodes, as in a tree-like, hierarchical structure. In many cases, the nodes represent the structure and content of an XML document, but in many cases they don't (e.g., rows in a database table are displayed as nodes). Nodes in Studio convey information about structure; the type of content that can be supported; or additional characteristics of the data.

Notification policy

Applies across an entire orchestration. Rules are based on event levels from 0 (no logging) to 9 for complete logging information.

O

Orchestration

The specific sequence of processing activities (such as data mapping, transformation, and control logic activities), endpoints, and data types defined and configured using Studio and deployed to run on the Integration Appliance.

P

Parameter

A value passed to an activity or to an orchestration. For example, Filename and data are two of the parameters that can be passed from an FTP endpoint to an orchestration.

Parameterized query

A database SQL statement that contains input or output database parameters. The **Execute Query** activity supports parameterized queries.

Parse

The converse of serialize. To convert to constituent pieces according to some established rules.

Pick

An activity that chooses from two or more alternatives. Typically used to start an orchestration, the **Pick** activity can support either synchronous or asynchronous messaging.

Project

An integration project defined and created using Cast Iron Studio. Each project has a properties file (filename.sp3) and several additional metadata files and folders that comprise all integration elements - orchestrations, endpoints, XML schemas, flat files - and their specific configuration (variables, parameters)

Publish

Copy all project files from Studio to an Integration Appliance or to an intermediate staging area, such as a shared directory on a file server, for subsequent runtime configuration and deployment to a specific environment. The Publish process encompasses validating the project; creating a .par file of project configuration documents; and sending the package to the Integration Appliance specified.

R

Raw message

The configuration that defines the character encoding for raw messages

Record identifier

A special field that delimits records in certain types of flat files, such as EDI (electronic data interchange) or HL7 (Health Level 7) files. For example, an HL7 PID (patient ID) number is a record identifier.

Repetition delimiters

A delimiter in a flat file that is used when the data lacks a unique value, such as record ID, to distinguish one record from another.

Replace

Appears in activity branches as an initial placeholder for the endpoint activity to receive a message for that branch. Dropping a **Receive endpoint** activity on this icon removes it.

Reply

Sends an acknowledgement when it receives a message.

Repository

Persistent storage for various types of data. Cast Iron Appliance has a configuration repository and a message repository.

S

Serialize

The converse of parse. Serialization assumes that the data is in XML format

Stored procedure

A functional code unit that resides in a database and is started explicitly by name. Stored procedures can be used to populate buffer tables when specific insert, update, or delete activities occur on a particular database table.

System store

A repository containing Appliance configuration information. Same as configuration repository.

T

Terminate

Stops orchestration processing.

Toolbox

The five-tab-set of Project, Activities, Variables, Functions, and Verify available in the right corner of Studio. These tabs provide access to all the entities you need to create new projects, create new orchestrations within projects, and develop the processing logic.

Trigger

A type of database stored procedure that is called implicitly when a triggering event occurs such as an INSERT, UPDATE, or DELETE on a table.

V

Variable

Used to pass data values processed by an orchestration. Variables are used by maps to identify the source and target. Some Activities create variables automatically.

W

While Loop

Initiates and continually processes any children activities for as long as a specified condition is true.

Cast Iron Express 入門

您可以使用 IBM® WebSphere® Cast Iron® Express®, 來快速註冊以取得免費試用帳戶、建立整合, 以及安全地管理 Cast Iron Express 環境。您也可以使用所提供的分析, 來分析您的整合使用情形。

為何使用 Cast Iron Express ?

WebSphere Cast Iron Express 是針對用途建置的解決方案, 可讓您快速建立、定義、執行及管理整合專案。只需數分鐘, 您就可以在 salesforce.com 帳戶與其他資料來源之間建立整合。

重點在於速度及簡化, 因此使用配置方法來定義整合。您不用編碼來進行整合。

當完成時, 您可以執行整合, 從遠端資料庫、本端檔案及 Dropbox 將資料移入及移出 salesforce.com。

您隨時可以擴充 Cast Iron Express 帳戶的功能, 方法為選取一個以上可用的附加程式函數套件。

您可以邀請其他使用者加入您的 Cast Iron Express 帳戶。您也可以監視及管理帳戶。

若要註冊, 請跳至 WebSphere Cast Iron Express 首頁 <https://express.castiron.com/express/>。

需要瞭解甚麼 ?

根據您的角色, 有不同的作業概述於下列文件中。每一項作業會依序說明, 從如何登錄 Cast Iron Express 帳戶開始。

基於安全原因, 如果您的使用者名稱處於登入狀態, 但沒有活動, 則您的階段作業將逾時。

部分 Cast Iron Express 函數會使用蹦現視窗。因此, 您可能要防止 Web 瀏覽器封鎖蹦現視窗。

在開始之前, 請檢查是否支援您正要使用的瀏覽器, 以及該瀏覽器是否符合必要的最低層次:

- Google Chrome 18
- Mozilla Firefox 10
- Windows Internet Explorer 8

您可以選取下列作業, 來瞭解 Cast Iron Express。然後, 您可以開始建立並管理您的整合、邀請其他使用者加入您的帳戶, 以及監視您帳戶內的活動。

若要瞭解如何建立從本端檔案到 salesforce.com 帳戶的整合, 請參閱[指導教學：建立本端檔案與 salesforce.com 的整合](#)。

- [登錄帳戶](#)
您可以登錄 IBM Cast Iron Express 帳戶，方法為在 Cast Iron Express 首頁上按一下註冊。
- [協助入門](#)
當您利用收到的使用者名稱和密碼登入時，「Cast Iron Express 入門」視圖即會開啟。
- [管理您的帳戶設定檔](#)
您可以使用管理設定檔視圖，來新增詳細資料，或變更現行詳細資料。您也可以變更帳戶密碼。
- [管理使用者](#)
管理者可以管理 Cast Iron Express 帳戶的使用者。只有管理者才能新增使用者至帳戶，以及移除不再需要存取的現有使用者。
- [Cast Iron Express 說明中心](#)
當您登入 Cast Iron Express 時，包含一系列有用資源的「說明中心」，可協助您瞭解並使用產品中的可用函數。
- [新增函數至 Express 帳戶](#)
您可以要求其他函數，來自訂 Cast Iron Express 帳戶。您可以選取一個以上可用的函數套件，來增加帳戶的功能。
- [隨時掌握 Cast Iron Express 的最新功能](#)
您可以查看「Cast Iron Express 說明中心」，瞭解 Cast Iron Express 的「最新功能」。

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/introduction.html>

登錄帳戶

您可以登錄 IBM® Cast Iron® Express® 帳戶，方法為在 Cast Iron Express 首頁上按一下註冊。

您可以登錄 IBM Cast Iron Express 帳戶，方法為跳至 <https://express.castiron.com/express/>。

無需承諾購買本產品。來自 Cast Iron Express 首頁的登錄鏈結會設定免費的試用帳戶。您可以要求可用的附加程式套件，在您的帳戶內擴充函數。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

登錄帳戶時，您必須識別單一使用者以進行登入。每一個 Cast Iron Express 帳戶都有一個具備管理者專用權的使用者。此使用者是在您首次完成登錄時建立，稱為 *admin*。admin 使用者可以邀請其他使用者加入相同的 Cast Iron Express 帳戶。

程序

1. 當 Cast Iron Express 首頁開啟時，請按一下註冊。「註冊」頁面即會開啟。
2. 輸入所要求的詳細資料來填寫所有欄位。如果您省略某欄位，則會提示您輸入資訊。
3. 閱讀使用條款。當您提交登錄要求時，表示您同意 Cast Iron Express 條款。
4. 完成時，請按一下註冊。這時會顯示確認訊息，顯示電子郵件正在傳送至所登錄的位址。
5. 跳至電子郵件帳戶，並開啟歡迎使用 IBM WebSphere Cast Iron Express 郵件。若要確認登錄並啟動您的帳戶，您必須按一下所提供的鏈結。這時會顯示帳戶驗證訊息。
6. 在您確認後，會傳送兩封進一步的電子郵件。其中一封郵件包含您的 `admin@YourCompanyName` Cast Iron Express 使用者名稱。另一封郵件則包含您的密碼。admin 使用者 ID 有權建立及定義整合、邀請其他使用者存取帳戶，以及管理公司 Cast Iron Express 帳戶。
7. 以提供的認證登入，開始使用您的免費試用帳戶。

限制：Cast Iron Express 限制每一家公司的使用者只能使用單一試用帳戶。如果出現錯誤訊息，指出您提供的公司名稱已登錄，請聯絡您公司的管理者。管理者可以在現有帳戶內邀請其他使用者。

上層主題：[Cast Iron Express 入門](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/intro_creatinganaccount.html

協助入門

當您利用收到的使用者名稱和密碼登入時，「Cast Iron Express 入門」視圖即會開啟。

為了協助您瞭解 Cast Iron® Express® 帳戶內可用的函數，您可以按一下「入門」視圖中顯示的每一個選項。

您可以隨時存取「入門」頁面，方法為按一下工具列中的「說明」圖示。下列畫面擷取顯示「說明」圖示和各種說明選項：

程序

1. 利用您從 IBM® Cast Iron Express 收到的使用者名稱和密碼登入。「Express 入門」視圖即會開啟。
2. 在「Express 入門」視圖中，您可以按一下三個顯示選項的其中一個：
 - 建立，用來快速定義並執行您的整合。
 - 監視，用來開啟儀表板頁面並即時分析您的整合。您也可以檢查是否有任何報告的問題。
 - 擴充，用來新增更多函數至您的帳戶，以擴充您的整合功能。

您現在可以開始定義 Cast Iron Express 環境。

上層主題：[Cast Iron Express 入門](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/intro_gettingstartedwithExpress.html

管理您的帳戶設定檔

您可以使用管理設定檔視圖，來新增詳細資料，或變更現行詳細資料。您也可以變更帳戶密碼。

登入您的 Cast Iron® Express® 帳戶。

程序

1. 按一下頁面右上方的登入名稱，以顯示功能表選項。按一下管理設定檔。下列畫面擷取顯示功能表。

2. 您可在下列欄位中新增或更新詳細資料：

- 名字
- 姓氏
- 電子郵件
- 國家/地區
- 電話
- 工作職稱

3. 若要變更密碼，請按一下變更密碼。輸入新密碼之前，您必須提供現有密碼。

適用一般密碼規則。密碼最少須有八個字元，而且可以包含特殊字元。

4. 選擇性的：如果想要接收 Cast Iron Express 新聞信件，您可以選取註冊「Cast Iron Express 新聞信件」，並讓 IBM 通知我優惠活動。

5. 若要修改您的設定檔，請按一下儲存。若要取消新增或修改，請按一下關閉圖示 。

上層主題：[Cast Iron Express 入門](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/intro_ManagingYourProfile.html

管理使用者

管理者可以管理 Cast Iron® Express® 帳戶的使用者。只有管理者才能新增使用者至帳戶，以及移除不再需要存取的現有使用者。

依預設，當登錄 Cast Iron Express 帳戶時，會停用管理使用者函數。若要使用這個額外函數，請按一下附加程式，並選取協同作業套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

請完成下列步驟，以邀請一個以上使用者存取您的 Cast Iron Express 帳戶。

程序

1. 若要開啟「管理使用者」頁面，請按一下管理使用者。
2. 在「新增使用者」區段中，輸入您要新增至 Cast Iron Express 帳戶之使用者的電子郵件位址。如果您想要邀請數個人員，請以逗點區隔每一個電子郵件位址。
3. 選擇性的：若要自訂傳送給使用者的電子郵件，請選取自訂電子郵件，並在提供的文字區中編輯內容。

4. 完成時，請按一下傳送。這時會顯示訊息，以確認正在傳送電子郵件。
5. 您邀請的人員會收到一封郵件，其中包括的鏈結會引導他們完成登入程序。他們第一次登入時，畫面會顯示授權合約。受邀的作者必須按一下接受，才能完成登入程序。
6. 在新使用者登入之後，您可在「作用中使用者」區段中看到他們前次登入 Cast Iron Express 的詳細資料。
7. 必要時，您可以按一下「前次登入」欄位旁邊的刪除圖示，來刪除使用者。

上層主題：[Cast Iron Express 入門](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/intro_ManagingUsers.html

Cast Iron Express 說明中心

當您登入 Cast Iron® Express® 時，包含一系列有用資源的「說明中心」，可協助您瞭解並使用產品中的可用函數。

「Cast Iron Express 說明中心」包含下列資訊：

- 「新增功能」詳細資料
- 一系列短片指導教學
- 記載的指導教學
- 常見問題 (FAQ) 區段

您可以隨時按一下「說明」圖示，來開啟「說明中心」。下列畫面擷取顯示「說明」圖示和功能表選項：

您可以按一下頁面右上方的關閉圖示，來關閉「說明中心」區段。

您也可以從說明功能表選項中存取「Cast Iron Express 資訊中心」。

上層主題：[Cast Iron Express 入門](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/intro_UsingTheHelpSection.html

新增函數至 Express 帳戶

您可以要求其他函數，來自訂 Cast Iron® Express® 帳戶。您可以選取一個以上可用的函數套件，來增加帳戶的功能。

登入您的 Cast Iron Express 帳戶。

根據您選取的額外函數，您可能需要付費，才能取得部分函數套件。您會重新導向至「IBM® 軟體」及服務線上網站，您可以在這裡新增 Cast Iron Express 產品項目至您的購物籃。出現提示時，請以 IBM 使用者 ID（必須在 Cast Iron Express 登入名稱之外另外配置）登入。

訂購程序結束時，請記錄確認號碼以供日後參考。

重要：付款系統會在新的視窗中開啟。因此，您必須確保 Web 瀏覽器沒有封鎖跳現視窗。

程序

1. 若要查看可用套件的清單，請按一下附加程式。

可用的函數套件包括：

- 對映函數。定義轉換，以操作在移入目標端點之前先從來源端點對映的資料。
- 內部部署支援。在本端系統與遠端系統之間提供連續的同步化。
- 協同作業。邀請其他使用者在您的 Cast Iron Express 帳戶中協助建立及管理整合。

每一個套件詳述內含的函數，以及是否有免費的試用。您可以使用一次的免費試用，來體驗函數如何加強您的商業應用程式。

2. 若要選取所有額外函數，請按一下嘗試全部 90 天。若要在免費 90 天試用完成時繼續使用函數，您必須購買套件。
3. 若要選取個別套件，請按一下免費試用 90 天，以取得您要使用的特定函數。當僅選擇部分套件時，您無法選取嘗試全部 90 天。
4. 如果適用，請在「IBM 軟體」及服務線上網站上完成購買。
5. 提交您的新函數要求。

「附加程式」視圖會顯示您的要求狀態、您的現行套件使用情形，以及指出免費試用的剩餘時間。

與 Cast Iron Express 整合

- [支援的來源和目標系統](#)
Cast Iron® Express® 提供在資料庫、FTP 伺服器、本端檔案、Dropbox 及 salesforce.com 帳戶之間整合的功能。
- [管理安全連接器](#)
為了與資料庫和 FTP 伺服器等站上系統通訊，Cast Iron Express 可讓您使用安全連接器。從「整合」頁面可管理安全連接器。
- [建立整合](#)
在 Cast Iron Express 中可以從整合頁面建立整合。
- [使用「整合」編輯器](#)
您可以使用「整合」編輯器來自訂整合的所有相關資訊。
- [複合函數](#)
複合函數是兩個不同函數的組合，其中一個函數的輸出是鏈結為後續函數的輸入。下列各主題提供建立、編輯或刪除複合函數的相關資訊。
- [函數清單](#)
Cast Iron Express 可選取在對映內使用的函數。這些函數可以用來操作所對映的欄位值，例如，變更字串內容、對數字執行數值作業，以及操作日期和時間值。
- [管理整合](#)
Cast Iron Express 會將帳戶中定義所有整合的清單顯示在「整合」頁面上。
- [監視整合活動](#)
您可以使用 Cast Iron Express 活動頁面，來查看您帳戶內所有活動的詳細資料。
- [使用率圖表](#)
使用率圖表可讓您快速識別特定租戶的最活躍整合和端點。工作成功和失敗的摘要以及整合活動細分，會以月和年圖表呈現。

[意見](#) | [注意事項](#)

- [FTP 來源支援的檔案類型](#)
Cast Iron Express 支援使用 FTP 作為某些檔案類型的來源。

上層主題：[與 Cast Iron Express 整合](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_supportedsourceandtargetsystem.html

FTP 來源支援的檔案類型

Cast Iron® Express® 支援使用 FTP 作為某些檔案類型的來源。

當選取 FTP 作為來源端點時，支援下列檔案類型：

- CSV 檔案，檔案的第一行定義其餘各行的欄位名稱。
- 其他文字檔中的文字內容會作為單一文字欄位使用。
- 二進位檔中的內容會作為單一的二進位欄位使用。

上層主題：[支援的來源和目標系統](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_SupportedFileTypesForFTPSource.html

管理安全連接器

為了與資料庫和 FTP 伺服器等站上系統通訊，Cast Iron® Express® 可讓您使用安全連接器。從「整合」頁面可管理安全連接器。

依預設，當登錄 Cast Iron Express 帳戶時，會停用「安全連接器」函數。若要使用這個額外函數，請按一下附加程式，並選取**內部部署支援套件**。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

當您開啟「整合」頁面時，已定義的安全連接器會列示在頁面左下方。對於每一個列出的連接器，您會看到連接器的名稱及狀態。

您可以按一下刪除圖示來刪除任一個安全連接器。

- [建立安全連接器](#)
您可以從 Cast Iron Express 的「整合」頁面建立安全連接器。
- [安裝安全連接器](#)
您可以在主機系統上安裝安全連接器。
- [啟動和停止安全連接器](#)
當您安裝安全連接器時，啟動和停止安全連接器的功能表項目會新增至稱為 Cast Iron Secure Connector 1.6.2.0.0 群組中的作業系統。
- [移除安全連接器](#)
先執行停止安全連接器項目，再執行解除安裝安全連接器項目，即可從主機系統中移除安全連接器。

上層主題：[與 Cast Iron Express 整合](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_ManagingSecureConnectors.html

建立安全連接器

您可以從 Cast Iron® Express® 的「整合」頁面建立安全連接器。

依預設，當登錄 Cast Iron Express 帳戶時，會停用「安全連接器」函數。若要使用這個額外函數，請按一下附加程式，並選取**內部部署支援套件**。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

程序

1. 當整合頁面開啟時，請按一下「新增」圖示：.
2. 輸入安全連接器的唯一敘述性名稱。
3. 按一下建立。

安全連接器會在背景中建立，完成時會顯示在「安全連接器」清單中。

下載安裝檔及配置檔，並在主機系統上安裝安全連接器。如需相關資訊，請參閱[安裝安全連接器](#)。

上層主題：[管理安全連接器](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_creatingsecureconnector.html

安裝安全連接器

您可以在主機系統上安裝安全連接器。

限制：主機系統與目標系統必須在相同的本端網路上。

程序

1. 登入主機系統，並在 Web 瀏覽器中跳至 <http://express.castiron.com>。
2. 按一下您所要安裝安全連接器旁邊的下載圖示： 畫面上顯示對話框，內含 Windows 和 Linux 平台的安裝與配置檔的下載鏈結，以及只下載配置檔本身的選項。
3. 將相關檔案下載至主機系統，並執行安裝程式。安裝期間會提示您提供配置檔。

上層主題：[管理安全連接器](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_InstallingASecureConnector.html

啟動和停止安全連接器

當您安裝安全連接器時，啟動和停止安全連接器的功能表項目會新增至稱為 Cast Iron® Secure Connector 1.6.2.0.0 群組中的作業系統。

您可以在「開始」功能表 (Windows)，或在「應用程式」功能表 (Linux) 中，尋找啟動和停止安全連接器的功能表項目。

重要：如果您是在 Windows 7 系統上執行安全連接器，請以管理者身分執行安全連接器。用滑鼠右鍵按一下啟動安全連接器選項，然後選擇以管理者身分執行。

啟動時，安全連接器會與您的 Cast Iron Express® 帳戶通訊，並指出它已在執行中。

提示：在 Windows 系統上安裝期間，安全連接器可以安裝為 Windows 服務。將安全連接器安裝為 Windows 服務，表示您不需要使用「開始」功能表，即可啟動安全連接器。

程序

當安全連接器啟動時，請在 Cast Iron Express 整合頁面上，按一下「安全連接器」區段中的「重新整理」圖示 。狀態會變更為「執行中」。

重新整理可以將安全連接器清單更新為最新狀態。

上層主題：[管理安全連接器](#)

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_startingands_toppingthesecureconnector.html

移除安全連接器

先執行停止安全連接器項目，再執行解除安裝安全連接器項目，即可從主機系統中移除安全連接器。

程序

1. 在主機系統上：
 - a. 使用「開始」功能表選項停止安全連接器，停止安全連接器。
 - b. 使用「開始」功能表選項解除安裝安全連接器，解除安裝安全連接器。
2. 在「Cast Iron® Express® 的「整合」頁面上：
 - a. 按一下相關安全連接器旁邊的「刪除」圖示 。
 - b. 按一下確定。

會從 Cast Iron Express 的「整合」頁面中移除安全連接器。

上層主題：[管理安全連接器](#)

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_removingasecureconnector.html

建立整合

在 Cast Iron® Express® 中可以從整合頁面建立整合。

登入 Cast Iron Express 帳戶，然後按一下整合。

程序

1. 從清單選擇來源。根據您的來源端點，會過濾目標清單只列出支援的系統。
2. 選擇目標。
3. 按一下新建空白整合以建立整合，並進入「整合」編輯器。

上層主題：[與 Cast Iron Express 整合](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_creatingintegrations1.html

使用「整合」編輯器

您可以使用「整合」編輯器來自訂整合的所有相關資訊。

您可以提供整合的自訂名稱，方法為在編輯器上半部的文字欄位中輸入名稱。您可以按一下儲存，以儲存整合變更。若要關閉整合編輯器而不儲存，請按一下關閉。隨時都可以儲存整合，但必須完成之後才能執行整合。

「整合」編輯器包含三個大型畫面：

- 來源
- 轉換
- 目標

如需配置「來源」和「目標」區段的相關資訊，請參閱下列主題：

- [配置連線](#)
- [選取作業](#)
- [選取物件](#)
- [選取欄位](#)
- [設定整合](#)

程序

1. 選取來源區段。來源編輯器開啟。
 - 配置連線
 - 選取作業
 - 選取物件
 - 選取欄位配置來源時，會顯示記號以指出步驟完成。

✓ Source

2. 選取目標區段 目標編輯器開啟。
 - 配置連線
 - 選取作業
 - 選取物件
 - 選取欄位

配置目標時，會顯示記號以指出步驟完成。

✓ Target

3. 建立轉換
 - 定義對映
 - 定義函數

同時配置來源和目標端點時，「整合」編輯器會在左側顯示「來源」欄位清單，在右側顯示「目標」欄位清單。程序的步驟 3 將與轉換區段互動，以建立「來源」與「目標」之間的資料轉換。如需相關資訊，請參閱下列主題：

- [定義對映](#)
- [定義函數](#)
- [設定整合](#)

當完成轉換時，即可儲存整合，然後關閉以回到「整合」頁面。如需啟動和停止新整合的相關資訊，請參閱[管理整合](#)。

- [配置連線](#)

您必須提供整合將連接的系統連線詳細資料。必須對連線詳細資料集指定名稱，稍後可使用該名稱來識別這些連線詳細資料，以在其他整合中重複使用。
- [連接至 MySQL 資料庫](#)

若要順利連接至 MySQL 實例，安全連接器中必須安裝相關的 MySQL JDBC 驅動程式。
- [選取作業](#)

作業的選擇決定 Cast Iron Express 如何監控「來源」和「目標」端點並與之互動。對個別作業的支援可能因實作不同而不同。例如，FTP 會利用取得和放置作業，而 salesforce.com 支援更新插入和取得更新項目作業。
- [資料庫觸發程式表格](#)

使用資料庫系統做為來源時，Cast Iron Express 需要資料庫系統內建立觸發程式表格。
- [選取物件](#)

順利連接來源或目標之後，Cast Iron Express 會在系統中查詢可處理的物件。
- [選取欄位](#)

選取物件時，Cast Iron Express 會自動查詢「來源」或「目標」系統，以識別該物件內的欄位。
- [連接至 salesforce.com 時使用外部 ID](#)

連接至 salesforce.com 時，您可以配置 Cast Iron Express，在更新插入物件作業上使用外部 ID。您也可以使用外部 ID 欄位將目標 salesforce.com 物件連結至其他 salesforce.com 物件。
- [過濾來源物件](#)

Cast Iron Express 過濾功能可讓您根據「整合」頁面中顯示的欄位值，來控制從來源應用程式傳遞至整合的記錄。
- [設定整合](#)

配置「來源」和「目標」端點之後，您已準備好定義對映。瞭解資料類型之間隱含轉換的 Cast Iron 準則，對於設定整合而言十分重要。繼續之前，讓自己熟悉本節中的資訊。
- [定義對映](#)

當配置「來源」與「目標」時，您會看到左側的來源欄位清單、右側的目標欄位清單及兩欄錨點。請連接這些錨點來定義對映。

- [定義函數](#)
簡式對映可以從來源欄位複製資料，並放入目標欄位中。不過，有時需要更複雜的轉換。所有對映都有可用來定義函數的新增函數圖示。
- [配置函數](#)
您可以配置函數，以符合特定需求。作法是編輯來源欄位和參數以新增或移除來源，或是變更其顯示順序。

上層主題：[與 Cast Iron Express 整合](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_UsingTheIntegrationEditor.html

配置連線

您必須提供整合將連接的系統連線詳細資料。必須對連線詳細資料集指定名稱，稍後可使用該名稱來識別這些連線詳細資料，以在其他整合中重複使用。

就資料庫和 FTP 伺服器等內部部署系統而言，連線詳細資料需要指定安全連接器。如需相關資訊，請參閱[管理安全連接器](#)。

當填完連線詳細資料時，請按一下連接，以連接至系統來驗證連線詳細資料。「連線詳細資料」畫面頂端會顯示訊息，指出連線是否成功。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_ConfiguringTheConnection.html

連接至 MySQL 資料庫

若要順利連接至 MySQL 實例，安全連接器中必須安裝相關的 MySQL JDBC 驅動程式。

小心：如果 Cast Iron® Express® 偵測到安全連接器沒有可用的驅動程式，則會顯示錯誤訊息，內含如何安裝驅動程式的資訊。

程序

1. 從[這裡](#)下載驅動程式。
2. 跳至執行「安全連接器」的機器，停止「安全連接器」。
3. 將檔案複製到 *Secure Connector install root\lib\plugins*，其中 *Secure Connector install root* 是安裝「安全連接器」的目錄。例如，C:\Program Files\IBM\Secure Connector。

4. 啟動「安全連接器」。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_ConnectingToAMySQLDatabase.html

選取作業

作業的選擇決定 Cast Iron® Express® 如何監控「來源」和「目標」端點並與之互動。對個別作業的支援可能因實作不同而不同。例如，FTP 會利用取得和放置作業，而 salesforce.com 支援更新插入和取得更新項目作業。

選取作業之前，請檢閱下列資訊，以確保您正在使用的特定端點支援您要使用的活動。

表 1. FTP 作為「來源」端點

作業	產生的活動
輪詢目錄	每隔 30 秒監視一次選擇的檔案是否有更新項目。

表 2. 資料庫 (MySQL、SQL Server、DB2®、Oracle) 作為「來源」端點

作業	產生的活動
取得插入的列	從資料庫表格中擷取最近插入的項目，並觸發整合。
取得更新的列	從資料庫表格中擷取最近修改的項目，並觸發整合。
取得刪除的列	從資料庫表格中傳遞最近刪除的項目，並觸發整合。

表 3. 資料庫 (MySQL、SQL Server、DB2、Oracle) 作為「目標」端點

作業	產生的活動
插入列	根據流經整合的資料建立資料庫項目。
更新列	根據流經整合的資料修改資料庫項目。
刪除列	根據流經整合的資料刪除資料庫項目。

表 4. salesforce.com 作為「來源」端點

作業	產生的活動
取得刪除的物件	從 salesforce.com 傳遞最近刪除之選定類型的物件，並觸發整合。
取得更新的物件	從 salesforce.com 傳遞最近修改之選定類型的物件，並觸發整合。

表 5. salesforce.com 作為「目標」端點

作業	產生的活動
建立物件	根據流經整合的資料建立物件項目。
更新物件	根據流經整合的資料修改物件項目。

作業	產生的活動
更新插入物件	根據流經整合的資料更新及/或插入物件項目。
刪除物件	根據流經整合的資料刪除物件項目。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_SelectingAnOperation.html

資料庫觸發程式表格

使用資料庫系統做為來源時，Cast Iron® Express® 需要資料庫系統內建立觸發程式表格。

當啟動的整合第一次使用資料庫中的表格時，Cast Iron Express 會通知使用者需要建立此觸發程式表格。畫面上會顯示資訊對話框，說明需要什麼並提供兩個鏈結。其中一個鏈結會嘗試連接至資料庫，並代表使用者自動建立觸發程式表格。使用此方法表示配置在整合中的連線詳細資料，包括資料庫系統中用以建立表格的必要權限。如果配置的使用者沒有必要的權限，則會顯示第二個鏈結來提供建立所需表格的 DDL 文件。

此文件鏈結可傳送給資料庫管理者，以代表使用者建立必要的表格。

限制：Cast Iron Express 緩衝區表格使用下列欄位名稱：

- IH_PK
- IH_OPERATION_NAME
- IH_FLAG

因此，當您建立專屬的表格時，不會支援這些欄位名稱，因為它們與觸發程式機制相互衝突。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/DatabaseTriggerTables.html>

選取物件

順利連接來源或目標之後，Cast Iron® Express® 會在系統中查詢可處理的物件。

物件可以是 FTP 伺服器上的檔案、資料庫綱目和表格，或是 salesforce.com 物件。所有可用的物件以樹狀結構呈現，可供導覽至想要進行整合的物件。

「來源」或「目標」系統可能隨時變更。例如，新的自訂物件可能新增至連接的 salesforce.com 帳戶、新的表格可能新增至資料庫綱目，或新的檔案已上傳至 FTP 伺服器。

1. 若要選擇要使用的物件，請從可用清單選取物件。
2. 若要重新整理物件清單，請在「可用的物件」區段中按一下重新整理圖示 。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_SelectingAnObject.html

選取欄位

選取物件時，Cast Iron® Express® 會自動查詢「來源」或「目標」系統，以識別該物件內的欄位。

物件內的欄位可能為：

- CSV 檔中的記錄。
- 表格中的直欄。
- salesforce.com 物件中的欄位。

欄位會顯示在清單中，且每一個欄位名稱旁邊都有勾選框。

註：來源端點是 FTP 伺服器時，在「可用的欄位」畫面上會有額外的選項，而您可以在此畫面中指定 Cast Iron Express 如何解譯選取的檔案。這些選項如下：

- 分隔字元。這個字元是識別用來區隔檔案內的個別欄位。
- 引號字元。這個字元是識別用來括住可能跨多行的欄位值。
- 檔案具有標頭列勾選框。這決定 Cast Iron Express 是否將檔案的第一列處理為標頭列。
- 標底列數目。這會決定檔案底端要忽略的列數。比方說，如果檔案包含總計或摘要。

部分欄位由「目標」系統標示為選用，部分欄位會標示為必要。例如，您必須提供名稱，才能使用 salesforce.com 建立帳戶物件。Cast Iron Express 會預先選取這些必要欄位，並停用該欄位的勾選框，以防止取消選取。這些欄位的名稱後面會標示星號 (*)。

其他欄位可能為選用但常用：Cast Iron Express 會預先選取這些欄位以節省時間，但您可以變更這些選擇。

註：欄位清單上方提供全選和全部清除鏈結。

「來源」或「目標」系統可能隨時變動；新的自訂欄位可能新增至連接的 salesforce.com 帳戶、新的直欄可能新增至資料庫表格，或新的檔案格式上傳至 FTP 伺服器。在可用的欄位區段中按一下重新整理圖示 ，可以重新整理給定的物件的欄位清單。

完成欄位選擇之後，請按一下完成按鈕。

現在已定義完成「來源」或「目標」，您會回到主要整合概觀。「來源」或「目標」以綠色勾號標示為完成 

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_SelectingTheFields.html

連接至 salesforce.com 時使用外部 ID

連接至 salesforce.com 時，您可以配置 Cast Iron® Express®，在更新插入物件作業上使用外部 ID。您也可以使用外部 ID 欄位將目標 salesforce.com 物件連結至其他 salesforce.com 物件。

您可以根據其他系統產生的 ID 或索引鍵值，使用外部 ID 來識別 salesforce.com 中的物件。salesforce.com 管理者可以將外部 ID 欄位新增至 salesforce.com 物件。如需相關資訊，請參閱您的 salesforce.com 文件。

選取 salesforce.com 物件時，Cast Iron Express 會自動查詢目標系統，以識別該物件內的欄位。

- [搭配使用外部 ID 與更新插入作業](#)

在 salesforce.com 中，當選取更新插入作業時，您可以在「可用的欄位」區段中選擇要使用的外部 ID。

- [搭配使用外部 ID 與相關物件](#)

在 salesforce.com 中，當選取建立或更新插入作業時，您可以使用外部 ID 欄位將目標物件連結至其他物件。例如，根據 Account 物件中定義的外部 ID 欄位值，Contact 物件可以連結至 Account 物件。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_overviewexternalids.html

搭配使用外部 ID 與更新插入作業

在 salesforce.com 中，當選取更新插入作業時，您可以在「可用的欄位」區段中選擇要使用的外部 ID。

程序

1. 在 salesforce.com 目標編輯器中，從「作業」功能表中選取更新插入物件選項。
2. 在「可用的欄位」區段中，從做為外部 ID 功能表選擇必要的外部 ID。
3. 按一下完成。

上層主題：[連接至 salesforce.com 時使用外部 ID](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_externalids.html

搭配使用外部 ID 與相關物件

在 salesforce.com 中，當選取建立或更新插入作業時，您可以使用外部 ID 欄位將目標物件連結至其他物件。例如，根據 Account 物件中定義的外部 ID 欄位值，Contact 物件可以連結至 Account 物件。

程序

1. 在 salesforce.com 目標編輯器中，從「作業」功能表選取建立物件或更新插入物件選項。
2. 在「可用的欄位」區段中，選取連接至預期物件的欄位。那些包含已定義外部 ID 的欄位，會在「類型」直欄中顯示選項清單。從清單選取所需的外部 ID 欄位。
3. 按一下完成。

上層主題：[連接至 salesforce.com 時使用外部 ID](#)

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_externalidrelatedobjects.html

過濾來源物件

Cast Iron® Express® 過濾功能可讓您根據「整合」頁面中顯示的欄位值，來控制從來源應用程式傳遞至整合的記錄。

對於此作業，您可以使用「整合」頁面，將搜尋準則指定給擷取自來源應用程式的內容。「整合」頁面的「來源」區域中，每一個欄位旁邊都會緊接著顯示過濾器圖示：

當您按一下過濾器圖示時會顯示蹦現視窗，讓您設定參數以控制整合所處理的資料。您可以在來源欄位上指定單一或多個過濾器。例如，您可能只想要擷取值超出特定金額且產生自另一個國家/地區的銷售訂單，而不是擷取所有現行銷售訂單。

程序

1. 若要過濾來源物件，請按一下「整合」頁面的「來源」區域中的物件。這時會顯示與來源物件相關的欄位清單。
2. 在來源欄位的清單中，尋找想要過濾的欄位，然後按一下它旁邊的過濾器圖示。這時會顯示「過濾器」蹦現視窗。您在「整合」視窗中選取的欄位會顯示在「過濾器」視窗中。
3. 在「過濾器」視窗的新增過濾器區段中，按下拉功能表，然後選取過濾選項。
可用的選項為：
 - 等於
 - 不等於
 - 小於
 - 大於
 - 在範圍內
4. 在文字欄位中，輸入過濾器參數。
5. 按一下新增。新的過濾器會顯示在「過濾器」視窗的陰影化區域中。
6. 若要將其他過濾器新增至來源欄位，請重複之前的步驟。

- 若要控制如何將多個過濾器套用至來源欄位，請使用「比對的過濾器」按鈕。如果您想要將任何過濾器參數用於來源，請按一下任何。如果您想要全部過濾器都套用至來源欄位，請按一下任何按鈕，將它切換為全部。
- 當完成時，請按一下關閉。

「整合」頁面上來源欄位旁邊的過濾器圖示會加上綠色陰影，指出已定義過濾器。

上層主題：[使用「整合」編輯器](#)

修改過濾器

您也可以使用「整合」頁面來修改現有的過濾器設定，或刪除過濾器。

程序

- 按一下「整合」頁面中來源欄位旁邊的綠色過濾器圖示。這時會顯示「過濾器」視窗。
 - 若要修改特定的過濾器，請跳至過濾器定義，然後按一下編輯。這時會顯示過濾器參數。請使用下拉功能表和文字欄位，以修改過濾器設定。完成時，請按一下儲存。
 - 若要刪除過濾器，請跳至您要刪除的過濾器，然後按一下它旁邊的刪除圖示。
- 按一下關閉，即可回到「整合」頁面。

已修改的過濾器會顯示在「過濾器」視窗的陰影化區域中。如果您已刪除過濾器，則它會從「過濾器」視窗中移除，而且來源欄位旁邊的過濾器圖示顏色不再是綠色。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_filtering.html

設定整合

配置「來源」和「目標」端點之後，您已準備好定義對映。瞭解資料類型之間隱含轉換的 Cast Iron® 準則，對於設定整合而言十分重要。繼續之前，讓自己熟悉本節中的資訊。

當您使用「整合」編輯器來定義對映時，會看到來源和目標欄位清單以及兩欄錨點。請連接這些錨點來定義對映。如需對映的相關資訊、有效資料類型的詳細資料，以及如何轉換資料類型，請參閱[定義對映](#)。

下表顯示資料類型間之隱含強制轉型的特定準則。「來源」直欄可指定對映轉換中所使用的來源資料。「目標」直欄可顯示衍生的目標。「註解」直欄提供所選取作業的任何必要相關資訊。

表 1. 資料類型之間強制轉型的 Cast Iron Express® 準則。

來源	目標	註解
任何	字串	所有資料類型都轉換為字串。
任何	布林	"T"、"t"、"true"、"TRUE"、"tRuE"、"1" 和類似項目都會強制轉型為 "TRUE"。其他則會強制轉型為 "FALSE"。

來源	目標	註解
字串	數字	將含有數值表示法的字串（例如 "10" 或 "3.14"）轉換為十進位數類型。 註： 未包含數字的字串會在處理來源資料時導致失敗。
字串	整數	將含有整數數值表示法的字串（例如 "10"）轉換為整數類型。未包含整數的字串會在處理來源資料時導致失敗。使用者可以使用「捨入」、「上限」或「下限」函數從十進位數字串轉換為整數類型，來避免此狀況。
數字	整數	將十進位數（例如 10 或 3.14）轉換為整數。針對非整數，會以相同方式自動轉換值，就像使用者已套用「捨入」函數一樣。使用者可以使用「捨入」、「上限」或「下限」函數，對轉換施行更特定的控制。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_settingupintegration.html

定義對映

當配置「來源」與「目標」時，您會看到左側的來源欄位清單、右側的目標欄位清單及兩欄錨點。請連接這些錨點來定義對映。

每一個欄位旁邊會緊接著顯示錨點：●

請在錨點之間繪製連線，將來源欄位對映至目標欄位。

對映會以下列三種顏色的其中一種來顯示：

綠色

指出來源與目標資料類型相符，且對映有效。

琥珀色

指出資料類型不符，但可能會從某種資料類型自動轉換為另一種資料類型。例如，數值資料類型可以自動轉換為字串。在此情況下，右側的「結果」直欄中會顯示警告圖示 。按一下此圖示，即可查看警告的詳細資訊。

紅色

指出由於資料類型不相容，來源欄位無法對映至目標欄位。您無法儲存具有紅色對映的任何整合。在此情況下，右側的「結果」直欄中會顯示錯誤圖示 。按一下此圖示，即可查看錯誤的詳細資訊。

程序

若要繪製連線，請按一下選擇的來源錨點，再按一下想要的目標錨點，或將來源錨點拖放到目標錨點上。

繪出兩個欄位之間的連線。這表示當整合執行且接收來源系統的資料時，來源欄位的值會維持原樣地複製到目標欄位。Cast Iron® Express® 會從左側的「來源」系統提供範例資料，並將此範例資料移入右側「目標結果」直欄中的對映結果。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_definingthe_mappings.html

定義函數

簡式對映可以從來源欄位複製資料，並放入目標欄位中。不過，有時需要更複雜的轉換。所有對映都有可用來定義函數的新增函數圖示。

依預設，當登錄 Cast Iron® Express® 帳戶時，會停用此函數。若要使用這個額外函數，請按一下附加程式，並選取對映函數套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

按一下「新增函數」圖示  可開啟可用的函數清單。函數是根據下列種類來分組：

- 字串
- 數學
- 布林
- 日期
- 公用程式

如需這些函數的相關資訊，請參閱[名詞解釋](#)。

程序

按一下必要函數。對映中會插入函數方框。

範例

此範例顯示簡單的「字串長度」函數。

右側的「結果」直欄也會更新來反映函數結果，而非簡單複製。

部分函數的可配置性更強，可以接受多個輸入欄位。例如，下列畫面擷取顯示「連結」函數。

其他來源欄位可以連接至函數左側的錨點，如下列畫面擷取所示。

「連結」函數也有配置選項，按一下「編輯」圖示  即可顯示。您可以變更輸入順序，並指定「連結」函數的配置選項，例如 prefix、defaultDelimiter 及 postfix。

按一下套用來儲存您的變更。右側的「目標結果」直欄會更新。

限制：如果結果太長而無法顯示在畫面上，則會截斷。按一下截斷的結果，可在工具提示中看到完整結果。

上層主題：[使用「整合」編輯器](#)

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_DefiningTheFunctions.html

配置函數

您可以配置函數，以符合特定需求。作法是編輯來源欄位和參數以新增或移除來源，或是變更其顯示順序。

依預設，當登錄 Cast Iron® Express® 帳戶時，會停用此函數。若要使用這個額外函數，請按一下附加程式，並選取對映函數套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

請完成下列步驟，以指定連結和其他函數的配置選項。

程序

1. 在「整合」頁面上，按一下想要編輯的整合。該整合會顯示在整合編輯器中，而先前選取的欄位會顯示在轉換視圖中。
2. 在轉換視圖中，按一下來源物件欄位上的錨點，然後按一下目標物件上的欄位，來對映欄位。這時會顯示「新增函數」圖示 。
3. 按一下「新增函數」圖示 ，以檢視可用函數的清單。這時會出現顯示可用函數清單的「配置函數」蹦現視窗。
4. 在「配置函數」視窗中，按一下想要套用至對映的函數。如果函數允許或需要配置其他資訊，則會顯示「編輯」圖示 。
5. 按一下「編輯」圖示。這時會出現顯示來源欄位和參數的「編輯來源欄位」視窗。
6. 若要編輯來源欄位，請按一下「編輯來源欄位」視窗中的列，而此列包含您想要編輯的來源欄位。即會強調顯示此欄位。
 - a. 若要刪除來源欄位，請按一下「刪除」圖示 。
 - b. 若要上下移動來源欄位，請按一下「上移」或「下移」箭頭。
7. 完成時，請按一下套用。
8. 在「整合」頁面上，按一下儲存以儲存對整合所做的變更。

即會儲存您的編輯。

如果您是使用函數複合，請參閱[複合函數](#)。

上層主題：[使用「整合」編輯器](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

hefunctions.html

複合函數

複合函數是兩個不同函數的組合，其中一個函數的輸出是鏈結為後續函數的輸入。下列各主題提供建立、編輯或刪除複合函數的相關資訊。

依預設，當登錄 Cast Iron® Express® 帳戶時，會停用此函數。若要使用這個額外函數，請按一下附加程式，並選取對映函數套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

- [使用複合函數](#)

您可以將函數新增至現有複合、變更複合順序，以及刪除函數。

上層主題：[與 Cast Iron Express 整合](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_compositefu
nctions.html

使用複合函數

您可以將函數新增至現有複合、變更複合順序，以及刪除函數。

依預設，當登錄 Cast Iron® Express® 帳戶時，會停用此函數。若要使用這個額外函數，請按一下附加程式，並選取對映函數套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

請完成下列步驟，以將函數新增至現有的複合函數。

程序

1. 在整合頁面上，按一下想要編輯的整合。該整合會顯示在「整合」編輯器中，而先前選取的欄位會顯示在「轉換」視圖中。
2. 在「轉換」視圖中，從來源物件按一下欄位的錨點，然後按一下目標物件上欄位的錨點。這時會顯示「新增函數」圖示。
3. 按一下「新增函數」圖示，以檢視可用函數的清單。這時會出現顯示可用函數清單的「配置函數」蹦現視窗。

4. 在「配置函數」視窗中，按一下想要套用至對映的函數。如果函數允許編輯，或需要配置其他資訊，則會在其旁邊顯示「編輯」圖示 。
5. 按一下「編輯」圖示。這時會顯示含有「編輯組合」、「編輯來源欄位」和「編輯參數」視窗區段的蹦現視窗。
註：
 - 「編輯組合」視窗區段顯示可用的複合函數。
 - 「編輯來源欄位」視窗區段定義第一個複合函數的來源（輸入）。
 - 「編輯參數」視窗區段顯示您在「編輯組合」區段中所選取複合的已配置參數。
6. 在「編輯組合」視窗區段中，按一下連結。這時會出現顯示可用連結函數參數清單的下拉功能表。
7. 從下拉功能表中選取參數。這時會使用您選取的項目來更新視窗。
8. 按一下套用。這時會更新複合函數。
9. 在「整合」頁面上，按一下儲存以儲存整合。

這時會使用新的函數來更新複合函數。

註：因為 **subsequent** 函數接收到單一輸入，所以無法選擇需要兩個以上輸入的函數作為 **subsequent** 複合函數。此外，不容許嘗試在複合內建立複合函數，而且複合函數不會顯示為選項。

上層主題：[複合函數](#)

編輯組合函數

您也可以編輯組合來移動、刪除或變更函數的順序。

請完成下列步驟，以刪除或移動複合函數。

程序

1. 在整合頁面上，按一下想要編輯的整合。該整合會顯示在「整合」編輯器中，而先前選取的欄位會顯示在「轉換」視圖中。
2. 在「轉換」視圖中，從來源物件按一下欄位的錨點，然後按一下目標物件上欄位的錨點。這時會顯示「新增函數」 圖示。
3. 按一下「新增函數」圖示。這時會出現顯示可用函數清單的「配置函數」視窗。
4. 在「配置函數」視窗中，按一下想要套用至對映的函數。如果函數允許編輯，或需要配置其他資訊，則會在其旁邊顯示「編輯」圖示 。
5. 按一下「編輯」圖示。這時會顯示含有「編輯組合」、「編輯來源欄位」和「編輯參數」視窗區段的蹦現視窗。
6. 在「編輯來源欄位」，選取要刪除或移動的函數。請使用  圖示，或「上移」和「下移」箭頭來刪除函數，或將它上下移動。函數的來源（輸入）會修改或移至其新位置。
7. 完成時，請按一下套用。
8. 在「整合」頁面上，按一下儲存以儲存整合。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_workingwith_composites.html

函數清單

Cast Iron® Express® 可選取在對映內使用的函數。這些函數可以用來操作所對映的欄位值，例如，變更字串內容、對數字執行數值作業，以及操作日期和時間值。

依預設，當登錄 Cast Iron Express 帳戶時，會停用此函數。若要使用這個額外函數，請按一下附加程式，並選取對映函數套件。如需相關資訊，請參閱[新增函數至 Express 帳戶](#)。

表 1. 字串函數. 此表格列出和說明字串函數

對映函數	說明
連結	接受兩個以上的引數，並將它們強制轉型為字串。傳回轉換之後為其引數值連結的字串。使用者也可以配置字首和（或）字尾字串，以及將在每一個引數之間插入的定界字元。
長度	傳回等於引數值長度（以字元為單位）的整數。如果引數值是空序列，則會傳回整數 0。
小寫	將每個字元轉換為其小寫對應項目（定義於 Unicode 標準的適當大小寫對映小節中）之後，傳回引數值。
大寫	將每個字元轉換為其大寫對應項目（定義於 Unicode 標準的適當大小寫對映小節中）之後，傳回引數值。
取代	傳回透過下列作業所取得的字串：將輸入中符合所提供型樣的每一個非重疊子字串，取代為出現的取代字串。
開始於	傳回布林結果，指出第一個引數值的開頭是否為第二個引數的值。
字串	傳回以字串形式代表的引數的值。此值可以用來將數值資料類型強制轉型為字串，以防止對映顯示警告。
子字串	傳回在第二個引數值所指出位置開始的第一個引數值的部分，並持續第三個引數的值所指出的字元數。若為子字串，只有一個欄位作為函數的「輸入」。不過，若為函數，起始索引和長度值是配置於函數對話視窗中。在現有文字（和所有其他說明）中， <i>引數</i> 用於這兩種狀況中。
修整	傳回含有空格的引數值，該值是透過下列方式正規化：刪除前置和尾端空格，並將一系列一個以上空格字元取代為單一空格。

表 2. 數學函數. 此表格列出和說明數學函數

對映函數	說明
絕對值	傳回數字的數值（或模數），而不考慮其正負號。
平均值	傳回輸入順序中值的平均值（即值的總和除以值的數目）。
上限	傳回不小於 X 的最小整數。

對映函數	說明
除	傳回第一個引數除以第二個引數的結果值。
下限	傳回不大於 X 的最大整數。
格式	<p>format-number 函數會將它的第一個引數轉換為字串，方法為使用第二個引數所指定的格式型樣字串，以及第三個引數所指定的十進位格式，或是預設十進位格式（如果沒有第三個引數）。</p> <p>第二個參數的格式選項如下：</p> <ul style="list-style-type: none"> • 0 - 數字 • # - 數字（零顯示為不存在） • . - 小數點的位置。例如：###.## • , - 千位群組分隔字元。例如：###,###.## • % - 以百分比顯示數字。例如：##% • ; - 型樣分隔字元。第一個型樣會用於正數，第二個則是用於負數 <p>第三個參數的十進位格式可協助本地化數字，而且可以使用下列選項：</p> <ul style="list-style-type: none"> • 0 - 數字 • # - 數字（零顯示為不存在） • . - 小數點或貨幣小數點 • - - 減號 • , - 分組分隔字元 • E - 以科學記號表示法區隔假數與指數。字首或字尾中不需要加上引號 • ; - 區隔正數與負數子型樣 • % - 乘上 100，並以百分比顯示 • \u2030 - 乘上 1000，並以千分比值顯示 • ¤ (\u00A4) - 貨幣符號，取代為貨幣符號。如果加倍，則取代為國際貨幣符號。如果出現在型樣中，則會使用貨幣小數點，而不是小數點 • ' - 用來括住字首或字尾中的特殊字元。例如，'#'# 將 123 格式化為 #123。若要建立單引號本身，請連續使用兩個：# o'clock
上限	傳回傳遞為引數的節點的最大值。
下限	傳回傳遞為引數的節點的最小值。
模數	傳回模數，或第一個引數除以第二個引數之後的餘數值。
乘	傳回所有引數相乘的值。
數字	將引數轉換為十進位。
捨入	傳回最接近引數且沒有小數部分的數字。如果有兩個這類數字，則會傳回最接近正無限大的數字。
減	傳回第一個引數減去第二個引數的值

對映函數	說明
總和	傳回將引數中的值相加而取得的值。

表 3. 布林函數. 此表格列出和說明布林函數

對映函數	說明
布林	計算引數的有效布林值。
非	如果有效布林值為 false，則傳回 true，如果有效布林值為 true，則傳回 false。

表 4. 日期函數. 此表格列出和說明日期函數

對映函數	說明
日期時間 (日期)	第一個引數必須為日期格式，而第二個引數是時間格式。結果是引數中同時具有日期和時間的 DateTime 格式。
日期到字串 (日期)	<p>第二個引數是顯示如何格式化日期/時間的字串。下列重要字元會取代為日期/時間的各部分：</p> <ul style="list-style-type: none"> • yy - 年份的後兩位數。例如，1986 中的 86 • MM - 兩位數的月份 • dd - 兩位數的日期 • HH - 兩位數的小時 • mm - 兩位數的分鐘 • ss - 兩位數的秒鐘 <p>例如，如果已使用下列輸入參數呼叫「格式日期字串」函數：</p> <p>dateTime : 2012-02-22T16:18:00.852-08:00</p> <p>格式字串 : MM/dd/yyyy</p> <p>語言環境字串 : en_US</p> <p>將傳回下列字串 : 02/22/2012。</p> <p>如需「日期到字串」函數的相關資訊，請參閱 Studio 說明小節中的「格式化日期字串」主題。</p>
調整到時區 (日期)	<p>轉換 TimeDate 以保留特定時區，或轉換為無。例如，套用的時區是第二個引數：</p> <ul style="list-style-type: none"> • -10H - 減去 10 小時的時區 • +5H30M - 加上 5 小時 30 分鐘的時區 • 0H - 0 小時的時區

表 5. 公用程式函數. 此表格列出和說明公用程式函數

對映函數	說明
複合	鏈結一系列函數。

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/Integrations_ListOfFunctions.html

管理整合

Cast Iron® Express® 會將帳戶中定義所有整合的清單顯示在「整合」頁面上。

此清單包含每一個整合的名稱、前次更新整合的日期和時間，以及執行前次變更的登入名稱。

也會顯示整合的現行狀態：

- 執行中。整合會繼續執行，直到停止。
- 已停止。依預設，當定義整合時，狀態為已停止。您必須按一下已停止，才能執行整合。當整合狀態顯示為已停止時，不會對目標系統進行更新。

您可以按一下刪除圖示來移除整合。您必須先確認刪除，然後才能採取任何動作。

- [修改整合](#)
您可以隨時在「整合」頁面按一下清單中的名稱來修改整合。
- [刪除整合](#)
您可以隨時從整合頁面刪除整合。

上層主題：[與 Cast Iron Express 整合](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_ManagingIntegrations.html

修改整合

您可以隨時在「整合」頁面按一下清單中的名稱來修改整合。

「整合編輯器」會顯示前次儲存的整合。您可以變更整合的配置，但「來源」和「目標」系統類型除外。

使用者可以變更

- 「來源」或「目標」系統的整合「連線」詳細資料名稱。
- 用於與「來源」和「目標」系統連接的作業。
- 與整合互動的物件。
- 整合所使用的欄位清單。
- 「來源」和「目標」系統之間的轉換。

完成時，請按一下儲存。如果整合處於「執行中」狀態，則會先停止，然後更新並重新啟動

上層主題：[管理整合](#)

[意見](#) | [注意事項](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_ModifyingIntegrations.html

刪除整合

您可以隨時從整合頁面刪除整合。

程序

1. 按一下刪除圖示 
2. 按一下確定。如果整合在「執行中」狀態，則會先停止，然後刪除。

上層主題：[管理整合](#)

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_DeletingIntegrations.html

監視整合活動

您可以使用 Cast Iron® Express® 活動頁面，來查看您帳戶內所有活動的詳細資料。

活動頁面會顯示許多不同類型的事件：

- 整合建立、修改及刪除。
- 整合所執行的工作。工作是從「來源」系統傳過來資料的單一實例，經過轉換，然後推送至「目標」系統。
- 詳述帳戶潛在問題的警示。比方說，如果執行中的整合沒有可用的安全連接器，則會顯示警示，指出必須先啟動安全連接器，才能執行任何工作。

您可以按一下頁面頂端的三個按鈕，來過濾「活動」資訊來源。選項包括：

- 所有活動，在一份清單中顯示所有不同類型的活動訊息。
- 整合活動，只顯示與系統中執行的工作有關的活動訊息。
- 警示，只顯示可能需要使用者介入的警告和錯誤。

「活動」頁面會先顯示最近的訊息。

此清單在每次「活動」頁面開啟時會自動更新，且每隔 60 秒會在背景中自動更新，以確保提供最新的資訊。

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/integrations_MonitoringIntegrationActivity.html

使用率圖表

使用率圖表可讓您快速識別特定租戶的最活躍整合和端點。工作成功和失敗的摘要以及整合活動細分，會以月和年圖表呈現。

從整合頁面中，按一下圖表圖示來開啟圖表顯示畫面：

若要關閉使用率圖表顯示畫面，請再次按一下圖表圖示。

您可以使用左移及右移箭頭，來捲動各種使用率圖表：

- 過去三十天前幾個最為活躍的整合
- 過去三十天前幾個最為活躍的端點
- 過去十二個月活動總計

每 60 秒會重新整理使用率圖表中所顯示的資訊。

過去十二個月活動總計圖表的範例會顯示在下列畫面擷取中：

過去三十天前幾個最為活躍的整合

此圖表提供在過去 30 天期間已處理大部分工作之整合的相關資料。前十個整合會以活動順序顯示在圖表中：最活躍整合是在圖表的頂端，並往下遞減，而最不活躍整合則在圖表的底端。針對前十個整合的每一個整合，圖表會

進一步細分成功工作（以綠色條欄代表）和失敗工作（以紅色條欄代表）的總數。按一下綠色或紅色條欄，即可查看其他詳細工作資訊。

過去三十天前幾個最為活躍的端點

此圖表提供在過去 30 天期間已處理大部分工作之端點的相關資料。圖表會將最活躍的端點顯示在頂端。針對每一個端點，圖表會進一步細分成功工作（以綠色條欄代表）和失敗工作（以紅色條欄代表）的總數。按一下綠色或紅色條欄，即可查看其他詳細工作資訊。

過去十二個月活動總計

此圖表提供特定租戶在最後 12 個月期間發生之所有整合活動的視圖。所有在最後 12 個月發生的整合活動都會以月間隔顯示。按一下特定條欄，以取得該月之成功和失敗呼叫細分的其他詳細資料。

指導教學

下列指導教學提供如何建立整合的範例。您可以使用這些資訊，在 Cast Iron® Express® 帳戶內快速建立整合。

- [指導教學：建立本端檔案與 salesforce.com 的整合](#)
您可以建立並執行與 IBM® Cast Iron Express 的整合。此指導教學說明如何建立從本端檔案到 salesforce.com 帳戶的整合。您可以在單次作業中快速定義整合，並上傳您的資料。

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.omniapps.doc/tutorials.html>

指導教學：建立本端檔案與 salesforce.com 的整合

您可以建立並執行與 IBM® Cast Iron® Express® 的整合。此指導教學說明如何建立從本端檔案到 salesforce.com 帳戶的整合。您可以在單次作業中快速定義整合，並上傳您的資料。

步驟 1：建立整合

在登入 Cast Iron Express 之後，請按一下整合。當「整合」視圖開啟時，選取您的來源與目標端點來建立整合。

提示：當建立及定義整合時，您可能想要定期按一下儲存。因此，如果您遭遇 Web 瀏覽器問題，或由於閒置而登出 Cast Iron Express，則您的工作將不會失去。

對於此指導教學，請選取本端檔案作為「來源」，以及 salesforce.com 作為「目標」。

Create

To start building an integration, choose your source and target endpoints from the selection below, then click the 'New Blank Integration' button

Source

Local File

Target

salesforce.com

New Blank Integration

按一下「目標」選項下顯示的新建空白整合。

這時會顯示大綱整合，必須在其中定義「來源」、「轉換」及「目標」。數字指出整合定義順序：

1. 定義來源端點
2. 定義目標端點
3. 將來源端點中的資料路徑對映至目標端點來定義轉換

Local File to salesforce.com Save Close

1 Source Edit **3 Transformation** **2 Target** Edit

Step 1: Define the Source ✕

Click on the title bar or the number to expand the source definition pane, fill in the details for the connection you want to use, and select to object and fields that you would like to integrate.

Step 3: Map the Data ✕

The middle panel is used to map the data between the source and target that you've selected. Come back to this step once you have filled in the Source and Target to complete your integration.

Step 2: Define the Target ✕

Click on the title bar or the number to expand the target definition pane, fill in the details for the connection you want to use, and select to object and fields that you would like to integrate.

步驟 2：配置端點

在來源標頭中，按一下編輯。

來源端點配置視圖即會開啟。

按一下選取檔案，並選擇您要從中上傳資料的本端檔案。檔案必須是以定界字元區隔的檔案。

對於此指導教學，我們正在使用名稱為 *accounts.csv* 的檔案。

此檔案包含部分帳戶資訊，並包括一個稱為 "id" 的欄位，可唯一識別檔案中的每一筆帳戶記錄。這裡包括所使用 *accounts.csv* 檔案的內容：

```
id,name,streetAddress,city,postcode,phoneNumber
0,AcmeCo,10 Downing Street,London,SW1A 2AA,02012345678
1,MyOtherCompany,221b Baker Street,London,SW2B 3FG,020654321
```

1 Source

Step 1: Upload File

Select a file from your local File System below. Your file will then be uploaded to our servers, and you will be able to begin selecting what fields to use.

accounts.csv [Change](#)

Load Fields >

如果想要選取不同的檔案，請按一下變更。

按一下載入欄位，並驗證自動產生關於所選取檔案的詳細資料。例如，檔案中使用的定界字元。

對於此指導教學，*accounts.csv* 檔案會使用逗點作為定界字元。另外，剩餘的欄位可以保留其預設值。

Local File to salesforce.com **Save**

1 Source **Done**

name	xy	AcmeCo
streetAddress	xy	10
city	xy	London
postcode	xy	SW1A 2AA
phoneNumber	xy	0201234

3 Transformation

Step 3: Map the Data ✕

The middle panel is used to map the data between the source and target that you've selected. Come back to this step once you have filled in the Source and Target to complete your integration.

2 Target Edit

Step 2: Define the Target ✕

Click on the title bar or the number to expand the target definition pane, fill in the details for the connection you want to use, and select to object and fields that you would like to integrate.

現在您可以定義目標端點。

在目標標頭中，按一下編輯。輸入登入 salesforce.com 所需的認證。

這些認證即會進行驗證，如果正確，您會登入 salesforce.com 帳戶。會列出您可在整合中使用的可用商業物件。

對於此指導教學，從物件清單中選取 Account。Account 物件的說明會呈現在「可用的欄位」區段中，其會顯示 Account 物件中的所有欄位。

註：您可以從本端檔案選取感興趣，而且想要與資料一起載入的欄位。您不必整合整個物件，只需整合定義的必要欄位。

使用「作業」選項，為您的整合指定所想要資料作業的環境定義。

對於此指導教學，請選取更新物件作為作業。當整合執行中時，它會自動更新 salesforce.com 中選取的「帳戶」欄位。

選取下列畫面擷取中顯示的必要「帳戶」欄位：

2 Target

Existing Connections

Operations: Update objects

Connection information

Name *

Username *

Password *

Security token *

Connect

Available Objects

- Account
- AccountContactRole
- AccountFeed
- AccountHistory
- AccountPartner
- AccountShare
- ActivityHistory
- AdditionalNumber
- AggregateResult
- ApexClass
- ApexComponent
- ApexLog
- ApexPage
- ApexTrigger
- Approval
- Asset
- AssetFeed
- AssignmentRule
- AsyncApexJob
- Attachment

- BusinessHours

Available Fields Select All | Clear All

Field	Type
Id *	tns:ID
IsDeleted	xsd:boolean
MasterRecordId	SalesForce.ct
Name	xsd:string
Type	xsd:string
ParentId	SalesForce.ct
BillingStreet	xsd:string
BillingCity	xsd:string
BillingState	xsd:string
BillingPostalCode	xsd:string
BillingCountry	xsd:string
ShippingStreet	xsd:string
ShippingCity	xsd:string
ShippingState	xsd:string
ShippingPostalCode	xsd:string
ShippingCountry	xsd:string
Phone	xsd:string

完成時，請按一下完成。

會針對此整合定義目標端點。

您會回到整合概觀。這時會以 salesforce.com 中選取的「目標」欄位更新整合。

Source			Transformation	Target		
Field	Type	Sample		Field	Type	Result
File		...		Account		
Record		...		Account		
id	xy	0	●	Id *	xy	[↻]
name	xy	AcmeCo	●	Name	xy	[↻]
streetAddress	xy	10	●	BillingStreet	xy	[↻]
city	xy	London	●	BillingCity	xy	[↻]
postcode	xy	SW1A 2AA	●	BillingPostalCode	xy	[↻]
phoneNumber	xy	02012345	●	Phone	xy	[↻]

在整合概觀中，現在您可以同時看到準備對映的來源及目標欄位。

步驟 3：定義轉換

若要完成整合，您必須將欄位從來源對映至目標。

根據需要，連接來源及目標欄位。對於每一個來源欄位，請按一下錨點，然後按一下對應的目標欄位錨點。

在此指導教學中，您會將來源欄位中的資料對映至目標欄位，如下列畫面擷取所示。您不需要對資料定義函數。

Source			Transformation	Target		
Field	Type	Sample		Field	Type	Result
File		...		Account		
Record		...		Account		
id	xy	0	● — (+) — (x)	Id *	xy	0 [↻]
name	xy	AcmeCo	● — (+) — (x)	Name	xy	Acm... [↻]
streetAddress	xy	10	● — (+) — (x)	BillingStreet	xy	10 ... [↻]
city	xy	London	● — (+) — (x)	BillingCity	xy	Lon... [↻]
postcode	xy	SW1A 2AA	● — (+) — (x)	BillingPostalCode	xy	SW... [↻]
phoneNumber	xy	02012345	● — (+) — (x)	Phone	xy	020... [↻]

在關於轉換的指導教學中，涵蓋如何定義函數及更複雜的轉換。

輸入代表整合的有意義名稱。例如，Local File Accounts to salesforce.com Account。

Local File Accounts to salesforce.com Account	Save	Close
---	------	-------

按一下儲存來儲存已完成的整合。然後，按一下關閉以回到「整合」視圖。

「整合」視圖列出所有已定義的整合及其現行狀態。

Integrations

Name	Updated	Status	Actions
Local File Accounts to salesforce.com Account <small>LOCAL FILE SALESFORCE.COM</small>	Sep 11, 2012 12:41:37 PM by admin@CompanyName	Stopped	<input type="button" value="Run"/>  accounts.csv Change

步驟 4：執行整合

既然已定義整合，您必須執行整合，將來源端點中的資料複製到目標端點。

按一下您所建立整合右側顯示的執行。

即會執行整合，而且可透過單次作業，將資料從您定義的來源本端檔案上傳至定義的目標 salesforce.com 物件。

整合狀態會變更為執行中：

Integrations

Name	Updated	Status	Actions
Local File Accounts to salesforce.com Account <small>LOCAL FILE SALESFORCE.COM</small>	Sep 11, 2012 12:41:37 PM by admin@CompanyName	Running...	<input type="button" value="Run"/>  accounts.csv Change

您可以按一下活動 > 整合活動，以檢視最近的 Cast Iron Express 整合活動。這時會顯示活動，而且最新的活動會位於清單頂端。

對於此指導教學，下列畫面擷取顯示已完成的整合詳細資料。

12 All Activity	4 Integration Activity	0 Alerts
Integration Local File Accounts to salesforce.com Account completed Job 8211C9A1B1A89AC337CB654A34E64B42 at 2012-09-08 13:40:19.728 08 September 2012 14:40:21		

若要驗證是否順利完成整合，請跳至目標系統並檢查是否已傳來資料。

當整合完成時，順利完成整合的確認通知也會立即顯示在視圖的下半部。

 Integration Local File Accounts to salesforce.com Account completed Job 8211C9A1B1A89AC337CB654A34E64B42 at 2012-09-08 13:40:19.728

名詞解釋

本名詞解釋包含 Cast Iron® Express® 的術語及定義。

- **組合 (Bundles)**
組合是指端點的集合。
- **連線 (Connection)**
可共同用來建立與來源或目標之間連線的內容集 (DB 使用者名稱、密碼、伺服器、埠等)。
- **端點 (Endpoint)**
代表外部系統的內容，例如資料庫伺服器、FTP 伺服器、電子郵件系統，或是企業應用程式。這可以作為「整合設備」的資料來源，或者「整合設備」的處理目標。
- **欄位 (Fields)**
物件/表格/檔案的內容 (視環境定義而定)。
- **函數 (Functions)**
用於操作資料的簡式 XSLT 樣式函數。例如 move、concat、not 或 max。
- **整合 (Integration)**
處理活動 (如資料對映、轉換及控制邏輯活動)、端點，以及使用 Cast Iron Express 所定義及配置資料類型的特定順序。
- **作業 (Operations)**
在轉換期間已使用的動作。在來源端，這些動作為過去式，例如已建立、已更新、已刪除或已更新並插入。在目標端，這些動作為主動語態，例如建立、更新、刪除或更新並插入。
- **來源**
位於整合左側的原始端點。
- **目標**
位於整合右側的目標端點。
- **轉換 (Transformation)**
將進行中的資料從來源格式轉換成目標格式的程序定義。這可能 (也可能不) 包括查閱、過濾及函數。

 Last updated: Wednesday, February 17, 2016

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/About_the_Cloud/toc_about_the_cloud.html

About Environment Dashboards

An environment dashboard provides multiple snapshot views of project configurations and jobs, a list of unresolved critical system errors, and an overall project configurations summary, and status of Secure

Connectors. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

To expand the views of the Critical Alerts and Secure Connector Summary, click the icon in the upper right corner. An expanded view of Project Configuration is available by selecting Repository > Configurations from the navigation pane. An expanded view of Results is available by selecting Repository > Job Log from the navigation pane.

A dashboard is available for each environment in a multi-environment cloud. The information the dashboard displays is specific to its environment.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/About_the_Cloud/aboutDashboard.html

About the Cloud

The IBM® WebSphere® Cast Iron® Cloud (Cloud) administrator provisions a tenant for your organization and can create multiple environments for you to deploy your projects in. The Cloud administrator also provides a username and password for the tenant administrator.

After the tenant, and any environments are created, it is the tenant administrator that creates users and groups, and manages environments in the tenant.

Cloud Tenants

The IBM WebSphere Cast Iron Cloud (Cloud) supports multiple organizations (tenants). Each cloud tenant is managed by a tenant administrator. The tenant administrator creates and manages users and groups, for a specific cloud tenant.

Contact Cast Iron Systems for a tenant administrator login. After the Cast Iron administrator creates a tenant, the administrator sends you the tenant administrator login and cloud URL.

Cloud Environments

The Cloud supports multiple environments for each tenant. The environments allow you to stage project development or isolate project development.

For example, you can have a Development, Staging, and Production environment. These environments display as tabs in the Cloud Web Application. While the Cloud administrator, not the tenant administrator, creates these environments for each tenant, it is the tenant administrator that grants permissions to individual users/groups for each environment.

Note: Some connectors require you to install 3rd party libraries before you can deploy a project to an environment. In a multi-environment tenant, verify that the environment to which you deploy a project has all

required libraries installed.

Note: To use Studio Verify in a multi-environment tenant, you must specify the environment from which Studio will retrieve connector libraries.

For example, SAP libraries are installed in the Development environment and Production environment. You specify the Development environment in your user profile. When you execute Studio Verify for your SAP project, Studio uses the libraries in the Development environment. You can then chose to deploy your project to the Development environment or Production environment.

To specify the environment from which Studio Verify retrieves connector libraries:

1. Click your username, located in the upper right corner of the console. The User Profile dialog is displayed.
2. Click Change Libraries Environment.
3. Select a libraries environment from the list.
4. Click Save.

Studio Cloud

In addition to the desktop version of Studio, you can launch and work with the Studio directly in the Cloud. This cloud version of Studio (Studio Cloud) allows you to create and deploy projects from the cloud.

Functionally, Studio Cloud is similar to Studio Desktop with a few differences listed here:

- The Recently Opened Project option is not available in Studio Cloud.
- The Save Remotely toolbar is not available in Studio Cloud, but is available in Studio Desktop when you are logged in to the Cloud.
- For Studio Cloud, when you select Save As Project [Cloud] or Rename Project [Cloud], the wizard does not display the location on the local file system where the wizard saves a project.
- Instead of a New Project option, Studio Cloud has a New Project Local option. The new option creates a new project on the local file system.
- Instead of a Open Project option, Studio Cloud has an Open Project Local option. The new option opens a project from the local file system.
- Instead of the Save Project option, Studio Cloud has two new options, which depend on whether you are logged in. If you are logged in, the Save Project [Cloud] options saves projects to the cloud. If you are not logged in, Save Project [Local] saves the project locally.
- Instead of the Save As option, Studio Cloud has a Save As to Local option.
- In Studio Cloud, you can select the Save As To Cloud option, which saves a copy of a project to the cloud.
- Instead of Rename Project, Studio Cloud has two new options, which depend on whether you are logged in. If you are logged in, the Rename Project [Cloud] option renames the project locally and remotely. If you are not logged in, the Rename Project [Local] option only renames the project locally.

Cloud TIPs Wizard

You can now access the TIP Wizard in the Cloud. The TIP Wizard steps you through an integration project template to help you quickly build your own integration project.

The Cloud Management Console allows you to search all the templates available in the Solutions Repository. When search results are returned, a check mark in the Certified column of the Solutions page identifies templates that Cast Iron has tested and certified. User rating information is also available in the Template Details pane. The final step in the TIP Wizard allows you to rate the template.

To launch the TIP Wizard:

1. In the cloud, select the Create tab. The Solutions page is displayed.

2. In the Search Templates by keyword(s) field, enter a keyword. For example: SAP.
3. Click Search. All templates that match the keyword display.
Note: You can select the Advanced Search option to filter templates by first endpoint or second endpoint.
4. Click the appropriate template. The Templates Details pane is displayed.
5. Click the Create a Project Based on this Template link.

Secure Connector

The Secure Connector allows you to access the cloud using endpoints that sit behind your internal firewalls and transfers data using a secure protocol.

Navigating the Management Console

The Management Console is a web-based tool that allows you to manage and monitor the various systems and resources of your integration environment. This environment can be a physical Integration Appliance or an environment in the WebSphere® Cast Iron® Cloud.

The navigation pane on the left of the Management Console displays a menu of pages that allow you to view, configure, and take actions on various systems and resources.

The back and forward buttons on browsers do not allow you to move through the Management Console pages in the order which you opened them. Use the back and forward arrows in the top right corner of the

Management Console to move through the Management Console pages in the order you opened them.

The user that is currently logged in is also displayed in the top right corner. Click the username to open the User Profile window.

Managing Cloud Instances

Managing Cloud Instances topics provide information about installing 3rd party libraries and scheduling downtimes.

- [Downloading and Installing SAP JAR Files and DLLs](#)
- [Installing Vendor Supplied Libraries](#)
- [Scheduling Downtime](#)

[Feedback](#) | [Notices](#)

Downloading and Installing SAP JAR Files and DLLs

Before you begin

You must have an SAP User ID and password to enter the SAP Support Portal to download the files.

About this task

In order to connect to an SAP system, you must install SAP DLLs and JAR files onto your development environment.

To download and install the SAP jar files and DLLs:

1. Contact SAP Technical Support to obtain the zip files for the following SAP Components:
 - o If the secure connector is running on Windows:
 - SAP 32 bit JCo version 3.0.10 or later versions - Windows
 - SAP Java IDoc Class Library 3.0.10 or later versions
 - o If the secure connector is running on Linux:
 - 32 bit SAP JCo 3.0.10 or later versions - Linux (for Intel compatible processors)
 - SAP Java IDoc Class Library 3.0.10 or later versions
2. Unzip the SAP JCo zip file:
 - o Double-click the `sapjdoc30P_x-1000xxxx.zip` file.
 - o Use the decompression tool to extract the contents of the compressed file to a temporary directory. This zip file contains another zip file `sapjco3-NTintel-3.0.x.zip`. Extract this zip also to a temporary directory, for example, in Windows: `C:\temp\sapjco3-NTintel-3.0.x`. This directory contains the required libraries `sapjco3.jar` and `sapjco3.dll`. For example in Linux: `/tmp/sapjco-linuxintel-3.0.x`. This directory contains the required libraries `sapjco3.jar` and `libsapjco3.so`.
3. Unzip the SAP IDoc JCo zip file:
 - o Double-click the `sapjdoc30P_x-1000xxxx.zip` file.
 - o Use the decompression tool to extract the contents of the compressed file to a temporary directory, for example, `C:\temp\sapjdoc30P_x-1000xxxx`. This directory contains the required library `sapidoc3.jar`.

Procedure

1. Log on to the Management Console and select System > Connectors. The Connectors page is displayed.
2. Click Update Libraries. The Update Connector Libraries window is displayed.
3. Select SAP in the Connector column.
4. Click the plus (+) button and repeat the following substeps until you have imported all the jar files you just downloaded.
 - a. Locate one of the jar files you just downloaded.
 - b. Click Open to import the jar file. The file displays in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Management Console does not add the files you uploaded. If the

Management Console times out before you click Update and commit the added files, repeat the last two steps.

Results

You can now run SAP projects.

Parent topic: [Managing Cloud Instances](#)

[Feedback](#) | [Notices](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Integration_Appliances/downloadingInstallingSAPfiles.html

Installing Vendor Supplied Libraries

About this task

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

If you have a multi-environment tenant, you must install the 3rd party libraries in each environment where you deploy a project configuration with a connector that requires the additional libraries.

For example, you have a tenant with three environments: Development, Staging, and Production. You publish a project configuration for an SAP endpoint in the Development and Production environments. Before you can deploy the project configuration, you must install additional SAP libraries on both the Development and Production environments.

Procedure

1. Click an environment tab.
2. Select System > Connector Libraries to open the Update Connector Libraries page.
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed display in the Installed Files column.

4. Click the (+) icon and select the library file or files to upload. In the cloud, .jar and .dll are valid library files types. The files you select display in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Cloud Management Console does not add the files you uploaded. If the Cloud Management Console times out before you click Update and commit the added files, repeat the last two steps.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Integration_Appliances/installing3rdPartyLibraries.html

Scheduling Downtime

About this task

Scheduling downtime allows you to perform maintenance on an environment or related system. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals. You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

By default, downtime rules are stored in GMT time zone. If an administrator modifies the system clock from GMT to another time zone, downtime rules are executed at the same absolute time. For example: You create a downtime rule to stop all orchestration between 4:00pm - 4:15pm GMT. The administrator then modifies the system clock to display PDT. Your downtime rule is modified to now stop all orchestration between 8:00am - 8:15am PDT. To execute the downtime rule at 4:00pm - 4:15pm PDT, you must edit the downtime rule. Times differences caused by daylight savings are automatically adjusted.

If the environment is offline when a downtime rule is scheduled to occur, all unexecuted rules are identified and executed in the appropriate order when the environment returns online. After all the backlogged downtime rules are executed, you regain control to modify the deployment state of a project configuration.

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtimes section, click New Rule. The New Downtime Rule dialog box is displayed.
4. Select one of the following actions from the list:
 - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows all jobs to end.
 - o **Stop (cancel running jobs)** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
 - o **Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.
5. Specify the duration of the downtime by specifying a date and time for Start Downtime and End Downtime.
6. Optional: Select the Repeat option to create a repeat downtime rule.
 - a. Specify a repeat interval (numeric value).

- b. Specify frequency from the list: Days, Weeks, Months, or Years.
7. Click Save.

Results

The new downtime rule displays in the Scheduled Downtimes section and the Scheduled Downtime counter increases by one.

Parent topic: [Managing Cloud Instances](#)

Edit Downtime Rules

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtime section, click the downtime rule you want to edit. The Edit Downtime Rule is displayed.
4. Select one of the following actions from the list:
 - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows all jobs to end.
 - o **Stop (cancel running jobs)** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
 - o **Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.
5. Specify the duration of the downtime by specifying a date and time for Start Downtime and End Downtime.
6. Optional: Select the Repeat option to create a repeat downtime rule.
 - a. Specify a repeat interval (numeric value).
 - b. Specify frequency from the list: Days, Weeks, Months, or Years.
7. Click Save.

Deleting Downtime Rules

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtime section, select the downtime rule you want to delete. The Delete Rules confirmation window is displayed.
4. Click Yes.

Results

The downtime rule no longer displays.

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Orchestrations/toc_managing_orchestrations.html

About Orchestration Settings

Orchestration settings allow you to configure properties for individual orchestrations in a project configuration. For each orchestration you can specify whether the orchestration is enabled, the logging levels, logging behavior, and the maximum number of jobs that the orchestration can simultaneously run.

When a project configuration is undeployed you can edit the following orchestration settings:

Orchestration Settings	Description
Enabled	Indicates whether an orchestration is enabled and can be deployed. At least one orchestration in a project configuration must be enabled to deploy a project configuration. By default, all orchestrations in a project configuration are enabled.

Orchestration Settings	Description
Logging Level	<p>Allows you to specify the level of orchestration details that are logged in the System Logs.</p> <ul style="list-style-type: none"> • None - Orchestration status and activity are not logged. • Initial Values - Only the initial values of orchestration variables are logged. • Initial and Error Values- Both the initial values of orchestration variables and orchestration errors are logged. • Error Values- Only orchestration errors are logged. • Inline - Orchestration job details are logged for suborchestrations inline with the job details of the calling orchestration. • All- The highest level of logging. All orchestration activity is logged.
Log Synchronously	<p>Allows the runtime to synchronize the writing of orchestration events to the orchestration monitoring logs as the orchestration is running.</p> <p>By default, this orchestration setting is disabled and orchestration jobs are not synchronously logged.</p> <p>Note: When you enable this orchestration setting, the time it takes to process an orchestration job increases.</p>
Max Simultaneous Job	<p>Allows you to specify the number of orchestration jobs that can run simultaneously.</p>

Editing Orchestration Settings

Before you begin

To edit orchestration settings, the project configuration must be undeployed.

Tenant administrators, environment administrators (for the environment where the project is published), and publisher of a project can edit its orchestration properties.

About this task

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration- the user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

Procedure

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
 - o **Finish Jobs** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allow the jobs to end.
 - o **Cancel Jobs** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Undeploy the project Configuration, by clicking the  Undeploy icon in the Action Column.
5. Click the project configuration you want to edit. The Configuration Details page displays.
6. In the Orchestration section, click Edit to edit the orchestration settings. The Edit Orchestration Settings window is displayed.
7. Click Save.
8. Deploy the project configuration to begin processing orchestration jobs.

Results

The updates you made display in the Orchestration section of the Configuration Details page and the runtime processes the orchestration as specified.

About Naming Projects and Configurations

Project and project configuration names cannot be longer than 42 characters. When you create a project or project configurations avoid using the following list of reserved characters.

Reserved Characters	Description
' & '	ampersand
' { ' ' } ' ' [' '] ' ' < ' ' > '	any brackets
' * '	asterisk
' \ '	backslash
' ^ '	caret
' : '	colon
' \$ '	dollar sign
' / '	forward slash
' # '	number sign
' () '	parenthesis
' '	pipe
' . '	period
' ? '	question mark
' ; '	semicolon
' ' '	space

Reserved Characters	Description
' ~ '	tilde

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Projects/aboutNamingProjects.html

About Project Configurations

Project configurations allow you to create multiple variations of the same integration project, so you can create and publish one project and deploy it to many different scenarios. Within a project configuration you can specify which orchestrations are enabled, modify configuration properties for endpoints, generate or modify assets, manage scheduled downtime rules, and control permissions for the project configuration.

Each project you publish has a Default project configuration. In the Management Console, you can create additional project configurations. The project name, project version, configuration name, and project state uniquely identify each project configuration.

You must have Administrator privileges or be the publisher of the specific project to create, edit, and delete project configurations. Administrators and publishers can grant users and groups permissions that allow them to create, edit, and delete project configurations.

Enabling and Disabling Orchestrations

The runtime only runs orchestration jobs for enabled orchestration. Before you can deploy a project configuration, the project configuration must contain at least one enabled orchestration. By default, all orchestrations are enabled.

Specifying the orchestration logging level allows you to control the type of orchestration errors that are written to the system logs. The Management Console also allows you to limit the number of jobs that run simultaneously. The number of jobs that run simultaneously can affect performance.

You must have administrator or publisher permissions to specify orchestration properties.

Understanding Configuration Properties

You create these configuration properties for a project in Studio. For more information about creating project properties and specifying a project version, see the Studio online help.

When you publish the project, you can specify values for the configuration properties. The values you specify for the configuration properties determine how the project is deployed. For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

You must have administrator or publisher permissions to edit configuration properties in the Management Console.

Modifying Assets

If your project configuration contains a database or WebServices endpoint, you must generate assets before you can deploy the project configuration. If your project does not contain a database or WebServices endpoint, assets are irrelevant to your project configuration.

You must have administrator or publisher permissions to generate or modify assets.

Scheduling Downtimes

Scheduling downtime allows you to perform maintenance. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals.

You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

Editing Project Configuration Permissions

As an administrator or project publisher, you can grant permissions for project configurations to other users and groups. When you grant users or groups permissions to a project configuration they are able to create, edit, and delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher. For more information, see [Granting Project Configuration Permissions](#).

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Projects/aboutProjectConfigurations.html

About Projects

Projects contain components that the runtime needs to execute an integration scenario: orchestrations, endpoints, maps, and other documents. Use Studio to create and test projects without being connected to an integration environment.

Multiple people can publish multiple projects to the same integration environment. Use Studio to publish projects to an integration environment or export projects to a staging location. You can later use the

Management Console to upload the exported project. You must have Administrator or Publisher privileges to publish or upload a project to the integration environment.

When you publish a project from Studio, the Management Console displays the project with default project settings; creating a default project configuration. You can clone this default project configuration to create new project configurations, which you can configure for separate development and production environments.

Use the Studio to create projects and specify endpoint configurations properties and then use the Management Console to specify project configurations and deploy project configurations.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Projects/aboutProjects.html

Cloning Project Configurations

Before you begin

You must have Administrator privileges or be the publisher of a project to clone project configurations.

About this task

Project configurations contain properties and assets that you can configure in the Management Console to create multiple variations of the same integration project. When you create a new configuration you can choose to clone an existing project configuration. A cloned project configuration inherits all the configurations from the original project configurations. However, if you edit the original configuration project, the changes are not propagated to the cloned project.

Note: The project configuration you clone does not display on the Favorites view, unless you explicitly add the project configuration to the view.

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. From the Configuration Filter list, select All. All project configurations display.
3. Locate the project configuration you want to clone.
4. Click the Clone icon . The Create Project Configuration dialog box is displayed.
5. Provide a unique name for the new project configuration.
6. Click OK.

Results

The cloned project configuration is displayed on the Project Configurations page. The cloned project has all the same project configuration details as the original project configuration.

Copying Projects

About this task

The Management Console allows you to copy a project by assigning a new version number to an existing project.

Procedure

1. Click the Modify tab. The Projects page is displayed.
2. Click the project you want to copy. The Copy Project dialog is displayed.
3. Enter a new project version. The version number can contain a decimal.
4. Click Save.

Results

The copy of the project is displayed in alphabetical order in the Projects page.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Managing_Projects/copyingProjects.html

Creating Projects From Scratch

About this task

You can create a project from scratch in the cloud.

Procedure

1. Click the Create tab. The Solutions page is displayed.
2. Click Create One From Scratch. The Create Project dialog box is displayed.
3. Specify a unique project name.
4. Click Save. The project displays in the Projects page of the Modify tab.

Results

You can now take edit, publish, delete or copy your project. Select the project to view the project details and assign permissions to your project. If you do assign permissions, click Save to save your updates.

Project details include the environment to which the project configuration was published, a timestamp of the last time you published the project, and the current state of the project configuration. For example: deployed.

Creating Projects From a Template

About this task

You can create a project from a template. Templates are stored in the Solutions Repository. All users can create a template solution and upload it to the Solutions Repository.

Note: Not all templates in the Solutions Repository are certified. The templates that are certified are denoted with a Cast Iron® logo.

Procedure

1. Click the Create tab. The Solutions page is displayed.
2. Search for a template.
 - a. Select a source endpoint.
 - b. Select a target endpoint.
 - c. Click Search

You can also select the Keyword Search option to search for a template using a keyword.

3. Choose a template from the solutions that are returned. The template details are displayed.
4. Click Create a project based on this template. Studio Cloud opens and the wizard guides you through the process of creating your project.

Deleting Project Configurations

Before you begin

The publisher of a project configuration, the environment administrator, or tenant administrator can delete project configurations. The publisher of a project configuration can grant permissions that allow other users to delete his project configuration. The environment administrator can grant permissions that allow other users to delete any project configuration in the environment. The tenant administrator can grant permissions that allow other users to delete any project configuration in the tenant.

Project configurations must be undeployed before you can delete them.

About this task

When you delete a project configuration, all monitoring history associated with the project configuration is also deleted.

Procedure

1. Select the environment tab, where the project configuration is published. A list of project configurations is displayed in the Project Configuration section of the Dashboard.
2. Verify that the project configuration you want to delete is undeployed. The state displays in parentheses () at the end of the project configuration name. For example, (undeployed)
3. If the project configuration is in any other state but undeployed, undeploy the project configuration by clicking the Undeploy icon in the Actions column.
4. In the Actions column, click the Delete icon. The Delete Project Configuration dialog box is displayed.
5. Click Yes.

Results

The project configuration is deleted and no longer available.

Parent topic: [Managing Projects](#)

Deleting Projects

Before you begin

The publisher of a project, the environment administrator, or tenant administrator can delete projects. The publisher of a project can grant permissions that allow other users to delete his project. The environment administrator can grant permissions that allow other users to delete any project in the environment. The tenant administrator can grant permissions that allow other users to delete any project in the tenant.

Procedure

1. Select the Modify tab. The Projects page displays a list of projects that can be published.
2. In the Actions column, click the Delete icon. The Delete Project? dialog box is displayed.
3. Click Yes.

Results

The project is deleted; however, any project configurations created from this project are still available.

Deploying Project Configurations

Before you begin

To deploy or undeploy project configurations, you must have tenant administrator or environment administrator privileges, or be the publisher of the project configuration.

About this task

The type of endpoint in an orchestration determines the steps you must complete to deploy a project configuration. A project configuration must contain at least one enabled orchestration before you can deploy the project configuration. If the orchestration contains a database or Web Services endpoint, you must also generate assets for the endpoints before you can deploy the project configuration.

By default, all the orchestrations in a project configuration are enabled. Therefore, if the orchestrations in a project configuration do not require additional configuration and do not access database or Web Services

endpoints, you can deploy your project configuration by clicking the deploy icon next to the project configuration in any of the Project tabs. If your project configuration requires assets or additional configuration, see the following deployment procedure.

Note: A project configuration must be in the stopped state for you to undeploy the project configuration.

Procedure

1. Select the environment tab to which you published your project.
2. In the Project Configuration section, select the project configuration you want to deploy. The Configuration Details page is displayed.
3. In the Orchestrations section, verify that at least one orchestration in the project configuration is enabled. Edit orchestration settings, as needed.

You cannot edit orchestration settings while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

4. In the Properties section, edit configuration properties, as needed.

You cannot edit configuration properties while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

5. If the project configuration contains a Database or Web Services endpoint, you must generate assets for these endpoints.
6. Optional: Add a schedule downtime rule.
7. Optional: Assign permissions for the project configuration, which specify which group of users can edit and deploy a project configuration. By default, tenant administrators, environment administrators, and the publisher of a project configuration can edit and deploy a project configuration.
8. If you assign permissions, click Save.
9. In the Summary section, click the Deploy icon ► to deploy the project configuration.

Results

The project configuration deploys, the runtime starts to process orchestration jobs, and the status is appropriately updated in the Summary section.

Editing Project Configuration Properties

Before you begin

You must have administrator or publisher permissions to edit configuration properties.

About this task

You create configuration properties for an integration project in Studio, before you publish the project to an environment in the cloud. When you publish the project, you can specify values for the configuration properties. Configuration properties allow you to move a project configuration from a staging environment to a production environment.

For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

Procedure

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
 - o **Finish Jobs** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allow the jobs to end.
 - o **Cancel Jobs** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Click the project configuration you want to edit. The Configuration Details page displays.
5. In the Properties section, click Edit to edit configuration property values.
6. Modify the configuration properties.
7. Click Save.

Results

The Configuration Details page displays the updated configuration property values.

Stopping Project Configurations

About this task

There are two ways to stop a running project configuration:

- **Stop (allows jobs to finish)** - When you click Finish Jobs, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows the Integration Appliance to end.
- **Stop (cancel running jobs)**- When you click Cancel Jobs, this option prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.

Procedure

1. From the Project Configurations page, select a project configuration.
2. In the Actions column, click the Stop icon . The Stop Configuration window is displayed.
3. Click either Finish Jobs or Cancel Jobs to stop the project configuration.

Parent topic: [Managing Projects](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

Uploading Project Configurations

Before you begin

To upload a project configuration, you must have tenant administrator, environment administrator, or environment publisher permissions.

About this task

When you upload a project configuration, you are publishing a project using a two-stage process. First, you export a project from Studio to an intermediate location. Then from the Management Console, you upload the project to a cloud environment.

Procedure

1. Select the environment tab, to which you want to upload the project configuration.
2. From the Navigation pane, select Repository > Upload Project. The Upload Project Configuration dialog box is displayed.
3. In the Local Project File field, specify the path from which to upload the project. You can click Browse to select a file from your local machine.
4. Specify a project name. The name should not exceed 42 characters and should not contain any restricted characters.
5. Specify a product version number. This field is not populated with the project version you specified in Studio. However as a best practice, you should specify a project version that matches the version you specified in Studio.
6. Click Upload.

Results

The project configuration is displayed in the cloud environment Project Configuration page.

Working with Project Configurations

Various views are available for project configurations:

- **All** - Displays the deployment state and status of all project configurations, regardless of the state of the project configuration. You can clone or delete project configurations from this view.
- **Recent** - Displays the deployment state and status of the most recently published or modified project configurations. You can clone or delete project configurations from this view.
- **Favorites** - Displays the deployment state and status of project configurations for which you have permissions. By default, this view is not populated. You must explicitly add project configurations from either the Recent view or All view.

You can access these views from the Dashboard or by selecting the following path in the Navigation pane: Repository > Configurations. The Configuration Filter allows you to choose your view from a drop-down list.

The following table describes information available in the various project configuration views:

Columns in Project Configuration Views	Descriptions
Configuration	Displays published project configurations.
Running	Displays the number of currently running jobs for the project configuration.
Completed	<p>Displays the number of orchestration jobs, for the project configuration, that were completely processed.</p> <p>When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.</p>
Errored	<p>Displays the number of orchestration jobs where a runtime error occurred for the project configuration.</p> <p>When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.</p>
Total	<p>Displays the total number of orchestration jobs, for the project configuration, that have run.</p> <p>When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.</p>

Columns in Project Configuration Views	Descriptions
Actions	<p>Displays the state of project configurations, as well as options for you to delete  or clone  project configurations.</p> <p> Clicking this icon deploys and runs a project configuration.</p> <p> Clicking this icon causes the runtime to suspend the orchestration job processing of the project configuration.</p> <p> Clicking this icon undeploys a project configurations. You must stop the project configuration before you can undeploy the project configuration.</p> <p> Clicking this icon stops the runtime from processing orchestration jobs for the project configuration.</p> <p>When you stop a project configuration, you can choose to have the runtime completely process all currently running jobs or have the runtime cancel all currently running jobs.</p> <p> Only available in All and Recent views. About Environment Dashboards

An environment dashboard provides multiple snapshot views of project configurations and jobs, a list of unresolved critical system errors, and an overall project configurations summary, and status of Secure Connectors. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

To expand the views of the Critical Alerts and Secure Connector Summary, click the icon in the upper right corner. An expanded view of Project Configuration is available by selecting Repository > Configurations from the navigation pane. An expanded view of Results is available by selecting Repository > Job Log from the navigation pane.

A dashboard is available for each environment in a multi-environment cloud. The information the dashboard displays is specific to its environment.

Choosing a Notification Level

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that meet or exceed the level you choose. 

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

You can specify the following notification levels:

Notification Level	Description
Critical	Sends an alert when an error condition causes the a shutdown.
Error	Sends an alert when non-critical issues that must be handled immediately occur.
Warning	Sends an alert when potential error conditions occur.
Info	Sends an alert for informational usage.

Creating Notification Policies

About this task

Notification policies allow you to monitor potential errors in a specific system. When you create a notification policy, the notification policy monitors the system log for the system you specify. When a system log event occurs that meets or exceeds the notification level of a notification policy, an alert is sent to the specified users.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification or you did not enable the notification policy. For more information about specifying system log settings, see [Specify System Log Settings](#). For more information about enabling email notification policies, see [Enabling Email Notification Policies](#).

Procedure

1. Click the environment for which you will create a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Click New Policy. The New Policy dialog box is displayed.
4. Specify a policy name.
5. From the Level Exceeds list, select a level. Alerts are only sent for errors that exceed the level you choose.
6. From the With System list, select the system you want the notification policy to monitor.
7. Specify the email address or addresses of the person or people that will receive the email notification. When you have multiple email addresses, add one email address per line.
8. Click Save.

Results

The new policy displays on the Notifications page. You must enable email notifications before any alerts can be sent. If the Email status displays as (inactive), email notifications are not enabled.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Monitoring/creatingNotificationPolicies.html>

Deleting Notification Policies

You can delete one or more notification policies.

Procedure

1. Click the environment for which you will delete a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Select the check box next to the policy you want to delete.

To delete multiple policies, select the top check box. All the policies are selected.

4. Click Delete. The Delete Policies? confirmation window is displayed.
5. Click Yes.

Results

The policy is deleted and is no longer displayed in the Notifications page.

Parent topic: [Monitoring](#)

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Monitoring/editingNotificationPolicies.html>

Enabling Email Notification Policies

About this task

When you create an email notification policy, you must enable the email notification policy for alerts to be sent. By default, email notifications are not enabled.

If you enable email notification policies, the settings you specified when you created the email notification determine when an email alert is sent.

Note: If you disable the email notification policy by clearing the Enable Email option, alerts are not delivered for any email notification policy.

Procedure

1. Click the environment for which you will enable an email notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. At the top of the page, click the Email link. The Enable Email option is displayed.
4. Select the Enable Email option.
5. Optional: Provide a email subject line that will qualify the alert sent.
6. Click Save.

Results

The Notifications page is displayed with the new policy and the Email status changes from (Inactive) to (Active). Email notifications will now be sent when an event that triggers the notification policy occurs.

Parent topic: [Monitoring](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Monitoring/enablingEmailNotificationPolicies.html>

Searching for Orchestration Jobs

About this task

Job IDs and keys allow you to search for orchestration jobs. You define primary message keys in Studio, when you configure connectors. The primary message key must be a unique value. For example, the purchase order number for a purchase order message. If you do not define a primary key, the runtime uses the job ID, a unique number that the runtime generates, to identify an orchestration job.

From the Management Console, you can search orchestration jobs by job ID. By default, the Management Console searches only for completed orchestration jobs that match the job ID you specify. Use the Advanced Search option to search for all other orchestration jobs.

Procedure

1. From the navigation pane, select Dashboard.
2. In the Results section, enter a job ID in the Key Search field.
3. From your keyboard, press Enter. The completed job with the matching job ID displays.

Parent topic: [Monitoring](#)

Using Advanced Search

About this task

Use the Advanced Search option to further refine your job search. If you enter values for multiple fields in the Advanced Search box, the Management Console uses AND logic to refine the search.

For example, you specify a time range in addition to selecting the errored status. The Management Console searches for all orchestration jobs that had an error within the time range specified.

Note: If you choose to search by date and time, you must specify a start and end date and time.

Procedure

1. From the navigation pane, select Dashboard.
2. In the Results section, select an orchestration. The Orchestration Details page displays all the jobs associated with the orchestration.
3. In the Advanced Search box, specify values for Job ID, Key, Status, Start Date and Time, or End Date and Time as appropriate for your search.
Note: If you choose to search by date and time, you must specify a start and end date and time.
4. Click Search.

Results

The search results are displayed in the table.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Monitoring/searchingOrchestrationJobs.html>

Viewing Orchestration Job Logs

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:

- **All** - displays orchestration job information for all project configurations.
- **Recent** - displays orchestration job information for the most recently published or modified project configurations.
- **Favorites** - displays orchestration job information for the project configurations displayed in the Favorites filter. Orchestration job information displayed through this filter also displays in the Recent and All filters.

In some cases, the Management Console displays an orchestration job status of Unknown, even though the orchestration job completed successfully. Rebooting the environment, while orchestration jobs are processing, can result in the Unknown status because monitoring data is lost during the reboot. Stop all orchestration jobs before rebooting the environment to avoid an Unknown status.

Click an orchestration job to view the orchestration details for that orchestration. The Orchestration Details page displays all the jobs associated with the orchestration you selected and the status of each individual job. Use the Left and Right arrows (<< , < , > , >>) to view all orchestration jobs.

Parent topic: [Monitoring](#)

Sorting Orchestration Jobs

About this task

You can search orchestration jobs by job ID. To sort orchestration jobs by project configuration name, orchestration name, status, time, or job ID click the appropriate column header.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Permissions/toc_permissions.html

About Built-In Groups

Built-in groups are predefined groups. In the cloud, in addition to a tenant administrator group, each environment has a built-in administrator, publisher, and user group.

For example: A tenant, named Cumulus, is created for your organization. Within this tenant there are two environments: Development and Production. The following built-in groups would be available:

- admin [cumulus.com]
- admin [Development]
- publisher [Development]
- user [Development]
- admin [Production]
- publisher [Production]
- user [Production]

The same user can be a part of multiple groups. You can assign users to a built-in group or create a new group.

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration- the user will be able to create new versions of the project configuration, as well as

edit and delete the project configuration.

The following list defines the permissions granted to each of the built-in groups:

- **Tenant Administrator Group.** Provides privileges to all environments, users, groups, and projects in a specific tenant. Permits users to create, edit, and delete users and custom groups in the tenant. Users in this group can add and delete users to and from any built-in or custom group in the tenant. Users in this group can view, edit, and delete permissions for all source projects in the tenant.

Users in this group can view all the environments in the tenant and have all the permissions of an environment administrator in each of the tenant environments.

- **Environment Administrator Group.** Provides privileges to all users, groups, and projects in a specific environment. Permits users to create, edit, and delete users and custom groups in a specific environment. Users in this group can add and delete users to and from any built-in or custom group in the environment.

Environment Administrators can also create and deploy project configurations for project that any environment publisher publishes, and view orchestration job details for any project configuration in the environment. With environment administrator group privileges you can edit permissions that publishers for the same environment set for their individual project configurations.

Even though members of the Environment Administrator group have Environment Publisher group and Environment User group privileges, the members of the Environment Administrator Group do not appear in other groups in the same environment until you explicitly add the user.

- **Environment Publisher Group.** Provides project privileges in a specific environment. Permits users to create, deploy, or delete project configurations for any project that they publish in the environment. Users in this group can also start and stop orchestrations and view orchestration job details for project configurations they deployed in the environment. As an environment publisher, you can grant permissions for individual project configurations you create to another user with environment publisher privileges for the same environment.

The members of the Environment Publisher Group are not displayed in the Environment User Group, until you explicitly add the user.

- **Environment User Group.** Permits users to monitor alerts and orchestrations in a specific environment. Users in this group can create and edit projects; however, they cannot publish the project to an environment. You must have Publisher privileges for the specific environment to which you want to publish a project. All users are automatically members of the Environment User group.

In a multi-environment tenant, users in this group only see the environment tab for environments of which they are a member. For example, a tenant has a Development, a Staging, and a Production environment. The tenant administrator or administrator of the Development environment adds a user to the User [Development] group. When the user logs in to the tenant, the user can only see the Development environment, even though the tenant has two other environments.

About Libraries Environments

Libraries Environment is a user profile parameter that specifies the environment from which Studio retrieves connector libraries.

In a multi-environment tenant, each environment can potentially have different versions of connector libraries installed. Setting this parameter points Studio to the libraries you want to use while verifying your projects. This parameter is not as critical if your project does not use an endpoint that requires additional libraries to be installed. See the Connector Release Notes for a complete list of endpoints that require you to install additional libraries.

Note: The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.

Creating New Groups

Before you begin

In the cloud, only the tenant admin user can create new groups. In a multi-environment tenant, environment administrators can also create new groups for their specific environment.

On a physical or virtual Integration Appliance, only admin users can create new groups.

Procedure

1. In the Management Console, login as administrator.
2. Select Setup > Users and Groups.
3. In the New Group dialog box, enter a Name and Display Name for the new group.
4. From the Scope list, select the scope of permissions you want to grant the group. You can select to give permissions to the entire tenant or to a specific environment.
5. In the User list, select the users to join the group.

Select the User checkbox to select all the users in the list.

6. Click Save.

Results

In the Groups section of the Users and Groups page, the new group is displayed in alphabetical order.

Parent topic: [Permissions](#)

Creating New Users

Before you begin

In the cloud, only the tenant admin user can create new users. In a multi-environment tenant, environment administrators can also create new users for their specific environment.

On a physical or virtual Integration Appliance, only admin users can create new users.

Procedure

1. In the Management Console, login as administrator.
2. Select Setup > Users and Groups.
3. In the New User window, enter a value for the following fields: Name, Display Name, Email, Password, and Confirm Password.

It is recommended that you add the tenant name to the user name and display name.

For example, if the tenant name is castiron.com, then the new user name should be *newuser@castiron.com*. This will help you identify common user names across multiple tenants in the cloud.

If you clear the Hide Password Text option, your password displays and is no longer encrypted.

4. From the Libraries Environment list, select the environment from which the user's projects can retrieve additional libraries and files for endpoints. The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.
5. In the Groups list, select all the groups to which the new user will have access.
6. Optional: Clear the Active checkbox. If you clear this option, the user cannot log in to the Management Console.
7. Click Save.

Results

In the Users section of the Users and Groups page, the new user is displayed in alphabetical order.

Granting Project Configuration Permissions

Before you begin

You must have Administrator privileges or be the publisher of a project to grant permissions to other users or groups to create, edit, or delete project configurations.

About this task

Once you grant permissions to a user or group, they can edit or delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher.

Procedure

1. Click on a project configuration. The Configuration Details page is displayed.
2. In the Permissions section, select users and groups to grant permissions to.
3. Click Save.

Results

All the users and groups you select now have full access to the project configuration. These users and groups can now create new project configurations, edit the project configuration and any new project configurations they create, and delete the source project.

About Secure Connectors

A Secure Connector facilitates the secure transfer of data between the IBM® WebSphere® Cast Iron® Cloud and an endpoint located behind a firewall. The Secure Connector installer for appliance supports both 32-bit and 64-bit Windows and Linux machines.

To enable a Secure Connector a tenant administrator must complete the following tasks:

- Create a Secure Connector.
- Download the Secure Connector configuration file.
- Launch the Secure Connector installer.
- Install vendor supplied libraries.

Secure Connector Minimum Requirements

This topic provides information about minimum system requirements needed to use a Secure Connector.

You can run the Secure Connector on the following operating systems:

- Microsoft Windows 7
- Microsoft Windows 8
- Microsoft Windows 2008
- Linux (RHEL 6.5, Ubuntu 14.04)

Note: For installing Secure Connectors on Linux platform, use xWindows or KDE environment to use the GUI option.

The Secure Connector has the following minimum system requirements:

- 1 GHz CPU
- 2 GB RAM
- Java 1.7

Creating Secure Connectors

This topic provides information about creating Secure Connectors.

About this task

Use the Management Console to create a Secure Connector for your environment.

After you create a Secure Connector in the cloud, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: If the endpoint you are creating a Secure Connector for requires additional libraries, use the Management Console to install the libraries before you deploy any project configurations that use the Secure Connector.

Procedure

1. From the Navigation pane of an environment tab, select System > Secure Connector.
2. Click New Secure Connector. The Create Secure Connector dialog box is displayed.
3. Provide a name for the new Secure Connector.
4. Provide a brief description of the Secure Connector.
5. Click Save. The Secure Connector is displayed in the Secure Connector page.

Downloading Secure Connector Configuration Files

How to download Secure Connector configuration files.

About this task

When you download a configuration file, the configuration file is saved to your default download directory. You can choose to save configuration files to different locations. Regardless of the number of configuration files you download, you can only use one configuration file during the Secure Connector installation process.

Once you select a configuration file to set up a Secure Connector, that configuration file will be used to configure any subsequent Secure Connector. It is not recommended to configure multiple Secure Connectors using the same configuration file. Instead, use a new configuration file or modify the existing configuration file. The Gateway, Listen to Port, and Transmit to Port parameters should have unique values for each Secure Connector.

The Secure Connector configuration file provides the Secure Connector installer with values for the following parameters:

- **Secure Connector Name** - Specify the name of the Secure Connector you created.
- **Tenant ID** - Specify the hexadecimal UUID for the tenant. You can retrieve this information by logging in to the cloud and selecting Setup > Support Information. The Support Information page is displayed. Copy the Identifier column value for the tenant. You can copy the value by selecting the cell value, right-clicking, and selecting copy from the menu.
- **Environment ID** - Specify the hexadecimal UUID for the environment. You can retrieve this information by logging in to the cloud and selecting Setup > Support Information. The Support Information page is displayed. Copy the Identifier column value for the environment where you want the Secure Connector installed. You can copy the value by selecting the cell value, right-clicking, and selecting copy from the menu.
- **Cloud Gateway** - Specify the gateway name.
- **Listen on Port** - Only modify this parameter if another service is using the port specified or you want to run multiple Secure Connectors on the box.
- **Transmit on Port** - Only modify this parameter if another service is using the port specified or you want to run multiple Secure Connectors on the box.
- **Secure Connector Auth Key** - Specify the Auth key from the Secure Connector you created in the cloud.
- **Secure Connector Private Key** - Specify the Auth private key, which you downloaded while creating the Secure Connector in the cloud.

Procedure

1. Log into the Cloud Management Console as the tenant administrator.
2. From the Navigation pane of an environment tab, select System > Secure Connector.
3. In the Secure Connector window, click the Secure Connector that will communicate with an endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.
4. Click Download Secure Connector Configuration and click Download now. The Opening Secure Connector Configuration dialog box is displayed.
5. Choose Save File and click OK. The configuration file is saved to the default download directory of the current user.

Installing Secure Connectors

Provides the procedures to download the Secure Connector installer and install the Secure Connector.

Before you begin

For Windows installations, verify that you do not have an existing version of the Secure Connector installed. If you have a earlier version installed, you can upgrade it to the latest version using the Upgrade option. For more information about upgrading Secure Connectors, see [Upgrading Secure Connectors](#).

For Linux installations, while it is not required, it is good practice to uninstall previous Secure Connector installations.

For Linux machines, install a desktop environment, such as GNOME or KDE, to provide a graphical interface.

About this task

After you create a Secure Connector in the cloud, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: The machine on which you choose to run the installer must have access to the endpoint. You do not have to run the installer on the same machine as the endpoint.

To download the Secure Connector installer:

1. Log on to the Cloud Management Console as the tenant administrator. The Home page is displayed.
2. Click one of the environment tabs, that is, Development, Staging, and Production.
3. From the Navigation pane of the selected environment tab, click System > Secure Connector.
4. In the Secure Connector window, if you have already created a Secure Connector, click the Secure Connector that will communicate with the endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.

Note: If there are no Secure Connectors available in the Secure Connector window, create a new Secure Connector. For more information about creating a Secure Connector, see <creating secure connector>.

5. Click Download Installer and choose the operating system of the machine to which the installer is downloaded: Windows or Linux.
6. Click Save File. The file is saved to the default download directory.

To install the Secure Connector:

1. Launch the Secure Connector installer you downloaded.
 - o windows-secure-connector-installer.exe (for 32-bit Windows machine)
 - o windows-secure-connector-installer_64 (for 64-bit Windows machine)
 - o linux-secure-connector-installer.sh (for 32-bit Linux machine)
 - o linux-secure-connector-installer_64.sh (for 64-bit Linux machine)

The Secure Connector Installer Wizard is displayed.

2. Select the Install option.
3. Click Next then read and accept the licensing agreement.
4. Click Next and choose an installation directory.
5. Click Next. A message window states the location where the target directory will be created.

Note: If an install directory exists, a warning message displays and you must confirm that you want to install and overwrite existing files.
6. Click OK.
7. Set up shortcut options to start, stop, and edit a Secure Connector.
 - a. Select one or both of the following options:
 - Create shortcuts in the Start menu.

- Create additional shortcuts on the desktop.
 - b. Select a program group from which you will access the shortcuts.
 - c. Choose to create shortcuts for the current user or all users.
8. Click Next. The installation progress is displayed.
 9. Select a Secure Connector configuration file. If you have not already downloaded a Secure Connector configuration file, download one now. For more information about how to download Secure Connector configuration files, see [Downloading Secure Connector Configuration Files](#).
 10. Click Next.
 11. For Windows installation, choose to install and run the Secure Connector as a Windows Service. If you choose install the Secure Connector as a Windows Service, you can control the Secure Connector using the Windows Services control panel (recommended). If you choose not to install and run the Secure Connector as a Windows Service, then the Secure Connector is installed as a Windows application. To run the Secure Connector as a Windows Service, you must specify the following service account information:
 - Service Start Mode
 - Service Account Domain
 - Service Account User
 - Service Account Password
 12. Click Next. The installation is complete.
 13. Click Done.

Note: If your endpoint, for example, SAP, requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Supplied Libraries for Secure Connectors](#).

Parent topic: [Using Secure Connectors](#)

Feedback | Notices

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Secure_Connector/installingSecureConnectors.html

Installing Vendor Supplied Libraries for Secure Connectors

Certain endpoints require additional libraries to be installed before the Secure Connector can communicate with them. This section provides information about using the Cloud Management Console to install these vendor supplied libraries. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page in the Cloud Management Console.

About this task

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

If you have a multi-environment tenant, you must install the 3rd party libraries in each environment where you deploy a project configuration with a connector that requires the additional libraries.

For example, you have a tenant with three environments: Development, Staging, and Production. You publish a project configuration for an SAP endpoint in the Development and Production environments. Before you can deploy the project configuration, you must install additional SAP libraries on both the Development and Production environments. For more information about installing SAP libraries, see [Downloading and installing the SAP Jar Files and DLLs](#).

Procedure

1. Click an environment tab.
2. Select System > Connector Libraries to open the Update Connector Libraries page.
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed display in the Installed Files column.

4. Click the (+) icon and select the library file or files to upload. In the cloud, . jar and .dll are valid library files types. The files you select display in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Cloud Management Console does not add the files you uploaded. If the Cloud Management Console times out before you click Update and commit the added files, repeat the last two steps.

6. In the same environment tab, select: System > Secure Connectors.
7. Click Download Libraries and save the libraries.zip file to your workstation.
8. Unzip the libraries.zip file and find a *.tp-1.0.0.jar for each connector module.
9. Use the .jar files in the libraries.zip to replace the files in the Secure Connector install directory: lib/plugins.
10. Copy all the remaining .zip files to following Secure Connector install directory: lib/thirdparty
11. Restart the Secure Connector by running one of the following files from a command line:
 - o For Windows: runclient_osgi.bat
 - o For Linux: runclient_osgi.sh

Downloading and installing the SAP Jar Files and DLLs

To connect to an SAP system from studio, you must install SAP DLLs and jar files onto your Windows development machine. You must have the SAP login credentials to enter the SAP Support Portal and download the files.

About this task

To download and install the SAP jar files and DLLs:

1. Contact SAP Technical Support to obtain the zip files for the following SAP Components:
 - **SAP JCo Release 3.0.6 or later version - based on the platform on which studio is running.**
2. Unzip the SAP JCo zip file:
 - Double-click the `sapjdoc30P_6-1000xxxx.zip` file.
 - Use the decompression tool to extract the contents of the compressed file to a temporary directory. This zip file contains another zip file `sapjco3-NTintel-3.0.6.zip`. Extract this zip also to a temporary directory, for example: `C:\temp\sapjco3-NTintel-3.0.6`. This directory contains the required libraries `sapjco3.jar` and `sapjco3.dll`.
3. Unzip the SAP IDoc JCo zip file:
 - Double-click the `sapjdoc30P_6-1000xxxx.zip` file.
 - Use the decompression tool to extract the contents of the compressed file to a temporary directory, for example, `C:\temp\sapjdoc30P_6-1000xxxx`. This directory contains the required library `sapidoc3.jar`.

Procedure

1. Open studio, select Tools > Install Module Providers.
2. When the Add Providers dialog box is displayed, click the plus (+) button present beneath SAP Connector.

A text entry field and a Browse button is displayed.

3. Click Browse, and use the browse dialog box to locate and select the `sapjco3.jar` file.
4. Click Open to import the jar file contents.
5. Click the next available plus (+) button to add the `sapidoc3.jar` and `sapjco3.dll` files.
6. When the jar file is listed in the Add Providers dialog box, click OK.

Results

A prompt is displayed to restart studio and activate the changes.

What to do next

You can now create SAP endpoints and orchestrations.

Uninstalling Secure Connectors (Windows)

This topic provides information about uninstalling a Secure Connector from a Windows machine.

About this task

The following procedure allows you to uninstall a Secure Connector and all its configuration settings.

Procedure

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector_name> > Stop Secure Connector.
3. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector_name> > Uninstall Secure Connector. The Uninstaller window is displayed.
4. Select Force the deletion of C:\Program Files\IBM\Secure_Connector _<connector_name>.
5. Click Uninstall.
6. When the status bar displays [Finished], you can close the Uninstaller window.

Uninstalling Secure Connectors (Linux)

This topic provides information about uninstalling a Secure Connector from a Linux machine.

Before you begin

You must have root level permissions to uninstall the Secure Connector from a Linux machine.

About this task

You can uninstall the Secure Connector by using a graphical interface, issuing a command line command, or running the Java uninstall .jar file. Choose one of the following options to uninstall a Secure Connector and all its configuration settings from a Linux machine.

Uninstalling the Secure Connector using a graphical interface: You must have a desktop environment, such as GNOME or KDE, to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the application directory, select IBM > Cast Iron Secure Connector <connector_name> > Stop Secure Connector.
3. From the application directory, select IBM > Cast Iron Secure Connector <connector_name> > Uninstall Secure Connector.

Uninstalling the Secure Connector from the command prompt:

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, issue the `./Uninstaller/uninstall.sh` command.

Uninstalling the Secure Connector with .jar file. You must have Java™ version 1.6 or higher installed to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, enter the `runclient_osgi.sh stop` command.
3. In the directory where you installed the Secure Connector, navigate to the Uninstaller sub-directory to find the `uninstaller.jar` file: `"${JAVA}" -jar "${INSTALL_DIR}/Uninstaller/uninstaller.jar"` where `{JAVA}` is the Java executable and `{INSTALL_DIR}` is the Secure Connector name.

A dialog box is displayed.

4. Select the Force the Deletion... option.
5. Click Uninstall.
6. Click Quit.

Results

The Secure Connector is uninstalled. Configuration settings are retained in the home directory.

Starting and Stopping Secure Connectors

Starting and Stopping Secure Connectors topics provide information about starting and stopping Secure Connectors on Windows and Linux machines. For Windows machines, options you chose during installation affect how you can start and stop Secure Connectors. If you installed the Secure Connector as an automatic Windows Service, as recommended, then you can use the Windows Services control panel to stop and start the Secure Connector. If you installed the Secure Connector as a Windows application, then you can start and stop the Secure Connector using Windows Start menu shortcuts or desktop shortcuts. For Linux machines, you can start and stop Secure Connectors by using a graphical interface or by running commands from the command line.

Starting and Stopping Secure Connectors on Windows (Installed as a Windows Service)

This topic provides information about starting and stopping Secure Connectors on Windows machines, where you have a Secure Connector installed as a Windows Service.

About this task

If you installed the Secure Connector as an automatic Windows Service, as recommended, use the Windows Services control panel to stop or restart the Secure Connector.

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

For steps to enable the interactive mode for a Windows service, see [Enabling Interactive Mode for Windows Services](#).

Note: If you use the **Start Secure Connector** Start menu shortcut or desktop shortcut to start a Secure Connector, the Secure Connector starts as a normal application rather than as a service. You must use the Windows Services control panel to start Secure Connectors as a service. You can use either the **Stop Secure Connector** Start menu shortcut or desktop shortcut to stop a Secure Connector.

Starting and stopping Secure Connectors, using the Windows Services control panel:

Procedure

1. Open the Windows Services window : Start > Control Panel > Administrative Tools > Services.
2. Scroll down the list of services to locate the IBM® Secure Connector service.

3. Right-click on the IBM Secure Connector service and select the appropriate command: Start, Stop, Pause, Resume, or Restart.

Enabling Interactive Mode for Windows Services

When the Secure Connector is installed as a Windows Service, enable the interactive mode for the service to view system tray icons and command window.

About this task

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

Procedure

1. Open the Services control panel. For example: Start > Control Panel > Administrative Tools > Services.
2. Select the Cast Iron Secure Connector service.
3. Right-click the service name, and select Properties. The Service Properties window is displayed.
4. Select the Log On tab.
5. Select Local System account and then select Allow service to interact with desktop.
6. Click OK.
7. Click Restart.

Results

When the Cast Iron Secure Connector service is restarted, system tray icons and a command window is displayed.

Note: You can minimize the command window. However, if you close the command window, the Cast Iron Secure Connector service will be stopped and terminated. Closing the command window is the equivalent of stopping the Secure Connector service from the Windows Services control panel.

Starting and Stopping Secure Connectors on Linux

This topic provides information about starting and stopping Secure Connectors on Linux machines.

About this task

If you have a desktop environment, such as GNOME or KDE, you can start and stop the Secure Connector using menu shortcuts or desktop shortcuts. You can also start and stop the Secure Connector using the command

line.

Procedure

1. Start the Secure Connector from either the menu shortcut , desktop shortcut or command line. Choose one of the following options:
 - o Select `<application>` > IBM® > Cast Iron® Secure Connector `<connector_name>` > Start Secure Connector .
 - o From the desktop, click the Start Secure Connector shortcut to start the Secure Connector.
 - o From the command prompt, enter `runclient_osgi.sh start` .
2. Stop the Secure Connector from either the menu shortcut, desktop shortcut, or command line. Choose one of the following options:
 - o Select `<application>` > IBM > Cast Iron Secure Connector `<connector_name>` > Stop Secure Connector .
 - o From the desktop, click the Stop Secure Connector shortcut to stop the Secure Connector.
 - o From the command prompt, enter `runclient_osgi.sh stop`.

Upgrading Secure Connectors

This topic provides information about upgrading Secure Connectors.

Procedure

1. Create a new Secure Connector.
2. Download the latest version of the Secure Connector installer, based on your operating system. For example, Windows or Linux.
3. On a Windows or Linux machine, launch the Secure Connector installer. The Cast Iron® Secure Connector wizard guides you through the upgrade process.

Note: If you already have a Secure Connector installation that is higher than or same as the latest version, a warning message states that you have an existing installation and alternatively you can upgrade the existing installation.

Note: You must stop the Secure Connector (if already started) before upgrading.

Note: Before you proceed with the Secure Connector upgrade process, ensure that you have:

 - o Stopped the Secure Connector
 - o Taken a manual backup of the certificates (if any) located at `<secure_connector_install_path>/etc/security` or `jre/lib`. You may want to replace/add your certificates after upgrade.
4. Click the Upgrade option. The Select the installed path list box is displayed.
5. Select the Secure Connector installed path, if it is displayed in the list box. Else, click Browse button to select the installed path.

6. Click Next, then read and accept the licensing agreement.
7. Click Next. The installation progress is displayed. A message is displayed stating that the installation has been completed successfully. The path to the installer program is also displayed.
8. Click Done.
9. Start the Secure Connector.

Troubleshooting Secure Connectors

This topic provides potential solutions for issues you have with the Secure Connector.

Secure Connector log files are available for your review. The Log directory is created after the initial start of the Secure Connector. The Log directory is located in the Secure Connector install directory. For example:
C:\Program Files\IBM\Secure_Connector_1.development\logs

- **A port contention error occurs.** A port contention error can occur when two Secure Connectors are configured to use the same port and gateway. To resolve the issue, provide unique values for the Gateway, Listen on Port, and Transmit on Port parameters in each Secure Connector configuration file.
- **Unable to run .jar file to uninstall a Secure Connector.** Verify that the Java™ path is specified correctly and that you have Java version 1.6x or higher installed on the machine.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Security/toc_security.html

About Certificates

Certificates enable secure communication between the Integration Appliance and endpoints located in your intranet and extranet. Use the Management Console to manage certificates.

From the Certificates page, you can generate, import, and update security certificates and security settings.

The following tables provides definitions for certificate terminology.

Certificate Terminology	Definition
Alias	A string of alphanumeric characters you assign to a KeyStore or TrustStore entry to provide a more user friendly name. Within a KeyStore or TrustStore you can use an alias to refer to the keys and certificates. Note: Aliases are not case sensitive. For example, MyCert and mycert refer to the same entry.
Certificate	A signed credential which identifies an endpoint or organization.
Key Pair	A public key and associated private key.
KeyStore	A Java™ data store that houses private keys and certificates used by a Java SSL endpoint. For example, a local Java endpoint supplies a certificate from its KeyStore as a credential to identify itself to a remote SSL endpoint.
PKI	Public Key Infrastructure is a system for managing encryption keys and identity information. The purpose of the system is to provide standards based system for protecting/securing communications over the internet.
Private Key	A key known only to a single endpoint used to encrypt and/or sign data.
Public Key	A key associated with a private key that can be distributed to anyone.
SSL	Secure Sockets Layer enables secure web communications and permits endpoints to optionally authenticate each other.
TrustStore	A Java data store that houses certificate authority signed certificates. For example, a local Java endpoint utilizes a TrustStore to authenticate the identity (certificate) provided to it by a remote SSL endpoint.

Generating Self-Signed Certificates

Procedure

1. In the Key Store section, click Generate. The Generate Self-Signing Certificate dialog box displays.
2. Specify values for the following parameters:
 - o Alias - The name used to identify the key pair.
 - o Common Name (CN)
 - o Organization (O)
 - o Organization Unit (OU)
 - o Country (C) - Select a country from the list
 - o State (ST)
 - o Locale (L)
 - o Email (EMAILADDRESS)
 - o OID -
 - o Key Algorithm - Choose an algorithm type from the list.
 - o Key Length - Choose a value from the list.
 - o Valid For: - Specify the length of time this certificate is valid for in years and days.
3. Click Generate.

Results

The self-signed certificate displays in the Key Store table.

Importing Certificates

About this task

You can import a certificate or certificate chain into the IBM® WebSphere® Cast Iron KeyStore. You can also import trusted Certificate Authority certificates (CA Certs) to the TrustStore.

Procedure

1. In the Key Store section, click Generate. The Generate Self-Signing Certificate dialog box displays.
2. In the Key Store or Trust Store section, click Import. The Import Certificates dialog box is displayed.
3. Specify an alias name. This name is used to identify the imported certificate or certificate chain.
4. Optional: Provide a key password.

The password protects the private key of the key pair associated with the alias. If you do not specify a password, the password defaults to the password protecting the KeyStore.

5. If you are importing a certificate from a trusted site, select the Trusted option.

If you select the Trusted option, the certificate is imported without checking for an existing chain of trust. If you do not select the Trusted option, the KeyStore and TrustStore is checked to ensure a chain of trust exists for the certificate being imported.

6. Choose to import the content from a file or from content in the clipboard that contains the certificate or certificate chain to be imported.

Supported formats include: CER/PEM (RFC 1421), DER, PKCS7, and PKCS12.

7. Click Import.

Results

The certificate is displayed in the Certificates page.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.live.doc/CloudHelp/Working_with_Logs/toc_working_with_logs.html

Specify System Log Settings

About this task

You can specify the level of details that appears in the system logs. The log level you specify affects alerts for notification policies. Alerts are only sent for events that meet or exceed the log level you specify.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification.

Procedure

1. In the Navigation pane, select Logs > System Log. The System Log page is displayed.
2. Click Settings. The System Log Settings dialog box is displayed.
3. From the list, select a log level for each system.
4. Click Save.

Results

A confirmation message displays. The system log logs all events that occur at the level you specified or higher for the specific system. For example, if you chose the Error level for Deployment, all events that were Error or

Critical level in the Deployment system are logged.

Viewing System Logs

About this task

You can view system logs from the Management Console and use the system log filters to sort through system log entries.

When you upgrade, the Management Console does not persist system logs. To retain system log information, export system logs before you upgrade.

Note: The Management Console displays a maximum of 99,999 system log entries. When the number of system log entries exceeds 99,999, the oldest log entry is deleted from the system log.

Procedure

1. From the navigation pane, select **Logs > System Log**. The System Log page is displayed.
2. Choose the filter values from the lists at the top of the System Log page.

You can filter the log entries according to the level of severity for the event, the environment system that generated the log event, dates, and resolution state. The filters use AND logic.

Parent topic: [Working with Logs](#)

System Log Content

The system log provides the following information:

System Log Content	Description
Level	Identifies the level of severity of the log event: <ul style="list-style-type: none">• Critical• Error• Warning• Info
System	Identifies the system where the log event occurred.
Message	Text messages that provides details about the log event.

System Log Content	Description
Job	When available displays Job ID information for log events that occur in the Orchestration system.
When	Records the time when the log event occurred.
Resolved On	Provides a time stamp of when you resolved a log event.
Resolved By	Identifies which user resolved a log event.
Resolved	Select this checkbox to acknowledge that you have resolved a log event. When a user resolves a log event, a time stamp documents the date and time the issue was resolved. Information about the user who resolved the log event is tracked in the Resolved By column. You can resolve all the system log issues, by clicking Resolve All. Clear the checkbox next to any log events that are not resolved and the Resolved On and Resolved By values are cleared.

About Management Console Settings

From the Settings link, you can manage various user profile, session, and display preferences. The Web Management Console supports only the English language. The Settings link is in the upper right corner of the Management Console.

From the Settings dialog box, you can view and edit the following settings and preferences.

Table 1. User Profile Setting

User Profile Setting	Description
User Name	The name of the user currently logged in.
Display Name	The name that displays on the console and that displays in the logs.
Password	Password for the current user: <ul style="list-style-type: none">• Minimum length is 8 characters• Maximum length is 15 characters• Must contain characters from 3 of the 4 following categories:<ol style="list-style-type: none">1. upper-case2. lower-case3. numeric4. punctuation (for example, !, \$, #, %)• Must not contain any 3 character substring of user name• Must not contain any 3 character substring of prior password
Email	Current® user email address. Email notifications are sent to this email.
User Groups	User groups for which the user is a member.

Login Policy

When the 5th consecutive login failure occurs for a single user, in any span of time, the user is prohibited from logging-in again for a delay interval of 15 seconds.

For each subsequent login failure, the delay interval doubles until the delay interval capacity is reached. The delay interval capacity is 1 hour. A successful login by the user resets the login failure count and the delay interval for the user.

Table 2. Session Settings

Session Settings	Description
Inactivity Timeout	The amount of inactive time the console waits before logging off the current user. You can choose one of the following timeout intervals: <ul style="list-style-type: none">• 5 minutes• 15 minutes• 30 minutes• 60 minutes• Never

Session Settings	Description
Dashboard Refresh Interval	<p>The amount of time the console waits before refreshing the view. You can choose one of the following refresh intervals:</p> <ul style="list-style-type: none"> • 15 seconds • 30 seconds • 60 seconds • Off

Table 3. Display Settings

Display Settings	Description
Time Zone	<p>Allows you to specify the time displayed on the console. You can specify one of the following display modes:</p> <ul style="list-style-type: none"> • Local Time (GMT-0800) • Remote Time (GMT) • GMT
Page Size for Jobs Log	<p>Allows you to specify the number of rows of the Jobs log to display on the console. You can choose to display 15, 25, 50, or 100 rows.</p>
Page Size for System Log	<p>Allows you to specify the number of rows of the System log to display on the console. You can choose to display 15, 25, 50, or 100 rows.</p>
Maximum Age for Recent Jobs	<p>Allows you to specify the age of the recent jobs that are displayed on the console. For example, if you choose 1 hour, any job that is older than an hour is not displayed. You can include jobs as old as: 1 hour, 2 hours, 4 hours, 8 hours, 1 day, 2 days, 5 days, or 1 week.</p>
Maximum Age for Recent Configurations	<p>Allows you to specify the age of the recent project configurations that are displayed on the console. For example, if you choose 1 day, any project configuration that is older than a day is not displayed. You can include project configurations as old as: 1 day, 2 days, 5 days, 1 week, 2 weeks, 3 weeks, or 4 weeks.</p>

Navigating the Management Console

The Management Console is a web-based tool that allows you to manage and monitor the various systems and resources of your integration environment. This environment can be a physical Integration Appliance or an environment in the WebSphere® Cast Iron® Cloud.

The navigation pane on the left of the Management Console displays a menu of pages that allow you view, configure, and take actions on various systems and resources.

If you have logged on to the Management Console as an administrator, you can view the reports of:

- **Publish details:** Displays the configurations published, by whom it was published, and the date and time when it was published.
- **Login History:** Displays the login history of the user or users that logged on to the appliance. The login history includes the name of the user, the log in time, and the log out time.

The back and forward buttons on browsers do not allow you to move through the Management Console pages in the order which you opened them. Use the back and forward arrows in the top right corner of the Management Console to move through the Management Console pages in the order you opened them.

The user that is currently logged in is also displayed in the upper right corner. Click Settings > User Profile to open the User Profile window.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Local_Staging_Database/toc_local_staging_database.html

About the Local Staging Database

In Studio, you can build projects with Data Quality activities that sort and merge data from a source system to help you cleanse and quickly migrate the data to a target system. As the Data Quality activities in a project iteratively process data from a source system--sorting "good" and "bad" data, the Integration Appliance can store the data in a Local Staging Database.

From the WMC, you can view the local database tables and lookup tables to make further changes, as needed, to the processed data. You must have the appropriate permissions to view tables and perform operations on the Local Staging Database.

Important: The Local Staging Database must be started before you can view the Database Viewer in the WMC.

Database Viewer Panes

The Database Viewer is made up of three panes:

Database Objects pane

Located on the left-hand side of the Database Viewer, this pane displays all tables in the Local Staging Database, including fields and rows.

Query pane

Located in the upper-right side of the Database Viewer, this pane provides a workspace for you to validate and submit queries to the Local Staging Database. You can manage each query in a separate tab. You can perform the following operations on each tab:

- Validate Query
- Submit Query
- Clear Query
- Close Tab

Summary pane

Located in the lower-right side of the Database Viewer, this pane contains two tabs: Results and History.

- **Results tab** - Provides a summary of the rows returned from the query.

- **History tab** - Provides a log of events that have occurred on the Local Staging Database. A time stamp marks each event logged. The log of events persists as long as the WMC is open. Once you close the WMC, the History tab is cleared.

Starting the Local Staging Database

About this task

From the WMC, you can start and stop the Local Staging Database. You must start the staging database to view or update data. By default, the staging database is in a stopped state. In the stopped state, you cannot view or update the staging database. When you stop the database, all sessions for all users also stop.

Only users with Administrator privileges, granted as being part of the built-in Administrator group, can start, stop, and perform operations on the Local Staging Database. Users with Publisher privileges can only view the database if the Local Staging Database has already been started by a user with Administrator privileges. If the Local Staging Database has not been started, users with Publisher privileges will not be able to view the database. Users that are part of the built-in Users group or with WMC login credentials created in an LDAP Server do not have access to the Local Staging Database.

Procedure

1. From the navigation pane, select System > Staging DB. The Staging DB page is displayed.
2. Click Start Database.

Parent topic: [Local Staging Database](#)

Best Practices for Memory Management

Outlines memory management best practices to maintain a healthy runtime environment and avoid out of memory errors.

An Integration Appliance sets aside a pool of memory to run orchestration jobs. Managing this pool of memory is key to maintaining a healthy runtime environment.

There is a direct relationship between the amount of memory used and garbage collection cycles. Garbage collection is a process that returns memory, held by completed jobs and variable data, back to a pool of memory used by all orchestration jobs. This garbage collection process ensures that the Integration Appliance has a constant supply of free memory that new orchestration jobs can use.

Garbage collection (GC) is a continual process that runs in the background with no effect on orchestration job performance. However, when memory reaches a critical threshold, a more in-depth process known as full garbage collection occurs. The full garbage collection process puts all the running jobs into a sleep state and returns unused memory back to the pool. Because all orchestration jobs stop during a full garbage collection, frequent full garbage collections can affect orchestration performance.

When the GC Activity value on the Resource Utilization Graph spikes at regular intervals, there is most likely a high demand on memory that the Integration Appliance is trying to manage by initiating more frequent full garbage collection cycles. However, high memory usage does not necessarily mean an increase in full garbage collection cycles. For example, a large volume of short running orchestrations results in a larger percentage of

memory being used. But the garbage collection cycles, constantly running in the background, most likely return memory back to the pool of memory quickly enough that the overall memory usage is never high enough to trigger a full garbage collection. Full garbage collections stop all orchestrations, so frequent full garbage collections can affect orchestration performance.

Scenarios where high memory usage likely results in frequent full garbage collection cycles include a mix of orchestration types. For example, having multiple, non-persistent, long running orchestrations with numerous variables processing large objects. These types of orchestrations would consume and tie up large amounts of memory that could not quickly be returned to the memory pool.

Note: These types of orchestrations are not recommended by Cast Iron®.

The following table provides a list of best practices that will help you manage memory usage and maintain a healthy runtime environment.

Table 1. Best Practices for Memory Management

Best Practice Principles	Description
Reduce logging levels.	<p>More detailed logging requires more memory to process and store the data and also increases the I/O load on the Integration Appliance disk, which can slow performance. Detailed logging levels are recommended for debugging purposes only and not recommended for production environments, where high volumes of data are processed.</p> <p>The Integration Appliance generates system logs and orchestration job logs.</p> <p>Cast Iron recommends setting the System Log level to "Warning" for all components that are tracked in the system log:</p> <ul style="list-style-type: none"> • Hardware • Resources • Network • Security • Orchestration • Deployment <p>If the number of warnings generated by the various system components is high, memory usage might become an issue. Either resolve the problem that is causing the warnings to be generated or increase the system logging level to "Error". For more information about setting system log levels, see Specify System Log Settings.</p> <p>Orchestration logging levels are specified for each orchestration in a project. Cast Iron recommends setting Logging Levels to "Error Values" for all orchestrations under all projects on the Integration Appliance. For more information about setting orchestration log levels, see Editing Orchestration Settings.</p>

Best Practice Principles	Description
Verify persistence is enabled for all orchestrations.	<p>By default, persistence is enabled for an orchestration and variable data is written to disk instead of memory. Enabling persistence has the added benefit of point-in-time data recovery should a fault occur during runtime.</p> <p>If you disable persistence for an orchestration, data is stored in memory. While disabling persistence can improve performance, as the number of running jobs increases the likelihood of running out of memory also increases. Because of the high risk of running out of memory, proceed with extreme caution when you choose to disable persistence.</p> <p>Note: Turning off persistence reduces the number of orchestration jobs that the Integration Appliance can run simultaneously. The limit is set by the amount of memory available on the Integration Appliance.</p>
Use scheduling capabilities available in the Web Management Console (WMC) and Studio to stagger orchestration jobs.	<p>By scheduling memory intensive jobs to start at different times or to run during off-peak hours, you relieve some of the load on memory, reduce the number of full garbage collections, and potentially improve performance.</p> <p>In Studio, you can use the Schedule Job activity or configure polling intervals for activities in an orchestration to stagger orchestration jobs and maximize resource utilization. You can also create a schedule in the WMC, to control when the Integration Appliance should run an orchestration job. Measure the average execution time of a given orchestration job, so you can optimize job schedules.</p>
Minimize the number of variables used in an orchestration.	<p>The more variables you use in an orchestration, the more memory is required to store the data. This in turn could increase the number of garbage collection cycles and affect performance. Review your orchestrations to see if you can reduce the number of variables used.</p>
Reduce the number of simultaneously running jobs.	<p>In the WMC, you are able to specify the maximum number of simultaneously running jobs for an orchestration. As the number of concurrently running orchestrations increases, so does the percentage of memory usage increase. If you notice memory is getting overloaded, reduce the number of jobs running simultaneously.</p> <p>The effects of reducing the number of simultaneously running jobs is especially impactful for non-persistent, long running orchestrations jobs that contain a large number of variables.</p> <p>Note: These types of orchestrations are not recommended by Cast Iron.</p>
Do not exceed 75% load on memory.	<p>In the WMC Resource Utilization Graph, you can track the percentage of memory used. When the percentage of memory used is approximately 75% or less, the Integration Appliance has capacity to process more orchestrations. When the percentage of memory used exceeds approximately 75%, you will likely notice performance issues as the number of full garbage collections increase.</p>
Limit full garbage collection cycles.	<p>In the WMC Resource Utilization Graph, you can use the GC Activity value to track a percentage of full garbage collections. When this percentage exceeds 50%, you might notice a reduction in the throughput of your orchestrations jobs. Implement the best practices for memory management to reduce memory usage and thus reduce the likelihood of full garbage collection cycles occurring.</p>

Best Practice Principles	Description
Add additional Integration Appliances to your environment.	After implementing the best practices principles, if memory usage continues to be high, it might be time to add another Integration Appliance to your environment.

About Connectors

The Connectors page displays all the connectors that are installed on the Integration Appliance. From the Connectors page you can also see the version number of each installed connector and licensing status for each connector. The Integration Appliance can only process configuration projects that contain endpoints with valid connector licenses. To open the Connectors page, select System > Connectors from the navigation page.

Some connectors require you to install additional libraries, before you can deploy a configuration project. On the Connectors page, click the Update Libraries link to manage these additional connector libraries.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Integration_Appliances/aboutConnectors.html

System Summary

The System Summary page provides information about the Integration Appliance. To access the System Summary page, select System > Summary from the navigation pane.

System Information	Description
Model	Displays the Integration Appliance hardware model.
Version	Displays the version of WebSphere® Cast Iron® Operating System that is currently running on the Integration Appliance.
Serial Number	Displays the Integration Appliance serial number.

Downloading and installing SAP library files

Before you begin

You must have an SAP User ID and password to enter the SAP Support Portal to download the files.

About this task

In order to connect to an SAP system, you must install SAP libraries onto your development environment.

Note:

If you have older versions of the `librfccm.so` and `libsapjcorfc.so` files in any system directories, you must remove these files. Appliance must use the `libsapjco3.so` file provided with SAP JCo Release 3.0.x. You must use 64 bit SAP JCo libraries for Cast Iron® version 7.0 and later versions; and 32 bit SAP JCo libraries for Cast Iron version 6.4 and earlier versions.

Procedure

1. Contact SAP Technical Support to obtain the following zip files for the following SAP Components:
 - SAP 32 bit JCo version 3.0.10 or later versions - Linux 32 bit version.
 - SAP Java™ IDoc Class Library 3.0.10 or later versions.
2. Extract the contents of the package received from SAP Technical Support and copy it onto a local folder.
3. Log on to the Management Console and select System > Connectors. The Connectors page is displayed.
4. Click Update Libraries. The Update Connector Libraries window is displayed.
5. Select SAP in the Connector column.
6. Click the plus (+) button and repeat the following substeps until you have imported all the jar files you just downloaded.
 - a. Locate one of the jar files you just downloaded (`sapjco3.jar`, `sapidoc3.jar`, and `libsapjco3.so`).
 - b. Click Open to import the jar file. The file is displayed in the Files to Add column.
7. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Management Console does not add the files you uploaded. If the Management Console times out before you click Update and commit the added files, repeat the last two steps.

Results

You can now run SAP projects.

Parent topic: [Managing Integration Appliances](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Integration_Appliances/downloadingInstallingSAPfiles.html

Configuring Secure Network Communications (SNC) for SAP connector

In Cast Iron version 6.3.0.2 and later versions, you can connect to SAP through the SAP connector by using the SNC feature.

Procedure

1. Upload `libsapcrypto.so` to the same place where SAP JCo JARs are uploaded (for more information, see [Downloading and installing SAP library files](#)) in system library using WMC.
2. Run the shell commands to add the SAP crypto directory to the path variable of the system and to add the system credentials to the `.pse` file.

Note: Shell commands can be run only by the IBM WebSphere Cast Iron L2 or L3 support engineers and share the `.pse` file with IBM Support if required.

Executing Commands

About this task

To run a system control command against the Integration Appliance:

Procedure

1. From the navigation pane, select System > Command. The System Commands page is displayed.
2. From the Choose Command drop-down list, select a command. You can view command details by clicking the drop-down arrow.
3. Click Go.

Parent topic: [Managing Integration Appliances](#)

System Control Commands

You can execute the following commands against a standalone Integration Appliance or an High Availability (HA) Pair. For more information about HA specific commands, see [Working with High Availability Pairs](#).

System Control Commands	Descriptions
Remove Job History	Removes all job history from the Integration Appliance.
Remove Projects & Configurations	Removes all projects, orchestrations, and project configurations from the Integration Appliance.
Remove All Jobs in Progress	Removes all data for currently running projects.
Download Postmortem	Generates and downloads a postmortem file to the location you specify.
Restart	Stops and restarts the Integration Appliance.
Reboot	Shuts down all services and then reboots the Integration Appliance.

Exporting A Repository

About this task

Export the project repository to create a backup before upgrading an Integration Appliance. You can export all project configuration and user settings, which includes: network configurations, users and groups, licenses, job log parameters, log levels, notifications, downtime rules, and passwords, from the WMC to another location.

The Integration Appliance system logs are not exported when you export a repository. So if you import an earlier version of the repository, the system logs still contain events that occurred before the new repository was imported.

You can export a repository with the project configurations running. However, when you import this repository, the project configurations will all be in the undeployed state.

Procedure

1. In the Navigation pane, select Repository > Import/Export. The Import/Export Repository dialog box is displayed.
2. Click Export. The Save As window displays.
3. Specify the location where you would like to save the exported repository.
4. Click Save. The WMC exports a copy of the repository as a .tar.gz file.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Integration_Appliances/exportingRepository.html

Importing A Repository

About this task

When you import a repository, the WMC deletes some information held in the existing repository. Exactly which information is deleted depends on which option you select when you import the repository, as explained in this topic. However, the system log is not deleted. Therefore, you could potentially see system log entries from the previous repository. Once you have imported a repository, you cannot roll back to a previous repository. Therefore, it is recommended that you export the existing repository before importing another repository.

You must stop and undeploy all project configurations on the WMC, before you can import a repository. When the WMC successfully imports a repository, all the project configurations are in the undeployed state.

Procedure

1. In the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. From the Configurations Filter list, select All. All project configurations are displayed.
3. Stop and undeploy all project configurations.
4. In the Navigation pane, select Repository > Import/Export. The Import/Export Repository dialog box is displayed.
5. In the Repository File field, specify the path for the repository that you want to import.
6. Choose an import option:
 - o Project and User Settings
Imports all the contents of the repository file you select. All projects are imported in the undeployed state.
 - o Project Settings Only
Imports projects, configurations, notification policies, and job logs, from the repository file you select. All projects are imported in the undeployed state.
Note: Any projects, configurations, notification policies and job logs that exist prior to the import will be deleted.
 - o User Settings Only
Imports only the user setting information from the repository file you select. User setting information includes: network configurations, users and groups, licenses, job log filter parameters, system log levels, downtime rules and passwords.
7. Click Import. A warning is displayed.
8. Click Import to verify that you would like to proceed.

Results

The Integration Appliance imports the repository and restarts the Integration Appliance. When the import is complete, the WMC login window displays.

Installing Libraries from Other Vendors

About this task

If your integration project uses a connector that requires extra libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates run time errors. For a complete list of connectors that require vendor libraries, open the Update Connector Libraries page. See the following procedure.

If you have a multi-environment tenant, you must install the vendor libraries in each environment where you deploy a project configuration with a connector that requires the additional libraries.

For example, you have a tenant with three environments: Development, Staging, and Production. You publish a project configuration for an SAP endpoint in the Development and Production environments. Before you can deploy the project configuration, you must install extra SAP libraries on both the Development and Production environments.

Procedure

1. Click an environment tab.
2. Select System > Upgrade > Upgrade Connector Libraries to open the Update Connector Libraries page.
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed display in the Installed Files column.

4. Click the plus (+) icon and select the library files to upload. In a Linux system, the valid files are `.jar` or `.so`; in a Windows system, the valid files are `.jar` or `.dll`. The files that you select are displayed in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, WMC does not add the files that you have uploaded. If WMC times out before you click Update and commit the added files, repeat the last two steps.

Parent topic: [Managing Integration Appliances](#)

Scheduling Downtime

About this task

Scheduling downtime allows you to perform maintenance on an environment or related system. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals. You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

By default, downtime rules are stored in GMT time zone. If an administrator modifies the system clock from GMT to another time zone, downtime rules are executed at the same absolute time. For example: You create a downtime rule to stop all orchestration between 4:00pm - 4:15pm GMT. The administrator then modifies the system clock to display PDT. Your downtime rule is modified to now stop all orchestration between 8:00am - 8:15am PDT. To execute the downtime rule at 4:00pm - 4:15pm PDT, you must edit the downtime rule. Times differences caused by daylight savings are automatically adjusted.

If the environment is offline when a downtime rule is scheduled to occur, all unexecuted rules are identified and executed in the appropriate order when the environment returns online. After all the backlogged downtime rules are executed, you regain control to modify the deployment state of a project configuration.

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtimes section, click New Rule. The New Downtime Rule dialog box is displayed.
4. Select one of the following actions from the drop-down list:
 - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action facilitates a gracefully stop.
 - o **Stop (cancel running jobs)** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
 - o **Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.
5. Specify the duration of the downtime by specifying a date and time for Start Downtime and End Downtime.

6. (Optional) Select the Repeat option to create a repeat downtime rule.
 - a. Specify a repeat interval (numeric value).
 - b. Specify frequency from the drop-down list: Days, Weeks, Months, or years.
7. Click Save.

Results

The new downtime rule displays in the Scheduled Downtimes section and the Scheduled Downtime counter increases by one.

Parent topic: [Managing Integration Appliances](#)

Edit Downtime Rules

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations is displayed
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed
3. In the Scheduled Downtime section, click the downtime rule you want to edit. The Edit Downtime Rule displays.
4. Select one of the following actions from the drop-down list:
 - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action facilitates a gracefully stop.
 - o **Stop (cancel running jobs)** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
 - o **Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.
5. Specify the duration of the downtime by specifying a date and time for Start Downtime and End Downtime.
6. Optional: Select the Repeat option to create a repeat downtime rule.
 - a. Specify a repeat interval (numeric value).
 - b. Specify frequency from the drop-down list: Days, Weeks, Months, or years.
7. Click Save.

Deleting Downtime Rules

Procedure

1. From the Navigation pane, select Repository > >Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtime section, select the downtime rule you want to delete. The Delete Rules confirmation window is displayed.
4. Click Yes.

Results

The downtime rule no longer displays.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Integration_Appliances/schedulingDowntime.html

Specifying Network Settings

About this task

Network opens Network Settings page.

The iA300 only has one physical port; however, for network configuration purposes, you specify separate IP addresses for data networking and management networking. The iA1000, iA1500, iA2000, iA2500, and iA3000 have two physical ports.

You must have Administrator privileges to specify network configurations. By default, the Integration Appliance uses DHCP to configure network settings. When you choose to use DHCP to configure network settings, the WMC displays the settings in the Network Configuration page. You can edit these settings by clearing the Use DHCP option or selecting the Manual option.

Note: Using DHCP to configure your network settings can result in longer startup times. For faster startup time, select the Manual option and specify a static value.

Procedure

1. In the navigation pane, select Network. The Network Settings page is displayed.
2. Click Edit. The Edit Network Settings wizard is displayed.
3. In the Data Network section, select the Use DHCP option. If you clear this option, the Integration Appliance requires that you specify the IP address, subnet, and broadcast settings.

By default, the Integration Appliance uses DHCP to configure data network settings. To manually configure data network settings, clear the Use DHCP option and enter a valid value for the required settings. The Integration Appliance requires the following management network settings:

- o IP address
 - o Subnet
 - o Broadcast
4. In the Management Network section, select the Use DHCP option. If you clear this option, the Integration Appliance requires that you specify the IP address, subnet, and broadcast settings.

By default, the Integration Appliance uses DHCP to configure management network settings. To manually configure management network settings, clear the Use DHCP option and enter a valid value for the required settings. The Integration Appliance requires the following management network settings:

- o IP address
- o Subnet
- o Broadcast

5. Select a Gateway Interface and Gateway Source.
6. Select an option to set the HostName.
7. Select an option to set the Domain.
8. Select an option to set the DNS. When specifying multiple DNS values, use a space to separate the values.
9. Select an option to set the Time Server.
10. Click Next to validate settings.
11. Click Next to apply settings.
12. Click Finish.
13. Wait for the Integration Appliance to restart and log in.

Executing a System Command

Procedure

1. In the navigation pane, select System > Commands. The System Command page is displayed.
2. From the Choose Command list, select a command.
3. Click Go.

Parent topic: [Managing Integration Appliances](#)

System Commands

From the Management Console, you can run system commands. Different system commands are available depending on the Integration Appliance configuration (stand-alone vs. high availability pairs) and Integration Appliance state (active or standby). The following table lists all system commands available from the Management Console and notes behavioral differences due to Integration Appliance configuration or state.

Command	Description
Remove job history	The remove job history command removes orchestration monitoring data.
Remove project and configurations	The remove projects and configurations command removes currently deployed project(s) data.
Remove all jobs in progress	The remove all job in progress command removes all currently running project data.

Command	Description
Download postmortem	The download postmortem command exports the postmortem archive to an FTP Server you specify. The Integration Appliance does not require that you specify an export file name; however, as a best practice, you should include the Integration Appliance serial number, date, and timestamp. If you do not specify an export file name, the Integration Appliance exports a file named postmortem.tar.gz. Note: Do not use reserved words in the user name or password.
Restart	Restarts the Integration Appliance routing subsystem.
Reboot	Shuts down all routing services and then reboots the Integration Appliance. If the force parameter is used, reboot begins immediately.
HA Connect	Only available for HA pairs. The ha connect command reconnects an Active and Standby Integration Appliance to create an HA pair that can resume fail-over operations. This command is only available if you disconnected an HA pair by issuing the HA Disconnect command.
HA Disconnect	Only available for HA pairs. The ha disconnect temporarily disconnects an HA pair without causing the Standby machine to takeover the Active machine. This action allows you to perform any necessary hardware or software maintenance on the Standby machine without interrupting orchestration processing. When you choose this action, the Standby machine transitions to an idle state. Reboot the Active machine or execute the Connect action to reestablish communications between an HA pair and resumes data synchronization and fail-over operations. To perform maintenance on an Active machine, use the Switch action. The Active machine becomes the Standby machine, where you can use the Disconnect action and perform Integration Appliance maintenance without interrupting orchestration processing.
HA Switch	Only available for HA pairs. The ha switch command causes the Integration Appliances in an HA pair to switch roles: the Active machine becomes the Standby machine and the Standby machine becomes the Active machine.

Command	Description
Reboot active machine (allow peer takeover)	Only available for HA pairs. The reboot active machine (allow peer takeover) command shuts down all routing services and then reboots the active Integration Appliance in an HA pair. When you reboot the Active Integration Appliance using this command, the Standby Integration Appliance takes over data processing.
Reboot active machine (prevent peer takeover)	Only available for HA pairs. The reboot active machine (prevent peer takeover) command shuts down all routing services and then reboots the Active Integration Appliance in an HA pair. When you reboot the Active Integration Appliance using this command, the Active Integration Appliance stops all data processing and the Standby Integration Appliance does not take over data processing.
Reboot standby machine	Only available for HA pairs. Thereboot standby machine command reboots the Standby Integration Appliance in an HA pair. While the Standby Integration Appliance is rebooting, the Active Integration Appliance continues to process data. After a successful reboot, the Standby Integration Appliance synchronizes with the Active Integration Appliance.

Upgrading a Dell Integration Appliance

This section provides information on using the WMC to upload minor and patch releases to a Dell Integration Appliance. When you upgrade the appliance, you are able to access the latest features of the Cast Iron® operating system. This upgrade process only replaces or adds necessary files, it does not destroy any data.

About this task

Use the Web Management Console (WMC) to upgrade to the latest version of Cast Iron operating system by uploading an upgrade image onto the appliance. Please note that the WMC forces any running projects to be undeployed and stops any active orchestration jobs currently running on the appliance during the upgrade procedure. After the appliance is upgraded, you cannot undo or rollback to the previous version.
Note: Upgrades may also be applied through the Command Line Interface (CLI). See the system update command in the *CLI Reference Guide* for more information about using this option.

Procedure

1. Request the latest patch and download the patch to a location where you can access it. For example:
C:\Desktop
2. Using the WMC, log into the Dell Integration Appliance that you want to upgrade.
3. Select System > Upgrade. The Upgrade page displays.
4. Click the Upgrade Operating System link. The Upgrade Wizard launches.
5. Click Browse to locate the upgrade file.
6. Click Upgrade. The Integration Appliance uploads the upgrade file and starts the upgrade process. When the upgrade is complete, the Integration Appliance automatically reboots.
7. When the reboot is complete, the WMC Login page displays. If the page does not display, click the browser refresh button.

What to do next

Using the WMC, redeploy any projects that were undeployed by this upgrade procedure. Upgrade to a Studio version compatible with the installed Cast Iron operating system. For more information about appliance and Studio compatibility, see the Compatibility section of the *Cast Iron Operating System Release Notes* or the *Cast Iron Studio Release Notes*. For the procedure on upgrading Studio, see *Installing Studio*.

Upgrading a DataPower Integration Appliance

This section provides information on using the WMC to upload minor and patch releases to a Cast Iron® Cast Iron XH40 Integration Appliance. When you upgrade the appliance, you are able to access the latest features of the Cast Iron operating system. The upgrade process only replaces or adds necessary files, it does not destroy any data.

About this task

Use the Web Management Console (WMC) to upgrade to the latest version of Cast Iron operating system by uploading an upgrade image onto the appliance. Please note that the WMC forces any running projects to be undeployed and stops any active orchestration jobs currently running on the appliance during the upgrade procedure. After the appliance is upgraded, you cannot undo or rollback to the previous version.

Note: Upgrades may also be applied through the Command Line Interface (CLI). See the system update command in the *CLI Reference Guide* for more information about using this option.

Procedure

1. Obtain the latest patch, then download the appliance upgrade image file to a location you can access from your Windows workstation, for example: C:\Desktop.
2. Use the WMC to log into the Integration Appliance running the Cast Iron operating system.
3. From the Items menu in the WMC, select System > Upgrade. The System Summary window is displayed showing the model, version and serial number.
4. Click Upgrade Operating System. The Upgrade window is displayed.
5. In the text field, specify the path to the appliance upgrade image file or click Browse to locate the upgrade image file.
6. Click Upgrade. In the Upgrade panel, the following message is displayed: `Upload in progress. Please wait.` A progress bar displays the status of the upload. When the upload is complete, the WMC validates the upgrade. If the upgrade is successful, the appliance reboots.
7. Use the WMC to log into the appliance. You may need to click the browser refresh button.

What to do next

Using the WMC, redeploy any projects that were undeployed by this upgrade procedure. Upgrade to a Studio version compatible with the installed Cast Iron operating system. For more information about appliance and Studio compatibility, see the Compatibility section of the *Cast Iron Operating System Release Notes* or the *Cast Iron Studio Release Notes*. For the procedure on upgrading Studio, see *Installing Studio*.

Working with Network Routes

You can add and delete network routes for the Integration Appliance.

Parent topic: [Managing Integration Appliances](#)

Adding Network Routes

Procedure

1. In the navigation pane, select Network. The Network Settings page is displayed.
2. Click Edit. The Edit Network Settings wizard is displayed.
3. In the Routes section, click New Rule. The New Network Route dialog displays.
4. Specify a destination.
5. Specify a netmask.
6. Choose an interface from the drop-down list.
7. Specify a gateway.
8. Click Save.
9. Click Next to validate settings.
10. Click Next to apply settings.

11. Click Finish.
12. Wait for the Integration Appliance to restart and log in.

Deleting Network Routes

Procedure

1. In the navigation pane, select Network. The Network Settings page is displayed.
2. Click Edit. The Edit Network Settings wizard is displayed.
3. In the Routes section, click Delete. A confirmation window displays.
4. Click Yes.
5. Click Next to validate settings.
6. Click Next to apply settings.
7. Click Finish.
8. Wait for the Integration Appliance to restart and log in.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Orchestrations/to_c_managing_orchestrations.html

About Orchestration Settings

Orchestration settings allow you to configure properties for individual orchestrations in a project configuration. For each orchestration you can specify whether the orchestration is enabled, the logging levels, logging behavior, and the maximum number of jobs that the orchestration can simultaneously run.

When a project configuration is undeployed you can edit the following orchestration settings:

Orchestration Settings	Description
Enabled	Indicates whether an orchestration is enabled and can be deployed. At least one orchestration in a project configuration must be enabled to deploy a project configuration. By default, all orchestrations in a project configuration are enabled.
Logging Level	Allows you to specify the level of orchestration details that are logged in the System Logs. <ul style="list-style-type: none">• None - Orchestration status and activity are not logged.• Initial Values - Only the initial values of orchestration variables are logged.• Initial and Error Values- Both the initial values of orchestration variables and orchestration errors are logged.• Error Values- Only orchestration errors are logged.• Inline - Orchestration job details are logged for suborchestrations inline with the job details of the calling orchestration.• All- The highest level of logging. All orchestration activity is logged.
Log Synchronously	Allows the runtime to synchronize the writing of orchestration events to the orchestration monitoring logs as the orchestration is running. By default, this orchestration setting is disabled and orchestration jobs are not synchronously logged. Note: When you enable this orchestration setting, the time it takes to process an orchestration job increases.
Max Simultaneous Job	Allows you to specify the number of orchestration jobs that can run simultaneously.

Parent topic: [Managing Orchestrations](#)

[Feedback](#) | [Notices](#)

Editing Orchestration Settings

Before you begin

To edit orchestration settings, the project configuration must be undeployed.

Tenant administrators, environment administrators (for the environment where the project is published), and publisher of a project can edit its orchestration properties.

About this task

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration--user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

Procedure

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
 - o Finish Jobs - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allows the jobs to end.
 - o Cancel Jobs - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Undeploy the project Configuration, by clicking the  Undeploy icon in the Action Column.
5. Click the project configuration you want to edit. The Configuration Details page is displayed.
6. In the Orchestration section, click Edit to edit the orchestration settings. The Edit Orchestration Settings window is displayed.
7. Click Save.
8. Deploy the project configuration to begin processing orchestration jobs.

Results

The updates you made display in the Orchestration section of the Configuration Details page and the runtime processes the orchestration as specified.

Parent topic: [Managing Orchestrations](#)

file:///dcs/markdown/workspace/Transform/out.html

Exporting Orchestration Monitoring Data

About this task

You can export orchestration monitoring data. When you export orchestration monitoring data, you can choose to delete the orchestration monitoring data that you export or choose to persist the orchestration monitoring data on the system.

If you choose to delete the orchestration monitoring data, there is no mechanism to recover the data.

Procedure

1. In the navigation pane, select Logs > Job Logs. The Results page is displayed.
2. Click Export. The Export Jobs window is displayed.
3. Choose one of the following export options:
 - Export and Delete - Exports the monitoring data and deletes the data from the environment.
 - Export - Exports monitoring data and preserves data on the environment.
4. Click Download Now to download the exported log file.
5. Choose to open or save the file. If you choose to save the file, specify a location and click Save. The XML file is saved to the location you specified.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/toc_managing_projects.html

About Assets

The Management Console groups assets by endpoint. Assets must be generated for database and Web Services endpoints that connect to the following orchestration activities:

- Starter database activities.
- Non-starter database activities with the exactly once delivery option specified.
- Provide Services activity.

For each database endpoint, you must specify unique values for configuration properties associated with the database assets before you can deploy a project configuration. Database assets are control tables, buffer tables, sequence tables, or triggers. All starter database activities are managed in one buffer table, while it manages events for each non-starter database activity with the exactly once delivery option specified in individual control tables

A WSDL for the Provide Services activity is generated by the integration environment. From the Management Console, you can save this Web Services asset.

About Naming Projects and Configurations

Project and project configuration names cannot be longer than 42 characters. When you create a project or project configuration avoid using the following list of reserved characters.

Reserved Characters	Description
' & '	ampersand
' { ' } ' ['] ' ' < ' > '	any brackets
' * '	asterisk
' \ '	backslash
' ^ '	caret
' : '	colon
' \$ '	dollar sign
' / '	forward slash
' # '	number sign
' () '	parenthesis
' '	pipe
' . '	period
' ? '	question mark
' ; '	semicolon
' ' '	space
' ~ '	tilde

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/aboutNamingProjects.html

About Project Configurations

Project configurations allow you to create multiple variations of the same integration project, so you can create and publish one project and deploy it to many different scenarios. Within a project configuration you can

specify which orchestrations are enabled, modify configuration properties for endpoints, generate or modify assets, manage scheduled downtime rules, and control permissions for the project configuration.

Each project you publish has a Default project configuration. In the Management Console, you can create additional project configurations. The project name, project version, configuration name, and project state uniquely identify each project configuration.

You must have Administrator privileges or be the publisher of the specific project to create, edit, and delete project configurations. Administrators and publishers can grant users and groups permissions that allow them to a create, edit, and delete project configurations.

The Summary section displays the details of the project configuration selected from Repository > Configurations. The summary section includes the project configuration name, status of the configuration, the date and time when the project was last published, the name of the user who published or cloned the project configuration. In addition, the summary page also displays the number of orchestrations, properties, assets, and the scheduled downtimes associated with the configuration.

Note: The name of the user who published or cloned the project configuration is displayed in the following formats:

- `username [groupname]` - indicates that this particular user (`username`) belonging to (`groupname`) is the one who published or cloned the project configuration.
- `username {user does not exist}` - indicates that the user does not exist in the integration appliance.

Enabling and Disabling Orchestrations

The runtime only runs orchestration jobs for enabled orchestration. Before you can deploy a project configuration, the project configuration must contain at least one enabled orchestration. By default, all orchestrations are enabled.

Specifying the orchestration logging level allows you to control the type of orchestration errors that are written to the system logs. The Management Console also allows you to limit the number of jobs that run simultaneously. The number of jobs that run simultaneously can affect performance.

You must have administrator or publisher permissions to specify orchestration properties.

Understanding Configuration Properties

You create these configuration properties for a project in Studio. For more information about creating project properties and specifying a project version, see the Studio online help.

When you publish the project, you can specify values for the configuration properties. The values you specify for the configuration properties determine how the project is deployed. For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

You must have administrator or publisher permissions to edit configuration properties in the Management Console.

Modifying Assets

If your project configuration contains a database or WebServices endpoint, you must generate assets before you can deploy the project configuration. If your project does not contain a database or WebServices endpoint, assets are irrelevant to your project configuration.

You must have administrator or publisher permissions to generate or modify assets.

Scheduling Downtimes

Scheduling downtime allows you to perform maintenance. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals.

You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

Editing Project Configuration Permissions

As an administrator or project publisher, you can grant permissions for project configurations to other users and groups. When you grant users or groups permissions to a project configuration they are able to create, edit, and delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher. For more information, see [Granting Project Configuration Permissions](#).

Feedback | Notices

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/aboutProjectConfigurations.html

About Projects

Projects contain components that the runtime needs to execute an integration scenario: orchestrations, endpoints, maps, and other documents. Use Studio to create and test projects without being connected to an integration environment.

Multiple people can publish multiple projects to the same integration environment. Use Studio to publish projects to an integration environment or export projects to a staging location. You can later use the Management Console to upload the exported project. You must have Administrator or Publisher privileges to publish or upload a project to the integration environment.

When you publish a project from Studio, the Management Console displays the project with default project settings; creating a default project configuration. You can clone this default project configuration to create new project configurations, which you can configure for separate development and production environments.

Use the Studio to create projects and specify endpoint configurations properties and then use the Management Console to specify project configurations and deploy project configurations.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/aboutProjects.html

Cloning Project Configurations

Before you begin

You must have Administrator privileges or be the publisher of a project to clone project configurations.

About this task

Project configurations contain properties and assets that you can configure in the Management Console to create multiple variations of the same integration project. When you create a new configuration you can choose to clone an existing project configuration. A cloned project configuration inherits all the configurations from the original project configurations. However, if you edit the original configuration project, the changes are not propagated to the cloned project.

Note: The project configuration you clone does not display on the Favorites view, unless you explicitly add the project configuration to the view.

Procedure

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. From the Configuration Filter list, select All. All project configurations is displayed.
3. Locate the project configuration you want to clone.
4. Click the Clone icon . The Create Project Configuration dialog box is displayed.
5. Provide a unique name for the new project configuration.
6. Click OK.

Results

The cloned project configuration displays on the Project Configurations page. The cloned project has all the same project configuration details as the original project configuration.

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/cloningProjectConfigurations.html

Copying Projects

About this task

The Management Console allows you to copy a project by assigning a new version number to an existing project.

Procedure

1. Click the Modify tab. The Projects page is displayed.
2. Click the project you want to copy. The Copy Project dialog is displayed.
3. Enter a new project version. The version number can contain a decimal.
4. Click Save.

Results

The copy of the project is displayed in alphabetical order in the Projects page.

Parent topic: [Managing Projects](#)

Creating Projects From Scratch

About this task

You can create a project from scratch in the cloud.

Procedure

1. Click the Create tab. The Solutions page is displayed.
2. Click Create One From Scratch. The Create Project dialog box is displayed.
3. Specify a unique project name.
4. Click Save. The project is displayed in the Projects page of the Modify tab.

Results

You can now take edit, publish, delete or copy your project. Select the project to view the project details and assign permissions to your project. If you do assign permissions, click Save to save your updates.

Project details include the environment to which the project configuration was published, a timestamp of the last time you published the project, and the current state of the project configuration. For example: deployed.

Creating Projects From a Template

About this task

You can create a project from a template. Templates are stored in the Solutions Repository. All users can create a template solution and upload it to the Solutions Repository.

Note:

Not all templates in the Solutions Repository are certified. The templates that are certified are denoted with a WebSphere® DataPower Cast Iron® logo.

Procedure

1. Click the Create tab. The Solutions page is displayed.
2. Search for a template.
 - a. Select a source endpoint.
 - b. Select a target endpoint.
 - c. Click Search.

You can also select the Keyword Search option to search for a template using a keyword.

3. Choose a template from the solutions that are returned. Template details display.
4. Click Create a project based on this template. Studio Cloud launches and the wizard steps you through the process of creating your project.

Deleting Project Configurations

Before you begin

The publisher of a project configuration, the environment administrator, or tenant administrator can delete project configurations. The publisher of a project configuration can grant permissions that allow other users to delete his project configuration. The environment administrator can grant permissions that allow other users to delete any project configuration in the environment. The tenant administrator can grant permissions that allow other users to delete any project configuration in the tenant.

Project configurations must be undeployed before you can delete them.

About this task

When you delete a project configuration, all monitoring history associated with the project configuration is also deleted.

Procedure

1. Select the environment tab, where the project configuration is published. A list of project configurations is displayed in the Project Configuration section of the Dashboard.
2. Verify that the project configuration you want to delete is undeployed. The state displays in parentheses () at the end of the project configuration name. For example, (undeployed)
3. If the project configuration is in any other state but undeployed , undeploy the project configuration by clicking the Undeploy icon in the Actions column.
4. In the Actions column, click the Delete icon. The Delete Project Configuration dialog box displays.
5. Click Yes.

Results

The project configuration is deleted and no longer available.

Deploying Project Configurations

Before you begin

To deploy or undeploy project configurations, you must have tenant administrator or environment administrator privileges, or be the publisher of the project configuration.

About this task

The type of endpoint in an orchestration determines the steps you must complete to deploy a project configuration. A project configuration must contain at least one enabled orchestration before you can deploy the project configuration. If the orchestration contains a database or Web Services endpoint, you must also generate assets for the endpoints before you can deploy the project configuration.

By default, all the orchestrations in a project configuration are enabled. Therefore, if the orchestrations in a project configuration do not require additional configuration and do not access database or WebServices endpoints, you can deploy your project configuration by clicking the deploy icon next to the project configuration in any of the Project tabs. If your project configuration requires assets or additional configuration, see the following deployment procedure.

Note: A project configuration must be in the stopped state for you to undeploy the project configuration.

Procedure

-
1. Select the environment tab to which you published your project.
 2. In the Project Configuration section, select the project configuration you want to deploy. The Configuration Details page is displayed.
 3. In the Orchestrations section, verify that at least one orchestration in the project configuration is enabled. Edit orchestration settings, as needed.

You cannot edit orchestration settings while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

4. In the Properties section, edit configuration properties, as needed.

You cannot edit configuration properties while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

5. If the project configuration contains a Database or Web Services endpoint, you must generate assets for these endpoints.
6. Optional: Add a schedule downtime rule.
7. Optional: Assign permissions for the project configuration, which specify which group of users can edit and deploy a project configuration. By default, tenant administrators, environment administrators, and the publisher of a project configuration can edit and deploy a project configuration.
8. If you assign permissions, click Save.
9. In the Summary section, click the Deploy icon (▶) to deploy the project configuration.

Results

The project configuration deploys, the runtime starts to process orchestration jobs, and the status is appropriately updated in the Summary section.

Editing Project Configuration Properties

Before you begin

You must have administrator or publisher permissions to edit configuration properties.

About this task

You create configuration properties for an integration project in Studio, before you publish the project to an environment in the cloud. When you publish the project, you can specify values for the configuration properties. Configuration properties allow you to move a project configuration from a staging environment to a production environment.

For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

Procedure

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
 - o Finish Jobs - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allows the jobs to end.
 - o Cancel Jobs - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Click the project configuration you want to edit. The Configuration Details page is displayed.
5. In the Properties section, click Edit to edit configuration property values.
6. Modify the configuration properties.
7. Click Save.

Results

The Configuration Details page displays the updated configuration property values.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Managing_Projects/editingProjects.html

About Database Assets

The type of database endpoint you use determines the assets that must be generated. The following table shows the assets that are generated for each supported database:

Note: In Cast Iron, asset tables are created with the identifier size of 30 characters. For asset tables, the format that Cast Iron follows is: `CI_CT_<respective-table-name>` (for Control Table), and `CI_BT_<respective-table-name>` (for Buffer Table). So you must use tables with names having a maximum of 24 characters.

Database	Assets Generated
<ul style="list-style-type: none">• DB2® AS/400®• Informix®• Microsoft SQL• Sybase	<ul style="list-style-type: none">• Buffer tables• Control tables• Triggers
Local Staging Database	<ul style="list-style-type: none">• Buffer tables• Control tables• Index tables• Triggers
Oracle	<ul style="list-style-type: none">• Buffer tables• Control tables• Triggers• Sequences

Assets are only generated for starter activities and non-starter activities that specify the Exactly Once delivery option. Assets are not generated for non-starter activities that specify At Least Once or At Most Once delivery options.

Note: Control table names are appended with an activity ID to ensure all assets have unique names. This number does not distinguish multiple endpoints in an orchestration using the same control table.

Parent topic: [Managing Projects](#)

Validating Database Assets

About this task

Before you generate database assets, validate the assets. When you validate an asset, the integration environment verifies whether the buffer table or control table exists in the source database and verifies that table structures are correct.

Note:

Triggers and sequences are not validated .

Procedure

1. In the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
2. Click the project configuration that requires database assets. The Configuration Details page is displayed.
3. Verify the project configuration is in the undeployed state.
4. In the Assets section, click Database. The Database Assets page is displayed.
5. Select all the assets you want to validate and click Validate.
6. The results returned determine the next step. The following table tells you how to interpret the feedback and how to proceed.
 - o A green check mark - valid
 - o A yellow warning sign = warning

Database Asset Validation Feedback

Exists?	Valid?	Action
valid	valid	The asset exists in the database and the asset structure matches the project configuration you created in Studio.You can now deploy the project configuration.
valid	warning	The asset exists in the database, but the asset structure is incorrect. Check that the database script contains the appropriate columns and that the columns are in the correct order. If there is an error, recreate the asset.
warning	warning	The asset does not exist in the source database table. You must create the asset before you can deploy the project configuration.

Warning: Constraint names ending in a unique ID are generated. However, if the size of the database table name is greater than 18 characters, the constraint name is truncated resulting in a naming conflict. If the database table name is greater than 18 characters, edit the database assets script generated and make the constraint names unique.

Generating Database Assets

About this task

The project configuration must be undeployed before you can validate or generate assets. Validate assets before you generate them.

Procedure

1. In the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
2. Click the project configuration that requires database assets. The Configuration Details page is displayed.
3. Verify the project configuration is in the undeployed state.
4. In the Assets section, click Database. The Database Assets page is displayed.
5. Select all the assets you want to generate. You can select all the assets by selecting the top-most check box.
6. Click Create.
7. Review and modify the database script as needed.

Publishing Projects

Before you begin

You must be a tenant administrator, environment administrator, or environment publisher to publish projects.

About this task

Publishing a project uploads a project from Studio to a runtime environment.

Procedure

1. In the Management console, select the Modify tab. The Projects page displays.
2. In the Actions column, click the Publish Project icon. A list displays all the environments in the tenant.
3. Select the environment to which you want to publish the project.

Results

A confirmation displays. The project is available in the environment you selected.

Stopping Project Configurations

About this task

There are two ways to stop a running project configuration:

- **Stop (allows jobs to finish)** - When you click Finish Jobs, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows the Integration Appliance to gracefully stop.
- **Stop (cancel running jobs)**- When you click Cancel Jobs, this option prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.

Procedure

1. From the Project Configurations page, select a project configuration.
2. In the Actions column, click the Stop icon . The Stop Configuration window is displayed.
3. Click either Finish Jobs or Cancel Jobs to stop the project configuration.

Uploading Project Configurations

Before you begin

To upload a project configuration to the cloud, you must have tenant administrator, environment administrator, or environment publisher permissions.

About this task

When you upload a project configuration, you are publishing a project using a two-stage process. First, you export a project from Studio to an intermediate location. Then from the Management Console, you upload the project to an Integration Appliance or cloud environment.

Procedure

1. Select the environment tab, to which you want to upload the project configuration.
2. From the Navigation pane, select Repository > Upload Project. The Upload Project Configuration dialog box displays.
3. Enter the path from which to upload the project in the Local Project File field. You can click Browse to select a file from your local machine.
4. Specify a project name. The name should not exceed 42 characters and should not contain any restricted characters.
5. Specify a product version number. This field is not populated with the project version you specified in Studio. However as a best practice, you should specify a project version that matches the version you specified in Studio.
6. Click Upload.

Results

The project configuration displays in the Project Configuration page.

Viewing and Saving Web Services Assets

About this task

The Management Console generates a WSDL file for a project configuration that contains a Provide Service Activity, which you can view or save for reference. View the WSDL to verify it is correct before you deploy the project configuration that contains this web services endpoint.

Working with Project Configurations

Various views are available for project configurations:

- **All** - Displays the deployment state and status of all project configurations, regardless of the state of the project configuration. You can clone or delete project configurations from this view.
- **Recent** - Displays the deployment state and status of the most recently published or modified project configurations. You can clone or delete project configurations from this view.
- **Favorites** - Displays the deployment state and status of project configurations for which you have permissions. By default, this view is not populated. You must explicitly add project configurations from either the Recent view or All view.
- **My Configurations** - Displays the deployment state and the status of the project configurations that you have published or cloned (configurations published by the user currently logged on).

You can access these views from the Dashboard or by selecting the following path in the Navigation pane: Repository > Configurations. The Configuration Filter allows you to choose your view from a list.

The following table describes information available in the various project configuration views:

Columns in Project Configuration Views	Descriptions
Configuration	Displays published project configurations.
Running	Displays the number of currently running jobs for the project configuration.
Completed	Displays the number of orchestration jobs, for the project configuration, that were completely processed. When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.

Columns in Project Configuration Views	Descriptions
Errored	<p>Displays the number of orchestration jobs where a runtime error occurred for the project configuration.</p> <p>When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.</p>
Total	<p>Displays the total number of orchestration jobs, for the project configuration, that have run.</p> <p>When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.</p>
Actions	<p>Displays the state of project configurations, as well as options for you to delete  or clone  project configurations.</p> <ul style="list-style-type: none">  Clicking this icon deploys and runs a project configuration.  Clicking this icon causes the runtime to suspend the orchestration job processing of the project configuration.  Clicking this icon undeploys a project configurations. You must stop the project configuration before you can undeploy the project configuration.  Clicking this icon stops the runtime from processing orchestration jobs for the project configuration. <p>When you stop a project configuration, you can choose to have the runtime completely process all currently running jobs or have the runtime cancel all currently running jobs.</p> <ul style="list-style-type: none">  Only available in All and Recent views. Clicking this icon adds the project configuration to Favorites. <p>When the Management Console displays the project configuration in Favorites, this icon is no longer active next to the project configuration in the All and Recent views.</p> <ul style="list-style-type: none">  Clicking this icon removes the project configuration from Favorites, but does not delete the project configuration from the environment. You can view the project configuration from the All and Recent views.

Monitoring

Monitoring topics provide information about creating and managing notifications, viewing hardware status, searching orchestration jobs, and viewing orchestration job logs.

- [About the Web Management Console](#)
- [Choosing a Notification Level](#)

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that exceed the level you choose.
- [Creating Notification Policies](#)

Notification policies allow you to monitor potential errors in a specific system.
- [Deleting Notification Policies](#)

You can delete one or more notification policies.
- [Editing Notification Policies](#)
- [Enabling Email Notification Policies](#)
- [Searching for Orchestration Jobs](#)
- [Viewing Hardware Status](#)
- [Viewing Orchestration Job Logs](#)

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:
- [SNMP basics](#)

The Simple Network Management Protocol (SNMP) is an Internet standard protocol used primarily in network management systems to monitor network devices for conditions that warrant administrative attention. Devices that typically support SNMP include routers, switches, servers, workstations and printers. This section introduces SNMP basics and provides an overview of Cast Iron MIBs.
- [Setting up an SNMP receiver](#)

You can use the WMC to create notifications for events that happen in runtime components such as orchestrations, security, hardware and others. A delivery mechanism for these notifications is SNMP in which a trap is set for events. To retrieve these events, you must to set up a receiver or manager that is registered with the appliance. Use the procedures in this section to set up an SNMP receiver.
- [Adding a notifications policy](#)

When you add a notifications policy, you inform administrators of alerts, policy violations and the status changes of job executions. Using SNMP traps, the notification system also allows you to send traps to SNMP-enabled third-party applications. Perform the following steps to add a notifications policy and assign it a name.
- [About the Resource Utilization Graph](#)

Describes how to use the data the Resource Utilization graph provides for capacity planning and understanding the health of the runtime environment.
- [Hardware health](#)

Use the information in this section to obtain notifications based on the hardware health of the appliance.
- [Testing the system](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/toc_monitoring.html

About the Web Management Console

The Web Management Console (WMC) is a web-based management tool that allows you to:

- Manage the Integration Appliance
- Manage integration projects
- Monitor integration projects

You can access the same Integration Appliance from multiple WMCs. However, each WMC can only monitor and manage one Integration Appliance at a time. The tasks you can complete in the WMC depend on the user account you log in with. The WMC has built-in groups, which you can use to further control access to the Integration Appliance. Alternatively, you can specify an LDAP server to manage user and group authentication and authorization.

When you log into an Integration Appliance through the WMC, the Dashboard appears. The Dashboard provides multiple snapshot views of project configurations and jobs, a resource utilization graph, a list of unresolved critical system errors, and an overall project configuration summary. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

The WMC displays the name of the current user as well as the date and timestamp set on the Integration Appliance. This date and timestamp do not necessarily represent the local date and time. For example, the Integration Appliance is set to GMT; however, you can log on to this Integration Appliance from a WMC in San Francisco, CA, which is in the PST time zone. Use the Command Line Interface (CLI) to modify the time zone of the Integration Appliance.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/aboutDashboard.html>

Choosing a Notification Level

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that exceed the level you choose.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

You can specify the following notification levels:

Notification Level	Description
Critical	Sends an alert when an error condition causes the a shutdown.

Notification Level	Description
Error	Sends an alert when non-critical issues that must be handled immediately occur.
Warning	Sends an alert when potential error conditions occur.
Info	Sends an alert for informational usage.

Creating Notification Policies

Notification policies allow you to monitor potential errors in a specific system.

About this task

When you create a notification policy, the notification policy monitors the system log for the system you specify. When a system log event occurs that meets or exceeds the notification level of a notification policy, an alert is sent to the specified users.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification or you did not enable the notification policy. For more information about specifying system log settings, see "[Specify System Log Settings](#)". For more information about enabling email notification policies, see "[Enabling Email Notification Policies](#)".

Procedure

1. Click the environment for which you will create a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Click New Policy. The New Policy dialog box is displayed.
4. Enter a policy name.
5. From the Level Exceeds list, select a level. Alerts are only sent for errors that exceed the level you choose.
6. From the With System list, select the system you want the notification policy to monitor.
7. Specify the email address or addresses of the person or people that will receive the email notification. When you have multiple email addresses, add one email address per line.
8. Click Save.

Results

The new policy is displayed on the Notifications page. You must enable e-mail notifications before any alerts can be sent. If the email status is displayed as (inactive), email notifications are not enabled.

Parent topic: [Monitoring](#)

Deleting Notification Policies

You can delete one or more notification policies.

Procedure

1. Click the environment for which you will delete a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Select the check box for the policy you want to delete.

To delete multiple policies, select the top check box. All the policies are selected.

4. Click Delete. The Delete Policies? confirmation window is displayed.
5. Click Yes.

Results

The policy is deleted and no longer displays in the Notifications page.

Parent topic: [Monitoring](#)

Enabling Email Notification Policies

About this task

When you create an email notification policy, you must enable the email notification policy for alerts to be sent. By default, email notifications are not enabled.

If you enable email notification policies, the settings you specified when you created the email notification determine when an email alert is sent.

Note: If you disable the email notification policy by clearing the Enable Email option, alerts are not delivered for any email notification policy.

Procedure

1. Click the environment for which you will enable an email notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. At the top of the page, click the Email link. The Enable Email option is displayed.
4. Click the Enable Email option.
5. Optional: Provide an email subject line that will qualify the alert sent.
6. Click Save.

Results

The Notifications page displays the new policy and Email status changes from (Inactive) to (Active). Email notifications will now be sent when an event that triggers the notification policy occurs.

Searching for Orchestration Jobs

About this task

Job IDs and keys allow you to search for orchestration jobs. You define primary message keys in Studio, when you configure connectors. The primary message key must be a unique value. For example, the purchase order number for a purchase order message. If you do not define a primary key, the runtime uses the job ID, a unique number that the runtime generates, to identify an orchestration job.

From the Management Console, you can search orchestration jobs by job ID. By default, the Management Console searches only for completed orchestration jobs that match the job ID you specify. Use the Advanced Search option to search for all other orchestration jobs.

Procedure

1. From the navigation pane, select Dashboard.
2. In the Results section, enter a job ID in the Key Search field.
3. From your keyboard, press Enter. The completed job with the matching job ID is displayed.

Parent topic: [Monitoring](#)

Using Advanced Search

About this task

Use the Advanced Search option to further refine your job search. If you enter values for multiple fields in the Advanced Search box, the Management Console uses AND logic to refine the search.

For example, you specify a time range in addition to selecting the status that has an error. The Management Console searches for all orchestration jobs that had an error within the time range specified.

Note: If you choose to search by date and time, you must specify a start and end date and time.

Procedure

1. From the navigation pane, select Dashboard.
2. In the Results section, select an orchestration. The Orchestration Details page displays all the jobs associated with the orchestration.
3. In the Advanced Search box, specify values for Job ID, Key, Status, Start Date and Time, or End Date and Time as appropriate for your search.
Note: If you choose to search by date and time, you must specify a start and end date and time.
4. Click Search.

Results

The search results are displayed in the table.

Viewing Hardware Status

The WMC allows you to monitor Integration Appliance resource utilization and hardware health.

Viewing Resource Utilization

To view Integration Appliance CPU usage, memory usage, and disk space usage select System > Hardware Status. The Resource Utilization page is displayed.

The WMC displays a usage percentage for each resource utilization category listed. In cases where a category contains multiple components, like multiple CPUs, the percentage shown is an average of all the components displayed. In the Dashboard, the WMC provides a graphical summary of the Integration Appliance resource utilization data. For more information about interpreting the Resource Utilization graph, see [About the Web Management Console](#).

Viewing Hardware Health

To view status about Integration Appliance hardware components, select System > Hardware Status. The Hardware Health page displays the status of fans, temperature, disks, and network links. A green checkmark indicates that the component is good working order

Feedback | Notices

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/viewingHardwareStatus.html>

Viewing Orchestration Job Logs

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:

- **All** - displays orchestration job information for all project configurations.
- **Recent** - displays orchestration job information for the most recently published or modified project configurations.
- **Favorites** - displays orchestration job information for the project configurations displayed in the Favorites filter. Orchestration job information displayed through this filter also displays in the Recent and All filters.

In some cases, the Management Console displays an orchestration job status of `Unknown`, even though the orchestration job completed successfully. Rebooting the environment, while orchestration jobs are processing, can result in the Unknown status because monitoring data is lost during the reboot. Stop all orchestration jobs before rebooting the environment to avoid an Unknown status.

Click an orchestration job to view the orchestration details for that orchestration. The Orchestration Details page displays all the jobs associated with the orchestration you selected and the status of each individual job. Use the Left and Right arrows (<< , <, >, >>) to view all orchestration jobs.

Parent topic: [Monitoring](#)

Sorting Orchestration Jobs

About this task

You can search orchestration jobs by job ID. To sort orchestration jobs by project configuration name, orchestration name, status, time, or job ID click the appropriate column header.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/viewingOrchestrationJobLogs.html>

SNMP basics

The Simple Network Management Protocol (SNMP) is an Internet standard protocol used primarily in network management systems to monitor network devices for conditions that warrant administrative attention. Devices that typically support SNMP include routers, switches, servers, workstations and printers. This section introduces SNMP basics and provides an overview of Cast Iron MIBs.

In the lexicon of SNMP, a Cast Iron Integration Appliance is referred to as a "network element" or "managed device," indicating that it is a citizen on a network and available to be managed. Network elements include an *agent* that provides information about the element. Agents perform two key functions. First, they respond to requests from the management system and secondly, send notifications about events on the network element. Asynchronous notifications from agent to manager are referred to as *traps*.

SNMP traps enable an agent to notify the management station of significant events by way of an unsolicited SNMP message. Information provided through polling or traps are defined in Management Information Bases (MIBs). A MIB is a virtual database used for managing the entities in a communications network. MIBs define a hierarchy of objects, with each object having its own Object Identifier (OID). An OID is specified by numbers separated by periods, for example: ".1.3.6.1.2.1.1." A OID is sometimes referred to by a common name. For example, the specific OID .1.3.6.1.2.1.1 can be referred to as "system." The SNMP protocol defines many public MIBs, and also allows for organizations to define custom, application-specific MIBs.

Understanding Cast Iron MIBs

Files downloaded from the Cast Iron WMC have multiple MIB DEFINITIONS = BEGIN - END sections. Each section comprises a MIB with its own hierarchy. To poll for Cast Iron-specific information, use CASTIRON-IA-MIB. Each MIB has a MODULE-IDENTITY that describes the MIB function. A comment section that follows MODULE-IDENTITY provides an overview of the MIB contents and contains an Object Summary that lists the name and OID of every MIB object.

Note: Some tools, such as those provided by NET-SNMP, require each MIB to be split into a single file. For more information on splitting MIBs, see [Setting up an SNMP receiver](#).

A section of the Object Summary from a CASTIRON-IA-MIB follows:

```
-- ciIaProjectSummary                ciia.1.1.1
-- ciIaNbrProjects                   ciia.1.1.1.1
-- ciIaNbrRunningOrchs               ciia.1.1.1.2
-- ciIaNbrStoppedOrchs              ciia.1.1.1.3
-- ciIaNbrRunningJobs                ciia.1.1.1.4
-- ciIaNbrCompletedJobs              ciia.1.1.1.5
-- ciIaNbrErroredJobs                ciia.1.1.1.6
```

As shown, an organizational node (in this case, OBJECT-IDENTITY, which is similar to a directory) called ciIaProjectSummary contains general information about projects. Inside that "directory" are specific items (OBJECT-TYPES) containing the number of projects, the number of running and stopped orchestrations and more. To get more information about the meaning of these items, search the file for the name of the item. For example, to get information about ciIaNbrRunningJobs, searching the file for that string turns up the following:

```
ciIaNbrRunningJobs OBJECT-TYPE          -- ciia.1.1.1.4
    SYNTAX Unsigned32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "Total number of currently running jobs."
    ::= { ciIaProjectSummary 4 }
```

The key areas are:

- ciIaNbrRunningJobs OBJECT-TYPE - Defines the name of the object. Note that there is a comment at the end giving a shortened form of the OID.
- SYNTAX Unsigned32 - This is an unsigned integer whose value could go up or down.
- MAX-ACCESS read-only - A read-only value. The manager may ask for it but cannot change it.
- DESCRIPTION - Describes the object.

The following example illustrates the data displayed when polling for ProjectSummary information:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
```

```

CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0

```

The following data is displayed when polling `ciIaProjectTable`:

```

--      ciIaProjectTable                ciia.1.1.2
--      ciIaProjectEntry                ciia.1.1.2.1
--      ciIaProjEntryIndex              ciia.1.1.2.1.1
--      ciIaProjEntryName                ciia.1.1.2.1.2
--      ciIaProjEntryVersion             ciia.1.1.2.1.3
--      ciIaProjEntryConfig              ciia.1.1.2.1.4
--      ciIaProjEntryState                ciia.1.1.2.1.5
--      ciIaProjEntryNbrRunning           ciia.1.1.2.1.6
--      ciIaProjEntryNbrCompleted         ciia.1.1.2.1.7
--      ciIaProjEntryNbrErrored           ciia.1.1.2.1.8
--      ciIaProjEntryTimePublished        ciia.1.1.2.1.9

```

SNMP Tables can be challenging. SNMP tables indicate the name, version, configuration, state and other information about each project on the appliance, similar to a database schema. Each entry item (for example, `ciIaProjEntryName`, `ciIaProjEntryVersion`) describes a column in the table. You can search through the MIB for the string to find more information on each item. Note: Attempting to "walk" the Project table in an iterative fashion may present problems. Instead, always use a tool feature that understands tables when viewing table information. The following example illustrates a "walk" technique. In this case a project was published and then cloned to create a new configuration, resulting in two table rows. As the output indicates, it is difficult to understand which items are associated with specific rows. In this case, you need to view the index (the last piece of the OID) to determine the correct arrangement of items and rows.

```

$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
CASTIRON-IA-MIB::ciIaProjEntryName.98304 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryName.98305 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryVersion.98304 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryVersion.98305 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryConfig.98304 = STRING: Default
CASTIRON-IA-MIB::ciIaProjEntryConfig.98305 = STRING: OnlineLicensingClone
CASTIRON-IA-MIB::ciIaProjEntryState.98304 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryState.98305 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98304 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98305 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98304 = STRING: 2009-6-
12,16:36:20.0,+0:0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98305 = STRING: 2009-6-
12,16:36:20.0,+0:0

```

When information is mapped using the `snmptable` command, it is displayed more clearly, as shown in the following example:

```

$ snmptable -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
SNMP table: CASTIRON-IA-MIB::ciIaProjectTable

      PEN*                PEV PEC                PES                PER COM PEE                PETP
OnlineLicensing          1.0 Default          undeployed          0  0  0          2009-6-
12,16:36:20.0,
                                +0:0
OnlineLicensing          1.0 OnlineLicensingClone undeployed          0  0  0          2009-6-
12,16:36:20.0,
                                +0:0

```

*Table Key: PEN=ciIaProjEntryName, PEV=ciIaProjEntryVersion,
PEC=ciIaProjEntryConfig,
PES=ciIaProjEntryState, PER=ciIaProjEntryNbrRunning, COM=ciIaProjEntryNbrCompleted,
PEE=ciIaProjEntryNbrErrored, PETP=ciIaProjEntryTimePublished

Note that these examples use textual names rather than OIDs. Because a function of the MIB is to map between OID and textual name, you should not need to use OIDs on a regular basis.

Setting up an SNMP receiver

You can use the WMC to create notifications for events that happen in runtime components such as orchestrations, security, hardware and others. A delivery mechanism for these notifications is SNMP in which a trap is set for events. To retrieve these events, you must to set up a receiver or manager that is registered with the appliance. Use the procedures in this section to set up an SNMP receiver.

About this task

When you set up an SNMP receiver, you download and split the MIBs, create the configuration file, enable notifications, add a notification policy and then test the system:

Procedure

1. Click on **WMC: Logs-> Notifications -> SNMP**.
2. In the dialog box click **Download MIB**.
3. Add the MIBs to the machine you've designated to be the receiver.
4. Run the following script to split the MIBs into logical units. Note: the script assumes the file is in the local directory and that the file you downloaded is named castironsys.mib.

```
#!/bin/bash

sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castironsys.mib |
  while read mib; do
    echo $mib
    sed -ne "/^$mib/,/^END/p" castironsys.mib > $mib
  done
```

5. Set up your SNMP manager of choice.
6. Select **WMC: Logs-> Notifications -> SNMP** to enable SNMP notifications. Be sure that the **Enable SNMP** checkbox is checked.
7. Add the receiver hostname.
8. Set the trap community to be **public**. This is defined in /etc/snmp/snmptrapd.conf as the **authCommunity** entry.

9. Click **Save**.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/set_up_snmp_receiver.html

Adding a notifications policy

When you add a notifications policy, you inform administrators of alerts, policy violations and the status changes of job executions. Using SNMP traps, the notification system also allows you to send traps to SNMP-enabled third-party applications. Perform the following steps to add a notifications policy and assign it a name.

Procedure

1. Click on the **Policies** tab.
2. Click the **New Policy** link at the bottom left of the screen and give the policy a name.
3. In the **Notify When** row, select a level and system. Be sure the **SNMP checkbox** under the **Notify** section is checked.
4. Click **Save**.

Example

The following table shows the system, level and messages delivered via the Uncategorized trap. The Uncategorized trap is named CASTIRON-IA-MIB::ciIaUncategorizedEv, Enterprise 1.3.6.1.4.1.13336.2.2.2.1.1.10, Trap 1.

Table 1.

Header	Header	Header

About the Resource Utilization Graph

Describes how to use the data the Resource Utilization graph provides for capacity planning and understanding the health of the runtime environment.

The Resource Utilization graph tracks the following variables, which you can use to analyze the overall health of the runtime and calculate the available capacity for additional projects and orchestrations:

- % Disk Used
- % Memory Used
- GC Activity
- # Running Jobs

% Disk Used

This variable tracks the percentage of disk space used by orchestration job variables and historical data.

When you run an orchestration job, the runtime uses the disk to store the variable data for that job. When you enable persistence, the stored variable data for jobs allows the Integration Appliance to provide a point-in-time recovery of orchestration jobs should the Integration Appliance encounter a fault that requires restarting the runtime.

The runtime also stores historical data about orchestration jobs, which you can view on the Web Management Console (WMC) Job Log page.

If the amount of disk space available becomes too low, the Integration Appliance generates an alert, which sends a notification to designated users.

% Memory Used

The Integration Appliance has a fixed amount of available memory to run orchestrations. The % Memory Used variable tracks the amount of this fixed memory used by orchestration jobs and the corresponding variable data. When the memory allocated to orchestration jobs and variable data is no longer being used, the memory is returned to the pool of available memory using a process called garbage collection.

There is a direct relationship between the amount of memory used and garbage collection cycles. However, high memory usage does not necessarily mean an increase in full garbage collection cycles.

For more information about factors that affect the amount of memory used, see [Best Practices for Memory Management](#).

GC Activity

Garbage collection is a process that returns memory, held by completed jobs and variable data, back to a pool of memory used by all orchestration jobs. This garbage collection process ensures that the Integration Appliance has a constant supply of free memory to be used by new orchestration jobs.

The GC Activity variable tracks the percentage of full garbage collections that occur in a minute. This percentage is calculated by dividing the number of full garbage collections by 6. Ideally, the GC activity should be at or below 50%, that is 3 full garbage collections per minute. Orchestration performance is severely degraded when 6 or more full garbage collections happen per minute.

For more information about garbage collection and factors that impact garbage collection, see [Best Practices for Memory Management](#).

Running Jobs

Displays the number of jobs currently running on the Integration Appliance.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Monitoring/about_the_resource_utilization_graph.html

Hardware health

Use the information in this section to obtain notifications based on the hardware health of the appliance.

First you must prepare the SNMP Manager to receive Uncategorized traps (CASTIRON-IA-MIB::ciIaUncategorizedEv .1.3.6.1.4.1.13336.2.2.2.1.1.10 #1). Next you configure the SNMP Manager to poll for the following items and generate notifications when the conditions are met:

Table 1.

Parameters to Monitor	Recommended Thresholds	Snmp OID
Garbage Collections	Alert if this value changes quickly (by more than 6 counts in a 1-minute time period).	CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0
Memory Usage	Alert if this value goes over 80% (raw value of 8000).	CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0
Disk Usage	Alert if this value goes over 75% (raw value of 7500).	CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0

Garbage collections

CASTIRON-IA-MIB::ciIaResNbrGarbageCollects counts the number of garbage collections that have occurred since the system was last restarted. While occasional garbage collections are normal, collections of 6 or more per minute is excessive and indicates that an appliance is overworked and as a result, may experience performance issues.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0 =
```

Memory usage

CASTIRON-IA-MIB::ciIaResPctMemoryUsed shows the percentage of total memory in use, expressed in hundredths of a percent. This number is updated after each garbage collection.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 =
Gauge32: 1.84
```

Note that this value is provided as an integer (184 in this case), but the MIB causes the SNMP manager to alter its displayed value. Values expressed in hundredths of a percent are *usually* modified automatically. For example in this case, '1234' should be displayed as '12.34'. However, take care to ensure that the SNMP management tool handles this automatically. If it does not, the value will appear as follows:

```
$ snmpwalk -On -v 2c -c public pebbles2.sanjose.ibm.com
.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 = Gauge32: 184
```

Recommendation: Alert if this value goes over 80% (raw value of 8000).

Disk usage

CASTIRON-IA-MIB::ciIaResPctWipFull indicates the percentage of total Work-in-progress (WIP) disk space in use, expressed in hundredths of a percent. This number is key for predicting job purging activities.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0 = Gauge32:
6.00
```

Recommendation: Alert if this value goes over 75% (raw value of 7500).

Built-in groups are predefined groups. In the cloud, in addition to a tenant administrator group, each environment has a built-in administrator, publisher, and user group.
- [About Libraries Environments](#)
- [About User Profiles](#)
A user profile provides a summary of user details, such as: name, display name, email, and group memberships.
- [Assigning Users to Groups](#)
You must have tenant administrator or environment administrator privileges to assign users to groups. Environment administrators can only add users to groups in their specific environment.
- [Changing Your Password](#)
- [Changing User Passwords](#)
- [Creating New Groups](#)
In the cloud, only the tenant admin user can create new groups. In a multi-environment tenant, environment administrators can also create new groups for their specific environment.
- [Creating New Users](#)
In the cloud, only the tenant admin user can create new users. In a multi-environment tenant, environment administrators can also create new users for their specific environment.
- [Deleting Groups](#)
In the cloud, only the tenant admin users can delete groups from a cloud environment. In a multi-environment tenant, environment administrators can also delete groups for their specific environment.
- [Deleting Users](#)
In the cloud, only the tenant admin user can delete users from a cloud environment. In a multi-environment tenant, environment administrators can also delete users for their specific environment.
- [Granting Project Configuration Permissions](#)
You can grant permissions to a user or a group by editing the project configuration permission. When you grant permissions to a user or group, they can edit or delete the project configuration.
- [Local Staging Database Permissions](#)
Only users with Administrator privileges, granted as being part of the built-in Administrator group, can start, stop, and perform operations on the Local Staging Database.

[Feedback](#) | [Notices](#)

About Built-In Groups

Built-in groups are predefined groups. In the cloud, in addition to a tenant administrator group, each environment has a built-in administrator, publisher, and user group.

For example: A tenant, named Cumulus, is created for your organization. Within this tenant there are two environments: Development and Production. The following built-in groups would be available:

- admin [cumulus.com]
- admin [Development]
- publisher [Development]
- user [Development]
- admin [Production]
- publisher [Production]
- user [Production]

The same user can be a part of multiple groups. You can assign users to a built-in group or create a new group.

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration--user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

The following list defines the permissions granted to each of the built-in groups:

- **Tenant Administrator Group.** Provides privileges to all environments, users, groups, and projects in a specific tenant. Permits users to create, edit, and delete users and custom groups in the tenant. Users in this group can add and delete users to and from any built-in or custom group in the tenant. Users in this group can view, edit, and delete permissions for all source projects in the tenant.

Users in this group can view all the environments in the tenant and have all the permissions of an environment administrator in each of the tenant environments.

- **Environment Administrator Group.** Provides privileges to all users, groups, and projects in a specific environment. Permits users to create, edit, and delete users and custom groups in a specific environment. Users in this group can add and delete users to and from any built-in or custom group in the environment.

Environment Administrators can also create and deploy project configurations for project that any environment publisher publishes, and view orchestration job details for any project configuration in the environment. With environment administrator group privileges you can edit permissions that publishers for the same environment set for their individual project configurations.

Even though members of the Environment Administrator group have Environment Publisher group and Environment User group privileges, the members of the Environment Administrator Group are not displayed in other groups in the same environment until you explicitly add the user.

- **Environment Publisher Group.** Provides project privileges in a specific environment. Permits users to create, deploy, or delete project configurations for any project that they publish in the environment. Users in this group can also start and stop orchestrations and view orchestration job details for project configurations they deployed in the environment. As an environment publisher, you can grant

permissions for individual project configurations you create to another user with environment publisher privileges for the same environment.

The members of the Environment Publisher Group do not appear in the Environment User Group, until you explicitly add the user.

- **Environment User Group.** Permits users to monitor alerts and orchestrations in a specific environment. Users in this group can create and edit projects; however, they cannot publish the project to an environment. You must have Publisher privileges for the specific environment to which you want to publish a project. All users are automatically members of the Environment User group.

In a multi-environment tenant, users in this group only see the environment tab for environments of which they are a member. For example, a tenant has a Development, a Staging, and a Production environment. The tenant administrator or administrator of the Development environment adds a user to the User [Development] group. When the user logs in to the tenant, the user can only see the Development environment, even though the tenant has two other environments.

About Libraries Environments

Libraries Environment is a user profile parameter that specifies the environment from which Studio retrieves connector libraries.

In a multi-environment tenant, each environment can potentially have different versions of connector libraries installed. Setting this parameter points Studio to the libraries you want to use while verifying your projects. This parameter is not as critical if your project does not use an endpoint that requires additional libraries to be installed. See the Connector Release Notes® for a complete list of endpoints that require you to install additional libraries.

Note: The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.

About User Profiles

A user profile provides a summary of user details, such as: name, display name, email, and group memberships.

You can access and edit user profile settings from the Settings link in the top right-hand corner of the Management Console. The user profile displayed is for the user currently logged in to the Management Console.

Parent topic: [Permissions](#)

Accessing User Profile Information

Procedure

1. Click the Settings link in the upper right-hand corner of the Management Console. The Settings window is displayed.
2. Optional: For the Display Name setting, click Edit to modify the display name. After you modify the setting, click Save.
3. Optional: For the Password setting, click Edit to modify the user password. After you modify the setting, click Save.
4. Optional: For the Email setting, click Edit to modify the user's email address. After you modify the setting, click Save.
5. Optional: **Cloud:** Click Change Libraries Environment, to specify the environment from which Studio retrieves connector libraries. After you modify the setting, click Save.
6. Click Close to close the Settings window.

Changing Your Password

About this task

You can change your own password at anytime. However, to modify another user's password, you must have tenant administrator permissions. Environment administrators cannot change passwords for users in their environment.

For example, you are the administrator for the Development environment. You can change your password, but you cannot change the password for any specific user with permissions to the Development environment.

Procedure

1. Click the Settings link in the upper right-hand corner of the Management Console. The Settings window is displayed.
2. For the Password setting, click Edit.
3. Enter values for the Old Password, New Password, and Confirm Password fields.

If you clear the Hide Password Text option, your password displays and is no longer encrypted.

4. Click Save to change your password.

Results

A confirmation message displays when the Management Console has successfully saved the new password.

Parent topic: [Permissions](#)

 Last updated: Wednesday, February 17, 2016

Creating New Users

In the cloud, only the tenant admin user can create new users. In a multi-environment tenant, environment administrators can also create new users for their specific environment.

Before you begin

On a physical or virtual Integration Appliance, only admin users can create new users.

Procedure

1. In the Management Console, login as administrator.
2. Select Security > Users and Groups.
3. In the Users section, click New Users.
4. In the New User window, enter a value for the following fields: Name, Display Name, Email, Password, and Confirm Password.

It is recommended that you add the tenant name to the user name and display name.

For example, if the tenant name is `ibm.com`[®], then the new user name should be `newuser@ibm.com`. This will help you identify common user names across multiple tenants in the cloud.

5. Optional: Clear the Hide Password Text checkbox. If you clear this option, the password you entered displays and is no longer encrypted.
6. In the Groups list, select all the groups to which the new user will have access.
7. Optional: Clear the Active checkbox. If you clear this option, the user cannot log in to the Management Console.
8. **Cloud only:** From the Libraries Environment list, select the environment from which the user's projects can retrieve additional libraries and files for endpoints. The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development

- environment as the Libraries Environment, you should be a member of groups in the Development environment.
9. Click Save.

Results

In the Users section of the Users and Groups page, the new user displays in alphabetical order.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Permissions/deletingUsers.html>

Granting Project Configuration Permissions

You can grant permissions to a user or a group by editing the project configuration permission. When you grant permissions to a user or group, they can edit or delete the project configuration.

Before you begin

You must have Administrator privileges or you must be the publisher of a project to grant permissions to other users or groups to edit or delete project configurations.

About this task

By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only you, the Administrator Group members, and the members of the Publisher group that you belong to, will have permissions to the project configuration. If you would like to include another group to have

permissions to the project configuration, you must edit the permission on the project configuration to include another group.

To edit permissions:

Procedure

1. Click a project configuration. The Configuration Details page is displayed.
2. In the Permissions section, click Edit under Group or User and select group or groups and user or users to grant permissions to.
3. Click Save.

Note: When permission is given to a group, all the users in that group are granted permission to the project configuration by default. You cannot remove permissions for an individual user from this group. If any user (outside this group) requires access to the project, you can grant permissions to the user by selecting only that user from the user table.

Results

All the users and groups you select now have full access to the project configuration. These users and groups can now edit and delete the project configuration.

Local Staging Database Permissions

Only users with Administrator privileges, granted as being part of the built-in Administrator group, can start, stop, and perform operations on the Local Staging Database.

Users with Publisher privileges can view tables and perform operations on the database, only if the Local Staging Database has already been started by a user with Administrator privileges. If the Local Staging Database has not been started, users with Publisher privileges will not be able to view the database or perform operations on the database.

Users that are part of the built-in Users group or with WMC login credentials created in an LDAP Server do not have access to the Local Staging Database.

About Secure Connectors

A Secure Connector facilitates the secure transfer of data between the IBM® WebSphere® Cast Iron® appliance and an endpoint that is located behind a firewall. The Secure Connector installer for appliance supports both 32-bit and 64-bit Windows and Linux machines.

To enable a Secure Connector, a tenant administrator must complete the following tasks:

- Create a Secure Connector
- Download the Secure Connector configuration file
- Launch the Secure Connector installer
- Install vendor supplied libraries

Parent topic: [Using Secure Connectors](#)

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Secure_Connector/aboutSecureConnectors.html

Secure Connector Minimum Requirements

This topic provides information about minimum system requirements needed to use a Secure Connector.

You can run the Secure Connector on the following operating systems:

- Microsoft Windows 7
- Microsoft Windows 8
- Microsoft Windows 2008
- Linux (RHEL 6.5, Ubuntu 14.04)

Note: For installing Secure Connectors on Linux platform, use xWindows or KDE environment to use the GUI option.

The Secure Connector has the following minimum system requirements:

- 1 GHz CPU
- 2 GB RAM
- Java 1.7

Creating Secure Connectors

This topic provides information about creating Secure Connectors.

About this task

Use the Web Management Console (WMC) to create a Secure Connector for your environment.

After you create a Secure Connector in the appliance, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: If the endpoint you are creating requires extra libraries for a Secure Connector, use WMC to install the libraries before you deploy any project configurations that use the Secure Connector.

Procedure

1. From the navigation pane of an environment tab, select System > Secure Connectors.
2. Click New Secure Connector. The Create Secure Connector dialog box is displayed.
3. Provide a name for the new Secure Connector.
4. Provide a brief description of the Secure Connector.
5. Click Save. The Secure Connector is displayed in the Secure Connector page.

Downloading the Secure Connector installer:

You can download the Secure Connector installer from the Cast Iron installer CD, Fix Central, or IBM Passport Advantage. You can download for Windows or Linux, 32-bit or 64-bit, based on your requirement.

Parent topic: [Using Secure Connectors](#)

Downloading Secure Connector Configuration Files

How to download Secure Connector configuration files.

About this task

When you download a configuration file, the configuration file is saved to your default download directory. You can choose to save configuration files to different locations. Regardless of the number of configuration files you download, you can only use one configuration file during the Secure Connector installation process.

When you have selected a configuration file to set up a Secure Connector, that configuration file is used to configure any subsequent Secure Connector. It is not recommended to configure multiple Secure Connectors using the same configuration file. Instead, use a new configuration file or modify the existing configuration file. The Gateway, Listen to Port, and Transmit to Port parameters should have unique values for each Secure Connector.

The Secure Connector configuration file provides the Secure Connector installer with values for the following parameters:

- **Secure Connector Name** - Specify the name of the Secure Connector you created.
- **Tenant ID** - Use the default value provided in the file. It is used for internal communication.
- **Environment ID** - Use the default value provided in the file. It is used for internal communication.
- **Gateway** - Use the default value provided in the file. It is the data network IP on which the appliance is running.
- **Listen on Port** - Only modify this parameter if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
- **Transmit on Port** - Only modify this parameter if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
- **Secure Connector Auth Key** - Specify the authentication key from the Secure Connector you created in the appliance.
- **Secure Connector Private Key** - Specify the authentication private key, which you downloaded while creating the Secure Connector in the appliance.

Note: If you are using secure connector on appliance then:

- Ensure that the appliance IP is reachable (you are able to ping) from the machine where the secure connector is installed.
- The ports mentioned below are used internally by the appliance for communication with the Secure Connector. It is recommended that you do not use these ports on the appliance in any of your orchestration activities that involves HTTP Receive Request activity and Web Service activities.
- - 9080
 - 9442
 - 9443
 - 9445

To download the Secure Connector configuration files, complete the following steps:

Procedure

1. Log into the Web Management Console as the tenant administrator.
2. From the Navigation pane of an environment tab, select System > Secure Connector.
3. In the Secure Connector window, click the Secure Connector that will communicate with an endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.
4. Click Download Secure Connector Configuration and click Download now. The Opening Secure Connector Configuration dialog box is displayed.
5. Choose Save File and click OK. The configuration file is saved to the default download directory of the current user.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Secure_Connector/downloading_secure_connector_configuration_files.html

Installing Secure Connectors

Provides procedures to download the Secure Connector installer and install the Secure Connector.

Before you begin

For Windows installations, verify that you do not have an existing version of the Secure Connector installed. If you have a previous version that is installed, uninstall it before you proceed.

For Linux installations, while it is not required, it is good practice to uninstall previous Secure Connector installations.

For Linux machines, install a desktop environment, such as GNOME or KDE, to provide a graphical interface.

About this task

After you create a Secure Connector in the appliance, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: The machine on which you choose to run the installer must have access to the endpoint. You do not have to run the installer on the same machine as the endpoint.

Note: If you are using secure connector on appliance then:

- Ensure that the appliance IP is reachable (you are able to ping) from the machine where the secure connector is installed.
- The ports mentioned below are used internally by the appliance for communication with the Secure Connector. It is recommended that you do not use these ports on the appliance in any of your orchestration activities that involves HTTP Receive Request activity and Web Service activities.
- - 9080
 - 9442

- o 9443
- o 9445

Downloading the Secure Connector installer:

You can download the Secure Connector installer from the Cast Iron® installer CD, Fix Central, or IBM® Passport Advantage®. You can download for Windows or Linux, 32-bit or 64-bit, based on your requirement.

To install the Secure Connector:

1. Start the Secure Connector installer that you downloaded.
 - o `windows-secure-connector-installer.exe` (for Windows)
 - o `linux-secure-connector-installer.sh` (for Linux)

The Secure Connector Installer wizard is displayed.

2. Click Next then read and accept the licensing agreement.
3. Click Next and choose an installation directory.
4. Click Next. A message window states the location where the target directory is created.
Note: If an installation directory exists, a warning message is displayed and you must confirm that you want to install and overwrite existing files.
5. Click OK.
6. Set up shortcut options to start, stop, and edit a Secure Connector.
 - a. Select one or both of the following options:
 - Create shortcuts in the Start menu.
 - Create additional shortcuts on the desktop.
 - b. Select a program group from which you access the shortcuts.
 - c. Choose to create shortcuts for the current user or all users.
7. Click Next. The installation progress displays.
8. Select a Secure Connector configuration file. If you have not already downloaded a Secure Connector configuration file, download one now. For more information about how to download Secure Connector configuration files, see [Downloading Secure Connector Configuration Files](#).
9. Click Next.
10. For Windows installation, choose to install and run the Secure Connector as a Windows Service. If you choose install the Secure Connector as a Windows Service, you can control the Secure Connector using the Windows Services control panel (recommended). If you choose not to install and run the Secure Connector as a Windows Service, then the Secure Connector is installed as a Windows application. To run the Secure Connector as a Windows Service, you must specify the following service account information:
 - o Service Start Mode
 - o Service Account Domain
 - o Service Account User
 - o Service Account Password
11. Click Next. The Create Vendor Supplied Libraries screen is displayed.
12. Click Add and select the library files to upload. In the appliance, the valid files are `.jar`, `.dll`, and `.so` file types. The files that you select are displayed in the Files to Add column.
13. Click Update.

The files that display in the Files to Add column are not committed until you click Update.

14. Click Next. A dialog box is displayed to confirm the changes made, if you have not clicked the Update button. Click Yes to update changes and proceed further. If you click No to go to the next screen without any changes. Click the Cancel button to stay on the same screen.
15. When you click Yes to proceed further, the `Vendor JAR created/updated successfully` message is displayed.

16. Click OK. A message saying that the installation has completed successfully is displayed.
17. Restart the Secure Connector.

Note: If your endpoint (that is SAP) requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Supplied Libraries for Secure Connectors](#).

To run the Secure Connector installer:

1. Start the Secure Connector installer that you downloaded in the Creating a Secure Connector section.
 - `windows-agent-installer.exe` (for Windows)
 - `linux-agent-installer.sh` (for Linux)
2. Accept the licensing agreement and choose an installation directory.
3. Log in to the Web Management Console as the administrator.
4. Select Setup > Support Information. Keep the Support Information page open while configuring the Secure Connector installer parameters. You can cut and paste values from the Support Information page to the appropriate parameter field.
5. Provide values for the following parameters:
 - **Secure Connector Name** - Specify the name of the Secure Connector you created.
 - **Tenant ID** - Use the default value provided in the file. It is used for internal communication.
 - **Environment ID** - Use the default value provided in the file. It is used for internal communication.
 - **Gateway** - Use the default value provided in the file. It is the data network IP on which the appliance is running.
 - **Listen on Port** - Modify this parameter only if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
 - **Transmit on Port** - Modify this parameter only if another service is using the port specified or you want to run multiple Secure Connectors on the box.
 - **Secure Connector Auth Key** - Specify the authentication key from the Secure Connector you created in the cloud.
 - **Secure Connector Private Key** - Specify the authentication private key, which you downloaded while creating the Secure Connector in the cloud.
6. Open a command prompt and navigate to the Secure Connector installation directory.
7. If your endpoint (that is, SAP) requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Libraries on the Secure Connector](#).
8. Start the Secure Connector by running one of the following files at the command prompt:
 - For Windows: `runclient_osgi.bat`
 - For Linux: `runclient_osgi.sh`

Adding or importing certificates to the Secure Connector TrustStore/KeyStore

For Cast Iron connector activities, such as HTTP, FTP, Email, or Web Services (or any other connector) that need to establish connection with the SSL enabled server (HTTPS/FTPS), you must import the corresponding certificates into the TrustStore or KeyStore of the Secure Connector.

Procedure

1. Use the Java keytool utility to import the required certificates to TrustStore(cacerts) or KeyStore(cert) in the path mentioned: `<secure_connector_install_directory>\etc\security`
2. Restart Secure Connector for the changes to take effect.

Parent topic: [Using Secure Connectors](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Secure_Connector/Adding_importing_truststore.html

Installing Vendor Supplied Libraries for Secure Connectors

Certain endpoints require additional libraries to be installed before the Secure Connector can communicate with them. This section provides information about using the Web Management Console (WMC) to install these vendor supplied libraries. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page in WMC.

About this task

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

Procedure

1. Log on to WMC.
2. Select System > Upgrade Connector Libraries .
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed are displayed in the Installed Files column.

4. Click the plus (+) icon and select the library files to upload. In the appliance, the valid files are .jar and .dll are the valid library file types. The files that you select are displayed in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, WMC does not add the files you uploaded. If WMC times out before you click Update and commit the added files, repeat the last two steps.

6. In the same environment tab, select: System > Secure Connectors.
7. Click Download Libraries and save the SecureConnector-Default Environment-libraries.zip file to your workstation.
8. Uncompress the SecureConnector-Default Environment-libraries.zip file and find a *.tp-1.0.0.jar for each connector module.
9. Use the .jar files in the SecureConnector-Default Environment-libraries.zip to replace the files in the Secure Connector installation directory: lib/plugins.
10. Copy all the remaining .zip files to the following Secure Connector installation directory: lib/thirdparty
11. Restart the Secure Connector by running one of the following files from a command line:
 - o For Windows: runclient_osgi.bat
 - o For Linux: runclient_osgi.sh

Downloading and installing the SAP libraries

To connect to an SAP system from studio, you must install SAP DLLs and JAR files onto your Windows development machine. You must have the SAP login credentials to enter the SAP Support Portal and download the files.

About this task

To download and install the SAP JAR files and DLLs:

1. Contact SAP Technical Support to obtain the compressed files for the following SAP Components:
 - o **SAP JCo Release 3.0.6 or later version - based on the platform on which studio is running.**

2. Uncompress the SAP JCo compressed file:
 - o Double-click the `sapjdoc30P_6-1000xxxx.zip` file.
 - o Use the decompression tool to extract the contents of the compressed file to a temporary directory. This compressed file contains another compressed file `sapjco3-NTintel-3.0.6.zip`. Extract this compressed file also to a temporary directory, for example: `C:\temp\sapjco3-NTintel-3.0.6`. This directory contains the required libraries `sapjco3.jar` and `sapjco3.dll`.
3. Unzip the SAP IDoc JCo compressed file:
 - o Double-click the `sapjdoc30P_6-1000xxxx.zip` file.
 - o Use the decompression tool to extract the contents of the compressed file to a temporary directory, for example, `C:\temp\sapjdoc30P_6-1000xxxx`. This directory contains the required library `sapidoc3.jar`.

Procedure

1. Open studio, select Tools > Install Module Providers.
2. When the Add Providers dialog box is displayed, click the plus (+) button present beneath SAP Connector.

A text field and a Browse button are displayed.

3. Click Browse, and use the browse dialog box to locate and select the `sapjco3.jar` file.
4. Click Open to import the JAR file contents.
5. Click the next available plus (+) button to add the `sapidoc3.jar` and `sapjco3.dll` files.
6. When the JAR file is listed in the Add Providers dialog box, click OK.

Results

A prompt is displayed to restart studio and activate the changes.

What to do next

You can now create SAP endpoints and orchestrations.

Uninstalling Secure Connectors (Windows)

This topic provides information about uninstalling a Secure Connector from a Windows machine.

About this task

The following procedure allows you to uninstall a Secure Connector and all its configuration settings:

Procedure

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector_name> > Stop Secure Connector.
3. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector_name> > Uninstall Secure Connector. The Uninstaller window is displayed.
4. Select Force the deletion of C:\Program Files\IBM\Secure_Connector_<connector_name>.
5. Click Uninstall.
6. When the status bar displays [Finished], you can close the Uninstaller window.

Uninstalling Secure Connectors (Linux)

This topic provides information about uninstalling a Secure Connector from a Linux machine.

Before you begin

You must have root level permissions to uninstall the Secure Connector from a Linux machine.

About this task

You can uninstall the Secure Connector by using a graphical interface, issuing a command line command, or running the Java™ `uninstall.jar` file. Choose one of the following options to uninstall a Secure Connector and all its configuration settings from a Linux machine.

Uninstalling the Secure Connector using a graphical interface: You must have a desktop environment, such as GNOME or KDE, to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the application directory, select IBM > Cast Iron Secure Connector <connector_name> > Stop Secure Connector.
3. From the application directory, select IBM > Cast Iron Secure Connector <connector_name> > Uninstall Secure Connector.

Uninstalling the Secure Connector from the command prompt:

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, issue the `./Uninstaller/uninstall.sh` command.

Uninstalling the Secure Connector with .jar file. You must have Java version 1.6 or higher installed to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, enter the `runclient_osgi.sh stop` command.
3. In the directory where you installed the Secure Connector, navigate to the Uninstaller subdirectory to find the `uninstaller.jar` file: `"${JAVA}" -jar "${INSTALL_DIR}/Uninstaller/uninstaller.jar"` where `{JAVA}` is the Java executable and `{INSTALL_DIR}` is the Secure Connector name.

A dialog box is displayed.

4. Select the Force the Deletion... option.
5. Click Uninstall.
6. Click Quit.

Results

The Secure Connector is uninstalled. Configuration settings are retained in the home directory.

Starting and Stopping Secure Connectors on Windows (Installed as a Windows Service)

This topic provides information about starting and stopping Secure Connectors on Windows machines, where you have a Secure Connector that is installed as a Windows Service.

About this task

If you installed the Secure Connector as an automatic Windows Service, as recommended, use the Windows Services control panel to stop or restart the Secure Connector.

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

For steps to enable the interactive mode for a Windows service, see [Enabling Interactive Mode for Windows Services](#).

Note: If you use the **Start Secure Connector** Start menu shortcut or desktop shortcut to start a Secure Connector, the Secure Connector starts as a normal application rather than as a service. You must use the Windows Services control panel to start Secure Connectors as a service. You can use either the **Stop Secure Connector** Start menu shortcut or desktop shortcut to stop a Secure Connector.

Starting and stopping Secure Connectors, using the Windows Services control panel:

Procedure

1. Open the Windows Services window: Start > Control Panel > Administrative Tools > Services.
2. Scroll down the list of services to locate the IBM® Secure Connector service.
3. Right-click on the IBM Secure Connector service and select the appropriate command: Start, Stop, Pause, Resume, or Restart.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Secure_Connector/starting_s topping_secure_connectors_windows_services.html

Enabling Interactive Mode for Windows Services

When the Secure Connector is installed as a Windows Service, enable the interactive mode for the service to view system tray icons and command window.

About this task

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

Procedure

1. Open the Services control panel. For example: Start > Control Panel > Administrative Tools > Services.
2. Select the Cast Iron Secure Connector service.
3. Right-click the service name, and select Properties. The Service Properties window is displayed.
4. Select the Log On tab.
5. Select Local System account and then select Allow service to interact with desktop.
6. Click OK.
7. Click Restart.

Results

When the Cast Iron® Secure Connector service is restarted, system tray icons and a command window are displayed.

Note: You can minimize the command window. However, if you close the command window, the Cast Iron Secure Connector service is stopped and terminated. Closing the command window is the equivalent of stopping the Secure Connector service from the Windows Services control panel.

This topic provides information about starting and stopping Secure Connectors on Linux machines.

About this task

If you have a desktop environment, such as GNOME or KDE, you can start and stop the Secure Connector using menu shortcuts or desktop shortcuts. You can also start and stop the Secure Connector using the command line.

Procedure

1. Start the Secure Connector from either the menu shortcut, desktop shortcut, or command line. Choose one of the following options:
 - o Select *<application>* > IBM® > Cast Iron® Secure Connector *<connector_name>* > Start Secure Connector.
 - o From the desktop, click the Start Secure Connector shortcut to start the Secure Connector.
 - o From the command prompt, enter `runclient_osgi.sh start .`
2. Stop the Secure Connector from either the menu shortcut, desktop shortcut, or command line. Choose one of the following options:
 - o Select *<application>* > IBM > Cast Iron Secure Connector *<connector_name>* > Stop Secure Connector.
 - o From the desktop, click the Stop Secure Connector shortcut to stop the Secure Connector.
 - o From the command prompt, enter `runclient_osgi.sh stop.`

Upgrading Secure Connectors

This topic provides information about upgrading Secure Connectors.

Procedure

1. Create a new Secure Connector.
2. Download the latest version of the Secure Connector installer, based on your operating system. For example, Windows or Linux.
3. On a Windows or Linux machine, launch the Secure Connector installer. The Cast Iron® Secure Connector wizard guides you through the upgrade process.

Note: If you already have a Secure Connector installation that is higher than or same as the latest version, a warning message states that you have an existing installation and alternatively you can upgrade the existing installation.

Note: You must stop the Secure Connector (if already started) before upgrading.

Note: Before you proceed with the Secure Connector upgrade process, ensure that you have:

 - o Stopped the Secure Connector
 - o Taken a manual backup of the certificates (if any) located at `<secure_connector_install_path>/etc/security` or `jre/lib`. You may want to replace/add your certificates after upgrade.
4. Click the Upgrade option. The Select the installed path list box is displayed.
5. Select the Secure Connector installed path, if it is displayed in the list box. Else, click Browse button to select the installed path.
6. Click Next, then read and accept the licensing agreement.

7. Click Next. The installation progress is displayed. A message is displayed stating that the installation has been completed successfully. The path to the installer program is also displayed.
8. Click Done.
9. Start the Secure Connector.

Troubleshooting Secure Connectors

This topic provides potential solutions for issues you have with the Secure Connector.

Secure Connector log files are available for review. The Log directory is created after the initial start of the Secure Connector. The Log directory is in the Secure Connector installation directory. For example: C:\Program Files\IBM\Secure_Connector_1.development\logs

- **A port contention error occurs.** A port contention error can occur when two Secure Connectors are configured to use the same port and gateway. To resolve the issue, provide unique values for the Gateway, Listen on Port, and Transmit on Port parameters in each Secure Connector configuration file.
- **Unable to run .jar file to uninstall a Secure Connector.** Verify that the Java™ path is specified correctly and that you have Java version 1.6x or higher installed on the machine.

About Certificates

Certificates enable secure communication between the Integration Appliance and endpoints located in your intranet and extranet. Use the Management Console to manage certificates.

From the Certificates page, you can generate, import, and update security certificates and security settings.

The following tables provides definitions for certificate terminology.

Certificate Terminology	Definition
Alias	A string of alphanumeric characters you assign to a KeyStore or TrustStore entry to provide a more user friendly name. Within a KeyStore or TrustStore you can use an alias to refer to the keys and certificates. Note: Aliases are not case sensitive. For example, MyCert and mycert refer to the same entry.
Certificate	A signed credential which identifies an endpoint or organization.
Key Pair	A public key and associated private key.
KeyStore	A Java™ data store that houses private keys and certificates used by a Java SSL endpoint. For example, a local Java endpoint supplies a certificate from its KeyStore as a credential to identify itself to a remote SSL endpoint.
PKI	Public Key Infrastructure is a system for managing encryption keys and identity information. The purpose of the system is to provide standards based system for protecting/securing communications over the internet.
Private Key	A key known only to a single endpoint used to encrypt and/or sign data.
Public Key	A key associated with a private key that can be distributed to anyone.

Certificate Terminology	Definition
SSL	Secure Sockets Layer enables secure web communications and permits endpoints to optionally authenticate each other.
TrustStore	A Java data store that houses certificate authority signed certificates. For example, a local Java endpoint utilizes a TrustStore to authenticate the identity (certificate) provided to it by a remote SSL endpoint.

Configuring Kerberos

About this task

When the Integration Appliance is exchanging data over a non-secure network, the Kerberos protocol allows the Integration Appliance to authenticate the server with which the Integration Appliance is communicating.

Procedure

1. In the navigation pane, select Security > Kerberos. The Kerberos Configuration page is displayed.
2. Specify the Kerberos Server name.
3. Specify the Kerberos Realm.
4. Click Save.

Clicking Delete clears the settings that you have specified.

Configuring LDAP Mechanism Properties

About this task

If you selected the Use Secure Connection (SASL) security option while enabling an LDAP Server, you must also specify a mechanism policy and configure the mechanism properties.

LDAP mechanism properties and LDAP mechanism policies are further described in the following tables.

Procedure

1. In the navigation pane, select Security > LDAP. The LDAP Configuration page is displayed.
2. In the Security Options section, select Use Secure Connection (SASL).
3. In the Authentication section, click Advanced Settings. Options for Mechanism Policies and Mechanism Properties display.
4. Select the appropriate options and choose the appropriate value from the drop-down list.

Parent topic: [Security](#)

LDAP Mechanism Properties

Mechanism Properties	Description
QOP (Quality of Protection)	<p>Names a property that specifies the quality-of-protection that the LDAP directory server uses. The property contains a comma-separated, ordered list of quality-of-protection values that the client or server supports. The following are valid QOP values:</p> <ul style="list-style-type: none">auth authentication onlyauth-int authentication plus integrity protectionauth-conf authentication plus integrity and confidentiality protection <p>The order of the list specifies the preference order of the client or server. If you do not specify a value, the default QOP is auth.</p>
Cipher Strength	<p>Names the property that specifies the cipher strength that the LDAP directory server uses. The property contains a comma-separated, ordered list of cipher strength values that the client or server supports. The following are valid cipher strength values:</p> <ul style="list-style-type: none">• low• medium• high <p>The order of the list specifies the client or server order of preference. An implementation should allow you to configure the meaning of these values. An application might use the Java™ Cryptography Extension (JCE) with JCE-aware mechanisms to control the selection of cipher suites that match the strength values.</p> <p>If you do not specify a value, the default cipher strength is low.</p>

Mechanism Properties	Description
Max Buffer Size	Specifies the maximum size of the receive buffer in bytes. If you do not specify a value, the default size is defined by the mechanism. Valid value range is between 0 and 65536.
Mutual Authentication	Names the property that specifies whether the server must authenticate to the client. The property name contains true, if the server must authenticate the to client and contains false otherwise. By default, this value contains false.

LDAP Mechanism Policies

Mechanism Policies	Description
Forward Secrecy	Names the property that specifies whether mechanisms that implement forward secrecy between sessions are required. Forward secrecy means that breaking into one session does not automatically provide information for breaking into future sessions. The property contains true if mechanisms that implement forward secrecy between sessions are required and contains false if such mechanisms are not required. By default, this value contains false.
Client Credentials	Names the property that specifies whether mechanisms that pass client credentials are required. The property contains true if mechanisms that pass client credentials are required and contains false if such mechanisms are not required. By default, this value contains false.
Susceptible to passive attacks	Names the property that specifies whether mechanisms susceptible to simple plain passive attacks, for example: PLAIN, are not permitted. The property contains true if such mechanisms are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to active attacks	Names the property that specifies whether mechanisms susceptible to active (non-dictionary) attacks are not permitted. The property contains true if mechanisms susceptible to active attacks are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to dictionary attacks	Names the property that specifies whether mechanisms susceptible to passive dictionary attacks are not permitted. The property contains true if mechanisms susceptible to dictionary attacks are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to anonymous attacks	Names the property that specifies whether mechanisms that accept anonymous login are not permitted. The property contains true if mechanisms that accept anonymous login are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.

Editing Security Settings

Procedure

1. In the Settings section, click Edit. The Edit Settings dialog box is displayed.
2. Select the certificate to use with the corresponding category. For example, Client SSL, Server SSL over data NIC, or Server SSL over mgmt NIC.
3. Select the VPeer check box if appropriate.
 - Selecting VPeer means that the integration appliance authenticates the identity of the SSL peer using the certificate provided by the peer.
 - When selected for the Client SSL category, the integration appliance authenticates the identity of the SSL server using the certificate sent by the server.
 - When selected for the Server SSL over data NIC category, the integration appliance requires that SSL clients connecting to the integration appliance must send a certificate.
4. Select the VHost check box if appropriate.
 - Selecting VHost means that the integration appliance verifies that the hostname of the server in an SSL session matches the name contained in the server certificate. This check is designed to prevent a man-in-the-middle (MITM) attack and is described in RFC 2818 *HTTP Over TLS* Section 3.1 *Server Identity*.
 - The VHost selection is only applicable for the Client SSL category.
 - The VHost selection is only applicable when VPeer is also selected.
5. Select the cipher strength.
 - Standard
 - Strong
6. Click Save.

Enabling an LDAP Directory Server

About this task

From the WMC, you can choose to have an LDAP server handle user authentication and authorization. When you enable an LDAP directory server, the authentications and authorizations of the LDAP directory server override any users, groups, or permissions you specified via the WMC, except for the built-in Admin user. Therefore, with the exception of the Admin user, you can authenticate and authorize users and groups via an LDAP directory server or the WMC, but not both. Regardless if you enable LDAP or not, you can update the Admin user password via the CLI.

Note: LDAP users will not be able to access the staging database.

Procedure

1. In the navigation pane, select Security > LDAP. The LDAP Configuration page is displayed.
2. Select the Enable LDAP option. If you do not select this option, the Integration Appliance uses the built-in groups and users you defined in the WMC to authenticate and authorize users and their access to the WMC.
3. Specify host information.
 - a. Enter the host name and port number of the LDAP directory server.
 - b. Choose a Base DN (Base Distinguished Name) or click Fetch DNs. The WMC fetches the Base DN of all the Directory Information Trees (DITs) from the LDAP directory server. Select the Base DN of the DIT that contains the users you want to authorize.
4. Choose one of the following security options:
 - o **Use Secure Connection (SASL)** - Enables Simple Authentication and Security (SASL) mechanisms supported by the LDAP directory server. This is the most secure option.
 - o **Use Simple Authentication** - Enables simple authentications, but does not encrypt credentials.
 - o **Anonymous Bind** - Enables anonymous binding to the LDAP directory server. This is the least secure option.
5. If you selected the Use Secure Connection (SASL) security option, specify a mechanism and configure the mechanism properties and mechanism policies.
6. If the LDAP directory server requires authentication for a directory search, specify values for the Principal and Password, which are in the Credentials section. When you select the Composed DN Mode authentication mode, this step is not required. However, this step might be required to fetch DNs or mechanisms when the LDAP directory server does not allow anonymous searches.

If you do not specify a password, the WMC attempts to make the initial binding into the LDAP server as an anonymous user and the LDAP server ignores the Principal credential you specified.

7. Choose one of the following authentication modes:
 - o Composed DN Mode
 - o Searched DN Mode
8. Specify the User Container RDN. The authentication mode you specify determines what value you should specify here.
 - o If you selected the Composed DN mode, the User Container RDN is composed of one or more attributes from the user DN. Construct the User Container RDN by walking up the tree from the immediate ancestor of the user to the entry just before the base and adding up the RDN of each entry in the path.

For example, if:

```
User DN = "uid=JohnK,ou=emp,dc=xyz,dc=com"
```

then

```
User Container RDN = "ou=emp"
```

- If you selected the Searched DN mode, the User Container RDN is typically left blank, which causes the LDAP directory server to search the entire DIT starting from the root (Base). Otherwise, the LDAP directory server searches the subtree rooted at the entry having DN = User Container RDN +BaseDN.
9. If you selected the Searched DN Mode, specify the User Search Filter that the LDAP directory server uses to search for the user DN. (required, only if you select the Search DN Mode) This entry accepts LDAP search filter specification and also accepts a user name in the form of \$USERNAME. For example:
 - In MSAD, this entry could be "(samAccountName=\$USERNAME)"
 - In SunOne, this could be "(uid=\$USERNAME)"
 10. Specify the User Principal DN, which specifies the DN of the user that the LDAP directory server binds after the search. You can specify \$USERNAME or \$DN to represent the user name and Distinguished Name. Where \$DN represents (RDN+BaseDN) for the Compose DN Mode and searched DN for Search DN Mode. In most the cases, \$DN is the entry. However, when using SASL in MSAD, you might only need to specify \$USERNAME. For SASL in SunOne, you might only need to specify "dn:\$DN".
 11. Specify Group Mapping Information.
 - a. Specify the Admin Group Filter.
 - b. Specify the Publisher Group Filter.
 - c. Specify the Group Filter.
 12. Click Save.

Importing Certificates

About this task

You can import a certificate or certificate chain into the IBM® WebSphere® Cast Iron® KeyStore. You can also import trusted Certificate Authority certificates (CA Certs) to the TrustStore.

Procedure

1. In the Key Store or Trust Store section, click Import. The Import Certificates dialog box is displayed.
2. Enter an alias name. This name is used to identify the imported certificate or certificate chain.
3. Optional: Enter a key password.

The password protects the private key of the key pair associated with the alias. If you do not specify a password, the password defaults to the password protecting the KeyStore.

4. If you are importing a certificate from a trusted site, select the Trusted option.

If you select the Trusted option, the certificate is imported without checking for an existing chain of trust. If you do not select the Trusted option, the KeyStore and TrustStore options are checked to ensure a chain of trust exists for the certificate being imported.

5. Choose to import the content from a file or from content in the clipboard that contains the certificate or certificate chain to be imported.

When importing into the KeyStore, supported formats include: PKCS12. When importing into the TrustStore, supported formats include CER/PEM (RFC 1421), DER and PKCS7.

6. Click Import.

Results

The certificate displays in the Certificates page.

Parent topic: [Security](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Working_with_Logs/aboutArchivedLogs.html

About Archived Logs

Logs can be archived locally or exported to an FTP server. From the WMC, you can download locally archived logs: Logs > Archive Logs.

You can archive or purge orchestration monitoring logs. When you configure parameters to archive orchestration monitoring log files, the Integration Appliance archives the log files before polling for conditions that trigger the Integration Appliance to purge additional orchestration monitoring data. You can archive orchestration monitoring data to a local disk on the Integration Appliance or export the archives to an FTP server. If you do not configure archive settings, the Integration Appliance purges all orchestration monitoring data that meets the default purging trigger conditions.

You can view archived log files by selecting Logs > Archive Logs in the Navigation page. When you export the logs, the Integration Appliance names exported orchestration monitoring logs using the following convention: orcmon_export_<timestamp>.xml.

Parent topic: [Working with Logs](#)

Archiving Orchestration Monitoring Logs Locally

About this task

When you select the Archive Purged Monitor Data to a Local File option and one of the log purging trigger conditions is met, the Integration Appliance exports orchestration monitoring logs to a local disk on the Integration Appliance.

Note: When you archive orchestration monitoring logs locally, you decrease the availability of disk space on the Integration Appliance. As the disk space is filled up, the purging trigger conditions generate archives much quicker.

Procedure

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. In the Archive Settings section, select Archive Purged Monitor Data to be a Local File .

5. Select Replace Exported File to replace previously exported orchestration monitoring logs. If you do not select this option, the Integration Appliance cumulatively stores orchestration monitoring logs. This can cause the Integration Appliance to run out of disk space very quickly and prematurely trigger a purge.
6. Click Save.

Results

The Integration Appliance archives Orchestration Monitoring logs locally. You can download locally stored archives by selecting the archive from the Archive list and clicking Download.

Archiving Orchestration Monitoring Logs to an FTP Server

About this task

When you select the Archive Purged Monitor Data to a Local File option and the Transmit Archive to FTP Server option and one of the log purging trigger conditions is met, the Integration Appliance exports orchestration monitoring logs to an FTP server. You can choose to archive all the exported log files on the FTP server or choose to have the latest archive replace the previous archive.

Procedure

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. In the Archive Settings section, select Archive Purged Monitor Data to be a Local File .
5. Select Transmit Archive to FTP Server (After a Purge).
6. (Optional) Select Replace Exported File to replace previously exported logs.
7. Specify FTP settings. See the following table below: [Table 1](#) for more information about the FTP settings.
8. Click Save.

Archiving Utilization Data to an FTP Server

About this task

The Integration Appliance collects data about disk usage, memory usage, garbage collection, and the number of running jobs. This resource utilization data can help you analyze the overall health of the runtime and calculate available capacity for additional projects. The Integration Appliance stores this data in a file called `maestro.stat` and provides an option to archive a snapshot of the data to an FTP server. When you select the appropriate option, all the utilization data available on the Integration Appliance is collected and archived to the specified FTP server.

After an archive file has been created and transmitted to an FTP server, the Integration Appliance continues to aggregate new utilization data to the historic utilization data. Historic utilization data is not purged from the Integration Appliance when an archive is transmitted to an FTP server.

Selecting the Transmit Archive to FTP Server option transmits a snapshot of the utilization data daily at midnight. The following procedure describes how to select the option.

Procedure

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. Select Transmit archive utilization data to FTP Server (at midnight) .
5. Specify FTP settings. See the following table below: [Table 1](#) for more information about the FTP settings.
6. Click Save.

FTP Settings

Specifying FTP settings to archive orchestration monitoring logs and utilization data.

Table 1. Job Log FTP Settings

Parameter	Description
Host	Specifies the name of the FTP server, where the exported log files are archived.
Port	Specifies the port number of the FTP server, where the exported log files are archived.
Username	Specifies the user ID that the Integration Appliance uses to log in to the FTP server, where the exported log files are archived.
User Password	Specifies the password that the Integration Appliance uses to log in to the FTP server, where the exported log files are archived.
Hide Password Text	If you clear this option, the password you entered displays in plain text and is no longer encrypted.
Directory	Specifies the FTP directory to which the Integration Appliance exports the log file.

Purging Orchestration Monitoring Logs

You can purge and archive orchestration monitoring logs.

About this task

When the Integration Appliance purges orchestration monitoring data, it can take a few minutes for the Dashboard to display the updated job counts.

By default, an Integration Appliance purges orchestration monitoring logs older than 30 days when any of the following conditions occurs on the Integration Appliance:

- The amount of available disk space falls below 50%.
- One day has passed since the last purge.
- More than 5,000 orchestration jobs have completed.
- More than 1,000 orchestration jobs have contained an error.

Using the WMC, you can configure the job log purging parameters on the Integration Appliance that determine:

- **Trigger Conditions** - What conditions trigger the Integration Appliance to purge orchestration monitoring data.
- **Frequency** - How often to purge orchestration monitoring data.
- **Job Scope** - What type of orchestration monitoring data to purge.

Procedure

1. From the Navigation pane, select Logs > Job Log. The Results page is displayed.
2. Click Settings. The Job Log Settings dialog box is displayed. By default the Purge page is displayed.
3. Specify the parameters as described in the following section.
4. Click Save.

Parent topic: [Working with Logs](#)

Job Log Purging Parameters

Trigger Conditions

The amount of free disk space on the Integration Appliance, the time lapse since the last orchestration monitoring logs were purged, the number of completed jobs, and the number of jobs containing errors are all triggers that can initiate the purging or archiving of orchestration monitoring logs. The Integration Appliance uses "OR" logic and purges orchestration monitoring data when any one of the trigger conditions occurs.

Parameter	Description	Default
-----------	-------------	---------

Parameter	Description	Default
Available disk space	<p>This trigger fires when the percentage of free disk space is less than the specified value. When this trigger fires, the Integration Appliance purges the orchestration monitoring data as you specify in the Job Scope parameters.</p> <p>If the percentage of free disk space is still short of the percentage you specified, the Integration Appliance purges 50% of the remaining orchestration monitoring data until the value is reached.</p> <p>For example, you specify the following values for purging parameters:</p> <ul style="list-style-type: none"> • Available disk space = 40% • Job status = completed • Jobs older than = 30 days <p>If only 10% of the Integration Appliance disk is free, the Available disk space trigger fires and the Integration Appliance purges all completed jobs that are older than 30 days. However, purging this data only frees 10% of the disk space. Since the minimum amount of free disk space is still not satisfied, the Integration Appliance purges an additional 50% of the remaining orchestration monitoring data. The Integration Appliance continues to purge the remaining orchestration monitoring data by 50%, until the minimum available disk space is greater than or equal to the specified value.</p> <p>You can specify a value between 1-100 percent, any value outside a 40-75 percent range results in the Integration Appliance using the default value of 50%.</p> <p>Note: This is a required parameter.</p>	50%
Schedule	<p>This trigger fires when the period since the last purge is greater than the specified day, hours, minutes value.</p> <p>You can more precisely schedule a purge by selecting the Fixed option. When you select the Schedule Fixed option, the schedule you specify overrides the day, hours, minutes value specified since last purge.</p> <p>To schedule a purge:</p> <ol style="list-style-type: none"> 1. Select the Fixed option. 2. Specify the number of days, weeks, or months. 3. In the list, qualify the value by choosing Days, Weeks, or Months. 4. Specify the start date. 	1 day

Parameter	Description	Default
Completed job count	This trigger fires when the number of completed jobs is greater than the specified value. This parameter must be a positive integer value. Note: After the Integration Appliance purges the jobs, the job count is no longer visible from the WMC.	5,000 jobs
Errored job count	This trigger fires when the number of jobs containing errors is greater than the specified value. Errored job count includes any orchestration job in the following states: unknown, cancelled, terminated, or errored. This parameter must be a positive integer value. Note: After the Integration Appliance purges the jobs, the job count is no longer visible from the WMC.	1,000 jobs

Frequency

The frequency determines the interval at which the Integration Appliance checks the set of defined triggers for an actionable condition. You can specify the frequency interval in increments of hours, minutes, and seconds.

By default, this parameter is set to 10 seconds.

Job Scope

Along with specifying trigger conditions and frequency, you must also specify the type of orchestration job data you want to purge. The Integration Appliance uses the values you specify for the Job Status AND the Jobs Older Than parameters OR the values you specify for Job Status AND Jobs Older Than the Most Recent parameters to determine when the Integration Appliance purges data.

Parameter	Description	Default
Job status	This parameter specifies the type of orchestration jobs that the Integration Appliance purges. By default, this parameter is set to ANY, which purges completed and jobs containing errors. You can choose to purge only the completed jobs by specifying COMPLETED.	Any
Jobs older than	This parameter specifies the minimum age of orchestration jobs to purge. The Integration Appliance purges anything older than the amount of time you specify. You can specify the age of an orchestration job in months, days, hours, and minutes.	7 days

Parameter	Description	Default
Jobs older than the most recent	This parameter specifies the number of most recent jobs that the orchestration job must be older than before the Integration Appliance purges data.	1,000 jobs

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Working_with_Logs/purgingJobLogs.html

Specify System Log Settings

You can specify the level of details that appears in the system logs. The log level you specify affects alerts for notification policies. Alerts are only sent for events that meet or exceed the log level you specify.

About this task

The system log levels are shown in the following table. The Description column provides a description of each level and explains how it corresponds to the Cast Iron Management API log level.

Severity	Description
INFO	Informational messages. (Corresponds the Cast Iron Management API "INFO" log level).
WARNING	Warning messages. (Corresponds to the Cast Iron Management API "WARNING" log level).
ERROR	Serious errors that may need user attention. (Corresponds to the Cast Iron Management API "SEVERE" log level).
CRITICAL	Critical errors requiring user or administrator attention. (Corresponds to the Cast Iron Management API "FATAL" log level).
FINEST	Retrieves all logs at level above FINEST. (Corresponds to the Cast Iron Management API "ALL" log level).

Note: In certain cases, log levels set in the WMC override settings in the Cast Iron Management API. For example, if the WMC logging level for a component is set to FINEST, logs retrieved by the Cast Iron Management API are also set at the FINEST level. Additionally, if the WMC system logging level is set to INFO, logs retrieved by the Cast Iron Management API are also set at INFO.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set high enough to produce entries that would trigger a notification.

Procedure

1. In the Navigation pane, select Logs > System Log. The System Log page is displayed.

2. Click Settings. The System Log Settings dialog box is displayed.
3. From the list, select a log level for each system.
4. Click Save.

Results

A confirmation message is displayed. The system log logs all events that occur at the level you specified or higher for the specific system. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/Working_with_Logs/specifyingSystemLogSettings.html

Viewing System Logs

You can view system logs from the Management Console and use the system log filters to sort through system log entries.

About this task

When you upgrade, the Management Console does not persist system logs. To retain system log information, export system logs before you upgrade.

Note: The Management Console displays a maximum of 99,999 system log entries. When the number of system log entries exceeds 99,999, the oldest log entry is deleted from the system log.

Procedure

1. From the navigation pane, select Logs > System Log. The System Log page is displayed.
2. Choose the filter values from the lists at the top of the System Log page. You can filter the log entries according to the level of severity for the event, the environment system that generated the log event, dates, and resolution state. The filters use AND logic.

Parent topic: [Working with Logs](#)

System Log Content

The system log provides the following information:

System Log Content	Description
--------------------	-------------

System Log Content	Description
Level	Identifies the level of severity of the log event: <ul style="list-style-type: none"> • Critical • Error • Warning • Info
System	Identifies the system where the log event occurred: <ul style="list-style-type: none"> • Hardware • Resources • Network • Security • Orchestration • Deployment
Message	Text messages that provides details about the log event.
Job	When available displays Job ID information for log events that occur in the Orchestration system.
When	Records the time when the log event occurred.
Resolved On	Provides a time stamp of when you resolved a log event.
Resolved By	Identifies which user resolved a log event.
Resolved	Select this checkbox to acknowledge that you have resolved a log event. When a user resolves a log event, a time stamp documents the date and time the issue was resolved. Information about the user who resolved the log event is tracked in the Resolved By column. You can resolve all the system log issues, by clicking Resolve All. Clear the checkbox next to any log events that are not resolved and the Resolved On and Resolved By values are cleared.

Customizing columns in System log and Job log

You can customize the columns displayed in the System log and Job log pages, respectively.

About this task

You can customize the columns to be displayed in the System Log and Job Log pages by editing the column display settings. To customize the log page columns, complete the following steps:

Procedure

1. From the navigation pane, select Logs > System Log or Job Log. The System Log page or the Job Log page is displayed.
2. Click Edit Columns. The Display Columns window is displayed.
3. Select the columns that need to be displayed on the System Log or Job Log page. By default, all the columns are selected in the Display Columns window.
4. Click Save. Only those columns selected by you will be displayed in the System Log or Job Log page.

Managing Appliances

You can now manage other appliances from the Web Management Console. This feature is helpful when you have multiple appliances; and you can manage these appliances from a single console.

One appliance is designated as the master appliance, which is used to manage other appliances.

The following features are available as part of managing appliances:

- Appliances can be registered and unregistered with the master appliance.
- Resource utilization details of each of the appliances can be viewed from the master appliance. For more information about the Resource Utilization Graph, see [About the Resource Utilization Graph](#).
- Projects that are published, and the status of each project/orchestration on each of the appliances can be viewed from the master appliance.
- Upgrade of each of the registered appliances can be performed from the master appliance.
- Supports both physical and virtual appliances.
- Supports Cast Iron® version 7.0 and earlier versions (6.0.0.x, 6.1.x.x, 6.3.x.x, 6.4.x.x) for managing and monitoring. The earlier version of Cast Iron must be on the required patch level for using this feature.
- Users of the master appliance must have administrator privileges to use this feature.
- This feature is also available when the appliance is configured with high availability.
- [Registering, editing, and unregistering appliances](#)
- [Upgrading Cast Iron appliance](#)
This feature is used to upgrade the Cast Iron appliance by using the upgrade files `vscript2` and `script2` files. The upgrade files are obtained as a part of Cast Iron software or from Fix Central depending on the version (FixPacks/patch/major release) of the appliance.
- [Running commands](#)
- [Managing Project Configurations](#)
The managing multiple appliances feature allow you to manage the life cycle of projects (start, stop,

delete, and clone projects) present in the registered remote appliances. You can modify the life cycle of the projects running on different appliances through the single master appliance. The life cycle includes stop, start, clone, resume, pause, and undeploy. The list of registered appliances are displayed in the appliance filter through which you can select the appliance and modify the life cycle of the projects in the selected appliance.

Registering, editing, and unregistering appliances

About this task

To register a new appliance, complete the following steps:

Procedure

1. Log on to the Web Management Console as an administrator.
2. Select Manage > Appliances.
3. Click Register to register a new appliance. The Register New Appliance window is displayed.
4. In the Register New Appliance window, complete the following details:
 - a. Display Name - Specify a display name that can be used to identify the remote appliance.
 - b. Host Name - Specify the host name or IP address of the remote appliance that you want to register.
 - c. User Name - Specify the user name, with administrator privileges, to communicate with the remote appliance.
 - d. Password - Specify the password for the user name.
 - e. Optional: Description - Specify a brief description for this appliance.
 - f. LDAP - Select this option if the remote appliance is configured for LDAP. Also, provide the LDAP credentials that are used for connecting to the appliance, in the User Name and Password fields.
 - g. Enabled - Select this option if you want to enable the appliance for managing and monitoring. If disabled, the data will not be displayed for this appliance.

5. Click Save.

Note:

- An appliance, which is already registered to a master cannot be made as a master appliance.
- You cannot register an appliance, which is already a master to another master appliance.
- You can register an appliance with multiple master appliances.
- You can register the master appliance to itself for managing and monitoring.

Note:

- A user with the name `masteradmin4ma` is created in the master appliance that indicates that the current appliance is a master appliance.
- A user with the name `slaveadmin4ma` is created in the appliances that are registered in the master appliance.

- Both these users must not be deleted unless you want to unregister the appliance from the master appliance.

Results

A confirmation message is displayed. A new appliance is registered. When the registration is successful, the version of the appliance and the type (physical/virtual) is displayed.

Parent topic: [Managing Appliances](#)

Editing the registered appliance details

About this task

When you click the display name of any of the registered appliances, you can edit the appliance details in the Edit Appliance Details dialog. You can edit the following fields:

- Display Name
- User Name
- Password
- Description
- LDAP
- Enabled

Unregistering an appliance

Procedure

1. From the list of registered appliances, select the appliances to be unregistered.
2. Click the Unregister button. The Delete Appliances confirmation message is displayed.
3. Click Yes to unregister the appliance.

Upgrading Cast Iron appliance

This feature is used to upgrade the Cast Iron® appliance by using the upgrade files `vcrypt2` and `script2` files. The upgrade files are obtained as a part of Cast Iron software or from Fix Central depending on the version (FixPacks/patch/major release) of the appliance.

About this task

To upgrade remote appliances, complete the following steps:

Procedure

1. Copy the `vdecrypt2` and/or `scrypt2` file to the workstation from where you can access the appliance from Web Management Console.
2. In WMC, log on to the Integration Appliance and go to Manage > Appliances.
3. Select the appliances that you want to upgrade, from the list of registered appliances.
4. Click the Upgrade Operating System link. The Upgrade Appliances Operating System Wizard is displayed.
5. Browse the `.vdecrypt2` file in the Virtual appliance Upgrade File field, to upgrade the virtual appliance.
6. Browse the `.scrypt2` file in the Physical appliance Upgrade File field, to upgrade the physical appliance.
7. Click Upgrade. All the selected appliances will be upgraded one after the other sequentially.

Results

The results of the upgrade are displayed after all the appliance upgrade is complete. The appliance version is also updated in the registered list of appliances, after the data gets updated.

Note:

- Before making changes like Upgrade/Reboot of appliance, please stop all projects in the runtime. After appliance comes back, starts the projects one-by-one.
- If the master appliance is a part of the upgrade list, it will be upgraded only after the upgrade of the other appliances are complete.
- When the files for both physical appliance and virtual appliance, `scrypt2` and `vdecrypt2`, are browsed, upgrade is based on the type information (physical or virtual) available for the appliance in the table. If the type information is not available (earlier version without an interim fix), then these appliances are skipped from being upgraded.
- When only one file is browsed, that file is used as an input to upgrade all selected appliances, including appliances, which do not have type information (represented by -).

About the Command Line Interface

The Cast Iron® Command Line Interface (CLI) is available to administrators to manage the Integration Appliance and to maintain and update its configuration information.

The CLI is preinstalled on the Integration Appliance and is ready to respond to the commands described in this documentation.

Note: The CLI is case sensitive. In general, you must enter commands and keywords using lowercase characters.

Only a user logged in as an administrator can use the CLI. More than one administrator can be logged in to an Integration Appliance at the same time.

Logging into the CLI

You can log in to the CLI on the Integration Appliance through a secure shell (SSH) session, terminal emulation, or telnet. By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation.

When using an SSH client or a telnet client to log in to the CLI, the 5th consecutive log-in failure (regardless of which user or any span of time) triggers a lock-out. The lock-out is characterized by a limit of one log in attempt per minute without regard for the user. A successful log-in by any user resets the log-in failure count and ends the lock-out.

Logging out of the CLI

At the command prompt, use the exit command to log out of the CLI. This also closes the terminal emulation or telnet session connection.

Viewing CLI help

In the CLI, you can view a list of command categories by typing help or ?. To view syntax help for the commands in a specific category, enter *Category help*. For example, `net help` or `net ?` lists syntax information for each network command.

Tab completion also guides you through the CLI syntax. From the CLI, you can enter a partial command and press the Tab key. Pressing the Tab key completes the command or provides a list of options to complete the command syntax

Note: Tab completion is sensitive to spaces in the CLI syntax. For example, typing `system show` in the CLI and then pressing the Tab key appears to have no results. Add a space after `show` and press the Tab key to view valid command parameters.

Command conventions

The following conventions are used to illustrate command syntax rules:

Table 1.

Convention	Description
keyword <i><value></i>	Most command parameters combine a keyword and a value. Some parameters might not require a value.
<i><value></i>	Values for parameters are enclosed in angle brackets. In many cases, the text shown indicates the type of information you supply, such as <i><hostname></i> . Values may be explicit, such as <i><yes></i>
[<i>x</i>]	Optional parameters are enclosed in brackets.
{ <i>x y z</i> }	Groups of mandatory parameters are enclosed in braces.
<i>x y z</i>	Choices are separated by bars, select only one.
<i>x...</i>	Parameters that may occur more than once are followed by an ellipse.

- [Logging into the CLI with an secure shell session connection](#)
By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation. You can log in to the CLI on the Integration Appliance by using a secure shell session (SSH).

Logging into the CLI with an secure shell session connection

By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation. You can log in to the CLI on the Integration Appliance by using a secure shell session (SSH).

Procedure

1. In Windows, start an application, for example PuTTY, that performs SSH connections.
2. Enter the *appliance-host-name*.
3. If needed, select SSH as the connection protocol or set other connection parameters offered by the application.
4. Initiate[®] the connection. The login prompt is displayed at first access.
5. Log in to the Integration Appliance with a username and password, which have administrative privileges. The default username and password are:
 - Login: admin
 - Password: !n0r1t5@C

Results

When you log in, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

Logging into the CLI with a Serial Connection

A serial connection allows you to monitor and issue commands against an Integration Appliance from an ASCII terminal or PC running terminal emulation software. To establish a serial connection:

Procedure

1. Connect a console or laptop computer to an Integration Appliance with a serial cable. The serial connection must be between an ASCII terminal or a PC running terminal emulation software to the serial port on the Integration Appliance.
2. Use the included serial cable to connect the terminal or PC to the Serial connector on the Integration Appliance. If the terminal or PC does not have a serial port and has only a USB port, then use a USB-to-serial converter cable (not included).
3. Configure the terminal or PC for standard 9600 8N1 and no flow control operation. 8N1 is a notation for a serial configuration in asynchronous mode, where there are eight (8) data bits, no (N) parity bit, and one (1) stop bit. The terminal emulation suggested for the terminal or PC is VT100.

Results

When you log in to the Integration Appliance, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

Logging into the CLI with a telnet connection

When secure management access is disabled for the Integration Appliance, you can connect to the Integration Appliance via the network through a telnet session.

About this task

Note: By default, secure management access is enabled for the Integration Appliance; therefore, you will not be able to connect to the Integration Appliance using a telnet connection. See the `mgmt secure` command for more information about enabling and disabling secure management access.

Procedure

1. In Windows, select Start > Run.
2. Enter `telnet appliance-host-name`. The login prompt is displayed at first access.
3. Log in to the Integration Appliance with a username and password, which have administrative privileges. The default username and password are:
 - o Login: `admin`
 - o Password: `!n0r1t5@C`

Results

When you log in, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

Command Line Interface modes

The mode of an Integration Appliance determines the type of Command Line Interface (CLI) commands that you can use.

An Integration Appliance can be in one of the following modes:

Active

An Integration Appliance in an high availability (HA) pair that is actively processing data is in the Active mode. You can run all CLI commands in this mode. The active Integration Appliance can be in one of the following states:

- Active 1 - The active Integration Appliance is not communicating with its HA peer. If the peer Integration Appliance is rebooting or the R1 and R2 cables are disconnected, this status can occur.
- Active 2 - The active Integration Appliance is communicating with its HA peer.

Idle

An Integration Appliance enters the Idle mode when an error that requires user action occurs. This state indicates that the non-active Integration Appliance is unable to be in either the Active or Standby mode.

Only Integration Appliances that are part of an HA pair enter the Idle mode. You can run `diagnet`, `ha`, `netspect`, and `system` commands in this mode.

Standalone

A single Integration Appliance that processes all messages. A standalone Integration Appliance cannot be part of an HA pair. In this mode, you can run all commands except the commands associated with an HA pair.

Standby

An Integration Appliance in an HA pair that monitors the processing of the Active Integration Appliance runs in Standby mode. The Integration Appliance running in Standby mode stays in sync with the Integration Appliance running in the Active mode, ready to take over processing if the Active Integration Appliance goes down. You can run `ha` and `system` commands in this mode.

Unknown

In an HA pair, when an active Integration Appliance does not know the status of the standby Integration Appliance.

Typical HA pair mode combinations

When working with an HA pair, the following mode combinations are typical:

- *ACTIVE_2* and *STANDBY* - The active machine is communicating with its peer and vice versa. The pair is only highly available after the standby peer has synchronized all the data from the active peer.
- *ACTIVE_2* and *IDLE* - The active machine has been disconnected from the peer machine most likely as the result of a user issuing the `ha disconnect` command. Issue the `ha connect` command to restore the HA pair.
- *ACTIVE_1* and *UNKNOWN* - The active machine is not communicating with its peer most likely because the peer is rebooting, powered down, or the cables are disconnected.

Command Line Interface commands

A list of the various command categories available from the Command Line Interface (CLI), and describes the purpose of each command category:

Table 1.

Command Category	Description
Auth Commands	Authorization commands allow you to manage user accounts.
Config Commands	Configuration commands allow you to manage both management and integration configuration for the Integration Appliance.

Command Category	Description
Debug Commands	Debugging commands allow you to view queues and process stacks.
HA Commands	High availability management commands. These commands are only available with an Integration Appliance high availability (HA) pair.
Mgmt Commands	Management commands allow you to enable and manage security settings.
Net Commands	Network commands allow you to manage network configuration.
Netspect Commands	Network introspection commands allow you to manage network configurations and query the network for DHCP server, DNS server, gateway, and route information.
Stat Commands	Status commands allow you to view Integration Appliance status.
System Commands	System commands allow you to manage the operation of the Integration Appliance, which includes managing licenses for the Integration Appliance and connectors.
Time Commands	Time commands allow you to set or synchronize the date and time on the Integration Appliance.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_commands.html

Authorization commands

Authorization commands allow you to manage user accounts.

- [The auth set user command](#)
The auth set user command sets the password for a user. Users can change their own password using the Web Management Console (WMC), or have the administrator change their password. The administrator can use either the WMC, or this command. The Integration Appliance does not require the administrator to know a user's old password to update the user's password.
- [The auth set recovery command](#)
The auth set recovery command allows the admin password to be reset from the serial console for the IBM® DataPower Cast Iron® Appliance. The default is on.
- [The auth show recovery command](#)
The auth show recovery command shows whether recovery is on or off. In the on state, the admin password can be reset from the serial console for the IBM DataPower Cast Iron Appliance.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_auth_commands.html

The auth set user command

The `auth set user` command sets the password for a user. Users can change their own password using the Web Management Console (WMC), or have the administrator change their password. The administrator can use either the WMC, or this command. The Integration Appliance does not require the administrator to know a user's old password to update the user's password.

When you enable an LDAP directory server to manage authorization and authentication for users and groups, this command can only be used to change admin's password.

Syntax

```
auth set user <user>
```

Parent topic: [Authorization commands](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_auth_authset.html

The auth set recovery command

The `auth set recovery` command allows the admin password to be reset from the serial console for the IBM® DataPower Cast Iron® Appliance. The default is on.

If the option is enabled, you can type `resetpass` for the username at the serial login and any non-empty password. Immediately after you login, you will be asked to verify physical access to the machine. To verify that you have physical access to the appliance, you will be asked to unplug and replug the ethernet cable into the MGMT port of the appliance. This verifies that no one is accessing the serial console over a remote port replicator. If you do not have physical access to the appliance, you should set the recovery option to off.

Syntax

```
auth set recovery <on|off>
```

Parent topic: [Authorization commands](#)

 Last updated: Wednesday, February 17, 2016

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_auth_authsetrecovery.html

The auth show recovery command

The `auth show recovery` command shows whether recovery is on or off. In the on state, the admin password can be reset from the serial console for the IBM® DataPower Cast Iron® Appliance.

If the option is enabled, you can type `resetpass` for the username at the serial login and any non-empty password. Immediately after you login, you will be asked to verify physical access to the machine. To verify that you have physical access to the appliance, you will be asked to unplug and replug the Ethernet cable into the MGMT port of the appliance. This verifies that no one is accessing the serial console over a remote port replicator. If you do not have physical access to the appliance, you should set the recovery option to off using the `auth set recovery` command.

Syntax

```
auth show recovery
```

Configuration commands

Configuration commands allow you to manage both management and integration configuration for the Integration Appliance.

- [The config load command](#)
The `config load` command loads a management configuration file from an FTP or SFTP server. After the configuration file is loaded on the Integration Appliance, the Integration Appliance automatically reboots.
- [The config save command](#)
The `config save` command saves a management configuration file to an FTP or SFTP server.

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

The config load command

The config load command loads a management configuration file from an FTP or SFTP server. After the configuration file is loaded on the Integration Appliance, the Integration Appliance automatically reboots.

Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, ibm, port, user, and file.

Note: When using SFTP, you must specify a user name. Anonymous logins are not allowed with SFTP.

FTP Syntax

```
config load system ftp <host> [port <number>] [user <username>] file [<path>/]  
<filename>
```

SFTP Syntax

```
config load system sftp <host> [port <number>] user <username> file [<path>/]  
<filename>
```

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_config_configload.html

The config save command

The config save command saves a management configuration file to an FTP or SFTP server.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, ibm, port, user, and file.

FTP Syntax

When saving the configuration file to an FTP server, the Integration Appliance uses anonymous if you omit the user name.

```
config save system ftp <host> [port <number>] [user <username>] file [<path>/]  
<filename>
```

Example: Saves the current system configuration as old_sys_config.cfg to the FTP server running on host tern. The FTP user's login name is Joe.

```
config save system ftp tern user joe file old_sys_config.cfg
```

SFTP Syntax

When saving the configuration file to an SFTP server, you must specify a user name. Anonymous logins are not allowed with SFTP.

```
config save system sftp <host> [port <number>] user <username> file [<path>/]  
<filename>
```

Debugging commands

Debugging commands allow you to view queues and process stacks.

- [The debug postmortem export command](#)
The debug postmortem export command exports the postmortem archive to the FTP or SFTP Server you specify.
- [The debug postmortem generate all command](#)
The debug postmortem generate all command generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores, that can help debug an Integration Appliance issue.
- [The debug postmortem generate full logs command](#)
The debug postmortem generate full logs command generates a postmortem archive of all the Integration Appliance logs, which includes new logs in addition to archived logs, and possibly several stacks that are generated by previously running the debug show stack command.
- [The debug postmortem generate new logs command](#)
The debug postmortem generate new logs command generates a postmortem archive of all the latest Integration Appliance logs and possibly several stacks that are generated by previously running the debug show stack command.
- [The debug postmortem generate store command](#)
The debug postmortem generate store command is similar to the debug postmortem generate all command, except that the Integration Appliance only generates a postmortem archive of all the Integration Appliance logs and the data in the transactional store.
- [The debug show stacks command](#)
The debug show stacks command displays current runtime stack traces.
- [The debug system command](#)
The debug system command allows you to start and stop the Integration Appliance runtime. When you issue the debug system stop command, all running orchestration jobs are cancelled and the Integration Appliance does not process any new orchestration jobs..
- [The debug tail file command](#)
The debug tail file command displays log file contents as they are added to the log.
- [The debug top command](#)
The debug top file command dynamically displays process status.
- [The debug job command](#)
The debug job command allows you to capture the instruction set and log of a running job.

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_debug_commands.html

The debug postmortem export command

The debug postmortem export command exports the postmortem archive to the FTP or SFTP Server you specify.

The Integration Appliance does not require that you specify an export file name; however, as a best practice, you should include the Integration Appliance serial number, date, and timestamp. If you do not specify an export file name, the Integration Appliance exports a file named postmortem.tar.gz.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, postmortem, debug, export, ibm, port, user, and file.

FTP Syntax

```
debug postmortem export ftp <hostname> [port <number>][user <user>][file <filename>]  
]
```

where:

Table 1.

Option	Description
<i>hostname</i>	Specifies the name of the FTP Server.
<i>number</i>	Specifies the port number to use to connect to the FTP Server.
<i>user</i>	Specifies the username used to login to the FTP Server.
<i>filename</i>	Specifies the name of the file storing the postmortem archive.

User Input:

- debug postmortem export ftp 192.168.1.2 user user1 file logs/B2XXW56_04152005_172341.tgz
- debug postmortem export ftp ftpserver.yourcompany.com user user1 file logs/B2XXW56_04152005_172341.tgz

SFTP Syntax

To export the postmortem using SSH File Transfer Protocol, use the following SFTP syntax.

Note: When exporting a postmortem file to an SFTP server, you must specify a user name. Anonymous logins are not allowed with SFTP.

```
debug postmortem export sftp <hostname> [port <number>] user <user> [file <filename>]  
]
```

where:

Table 2.

Option	Description
--------	-------------

Option	Description
<i>hostname</i>	Specifies the name of the SFTP Server.
<i>number</i>	Specifies the port number to use to connect to the SFTP Server.
<i>user</i>	Specifies the username used to login to the SFTP Server.
<i>filename</i>	Specifies the name of the file storing the postmortem archive.

User Input:

- `debug postmortem export sftp 192.168.1.2 user user1 file logs/B2XXW56_04152005_172341.tgz`
- `debug postmortem export sftp ftpserver.yourcompany.com user user1 file logs/B2XXW56_04152005_172341.tgz`

Exporting Files to IBM Support

Exports a postmortem file to IBM Support.

```
debug postmortem export ibm pmr <pmrnumber>
where :
```

- `pmrnumber` - PMR number open with IBM Support. For example, `debug postmortem export ibm pmr 55555.555.555`

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_debug_postmortemexport.html

The debug postmortem generate all command

The `debug postmortem generate all` command generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores, that can help debug an Integration Appliance issue.

The postmortem archive remains on the Integration Appliance until you reissue the command. When you issue this command, the Integration Appliance generates a new archive that overwrites the previous postmortem archive.

Issue this command before rebooting the Integration Appliance and calling technical support.

Syntax

```
debug postmortem generate all
```

Parent topic: [Debugging commands](#)

High availability commands

High availability (HA) management commands. These commands are only available with an Integration Appliance HA pair.

- [The ha active command](#)
The ha active command orders the idle machine to become active. You can only issue this command if there is no peer, or the peer machine is idle.
- [The ha conncheck command](#)
The ha conncheck command provides information to help diagnose possible connection problems related to a high availability pair. This command is only available in active mode.
- [The ha disconnect command](#)
The ha disconnect command Temporarily disconnects an HA pair without causing the standby machine to takeover the active machine.. This command is only available in active mode.
- [The ha power off standby command](#)
The ha power off standby command powers off the Standby Integration Appliance in a high availability pair. This command is only available in active mode.
- [The ha power on standby command](#)
The ha power on standby command powers on the Standby Integration Appliance in a high availability pair. This command is only available in active mode.
- [The ha reboot command](#)
The ha reboot command completes a system reboot of the Integration Appliance you specify: active or standby. The ha reboot command is only available for use in an HA pair. When you issue the ha reboot standby command, the Standby Integration Appliance reboots, while the Active Integration Appliance continues to process data. When you issue the ha reboot active command, the Active Integration

Appliance shuts down all routing services and then reboots. The Standby Integration Appliance does not provide failover capabilities and data is not processed until the Active Integration Appliance is back online. To simulate failover capabilities, switch the modes of the machines in the HA pair using the `ha switch` command – the Active Integration Appliance (A1) becomes the Standby Integration Appliance (S2) and Standby Integration Appliance (S1) becomes the Active Integration Appliance (A2). After the Integration Appliances in the HA pair have switched modes, issue the `ha reboot standby` command. S1 continues to process data, while A1 is rebooting.

- [The `ha show lastaccess` command](#)

The `ha show lastaccess` command displays the last 10 state transitions on the Integration Appliance. Only available in idle mode.

- [The `ha show pairstatus` command](#)

The `ha show pairstatus` command displays status of the high availability pair, providing information about which Integration Appliance is Active and which is Standby. Only available in active mode.

- [The `ha switch` command](#)

The `ha switch` command switches the roles of the Integration Appliance in a high availability pair. The Active machine becomes the Standby machine and the standby machine becomes Active. Only available in active mode.

Feedback | Notices

 Last updated: Wednesday, February 17, 2016
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_HA_commands.html

The `ha active` command

The `ha active` command orders the idle machine to become active. You can only issue this command if there is no peer, or the peer machine is idle.

Syntax

Note: Using this command incorrectly can lead to data corruption.

```
ha active
```

Parent topic: [High availability commands](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_ha_conncheck.html

The `ha disconnect` command

The `ha disconnect` command temporarily disconnects an HA pair without causing the standby machine to takeover the active machine.. This command is only available in active mode.

This action allows you to perform any necessary hardware or software maintenance on the Standby machine without interrupting orchestration processing.

When you choose this action, the Standby machine transitions to an idle state. Reboot the active machine or run the `connect` action to reestablish communications between an HA pair and resumes data synchronization and fail-over operations.

To perform maintenance on an Active machine, run the `switch` action. The active machine becomes the standby machine, where you can execute the `disconnect` action and perform Integration Appliance maintenance without interrupting orchestration processing.

Syntax

`ha disconnect`

Management commands

A list of the management (mgmt) commands available.

Note: If you specify community names that require quotation marks, you must use (“ ”) double quotation marks.

Table 1.

Co m ma nd na me	Action	Syntax
mg mt ker ber os del con fig	Deletes the Kerberos realm and KDC server configurations.	mgmt kerberos del config

Co m m a n d n a m e	Action	Syntax
mg mt ker ber os set real m	Allows you to specify the Kerberos realm and KDC server configuration settings.	mgmt kerberos set realm<name>kd c<name ipaddress>
mg mt ker ber os sho w con fig	Displays the Kerberos realm and KDC server configuration settings.	mgmt kerberos show config
mg mt mo td	Allows you to set a message of the day that is displayed when a user logs in to the CLI. You can view the message of the day that was set, by choosing the show parameter. Choose the clear parameter and no message of the day is displayed when a user logs in to the CLI.	mgmt motd{set show clear}
mg mt sec ure	Enables or disables secure access to the Integration Appliance for the management interface. The default option is on, which enables secure management access. When secure management access is enabled (on), you must access the CLI by using SSH (secure shell) and access the Web Management Console (WMC) by using HTTPS. When you disable secure management access, by choosing the off option, you can access the CLI by using telnet and access the WMC by using HTTP. Verify the current security setting by using the mgmt secure setting command	mgmt secure { on off setting}
mg mt sn mp set	Allows you to set up or update current SNMP configurations, as well as enable and disable the SNMP MIB2 service. For more information on using SNMP commands, see SNMP basics .	1. mgmt snmp set { community description location contact } <value> 2. mgmt snmp set { on off }
mg mt sn mp sho w	Displays current SNMP configuration settings.	mgmt snmp show { community description location contact all status }

Command name	Action	Syntax
mgmt ssh add	<p>Adds a public key for the specified host to the SSH Store on the Integration Appliance. If strict SSH key checking is enabled on the Integration Appliance, public keys must reside in the SSH Store for all participating endpoint systems that the Integration Appliance connects to with SFTP.</p> <p>Restart the Integration Appliance after you issue this command.</p> <p>Note: The keytype is a required parameter.</p>	<pre>mgmt ssh add<rsa dsa >host<name ipaddr name,i paddr></pre>
mgmt ssh del	<p>Deletes the public key for the specified host from the SSH Store on the Integration Appliance.</p> <p>Restart the Integration Appliance after you issue this command.</p> <p>Note: The keytype is a required parameter.</p>	<pre>mgmt ssh del host<hostname > host IP address></pre>
mgmt ssh keycheck	<p>Enables or disables strict SSH key checking.</p> <p>In strict mode, SFTP connectors only connect to participating endpoint systems if the public key for that system matches the public key stored in the SSH Store of the Integration Appliance.</p> <p>In easy mode, SFTP connectors connect to participating endpoint system if either:</p> <ul style="list-style-type: none"> • The public key for that system matches the public key stored in the SSH Store • No public key exists in the SSH Store. If no key exists, the connector loads the current public key from the participating endpoint system to the SSH Store 	<pre>mgmt ssh keycheck<stri ct easy ></pre>
mgmt ssh list	<p>Displays all or a specified host that have public keys in the SSH Store. Public keys in the SSH Store are used with SFTP connectors to ensure secure connections.</p>	<pre>mgmt ssh list[host<nam e host IP address>}</pre>
mgmt ssh show keycheck	<p>Displays the current setting of SSH key checking: strict or easy.</p>	<pre>mgmt ssh show keycheck</pre>

Command name	Action	Syntax
mgmt syslog del config	Allows you to delete system log (syslog) configurations.	mgmt syslog del config
mgmt syslog set remote host	Allows you to specify the remote host to which logs are sent.	mgmt syslog set remote host<name host IP address>
mgmt syslog show config	Displays current system log (syslog) configuration settings.	mgmt syslog show config

Network commands

Network commands that you can use to manage the network configuration.

Table 1.

Co mm and na me	Action	Syntax
net add etc hos t	<p>Adds an entry to the /etc/hosts configuration file in the Integration Appliance.</p> <p>The IP address is typically the management IP address of the appliance. It is best practice to specify a fully qualified host name (for example, <i>myhost.mydept.mycompany.com</i>). Also, although alias is an optional parameter, it is best practice to specify an alias (for example, <i>myhost</i>).</p> <p>Here is an example of a net add etchost command.</p> <pre>net add etchost address 111.222.333.444 hostname myhost.mydept.mycompany.com alias myhost</pre> <p>If an entry was previously added with a host name that is not fully qualified, that entry must first be removed by using the net del etchost command before you add an entry with a fully qualified host name. Verify that the entry was successfully deleted by using the net show etchost command.</p>	<pre>net add etchost address <ip-address> hostname <fully-qualified- hostname> [alias <short-alias-name>]</pre>
net add rou te add res s	<p>Adds a static route to the routing table.</p>	<pre>net add route address <destination> mask <netmask> [gateway <gateway>] interface {emgmt edata}</pre>
net del etc hos t	<p>Removes one or more entries from the /etc/hosts configuration file in the Integration Appliance.</p> <p>Specify the identical parameters that were used when the entry was added by using the net add etchost command. You can verify the details by using the net show etchost command.</p>	<pre>net del etchost address <ip-address> hostname <fully-qualified- hostname> [alias <short-alias-name>]</pre>
net del rou te add res s	<p>Removes a static route from the routing table.</p>	<pre>net del route address <ip-address> mask <mask></pre>
net flus h dhc p	<p>Erases cached DHCP values from the Integration Appliance.</p>	<pre>net flush dhcp</pre>

Command name	Action	Syntax
net ping	Queries the specified host to determine if it is responding on the network.	net ping {<ip-address> <nodename>}
net restart	Saves and applies any new network settings. You must use this command after net set, net add, or net del commands to apply the changes.	net restart
net restore	Restores the memory to active or backup settings.	net restore {active backup}
net traceroute	Traces the network route to the specified node.	net traceroute <ip-address> <nodename>
net validate	<p>Tests the current in-memory settings and displays any warnings or errors that might prevent the network from operating correctly.</p> <p>When all network settings are acceptable, issuing this command returns the following statement, "Current network settings can be applied."</p> <p>When an invalid setting is entered, issuing this command returns the appropriate warning or error messages. For example,</p> <pre>warning: Route to 9.43.79.4 requires static Data IP address</pre> <pre>error: Gateway 9.9.9.9 is not reachable from emgmt</pre> <p>Current network settings cannot be applied</p>	net validate

For the net set and net show commands, see the following topics:

- [The net set command](#)
Sets the configuration for the network interfaces of the Integration Appliance, DNS server, host name, and default gateway. Choose the net set autohost command to automatically add the hostname/IP address to the Integration Appliance. You can also set the amount of time before reporting a lost carrier.
- [The net show command](#)
This command displays all network configuration for the Integration Appliance. This command can also display specific configuration information for the network interfaces, DNS server, host name, default gateway, routing tables, and socket connections. If you enable the net set autohost command, use the net show autohost to view the current settings of the autohost.

The net set command

Sets the configuration for the network interfaces of the Integration Appliance, DNS server, host name, and default gateway. Choose the net set autohost command to automatically add the hostname/IP address to the Integration Appliance. You can also set the amount of time before reporting a lost carrier.

To improve startup time in networks that do not have a DHCP server, configure all items to either static values or none so the Integration Appliance does not search for a DHCP server.

If you configure any value to be obtained through DHCP, startup time could be delayed as the Integration Appliance tries to locate an available DHCP server.

The network interfaces of the Integration Appliance use these names:

- edata - for the interface that handles all integration data
- emgmt - for the interface that handles management traffic, including both the CLI and the Web Management Console (WMC)

Table 1.

Options	Description
autohost	Allows the Integration Appliance to find its IP address from its own hostname. When you enabled this option and the Integration Appliance cannot find an IP address corresponding to its hostname, either through DNS or an entry you entered manually into the /etc/hosts directory, the Integration Appliance automatically adds an entry into the /etc/hosts directory to allow the CIOS to operate normally. Enable or disable this option through the net set autohost command.
carrier	Specifies the time, in seconds, until a missing ethernet link carrier is reported as an error. Setting the value to zero disables the carrier checking and no errors are reported.
domain	Sets the domain name for this Integration Appliance. The effect is that most queries for names within this domain can use short names relative to the local domain.

Options	Description
gateway	Specifies the gateway and the interface to use for that gateway. The Integration Appliance supports only one default gateway for both management and data traffic (as opposed to one gateway per interface), but additional routes can be added separately.
hostname	Sets the name of the Integration Appliance. This should be the short hostname, without the domain name.
interface	Sets the IP address, Netmask and Broadcast address for the specified interface.
link	Sets the ethernet link to autonegotiate (the default) or to specific values. In most cases autonegotiate is preferable, but setting specific values can sometimes help improve throughput when network conditions are not optimal.
mtu	Sets the Maximum Transmission Unit (MTU) size between a range of (68-9000). The default MTU is 1500.
nameserver	Sets DNS server list (maximum 2).
ntp	Sets the time server.

Options	Description
search	Specifies the search list. If you do not set this option, the search list is the same as the value of the domain setting.

Syntax 1

```
net set autohost [enable|disable ]
```

Syntax 2

```
net set carrier timeout <timeout>
```

Syntax 3

```
net set {domain|search|nameserver|ntp} {dhcp[emgmt|edata]|static <value>|none}
```

Example 1: Set a specific domain name.

```
net set domain static mydomain.com
```

Example 2: Ask a DHCP server on the management NIC for an NTP server.

```
net set ntp dhcp emgmt
```

Example 3: Search for host names in specified domains.

```
net set search static a.mydomain.com b.mydomain.com
```

Example 4: Do not search for host names in other domains.

```
net set search none
```

Syntax 4

```
net set gateway {dhcp {emgmt|edata}|static <ipaddress> {emgmt|edata}|none}
```

Syntax 5

```
net set hostname {dhcp[emgmt|edata]|static <value>}
```

Syntax 6

```
net set interface {emgmt|edata} {dhcp|address <ipaddress> mask <mask> [bcast <bcast>]}
```

Syntax 7

```
net set link {emgmt|edata} {autonegotiate|speed <speed> duplex {half|full}}
```

Syntax 8

```
net set mtu {emgmt|edata} <MTU>
```

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_network_netset.html

The net show command

This command displays all network configuration for the Integration Appliance. This command can also display specific configuration information for the network interfaces, DNS server, host name, default gateway, routing tables, and socket connections. If you enable the net set autohost command, use the net show autohost to view the current settings of the autohost.

You can issue a collection of network settings changes in memory with the net show command. The Integration Appliance does not persist these changes. The net show command only becomes permanent after you issue a net restart command.

- Active - Displays the network settings for the Integration Appliance that is currently running.
- Memory - Displays the network settings of a staging Integration Appliance that becomes active when you issue the net restart command.
- Backup - Specifies the Integration Appliance that was active before you issued the previous net restart command.

The network interfaces of the Integration Appliance use these names:

- edata - for the interface that handles all integration data
- emgmt - for the interface that handles management traffic, including both the CLI and the Web Management Console

Table 1. . The following table provides descriptions for options available in the various command syntaxes:

Options	Description
all	Displays all network configuration information for the Integration Appliance.

Options	Description
active	Displays complete network configurations.
autohost	Allows the Integration Appliance to find its IP address from its own hostname. When you enabled this option and the Integration Appliance cannot find an IP address corresponding to its hostname, either through DNS or an entry you entered manually into the /etc/hosts directory, the Integration Appliance automatically adds an entry into the /etc/hosts directory to allow the runtime to operate normally. Enable or disable this option through the net set autohost command.
backup	Displays complete network configurations.
carrier	Specifies the time, in seconds, until a missing ethernet link carrier is reported as an error. Setting the value to zero disables the carrier checking and no errors are reported.
domain	Displays the domain name for this Integration Appliance. The effect is that most queries for names within this domain can use short names relative to the local domain.
etchost	Displays the entries within /etc/hosts.

Options	Description
gateway	Specifies the gateway and the interface to use for that gateway. The Integration Appliance supports only one default gateway for both management and data traffic (as opposed to one gateway per interface), but additional routes can be added separately.
hostname	Displays the name of the Integration Appliance. This should be the short hostname, without the domain name.
interface	Displays the IP address, Netmask and Broadcast address for the specified interface.
link	Sets the ethernet link to autonegotiate (the default) or to specific values. In most cases autonegotiate is preferable, but setting specific values can sometimes help improve throughput when network conditions are not optimal.
memory	Displays complete network configurations.
mtu	Displays Maximum Transmission Unit (MTU) size for data in an IP packet.

O p t i o n s	Description
n a m e s e r v e r	Displays the DNS server list (maximum 2).
n o d e	Displays the IP address for the node.
n t p	Displays the network protocol for clock synchronization between an appliance and network.
r o u t e	Displays active routes.
s e a r c h	Specifies the search list. If you do not set this option, the search list is the same as the value of the domain setting.
s o c k e t s	Displays a list of socket addresses.
s t a t u s	Displays the network status of the Integration Appliance, including the last attempt to start networking, the last time networking started, the last time networking stopped, the reason for last networking stop and the current networking activity.

```
net show {active|memory|backup}
```

Syntax 2

```
net show {hostname|domain|search|nameserver|gateway|ntp} [ all|active|memory|backup]
```

If not specified, the last parameter defaults to active.

Syntax 3

```
net show autohost
```

Syntax 4

```
net show carrier [all|active|memory|backup]
```

Syntax 5

```
net show etchost
```

Syntax 6

```
net show interface {emgmt|edata} [all|active|memory|backup]
```

Syntax 7

```
net show link [all|active|memory|backup]
```

Syntax 8

```
net show node {<ip address>|<hostname> }
```

Syntax 9

```
net show route [active|memory|backup]
```

If not specified, the last parameter defaults to active.

Syntax 10

```
net show sockets
```

Syntax 11

```
net show status
```

Network introspection commands

Network introspection (Netspect) commands allow you to manage network configurations and query the network for DHCP server, DNS server, gateway, and route information.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, export, ibm, port, user, and file.

Table 1.

Co mm and na me	Action	Syntax
net spe ct arp	Issues an ARP request for the IP address you specify and displays the result of the ARP reply or displays the ARP cache content.	<code>netspect arp <lookup ipv4- address show cache></code>
net spe ct cap ture clea n	Deletes all existing packet capture files.	<code>netspect capture clean</code>
net spe ct cap ture sho w	Displays the captured packets. Issuing this command also stops any running packet capture.	<code>netspect capture show</code>

Co mm and na me	Action	Syntax
net spe ct cap ture star t	<p>Initiates a packet trace and produces a gzip (.gz) file. Packet traces can be useful for debugging network connection errors.</p> <p>Only one packet trace capture can run at a time. The capture continues running until you stop it using <CTRL + C> or until a maximum number of packets is reached.</p> <p>Note: When you start a capture with packet size parameter set to full, <code>pktsize full</code>, fewer packets can be captured.</p> <p>You can transfer packet traces to another host using the <code>netspect export</code> command.</p> <p>Note: Capturing a packet trace overwrites the previous capture.</p>	<pre>netspect capture start [interface <emgmt edata all>] [pktsize <header full>] [find <hostname network>]</pre> <p>where</p> <ul style="list-style-type: none"> • <code>hostname</code> - Captures to/from specified host (nn.nn.nn.nn). • <code>network</code> - Captures to/from certain network in CIDR. <p>Note: If you do not specify <code>emgmt</code> or <code>edata</code> for the interface parameter, the Integration Appliance uses the default value of <code>all</code> and capture starts for both interfaces.</p> <p>Example 1: Capture packet headers on both interfaces.</p> <pre>netspect capture start</pre> <p>Example 2: Capture full packets on <code>edata</code>.</p> <pre>netspect capture start interface edata pktsize full</pre> <p>Example 3: Capture packet headers on <code>edata</code> to/from certain network.</p> <pre>netspect capture start interface edata find 123.12.0.0/24</pre> <p>Example 4: Capture full packets on <code>emgmt</code> to/from certain host.</p> <pre>netspect capture start interface emgmt pktsize full find 123.12.0.123</pre>

Co mm and na me	Action	Syntax
net spe ct con nec t	Using the protocol you specify, this command attempts to open a connection to the network host port and displays the result of the connection attempt. If a connection is established, the connection is closed prior to this command returning.	<pre>netspect connect host <host-id> <protocol> port <port-num></pre> <p>where</p> <ul style="list-style-type: none"> • <code>host-id</code> - The name or IP address of a network host. • <code>protocol</code> - The protocol to use for the connection. Must be "tcp". • <code>port-num</code> - Any valid tcp port number.
net spe ct dhc p	Queries the network for DHCP servers on the network interface you specify. Also displays DHCP server supplied network configuration information, plus the offered IP address and its lease terms.	<pre>netspect dhcp interface <emgmt edata></pre>
net spe ct dns	Queries the system configured DNS server for the specified network host (i.e. perform either a forward lookup: return the IP address for a given host name, or perform a reverse lookup: return a host name for a given IP address), and display the result of the lookup.	<pre>netspect dns lookup host <host-id></pre>

Command name	Action	Syntax
netspect export	Exports a packet capture file to an FTP Server. For more information about capturing packet traces, see the <code>netspect capture start</code> command.	<pre>netspect export <ftp sftp> host <host-id> [port <number>] [user <user>] [file <filename>]</pre> <p>where:</p> <ul style="list-style-type: none"> • <code>host-id</code> - The name or IP address of the network host. • <code>port</code> - A valid port on the specified network host to which to connect. • <code>user</code> - Specifies the username used to log into the host. Note: When using <code>sftp</code>, this parameter must be specified. Anonymous logins are not allowed with <code>sftp</code>. • <code>filename</code> - File path on the destination host. <p>Example 1: <code>netspect export ftp.</code></p> <pre>netspect export ftp host 123.12.12.123</pre> <p>Example 2: <code>netspect export sftp.</code></p> <pre>netspect export sftp host 123.12.12.123 user myname file /home/myname/mycap.gz</pre>
netspect gateways	Queries the gateways and routes for the specified IP protocol family, and reports whether or not the gateway responded to the query/ping. The IP protocol family can be either <code>ipv4</code> , which is the default or <code>ipv6</code> .	<pre>netspect gateways <ip- protocol></pre>
netspect help	Displays help text for the specified <code>netspect</code> command. If a command is not specified, then a help summary for all <code>netspect</code> commands is displayed.	<pre>netspect help <command></pre>
netspect ifconfig	Displays network interface configuration information for the specified interface. If a network interface name is not specified, then interface configuration information is displayed for all network interfaces.	<pre>netspect ifconfig interface <emgmt edata></pre>

Co mm and na me	Action	Syntax
net spe ct ping	Attempts to query the specified network host, and displays the result of the query attempt.	<code>netspect ping host <host-id></code>
net spe ct rout es	Displays currently configured routes for the specified IP protocol family. The IP protocol family can be either IPv4 (the default if none specified) or IPv6.	<code>netspect routes [<ip-protocol>]</code>
net spe ct sum mar y	Provides a summary of network configuration information.	<code>netspect summary</code>
net spe ct trac ero ute	Attempts to determine the route to the specified network host, and displays the route packets took to get to the specified network host.	<code>netspect traceroute host <host-id></code>

System commands

System commands allow you to manage the operation of the Integration Appliance, which includes managing licenses for the Integration Appliance and connectors.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, ibm, port, user, and file.

Table 1.

Com man d nam e	Action	Syntax
system auto rebo ot	Allows you to enable or disable automatic reboot for an Integration Appliance. Note: During a Cast Iron® firmware upgrade, the Integration Appliance reboots even if the automatic reboot is disabled.	system autoreboot <on off>
system auto rebo ot setti ng	Use the setting parameter to print autoreboot settings.	system autoreboot setting

Command name	Action	Syntax
system clean	<p>Clears the system states of the Integration Appliance. When you issue a <code>system clean all</code> command, the IBM® DataPower® Cast Iron® Appliance may reboot.</p> <p>Running the <code>all</code> option results in the removal of all data and configurations, including High Availability configurations, from disk. The results are equivalent to restoring factory default settings for the appliance. After the reboot, you will be asked to accept the license agreement before logging in to the Web Management Console for the appliance.</p>	<pre>system clean{ [running] [orchmon] [deploy] } all</pre> <p>where:</p> <ul style="list-style-type: none"> • <code>running</code> - Removes currently running project data. • <code>orchmon</code> - Removes orchestration monitoring data. • <code>deploy</code> - Removes all projects and configurations. • <code>all</code> - Resets the appliance to factory default settings.
system persist	<p>Enables or disables the disk cache on the Integration Appliance. The default and recommended setting is <code>system persist on</code>.</p> <p>When persistence is enabled, writes are synchronized to ensure that all requested data is completely written to disk. This behavior helps protect data integrity, particularly when accessing external transactional systems such as databases.</p> <p>When persistence is disabled, on an appliance that supports this feature, performance might be improved. However, there is a risk of losing job progress state.</p>	<pre>system persist { on off }</pre>
system persist setting	<p>Displays the current system persist setting: on or off. Use the <code>system persist</code> command to specify whether the disk cache is enabled or disabled.</p>	<pre>system persist setting</pre>
system poweroff	<p>Shuts down all routing services and then powers off the Integration Appliance. If the <code>force</code> parameter is used, power is cut off immediately.</p>	<pre>system poweroff</pre>

Command name	Action	Syntax
system reboot	<p>Shuts down all routing services and then reboots the Integration Appliance.</p> <p>Note:</p> <ul style="list-style-type: none"> • Before making changes like Upgrade/Reboot of appliance, please stop all projects in the runtime. After appliance comes back, starts the projects one-by-one. • When the system reboots, any network settings that have not been saved are lost. To commit network settings to the Integration Appliance, use the net restart command. 	system reboot
system restart	Restarts the runtime and Web Management Console, without affecting the network connectivity.	system restart
system show platform	Displays information about the Integration Appliance, such as: ROM version, appliance platform, serial number, and MAC addresses.	system show platform
system show status	Available for Standalone Integration Appliances as well as the Active Integration Appliance in an HA pair. Shows whether the following components are up or down: System, Network, and Runtime.	<p>system show status</p> <p>Example output:</p> <pre>Appliance Status ----- System: Up Network: Up Runtime: Up</pre>
system show version	Displays the version of the Cast Iron operating system on the Integration Appliance.	system show version

Command name	Action	Syntax
system update cios image	Updates the Cast Iron Operating System on the Integration Appliance using an image from an FTP Server based file or an SFTP Server based file.	<pre>system update cios image from <source></pre> <p>where <i>source</i> can specify an FTP Server or an SFTP Server:</p> <ul style="list-style-type: none"> • ftp <hostname> [port <number>] [user <user>] file <filename> • sftp <hostname> [port <number>] user <user> file <filename> • http <hostname> [port <number>] [user <user>] file <filename> • https <hostname> [port <number>] user <user> file <filename> <p>Note: When using sftp, you must specify the user parameter. Anonymous logins are not allowed with sftp.</p>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_time_commands.html

About High Availability Pairs

A High Availability (HA) pair is an Integration Appliance configuration that connects two physical Integration Appliances together, allowing them to automatically synchronize data and perform fail-over operations. The machines that make up the HA pair share the same MAC and IP addresses, thus creating a single network identity.

There is one Active and one Standby Integration Appliance in an HA pair. The Integration Appliance that actively processes orchestrations is the Active machine. The Integration Appliance that automatically synchronizes data and performs fail-over operations is the Standby machine. When the machines that make up an HA pair initially connect to each other, they immediately synchronize with each other and determine which machine assumes the active role and which machine assumes the standby role. During the initial synchronization operation, the Active machine can process orchestrations; however, fail-over cannot occur until the HA pair is completely synchronized. Once the HA pair is synchronized, the HA pair persists data and automatically synchronizes this data between the two machines.

When an Active machine failure occurs, the Standby machine initiates a take over procedure, becomes the Active machine, and resumes processing orchestrations exactly where the other machine stopped. The take over process typically takes less than a minute to complete, but DHCP response times can slow the take over process. During the take over procedure, the Standby machine power cycles the Active machine to ensure the Active machine is not still processing orchestrations. Only when the Standby machine can successfully power cycle the failed Active machine does it become the Active machine. If the Standby machine is unable to power cycle the Active machine, the Standby machine goes into an IDLE state.

Examples of failures that can cause an HA fail-over to occur include the following failures:

- Hardware failures generated by CPUs, hard drives, RAM, motherboards, network interfaces, power supplies, and raid-controllers.
- Integration Appliance runtime failures, such as fatal errors during processing.
- Communication failures between the Integration Appliances caused by replication port network interface issues or replication cable issues.

When the Active machine loses contact with the Standby machine, the Active machine stops running orchestrations to prevent an asynchronous data commit and waits to see if the Standby machine initiates the take over procedure. If the Standby machine does not power cycle the Active machine, the Active machine resumes processing orchestrations. When the Standby machine is able to reconnect to the Active machine, the Standby machine synchronizes with the Active machine.

From the WMC, you can monitor an HA pair's status and manipulate the roles of the Integration Appliances in an HA pair.

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.HAOverview.doc/HA_about_HA.html

About Integration Appliance States

Integration Appliances in a High Availability (HA) pair can be in one of many states. States for Integration Appliances in an HA pair include:

States for Integration Appliances in an HA pair include:

ACTIVE_1

The Active machine cannot communicate with the Standby machine; however, the Active machine continues to process data.

ACTIVE_2

The Active machine is successfully processing data and can communicate with the peer HA machine.

IDLE

Displays when the Active machine or Standby machine encounters a hardware or software problem. An IDLE state helps to ensure data integrity between an HA pair. IDLE is not always an error state.

For example, the Active machine enters an IDLE state when it power cycles and remains in this state until it can verify the state of the Standby machine.

STANDBY

The Standby machine is successfully synchronizing with the Active machine.

TRANSITIONING

Can occur immediately before or after rebooting. Typically, a machine in an HA pair remains in this state after rebooting long enough to perform some initialization, find its peer, and then transition into the appropriate state.

UNKNOWN

Occurs when the peer machine is unavailable. For example, when a Standby machine is powered off, the Active machine states that the state of the peer machine (Standby machine) is UNKNOWN.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.HAOverview.doc/HA_about_IAStates.html

Requirements for Configuring High Availability Pairs

A High Availability (HA) pair requires a very specific hardware configuration, and the two Integration Appliances must meet certain requirements.

To operate as an HA pair, the two Integration Appliances must meet the following requirements:

- Both Integration Appliances must use the same version of the Cast Iron® Operating System. When you apply a patch to one Integration Appliance, the same patch is automatically applied to the other Integration Appliance in the HA pair.
- The replication interfaces on one machine must be connected by cable to the corresponding interface on the other machine.
- The management network port on each Integration Appliance must be connected to the same subnet.
- The data network port on each Integration Appliance must be connected to the same subnet.

Note: A note regarding High Availability pairs and Hybrid Cloud Integration (HCI) support – If you are using HCI functionality and attempt to convert two Integration Appliances to HA, the HCI function will no longer be supported.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.HAOverview.doc/HA_req_HApairs.html

Setting Up a High Availability Pair

About this task

Perform the following steps to set up a High Availability pair.

Procedure

1. If you are using 9005 appliances to set up an HA pair, do the procedures in Step 1a. If you are using 9004 appliances, do the procedures in Step 1b. .

Note: High Availability can only be obtained by connecting homogeneous appliances. Do not attempt to connect dissimilar appliances (such as a 9005 appliance and a 9004 appliance) to one another to attain High Availability

- a. For the 9005 appliance - To create an HA pair, you need a total of six Ethernet cables in addition to the recommended serial console cable. Directly connect the replication interfaces of the two appliances with two Ethernet cables:

```
1 x ethernet cable for emgmt of Appliance A
1 x ethernet cable for emgmt of Appliance B
1 x ethernet cable for edata of Appliance A
1 x ethernet cable for edata of Appliance B
1 x ethernet cable for repl1 between Appliance A and Appliance B
1 x ethernet cable for repl2 between Appliance A and Appliance B
```

Connected as follows:

```
Appliance 1          Appliance 2
Repl 1 <-----> Repl 1
MGMT                MGMT
Data 1              Data 1
Data 2              Data 2
Data 3              Data 3
Repl 2 <-----> Repl 2
```

Connect MGMT and Data 1 for both appliances to the appropriate management and data networks. Data 2 and Data 3 should remain disconnected.

- b. For the 9004 appliance - Note that the network interfaces labelled externally on the Cast Iron appliance are mapped to different interfaces internally:

External Label	Internal designation
MGMT	emgmt
ETH0	r1
ETH2	edata
ETH1	r2

Connect the appliances with two Ethernet cables:

```
Appliance 1          Appliance 2
MGMT (internal:emgmt)  MGMT (internal:emgmt)
ETH0 (internal:r1)    -----> ETH0 (internal:r1)
ETH1 (internal:r2)    -----> ETH1 (internal:r2)
ETH2 (internal:edata) ETH2 (internal:edata)
```

MGMT (emgmt) and ETH2 (edata) for both appliances should be connected to the appropriate management and data networks.

2. Select an appliance to be the initial Active peer. The second appliance will be the Standby peer.
3. Connect a serial console to the selected Cast Iron appliance. Log in to the Cast Iron command line interface (CLI) on the Active peer appliance as user `admin`. The default admin password is `!n0r1t5@C`. You should get a command prompt similar to: `none/Standalone>`.
4. Configure the management and data networks to use statically assigned IP addresses. From the CLI, you do this by issuing a `net set interface` command followed by `net restart`:

```
appliance name/Standalone> net set interface emgmt address <MGMT IP ADDRESS> mask <MGMT NETMASK> bcast <MGMT BROADCAST>
```

```
appliance name/Standalone> net set interface edata address <DATA IP
```

```
ADDRESS> mask <DATA NETMASK> bcast <DATA BROADCAST>
appliance name/Standalone> net restart
```

5. To avoid problems, you should upgrade Cast Iron appliances with the latest software version. The software can be located on the IBM Fix Central website at <http://www.ibm.com/support/fixcentral/> and should be downloaded onto a machine that is accessible from the Cast Iron appliance to be upgraded. Upgrade of the Cast Iron software can be done through the Cast Iron Web Management Console (WMC) or alternatively, through commands issued on the command line interface. To check the software level, connect a serial console to the selected Cast Iron appliance, then log in to the Cast Iron command line interface on the Active peer appliance as user `admin`. By default the admin password is `!n0r1t5@C`. Issue the following command to check the software level:

```
none/standalone>system show version
```

If an update is required, issue the update command, providing the `ftp` location and user credentials required. For example:

```
none/standalone>system update cios image from ftp 10.10.17.166 user
billbloggs file Downloads/fixcentral/castiron/myciupdate
```

The appliance reboots during the upgrade process.

6. Repeat steps 3 and 5 for the Standby appliance. Because the appliance temporarily requires two IP addresses for the duration of the upgrade, you may also need to perform step 4 on the Standby peer. Note: After HA setup is complete, only two IP addresses (one for management and one for data) are required for the HA pair. Any IP addresses used on the Standby peer for this step are discarded upon completion of HA setup and may be used elsewhere in the network environment.
7. Issue the following command on both peers to ensure that they have the same level of software installed and that it is the required software level:

```
none/standalone>system show version
```

8. Configure the Active appliance as HA:

```
none/standalone> system haconfig enable active
```

The appliance reboots and restarts as the Active appliance.

9. Log in to the Active appliance. The command prompt shows the appliance is active:

```
none/Active>
or
appliance name/Active>
```

10. Connect a serial console to the selected Standby appliance, then log into the Standby peer and issue the following command to configure it as HA:

```
none/standalone> system haconfig enable standby
```

11. Log back into the Standby appliance. The command prompt shows the appliance is standby:

```
none/Standby>
```

12. On the Active appliance check the status of the HA pair:

```
appliance name/Active>ha show pairstatus
```

The output indicates if the appliances are highly available. For example:

```
appliance name/Active>ha show pairstatus
```

```
Pair Status
-----
```

```
NOT Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: 74%
```

```
Appliance Services
-----
Network: Up
Runtime: Starting
```

Command complete

In this example, the HA pair is not highly available because synchronization of the disks is only 74% complete. Issue the command again and the status changes:

```
appliance name/Active>ha show pairstatus
```

```
Pair Status
-----
Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: Synced
```

```
Appliance Services
-----
Network: Up
Runtime: Up
```

Command complete

13. After synchronization completes, it is important to ensure that the HA pair can properly switch roles when necessary. Use `ha show pairstatus` to confirm that the pair is Highly Available and that the network and runtime appliance services are reported as up. Identify the serial number of the appliance that is currently active.

```
appliance name/Active> system show version
```

Issue the following command to switch the roles of the HA pair:

```
appliance name/Active> ha switch
```

The Standby peer takes over and becomes Active. (Typically this process requires about 2 minutes). The peer that was previously Active becomes Standby. Use the command `system show version` to view the serial number of the Active appliance and confirm that it has changed. Use the command "`ha show pairstatus`" to verify that the HA pair returns to the Highly Available state.

14. After confirming that the HA pair can switch roles in one direction (for example: Peer A -> Peer B), do Step 13 again to ensure the HA pair can switch roles in the other direction (Peer B -> Peer A).
Note: A note regarding High Availability pairs and Hybrid Cloud Integration (HCI) support – If you are using HCI functionality and attempt to convert two Integration Appliances to HA, the HCI function will no longer be supported.

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.HAOverview.doc/HAsetuphapair.html>

Working with High Availability Pairs

High Availability (HA) pairs consist of two Integration Appliances: an Active machine and a Standby machine. This HA pair can then process orchestrations as a single entity.

The Active machine actively processes orchestrations, while the Standby machine automatically synchronizes data with the Active machine in case the Standby machine needs to perform any fail-over operations. When the appropriate scenario occurs, the Active machine and Standby machine can switch roles.

From the WMC, you can change the state or role of the Integration Appliances in an HA pair.

- [Running High Availability Commands](#)
You can run commands against a High Availability (HA) pair from the navigation pane.
- [High Availability Commands](#)
These commands can be run against a High Availability (HA) Pair.

Running High Availability Commands

You can run commands against a High Availability (HA) pair from the navigation pane.

Procedure

1. Select System > Command. The System Commands page is displayed.
2. From the Choose Command drop-down list, select a command. You can view command details by clicking the drop-down arrow.
3. Click Go.

Parent topic: [Working with High Availability Pairs](#)

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.HAOverview.doc/HA_run_commands.html

High Availability Commands

These commands can be run against a High Availability (HA) Pair.

Table 1.

System Control Commands	Description
H A C o n n e c t	Reconnects the Active and Standby Integration Appliance so that they can resume fail-over operations.
H A D i s c o n n e c t	Temporarily disconnects an HA pair without causing the Standby machine to takeover the Active machine. This action allows you to perform any necessary hardware or software maintenance on the Standby machine without interrupting orchestration processing. When you choose this action, the Standby machine transitions to an idle state. Reboot the Active machine or execute the Connect action to reestablish communications between an HA pair and resumes data synchronization and fail-over operations. To perform maintenance on an Active machine, use the Switch action. The Active machine becomes the Standby machine, where you can use the Disconnect action and perform Integration Appliance maintenance without interrupting orchestration processing.
H A S w i t c h	Causes the Integration Appliances in an HA pair to switch roles: the Active machine becomes the Standby machine and the Standby machine becomes the Active machine.

Parent topic: [Working with High Availability Pairs](#)

[Feedback](#) | [Notices](#)

Troubleshooting a High Availability Pair

If both the Active and Standby machines enter an IDLE state, use the CLI to resolve the issue.

Procedure

To resolve an IDLE/IDLE state:

1. From the CLI on both the Active machine and the Standby machine, type `ha show lastaccess`.
2. Determine which Integration Appliance has the most valid set of data. Usually the Integration Appliance with the most recent activity generates the most recent timestamp.
3. Type `ha active` on the Integration Appliance you determine to have the most valid data.

Results

This Integration Appliance is now the Active machine in a HA pair.

If you require specific technical support for high availability pairs, contact IBM Technical Support.

About the virtual appliance

This guide provides information about creating, configuring, backing up and recovering virtual appliances. Virtual appliances run in a virtual environment and are packaged with a guest operating system and optional application software, while integration appliances are physical machines.

Cast Iron® products perform equally well in both the virtual and physical worlds. You can install the Cast Iron Operating System (CIOS) on a single virtual machine running one integration project or on multiple virtual machines running many projects to create a data center infrastructure. For information on creating virtual appliances with CIOS as the guest operating system, see [Deploying an OVF template](#).

Your virtual appliance environment should consist of the following:

- A host machine (desktop computer or server).
- CPU (for example Intel® VT-x or AMD®-V) with virtualization technology enabled. (In some cases, virtualization technology must be enabled through BIOS).
- 60 GB disk space.
- Supported configuration of either 1 CPU, 4 GB RAM or 2 CPU, 8 GB RAM. Ensure that the host has enough physical RAM to run the selected configuration or system performance might be affected.

- VMware® ESX® or ESXi version 5.0 or later. For more information on VMware products and ESX, go to <http://kb.vmware.com/selfservice/microsites/microsite.do> and click *VMware ESX and ESXi Comparison*.
- Cast Iron Hypervisor Edition installation file (in OVA format).
- VMware vCenter® Server, 4.0.0, 258672 (optional).
- VMware VMotion® and VMware High Availability add-ons (optional). When added to your installation, VMware add-ons can manage and balance your workload across virtual machines, find an optimum data center location for a virtual machine and manage OS related failures. Refer to VMware documentation to learn more about add-ons and for tips on setting up your virtual environment.

Note: Shared storage, such as a SAN, is optional. Shared storage is required to enable VMware features such as VMware VMotion and VMware High Availability.

Getting started with the IBM WebSphere Cast Iron Hypervisor Edition

This guide introduces the IBM® WebSphere® Cast Iron® Hypervisor Edition (HVE) and provides an overview of virtualization technology. Virtualization refers to hardware virtualization where a virtual appliance runs in a virtual environment and is packaged with a guest operating system and optional application software.

Virtualization allows you to run several instances of an operating system on the same physical piece of hardware at the same time. Virtualization is accomplished through technology called *hypervisor*. A hypervisor allows many different simultaneously running operating systems to share the same set of physical resources (memory, CPU, disk and network) on one physical server. The physical machine on which the virtualization software runs is the *host* and virtual machines running on the host are *guests*.

Cast Iron products perform equally well in both the virtual and physical worlds. You can install the Cast Iron Operating System (CIOS) on a single virtual machine running one integration project or on multiple virtual machines running many projects to create a data center infrastructure. For information on creating virtual appliances with CIOS as the guest operating system, see [Deploying an OVF template](#).

Requirements

This section outlines the requirements and resources needed to establish a virtual appliance environment. For detailed information on mapping between resources, see [Resource mapping](#).

Requirements:

- A host machine (desktop computer or server).
- CPU (for example Intel® VT-x or AMD®-V) with virtualization technology enabled. (In some cases, virtualization technology must be enabled through BIOS).
- 60GB disk space.
- Supported configuration of either 1 CPU, 4GB RAM or 2 CPU, 8GB RAM. Ensure the host has enough physical RAM to run the selected configuration or system performance may be affected.
- VMware® ESX® or ESXi version 5.0 or later. For more information on VMware products and ESX, go to <http://kb.vmware.com/selfservice/microsites/microsite.do> and click on *VMware ESX and ESXi Comparison*.
- Cast Iron® Hypervisor Edition installation file (in OVA format).
- VMware vCenter® Server, 4.0.0, 258672 (optional).
- VMware VMotion® and VMware High Availability add-ons (optional). When added to your installation, VMware add-ons can manage and balance your workload across virtual machines, find an optimum data center location for a virtual machine and manage OS related failures. Refer to VMware documentation to learn more about add-ons and for tips on setting up your virtual environment.

Note: Shared storage, such as a SAN, is optional. Shared storage is required to enable VMware features such as VMware VMotion and VMware High Availability.

Parent topic: [Getting started with the IBM WebSphere Cast Iron Hypervisor Edition](#)

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_requirements.html

Resource mapping

This section provides information on mapping between virtual and physical resources when provisioning virtual machines.

When you instantiate a new virtual machine to run the Cast Iron HVE, you first must select a size for the virtual machine. As referenced in [Requirements](#), the supported sizes are:

- 1 CPU, 4GB RAM, minimum 60GB disk space. (Standard configuration).
- 2 CPU, 8GB RAM, minimum 60GB disk space. (Enhanced configuration).

The preceding resources sizes refer to the amount of a resource that is visible to a running virtual machine. For the Standard configuration, 1 CPU and 60GB disk space refer to the number of virtual CPUs and the amount of disk space the virtual machine must see. Because virtualization allows many different virtual machines running different operating system instances to share the same physical resources, it's important to size your physical host environment to account for the number of virtual machines you have running.

Memory

In addition to your host environment, it's important to size your physical host to properly account for the amount of memory needed for your running guests. Best practice dictates that your host should have more physical memory than the sum of the memory set up for the simultaneously running guests. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, you should pick a host that has $4 + 8 + 2 \Rightarrow$ at least 14GB of RAM. (The extra 2GB of RAM is recommended for the hypervisor processes).

CPU

When mapping virtual CPUs to physical CPUs you should count one physical CPU core per virtual CPU that will be running simultaneously, and leave at least one core as a buffer for the hypervisor processes. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, you should pick a host that has $1 + 2 + 1 = 4$ physical CPU cores. Because most physical CPUs are multicore, a physical host with one quad-core CPU is sufficient to run the configurations. Because the Cast Iron HVE uses a 64-bit kernel, your host must have a physical CPU with virtualization technology support available and enabled, (for example, Intel's VT-x or AMD's AMD-V). In some cases, virtualization technology must be enabled through BIOS.

Disk

Disks are typically the cheapest resource in a virtualized environment. Best practices dictate that a virtual machine should preallocate the amount of disk space required onto physical disks so that performance does not suffer when trying to expand disks later. When sizing disks, you should significantly oversize the disks so you can store many suspended virtual machines at the same time and only instantiate the ones needed. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, the minimum requirement for disk space is $60 + 60 + 5 = 125$ GB. (The remaining 5GB of space is for the hypervisor software). However, best practice is to get a physical host with significantly larger disks so that you can store more inactive virtual machines as your needs grow.

Upload an appliance patch

By uploading an appliance patch, you can upgrade to the newest version of the Cast Iron® operating system and access the latest features.

Before you begin

Important: If you use SAP projects, you must ensure that you install the SAP 64-bit libraries. Remove any SAP 32-bit libraries before you upgrade to WebSphere® Cast Iron Hypervisor Edition Version 7. If there are any SAP 32-bit libraries that are installed, you cannot upgrade to WebSphere Cast Iron Hypervisor Edition Version 7.

About this task

Use the Web Management Console (WMC) to upgrade to the latest version of Cast Iron operating system by uploading an upgrade image onto the appliance. This upgrade process only replaces or adds necessary files, it does not destroy any data. Note, the WMC forces any running projects to be undeployed and stops any active orchestration jobs currently running on the appliance during the upgrade procedure. After the appliance is upgraded, you cannot undo or roll back to the previous version.

Note: Upgrades can also be applied through the Command Line Interface (CLI). For more information, see the system update command in the *CLI Reference Guide*.

Procedure

1. Download the WebSphere Cast Iron Hypervisor firmware upgrade file (type = vcrypt2) from Fix Central: <http://www.ibm.com/support/fixcentral/>.
2. Download the appliance upgrade image file to a location you can access from your Windows workstation, for example: C:\Desktop.
3. Use the WMC to log into the appliance that is running the Cast Iron operating system.
4. In the WMC, select Set Up > Install/Upgrade. The Install/Upgrade Appliance and Libraries panel is displayed.
5. In the Upgrade Appliance section, click Install Upgrade. The upgrade wizard is displayed.
6. Click Next.
7. Click Next to check for running projects. If projects are running on the appliance, the upgrade wizard asks for confirmation to stop the projects before proceeding. Click Continue to proceed. If there are no projects running on the appliance, a green check mark is displayed. Click Next.
8. In the text field, either specify the path to the appliance upgrade image file or browse to locate the appliance upgrade image file.
9. Click Next. In the Upgrade panel, the following message is displayed: `Upload in progress. Please wait`. A progress bar displays the status of the upload. When the upload is complete, the WMC validates the upgrade.
10. Verify the patch version number and click Install.
11. A series of dialog boxes are displayed asking for confirmation to stop any running orchestrations. Click OK and OK. The Upgrade Appliance panel displays. After the upgrade completes in about 5 minutes, the appliance reboots and the following message is displayed in the Upgrade Appliance panel: `Installation Successful! Please wait. The Appliance is rebooting.` If a console window to the appliance is open, the rebooting messages are displayed.
12. Use the WMC to log into the appliance. You might need to click the refresh button of the browser.

What to do next

Using the WMC, redeploy any projects that were undeployed by this upgrade procedure. Upgrade to a Studio version compatible with the installed Cast Iron operating system. For more information about appliance and Studio compatibility, see the Compatibility section of the *Cast Iron Operating System Release Notes*® or the *Cast Iron Studio Release Notes*. For the procedure on upgrading Studio, see *Installing Studio*.

Deploying an OVF template

You can deploy an OVF template which creates a virtual machine with the CIOS and VMwareTools installed. After the OVF template is deployed, you can manage the virtual appliance from the vSphere Client Console tab, as you would manage a physical integration appliance through the CLI.

Before you begin

Note: The steps in this section apply to VMware only. Note also that after deploying an OVF template, the vSphere client might display the VMware Tools status as "Not Installed." However, if the OVF template is correctly deployed, VMware Tools are installed on the virtual machine.

Procedure

1. Download a local copy of the CIOS OVA file. It is recommended that you download the OVA to a storage device that is accessible by the host machine, where the virtual machine will reside.
2. In the VMware Infrastructure Client navigation pane, select the virtual machine on which to install the CIOS.
3. Select File > Deploy OVF Template. The Deploy OVF Template Wizard is displayed.
4. Choose an option to deploy the OVF template and specify the location of the OVF template, and click Next.
 - Deploy from file - Choose this option if the source OVF template is on the local file system.
 - Deploy from URL - Choose this option to download the OVF template from the Internet and enter a URL
5. Verify the template details that display and click Next.
6. Specify the name and location for the deployed template and click Next.
7. Select a configuration option and click Next.
 - Standard - 1CPU, 4GB RAM
 - Enhanced - 2CPU, 8GB RAMThe Host/Cluster page is displayed.
8. Select the host or cluster on which to run the deployed template, and click Next.
9. Select a resource pool, and click Next.
10. Select the datastore to which you want to store the virtual machine files, and click Next.
11. Map the networks used in the OVF template to networks in your inventory, by selecting the drop-down list in the Destination Networks column. Then click Next.
12. Verify the options you have specified and click Finish. The OVF template is deployed to your virtual machine.

What to do next

After you have successfully deployed the OVF template, do not attempt to modify the settings for hard disk 1 or hard disk 2.

Configuring to use DHCP addressing

You can configure a virtual machine in a network to use a DHCP server for addressing.

Procedure

1. Using the virtual machine console, log in to the virtual machine with the default user name and password.

- o localhost login: admin
- o Password: !n0r1t5@C

The following prompt displays:

```
localhost>
```

Note: The keyboard mapping of the vSphere Client terminal uses a US layout. If your workstation keyboard uses another layout, your login attempt might fail.

2. Assign the host name and IP address in the DNS server for the following interfaces:

- o Host name and IP address for the data interface
- o Host name and IP address for the management interface

The data interface is used by the integration appliance during run time to communicate to endpoints on the network, for example a database server. The management interface is used to communicate with the integration appliance from the WMC.

3. Enter the following settings:

- o MAC address for the data interface
- o Hostname assigned to the data interface in the DNS server
- o MAC address for the management interface
- o Hostname assigned to the management interface in the DNS server
- o Hostname assigned to the BMC interface in the DNS server

4. Apply the network settings: `localhost> net restart`

5. Monitor the status of the system, by repetitively issuing the following command: `localhost> system show status`. As the network settings are applied, the network status transitions through the following states:

- o Up
- o Stopping
- o Starting
- o Up

6. Monitor the state of the network: `localhost> net show status`. The network settings have been applied when status of the Current activity lists `Monitoring network`.

7. Verify the data and management interface network settings, using the following command: `localhost> net show active`

8. Reset any address that is incorrect. If you run `net show all`, the EData display as disabled.

9. Verify the connection to the management interface using the WMC.

Configuring to use static addressing

You can configure a virtual machine in a network to use static addressing.

About this task

Network settings you specify are only committed to the Integration Appliance when you run the `net restart` command. If a system reboot occurs before you commit your network settings, those network settings are lost.

Procedure

1. Using the virtual machine console, log in to the virtual machine with the default user name and password.

- o localhost login: `admin`
- o Password: `!n0r1t5@C`

The following prompt is displayed::

```
localhost>
```

2. Assign the host name and IP address in the DNS server for the following interfaces:

- o Host name and IP address for the data interface
- o Host name and IP address for the management interface

The data interface is used by the integration appliance during run time to communicate to endpoints on the network, for example a database server. The management interface is used to communicate with the integration appliance from the WMC.

3. Set the host name for the management interface: `localhost> net set hostname static appliancehostname`. Once the host machine is restarted at the end of this procedure, the prompt changes to the following setting:

```
hostname>
```

4. Set the DNS domain name: `localhost> net set domain static domain-name`
5. Set the DNS name server: `localhost> net set nameserver static dns-ipaddress`
6. Set the network address for the data interface: `localhost> net set interface edata address ipaddress mask netmask bcast broadcast`
7. Set the network address for the management interface: `localhost> net set interface emgmt address ipaddress mask netmask bcast broadcast`
8. Set the gateway address: `localhost> net set gateway static ip-address emgmt`
9. Disable searching the domain list: `localhost> net set search none`
10. Set the Network timeserver to the appropriate setting for your environment:
 - o If you have a timeserver on your network: `localhost> net set ntp static ntp-address`
 - o If you do not have a timeserver on your network: `localhost> net set ntp none`
11. Review the settings: `localhost> net show memory`
12. Apply the network settings: `localhost> net restart`
13. Monitor the status of the system, by repetitively issuing the following command: `localhost> system show status` As the network settings are applied, the network status transitions through the following states:
 - o Up
 - o Stopping

- o Starting
- o Up

Note: As network settings are applied, you can expect the runtime to be down.

14. Monitor the state of the network: `hostname> net show status` The network settings have been applied when status of the Current activity lists `Monitoring network`.
15. Verify the settings you entered using this command: `hostname> net show active`
16. Reset any address that is incorrect. If you run `net show all`, the EData display as disabled.
17. Log out `hostname> exit` The session closes.

Backing up and recovering virtual appliances

You can purchase the VMware Consolidated Backup add-on to handle a disaster recovery scenario for your virtual environment or you can use the Export/Import functionality of the virtual appliance.

For more information about VMware Consolidated Backup, see the VMware Consolidated Backup Guide.

The following topics describe how to export and import virtual appliance repositories and provide details about which components of the virtual appliance are affected by these operations.

- [Exporting a virtual appliance repository](#)
Export the project repository to create a backup of the virtual appliance. You can export all project configuration and user settings from the WMC to another location. The virtual appliance system logs are not exported when you export a repository.
- [Importing a virtual appliance repository](#)
When you import a repository, the WMC deletes all existing projects, project configurations, and job history. The virtual appliance system logs remain unaffected. Once you have imported a repository, you cannot roll back to a previous repository.

Feedback | Notices

 Last updated: Wednesday, December 16, 2015

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_backingupVA.html

Exporting a virtual appliance repository

Export the project repository to create a backup of the virtual appliance. You can export all project configuration and user settings from the WMC to another location. The virtual appliance system logs are not exported when you export a repository.

About this task

You can export a repository with the project configurations running. However, when you import this repository, the project configurations will all be in the undeployed state.

Use the WMC to export a virtual appliance repository.

Note: Encryption of virtual appliance disks utilizes the VMware-assigned UUID of the virtual appliance. As a result, attempting to clone and/or copy a virtual appliance yields a non-functioning clone/copy because such operations yield a new UUID. To create a back-up appliance, create a new virtual appliance with the same configuration (for example: standard or enhanced) and use the CLI command `config save/load` to export/import virtual appliance settings and WMC repository functions. (Be aware, however, that these operations do not export/import data, including variables, stored on the disk or in memory as part of the process of the orchestration).

Note: VMotion remains a valid operation for migrating a virtual appliance to a new host.

Procedure

1. From the Deploy tab, select Export Repository. The File Download window is displayed.
2. Click Save. The Save As window is displayed.
3. Specify the location where you would like to save the exported repository.
4. Click Save. The WMC exports a copy of the repository as a .tar.gz file.

Importing a virtual appliance repository

When you import a repository, the WMC deletes all existing projects, project configurations, and job history. The virtual appliance system logs remain unaffected. Once you have imported a repository, you cannot roll back to a previous repository.

Before you begin

You must stop and undeploy all project configurations on the WMC before you can import a repository. When the WMC successfully imports a repository, all project configurations are in an undeployed state. You can import repositories from CIOS version 3.7.1 to 6.x.

Note: Before you import a repository from one virtual appliance to another, you must power off the virtual appliance from which you are importing a repository.

About this task

In the steps that follow, you undeploy all projects, then use the WMC to import a virtual appliance repository:

Procedure

1. From the Deploy tab, select Projects. All project configurations are displayed.
2. Verify that all the project configurations are undeployed.
3. If any project is not in the undeployed state, click the project configuration link, then stop and undeploy the project configuration.
4. From the Deploy tab, select Import Repository. The Import Repository page is displayed.
5. Specify the repository file you want to import or click Browse to search for a repository file.
6. Select one of the following import options:
 - Project & User Settings - Imports all the contents of the repository file you select. All projects are imported in the undeployed state.
 - Project Only - Imports only project information from the repository file you select. All projects are imported in the undeployed state.
 - User Settings Only - Imports only the user setting information from the repository file you select. User setting information includes: network configurations, users and groups, licenses, job log parameters, log levels, notifications, downtime rules and passwords.
7. Click Import. A warning is displayed.
8. Click Import to verify that you would like to proceed with the import. The virtual appliance restarts and the WMC login window is displayed when the import is complete.
9. Log into the virtual appliance.
10. From the Deploy tab, select Projects to deploy all appropriate project configurations.

Integration Appliance Monitoring Options

Overview of monitoring options available on the Integration Appliance.

The Integration Appliance logs system events, such as a fan failing or Standby machine assuming the active role in an HA pair. You can view these system events from the Web Management Console (WMC). When system events occur, individual users as well as network management systems can receive notification alerts from the Integration Appliance via email and SNMP traps respectively. Using SNMP, network management systems can also poll an Integration Appliance to actively monitor resources such as disk usage, memory usage, and garbage collection cycles. For more information about systems and notification severity levels you can monitor from the WMC, see the management console online help.

While any user can view the systems events log and monitor disk and memory usage from the WMC, you must create a notification policy to receive alerts from the Integration Appliance. Use the WMC to create a notification policy. Notification policies contain details about which systems to monitor, notification levels to monitor, and notification alert recipients. The Integration Appliance only sends alerts when an event meets or

exceeds the notification level specified in a notification policy. For more information about creating notification policies and notification levels, see the management console online help.

The Cast Iron Notifications Reference provides details about reading and using Cast Iron SNMP MIB and individual messages from each Cast Iron MIB module. The version of SNMP is SNMPv2c.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/integration_appliance_monitoring_options.html

About the Cast Iron SNMP MIB

An overview of the Cast Iron SNMP MIB and a list of available MIB modules.

As a network element, the Integration Appliance is able to respond to requests from a network management system. The Integration Appliance is also able to send notifications to the network management system about events that occur on the Integration Appliance. This communication between the Integration Appliance and your network management system allows you to use traps to monitor the Integration Appliance.

Whether you choose to receive notification alerts from the Integration Appliance by enabling SNMP traps or you choose to actively monitor Integration Appliance activities like memory usage by polling the Integration Appliance, the Cast Iron MIB provides data structure and defines content type for the information exchange.

When you use the WMC to download the Cast Iron MIB, you are downloading one file that contains multiple MIB definitions. Some SNMP MIB parsers are unable to read a file that contains multiple MIB modules, so you must separate each MIB module into individual files. For more information about generating separate MIB module files, see [Downloading the Cast Iron SNMP MIB](#).

The Cast Iron MIB contains notification messages for the following modules:

- [Downloading the Cast Iron SNMP MIB](#)
Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.
- [Reading the Cast Iron SNMP MIB](#)
Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/about_the_castiron_snmp_mib.html

Downloading the Cast Iron SNMP MIB

Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.

Use the Web Management Console (WMC) to download the Cast Iron SNMP MIB from an Integration Appliance. For more information about how to use the WMC to download the Cast Iron SNMP MIB, see the management console online help.

The WMC downloads the Cast Iron SNMP MIB as a single text file. This text file is comprised of multiple sections, where each section is a full MIB module. For example, the NetSuite Module is defined in one section and the Salesforce Module is defined in another section.

Note: If your SNMP MIB parser is unable to read a file that contains multiple MIB modules, separate each section (MIB module) into individual files. On Linux, you can use the following script to generate a separate file for each MIB module in the Cast Iron SNMP MIB.

```
#!/bin/bash

sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castironsys.mib |
while read mib; do
echo $mib
sed -ne "/^$mib/,/^END/p" castironsys.mib > $mib
done
```

 Last updated: Thursday, December 17, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/downloading_the_castiron_mib.html

Reading the Cast Iron SNMP MIB

Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

Each MIB module has a module-identity, which describes the purpose for the MIB. For example, the NetSuite Module provides access to the NetSuite online service. Each MIB module also contains a comment section that provides a high-level overview of its contents. Content like the Object Summary lists the name and OID of every object in the MIB, much like a table of contents, and allows you to examine the layout and the type of data that is being provided.

In the following example, ciIaProjectSummary is an organizational node that contains general information about projects on the Integration Appliance. Like a directory, the ciIaProjectSummary organizational node contains object types that provide information about the number of projects, number of running orchestrations, number of stopped orchestrations, number of running jobs, number of completed jobs, and number of errored jobs.

```
-- ciIaProjectSummary          ciia.1.1.1
--   ciIaNbrProjects           ciia.1.1.1.1
--   ciIaNbrRunningOrchs       ciia.1.1.1.2
```

```

--      ciIaNbrStoppedOrchs                ciia.1.1.1.3
--      ciIaNbrRunningJobs                 ciia.1.1.1.4
--      ciIaNbrCompletedJobs               ciia.1.1.1.5
--      ciIaNbrErroredJobs                 ciia.1.1.1.6

```

To get more information about the meaning of one of the objects, search the file for the name of the object. For example, searching for `ciIaNbrRunningJobs` returns the following block of information:

```

ciIaNbrRunningJobs OBJECT-TYPE                -- ciia.1.1.1.4
    SYNTAX Unsigned32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "Total number of currently running jobs.
        "
 ::= { ciIaProjectSummary 4 }

```

where:

- **ciIaNbrRunningJobs OBJECT-TYPE** - Defines the name of the object.
Note: Next to the object name, there is a shortened form of the OID (– ciia.1.1.1.4).
- **SYNTAX Unsigned32** - An unsigned integer whose value could go up or down over time.
- **MAX-ACCESS read-only** - A read-only value that the system manager can ask for but cannot change.
- **STATUS** -
- **DESCRIPTION** - Describes the object.

Polling for ProjectSummary information retrieves data that is similar to the following example:

```

$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0

```

`ciIaProjectTable` is another example of an organizational node that contains information about each project on the Integration Appliance. Like a directory, the `ciIaProjectTable` organizational node contains object types that provide information like the project name, project version, project configuration, project state, and so on.

```

--      ciIaProjectTable                    ciia.1.1.2
--      ciIaProjectEntry                   ciia.1.1.2.1
--      ciIaProjEntryIndex                  ciia.1.1.2.1.1
--      ciIaProjEntryName                   ciia.1.1.2.1.2
--      ciIaProjEntryVersion                ciia.1.1.2.1.3
--      ciIaProjEntryConfig                 ciia.1.1.2.1.4
--      ciIaProjEntryState                   ciia.1.1.2.1.5
--      ciIaProjEntryNbrRunning              ciia.1.1.2.1.6
--      ciIaProjEntryNbrCompleted            ciia.1.1.2.1.7
--      ciIaProjEntryNbrErrored              ciia.1.1.2.1.8
--      ciIaProjEntryTimePublished           ciia.1.1.2.1.9

```

Polling for ProjectTable information retrieves data that is similar to the following example:

```

$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0

```

```
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

The object types are much like columns in a table that store data generated by events that occur on the Integration Appliance. For example, publishing and cloning projects are events that generate ProjectTable data. You can poll the Integration Appliance to retrieve this data. Data for two events: publishing a project and cloning a project are displayed in the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
CASTIRON-IA-MIB::ciIaProjEntryName.98304 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryName.98305 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryVersion.98304 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryVersion.98305 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryConfig.98304 = STRING: Default
CASTIRON-IA-MIB::ciIaProjEntryConfig.98305 = STRING: OnlineLicensingClone
CASTIRON-IA-MIB::ciIaProjEntryState.98304 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryState.98305 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98304 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98305 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98304 = STRING: 2009-6-
12,16:36:20.0,+0:0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98305 = STRING: 2009-6-12,16:36
```

As more events occur, the output can become increasingly difficult to read. To generate a more readable output, it is recommended to use the `snmptable` command to display the data in a table format. Data for each event displays as a new row.

```
$ snmptable -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
SNMP table: CASTIRON-IA-MIB::ciIaProjectTable

  ciIaProjEntryName  ciIaProjEntryVersion  ciIaProjEntryConfig  ciIaProjEntryState
ciIaProjEntryNbrRunning  ciIaProjEntryNbrCompleted  ciIaProjEntryNbrErrored
ciIaProjEntryTimePublished
  OnlineLicensing          1.0          Default          undeployed
0          0          0  2009-6-12,16:36:20.0,+0:0
  OnlineLicensing          1.0  OnlineLicensingClone          undeployed
0          0          0  2009-6-12,16:36:20.0,+0:0
```

SNMP Items Available Using SNMP Get

Presents a table of OID trees that you can poll using SNMP Get.

Each entry in the table represents many individual items. Use snmpwalk or another SNMP polling utility to see the complete list. You can poll the following OID trees:

OID	SNMP Name	Notes
.1.3.6.1.2.1.1	SNMPv2-MIB::system	
.1.3.6.1.2.1.2	IF-MIB::interfaces	
.1.3.6.1.2.1.4	IP-MIB::ip	
.1.3.6.1.2.1.5	IP-MIB::icmp	
.1.3.6.1.2.1.6	TCP-MIB::tcp	
.1.3.6.1.2.1.7	UDP-MIB::udp	
.1.3.6.1.2.1.1 1	SNMPv2-MIB::snmp	
.1.3.6.1.2.1.2 5.1	HOST-RESOURCES- MIB::hrSystem	Excluding .1.3.6.1.2.1.25.1.3 HOST-RESOURCES- MIB::hrSystemInitialLoadDevice Excluding .1.3.6.1.2.1.25.1.4 HOST-RESOURCES- MIB::hrSystemInitialLoadParameters
.1.3.6.1.2.1.2 5.2	HOST-RESOURCES- MIB::hrStorage	
.1.3.6.1.2.1.2 5.3	HOST-RESOURCES- MIB::hrDevice	
.1.3.6.1.4.1.2 021.4	UCD-SNMP-MIB::memory	
.1.3.6.1.4.1.2 021.10	UCD-SNMP-MIB::laTable	CPU Load Average
.1.3.6.1.4.1.2 021.11	UCD-SNMP-MIB::systemStats	
.1.3.6.1.4.1.1 3336	CASTIRON-REGISTRATIONS- MIB::castironsys	See the Cast Iron MIB, particularly CASTIRON-IA-MIB.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/snmp_items_available_using_snmpget.html

Using Traps to Monitor Appliance Health

Recommendations for configuring alerts that monitor appliance health.

When monitoring the health of the Integration Appliance, you can use one or both of the following methods:

- Poll - Actively monitor runtime resource usage including appliance garbage collection cycles, appliance memory usage, and appliance disk usage.
- Trap - Receive notifications indicating hardware situations such as failed fans, high temperatures, or failed disks. For more information about hardware related SNMP traps, see [About the Platform Module](#).

For more information about creating and enabling notification alerts, see the WMC Online Help or the Cast Iron Web Management Console Guide in the IBM WebSphere Cast Iron Information Center.

[Table 1](#) provides recommended thresholds for notifications regarding garbage collection, memory usage, and disk usage.

- **Garbage Collection** - This parameter counts the number of garbage collections that have occurred since the last system restart. Garbage collection that occurs at a rate over the recommended threshold can indicate that the appliance is overworked and might start to experience performance issues.
- **Memory Usage** - This parameter measures the percentage of total memory in use, expressed in hundredths of a percent. This number is updated after each garbage collection.
Note: This value is provided as an integer, but the MIB causes the SNMP Manager to alter its displayed value by a hundredths of a percent. For example: a value of '1234' displays as '12.34!'. The SNMP Management tool should handle this automatically, but verify that it does so.
- **Disk Usage** - This parameter measures the percentage of total work-in-progress (WIP) disk space that is in use, expressed in hundredths of a percent. The percentage of disk usage determines job purging activities for the appliance.

Table 1. Recommended Notification Thresholds

Parameters to Monitor	Recommended Thresholds	SNMP Name and OID
Garbage Collection	Create a notification that triggers an alert if this value changes quickly, by more than 6 counts in a 1-minute time period.	CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0
Memory Usage	Create a notification that triggers an alert if this value goes over 80% (raw value of 8000).	CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0
Disk Usage	Create a notifications triggers an alert if this value goes over 75% (raw value of 7500).	CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0

Note: The parameters to monitor, described in the table above, are for SNMP polling only.

Archive Module

The Archive Module provides activities that allow creating and reading compressed archives. This section contains details for the messages delivered from the Archive Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Archive Module.

MIB Name : *CASTIRON-COMP-ARCHIVE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.4*

The following table provides an alphabetical list of all notifications that can be issued by the Archive Module.

Table 1. Notifications issued by the Archive Module

Notification	Level	System	Description
ArchiveDone	Info	Orchestration	Activity has successfully completed archiving.
ArchiveEntryBlank	Severe	Orchestration	Archive input entry does not have any content.
ArchiverCreated	Info	Orchestration	Activity has successfully created an archiver for archiving.
ErrorIdentifyArchive	Severe	Orchestration	There was an error identifying the archive entry.
ErrorUnZipOperation	Severe	Orchestration	There was an error performing unzip operation.
ErrorZipOperation	Severe	Orchestration	There was an error performing zip operation.
IncorrectParameters	Severe	Orchestration	Parameters provided to the activity are invalid.
InvalidArchiveEntry	Severe	Orchestration	There was an error reading archive entry.
InvalidArchiveFormat	Severe	Orchestration	Activity could not create an archiver for the supplied archiving format. This format might not be supported by the activity.
InvalidBzipEntry	Severe	Orchestration	The bzip entry has more than one entry.
InvalidDateTime	Warning	Orchestration	Error occurred while parsing datetime from archive entries.
InvalidGzipEntry	Severe	Orchestration	The gzip entry has more than one entry.
InvalidNumInArchEntry	Warning	Orchestration	The numeric value in archive entry is not valid.
InvalidUnArchFormat	Severe	Orchestration	Activity could not create an unarchiver for the supplied archiving format. This format might not be supported by the activity.
InvalidUnarchiveInput	Severe	Orchestration	The input to unarchive is invalid.
UnArchiverCreated	Info	Orchestration	Activity has successfully created an unarchiver for unarchiving.
UnarchiveDone	Info	Orchestration	Activity has successfully completed unarchiving.
ValidationError	Severe	Orchestration	The input entries were not successfully validated against the schema.
ValidationFine	Info	Orchestration	The input entries were successfully validated against the schema.

- [Archive Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Archive Module.

Crypto Service Module

The Crypto Service Module provides activities that allow encrypting and decrypting the binary content. This section contains details for the messages delivered from the Crypto Service Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Crypto Service Module.

MIB Name : *CASTIRON-COMP-CRYPTOSERVICE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.26*

The following table provides an alphabetical list of all notifications that can be issued by the Crypto Service Module.

Table 1. Notifications issued by the Crypto Service Module

Notification	Level	System	Description
DecryptDone	Info	Orchestration	Activity completed decrypting the content.
DecryptStarted	Info	Orchestration	Activity started decrypting the content.
EncryptDone	Info	Orchestration	Activity completed encrypting the content.
EncryptStarted	Info	Orchestration	Activity started encrypting the content.
FoundPrivateKey	Info	Orchestration	Crypto Service was successfully able to read the private key from the java key store.
FoundPublicKey	Info	Orchestration	Crypto Service was successfully able to read the public key from the java key store.
IOException	Severe	Orchestration	Activity could not read or write to one of the Input / Output files.
InputEntryCount	Info	Orchestration	Activity successfully filtered specified number of entries.
IntegrityCheckFailed	Info	Orchestration	Message failed integrity check.
IntegrityCheckPassed	Info	Orchestration	Message passed integrity check.
InvalidAlgorithm	Severe	Orchestration	Activity could not find key because of invalid algorithm.
InvalidContent	Severe	Orchestration	The input content cannot be empty.
InvalidDateFormat	Severe	Orchestration	The date format is not valid. Enter date in dd-MM-yyyy format
InvalidFormat	Severe	Orchestration	Activity could not complete due invalid crypto format.
InvalidKeyOrPwd	Severe	Orchestration	Activity could not find a specified key handle in the java keystore with provided name and password.
InvalidKeyStore	Severe	Orchestration	Activity could not find a specified entry in key store.

Notification	Level	System	Description
InvalidKeyhandle	Severe	Orchestration	The input keyhandle cannot be empty.
InvalidPassword	Severe	Orchestration	The input password cannot be empty.
KeystoreEntryExpired	Severe	Orchestration	Activity found specified entry in key store, but its expired.
NoIntegrityCheck	Info	Orchestration	No Message integrity check.
PGPException	Severe	Orchestration	PGP Exception.

- [Crypto Service Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the Crypto Service Module.

Crypto Service Operation Notifications

Provides a comprehensive list of operation notifications sent from the Crypto Service Module.

- [DecryptDone](#)
Activity completed decrypting the content.
- [DecryptStarted](#)
Activity started decrypting the content.
- [EncryptDone](#)
Activity completed encrypting the content.
- [EncryptStarted](#)
Activity started encrypting the content.
- [FoundPrivateKey](#)
Crypto Service was successfully able to read the private key from the java key store.
- [FoundPublicKey](#)
Crypto Service was successfully able to read the public key from the java key store.
- [IOException](#)
Activity could not read or write to one of the Input / Output files.
- [InputEntryCount](#)
Activity successfully filtered specified number of entries.
- [IntegrityCheckFailed](#)
Message failed integrity check.
- [IntegrityCheckPassed](#)
Message passed integrity check.
- [InvalidAlgorithm](#)
Activity could not find key because of invalid algorithm.

- [InvalidContent](#)
The input content cannot be empty.
- [InvalidDateFormat](#)
The date format is not valid. Enter date in dd-MM-yyyy format
- [InvalidFormat](#)
Activity could not complete due invalid crypto format.
- [InvalidKeyOrPwd](#)
Activity could not find a specified key handle in the java keystore with provided name and password.
- [InvalidKeyStore](#)
Activity could not find a specified entry in key store.
- [InvalidKeyhandle](#)
The input keyhandle cannot be empty.
- [InvalidPassword](#)
The input password cannot be empty.
- [KeystoreEntryExpired](#)
Activity found specified entry in key store, but its expired.
- [NoIntegrityCheck](#)
No Message integrity check.
- [PGPException](#)
PGP Exception.

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.14.1.2*

SNMP Trap Number : *1*

Variables

The FilterError message contains the following variables:

Table 1. FilterError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Database Module

The Database Module provides activities for accessing various SQL databases. This section contains details for the messages delivered from the Database Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Database Module.

MIB Name : *CASTIRON-COMP-DATABASE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.2*

The following table provides an alphabetical list of all notifications that can be issued by the Database Module.

Table 1. Notifications issued by the Database Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	A problem occurred while activating the activity.
ConnectionError	Warning	Orchestration	An error occurred while connecting to the database endpoint.
ConnectionRetry	Warning	Orchestration	An error occurred while attempting to connect to the database.
DataSourceHashCode	Info	Orchestration	Information regarding the hash code used to register the datasource.
DataSourceRegistered	Info	Orchestration	Information about the datasource name registered with the system.
DateTimeParseError	Severe	Orchestration	Unable to parse the date and time
DeleteRowsError	Severe	Orchestration	An exception occurred while deleting the row from the control table.
DeleteRowsFailure	Severe	Orchestration	Unable to delete rows from the buffer table.
DeleteSQL	Info	Orchestration	The delete query issued to the buffer table.
DeleteSQLWithId	Info	Orchestration	The delete query, with id, issued to the buffer table.
ErrorDeletePost	Severe	Orchestration	An exception occurred while deleting the row from the control table due to a connection error.
ErrorSingleTableJob	Severe	Orchestration	An exception occurred while processing a SingleTableNotification job
InboundOperationError	Severe	Orchestration	An error occurred while executing the inbound job.
InsertTableStatement	Info	Orchestration	An insert statement was issued to the control table.
JDBCConnectionClose	Warning	Orchestration	An error occurred while closing the connection in the exception path.
MaxRowExceeded	Info	Orchestration	The maximum number of rows for one poll on the table was reached. If this happens frequently, it is advisable to alter the threshold
MethodNotFound	Info	Orchestration	Unable to invoke the method specified in the connection properties.
OperationNameAbsent	Severe	Orchestration	The buffer table contains the operation but there is no activity in the orchestration for that operation. This is not a valid configuration.
OutboundActivateError	Severe	Orchestration	A problem occurred while activating the database outbound activity.

Notification	Level	System	Description
ParamQueryActivate	Severe	Orchestration	An exception occurred while activating the parameterized query activity.
ParamQueryError	Severe	Orchestration	An error occurred while processing the message for the parameterized query activity.
ParameterizedQuery	Info	Orchestration	The query for the parameterized query activity.
PollTblActivateError	Severe	Orchestration	A problem occurred while activating the database poll table activity.
QueryString	Info	Orchestration	The query which was issued for buffer table.
RedeliverSkip	Warning	Orchestration	This row is already delivered to the database and will be skipped now.
SelectStatement	Info	Orchestration	A select statement was issued to the control table to check for duplicate rows.
SetQueryTimeout	Warning	Orchestration	Unable to set the query time out for the database.
StoredProcActivate	Severe	Orchestration	An exception occurred while activating the stored procedure activity.
StoredProcException	Severe	Orchestration	A data error occurred while processing an outbound job in the stored procedure activity.
StoredProcQuery	Info	Orchestration	The stored procedure query issued to the database.
UnexpectedEmptyRows	Warning	Orchestration	An unexpected result returned from the buffer table. Expecting rows to present in result, instead the result is empty.
UpdateQuery	Info	Orchestration	The update query issued to the buffer table for marking rows.

Database Operation Notifications

Provides a comprehensive list of operation notifications sent from the Database Module.

- [ActivateError](#)
A problem occurred while activating the activity.
- [DataSourceHashCode](#)
Information regarding the hash code used to register the datasource.
- [DataSourceRegistered](#)
Information about the datasource name registered with the system.
- [DateTimeParseError](#)
Unable to parse the date and time
- [DeleteRowsError](#)
An exception occurred while deleting the row from the control table.
- [DeleteRowsFailure](#)
Unable to delete rows from the buffer table.
- [DeleteSQL](#)
The delete query issued to the buffer table.
- [DeleteSQLWithId](#)
The delete query, with id, issued to the buffer table.
- [ErrorDeletePost](#)
An exception occurred while deleting the row from the control table due to a connection error.

- [ErrorSingleTableJob](#)
An exception occurred while processing a SingleTableNotification job
- [InboundOperationError](#)
An error occurred while executing the inbound job.
- [InsertTableStatement](#)
An insert statement was issued to the control table.
- [MaxRowExceeded](#)
The maximum number of rows for one poll on the table was reached. If this happens frequently, it is advisable to alter the threshold
- [MethodNotFound](#)
Unable to invoke the method specified in the connection properties.
- [OperationNameAbsent](#)
The buffer table contains the operation but there is no activity in the orchestration for that operation. This is not a valid configuration.
- [OutboundActivateError](#)
A problem occurred while activating the database outbound activity.
- [ParamQueryActivate](#)
An exception occurred while activating the parameterized query activity.
- [ParamQueryError](#)
An error occurred while processing the message for the parameterized query activity.
- [ParameterizedQuery](#)
The query for the parameterized query activity.
- [PollTblActivateError](#)
A problem occurred while activating the database poll table activity.
- [QueryString](#)
The query which was issued for buffer table.
- [RedeliverSkip](#)
This row is already delivered to the database and will be skipped now.
- [SelectStatement](#)
A select statement was issued to the control table to check for duplicate rows.
- [StoredProcException](#)
A data error occurred while processing an outbound job in the stored procedure activity.
- [StoredProcQuery](#)
The stored procedure query issued to the database.
- [UpdateQuery](#)
The update query issued to the buffer table for marking rows.

DataSourceHashCode

Information regarding the hash code used to register the datasource.

Level : *Info*

Log Message : *The datasource with the name {DataSourceName} is registered with hash code: {HashCodeName}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DATABASE-MIB::ciC2oDataSourceHashCodeEv19*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.2.1.2*

SNMP Trap Number : *19*

Variables

The DataSourceHashCode message contains the following variables:

Table 1. DataSourceHashCode Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. DataSourceName

The name of the datasource

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv19DataSourceName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.19.1

6. HashCodeName

The name of the hash code used to register the datasource.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv19HashCodeName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.19.2

StoredProcException

A data error occurred while processing an outbound job in the stored procedure activity.

Level : *Severe*

Log Message : *An exception occurred while processing an outbound job in the stored procedure activity. Data error at row number: {RowNumber}. The error is {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DATABASE-MIB::ciC2oStoredProcExceptionEv16*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.2.1.2*

SNMP Trap Number : *16*

Variables

The StoredProcException message contains the following variables:

Table 1. StoredProcException Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p>

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. RowNumber

The row number at which the error occurred.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv16RowNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.2.1.2.1.16.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

Domino Module

The Domino Module provides activities for accessing IBM Lotus Domino servers. This section contains details for the messages delivered from the Domino Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Domino Module.

MIB Name : *CASTIRON-COMP-DOMINO-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.22*

The following table provides an alphabetical list of all notifications that can be issued by the Domino Module.

Table 1. Notifications issued by the Domino Module

Notification	Level	System	Description
ActivateFailureBlank	Severe	Orchestration	The specified activity name is not executed successfully because the activity name was blank.
ActivateSuccess	Info	Orchestration	The specified activity name is activated successfully.
ActivityCreateSuccess	Info	Orchestration	The specified activity name is created successfully and is ready for invocation.

Notification	Level	System	Description
ActivityFailure	Severe	Orchestration	The specified activity name failed to execute.
ActivitySuccessful	Info	Orchestration	The specified activity name is executed successfully. The response parameter is populated successfully.
ConnectError	Severe	Orchestration	An error occurred while processing the connection parameters sent as part of the request in the activity.
InitializationError	Severe	Orchestration	Exception while initializing Lotus Domino connector.
RetryCount	Info	Orchestration	The specified activity re tried the execution so many times specified above.
RunningInfo	Warning	Orchestration	Encountered few warnings or errors while running Domino activity.
RunningMessages	Warning	Orchestration	Received messages while executing the activity.
SchemaInvoke	Info	Orchestration	The specified activity name is generating schemas.
StopSuccess	Info	Orchestration	The specified activity name is successfully stopped.
UnmarshalError	Severe	Orchestration	An error occurred while reading input connection parameters in the activity.

ActivateFailureBlank

The specified activity name is not executed successfully because the activity name was blank.

Level : *Severe*

Log Message : *{ActivityName} activity execution failed due to {Name} property is blank.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DOMINO-MIB::ciC22oActivateFailureBlankEv9*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.22.1.2*

SNMP Trap Number : 9

Variables

The ActivateFailureBlank message contains the following variables:

Table 1. ActivateFailureBlank Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p>

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

The activity name that failed to activate.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv9ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.9.1

6. Name

The blank activity name caused the activation to fail.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv9Name
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.9.2

ActivitySuccessful

The specified activity name is executed successfully. The response parameter is populated successfully.

Level : *Info*

Log Message : *{ActivityName} activity executed successfully.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DOMINO-MIB::ciC22oActivitySuccessfulEv5*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.22.1.2*

SNMP Trap Number : *5*

Variables

The ActivitySuccessful message contains the following variables:

Table 1. ActivitySuccessful Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

The activity name that is executed successfully.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv5ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.5.1

RetryCount

The specified activity re tried the execution so many times specified above.

Level : *Info*

Log Message : *The Domino {ActivityName} activity re trying {Count} times now.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DOMINO-MIB::ciC22oRetryCountEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.22.1.2*

SNMP Trap Number : *11*

Variables

The RetryCount message contains the following variables:

Table 1. RetryCount Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

The activity name.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv11ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.11.1

6. Count

The retry count which activity tried so far.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv11Count
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.11.2

Email Module

The Email Module provides connectivity to POP3 and SMTP mail servers. This section contains details for the messages delivered from the Email Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Email Module.

MIB Name : *CASTIRON-COMP-EMAIL-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.7*

The following table provides an alphabetical list of all notifications that can be issued by the Email Module.

Table 1. Notifications issued by the Email Module

Notification	Level	System	Description
BodyNull	Severe	Orchestration	The 'body' input parameter from the container is null. This is an error condition.
ConPoolReleaseError	Warning	Orchestration	Error while closing the connection pool.
ConnectError	Severe	Orchestration	The email activity operation failed because a connection to the server could not be established.
ConnectErrorRetry	Warning	Orchestration	The email activity operation failed while trying to connect to the server. This will cause a retry.
ConnectHeaderAbsent	Info	Orchestration	The optional input header - emailConnection - is mapped.
ConnectHeaderPresent	Info	Orchestration	The optional input header - emailConnection - is mapped.
ConnectionPoolReturn	Warning	Orchestration	Error occurred while returning connection to pool.

Notification	Level	System	Description
CouldNotGetHostIP	Warning	Orchestration	Error occurred while getting IP of the router. Continuing activity without the host IP.
DisconnectException	Warning	Orchestration	Error while trying to disconnect from server. Discarding error and continuing the activity.
EmailMatched	Info	Orchestration	Found an email matching From and subject fields specified in configuration.
EmailSent	Info	Orchestration	The activity successfully sent email to the server.
EndpointData	Info	Orchestration	The information regarding the email endpoint data.
IncorrectPort	Warning	Orchestration	The email port needs to be a positive integer. Defaulting to 110 in case its not specified as positive integer.
IncorrectSmtpPort	Warning	Orchestration	The email port needs to be a positive integer. Defaulting to 25 in case its not specified as positive integer.
IncorrectSmtpTimeout	Warning	Orchestration	The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
IncorrectTimeout	Warning	Orchestration	The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
InvalidAddressFormat	Warning	Orchestration	The email address in the specified field is in incorrect format.
InvalidEmailID	Warning	Orchestration	The email id specified is not valid.
MailHeaderAbsent	Info	Orchestration	The optional input header - mailheader - is not mapped.
MailHeaderPresent	Info	Orchestration	The optional input header - mailheader - is mapped.
MailsDeleted	Info	Orchestration	The mails processed in the current poll have been deleted from the server.
MailsToBeDeleted	Info	Orchestration	There are some mails to be deleted as they were processed earlier.
MakeConPoolError	Warning	Orchestration	Error while creating the connection.
NewConnectEverytime	Info	Orchestration	The additional property 'smtpNewConnEveryTime' was added to connection pool.
NoEmailMatched	Info	Orchestration	Could not find an email matching From and subject fields specified in configuration.
NoMailOnServer	Info	Orchestration	No mail was found on server.
PatternIncorrect	Severe	Orchestration	Pattern specified in the activity is incorrect.
Pop3ConfigParams	Info	Orchestration	Configuration parameters specified in the activity.
Pop3Connected	Info	Orchestration	The activity was successfully able to connect to the email server.

Notification	Level	System	Description
Pop3DataError	Severe	Orchestration	A pop3 data error occurred while executing the activity.
Pop3InternalError	Severe	Orchestration	Internal error occurred while executing pop3 activity.
Pop3MailSent	Info	Orchestration	Activity has outputted 'mailheader' and 'body' output parameters. Mail marked for deletion from server
Pop3NumMails	Info	Orchestration	Number of mails found on the email server.
Pop3ServerError	Severe	Orchestration	A pop3 command unexpectedly returned an error while executing the activity.
SaveStateError	Warning	Orchestration	Error occurred while trying to save duplist state after disconnect. Will cleanup in next poll.
SetBCCFieldValue	Info	Orchestration	Setting the value of 'BCC' field to specified value
SetCCFieldValue	Info	Orchestration	Setting the value of 'CC' field to specified value
SetFromFieldValue	Info	Orchestration	Setting the value of 'From' field to specified value
SetSubjectFieldValue	Info	Orchestration	Setting the value of the 'Subject' field to the specified value.
SetTimeout	Info	Orchestration	Setting the timeout to specified value.
SetToFieldValue	Info	Orchestration	Setting the value of 'To' field to specified value
SmtpConfigParams	Info	Orchestration	Information regarding configuration parameters specified in email activity.
SmtpConnectFailed	Severe	Orchestration	The email activity operation failed because a connection to the server could not be established.
SmtpConnectRetry	Warning	Orchestration	The email activity operation failed while trying to connect to the server. This will cause a retry.
SmtpConnected	Info	Orchestration	The activity was successfully able to connect to the email server.
SmtpDataError	Severe	Orchestration	Smtp data error occurred while executing the activity.
SmtpDisconnectError	Warning	Orchestration	Error while trying to disconnect from server. Discarding error and continuing the activity.
SmtpEndpointData	Info	Orchestration	The information regarding the email endpoint data.
SmtpInternalError	Severe	Orchestration	Internal error occurred while executing smtp activity.
SmtpSendEmail	Info	Orchestration	The activity is sending email to the server.
SmtpTimeout	Info	Orchestration	Setting the timeout to specified value.
SubjectPatternError	Severe	Orchestration	Subject pattern specified in the activity is incorrect.
ToAndCCEmpty	Severe	Orchestration	There was no valid To, CC, BCC specified in the activity.

Email Connection Notifications

Provides a comprehensive list of connection notifications sent from the Email Module.

- [ConPoolReleaseError](#)
Error while closing the connection pool.
- [ConnectError](#)
The email activity operation failed because a connection to the server could not be established.
- [ConnectErrorRetry](#)
The email activity operation failed while trying to connect to the server. This will cause a retry.
- [ConnectHeaderAbsent](#)
The optional input header - emailConnection - is mapped.
- [ConnectHeaderPresent](#)
The optional input header - emailConnection - is mapped.
- [ConnectionPoolReturn](#)
Error occurred while returning connection to pool.
- [DisconnectException](#)
Error while trying to disconnect from server. Discarding error and continuing the activity.
- [EndpointData](#)
The information regarding the email endpoint data.
- [IncorrectPort](#)
The email port needs to be a positive integer. Defaulting to 110 in case its not specified as positive integer.
- [IncorrectSmtpPort](#)
The email port needs to be a positive integer. Defaulting to 25 in case its not specified as positive integer.
- [IncorrectSmtpTimeout](#)
The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
- [IncorrectTimeout](#)
The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
- [MakeConPoolError](#)
Error while creating the connection.
- [NewConnectEverytime](#)
The additional property 'smtpNewConnEveryTime' was added to connection pool.
- [Pop3Connected](#)
The activity was successfully able to connect to the email server.

- [SetTimeout](#)
Setting the timeout to specified value.
- [SmtpConnectFailed](#)
The email activity operation failed because a connection to the server could not be established.
- [SmtpConnectRetry](#)
The email activity operation failed while trying to connect to the server. This will cause a retry.
- [SmtpConnected](#)
The activity was successfully able to connect to the email server.
- [SmtpDisconnectError](#)
Error while trying to disconnect from server. Discarding error and continuing the activity.
- [SmtpEndpointData](#)
The information regarding the email endpoint data.
- [SmtpTimeout](#)
Setting the timeout to specified value.

ConPoolReleaseError

Error while closing the connection pool.

Level : *Warning*

Log Message : *Error while closing the connection pool. The error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7cConPoolReleaseErrorEv21*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.1*

SNMP Trap Number : *21*

Variables

The ConPoolReleaseError message contains the following variables:

Table 1. ConPoolReleaseError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

ConnectErrorRetry

The email activity operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to server. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7cConnectErrorRetryEv5*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.1*

SNMP Trap Number : *5*

Variables

The ConnectErrorRetry message contains the following variables:

Table 1. ConnectErrorRetry Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv5RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.7.1.1.1.5.2

7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv5TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.7.1.1.1.5.3

8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv5IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.7.1.1.1.5.4

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. PortNumber

Port number specified for email which caused an error.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv9PortNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.7.1.1.1.9.1

SmtPEndpointData

The information regarding the email endpoint data.

Level : *Info*

Log Message : *Endpoint Parameters: Host: "{HostName}", Port: {Port}, User: "{Username}"*.

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7cSmtPEndpointDataEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.1*

SNMP Trap Number : *17*

Variables

The SmtPEndpointData message contains the following variables:

Table 1. SmtPEndpointData Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. HostName

The host name specified in email endpoint.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv17HostName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.17.1

6. Port

The port number specified in email endpoint.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv17Port
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.17.2

7. Username

The user name specified in email endpoint.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv17Username
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.17.3

Email Operation Notifications

Provides a comprehensive list of operation notifications sent from the Email Module.

- [CouldNotGetHostIP](#)
Error occurred while getting IP of the router. Continuing activity without the host IP.
- [EmailMatched](#)
Found an email matching From and subject fields specified in configuration.
- [EmailSent](#)
The activity successfully sent email to the server.
- [InvalidAddressFormat](#)
The email address in the specified field is in incorrect format.
- [InvalidEmailID](#)
The email id specified is not valid.
- [MailHeaderAbsent](#)
The optional input header - mailheader - is not mapped.
- [MailHeaderPresent](#)
The optional input header - mailheader - is mapped.
- [MailsDeleted](#)
The mails processed in the current poll have been deleted from the server.
- [MailsToBeDeleted](#)
There are some mails to be deleted as they were processed earlier.
- [NoEmailMatched](#)
Could not find an email matching From and subject fields specified in configuration.
- [NoMailOnServer](#)
No mail was found on server.
- [PatternIncorrect](#)
Pattern specified in the activity is incorrect.
- [Pop3ConfigParams](#)
Configuration parameters specified in the activity.
- [Pop3DataError](#)
A pop3 data error occurred while executing the activity.
- [Pop3MailSent](#)
Activity has outputted 'mailheader' and 'body' output parameters. Mail marked for deletion from server
- [Pop3NumMails](#)
Number of mails found on the email server.
- [Pop3ServerError](#)
A pop3 command unexpectedly returned an error while executing the activity.
- [SaveStateError](#)
Error occurred while trying to save duplist state after disconnect. Will cleanup in next poll.

- [SetBCCFieldValue](#)
Setting the value of 'BCC' field to specified value
- [SetCCFieldValue](#)
Setting the value of 'CC' field to specified value
- [SetFromFieldValue](#)
Setting the value of 'From' field to specified value
- [SetSubjectFieldValue](#)
Setting the value of the 'Subject' field to the specified value.
- [SetToFieldValue](#)
Setting the value of 'To' field to specified value
- [SmtpConfigParams](#)
Information regarding configuration parameters specified in email activity.
- [SmtpDataError](#)
Smtp data error occurred while executing the activity.
- [SmtpSendEmail](#)
The activity is sending email to the server.
- [SubjectPatternError](#)
Subject pattern specified in the activity is incorrect.

CouldNotGetHostIP

Error occurred while getting IP of the router. Continuing activity without the host IP.

Level : *Warning*

Log Message : *Error while trying to get IP of router. Error is: {Message}. Continuing without getting IP.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7oCouldNotGetHostIPEv20*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.2*

SNMP Trap Number : *20*

Variables

The CouldNotGetHostIP message contains the following variables:

Table 1. CouldNotGetHostIP Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

FTP Module

The FTP Module provides connectivity to remote FTP servers. This section contains details for the messages delivered from the FTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the FTP Module.

MIB Name : *CASTIRON-COMP-FTP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.6*

The following table provides an alphabetical list of all notifications that can be issued by the FTP Module.

Table 1. Notifications issued by the FTP Module

Notification	Level	System	Description
AppendAfter	Info	Orchestration	Response received after issuing an append command to the file on remote server.
AppendBefore	Info	Orchestration	In process of issuing an append command to the file on remote server.
ConnectionFailure	Severe	Orchestration	The FTP operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The FTP operation failed while trying to connect to the server. This will cause a retry.

Notification	Level	System	Description
DeleteAfter	Info	Orchestration	Response received when a file was deleted from the remote server.
DeleteBefore	Info	Orchestration	In process of deleting a file to the remote server.
DeleteDupListEntry	Info	Orchestration	Duplicate list is at maximum capacity. Removing a file from the duplicate list.
DeleteInfoSummary	Info	Orchestration	A complete summary of delete file activity configuration.
DirChangeAfter	Info	Orchestration	Changed to the specified directory on remote server.
DirChangeBefore	Info	Orchestration	Changing directory on the remote server.
DuplicateFile	Info	Orchestration	The file was previously processed by FTP poll activity.
EncodingError	Severe	Orchestration	The data encoding specified is not supported by FTP activity.
EndpointInfoSummary	Info	Orchestration	A complete summary of endpoint information specified.
FileNotMoved	Warning	Orchestration	File was not moved from original location as there is already another file in the destination location and overwrite option is false.
FileProcessed	Info	Orchestration	The file is processed by FTP activity and is left in place.
FileProcessingError	Warning	Orchestration	Error occurred while processing the file.
FtpPatternConversion	Warning	Orchestration	In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
GetAfter	Info	Orchestration	Response received when a file was downloaded to the remote server.
GetBefore	Info	Orchestration	In process of downloading a file to the remote server.
GetInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
InternalException	Severe	Orchestration	A internal error occurred while executing FTP activity.
ListAfter	Info	Orchestration	Response received when the directory was listed on the remote server.
ListBefore	Info	Orchestration	In process of listing a directory on the remote server.
ListFileSummary	Info	Orchestration	A complete summary of list file activity configuration.
NListAfter	Info	Orchestration	Response received when the directory was name listed on the remote server.
NListBefore	Info	Orchestration	In process of name listing a directory on the remote server.
OperationError	Severe	Orchestration	FTP activity was unable to perform operation on FTP server.

Notification	Level	System	Description
PutAfter	Info	Orchestration	Response received when a file was uploaded to the remote server.
PutBefore	Info	Orchestration	In process of uploading a file to the remote server.
PutDuplicateFileName	Severe	Orchestration	File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
PutEmptyFileName	Severe	Orchestration	The file name specified in put activity is empty.
PutInfoSummary	Info	Orchestration	A complete summary of put file activity configuration.
RenameAfter	Info	Orchestration	Response received when a file was renamed to the remote server.
RenameBefore	Info	Orchestration	In process of renaming a file to the remote server.
RenameDupError	Severe	Orchestration	Rename operation errored as file with same name already exists.
RenameInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
SshFingerprintInfo	Info	Orchestration	SSH finger print information for communication with FTP server.
SshModeInfo	Info	Orchestration	SSH mode information for communication with FTP server.
TimeStampError	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
TimestampCommand	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
UnableToDelete	Warning	Orchestration	Error occurred while deleting file from the specified location.
UnableToMove	Warning	Orchestration	Error occurred while moving file to destination location.

ConnectionFailure

The FTP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the server "{ServerName}" after {NumberOfRetryAttempts} attempts. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6cConnectionFailureEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.1*

SNMP Trap Number : *1*

Variables

The ConnectionFailure message contains the following variables:

Table 1. ConnectionFailure Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ServerName

The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1ServerName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.1.1

6. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.1.2

7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

ConnectionRetry

The FTP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the server "{ServerName}". Error is: {Message} Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6cConnectionRetryEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.1*

SNMP Trap Number : *2*

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ServerName

The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2ServerName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.5

FTP Operation Notifications

Provides a comprehensive list of operation notifications sent from the FTP Module.

- [AppendAfter](#)
Response received after issuing an append command to the file on remote server.
- [AppendBefore](#)
In process of issuing an append command to the file on remote server.
- [DeleteAfter](#)
Response received when a file was deleted from the remote server.
- [DeleteBefore](#)
In process of deleting a file to the remote server.
- [DeleteDupListEntry](#)
Duplicate list is at maximum capacity. Removing a file from the duplicate list.
- [DeleteInfoSummary](#)
A complete summary of delete file activity configuration.
- [DirChangeAfter](#)
Changed to the specified directory on remote server.
- [DirChangeBefore](#)
Changing directory on the remote server.
- [DuplicateFile](#)
The file was previously processed by FTP poll activity.
- [EndpointInfoSummary](#)
A complete summary of endpoint information specified.
- [FileNotMoved](#)
File was not moved from original location as there is already another file in the destination location and overwrite option is false.
- [FileProcessed](#)
The file is processed by FTP activity and is left in place.
- [FileProcessingError](#)
Error occurred while processing the file.
- [FtpPatternConversion](#)
In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
- [GetAfter](#)
Response received when a file was downloaded to the remote server.
- [GetBefore](#)
In process of downloading a file to the remote server.
- [GetInfoSummary](#)
A complete summary of get file activity configuration.
- [ListAfter](#)
Response received when the directory was listed on the remote server.
- [ListBefore](#)
In process of listing a directory on the remote server.
- [ListFileSummary](#)
A complete summary of list file activity configuration.

- [NListAfter](#)
Response received when the directory was name listed on the remote server.
- [NListBefore](#)
In process of name listing a directory on the remote server.
- [OperationError](#)
FTP activity was unable to perform operation on FTP server.
- [PutAfter](#)
Response received when a file was uploaded to the remote server.
- [PutBefore](#)
In process of uploading a file to the remote server.
- [PutDuplicateFileName](#)
File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
- [PutEmptyFileName](#)
The file name specified in put activity is empty.
- [PutInfoSummary](#)
A complete summary of put file activity configuration.
- [RenameAfter](#)
Response received when a file was renamed to the remote server.
- [RenameBefore](#)
In process of renaming a file to the remote server.
- [RenameDupError](#)
Rename operation errored as file with same name already exists.
- [RenameInfoSummary](#)
A complete summary of get file activity configuration.
- [SshFingerprintInfo](#)
SSH finger print information for communication with FTP server.
- [SshModeInfo](#)
SSH mode information for communication with FTP server.
- [TimeStampError](#)
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
- [TimestampCommand](#)
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
- [UnableToDelete](#)
Error occurred while deleting file from the specified location.
- [UnableToMove](#)
Error occurred while moving file to destination location.

DeleteBefore

In process of deleting a file to the remote server.

Level : *Info*

Log Message : *Deleting file "{FileName}" on server.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6oDeleteBeforeEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.2*

SNMP Trap Number : *11*

Variables

The DeleteBefore message contains the following variables:

Table 1. DeleteBefore Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. FileName

Name of the file which is being deleted.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv11FileName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.11.1

FtpPatternConversion

In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.

Level : *Warning*

Log Message : *Automatically converting old style FTP filename pattern from "{OldStylePattern}" to "{NewStylePattern}". Please republish project from Studio version 3.6 or later to eliminate this warning.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oFtpPatternConversionEv17

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 17

Variables

The FtpPatternConversion message contains the following variables:

Table 1. FtpPatternConversion Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. OldStylePattern

Old style pattern sent to FTP activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv17OldStylePattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.17.1

6. NewStylePattern

New style pattern automatically generated by FTP activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv17NewStylePattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.17.2

SSH finger print information for communication with FTP server.

Level : *Info*

Log Message : *Finger print for host: {HostName} is {FingerprintInfo}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6oSshFingerprintInfoEv37*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.2*

SNMP Trap Number : *37*

Variables

The SshFingerprintInfo message contains the following variables:

Table 1. SshFingerprintInfo Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p> <p>Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.</p> <ul style="list-style-type: none">• Type : OID• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.3
<p>5. HostName</p> <p>Host name for which finger print information is specified.</p>

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv37HostName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.37.1

6. FingerprintInfo

Finger print information for the specified host.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv37FingerprintInfo
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.37.2

SshModeInfo

SSH mode information for communication with FTP server.

Level : *Info*

Log Message : *The SFTP key access is: {ModeInformation}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6oSshModeInfoEv38*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.2*

SNMP Trap Number : *38*

Variables

The SshModeInfo message contains the following variables:

Table 1. SshModeInfo Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ModeInformation

SSH mode information for the communication with FTP server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv38ModeInformation
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.38.1

HTTP Module

The HTTP Module provides HTTP/HTTPS client and server facilities. This section contains details for the messages delivered from the HTTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the HTTP Module.

MIB Name : *CASTIRON-COMP-HTTP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.1*

The following table provides an alphabetical list of all notifications that can be issued by the HTTP Module.

Table 1. Notifications issued by the HTTP Module

Notification	Level	System	Description
AcceptEncodingType	Info	Orchestration	The type of Accept-Encoding in the request-header field.
ClientConMgrTimeout	Info	Orchestration	Setting the client connection manager timeout value. This is configurable on the JConsole.

Notification	Level	System	Description
ClientIdleTimeout	Info	Orchestration	The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.
ClientMaxTotalConn	Info	Orchestration	Setting the client connection manager maximum number of connections from the JConsole.
ClientReclaimPeriod	Info	Orchestration	The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set from the JConsole.
CommonHandlerError	Severe	Orchestration	An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
CompressFormat	Info	Orchestration	Indicates the type of Content-Encoding in the response from the server.
ConnectionRetry	Warning	Orchestration	The send request operation failed while trying to connect to the server. This will cause a retry.
ContentEncodingType	Info	Orchestration	The type of Content-Encoding used in the header in the outgoing request.
DecompressedEncoding	Info	Orchestration	Content-Encoding of the incoming request to the receive activity.
EndpointInformation	Info	Orchestration	Request for endpoint information.
GeneralRequestFailed	Severe	Orchestration	The send request failed while executing the activity.
HttpListenerStop	Info	Orchestration	Information regarding the stopping of a listener on a specific port.
HttpLoopBackValues	Info	Orchestration	Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
IdleConTimeoutStart	Info	Orchestration	The idle connection timeout thread is enabled.
IdleConTimeoutStop	Info	Orchestration	The idle connection thread is disabled.
IncomingContentEnc	Info	Orchestration	The Content-Encoding type in the request header received by the receive activity
LoopBackInitialize	Info	Orchestration	Loopback values for initializing the MBean. It is set on the JConsole.
ReadConnectionParam	Info	Orchestration	The input connection parameter is not mapped by the user.
ReadInputHeaders	Info	Orchestration	The input parameter header is not mapped by the user.
ReceiveActivate	Severe	Orchestration	The receive activity failed to activate.
ReceiveDeActivate	Severe	Orchestration	The receive activity failed to stop.
ReceiveIOError	Severe	Orchestration	An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.

Notification	Level	System	Description
ReceiveInternalError	Severe	Orchestration	An error occurred while the receive activity processed the request.
ReceiveOperationError	Severe	Orchestration	An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
ReceiveResponseBody	Info	Orchestration	The response sent by the receive activity to a request.
ReceiveSendReplyError	Severe	Orchestration	A connection problem caused an error while sending the response from the receive activity.
ReceiveURIPortInfo	Info	Orchestration	Information regarding the URI and Port where the server is listening.
RegisterKeyStore	Severe	Orchestration	An error occurred while registering the key store.
ReplyCompressFormat	Info	Orchestration	The Content-Encoding used by the send reply activity.
ReplyConnectionError	Severe	Orchestration	An error occurred while sending the response. Probable cause is a connection error.
ReplyGeneralError	Severe	Orchestration	An internal error occurred while sending the reply from the receive activity.
ReplyHandlerNull	Severe	Orchestration	Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
ReplyUnMarshalHeader	Severe	Orchestration	An error occurred while reading input headers in the reply activity.
ReplyUnknownError	Severe	Orchestration	An unknown exception occurred while sending the response to the client.
RequestActivate	Severe	Orchestration	The request activity failed to activate.
RequestIgnoredHeader	Info	Orchestration	The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
RequestParamsDetails	Info	Orchestration	Parameter details, including URL and method, used for the post activity
ResponseBodyBinary	Info	Orchestration	The response body is binary.
ResponseBodyNotBinary	Info	Orchestration	The response body is not binary.
ResponseDefinition	Info	Orchestration	Response definition received from the server for the performed post.
SendRequestConnection	Severe	Orchestration	The send request operation failed because a connection to the server could not be established.
SendRequestOperation	Severe	Orchestration	The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
ServerResponseCode	Info	Orchestration	Post response code received from the server.

Notification	Level	System	Description
SockCollectorFinish	Info	Orchestration	Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorRunInfo	Info	Orchestration	Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorSched	Info	Orchestration	Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.
StaleConnectionCheck	Info	Orchestration	Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.
UnSupportedMedia	Warning	Orchestration	Request is an unsupported media type.
UnsolicitedEncoding	Severe	Orchestration	The server reply contains Content-Encoding which is not acceptable by the client.
UnsupportedEncoding	Severe	Orchestration	The Content-Encoding in the request header is not supported by the receive activity.

HTTP Connection Notifications

Provides a comprehensive list of connection notifications sent from the HTTP Module.

- [ClientConMgrTimeout](#)
Setting the client connection manager timeout value. This is configurable on the JConsole.
- [ClientIdleTimeout](#)
The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.
- [ClientMaxTotalConn](#)
Setting the client connection manager maximum number of connections from the JConsole.
- [ClientReclaimPeriod](#)
The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set

from the JConsole.

- [ConnectionRetry](#)
The send request operation failed while trying to connect to the server. This will cause a retry.
- [EndpointInformation](#)
Request for endpoint information.
- [HttpLoopBackValues](#)
Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
- [ReadConnectionParam](#)
The input connection parameter is not mapped by the user.
- [ReceiveActivate](#)
The receive activity failed to activate.
- [ReceiveDeActivate](#)
The receive activity failed to stop.
- [ReceiveIOError](#)
An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.
- [ReceiveSendReplyError](#)
A connection problem caused an error while sending the response from the receive activity.
- [ReplyConnectionError](#)
An error occurred while sending the response. Probable cause is a connection error.
- [SendRequestConnection](#)
The send request operation failed because a connection to the server could not be established.
- [StaleConnectionCheck](#)
Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.

ReceiveSendReplyError

A connection problem caused an error while sending the response from the receive activity.

Level : *Severe*

Log Message : *A connection error occurred while sending the receive activity response. Exception: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1cReceiveSendReplyErrorEv7*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.1*

SNMP Trap Number : 7

Variables

The ReceiveSendReplyError message contains the following variables:

Table 1. ReceiveSendReplyError Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

StaleConnectionCheck

Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.

Level : *Info*

Log Message : *Setting the stale connection check at {StaleConnection}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1cStaleConnectionCheckEv15*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.1*

SNMP Trap Number : *15*

Variables

The StaleConnectionCheck message contains the following variables:

Table 1. StaleConnectionCheck Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. StaleConnection

Value (True or False) of stale connection check.

- **Type** : Boolean
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1cEv15StaleConnection
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.1.1.15.1

HTTP Operation Notifications

Provides a comprehensive list of operation notifications sent from the HTTP Module.

- [AcceptEncodingType](#)
The type of Accept-Encoding in the request-header field.
- [CommonHandlerError](#)
An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
- [CompressFormat](#)
Indicates the type of Content-Encoding in the response from the server.
- [ContentEncodingType](#)
The type of Content-Encoding used in the header in the outgoing request.
- [DecompressedEncoding](#)
Content-Encoding of the incoming request to the receive activity.
- [HttpListenerStop](#)
Information regarding the stopping of a listener on a specific port.
- [IncomingContentEnc](#)
The Content-Encoding type in the request header received by the receive activity
- [ReadInputHeaders](#)
The input parameter header is not mapped by the user.
- [ReceiveOperationError](#)
An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
- [ReceiveResponseBody](#)
The response sent by the receive activity to a request.
- [ReceiveURIPortInfo](#)
Information regarding the URI and Port where the server is listening.
- [RegisterKeyStore](#)
An error occurred while registering the key store.
- [ReplyCompressFormat](#)
The Content-Encoding used by the send reply activity.
- [ReplyUnMarshalHeader](#)
An error occurred while reading input headers in the reply activity.
- [RequestActivate](#)
The request activity failed to activate.
- [RequestIgnoredHeader](#)
The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
- [RequestParamsDetails](#)
Parameter details, including URL and method, used for the post activity
- [ResponseBodyBinary](#)
The response body is binary.
- [ResponseBodyNotBinary](#)
The response body is not binary.
- [ResponseDefinition](#)
Response definition received from the server for the performed post.
- [SendRequestOperation](#)
The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
- [ServerResponseCode](#)
Post response code received from the server.
- [UnsupportedMedia](#)
Request is an unsupported media type.
- [UnsolicitedEncoding](#)
The server reply contains Content-Encoding which is not acceptable by the client.

- [UnsupportedEncoding](#)
The Content-Encoding in the request header is not supported by the receive activity.

Table 1. RequestParamsDetails Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. URL

The URL used to perform Http post.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv6URL
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.1.1.2.1.6.1

6. MethodName

Method specified for the post activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv6MethodName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.1.1.2.1.6.2

Parent topic: [HTTP Operation Notifications](#)

ResponseBodyBinary

The response body is binary.

Level : *Info*

Log Message : *The response is binary.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1oResponseBodyBinaryEv9*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.2*

HTTP Internal Notifications

Provides a comprehensive list of internal notifications sent from the HTTP Module.

- [GeneralRequestFailed](#)
The send request failed while executing the activity.
- [IdleConTimeoutStart](#)
The idle connection timeout thread is enabled.
- [IdleConTimeoutStop](#)
The idle connection thread is disabled.
- [LoopBackInitialize](#)
Loopback values for initializing the MBean. It is set on the JConsole.
- [ReceiveInternalError](#)
An error occurred while the receive activity processed the request.
- [ReplyGeneralError](#)
An internal error occurred while sending the reply from the receive activity.
- [ReplyHandlerNull](#)
Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
- [ReplyUnknownError](#)
An unknown exception occurred while sending the response to the client.
- [SockCollectorFinish](#)
Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorRunInfo](#)
Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorSched](#)
Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.

IdleConTimeoutStop

The idle connection thread is disabled.

Level : *Info*

Log Message : *Stopping the idle connection timeout thread.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1iIdleConTimeoutStopEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.3*

SNMP Trap Number : *11*

Variables

The IdleConTimeoutStop message contains the following variables:

Table 1. IdleConTimeoutStop Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

JD Edwards Module

JD Edwards Module. This section contains details for the messages delivered from the JD Edwards Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JD Edwards Module.

MIB Name : *CASTIRON-COMP-JDE-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.15

The following table provides an alphabetical list of all notifications that can be issued by the JD Edwards Module.

Table 1. Notifications issued by the JD Edwards Module

Notification	Level	System	Description
ActivateSuccessful	Info	Orchestration	JDE activity was activated successfully.
ActivateUnSuccessful	Info	Orchestration	The activity which was not activated successfully. Activity activated, will try to establish connectivity at activity execute time.
ActivityError	Severe	Orchestration	The specified activity was not successful.
ActivitySuccessful	Info	Orchestration	The specified activity was successful.
ClassesMissing	Severe	Orchestration	JDE is missing classes required to start the activity. Please install the libraries from the WMC.
CloseConnectionError	Severe	Orchestration	Error occurred while closing the connection to JDE.
ConnectException	Warning	Orchestration	Error while connecting to JDE.
ConnectPoolRelease	Warning	Orchestration	There was an error while closing the connection pool.
CreateSchemaError	Severe	Orchestration	Error occurred while creating request schema for the business function.
DataStructureError	Severe	Orchestration	Error occurred while creating a schema for the business function name.
DisconnectException	Warning	Orchestration	Error while disconnecting from JDE.

Notification	Level	System	Description
GetConnectionError	Severe	Orchestration	Error occurred while creating a connection to JDE.
JDEConnectError	Severe	Orchestration	The JDE operation failed because a connection to the server could not be established.
JDEInternalerror	Severe	Orchestration	Error occurred while processing the request.
JDERetryError	Warning	Orchestration	The JDE operation failed while trying to connect to the server. This will cause a retry.
MakeConnectionError	Warning	Orchestration	There was an error while creating a connection to destination.
NumberFormatError	Warning	Orchestration	There was an error due to invalid port number.
ResourceCleanError	Severe	Orchestration	Error occurred while closing the statement or result set in database.
ResponseSchemaError	Severe	Orchestration	Error occurred while creating response schema for the business function.
SetUpInfo	Warning	Orchestration	JDE activity got warning or error messages while setting up the specified activity.
UnSupportedEncoding	Severe	Orchestration	Error while processing unsupported encoding.

JD Edwards Connection Notifications

Provides a comprehensive list of connection notifications sent from the JD Edwards Module.

- [ActivateUnSuccessful](#)
The activity which was not activated successfully. Activity activated, will try to establish connectivity at activity execute time.
- [CloseConnectionError](#)
Error occurred while closing the connection to JDE.
- [ConnectException](#)
Error while connecting to JDE.

- [ConnectPoolRelease](#)
There was an error while closing the connection pool.
- [DisconnectException](#)
Error while disconnecting from JDE.
- [GetConnectionError](#)
Error occurred while creating a connection to JDE.
- [JDEConnectError](#)
The JDE operation failed because a connection to the server could not be established.
- [JDERetryError](#)
The JDE operation failed while trying to connect to the server. This will cause a retry.
- [MakeConnectionError](#)
There was an error while creating a connection to destination.

ActivateUnSuccessful

The activity which was not activated successfully. Activity activated, will try to establish connectivity at activity execute time.

Level : *Info*

Log Message : *Error connecting to JDE system while activating activity {ActivityName}, error is: {Message}. Activity activated, will try to establish connectivity at activity execute time*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JDE-MIB::ciC15cActivateUnSuccessfulEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.15.1.1*

SNMP Trap Number : *1*

Variables

The ActivateUnSuccessful message contains the following variables:

Table 1. ActivateUnSuccessful Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ActivityName

The activity which was activated successfully.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15cEv1ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.15.1.1.1.1.1

6. Message

Textual description of the error.

JD Edwards Operation Notifications

Provides a comprehensive list of operation notifications sent from the JD Edwards Module.

- [ActivateSuccessful](#)
JDE activity was activated successfully.
- [ActivityError](#)
The specified activity was not successful.
- [ActivitySuccessful](#)
The specified activity was successful.

- [ClassesMissing](#)
JDE is missing classes required to start the activity. Please install the libraries from the WMC.
- [CreateSchemaError](#)
Error occurred while creating request schema for the business function.
- [DataStructureError](#)
Error occurred while creating a schema for the business function name.
- [NumberFormatError](#)
There was an error due to invalid port number.
- [ResourceCleanError](#)
Error occurred while closing the statement or result set in database.
- [ResponseSchemaError](#)
Error occurred while creating response schema for the business function.
- [SetUpInfo](#)
JDE activity got warning or error messages while setting up the specified activity.
- [UnsupportedEncoding](#)
Error while processing unsupported encoding.

ActivitySuccessful

The specified activity was successful.

Level : *Info*

Log Message : *{ActivityName} executed and outputted response output parameter*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JDE-MIB::ciC15oActivitySuccessfulEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.15.1.2*

SNMP Trap Number : 3

Variables

The ActivitySuccessful message contains the following variables:

Table 1. ActivitySuccessful Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration

JDEInternalerror

Error occurred while processing the request.

Level : *Severe*

Log Message : *Error while processing request. Exception : {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JDE-MIB::ciC15iJDEInternalerrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.15.1.3*

SNMP Trap Number : *1*

Variables

The JDEInternalerror message contains the following variables:

Table 1. JDEInternalerror Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. JMS Module

JMS Module. This section contains details for the messages delivered from the JMS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JMS Module.

MIB Name : *CASTIRON-COMP-JMS-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.8*

The following table provides an alphabetical list of all notifications that can be issued by the JMS Module.

Table 1. Notifications issued by the JMS Module

Notification	Level	System	Description
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
FactoryUnknownError	Severe	Orchestration	Unknown exception while looking up the connection factory
FirstID	Warning	Orchestration	The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message. Messages in the queue is tampered and will impact the delivery of messages
GetConnectRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
GetMarshallError	Severe	Orchestration	Error occurred while marshalling the JMS message.
JMSError	Severe	Orchestration	Error occurred while getting message from the provider.
LibraryNotInstalled	Severe	Orchestration	This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
MakeConnectError	Severe	Orchestration	Error occurred while creating the connection to destination.
NamingException	Severe	Orchestration	Naming exception occurred while getting message from destination.

Notification	Level	System	Description
NoMessage	Info	Orchestration	There is no message to be retrieved from the destination specified.
PollMessageError	Severe	Orchestration	Error occurred while getting a message from queue.
PollMessageRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
PoolFactoryError	Severe	Orchestration	Error occurred while looking up for connection factory.
PoolReleaseError	Severe	Orchestration	Error occurred while closing the connection pool.
PooledConnException	Warning	Orchestration	A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.
RecoveryInfo	Info	Orchestration	The activity is recovering and its skipping message with specified id as its already delivered.
RecoveryInfo	Info	Orchestration	The JMS connector is in recovery mode.
RestartError	Severe	Orchestration	Error occurred while trying to restart the subscriber on the specified topic.
SendConnectRerty	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
SendMarshallError	Severe	Orchestration	Error occurred while unmarshalling the JMS message.
SendMessageError	Severe	Orchestration	Error occurred while sending message.
SendNamingException	Severe	Orchestration	Naming exception occurred while sending message to destination.
SubscriberConfigError	Severe	Orchestration	Error occurred while configuring the subscriber activity.
SubscriberConnect	Severe	Orchestration	The JMS operation failed while trying to connect to the server.
SubscriberError	Severe	Orchestration	Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
SubscriberNameError	Severe	Orchestration	Naming exception occurred while configuring the subscriber activity.
SubscriberStartInfo	Info	Orchestration	Subscriber started successfully for the specified topic.
UnsubscribeError	Warning	Orchestration	Error occurred while unsubscribing on the topic.

FactoryUnknownError

Unknown exception while looking up the connection factory

Level : *Severe*

Log Message : *Exception while looking up the connection factory {Message}. The exception is unknown error message from Provider. One of the reason for the error is If the provider is ActiveMQ and the binding file name or path is not correct.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JMS-MIB::ciC8cFactoryUnknownErrorEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.8.1.1*

SNMP Trap Number : *11*

Variables

The FactoryUnknownError message contains the following variables:

Table 1. FactoryUnknownError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

GetConnectRetry

The JMS operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Connection exception while getting message from the provider. The error code is {ErrorCode} and message is {ErrorMessage}. The job is retrying {RetryAttemptNumber}, out of {TotalRetryAttempts} attempts to*

connect to JMS provider. The next attempt will be after {IntervalForRetries} seconds.

System : Orchestration

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cGetConnectRetryEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 1

Variables

The GetConnectRetry message contains the following variables:

Table 1. GetConnectRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p> <p>Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.</p> <ul style="list-style-type: none">• Type : OID• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.3
<p>5. ErrorCode</p> <p>The error code specified in the error message</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-COMP-JMS-MIB::ciC8cEv1ErrorCode• SNMP OID : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1.1

6. ErrorMessage

The error message specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1ErrorMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1.5

A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.

Level : *Warning*

Log Message : *Exception received on JMS connection while it was in the idle connections pool. The error code is: {ErrorCode}, and the exception is: {ErrorMessage}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JMS-MIB::ciC8cPooledConnExceptionEv12*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.8.1.1*

SNMP Trap Number : *12*

Variables

The PooledConnException message contains the following variables:

Table 1. PooledConnException Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p> <p>Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.</p> <ul style="list-style-type: none">• Type : OID• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.3
<p>5. ErrorCode</p>

The error code specified in the exception

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv12ErrorCode
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.12.1

6. ErrorMessage

The error message specified in the exception

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv12ErrorMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.12.2

JMS Operation Notifications

Provides a comprehensive list of operation notifications sent from the JMS Module.

- [FirstID](#)
The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message. Messages in the queue is tampered and will impact the delivery of messages
- [NamingException](#)
Naming exception occurred while getting message from destination.
- [NoMessage](#)
There is no message to be retrieved from the destination specified.

- [RecoveryInfo](#)
The activity is recovering and its skipping message with specified id as its already delivered.
- [SendMessageError](#)
Error occurred while sending message.
- [SendNamingException](#)
Naming exception occurred while sending message to destination.
- [SubscriberConfigError](#)
Error occurred while configuring the subscriber activity.
- [SubscriberError](#)
Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
- [SubscriberNameError](#)
Naming exception occurred while configuring the subscriber activity.
- [SubscriberStartInfo](#)
Subscriber started successfully for the specified topic.
- [UnsubscribeError](#)
Error occurred while unsubscribing on the topic.

JMS Internal Notifications

Provides a comprehensive list of internal notifications sent from the JMS Module.

- [GetMarshallError](#)
Error occurred while marshalling the JMS message.
- [JMSError](#)
Error occurred while getting message from the provider.
- [LibraryNotInstalled](#)
This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
- [PollMessageError](#)
Error occurred while getting a message from queue.
- [SendMarshallError](#)
Error occurred while unmarshalling the JMS message.

The MIME Module provides activities for creating and parsing Multipurpose Internet Mail Extensions. This section contains details for the messages delivered from the MIME Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the MIME Module.

MIB Name : *CASTIRON-COMP-MIME-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.10*

The following table provides an alphabetical list of all notifications that can be issued by the MIME Module.

Table 1. Notifications issued by the MIME Module

Notification	Level	System	Description
AttachmentNumber	Info	Orchestration	Activity is processing the specified attachment number.
AttachmentsFound	Info	Orchestration	The activity found specified number of attachments.
AutoGeneratedBody	Info	Orchestration	No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
BoundaryAbsent	Info	Orchestration	Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
BoundaryInfo	Info	Orchestration	Boundary of mime attachment is as specified.
BoundaryMoreThan70	Warning	Orchestration	Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
BoundarySpecified	Info	Orchestration	Activity found boundary in mime message.
DefaultContentType	Info	Orchestration	Activity did not find any content type specified. Setting content type to text/plain.
EmptyParts	Severe	Orchestration	The input parameter - parts - is empty and there is no data to serialize.
FoundBoundary	Info	Orchestration	Activity found boundary parameter in the mime message.
HeaderAbsent	Severe	Orchestration	Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
InputBodyNull	Severe	Orchestration	Input parameter body from container is NULL. This is due to internal exception.
MainAndSubType	Severe	Orchestration	The main and sub type found in content type.
MainType	Info	Orchestration	Main type specified in the serialize activity.
MimeHeaderMapped	Info	Orchestration	Optional input parameter 'mimeheader' is mapped.
MimeHeaderNotMapped	Info	Orchestration	Optional input parameter 'mimeheader' was not mapped in the activity.
NoAttachments	Severe	Orchestration	Activity did not find any attachments to serialize.
NoBoundaryFound	Warning	Orchestration	Boundary was specified in header but no boundary found in the body. Returning single body.

Notification	Level	System	Description
NoPartBody	Info	Orchestration	This part does not have any body. Setting blank body.
NumberOfParts	Info	Orchestration	The number of parts found in the mime message.
ParseActivityDone	Info	Orchestration	The activity has outputted parts output parameter.
ParseException	Severe	Orchestration	Error occurred while parsing the data.
SerialActivityDone	Info	Orchestration	The activity is done outputting mimeheader and body output parameters.
SerializeException	Severe	Orchestration	Error occurred while serializing the data.
SubType	Info	Orchestration	Sub Type found in content type of the message.
TransferEncChanged	Warning	Orchestration	The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
TransferEncLimit	Severe	Orchestration	Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
TransferEncMissing	Warning	Orchestration	Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.
TransferEncodingError	Severe	Orchestration	Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
TransferEncodingValue	Info	Orchestration	Activity found Content-Transfer-Encoding.

MIME Operation Notifications

Provides a comprehensive list of operation notifications sent from the MIME Module.

- [AttachmentNumber](#)
Activity is processing the specified attachment number.
- [AttachmentsFound](#)
The activity found specified number of attachments.

- [AutoGeneratedBody](#)
No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
- [BoundaryAbsent](#)
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
- [BoundaryInfo](#)
Boundary of mime attachment is as specified.
- [BoundaryMoreThan70](#)
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
- [BoundarySpecified](#)
Activity found boundary in mime message.
- [DefaultContentType](#)
Activity did not find any content type specified. Setting content type to text/plain.
- [EmptyParts](#)
The input parameter - parts - is empty and there is no data to serialize.
- [FoundBoundary](#)
Activity found boundary parameter in the mime message.
- [HeaderAbsent](#)
Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
- [MainAndSubType](#)
The main and sub type found in content type.
- [MainType](#)
Main type specified in the serialize activity.
- [MimeHeaderMapped](#)
Optional input parameter 'mimeheader' is mapped.
- [MimeHeaderNotMapped](#)
Optional input parameter 'mimeheader' was not mapped in the activity.
- [NoAttachments](#)
Activity did not find any attachments to serialize.
- [NoBoundaryFound](#)
Boundary was specified in header but no boundary found in the body. Returning single body.
- [NoPartBody](#)
This part does not have any body. Setting blank body.
- [NumberOfParts](#)
The number of parts found in the mime message.
- [ParseActivityDone](#)
The activity has outputted parts output parameter.
- [SerialActivityDone](#)
The activity is done outputting mimeheader and body output parameters.
- [SerializeException](#)
Error occurred while serializing the data.
- [SubType](#)
Sub Type found in content type of the message.
- [TransferEncChanged](#)
The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
- [TransferEncLimit](#)
Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
- [TransferEncMissing](#)
Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.

- [TransferEncodingError](#)
Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
- [TransferEncodingValue](#)
Activity found Content-Transfer-Encoding.

The Maestro Module represents the internal operation of the Cast Iron runtime. This section contains details for the messages delivered from the Maestro Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Maestro Module.

MIB Name : *CASTIRON-COMP-MAESTRO-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.20*

The following table provides an alphabetical list of all notifications that can be issued by the Maestro Module.

Table 1. Notifications issued by the Maestro Module

Notification	Level	System	Description
AbandonedJobs	Warning	Orchestration	A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
ActInvalidLicense (Deprecated)	Severe	Orchestration	Deprecated.
ActivityFailedError	Severe	Orchestration	Encountered fault of specified type, please see rest of the log for more information.
AlreadyDeployed	Severe	Orchestration	The specified orchestration is already deployed.
CallContext	Severe	Orchestration	Maestro is not able to create call context.
CallContextDestroy	Info	Orchestration	Call context created but task never started.
CatchExpression	Severe	Orchestration	Unable to parse the catch expression.
CleanUpFailed	Warning	Orchestration	Failed to clean up the activity.
CloseInputStream	Warning	Orchestration	Could not close input stream.
CloseOutputStream	Warning	Orchestration	Could not close output stream.
CloseReader	Warning	Orchestration	Could not close reader.
CloseWriter	Warning	Orchestration	Could not close writer.
DeactivateFailed	Severe	Orchestration	Maestro failed to deactivate the specified activity.
DebugFailed	Severe	Orchestration	Debugger operation failed.
DeleteObject	Warning	Orchestration	Could not clean up object with ID.
DestroyFailed	Severe	Orchestration	Maestro failed to destroy the specified activity.
EnqueueFailed	Severe	Orchestration	Unable to enqueue the orchestration.
EntryPath	Severe	Orchestration	Could not find an entry point for the specified activity in the compiled orchestration.
ErrorMap	Severe	Orchestration	Error in map activity.
ErrorTwoPhase	Severe	Orchestration	Activity could not be converted to Two phase activity.
ExecuteError	Severe	Orchestration	Unable to execute the orchestration.
FaultInfo	Severe	Orchestration	Could not initialize FaultInfo.
ForEach	Severe	Orchestration	Error occurred in for each activity.

Notification	Level	System	Description
IOError	Warning	Orchestration	Internal error occurred because of Input/Output error.
InitializeJobInfo	Severe	Orchestration	Could not initialize job info.
InputMap	Severe	Orchestration	No input maps are there for required input parameter.
InputMapXPath	Severe	Orchestration	Could not perform input map expression.
InputMapXSLT	Severe	Orchestration	Could not perform input map XSLT.
InvokeError	Severe	Orchestration	Error occurred in module.
KeyLog	Info	Orchestration	Logged key with specified name and value.
LargeInputParam	Warning	Orchestration	Specified input parameter is over the limit and is too large to log.
LargeNonpersistentVar	Severe	Orchestration	Specified variable is too large for a non-persistent orchestration.
LargeOutputParam	Warning	Orchestration	Specified output parameter is over the limit and is too large to log.
LargeTotalVarSize	Severe	Orchestration	This job cannot be run during low-memory conditions.
LargeVariable	Warning	Orchestration	Specified variable is over the limit and is too large to log.
LicenseExpireImminent (Deprecated)	Severe	Orchestration	Deprecated.
LicenseExpireSoon (Deprecated)	Warning	Orchestration	Deprecated.
LicenseExpired (Deprecated)	Severe	Orchestration	Deprecated.
LicenseInvalid (Deprecated)	Severe	Orchestration	Deprecated.
LoaderCancel	Severe	Orchestration	Cancel of job with specified ID of specified orchestration.
LoaderDelete	Severe	Orchestration	Delete of specified orchestration failed.
LoaderDeploy	Severe	Orchestration	Deployment of specified orchestration failed.
LoaderPublish	Severe	Orchestration	Publish of specified configuration failed.
LoaderStart	Severe	Orchestration	Start of the specified orchestration failed.
LoaderStop	Severe	Orchestration	Stop of the specified orchestration failed.
LoaderSuspend	Severe	Orchestration	Suspend of the specified orchestration failed.
LoaderunDeploy	Severe	Orchestration	Undeploy of specified orchestration failed.
MBeanRegister	Severe	Orchestration	Could not register specified object with MBean server.
MBeanUnregister	Severe	Orchestration	Could not unregister specified object with MBean server.

Notification	Level	System	Description
MaxSeqNum	Warning	Orchestration	Exceeded maximum number of activity events for a job.
ModuleConfig	Severe	Orchestration	Could not read module configuration.
MonitorQuery	Severe	Orchestration	Could not query for monitor data.
MonitorVariable	Warning	Orchestration	Could not log monitor variable.
MonitorVariables	Warning	Orchestration	Could not log monitor variables.
MontiorEvents	Severe	Orchestration	Could not log monitor events.
MultipleActFactory	Severe	Orchestration	Activity Factory with specified name and version has multiple registrations, and hence not loading it.
NoActivityFactory	Severe	Orchestration	Activity Factory with specified name and version not registered.
NotDeployed	Severe	Orchestration	Orchestration not deployed.
NotDocParameter	Severe	Orchestration	Specified parameter is not an XML document.
NotDocVariable	Severe	Orchestration	Specified variable is not an XML document.
NotStopped	Severe	Orchestration	Could not undeploy as the orchestration is not stopped.
NotSuspend	Severe	Orchestration	Could not suspend as the orchestration is not running.
NullParam	Severe	Orchestration	Specified parameter is null.
NullVariable	Severe	Orchestration	Specified variable is null.
OSGISyntaxError	Severe	Orchestration	Invalid OSGI query syntax provided.
OrchCompileError	Severe	Orchestration	Unable to compile the specified orchestration.
OutputMap	Severe	Orchestration	Could not perform output map.
OutputMapXPath	Severe	Orchestration	Could not perform output map expression.
OutputMapXSLT	Severe	Orchestration	Could not perform output map transform.
ParamIndex	Warning	Orchestration	Parameter at specified index is already set.
ProgramDestroy	Severe	Orchestration	Program in non terminal state being destroyed.
ProgramStart	Severe	Orchestration	Cannot start an orchestration that is in transient state.
SocketNoReply	Warning	Orchestration	Could not receive socket reply.
SplitError	Severe	Orchestration	Error occurred in split activity.
SwitchExpEmpty	Severe	Orchestration	The condition provided for if-then activity and case label is empty.
SwitchExpression	Severe	Orchestration	Unable to parse the if-then expression.
TaskCancelled	Warning	Orchestration	Caught exception while cancelling job.
TaskEnd	Info	Orchestration	Ended job for specified orchestration.
TaskFound	Severe	Orchestration	Found task with specified state on undeploy.

Notification	Level	System	Description
TaskRemove	Severe	Orchestration	Unable to remove the task.
TaskStart	Info	Orchestration	Started job for specified orchestration.
TaskState	Severe	Orchestration	Unable to set the task state.
TaskStateTransition	Severe	Orchestration	Invalid task state transition happened, hence marking the job as faulted.
TaskStatusChanged	Info	Orchestration	Job status changed.
TooManyWaitingJobs	Severe	Orchestration	A job was aborted due to a large number of waiting jobs.
UnCaughtError	Severe	Orchestration	Uncaught Internal error occurred.
UnexpectedError	Severe	Orchestration	Unexpected Internal error occurred.
VariableNull	Warning	Orchestration	Specified variable is null.
WhileExpEmpty	Severe	Orchestration	The condition provided for while activity is empty.
WhileExpression	Severe	Orchestration	Unable to parse while expression with specified condition.
WrongActFactory	Severe	Orchestration	Activity factory with specified name and version returned wrong class.

Maestro Operation Notifications

Provides a comprehensive list of operation notifications sent from the Maestro Module.

- [AbandonedJobs](#)
A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
- [ActInvalidLicense \(Deprecated\)](#)
Activity Factory with specified name and version had a licensing failure.
- [ActivityFailedError](#)
Encountered fault of specified type, please see rest of the log for more information.
- [AlreadyDeployed](#)
The specified orchestration is already deployed.

- [CallContext](#)
Maestro is not able to create call context.
- [CallContextDestroy](#)
Call context created but task never started.
- [CatchExpression](#)
Unable to parse the catch expression.
- [CleanUpFailed](#)
Failed to clean up the activity.
- [CloseInputStream](#)
Could not close input stream.
- [CloseOutputStream](#)
Could not close output stream.
- [CloseReader](#)
Could not close reader.
- [CloseWriter](#)
Could not close writer.
- [DeactivateFailed](#)
Maestro failed to deactivate the specified activity.
- [DebugFailed](#)
Debugger operation failed.
- [DeleteObject](#)
Could not clean up object with ID.
- [DestroyFailed](#)
Maestro failed to destroy the specified activity.
- [EnqueueFailed](#)
Unable to enqueue the orchestration.
- [EntryPath](#)
Could not find an entry point for the specified activity in the compiled orchestration.
- [ErrorMap](#)
Error in map activity.
- [ErrorTwoPhase](#)
Activity could not be converted to Two phase activity.
- [ExecuteError](#)
Unable to execute the orchestration.
- [FaultInfo](#)
Could not initialize FaultInfo.
- [ForEach](#)
Error occurred in for each activity.
- [InitializeJobInfo](#)
Could not initialize job info.
- [InputMap](#)
No input maps are there for required input parameter.
- [InputMapXPath](#)
Could not perform input map expression.
- [InputMapXSLT](#)
Could not perform input map XSLT.
- [InvokeError](#)
Error occurred in module.
- [KeyLog](#)
Logged key with specified name and value.
- [LargeInputParam](#)
Specified input parameter is over the limit and is too large to log.

- [LargeNonpersistentVar](#)
Specified variable is too large for a non-persistent orchestration.
- [LargeOutputParam](#)
Specified output parameter is over the limit and is too large to log.
- [LargeTotalVarSize](#)
This job cannot be run during low-memory conditions.
- [LargeVariable](#)
Specified variable is over the limit and is too large to log.
- [LicenseExpireImminent \(Deprecated\)](#)
Imminent license expiration for specified bundle - expires on specified date - Please renew the license now to avoid service interruption.
- [LicenseExpireSoon \(Deprecated\)](#)
License for specified bundle name expires soon. Please renew the license to avoid service interruption.
- [LicenseExpired \(Deprecated\)](#)
License has expired. Please renew the license now to avoid service interruption.
- [LicenseInvalid \(Deprecated\)](#)
License for specified bundle name is invalid.
- [LoaderCancel](#)
Cancel of job with specified ID of specified orchestration.
- [LoaderDelete](#)
Delete of specified orchestration failed.
- [LoaderDeploy](#)
Deployment of specified orchestration failed.
- [LoaderPublish](#)
Publish of specified configuration failed.
- [LoaderStart](#)
Start of the specified orchestration failed.
- [LoaderStop](#)
Stop of the specified orchestration failed.
- [LoaderSuspend](#)
Suspend of the specified orchestration failed.
- [LoaderunDeploy](#)
Undeploy of specified orchestration failed.
- [MBeanRegister](#)
Could not register specified object with MBean server.
- [MBeanUnregister](#)
Could not unregister specified object with MBean server.
- [MaxSeqNum](#)
Exceeded maximum number of activity events for a job.
- [ModuleConfig](#)
Could not read module configuration.
- [MonitorQuery](#)
Could not query for monitor data.
- [MonitorVariable](#)
Could not log monitor variable.
- [MonitorVariables](#)
Could not log monitor variables.
- [MontiorEvents](#)
Could not log monitor events.
- [MultipleActFactory](#)
Activity Factory with specified name and version has multiple registrations, and hence not loading it.
- [NoActivityFactory](#)
Activity Factory with specified name and version not registered.

- [NotDeployed](#)
Orchestration not deployed.
- [NotDocParameter](#)
Specified parameter is not an XML document.
- [NotDocVariable](#)
Specified variable is not an XML document.
- [NotStopped](#)
Could not undeploy as the orchestration is not stopped.
- [NotSuspend](#)
Could not suspend as the orchestration is not running.
- [NullParam](#)
Specified parameter is null.
- [NullVariable](#)
Specified variable is null.
- [OSGISyntaxError](#)
Invalid OSGI query syntax provided.
- [OrchCompileError](#)
Unable to compile the specified orchestration.
- [OutputMap](#)
Could not perform output map.
- [OutputMapXPath](#)
Could not perform output map expression.
- [OutputMapXSLT](#)
Could not perform output map transform.
- [ParamIndex](#)
Parameter at specified index is already set.
- [ProgramDestroy](#)
Program in non terminal state being destroyed.
- [ProgramStart](#)
Cannot start an orchestration that is in transient state.
- [SocketNoReply](#)
Could not receive socket reply.
- [SplitError](#)
Error occurred in split activity.
- [SwitchExpEmpty](#)
The condition provided for if-then activity and case label is empty.
- [SwitchExpression](#)
Unable to parse the if-then expression.
- [TaskCancelled](#)
Caught exception while cancelling job.
- [TaskEnd](#)
Ended job for specified orchestration.
- [TaskFound](#)
Found task with specified state on undeploy.
- [TaskRemove](#)
Unable to remove the task.
- [TaskStart](#)
Started job for specified orchestration.
- [TaskState](#)
Unable to set the task state.
- [TaskStateTransition](#)
Invalid task state transition happened, hence marking the job as faulted.

- [TaskStatusChanged](#)
Job status changed.
- [TooManyWaitingJobs](#)
A job was aborted due to a large number of waiting jobs.
- [VariableNull](#)
Specified variable is null.
- [WhileExpEmpty](#)
The condition provided for while activity is empty.
- [WhileExpression](#)
Unable to parse while expression with specified condition.
- [WrongActFactory](#)
Activity factory with specified name and version returned wrong class.

AbandonedJobs

A timeout occurred while waiting for jobs to stop and some jobs were abandoned.

Level : *Warning*

Log Message : *Timeout waiting for jobs to stop, number of jobs abandoned: {NumberOfAbandonedJobs}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MAESTRO-MIB::ciC20oAbandonedJobsEv87*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.20.1.2*

SNMP Trap Number : *87*

Variables

The AbandonedJobs message contains the following variables:

Table 1. AbandonedJobs Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfAbandonedJobs

The number of abandoned jobs.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv87NumberOfAbandonedJobs
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.87.1

LicenseExpireImminent (Deprecated)

As of Cast Iron version 6.0, this message has been deprecated because connectors are no longer individually licensed.

Imminent license expiration for specified bundle - expires on specified date - Please renew the license now to avoid service interruption.

Level : *Severe*

Log Message : *Imminent license expiration for {BundleName} - expires: {Date} - Please renew the license now to avoid service interruption*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MAESTRO-MIB::ciC20oLicenseExpireImminentEv26*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.20.1.2*

SNMP Trap Number : *26*

Variables

The LicenseExpireImminent message contains the following variables:

Table 1. LicenseExpireImminent Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. BundleName

The bundle for which license expires.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv26BundleName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.26.1

6. Date

The date on which license expires.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv26Date
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.26.2

NetSuite Module

The NetSuite Module provides access to the NetSuite online service. This section contains details for the messages delivered from the NetSuite Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the NetSuite Module.

MIB Name : *CASTIRON-COMP-NETSUITE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.11*

The following table provides an alphabetical list of all notifications that can be issued by the NetSuite Module.

Table 1. Notifications issued by the NetSuite Module

Notification	Level	System	Description
ConnectionFailed	Severe	Orchestration	The NetSuite operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to pool. Continuing the activity.
ConnectionRetry	Warning	Orchestration	The NetSuite operation failed while trying to connect to the server. The operation will be retried.
CustomFieldError	Severe	Orchestration	Error occurred and returned specified soap fault while getting custom fields for the recordType.
IOError	Severe	Orchestration	Unexpected IO error occurred while performing operation with NetSuite.
SoapError	Severe	Orchestration	Error occurred while creating SOAP message.
StreamError	Severe	Orchestration	Unexpected IO exception occurred while streaming the message.
TransformationError	Severe	Orchestration	An error occurred while processing a message for NetSuite.
UnknownError	Severe	Orchestration	Unknown error while invoking an operation on NetSuite.

NetSuite Internal Notifications

Provides a comprehensive list of internal notifications sent from the NetSuite Module.

- [IOError](#)
Unexpected IO error occurred while performing operation with NetSuite.
- [SoapError](#)
Error occurred while creating SOAP message.
- [StreamError](#)
Unexpected IO exception occurred while streaming the message.
- [UnknownError](#)
Unknown error while invoking an operation on NetSuite.

Parent topic: [NetSuite Module](#)

[Feedback](#) | [Notices](#)

IOError

Unexpected IO error occurred while performing operation with NetSuite.

Level : *Severe*

Log Message : *Unexpected IO error while performing operation with NetSuite. The exception is {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-NETSUITE-MIB::ciC11iIOErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.11.1.3*

SNMP Trap Number : *1*

Variables

The IOError message contains the following variables:

Table 1. IOError Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

SoapError

Error occurred while creating SOAP message.

Level : *Severe*

Log Message : *Exception while creating soap message. The exception is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-NETSUITE-MIB::ciC11iSoapErrorEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.11.1.3*

SNMP Trap Number : 2

Variables

The SoapError message contains the following variables:

Table 1. SoapError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

PeopleSoft Module

The PeopleSoft Module provides access to Oracle's PeopleSoft applications. This section contains details for the messages delivered from the PeopleSoft Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the PeopleSoft Module.

MIB Name : *CASTIRON-COMP-PEOPLESOFT-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.9*

The following table provides an alphabetical list of all notifications that can be issued by the PeopleSoft Module.

Table 1. Notifications issued by the PeopleSoft Module

Notification	Level	System	Description
ActivateFailureBlank	Severe	Orchestration	Activity could not be started as the specified name was blank.

Notification	Level	System	Description
ActivateSuccess	Info	Orchestration	Activity name specified was successfully activated.
ActivateUnsuccessful	Info	Orchestration	Error occurred while connecting to PeopleSoft system while activating activity. Activity activated, will try to establish connectivity at activity execute time.
ActivityFailure	Severe	Orchestration	Activity name specified failed to execute.
ActivitySuccessful	Info	Orchestration	Activity name specified executed successfully. The response output parameter was successfully generated.
ConfigURI	Info	Orchestration	Information regarding the URI and Port where the PeopleSoft Receive is listening.
ConnectionError	Severe	Orchestration	The peoplesoft operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
ConnectionRetry	Warning	Orchestration	The peoplesoft operation failed while trying to connect to the server. This will cause a retry.
CreateOnlyKeys	Warning	Orchestration	Only Create Keys was specified and no other properties were specified. Create might not have created the record.
DataLengthMore	Warning	Orchestration	The data set for specified field name has length exceeding the field length. This may cause loss of data.
DeleteFail	Warning	Orchestration	The activity failed to delete specified item number.
GetNoReturn	Info	Orchestration	Activity name specified could not find any record.
ItemNumberBlank	Warning	Orchestration	Item number returned is empty.
MakeConnectError	Warning	Orchestration	Error occurred while creating the connection to destination.
MessageNameVersion	Severe	Orchestration	Message name and version got does not match that set in activity.
MissingLibraries	Severe	Orchestration	Peoplesoft activity is missing required libraries. Please install them from WMC.
NoOperationOnRecord	Warning	Orchestration	Activity could not find any record to do specified operation on it.
OutOfRange	Warning	Orchestration	Activity is trying to delete an item which is out of range.
PoolReleaseError	Warning	Orchestration	Error occurred while closing the connection pool.
ReceiveActivate	Severe	Orchestration	Error occurred while activating PeopleSoft Receive.
ReceiveDeActivate	Severe	Orchestration	Error occurred while deactivating PeopleSoft Receive.
ReceiveError	Severe	Orchestration	Peoplesoft receive activity was unsuccessful in receiving the request.

Notification	Level	System	Description
ReceiveGeneralError	Severe	Orchestration	Error occurred while sending the response from PeopleSoft Receive.
ReceiveIOError	Severe	Orchestration	IO Error occurred while processing request in PeopleSoft Receive.
ReceiveInfo	Info	Orchestration	Got document from specified host with specified name and version.
ReceiveProcess	Severe	Orchestration	Error occurred while processing request in PeopleSoft Receive.
ReceiveSuccessful	Info	Orchestration	Peoplesoft receive activity successfully received the request.
RunningInfo	Warning	Orchestration	Faced few warnings or errors while running Peoplesoft activity.
RunningMessages	Warning	Orchestration	Received messages while executing the activity.
SetupInfo	Warning	Orchestration	Faced few warnings or errors while setting up Peoplesoft activity.

PeopleSoft Operation Notifications

Provides a comprehensive list of operation notifications sent from the PeopleSoft Module.

- [ActivateFailureBlank](#)
Activity could not be started as the specified name was blank.
- [ActivateSuccess](#)
Activity name specified was successfully activated.
- [ActivityFailure](#)
Activity name specified failed to execute.
- [ActivitySuccessful](#)
Activity name specified executed successfully. The response output parameter was successfully

- generated.
- [ConfigURI](#)
Information regarding the URI and Port where the PeopleSoft Receive is listening.
 - [CreateOnlyKeys](#)
Only Create Keys was specified and no other properties were specified. Create might not have created the record.
 - [DataLengthMore](#)
The data set for specified field name has length exceeding the field length. This may cause loss of data.
 - [DeleteFail](#)
The activity failed to delete specified item number.
 - [GetNoReturn](#)
Activity name specified could not find any record.
 - [ItemNumberBlank](#)
Item number returned is empty.
 - [MessageNameVersion](#)
Message name and version got does not match that set in activity.
 - [NoOperationOnRecord](#)
Activity could not find any record to do specified operation on it.
 - [OutOfRange](#)
Activity is trying to delete an item which is out of range.
 - [ReceiveError](#)
Peoplesoft receive activity was unsuccessful in receiving the request.
 - [ReceiveGeneralError](#)
Error occurred while sending the response from PeopleSoft Receive.
 - [ReceiveInfo](#)
Got document from specified host with specified name and version.
 - [ReceiveProcess](#)
Error occurred while processing request in PeopleSoft Receive.
 - [ReceiveSuccessful](#)
Peoplesoft receive activity successfully received the request.
 - [RunningInfo](#)
Faced few warnings or errors while running Peoplesoft activity.
 - [RunningMessages](#)
Received messages while executing the activity.

ReceiveInfo

Got document from specified host with specified name and version.

Level : *Info*

Log Message : *Got document from {From} with Message Name: {MessageName}, Message Version: {MessageVersion}, Message Type: {MessageType} and Originating Time Stamp: {TimeStamp}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oReceiveInfoEv13*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.2*

SNMP Trap Number : *13*

Variables

The ReceiveInfo message contains the following variables:

Table 1. ReceiveInfo Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. From

The name of the host where receive activity got the document.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13From
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.1

6. MessageName

The name of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.2

7. MessageVersion

The version of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.3

8. MessageType

The type of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13MessageType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.4

9. TimeStamp

The originating time stamp of the message received by the activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv13TimeStamp
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.13.5

ReceiveProcess

Error occurred while processing request in PeopleSoft Receive.

Level : *Severe*

Log Message : *Error while processing request in PeopleSoft Receive. The error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oReceiveProcessEv18*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.2*

SNMP Trap Number : *18*

Variables

The ReceiveProcess message contains the following variables:

Table 1. ReceiveProcess Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Platform Module

The Platform module provides notifications for elements generally not associated with projects or the runtime such as hardware, network, security, and resources. This section contains details for the messages delivered from the Platform Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Platform Module.

MIB Name : *CASTIRON-COMP-PLATFORM-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.23

The following table provides an alphabetical list of all notifications that can be issued by the Platform Module.

Table 1. Notifications issued by the Platform Module

Notification	Level	System	Description
AccessViolation	Info	Security	An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
AuthFailure	Severe	Security	An attempt to authenticate with the appliance failed.
AuthLogOut	Info	Security	Event showing logging out of the user.
AuthSuccess	Info	Security	Attempt to authenticate with the appliance was successful.
DiskUsageCritOk	Info	Resources	Disk space usage is below the critical threshold.
DiskUsageCritical	Severe	Resources	Disk space usage has exceeded the critical threshold.

Notification	Level	System	Description
DiskUsageWarnOk	Info	Resources	Disk space usage is below the warning threshold.
DiskUsageWarning	Warning	Resources	Disk space usage has exceeded the warning threshold.
FanFailed	Severe	Hardware	A cooling fan is not operating correctly.
FanRestored	Info	Hardware	A cooling fan has resumed proper operation.
GrantRole	Info	Security	grant new role created.
GroupCreated	Info	Security	New group created.
GroupDeleted	Info	Security	Group deleted.
HighAvailFailover	Info	Hardware	The High Availability failover feature has taken effect; failover is complete.
HighAvailNotReady	Warning	Hardware	The HA system is not Highly Available.
HighAvailReady	Info	Hardware	The HA system is Highly Available.
HighAvailVersionError	Severe	Resources	The version of CIOS running on Standby does not match that running on Active.
IntrusionInform	Warning	Hardware	The appliance case has been opened.
IntrusionSevere	Severe	Hardware	The appliance case has been opened, which could result in system failure. Please contact Cast Iron Support.
LargeFileWarning	Warning	Resources	Large file taking up space on heavily loaded disk.
NetworkAutohost	Warning	Network	The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.
NetworkInvalidRoute	Warning	Network	Could not add a requested network route.
NetworkLinkDown	Warning	Network	The network link is down (offline).
NetworkLinkUp	Info	Network	The network link is up (online).
OrcmonArchiveError	Severe	Resources	Job log archive error.
OrcmonDatabaseError	Severe	Resources	Job log database error.
OrcmonDiskFull	Warning	Resources	Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
OrcmonDiskFullNoPurge	Severe	Resources	Failed to purge any job logs to recover disk space.
OrcmonDiskTrigger	Info	Resources	Job log purge was initiated due to an available disk space trigger.
OrcmonExportCdError	Severe	Resources	Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
OrcmonExportError	Severe	Resources	Failure uploading archive file to FTP server.
OrcmonExportFTP	Info	Resources	Exporting archive file to FTP server.
OrcmonExportLocal	Info	Resources	Exporting job log data to a local archive file.

Notification	Level	System	Description
OrcmonExportStoreErr	Severe	Resources	Failure uploading archive file to FTP server: Could not store file.
OrcmonExportedJobs	Info	Resources	Exported jobs from the job log.
OrcmonPurgeByCompl	Info	Resources	Job log purge has been triggered based on the number of stored completed jobs.
OrcmonPurgeByErrored	Info	Resources	Job log purge has been triggered based on the number of stored errored jobs.
OrcmonPurgeByTime	Info	Resources	Job log purge has been triggered based on the amount of time since the last purge.
OrcmonPurgeByTimeNP	Info	Resources	Job log purge has been triggered based on the amount of time since collection began.
OrcmonPurgeFailed	Severe	Resources	Job log purge/archive failed.
PowerInterrupted	Warning	Hardware	A power module has reported that it does not have power.
PowerRestored	Info	Hardware	A power module has reported that power has been restored.
RaidArrayDegraded	Severe	Hardware	The RAID array on the appliance is degraded.
RaidArrayOffline	Severe	Hardware	The RAID array on the appliance is offline. Please contact Cast Iron Support.
RaidArrayOptimal	Info	Hardware	The RAID array on the appliance is optimal.
RaidDiskFailed	Severe	Hardware	A disk on the appliance has failed.
RaidDiskOnline	Info	Hardware	A disk on the appliance is now online and working properly.
RaidDiskRebuilding	Info	Hardware	A disk on the appliance is rebuilding.
RevokeRole	Info	Security	User role revoked.
SwapUsageCritOk	Info	Resources	Swap space usage is below the critical threshold.
SwapUsageCritical	Severe	Resources	Swap space usage has exceeded the critical threshold.
SwapUsageWarnOk	Info	Resources	Swap space usage is below the warning threshold.
SwapUsageWarning	Warning	Resources	Swap space usage has exceeded the warning threshold.
SystemInitComplete	Info	Hardware	The appliance is finished initializing after reboot.
SystemInitStarted	Info	Hardware	The appliance is initializing after being shut down or rebooted.
SystemRecoveryReboot	Warning	Hardware	Operational failure was detected. System is rebooting to recover.
SystemRecoveryRestart	Warning	Hardware	Operational failure was detected. System is restarting to recover.

Notification	Level	System	Description
TemperatureOutOfRange	Severe	Hardware	A monitored temperature within the appliance is too high, which could lead to future failures.
TemperatureRestored	Info	Hardware	A temperature which was previously out of range (too hot) has come back into range
UpdateStatus	Info	Security	Update user status as active or inactive.
UpdateUser	Info	Security	Update display name of a user.
UpgradeComplete	Info	Hardware	The Cast Iron firmware was successfully upgraded.
UpgradeFailed	Severe	Hardware	The attempt to upgrade the Cast Iron firmware has failed.
UserCreated	Info	Security	New user created.
UserDeleted	Info	Security	User deleted.

Platform Hardware Notifications

Provides a comprehensive list of hardware notifications sent from the Platform Module.

- [FanFailed](#)
A cooling fan is not operating correctly.
- [FanRestored](#)
A cooling fan has resumed proper operation.
- [HighAvailFailover](#)
The High Availability failover feature has taken effect; failover is complete.
- [HighAvailNotReady](#)
The HA system is not Highly Available.
- [HighAvailReady](#)
The HA system is Highly Available.

- [IntrusionInform](#)
The appliance case has been opened.
- [IntrusionSevere](#)
The appliance case has been opened, which could result in system failure. Please contact Cast Iron Support.
- [PowerInterrupted](#)
A power module has reported that it does not have power.
- [PowerRestored](#)
A power module has reported that power has been restored.
- [RaidArrayDegraded](#)
The RAID array on the appliance is degraded.
- [RaidArrayOffline](#)
The RAID array on the appliance is offline. Please contact Cast Iron Support.
- [RaidArrayOptimal](#)
The RAID array on the appliance is optimal.
- [RaidDiskFailed](#)
A disk on the appliance has failed.
- [RaidDiskOnline](#)
A disk on the appliance is now online and working properly.
- [RaidDiskRebuilding](#)
A disk on the appliance is rebuilding.
- [SystemInitComplete](#)
The appliance is finished initializing after reboot.
- [SystemInitStarted](#)
The appliance is initializing after being shut down or rebooted.
- [SystemRecoveryReboot](#)
Operational failure was detected. System is rebooting to recover.
- [SystemRecoveryRestart](#)
Operational failure was detected. System is restarting to recover.
- [TemperatureOutOfRange](#)
A monitored temperature within the appliance is too high, which could lead to future failures.
- [TemperatureRestored](#)
A temperature which was previously out of range (too hot) has come back into range
- [UpgradeComplete](#)
The Cast Iron firmware was successfully upgraded.
- [UpgradeFailed](#)
The attempt to upgrade the Cast Iron firmware has failed.

FanFailed

A cooling fan is not operating correctly.

The most likely cause is that the fan has become disconnected or has failed. The recommended action is to 1) confirm the appliance with the corresponding AffectedAppliance serial number has an indicator LED (usually orange), 2) confirm the fan is properly connected, and 3) contact Cast Iron Support for assistance replacing the fan.

Level : *Severe*

RaidDiskOnline

A disk on the appliance is now online and working properly.

This notification is typically sent when a disk has completed rebuilding and comes online, providing hardware redundancy.

Level : *Info*

Log Message : *The RAID disk {DiskID} on appliance {AffectedAppliance} is online.*

System : *Hardware*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23hRaidDiskOnlineEv14*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.4*

SNMP Trap Number : *14*

Variables

The RaidDiskOnline message contains the following variables:

Table 1. RaidDiskOnline Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. DiskID</p> <p>Identifier associated with the associated disk.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv14DiskID

- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.14.1

4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

RaidDiskRebuilding

A disk on the appliance is rebuilding.

A rebuilding disk actively copies data from the online disk. While in this state, system performance may be affected and the RAID Array state is usually "Degraded". System performance and the RAID Array state should return to normal when rebuilding has completed.

Level : *Info*

Log Message : *The RAID disk {DiskID} on appliance {AffectedAppliance} is rebuilding.*

System : *Hardware*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23hRaidDiskRebuildingEv13*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.4*

SNMP Trap Number : *13*

Variables

The RaidDiskRebuilding message contains the following variables:

Table 1. RaidDiskRebuilding Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. DiskID

Identifier associated with the associated disk.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv13DiskID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.13.1

4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.5

SystemRecoveryReboot

Operational failure was detected. System is rebooting to recover.

The Cast Iron appliance continually monitors the health of components within the system. If a component has a momentary failure, the system may choose to reboot to recover from the situation. In the case of a recurring error, further reboots are not used until an hour has passed; instead the runtime is restarted. See the CLI command "system autoreboot" for information about controlling this behavior.

Level : *Warning*

Log Message : *Operational failure was detected on appliance {AffectedAppliance}. System is rebooting to recover. Uptime {Days} days, {Hours}:{Minutes}.*

System : *Hardware*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23hSystemRecoveryRebootEv18*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.4*

SNMP Trap Number : *18*

Variables

The SystemRecoveryReboot message contains the following variables:

Table 1. SystemRecoveryReboot Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

UpgradeFailed

The attempt to upgrade the Cast Iron firmware has failed.

Level : *Severe*

Log Message : *Attempt to upgrade Cast Iron firmware on appliance {AffectedAppliance} from version {OldVersion} to version {NewVersion} failed: {Message}.*

System : *Hardware*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23hUpgradeFailedEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.4*

SNMP Trap Number : *17*

Variables

The UpgradeFailed message contains the following variables:

Table 1. UpgradeFailed Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. AffectedAppliance</p> <p>Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.</p>

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

4. OldVersion

The version of firmware which is currently operating on the Cast Iron appliance.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv17OldVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.17.2

5. NewVersion

The version of the attempted firmware upgrade.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv17NewVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.17.3

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

Platform Network Notifications

Provides a comprehensive list of network notifications sent from the Platform Module.

- [NetworkAutohost](#)
The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.
- [NetworkInvalidRoute](#)
Could not add a requested network route.
- [NetworkLinkDown](#)
The network link is down (offline).
- [NetworkLinkUp](#)
The network link is up (online).

 Last updated: Thursday, December 17, 2015
file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/platform/platform_network_notifications_list.html

NetworkAutohost

The Autohost feature has added the appliance's hostname and IP address to `/etc/hosts`.

The appliance requires the ability to resolve its own hostname to an IP address. The mapping is validated each time the appliance's network subsystem is started, and may be determined by DNS lookup or from an entry which was manually added via the CLI. If the appliance cannot determine the mapping this way, the autohost feature automatically adds a "best-guess" entry. While this automatic entry may work in many circumstances, it is not guaranteed to allow proper appliance operation in all environments. This notification may indicate a misconfiguration in the network. Therefore it is recommended that the user examine the appliance's network configuration and either enter the appliance's IP address and hostname to DNS, or manually add an entry to `/etc/hosts` by using the CLI command "net add etchost".

Level : *Warning*

Log Message : *Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}.*

System : *Network*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23nNetworkAutohostEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.5*

SNMP Trap Number : *3*

Variables

The NetworkAutohost message contains the following variables:

Table 1. NetworkAutohost Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p>

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. Hostname

Hostname of the appliance as added to /etc/hosts.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv3Hostname
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.5.1.3.1

4. IPAddress

IP Address of the appliance as added to /etc/hosts.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv3IPAddress
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.5.1.3.2

Platform Resources Notifications

Provides a comprehensive list of resources notifications sent from the Platform Module.

- [DiskUsageCritOk](#)
Disk space usage is below the critical threshold.
- [DiskUsageCritical](#)
Disk space usage has exceeded the critical threshold.
- [DiskUsageWarnOk](#)
Disk space usage is below the warning threshold.
- [DiskUsageWarning](#)
Disk space usage has exceeded the warning threshold.
- [HighAvailVersionError](#)
The version of CIOS running on Standby does not match that running on Active.
- [LargeFileWarning](#)
Large file taking up space on heavily loaded disk.
- [OrcmonArchiveError](#)
Job log archive error.
- [OrcmonDatabaseError](#)
Job log database error.
- [OrcmonDiskFull](#)
Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
- [OrcmonDiskFullNoPurge](#)
Failed to purge any job logs to recover disk space.
- [OrcmonDiskTrigger](#)
Job log purge was initiated due to an available disk space trigger.
- [OrcmonExportCdError](#)
Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
- [OrcmonExportError](#)
Failure uploading archive file to FTP server.

- [OrcmonExportFTP](#)
Exporting archive file to FTP server.
- [OrcmonExportLocal](#)
Exporting job log data to a local archive file.
- [OrcmonExportStoreErr](#)
Failure uploading archive file to FTP server: Could not store file.
- [OrcmonExportedJobs](#)
Exported jobs from the job log.
- [OrcmonPurgeByCompl](#)
Job log purge has been triggered based on the number of stored completed jobs.
- [OrcmonPurgeByErrored](#)
Job log purge has been triggered based on the number of stored errored jobs.
- [OrcmonPurgeByTime](#)
Job log purge has been triggered based on the amount of time since the last purge.
- [OrcmonPurgeByTimeNP](#)
Job log purge has been triggered based on the amount of time since collection began.
- [OrcmonPurgeFailed](#)
Job log purge/archive failed.
- [SwapUsageCritOk](#)
Swap space usage is below the critical threshold.
- [SwapUsageCritical](#)
Swap space usage has exceeded the critical threshold.
- [SwapUsageWarnOk](#)
Swap space usage is below the warning threshold.
- [SwapUsageWarning](#)
Swap space usage has exceeded the warning threshold.

Platform Security Notifications

Provides a comprehensive list of security notifications sent from the Platform Module.

- [AccessViolation](#)
An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
- [AuthFailure](#)
An attempt to authenticate with the appliance failed.
- [AuthLogOut](#)
Event showing logging out of the user.
- [AuthSuccess](#)
Attempt to authenticate with the appliance was successful.
- [GrantRole](#)
grant new role created.
- [GroupCreated](#)
New group created.
- [GroupDeleted](#)
Group deleted.

- [RevokeRole](#)
User role revoked.
- [UpdateStatus](#)
Update user status as active or inactive.
- [UpdateUser](#)
Update display name of a user.
- [UserCreated](#)
New user created.
- [UserDeleted](#)
User deleted.

SAP Module

The SAP Module provides activities to access SAP servers. This section contains details for the messages delivered from the SAP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the SAP Module.

MIB Name : *CASTIRON-COMP-SAP-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.19*

The following table provides an alphabetical list of all notifications that can be issued by the SAP Module.

Table 1. Notifications issued by the SAP Module

Notification	Level	System	Description
AddingServerInfo	Info	Orchestration	Adding server gateway.
BAPIActivationError	Severe	Orchestration	Error occurred while activating the BAPI activity.
BAPIParseError	Severe	Orchestration	Error occurred while parsing schema for the specified BAPI.
BAPIReturnError	Severe	Orchestration	Error returned by specified BAPI in the type field.
CompleteFunctionExec	Info	Orchestration	This is the name of the function which is executed by the BAPI or RFC activity
ConnectError	Severe	Orchestration	The SAP operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The SAP operation failed while trying to connect to the server. This will cause a retry.
ConnectionPoolError	Severe	Orchestration	Connection Pool returned null connection.
CreateTID	Info	Orchestration	Creating a specified TID in the TID manager.
CreateTrcDirFailed	Warning	Orchestration	Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.
FuncRetStructNotFound	Info	Orchestration	This is to report that activity is not able to find the return structure for the function
FunctionLookup	Info	Orchestration	This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
FunctionLookupComp	Info	Orchestration	This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
GatewayCommWarning	Warning	Orchestration	Error occurred, while communicating to SAP Gateway.

Notification	Level	System	Description
GatewayRegisterError	Info	Orchestration	Server gateway specified already exists.
GatewayRemoveInfo	Info	Orchestration	Removing server gateway.
IDOCExtensionError	Severe	Orchestration	IDOC contains more than one type of IDOC extension type.
IDOCSentInfo	Info	Orchestration	IDOC with specified TID was sent to SAP.
IDOCTypeError	Severe	Orchestration	Received IDOC contains more than one type of IDOC type.
InitializationError	Severe	Orchestration	Error occurred while initializing the send IDOC activity.
InvalidRFCName	Severe	Orchestration	Unable to find specified RFC name.
InvalidTIDError	Severe	Orchestration	TID was not set in the task context.
ListenerInstanceInfo	Info	Orchestration	SAP listener instance was started for SAP gateway.
ListenerStartInfo	Info	Orchestration	SAP listener started again for specified host.
ListenerStopWarning	Warning	Orchestration	Error occurred while stopping the listener for specified host.
NoHandlerError	Warning	Orchestration	Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
NoSegmentWarning	Warning	Orchestration	The specified IDOC number contains no data segment.
NonReturnStruct	Severe	Orchestration	No return structure returned by the specified BAPI.
ParseError	Severe	Orchestration	Error occurred while parsing schema for the RFC.
PoolAddInfo	Info	Orchestration	Adding Connection pool with the specified name.
PoolExistInfo	Info	Orchestration	Connection pool with specified name already exists.
ProcessDocError	Severe	Orchestration	Error occurred while processing the IDOC.
RFCActivationError	Severe	Orchestration	Error occurred while activating the RFC activity.
ReceiveTIDNotFound	Severe	Orchestration	Specified TID was not found in TID manager.
RemoveInfo	Info	Orchestration	Removing connection pool with specified name.
RollbackWarning	Warning	Orchestration	Error occurred while rolling back the transaction. Ignoring and continuing the activity.
SAPActivityError	Severe	Orchestration	Error occurred while processing SAP activity.
SAPValidationError	Severe	Orchestration	Input data was not valid for specified RFC. The items specified were invalid.
SapLibNotFound	Severe	Orchestration	Sap activity is not able to activate because the sap provided libraries are not installed.
SendIDOCActivation	Severe	Orchestration	Error occurred while activating the Send IDOC activity.

Notification	Level	System	Description
SendIDOCCreateInfo	Info	Orchestration	Created the specified TID for starting a transaction in send IDOC activity.
SendIDOCValidation	Severe	Orchestration	Input data was not valid for IDOC. The specified item(s) were invalid.
SerializingError	Severe	Orchestration	Error occurred while creating IDOC from input parameter.
StartFunctionExec	Info	Orchestration	This is the name of the function which is going to be executed by the BAPI or RFC activity
StartWarning	Info	Orchestration	Error occurred while starting the server.
TIDCheck	Info	Orchestration	SAP TIP check for specified ID is requested by SAP.
TIDCommit	Info	Orchestration	SAP TID has been committed by SAP.
TIDCommitUnknown	Severe	Orchestration	SAP attempting to confirm an unknown or uncommitted TID.
TIDCommittedInfo	Info	Orchestration	Specified TID was committed to SAP.
TIDCommittingInfo	Info	Orchestration	Committing TID to SAP.
TIDConfirmed	Info	Orchestration	SAP TID has been confirmed and deleted from the TID manager.
TIDRollback	Info	Orchestration	SAP TID has been rolled back.
TIDSentInfo	Info	Orchestration	Sending the IDOC with specified TID to SAP.
TIDUnknown	Severe	Orchestration	SAP has requested rollback for unknown TID.
TransactionalError	Severe	Orchestration	Unable to find the BAPI transaction RFCs.
UnicodeGateway	Info	Orchestration	The unicode instance property is set through JCONSOLE.
ValidationError	Severe	Orchestration	Error occurred while validating the input data.
ValidationInfo	Info	Orchestration	Validation is on/off for the specified field value.

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/sap/sap_connection_notifications_list.html

ConnectError

The SAP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the SAP server after {NumberOfRetryAttempts} attempts. Error is: Error Group {ErrorGroup}, Error Key {ErrorKey}, Error Message {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19cConnectErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.1*

SNMP Trap Number : *1*

Variables

The ConnectError message contains the following variables:

Table 1. ConnectError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.1

6. ErrorGroup

The group mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorGroup
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.2

7. ErrorKey

The key mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorKey
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.3

8. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

ConnectRetry

The SAP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the SAP server. Error is: Error Group: {ErrorGroup} Error Key {ErrorKey} Error Message {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {RetryAttemptNumber} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19cConnectRetryEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.1*

SNMP Trap Number : 2

Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ErrorGroup

The group mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorGroup
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.1

6. ErrorKey

The key mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.2

7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

8. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.4

9. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.5

10. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.6

SAP Operation Notifications

Provides a comprehensive list of operation notifications sent from the SAP Module.

- [AddingServerInfo](#)
Adding server gateway.
- [BAPIActivationError](#)
Error occurred while activating the BAPI activity.
- [BAPIParseError](#)
Error occurred while parsing schema for the specified BAPI.
- [BAPIReturnError](#)
Error returned by specified BAPI in the type field.
- [CompleteFunctionExec](#)
This is the name of the function which is executed by the BAPI or RFC activity
- [CreateTID](#)
Creating a specified TID in the TID manager.
- [CreateTrcDirFailed](#)
Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.

- [FuncRetStructNotFound](#)
This is to report that activity is not able to find the return structure for the function
- [FunctionLookup](#)
This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [FunctionLookupComp](#)
This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [GatewayCommWarning](#)
Error occurred, while communicating to SAP Gateway.
- [GatewayRegisterError](#)
Server gateway specified already exists.
- [GatewayRemoveInfo](#)
Removing server gateway.
- [IDOCExtensionError](#)
IDOC contains more than one type of IDOC extension type.
- [IDOCSentInfo](#)
IDOC with specified TID was sent to SAP.
- [IDOCTypeError](#)
Received IDOC contains more than one type of IDOC type.
- [InvalidRFCName](#)
Unable to find specified RFC name.
- [ListenerInstanceInfo](#)
SAP listener instance was started for SAP gateway.
- [ListenerStartInfo](#)
SAP listener started again for specified host.
- [ListenerStopWarning](#)
Error occurred while stopping the listener for specified host.
- [NoHandlerError](#)
Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
- [NoSegmentWarning](#)
The specified IDOC number contains no data segment.
- [NonReturnStruct](#)
No return structure returned by the specified BAPI.
- [ParseError](#)
Error occurred while parsing schema for the RFC.
- [ProcessDocError](#)
Error occurred while processing the IDOC.
- [RFCActivationError](#)
Error occurred while activating the RFC activity.
- [ReceiveTIDNotFound](#)
Specified TID was not found in TID manager.
- [RollbackWarning](#)
Error occurred while rolling back the transaction. Ignoring and continuing the activity.
- [SAPActivityError](#)
Error occurred while processing SAP activity.
- [SAPValidationError](#)
Input data was not valid for specified RFC. The items specified were invalid.
- [SapLibNotFound](#)
Sap activity is not able to activate because the sap provided libraries are not installed.
- [SendIDOCActivation](#)
Error occurred while activating the Send IDOC activity.
- [SendIDOCCreateInfo](#)
Created the specified TID for starting a transaction in send IDOC activity.

- [SendIDOCValidation](#)
Input data was not valid for IDOC. The specified item(s) were invalid.
- [StartFunctionExec](#)
This is the name of the function which is going to be executed by the BAPI or RFC activity
- [StartWarning](#)
Error occurred while starting the server.
- [TIDCheck](#)
SAP TIP check for specified ID is requested by SAP.
- [TIDCommit](#)
SAP TID has been committed by SAP.
- [TIDCommitUnknown](#)
SAP attempting to confirm an unknown or uncommitted TID.
- [TIDCommittedInfo](#)
Specified TID was committed to SAP.
- [TIDCommittingInfo](#)
Committing TID to SAP.
- [TIDConfirmed](#)
SAP TID has been confirmed and deleted from the TID manager.
- [TIDRollback](#)
SAP TID has been rolled back.
- [TIDSentInfo](#)
Sending the IDOC with specified TID to SAP.
- [TIDUnknown](#)
SAP has requested rollback for unknown TID.
- [TransactionalError](#)
Unable to find the BAPI transaction RFCs.
- [UnicodeGateway](#)
The unicode instance property is set through JCONSOLE.
- [ValidationError](#)
Error occurred while validating the input data.
- [ValidationInfo](#)
Validation is on/off for the specified field value.

STS Module

The SAML STS Module This section contains details for the messages delivered from the STS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the STS Module.

MIB Name : *CASTIRON-COMP-STS-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.27*

The following table provides an alphabetical list of all notifications that can be issued by the STS Module.

Table 1. Notifications issued by the STS Module

Notification	Level	System	Description
ActivationFailed	Severe	Orchestration	Activation of Get SAML 2.0 token failed
AssertionEmpty	Severe	Orchestration	Received empty response from Security Token Service. Cannot get the SAML Assertion.
InputBodyConsidered	Info	Orchestration	RequestSecuirtyToken from Map Inputs is sent as request body because data sent in Map Inputs holds higher priority than in Configure Panel

Notification	Level	System	Description
RequestLocation	Info	Orchestration	Location of request being sent to Security Token Service
UriDeprecated	Warning	Orchestration	Security Token Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.

- [STS Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the STS Module.

Salesforce.com Module

The Salesforce.com Module provides access to the Salesforce.com online service. This section contains details for the messages delivered from the Salesforce.com Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Salesforce.com Module.

MIB Name : *CASTIRON-COMP-SFDC-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.3*

The following table provides an alphabetical list of all notifications that can be issued by the Salesforce.com Module.

Table 1. Notifications issued by the Salesforce.com Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	There was a problem in activating the activity.
ActivityOutput	Info	Orchestration	The activity has completed its operation and outputted param objects in output parameter.
BatchPollStart	Info	Orchestration	Starting a batch poll for index range specified.

Notification	Level	System	Description
ConnectFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
ConnectionFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
ConnectionTryAgain	Info	Orchestration	Not able to connect to Salesforce endpoint. Trying to establish a new session.
EndpointNull	Severe	Orchestration	The endpoint object provided to Salesforce.com activity is null.
ExecuteError	Severe	Orchestration	An error occurred while executing the activity.
ExecuteProblem	Severe	Orchestration	An error occurred while executing the query.
InitializeProblem	Warning	Orchestration	Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
InputParamMapped	Info	Orchestration	The optional input parameter in the activity is mapped.
InputParamNotMapped	Info	Orchestration	The optional input parameter in the activity is not mapped.
InvalidQuery	Severe	Orchestration	The query provided to Salesforce.com was invalid.
InvalidSFDCField	Severe	Orchestration	The field is invalid in Salesforce.com.
InvalidSFDCObject	Severe	Orchestration	The object is invalid in Salesforce.com
LargeData	Severe	Orchestration	The activity was not able to get data as id limit has exceeded.
LargeDataError	Severe	Orchestration	An error occurred due to large data which activity cannot handle.
LoginFailure	Severe	Orchestration	Failure while performing a login into Salesforce.com.
MarshalError	Severe	Orchestration	An error occurred while writing output parameters in the activity.
MetadataError	Severe	Orchestration	Unable to obtain meta data from Salesforce.com.
MetadataObjectError	Severe	Orchestration	Unable to obtain meta data for the object from Salesforce.com.
NoDatafound	Info	Orchestration	No data was found by the activity in the interval specified.
OptionalInputError	Severe	Orchestration	Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
ParameterOutput	Info	Orchestration	The activity has completed its operation and outputted objects in output parameter.

Notification	Level	System	Description
ParameterResults	Info	Orchestration	The activity has completed its operation and outputted result objects in output parameter.
PollActivateError	Severe	Orchestration	The poll activity failed to activate.
PollOutput	Info	Orchestration	The number of objects outputted for a batch poll.
PollReturnedNothing	Info	Orchestration	The poll activity did not return any ids for specified interval.
PollReturnedResults	Info	Orchestration	Poll activity returned these number of ids for interval specified.
SessionInvalid	Info	Orchestration	Salesforce session timed out and activity is establishing a new session.
SfdcErrorInternal	Severe	Orchestration	An internal error occurred in Salesforce.com connector.
ShortPoll	Info	Orchestration	The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
StillRun	Info	Orchestration	There is a problem in connectivity and messages will be picked up from this time when connectivity is established.
TimeTooClose	Info	Orchestration	The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
UnexpectedSFDCFault	Severe	Orchestration	Salesforce.com returned an unexpected fault that is not declared in the method signature.
UnmarshalError	Severe	Orchestration	An error occurred while reading input parameters in the activity.

Salesforce.com Connection Notifications

Provides a comprehensive list of connection notifications sent from the Salesforce.com Module.

- [ConnectionFailed](#)
The Salesforce.com operation failed because a connection to the server could not be established.
- [ConnectionRetry](#)
The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
- [ConnectionTryAgain](#)
Not able to connect to Salesforce endpoint. Trying to establish a new session.
- [LoginFailure](#)
Failure while performing a login into Salesforce.com.
- [OptionalInputError](#)
Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
- [SessionInvalid](#)
Salesforce session timed out and activity is establishing a new session.
- [StillRun](#)
There is a problem in connectivity and messages will be picked up from this time when connectivity is established.

ConnectionFailed

The Salesforce.com operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to Salesforce.com after {NumberOfRetryAttempts} attempts. Error is: {Message}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3cConnectionFailedEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.1*

SNMP Trap Number : *4*

Variables

The ConnectionFailed message contains the following variables:

Table 1. ConnectionFailed Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv4NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.1.1.4.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Parent topic: [Salesforce.com Connection Notifications](#)

ConnectionRetry

The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to Salesforce.com. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3cConnectionRetryEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.1*

SNMP Trap Number : 3

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.2

7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.3

8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv3IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.1.1.3.4

Salesforce.com Operation Notifications

Provides a comprehensive list of operation notifications sent from the Salesforce.com Module.

- [ActivateError](#)
There was a problem in activating the activity.
- [ActivityOutput](#)
The activity has completed its operation and outputted param objects in output parameter.
- [BatchPollStart](#)
Starting a batch poll for index range specified.
- [ConnectFailed](#)
The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
- [ExecuteError](#)
An error occurred while executing the activity.
- [ExecuteProblem](#)
An error occurred while executing the query.
- [InitializeProblem](#)
Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
- [InputParamMapped](#)
The optional input parameter in the activity is mapped.
- [InputParamNotMapped](#)
The optional input parameter in the activity is not mapped.
- [InvalidQuery](#)
The query provided to Salesforce.com was invalid.
- [InvalidSFDCField](#)
The field is invalid in Salesforce.com.
- [InvalidSFDCObject](#)
The object is invalid in Salesforce.com

- [LargeData](#)
The activity was not able to get data as id limit has exceeded.
- [LargeDataError](#)
An error occurred due to large data which activity cannot handle.
- [MetadataError](#)
Unable to obtain meta data from Salesforce.com.
- [MetadataObjectError](#)
Unable to obtain meta data for the object from Salesforce.com.
- [NoDatafound](#)
No data was found by the activity in the interval specified.
- [ParameterOutput](#)
The activity has completed its operation and outputted objects in output parameter.
- [ParameterResults](#)
The activity has completed its operation and outputted result objects in output parameter.
- [PollActivateError](#)
The poll activity failed to activate.
- [PollOutput](#)
The number of objects outputted for a batch poll.
- [PollReturnedNothing](#)
The poll activity did not return any ids for specified interval.
- [PollReturnedResults](#)
Poll activity returned these number of ids for interval specified.
- [ShortPoll](#)
The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
- [TimeTooClose](#)
The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
- [UnexpectedSFDCFault](#)
Salesforce.com returned an unexpected fault that is not declared in the method signature.

PollReturnedNothing

The poll activity did not return any ids for specified interval.

Level : *Info*

Log Message : *Poll did not return any ids for interval starting from {PollStartTime} to {PollEndTime}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3oPollReturnedNothingEv15*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.2*

SNMP Trap Number : *15*

Variables

The PollReturnedNothing message contains the following variables:

Table 1. PollReturnedNothing Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. PollStartTime

The start time for the poll.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv15PollStartTime
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.2.1.15.1

6. PollEndTime

The end time for the poll.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv15PollEndTime
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.2.1.15.2

Scheduler Module

The Scheduler Module allows jobs to be started on a regular basis. This section contains details for the messages delivered from the Scheduler Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Scheduler Module.

MIB Name : *CASTIRON-COMP-SCHEDULER-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.5

The following table provides an alphabetical list of all notifications that can be issued by the Scheduler Module.

Table 1. Notifications issued by the Scheduler Module

Notification	Level	System	Description
ActivityException	Severe	Orchestration	There was an error running scheduler activity.
SchedulerUnknownType	Warning	Orchestration	The group configured in the activity is unknown.
SchedulerWarning	Warning	Orchestration	There was an error in scheduler activity. Continuing to schedule further jobs.

- [Scheduler Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the Scheduler Module.

Siebel Module

The Siebel Module provides access to Oracle's Siebel CRM. This section contains details for the messages delivered from the Siebel Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Siebel Module.

MIB Name : *CASTIRON-COMP-SIEBEL-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.17*

The following table provides an alphabetical list of all notifications that can be issued by the Siebel Module.

Table 1. Notifications issued by the Siebel Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	Error occurred while activating the specified activity.
ConfigURI	Severe	Orchestration	Specified activity name is listening on the specified uri and port.
ConnectError	Severe	Orchestration	The invoke operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while setting up connection pool for specified activity.
ConnectionRetry	Warning	Orchestration	The invoke operation failed while trying to connect to the server. This will cause a retry.
DataException	Severe	Orchestration	Data error occurred while executing the activity.
GeneralError	Severe	Orchestration	General error occurred while sending the response.
IOError	Severe	Orchestration	IO error occurred while processing request.
InternalError	Severe	Orchestration	Internal error occurred while processing request.
InvokeActivate	Warning	Orchestration	Error in setup of repository/connection-pool in activate of specified activity. Setup will be done at activity execution time.
InvokeDeactivateError	Warning	Orchestration	Error occurred while deactivating the specified activity.
InvokeException	Severe	Orchestration	Error occurred while executing the activity.
InvokeSuccessful	Info	Orchestration	Activity has successfully executed activity and outputted output parameter RESPONSE.
MissingLibraries	Severe	Orchestration	Config file jas.ini needs to be present before the JD Edwards Invoke activity can be run. Please upload jas.ini file and run again.
ReceiveDeactivateErr	Severe	Orchestration	Error occurred while deactivating the specified activity.
ReceiveError	Severe	Orchestration	Error occurred while receiving in the specified activity name.
ReceiveSuccessful	Info	Orchestration	Receive activity successfully received request and outputted output parameter RESPONSE.
RepositoryError	Warning	Orchestration	Error occurred while setting up repository for specified activity.

Notification	Level	System	Description
UnSupportedEncoding	Severe	Orchestration	Error occurred while processing unsupported encoding.

- [Siebel Connection Notifications](#)
Provides a comprehensive list of connection notifications sent from the Siebel Module.
- [Siebel Operation Notifications](#)
Provides a comprehensive list of operation notifications sent from the Siebel Module.
- [Siebel Internal Notifications](#)
Provides a comprehensive list of internal notifications sent from the Siebel Module.

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.17.1.1*

SNMP Trap Number : 2

Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.2

7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.3

8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.4

Web Service Module

The Web Service Module provides activities to act as a Web Service client or server. This section contains details for the messages delivered from the Web Service Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Web Service Module.

MIB Name : *CASTIRON-COMP-WS-MIB*

The following table provides an alphabetical list of all notifications that can be issued by the Web Service Module.

Table 1. Notifications issued by the Web Service Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Web Service activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The webservice operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The webservice operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Web Service activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Web Service activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Web Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WSFaultString	Severe	Orchestration	The fault string returned by the WebService activity.
WebServiceException	Severe	Orchestration	Error occurred while processing Web Service activity.

WebSphere MQ Module

The WebSphere MQ module provides activities for communicating with IBM WebSphere MQ servers. This section contains details for the messages delivered from the WebSphere MQ Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the WebSphere MQ Module.

MIB Name : *CASTIRON-COMP-MQ-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.13*

The following table provides an alphabetical list of all notifications that can be issued by the WebSphere MQ Module.

Table 1. Notifications issued by the WebSphere MQ Module

Notification	Level	System	Description
ConnectRetry	Warning	Orchestration	The MQ operation failed while trying to connect to the server. This will cause a retry.
ConnectionError	Severe	Orchestration	The MQ operation failed because a connection to the server could not be established.
DetailsOpen	Info	Orchestration	Opening the queue with set all privileges as specified.
DuplicateFound	Info	Orchestration	Discarding the duplicate message found in get activity.
FormatError	Severe	Orchestration	The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
FormatWarning	Warning	Orchestration	Activity expected string data (MQFMT_STRING), but the message is of another format.
GetFailure	Severe	Orchestration	The get activity was not able to get messages from queue.
InputParamNull	Severe	Orchestration	The input parameter specified is of zero length.
InternalFailure	Severe	Orchestration	There was an internal error in MQ activity.
MQConnectionInfo	Info	Orchestration	The complete information about MQ Endpoint details.
MQMDFormatError	Severe	Orchestration	MQMD header input parameter format is incorrect.

Notification	Level	System	Description
MQProtocolWarning	Warning	Orchestration	Received warning from queue manager with specified MQ reason code.
MQPutDetails	Info	Orchestration	Putting in queue with set all privileges as specified.
MQPutFailure	Severe	Orchestration	MQ was unable to put message on queue due to specified error code.
MQRFHHeaderError	Severe	Orchestration	MQRFH2 header input parameter format is incorrect.
MessageDelievered	Info	Orchestration	The MQ message was successfully delivered to the specified queue.
MessageRetrieved	Info	Orchestration	Retrieved a message from the queue.
NoMessage	Info	Orchestration	There is no message available on the queue.
NoMessageFailure	Severe	Orchestration	The MQ operation failed as there was no message on queue on server.
NoMessageRetry	Warning	Orchestration	The MQ operation failed as there was no message on queue on server. This will cause a retry.
PollFailure	Severe	Orchestration	The poll activity was not able to get messages from queue.
RFHFormatError	Severe	Orchestration	Error encountered unmarshaling the MQRFH2 header.
ReasonCode	Info	Orchestration	The reason code for the MQ exception caught.

ConnectRetry

The MQ operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the Queue Manager "{QueueManager}". MQ returned error code "{ErrorCode}". Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13cConnectRetryEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.1*

SNMP Trap Number : 2

Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. QueueManager

The name of the queue manager which activity was not able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2QueueManager
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.1

6. ErrorCode

The error code returned by the MQ server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2ErrorCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2IntervalForRetries

- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.5

The MQ operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the Queue Manager "{QueueManager}" after {NumberOfRetryAttempts} attempt(s). MQ returned error code "{ErrorCode}".*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13cConnectionErrorEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.1*

SNMP Trap Number : 3

Variables

The ConnectionError message contains the following variables:

Table 1. ConnectionError Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"> • Type : String • SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber • SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none"> • Type : Integer • SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity • SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. QueueManager

The name of the queue manager which activity was not able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv3QueueManager
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.3.1

6. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv3NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.3.2

7. ErrorCode

The error code returned by the MQ server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv3ErrorCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.1.1.3.3

WebSphere MQ Operation Notifications

Provides a comprehensive list of operation notifications sent from the WebSphere MQ Module.

- [DetailsOpen](#)
Opening the queue with set all privileges as specified.
- [DuplicateFound](#)
Discarding the duplicate message found in get activity.
- [FormatError](#)
The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
- [FormatWarning](#)
Activity expected string data (MQFMT_STRING), but the message is of another format.
- [GetFailure](#)
The get activity was not able to get messages from queue.
- [MQMDFormatError](#)
MQMD header input parameter format is incorrect.
- [MQProtocolWarning](#)
Received warning from queue manager with specified MQ reason code.
- [MQPutDetails](#)
Putting in queue with set all privileges as specified.
- [MQPutFailure](#)
MQ was unable to put message on queue due to specified error code.
- [MQRFHHeaderError](#)
MQRFH2 header input parameter format is incorrect.
- [MessageDelievered](#)
The MQ message was successfully delivered to the specified queue.
- [MessageRetrieved](#)
Retrieved a message from the queue.
- [NoMessage](#)
There is no message available on the queue.
- [NoMessageFailure](#)
The MQ operation failed as there was no message on queue on server.
- [NoMessageRetry](#)
The MQ operation failed as there was no message on queue on server. This will cause a retry.
- [PollFailure](#)
The poll activity was not able to get messages from queue.
- [RFHFormatError](#)
Error encountered unmarshaling the MQRFH2 header.
- [ReasonCode](#)
The reason code for the MQ exception caught.

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. ReasonCode

The reason code for the MQ exception.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv13ReasonCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.13.1

Workday Module

The Workday Module provides activities to act as a Workday client. This section contains details for the messages delivered from the Workday Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Workday Module.

MIB Name : *CASTIRON-COMP-WD-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.24*

The following table provides an alphabetical list of all notifications that can be issued by the Workday Module.

Table 1. Notifications issued by the Workday Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Workday activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The workday operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The workday operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Workday activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Workday activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Workday Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WDFaultString	Severe	Orchestration	The fault string returned by the Workday activity.
WorkdayException	Severe	Orchestration	Error occurred while processing Workday activity.

ConnectFailed

The workday operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Error sending SOAP request to location: {LocationName}. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WD-MIB::ci24cConnectFailedEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.24.1.1*

SNMP Trap Number : *2*

Variables

The ConnectFailed message contains the following variables:

Table 1. ConnectFailed Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv2LocationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.2.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

Parent topic: [Workday Connection Notifications](#)

ConnectRetry

The workday operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to send the SOAP request to {LocationName}. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will retry again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WD-MIB::ciC24cConnectRetryEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.24.1.1*

SNMP Trap Number : *1*

Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<p>1. SerialNumber</p> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-IA-MIB::ciIaPlatSerialNumber• SNMP OID : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3
<p>2. Severity</p> <p>Severity of the Notification.</p> <ul style="list-style-type: none">• Type : Integer• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.1
<p>3. JobID</p> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none">• Type : String• SNMP Object Name : CASTIRON-REGISTRATIONS-MIB::ciEvJobID• SNMP OID : 1.3.6.1.4.1.13336.2.2.1.2.4
<p>4. Orchestration</p>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1LocationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.1

6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.3

8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.4

9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1.5

XMLQueryError

There was an error while querying the XML.

Level : *Severe*

Log Message : *Failed to query XML, error was: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-XML-MIB::ciC12oXMLQueryErrorEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.12.1.2*

SNMP Trap Number : 2

Variables

The XMLQueryError message contains the following variables:

Table 1. XMLQueryError Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

Uncategorized Notifications

This topic provides details about messages that have not formally been categorized in an existing module.

These notifications are used for events which have not yet been assigned their own OID. Use the information specified in the Message variable to identify individual notifications.

SNMP Name : *CASTIRON-IA-MIB::ciIaUncategorizedEv*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.1.1.10*

SNMP Trap Number : *1*

Variables

The uncategorized message contains the following variables:

Table 1. Uncategorized Message Variables

1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

5. Message

Textual description of the error. See the table below for a list of descriptions.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

6. LoggerName

Name of the logger used to send the notification. See table below.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaEvLoggerName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.10.1.1

Uncategorized Messages

This table lists the most commonly encountered uncategorized notifications. When one of these notifications is categorized, a replacement value is provided and the message remains in the uncategorized messages list for reference purposes.

Table 2. Uncategorized Messages

Severity	System	LoggerName	Message	Replacement
Severe	Orchestration	com.approuter.module.platform	Fan is not functional. Fan: {0} Current Speed: {1} rpm Min Required Speed: {2} rpm Max Allowed Speed: {3} rpm Machine ID: {4}	FanFailed

Log Message Reference

Alphabetized list of all log messages, with links to the details.

Message	Module	Level	Notification
A connection error occurred while sending the receive activity response. Exception: {Message}	HTTP	Severe	ReceiveSendReplyError
A connection error occurred while sending the response. Error is {Message}	HTTP	Severe	ReplyConnectionError
A general error occurred while sending the response. Exception: {Message}	HTTP	Severe	ReplyGeneralError
A select statement was issued to control table {TableName} to check for duplicate rows.	Database	Info	SelectStatement
About to execute function {FunctionName}	SAP	Info	StartFunctionExec
Access Violation by user: {Username}. Target: {Target}. Action Performed: {Action}.	Platform	Info	AccessViolation
Activation of Get SAML 2.0 token failed	STS	Severe	ActivationFailed
Activity could not be converted into TwoPhase activity	Master	Severe	ErrorTwoPhase

Message	Module	Level	Notification
Activity could not get activated. Error is: {Message}	Sal esf orc e.c om	S e v e r e	Activat eError
Activity expected string data (MQFMT_STRING), but the message is of format "{Format}".	We bS phe re MQ	W a r n i n g	Format Warnin g
Activity failed as data to get is larger than activity can handle. Error is: {Message}	Sal esf orc e.c om	S e v e r e	LargeD ataErr or
Activity {ActivityName} activated successfully	JD Ed war ds	I n f o	Activat eSucc essful
Activity {ActivityName} activated successfully	Peo ple Sof t	I n f o	Activat eSucc ess
Activity {ActivityName} activated successfully.	Do min o	I n f o	Activat eSucc ess
Activity {ActivityName} could not find any record	Peo ple Sof t	I n f o	GetNo Return
Activity {ActivityName} is stopped successfully.	Do min o	I n f o	StopSu ccess

Message	Module	Level	Notification
Activity {ActivityName} not started as {Name} is blank	PeopleSoft	Severe	ActivateFailureBlank
ActivityFactory (name - {ActivityName}, version - {ActivityVersion}) not registered	Mastero	Severe	NoActivityFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) has multiple registrations, not loading	Mastero	Severe	MultipleActFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) returned wrong class {ActivityClass}	Mastero	Severe	WrongActFactory
Adding Connection Pool with name {PoolName}	SAP	Info	PoolAddInfo
Adding Server Gateway {GatewayName}.	SAP	Info	AddingServerInfo
Additional property {PropertyName} set to {PropertyValue} so setup connection pool.	Email	Info	NewConnectEventTime
An I/O error occurred while processing the request. Exception: {Message}	HTTP	Severe	ReceiveIOError

Message	Module	Level	Notification
An error occurred handling a receive request. Exception: {Message}	HTTP	Severe	CommonHandlerError
An error occurred while archiving job logs. The error message is: {Message}	Platform	Severe	OrcmonArchiveError
An error occurred while closing the connection in the exception path. The exception is {Message}	Database	Warning	JDBCConnectionClose
An error occurred while connecting to the database. The exception is {Message}	Database	Warning	ConnectionError
An error occurred while connecting to the database. The exception is {Message} The job is retrying: {RetryAttemptNumber} out of {TotalRetryAttempts} attempts to connect to the database . Another attempt will be made after {IntervalForRetries} secs.	Database	Warning	ConnectionRetry
An error occurred while executing a query on the job log database. The error message is: {Message}	Platform	Severe	OrcmonDatabaseError

Message	Module	Level	Notification
An error occurred while processing the message for the parameterized query activity at row number {RowNumber}. The error is: {Message}	Database	Severe	Param Query Error
An error occurred while processing the request. Exception: {Message}	HTTP	Severe	ReceiveInternalError
An error occurred while reading headers. Exception: {Message}	HTTP	Severe	ReplyUnMarshalHeader
An error occurred while setting the key store. Exception: {Message}	HTTP	Severe	RegisterKeyStore
An error occurred while trying to execute activity {ActivityName}. Error is: {Message}	Domaino	Severe	ActivityFailure
An error occurred while trying to process an unsupported Accept-Charset encoding. Exception: {Message}	HTTP	Severe	ReceiveOperationError
An exception occurred while activating the activity. The exception is :{Message}	HTTP	Severe	RequestActivate

Message	Module	Level	Notification
An exception occurred while activating the parameterized query activity. The exception is: {Message}	Database	Severe	Param Query Activate
An exception occurred while activating the stored procedure activity. The exception is: {Message}	Database	Severe	Stored ProcActivate
An exception occurred while deleting the row from the control table. The exception is {Message}	Database	Severe	ErrorDeletePost
An exception occurred while deleting the row from the control table. The exception is: {Message}	Database	Severe	Delete RowsError
An exception occurred while processing a SingleTableNotification job. Data error at row number {RowNumber} of table {TableName}. The Error is {Message}	Database	Severe	ErrorSingleTableJob
An exception occurred while processing an outbound job in the stored procedure activity. Data error at row number: {RowNumber}. The error is {Message}	Database	Severe	Stored ProcException
An exception occurred while processing the inbound job: {Message}	Database	Severe	InboundOperationError

Message	Module	Level	Notification
An insert statement was issued to the control table. {TableName}	Database	Info	InsertTableStatement
An internal error occurred: {Message}.	WebSphere MQ	Severe	InternalFailure
An unexpected result returned from the buffer table. Expecting rows to be present in the result, instead the result is empty.	Database	Warning	UnexpectedEmptyRows
An unknown exception occurred while sending the response to the client. Exception: {Message}	HTTP	Severe	ReplyUnknownError
Append data to file "{FileName}" completed with return code {ResponseCode}.	FTP	Info	AppendAfter
Appending data to file "{FileName}".	FTP	Info	AppendBefore
Archiver created successfully, now performing archiving.	Archive	Info	ArchiverCreated
Archiving done successfully.	Archive	Info	ArchiveDone

Message	Module	Level	Notification
Attempt to upgrade Cast Iron firmware on appliance {AffectedAppliance} from version {OldVersion} to version {NewVersion} failed: {Message}.	Platform	Severe	UpgradeFailed
Authentication failure for user {Username}, from host {Host}.	Platform	Severe	AuthFailure
Authentication success for user {UserName}, from host {Host} with session id {SessionId}.	Platform	Info	AuthSuccess
Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}.	Platform	Warning	NetworkAutohost
Automatically converting old style FTP filename pattern from "{OldStylePattern}" to "{NewStylePattern}". Please republish project from Studio version 3.6 or later to eliminate this warning.	FTP	Warning	FtpPatternConversion
Binding parameters supplied are invalid.	Archive	Severe	IncorrectParameters
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.	MIME	Info	BoundaryAbsent

Message	Module	Level	Notification
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.	MI ME	Warning	BoundaryMoreThan70
Boundary is: \"{Boundary}\".	MI ME	Info	BoundaryInfo
Boundary specified in header but no boundary found in the body. Returning single body.	MI ME	Warning	NoBoundaryFound
Call context created but task never started; destroying task {TaskID}	Mastero	Info	CallContextDestroy
Call to function {FunctionName} is complete	SAP	Info	CompleteFunctionExec
Cancel of job {JobID} of Orchestration {OrchName} failed: {Message}.	Mastero	Severe	LoaderCancel
Cannot complete this job due to low memory, please try redeploying this orchestration	Mastero	Severe	LargeTotalVarSize
Cannot start an orchestration that is in transient state: {State}	Mastero	Severe	ProgramStart

Message	Module	Level	Notification
Caught exception while canceling job: {Message}	Mastero	Warning	TaskCancelled
Changed directory to "{DirectoryName}" completed with return code {ResponseCode}.	FTP	Info	DirChangeAfter
Changing to directory "{DirectoryName}".	FTP	Info	DirChangeBefore
Committing TID {TID}.	SAP	Info	TIDCommittingInfo
Completed activity and spewed out sessionInfo and {NameOfOutputParam} output parameter.	Sal esf orc e.c om	Info	ActivityOutput
Completed activity and spewed out sessionInfo output parameter and {NumberOfObjects} objects in output parameter {NameOfOutputParam}.	Sal esf orc e.c om	Info	ParameterOutput
Completed activity and spewed out sessionInfo output parameter and {NumberOfResults} result objects in output parameter {NameOfOutputParam}.	Sal esf orc e.c om	Info	ParameterResults
Composite media type {MediaType} cannot have any other Content-Transfer-Encoding apart from 7bit, 8bit or binary.	MIME	Severe	TransferEncodingError

Message	Module	Level	Notification
Config Parameters: From: \"{From}\", To: \"{To}\", CC: \"{CC}\", BCC: \"{BCC}\", Subject: \"{Subject}\".	Email	Info	SmtPConfigParams
Config parameters: From Pattern: \"{FromPattern}\", Subject Pattern: \"{SubjectPattern}\".	Email	Info	Pop3COnfigParams
Connected to the POP3 server.	Email	Info	Pop3COnnect
Connected to the SMTP server.	Email	Info	SmtPCOnnect
Connection Pool {PoolName} already exists, Using existing definition.	SAP	Info	PoolExistInfo
Connection error while executing activity {ActivityName}. The error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s)	JDEwards	Warning	JDERetryError
Connection error while executing activity {ActivityName}. The error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s)	PeopleSoft	Warning	ConnectionRetry
Connection exception in the subscriber. The exception is {Message}. Going to restart the subscriber after the {IntervalForRestart} secs	JMS	Severe	SubscriberConnect

Message	Module	Level	Notification
Connection exception while getting message from the provider. The error code is {ErrorCode} and message is {ErrorMessage}. The job is retrying {RetryAttemptNumber}, out of {TotalRetryAttempts} attempts to connect to JMS provider. The next attempt will be after {IntervalForRetries} seconds.	JMS	Warning	GetConnectRetry
Connection exception while polling message. The exception is {Message}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.	JMS	Warning	PollMessageRetry
Connection exception while sending message. The error code is {ErrorCode} and exception is {ErrorMessage}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.	JMS	Warning	SendConnectRerty
Connection handler retrieved from the call context is Null!	HTTP	Severe	ReplyHandlerNull
Content-Encoding header received: {ContentEncodingHeader}	HTTP	Info	IncomingContentEnc
Content-Transfer-Encoding value for attachment {AttachmentNumber} is {EncodingValue} while the attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.	MIME	Warning	TransferEncChang

Message	Module	Level	Notification
Content-Transfer-Encoding value missing for attachment number {AttachmentNumber}. Guessing based on Content-Type and charset values.	MI ME	Warning	TransferEnc Missing
Content-type not found. Taking default Content-Type as text/plain.	MI ME	Info	DefaultContentType
Could not add route to {DestinationIP} on {LinkName}.	Platform	Warning	NetworkInvalidRoute
Could not clean up object with ID {ObjectID}, will try later	Master	Warning	DeleteObject
Could not close output stream	Master	Warning	CloseOutputStream
Could not close reader	Master	Warning	CloseInputStream

Message	Module	Level	Notification
Could not close reader	Maestro	Warning	CloseReader
Could not close writer	Maestro	Warning	CloseWriter
Could not delete file "{FileName}" after processing. Error is {Message}	FTP	Warning	UnableToDelete
Could not execute query to preload lookup cache	Data Quality	Warning	BadPreloadQuery
Could not find an Archiver for supplied archive type: {FormatName}	Archive	Severe	InvalidArchiveFormat
Could not find an entry point for the activity: [{ActivityName}] in the compiled orchestration	Maestro	Severe	EntryPath

Message	Module	Level	Notification
Could not get data for date range, because id limit exceeded	Salesforce.com	Severe	LargeData
Could not initialize FaultInfo	Mastero	Severe	FaultInfo

Introduction

This information center provides information for WebSphere® DataPower Cast Iron® Management API Guide .

About WebSphere DataPower Cast Iron Management API Guide

The Management API guide is written for developers and IT personnel who want to manage Integration Appliance and the Cloud by using applications or scripts.

This guide assumes that you have an intermediate level of expertise in integration projects and some experience in supporting and managing an IT environment.

Integration Appliance and Cloud documentation

To view PDF documents, download Adobe Reader version 5 or higher from Adobe Systems Inc., see <http://www.adobe.com>.

You can access documentation from the Documentation CD.

The documentation set includes the following books:

Command Line Interface Reference

Reference information about commands available from the Command Line Interface (CLI).

Getting Started Guide

An overview of Integration Appliance and Studio, and summary information about using Studio to create integration projects that run on the Integration Appliance

HA Overview Guide

A high-level overview about High Availability (HA) pairs. This guide includes information about HA pair states, configuration requirements, commands, and troubleshooting issues.

Management API Guide

Information for the Management API for the Cloud and Integration Appliances.

Documentation conventions

The following table describes the conventions that are used in this document.

Convention	Description
<Hostname> command	Examples of using commands are shown in this document in this format.
<code>enter exactly as shown</code>	Procedures might also include instructions on what you should enter for particular fields, prompts, or commands. Information in this font must be typed exactly as shown.
<code>net set interface dataaddress <port-address></code>	Placeholders are shown between angle brackets (<>) and generally indicate the type of information you should supply in the command.
Menu > Submenu	Instructions that use menu commands use the greater than symbol (>) to indicate submenus, for example, “click Configuration > Notifications”.

Other resources

In addition to the product information, IBM® provides these other resources:

- Online help
- Information centers

- Knowledge Base
- Product Support

Online help

Online help is accessible from Studio and the Web Management Console.

IBM website

You can access the IBM Corporation website at: <http://www.ibm.com>.

The site contains information about the IBM Corporation, its background, and products. The site also provides contact information for sales and technical support.

Contacting IBM support

IBM support provides assistance with product defects. Before contacting IBM support, the following criteria must be met:

- Your company has an active maintenance contract.
- You are authorized to submit problems.

Submit the problem in one of two ways:

- Electronically through the Service Request (SR) problem submission tool. You must sign in with your IBM ID and password.
- Telephone. Refer to the directory of worldwide contacts in the IBM Software Support Handbook for the appropriate software support phone number to call.

Overview of the Management API guide

An overview of the Management API. The API provides management capabilities for Clouds and Integration Appliances.

The Management API is implemented as a web service. This web service provides a way to manage WebSphere® DataPower Cast Iron® Appliances (Integration Appliances) and WebSphere Cast Iron Cloud (Cloud) projects through your applications or scripts.

The API provides Integration Appliance and Cloud management in the following areas:

Deployment

Provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can import or export repositories.

Security

Provides operations to create, get, list, and delete users, roles, and permissions. You can log in and log out by using the security WSDL.

Staging

Checks whether the staging database is started and starts or stops the staging database. (Applies to appliances only.)

System Administration

Sets or gets the appliance name or network configuration. You can also run system commands or get system information. (Applies to appliances only.)

Job Monitoring

Searches for job, gets job count, and gets job details. You can also set and get job monitoring properties.

Logs and Notifications

Saves, gets, and deletes notification policies. You can also get and set email and SNMP endpoints, set and get log levels, and get log count.

The Management API complies with the following web services standards:

- Web Services Interoperability Organization (WS-I) Basic Profile 1.0
- SOAP 1.1
- Web Services Description Language (WSDL) 1.1
- XML Schema 1.1

You can create client applications that call web services operations to manage and monitor Integration Appliances and Cloud projects. Communication between the client application and the Integration Appliance or Cloud project is accomplished by using HTTP or HTTPS.

The Management API is defined in WSDL files. Client applications call web services operations by sending SOAP messages. SOAP messages are formatted in XML and so are programming language neutral.

Examples of SOAP messages

This section provides examples of logging in, getting a user and logging out using the Management API - Security WSDL.

The following code is an example of a SOAP request to log in.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header/>
  <soapenv:Body>
    <sec:login>
      <sec:username>webuser@mycompany.com</sec:username>
      <sec:password>D3nu9noB</sec:password>
    </sec:login>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP reply to the request to log in.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:sessionId>8F059BEEA3611033D27773A95404641</ns2:sessionId>
    </ns2:loginResponse>
  </S:Body>
</S:Envelope>
```

The *sessionId* is required to perform other SOAP operations after you log in to an Integration Appliance or the Cloud.

The following code is an example of a SOAP request to get a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getUser>
      <sec:username>webuser</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP response to the request to get a user.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>8F059BEEA3611033D277773A95404641</ns3:id>
        <ns3:name>webuser</ns3:name>
        <ns3:encPasswd>{SHA}clO20r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webuser@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

The following code is an example of a SOAP request to logout.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:logout/>
  </soapenv:Body>
</soapenv:Envelope>
```

Cloud examples

The following examples apply to the Cloud only.

The previous examples used SOAP operations that ran in a tenant in the Cloud or an Integration Appliance. To run operations in environments within a tenant in the Cloud, you use the `setCurrentScope` operation to set the scope to the environment where you want to run SOAP operations.

The following example sets the scope to the development environment and then starts a project located in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>63Y93HD6D856EB5812EB71216C3547W7</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScope>
      <sec:scopeName>Development</sec:scopeName>
    </sec:setCurrentScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeResponse>
  </S:Body>
</S:Envelope>
```

The following example is a SOAP request to start a configuration in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>63Y93HD6D856EB5812EB71216C3547W7</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/
types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:startResponse>
  </S:Body>
</S:Envelope>
```

WSDL files

Client-side web services use the WSDL file to create stubs that enable client-side applications to interact with an Integration Appliance or Cloud project.

The WSDL files specify the operations that a client application can use to install, manage, and monitor an Integration Appliance or Cloud project.

The Management API is defined in six WSDL files:

- security.wsdl
- staging.wsdl
- deployment.wsdl
- system.wsdl
- orcmon.wsdl
- lognotif.wsdl

You can download the WSDL files from the following locations for an Integration Appliance:

- Security: <https://<appliance>/ws/security?wsdl>
- Staging: <https://<appliance>/ws/staging?wsdl>
- Deployment: <https://<appliance>/ws/deployment?wsdl>
- System: <https://<appliance>/ws/system?wsdl>
- Orcmon: <https://<appliance>/ws/orcmon?wsdl>
- Lognotif: <https://<appliance>/ws/lognotif?wsdl>

You can download the WSDL files from the following locations for the Cloud:

- Security: <https://cloud2.castiron.com/ws/security?wsdl>
- Staging: <https://cloud2.castiron.com/ws/staging?wsdl>
- Deployment: <https://cloud2.castiron.com/ws/deployment?wsdl>
- System: <https://cloud2.castiron.com/ws/system?wsdl>
- Orcmon: <https://cloud2.castiron.com/ws/orcmon?wsdl>
- Lognotif: <https://cloud2.castiron.com/ws/lognotif?wsdl>

Glossary of terms for WebSphere DataPower Cast Iron Management API Guide

This glossary defines WebSphere® DataPower Cast Iron® Management API Guide terms that are used in this documentation.

This glossary contains terms specific to WebSphere DataPower Cast Iron Management API Guide .

A B C D **E** F G H I J K L M N O P Q **R S T** U V W X Y Z

E

environment

In the Cloud, an environment is a subdivision of a tenant. A typical tenant contains development, staging, and production environments. An environment has its own administrators, users, roles, and role groups. After a project is completed in the Modify tab, it is published to an environment where it can be deployed, tested, and run. The administrator role of an environment can assign users to roles and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the environment.

[TOP](#)

R

role

Role is a way to provide users with a pre-defined set of permissions. When an administrator assigns a role to a user the user is able to access all of the projects to which the role is has permissions. The user can also perform all of the actions for which the role has permissions. In the Cloud, the user gets access to any tenants and environments to which the role has permissions.

roleGroup

Use to combine roles into a single entity which can then be assigned to users. A user assigned to a roleGroup inherits all of the access and permissions that the roles in the roleGroup are given.

[TOP](#)

S

scope

In the Cloud, scope refers to either a tenant or an environment within a tenant. You use `setCurrentScope` to set the scope to where you want to run SOAP operations. Scope applies to the Cloud only.

[TOP](#)

T

tenant

The Cloud is a multi-tenant cloud as opposed to a single-tenant cloud. Each tenant can be divided into environments such as development, staging, and production. The administrator role of the tenant can assign users to environments, roles, and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the tenant and environments within the tenant.

[TOP](#)

Security

Information about the security WSDL.

The security WSDL provides operations to create, get, list and delete users, roles, and permissions. You log in and log out by using the security WSDL.

This section contains the following topics:

addRoleToRoleGroup

Adds the specified role as a member to the specified group.

Applies to Clouds and Integration Appliances.

Parameters:

role

The name of the role.

group

The name of the group to which the role is to be added.

Returns:

True if the role is successfully added to the group.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00006.html>

changePassword

Changes the password for the specified username.

Parameters:

username

The username for which the password is to be changed.

oldPassword

The old password for the username.

newPassword

The new password for the username.

Returns:

True if the password was successfully changed.

Examples:

The following example is a SOAP request to change the password for a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B0097A43C5527FA552C3DDBA7EF74CE9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:changePassword>
      <sec:username>webman</sec:username>
      <sec:oldPassword>Oldpw12g</sec:oldPassword>
      <sec:newPassword>Newpw24e</sec:newPassword>
    </sec:changePassword>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:changePasswordResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:changePasswordResponse>
  </S:Body>
</S:Envelope>
```

clearPrivileges

Clears privileges for the specified target, such as a user.

Applies to Clouds and Integration Appliances.

Parameter:

target

The specified target.

Returns:

True if the privileges are cleared for the specified target.

Examples:

The following code is an example of a SOAP request to create a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B87CDEE24C7AE5EE4B1C00158EBC483D</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:clearPrivileges>
      <sec:target>pubuser</sec:target>
    </sec:clearPrivileges>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is the SOAP response to the request.

```

createRole

Creates a role.

Applies to Clouds and Integration Appliances.

Parameters:

role

The specified roleName for the role that you want created.

displayName

The name to be displayed in the WMC.

email

The email address for the role.

Returns:

True if the role is created.

Examples:

The following example is a SOAP request to create a role. The input for the request is the session ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

deleteRole

Deletes a specified role.

Applies to Clouds and Integration Appliances.

Parameter:

role

The specified roleName to delete.

Returns:

True if the role is deleted.

Examples:

The following example is a SOAP request to delete a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B0097A43C5527FA552C3DDBA7EF74CE9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:deleteRole>
      <sec:role>jobmonitor</sec:role>
    </sec:deleteRole>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:deleteRoleResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:deleteRoleResponse>
  </S:Body>
</S:Envelope>
```

deleteUser

Deletes the user with the specified username.

Applies to Clouds and Integration Appliances.

Parameter:

username

The user to delete from the tenant, environment, or project.

Returns:

True if the user was successfully deleted.

Examples:

The following example is a SOAP request to delete a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BAB25F1A2A1ADCC0BB0D455D41354509</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:deleteUser>
      <sec:username>webman</sec:username>
    </sec:deleteUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:deleteUserResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:deleteUserResponse>
  </S:Body>
</S:Envelope>
```

disableUser

Disables a username. A disabled username cannot authenticate.

Applies to Clouds and Integration Appliances.

Parameter:

username

The username to disable.

Returns:

True if the user was successfully disabled.

Examples:

The following example is a SOAP request to disable a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

getImpliedRoles

Returns a list of all roles to which the specified user is a member. The list might contain roles that might not have been explicitly granted to the user, but are indirectly implied due to group memberships.

Applies to Clouds and Integration Appliances.

Parameter:

username
The specified user.

Returns:
The role names.

getRole

Gets the specified role.

Applies to Clouds and Integration Appliances.

Parameter:

role

The specified role to return.

Returns:

The specified role

Examples:

The following example is a SOAP request to get a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BC77BA76E338CFA6B0063218A0AE4656</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getRole>
      <sec:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</sec:name>
    </sec:getRole>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRoleResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:group>
        <ns3:id>903273B869AC8CA9D99F4C8448694680</ns3:id>
        <ns3:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</ns3:name>
        <ns3:displayName>Publisher Group</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>false</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:createdTime>2010-04-10T00:08:23Z</ns3:createdTime>
        <ns3:scopeId>A347B0C49C8CFA462D4F28A4C05B47C2</ns3:scopeId>
        <ns3:scopeType>Environment</ns3:scopeType>
        <ns3:groupType>Publisher</ns3:groupType>
      </ns2:group>
    </ns2:getRoleResponse>
  </S:Body>
</S:Envelope>
```

For each role the following information is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs. If you create your own group, it is a custom group. For information about the built-in groups, see [WMC Help > Permissions > About Built-in Groups](#).

  <soapenv:Body>
    <sec:getRoleById>
      <sec:id>8F52644BBA2491693D440F2FA12A4B3D</sec:id>
    </sec:getRoleById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is a SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRoleByIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security"
xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:group>
        <ns3:id>8F52644BBA2491693D440F2FA12A4B3D</ns3:id>
        <ns3:name>securitymonitor</ns3:name>
        <ns3:displayName>monitor</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>security@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-23T19:14:30.066Z</ns3:createdTime>
        <ns3:scopeId>A6EFAF24DB7168A4206F605CA6E14B1D</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
        <ns3:groupType>Custom</ns3:groupType>
      </ns2:group>
    </ns2:getRoleByIdResponse>
  </S:Body>
</S:Envelope>
```

For each role the following information is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs.

        <ns3:groupType>Custom</ns3:groupType>
      </ns2:roles>
    </ns2:getRolesResponse>
  </S:Body>
</S:Envelope>

```

```
</S:Body>
</S:Envelope>
```

For each role the following is returned:

id

The ID for the role.

name

The name of the role.

displayName

The name displayed in the WMC for the role.

isActive

True or false depending on whether the role is active.

isMutable

True or false. True means that the object can be updated.

isVisible

True or false. True means that the object is visible in the WMC.

email

The email address for the role.

createdTime

The date and time the role was created. The time is compliant with ISO 8601.

scopeId

The ID of the scope where the role is found. (Cloud only.)

scopeType

The type of scope, either tenant or environment. (Cloud only.)

groupType

The type of group to which the role belongs.

getRolesInRoleGroup

Returns a list of all the roles in the specified role group.

Applies to Clouds and Integration Appliances.

Parameter:

name

The specified role group.

Returns:

The list of roles for the specified role group.

getRoleUsers

Returns a list of all the users that are members of the specified role.

Applies to Clouds and Integration Appliances.

Parameter:

name

The specified role.

Returns:

The list of users for the specified role.

getScope

Gets the specified scope in the specified parent scope.

Applies to Clouds only.

Parameters:

scopeType

The type of scope, which is either tenant or environment.

name

The name of the scope.

parentScopeId

The ID of the parent scope.

Returns:

The specified scope.

Examples:

The following example is a SOAP request to get the specified scope in the specified parent scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>AA91E56114D36B296D82660639B6482F</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScope>
      <sec:scopeType>ENV</sec:scopeType>
      <sec:name>Staging</sec:name>
      <sec:parentScopeId>88673D5DF2583806B037576D94F34BBA</
sec:parentScopeId>
    </sec:getScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scope>
        <active>true</active>
        <displayName>Staging</displayName>
        <id>A51EDD44BE6C10B2D1335A9D634D407D</id>
        <index>1</index>
        <name>Staging</name>
        <parentId>88673D5DF2583806B037576D94F34BBA</parentId>
        <type>ENV</type>
      </ns2:scope>
    </ns2:getScopeResponse>
  </S:Body>
</S:Envelope>
```

getScopeById

Gets the scope as specified by the ID.

Applies to Clouds only.

Parameter:

scopeID

The ID for the scope.

Returns:

The scope as specified by the ID.

Examples:

The following code is an example of a SOAP request to get a scope by its ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B60EA6425F8FCB16BB6E96063D09408E</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScopeById>
      <sec:scopeId>9378E8C3C5E5DCACA77D9F7B6BE24B98</sec:scopeId>
    </sec:getScopeById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopeByIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scope>
        <active>true</active>
        <category>enterprise</category>
        <displayName>mycompany.com</displayName>
        <id>9378E8C3C5E5DCACA77D9F7B6BE24B98</id>
        <index>0</index>
        <name>castiron.com</name>
        <parentId>00000000000000000000000000000000</parentId>
        <type>TENANT</type>
      </ns2:scope>
    </ns2:getScopeByIdResponse>
  </S:Body>
</S:Envelope>
```

getScopesByParentId

Using the ID of the parent scope, returns a list of all the child scopes.

Applies to Clouds only.

Parameter:

parentScopeId

The ID for the parent scope.

Returns:

A list of child scopes.

Examples:

The following example is a SOAP request to get scopes by using the ID of the parent scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/
schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>B0097A43C5527FA552C3DDBA7EF74CE9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getScopesByParentId>
      <sec:parentScopeId>BB173AE61484BD7359D8910789EA4E88</
      sec:parentScopeId>
    </sec:getScopesByParentId>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request. The parent scope is a tenant and the child scopes are the environments in the tenant.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getScopesByParentIdResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security"
xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:scopes>
        <active>true</active>
        <displayName>Staging</displayName>
        <id>9203C78275503796DB49CB5E6CF34111</id>
        <index>1</index>
        <name>Staging</name>
        <parentId>BB173AE61484BD7359D8910789EA4E88</parentId>
        <type>ENV</type>
      </ns2:scopes>
      <ns2:scopes>
        <active>true</active>
        <displayName>Development</displayName>
        <id>A26D2319BAE05E9513117949CF274A09</id>
        <index>0</index>
        <name>Development</name>
        <parentId>BB173AE61484BD7359D8910789EA4E88</parentId>
        <type>ENV</type>
      </ns2:scopes>
    </ns2:scopes>
  </S:Body>
</S:Envelope>
```

```
<active>true</active>
<displayName>Production</displayName>
<id>B56005332F3E41A3F1456F5F40594A06</id>

<name>Production</name>
<parentId>BB173AE61484BD7359D8910789EA4E88</parentId>
<type>ENV</type>
</ns2:scopes>
</ns2:getScopesByParentIdResponse>
</S:Body>
</S:Envelope>
```

For each child scope, the following information is returned:

active

True or false. True means that the scope is active.

displayName

The name displayed in the WMC for the role.

id

The ID for the child scope.

index

The position in the index of the child scope.

name

The name of the child scope.

parentId

The ID of the parent scope.

type

The type of scope.

    <sec:getUser>
      <sec:username>webman</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>965AAB3FED8D3CCBBE4DC8EE0E2944EA</ns3:id>
        <ns3:name>webman</ns3:name>
        <ns3:encPasswd>{SHA}c1020r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webman@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

For each user the following information is returned:

id

The ID for the user.

name

The name for the user.

encPasswd

The SHA encoded password for the user.

displayName

The name displayed in the WMC for the role.

isActive

True if the user is logged in, false if not.

isMutable

True or false. True means that the object can be updated, false if not.

isVisible

True or false. True means that the object is visible in the WMC, false if not.

email

The email address for the user.

createdTime

The date and time the user was created.

failedLoginCount

The number of failed attempts to log in by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled (15 - 30 - 60 - 120).

scopeId

The scope ID for the scope where the user is located. Does not apply for Integration Appliances.

scopeType

The type of scope, either tenant or environment. Does not apply for Integration Appliances.

</ns2:getUsersResponse>
</S:Body>
</S:Envelope>

```

For each user the following information is returned:

id

The ID for the user.

name

The name for the user.

encPasswd

The SHA encoded password for the user.

displayName

The name displayed in the WMC for the user.

isActive

True or false depending on whether the user is logged in.

isMutable

True or false. True means that the object can be updated, false if not.

isVisible

True or false. True means that the object is visible in the WMC, false if not.

email

The email address for the user.

createdTime

The date and time the user was created.

failedLoginCount

The number of failed attempts to log in to the tenant by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled.

scopeId

The scope ID for the scope where the user is located. Applies to Clouds only.

scopeType

The type of scope, either tenant or environment. Applies to Clouds only.

hasPrivilege

Returns true if a privilege exists for the specified user, target, and action.

Applies to Clouds and Integration Appliances.

Parameters:

username

The specified user.

target

The specified target.

action

The specified action.

Returns:

True if the privilege exists.

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00038.html>

isRealmUser

Returns true if the specified user belongs to the realm that corresponds to the session ID.

Applies to Clouds and Integration Appliances.

Parameter:

username
The specified user.

Returns:
True if the user belongs to the realm.

Examples:

The following example is a SOAP request to check if the specified user belongs to the realm.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:isRealmUser>
      <sec:username>admin@mycompany.com</sec:username>
    </sec:isRealmUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:isRealmUserResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:isRealmUser>true</ns2:isRealmUser>
    </ns2:isRealmUserResponse>
  </S:Body>
</S:Envelope>
```

isUserEnabled

Checks to see if the specified username is enabled. An enabled user is authenticated.

Applies to Clouds and Integration Appliances.

Parameter:

username
The username to be checked.

Returns:
True if the specified username is enabled.

Examples:

The following example is a SOAP request to check if the specified user is enabled.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:isUserEnabled>
      <sec:username>webman</sec:username>
    </sec:isUserEnabled>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:isUserEnabledResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:isUserEnabled>true</ns2:isUserEnabled>
    </ns2:isUserEnabledResponse>
  </S:Body>
</S:Envelope>
```

Feedback | Notices

listAvailableActions

List the available actions for a specified target.

Applies to Clouds and Integration Appliances.

Parameter:

target

The specified target.

Returns:

The list of actions for the specified target.

listGrantableRoles

Returns a list of roles that can be granted (excludes conditional roles).

Applies to Clouds and Integration Appliances.

Returns:

The list of roles.

Examples:

The following example is a SOAP request to list the grantable roles.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00044.html>

listUsers

Returns a list of all users.

Applies to Clouds and Integration Appliances.

Returns:

A list of all users.

Examples:

The following example is a SOAP request for the list of users.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
```

```
<soapenv:Body>
  <sec:listUsers/>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request for the list of users:

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:listUsersResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:users>foo@mycompany.com</ns2:users>
      <ns2:users>httpclient@mycompany.com</ns2:users>
      <ns2:users>admin@mycompany.com</ns2:users>
      <ns2:users>webman@mycompany.com</ns2:users>
      <ns2:users>support@mycompany.com</ns2:users>
    </ns2:listUsersResponse>
  </S:Body>
</S:Envelope>
```

Feedback | Notices

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00045.html>

login

Logs in to an Integration Appliance or a Cloud.

Parameters:

username

The user ID that you use to log in to an Integration Appliance or Cloud.

password

The password for username.

Returns:

The session ID.

Examples:

The following code is an example of a SOAP request that you can use to log in to the web service:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header/>
  <soapenv:Body>
    <sec:login>
      <sec:username>webman@mycompany.com</sec:username>
      <sec:password>My6word3S</sec:password>
```

```
</sec:login>
</soapenv:Body>
</soapenv:Envelope>
```

The password must be at least eight characters long and contain a combination of three of the following characters:

- Alphabet characters
- Uppercase alphabet characters
- Numbers
- Special characters

The following code is an example of a SOAP response to a successful login request:

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:sessionId>8F059BWEA3611033D277773A95404641</ns2:sessionId>
    </ns2:loginResponse>
  </S:Body>
</S:Envelope>
```

The session ID is required to run the other operations in the Management API after logging in.

setCurrentScope

Sets the current scope for this thread.

Applies to Clouds only.

Returns:

True if the current scope was set.

Examples:

The following example is a SOAP request to set the current scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>84B7E4D6D856EB5812EB71896C3547CC</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScope>
      <sec:scopeName>Development</sec:scopeName>
    </sec:setCurrentScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/

updateUser

Updates a user.

Applies to Clouds and Integration Appliances.

Parameters:

username

The user name for the tenant associated with the session ID.

displayName

The name to display in the WMC.

email

The email address for the username.

Returns:

True if the user was successfully updated.

Examples:

The following example is a SOAP request to update a user. The input for the request is the session ID and the username. The email address is being updated in this example.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

Deployment

Information about the deployment WSDL.

The deployment WSDL provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can also import or export repositories.

This section contains the following topics:

- [cancelJob](#)
- [cloneConfiguration](#)
- [createAssets](#)
- [createConfiguration](#)
- [createRepeatingRule](#)
- [createRule](#)
- [createUserConfiguration](#)
- [deleteConfiguration](#)
- [deleteProject](#)
- [deleteRule](#)
- [deleteUserConfiguration](#)
- [downloadProject](#)
- [exportRepository](#)
- [getAllProjects](#)
- [getAssetGroupDisplayString](#)
- [getAssetGroupScript](#)
- [getAssetGroupWarnings](#)
- [getAssetProperties](#)
- [getAssetPropertiesBindings](#)
- [getConfiguration](#)
- [getConfigurationGroups](#)
- [getProject](#)
- [getRule](#)
- [getRules](#)
- [getUserConfiguration](#)
- [getUserConfigurations](#)
- [importRepository](#)
- [publishProject](#)
- [resume](#)
- [saveOrchestrationValues](#)

- [saveProperties](#)
- [setConfigurationGroups](#)
- [start](#)
- [stopAndCancel](#)
- [stopAndWait](#)
- [suspend](#)
- [undeploy](#)

[Feedback](#) | [Notices](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00092.html>

cancelJob

Cancels the specified job group.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project.

Version

The version number for the project.

configName

The name used to identify a configuration, such as Default.

jobId

The ID for the job.

Together projectName, Version, and configName uniquely identify a configuration.

You can obtain the jobId by first running the searchJobs operation (orcmon.wsdl).

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00093.html>

cloneConfiguration

Clones the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

oldConfigName

The name of the configuration being cloned.

newConfigName

The name of the cloned configuration.

Returns:

The cloned configuration.

Examples:

The following code is an example of a SOAP request to clone a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>855BE295392375C8551C8B98D6EA4774</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:cloneConfiguration>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:oldConfigName>GenericProject_2_Cloud</dep:oldConfigName>
      <dep:newConfigName>GenericProject_3_Cloud</dep:newConfigName>
    </dep:cloneConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:cloneConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:cloneConfigurationResponse>
  </S:Body>
</S:Envelope>
```

 Last updated: Wednesday, December 16, 2015

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00094.html>

createAssets

Creates assets by using the specified script.

The endpoint is specified as a project URL, such as project-url:// Endpoints/TargetDB. The module ID is typically either <http://www.approuter.com/module/webservice/> or <http://www.approuter.com/module/database/>

Database assets must be enclosed as specified in the following table.

Database	Enclosure
DB2® AS/400®	" "
Informix®	[]
Microsoft SQL	[]
Oracle	" "
Sybase	" "

The following table lists the assets that can be created for the databases.

Database	Asset
DB2 As/400, Informix, Microsoft, Sybase	Applies to Clouds, Integration Appliances. Buffer tables, control tables, and triggers.
Local Staging Database	Buffer tables, control table, index tables, and triggers
Oracle	Buffer tables, control tables, sequences, and triggers

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

username

The user ID for the endpoint.

password

The password for the endpoint.

assetType

The type of asset.

script

The script to run against the endpoint.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

[Feedback](#) | [Notices](#)

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00095.html>

createConfiguration

Creates the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration.

Examples:

The following example is a SOAP request to create a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363W</dep:configName>
    </dep:createConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:createConfigurationResponse>
  </S:Body>
</S:Envelope>
```

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00096.html>

createRepeatingRule

Creates a repeating rule for downtime for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

stopDate

The date the configuration is to be stopped.

restartDate

The date the configuration is to be restarted.

downtimeType

The type or reason for the downtime.

repeat

Specifies that the downtime rule be repeated.

repeatInterval

Specifies the amount of time between repeats of the downtime rule.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The new repeating rule for the specified configuration.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00097.html>

createRule

Creates a downtime rule for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

stopDate

The date the configuration is to be stopped.

restartDate

The date the configuration is to be restarted.

downtimeType

The type or reason for the downtime.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The new downtime rule for the specified configuration.

Examples:

The following code is an example of a SOAP request to create a rule. Dates must conform to ISO 8601.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createRule>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>Default</dep:configName>
      <dep:stopDate>2010-04-17T07:00:00.066Z</dep:stopDate>
      <dep:restartDate>2010-04-17T08:00:00.066Z</dep:restartDate>
      <dep:downtimeType>stop</dep:downtimeType>
    </dep:createRule>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRuleResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:ruleId>2</ns2:ruleId>
    </ns2:createRuleResponse>
  </S:Body>
</S:Envelope>
```

deleteUserConfiguration

Deletes the specified configuration for the specified user.

Applies to Clouds and Integration Appliances.

Parameters:

userName

The name of the specified user.

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Examples:

The following example is a SOAP request to delete the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

downloadProject

Downloads the specified project as a byte array.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified project in a compressed file.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00106.html>

getAssetGroupDisplayString

Gets the asset display string for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset display string.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00107.html>

getAssetGroupScript

Gets the asset script for the given configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset script.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00108.html>

getAssetGroupWarnings

Gets the asset warnings for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either [http:// www.approuter.com/module/webservice/](http://www.approuter.com/module/webservice/) or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset warnings.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00109.html>

getAssetProperties

Gets the asset property values for the specified configuration and endpoint.

The endpoint is specified as a project URL, for example project-url://Endpoints/TargetDB. The module ID is typically either <http://www.approuter.com/module/webservice/> or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The values for the asset properties.

getAssetPropertiesBindings

Gets the asset properties for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either [http:// www.approuter.com/module/webservice/](http://www.approuter.com/module/webservice/) or <http://www.approuter.com/module/database/>

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset properties.

getConfiguration

Gets the specified project.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

Returns:

The specified project.

Examples:

The following example is a SOAP request to get a specified project:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:getConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:configuration>
        <envId>
          <guidString>A51EDD44BE6C10B2D1335A9D634D407D</guidString>
        </envId>
        <lastmodified>2010-04-08T20:58:49.694Z</lastmodified>
        <name>HTTP_363j</name>
        <orchestrationValues>
          <orchestrationValue>
            <enabled>true</enabled>
            <syncLoggingEnabled>false</syncLoggingEnabled>
            <loggingLevel>errorValues</loggingLevel>
            <maxJobs>1</maxJobs>
            <orchestrationRelativeurl>project-url://Orchestrations/
Post</orchestrationRelativeurl>
            <state>stopped</state>
          </orchestrationValue>
          <orchestrationValue>
            <enabled>true</enabled>
            <syncLoggingEnabled>false</syncLoggingEnabled>
            <loggingLevel>errorValues</loggingLevel>
            <maxJobs>1</maxJobs>
            <orchestrationRelativeurl>project-url://Orchestrations/
```

```
    Receive</orchestrationRelativeurl>
    <state>stopped</state>
  </orchestrationValue>
</orchestrationValues>
<projectName>HTTP_363i</projectName>
<projectVersion>1.0</projectVersion>
<propertyValues/>
<state>stopped</state>
</ns2:configuration>
</ns2:getConfigurationResponse>
</S:Body>
</S:Envelope>
```

getConfigurationGroups

Gets the display names for the groups with permission for the given configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The group display names.

Examples:

The following example is a SOAP request to get configuration groups with permission for the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AAC96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getConfigurationGroups>
```

```
<dep:projectName>HTTP_363i</dep:projectName>
<dep:version>1.0</dep:version>
<dep:configName>HTTP_363j</dep:configName>
</dep:getConfigurationGroups>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getConfigurationGroupsResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/

getRules

Gets the downtime rules for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The downtime rules for the specified configuration.

Examples:

The following code is an example of a SOAP request to get rules.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00116.html>

Gets the specified configuration for the specified user.

Applies to Clouds and Integration Appliances.

Parameters:

userName

The name of the specified user.

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration for specified user.

importRepository

Imports the project repository in XML format.

Applies to Integration Appliances only.

Parameters:

importType

The type of import.

data

The project repository in XML format.

Returns:

Success or failure

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00119.html>

publishProject

Publishes the given project and creates a default configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

content

The project in a compressed file (a .par file).

Returns:

Success or failure.

 Last updated: Wednesday, December 16, 2015

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00120.html>

resume

Resumes the specified configuration

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to resume running a configuration that was paused.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:resume>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:resume>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:resumeResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/

saveOrchestrationValues

Saves the specified values for the specified orchestration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

values

The specified values to save for the specified orchestration.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to save the values for the specified orchestration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AACAA96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:saveOrchestrationValues>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
      <dep:values>
        <enabled>>true</enabled>
        <syncLoggingEnabled>>false</syncLoggingEnabled>
        <loggingLevel>errorValues</loggingLevel>
      </dep:values>
    </dep:saveOrchestrationValues>
  </soapenv:Body>
</soapenv:Envelope>
```

```
<maxJobs>1</maxJobs>
<orchestrationRelativeurl>orchestrationRelativeurl>project-url://
Orchestrations/
Receive</orchestrationRelativeurl>
<state>stopped</state>
</dep:values>
</dep:saveOrchestrationValues>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:saveOrchestrationValuesResponse xmlns:ns2="http://
www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://
www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://
www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://
www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:saveOrchestrationValuesResponse>
  </S:Body>
</S:Envelope>
```

saveProperties

Saves the specified properties for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

Version

The version number for the specified project.

configName

The configuration name for the specified project.

properties

The specified properties to save for the specified configuration.

Together projectName, version, and configName uniquely identify a configuration.

setConfigurationGroups

Sets the groups with permission for the specified project.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

groupIds

The IDs for the groups.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00124.html>

start

Starts the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to start a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/
types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:startResponse>
  </S:Body>
</S:Envelope>
```

stopAndCancel

Stops and cancels all the jobs for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to stop and cancel the configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">

stopAndWait

Stops and waits for jobs for the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure

Examples:

The following example is a SOAP request to stop the configuration and wait.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

  </S:Body>
</S:Envelope>
```

suspend

Suspends the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to suspend the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:suspend>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:suspend>

undeploy

Withdraw the specified configuration.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to withdraw the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>

Orcmon

Information about the orcmon WSDL.

Using the orcmon WSDL, you can search for jobs, get a job count, and get job details. You can also set and get job monitoring properties.

This section contains the following topics:

- [getJobCount](#)
- [getJobDetails](#)
- [getMonitoringProperties](#)
- [purgeJobs](#)
- [searchJobs](#)
- [setMonitoringProperties](#)

Feedback | Notices

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00130.html>

getJobCount

Returns the number of jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run. For the default configuration, this value should be 'Default'.

orchName

The name of the orchestration where the jobs run.

jobId (optional)

The ID of the jobs for which a count is returned.

jobKey (optional)

The job key for the jobs for which a count is returned.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

–Setting status as negative gets all status.

–Setting specific status value gets jobs with that status:

- SUCCESS = 0
- ERRORED = 1
- RUNNING = 2
- CANCELLING = 3
- TERMINATED = 4
- CANCELLED = 5
- SUSPENDED = 6
- CRASHED = 7
- SUSPENDING = 8
- UNKNOWN = 101

Returns:

The number of jobs.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00131.html>

getJobDetails

Returns the details for the job with the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the job runs.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the job runs.

orchName

The name of the orchestration where the job runs.

jobId

The ID of the job for which the details are returned.

Returns:

The job details for the job that has the specified parameters.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00133.html>

purgeJobs

Purges jobs that have the specified parameters.

Applies to Integration Appliances only.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run.

orchName

The name of the orchestration where the jobs run.

jobId

The ID of the job to be purged.

jobKey

The job key for the jobs to be purged.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

exportJobs

Whether to return the purged jobs - true or false.

Returns:

The purged jobs if exportJobs is set to true.

searchJobs

Returns the jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run.

orchName

The name of the orchestration where the jobs run.

jobId

The ID of the jobs to be returned.

jobKey

The job key for the jobs to be returned.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

page

0-based page numbering.

pageSize

The number of lines per page.

Returns:

The jobs that have the specified parameters.

Examples:

The following code is an example of a SOAP request to search jobs.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:orc="http://www.approuter.com/schemas/2008/1/orcmon">
  <soapenv:Header>

createNotificationPolicy

Creates and saves a notification policy.

Applies to Clouds and Integration Appliances.

Parameter:

policy

The name of the policy.

Returns:

The notification policy ID of the policy was successfully created. If not successful, returns a -1.

Examples:

The following example is a SOAP request to create a notification policy.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>

deleteNotificationPolicy

Deletes a notification policy.

Applies to Clouds and Integration Appliances.

Parameter:

policyId

The specified ID for the notification policy to be deleted.

Returns:

Success or failure.

Examples:

The following is a SOAP request to delete the notification policy with the specified ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:deleteNotificationPolicy>
      <log:policyId>688128</log:policyId>
    </log:deleteNotificationPolicy>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:deleteNotificationPolicyResponse xmlns:ns2="http://
www.approuter.com/schemas/2008/1/lognotif" xmlns:ns3="http://
www.approuter.com/schemas/2008/1/lognotif/types">
      <ns2:success>true</ns2:success>
    </ns2:deleteNotificationPolicyResponse>
  </S:Body>
</S:Envelope>
```

getEmailEndpoint

Gets the email endpoint for notifications based on the session ID.

Applies to Integration Appliances only.

Returns:

The email endpoint.

Examples:

The following example is a SOAP request to get an email endpoint.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/ci00140.html>

getLogCount

Gets the number of logs for the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

logComponent

The specified component for which logs are generated.

logLevel

The level of logging to be done for the specified component.

maxDaysOld

The maximum number of days to go back to get logs. Use 1 for no maximum.

status

The specified status of logs to be included in the count. The default values are:

- All
- Resolved
- Unresolved

Returns:

The number of logs that match the specified parameters.

Examples:

The following example is a SOAP request to get a log count.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getLogCount>
      <log:logComponent>orchestration</log:logComponent>
      <log:logLevel>error</log:logLevel>
      <log:maxDaysOld>3</log:maxDaysOld>
      <log:status>all</log:status>
    </log:getLogCount>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getLogCountResponse xmlns:ns2="http://www.approuter.com/

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00141.html>

getLogLevel

Gets the log level for the specified log component.

The default log levels are:

- All. (Note: The actual level of logs retrieved for the All level is determined by the logging level set in the WMC. For more information, see "Specify System Log Settings" in the WMC).
- Fatal
- Severe
- Warning
- Info

Applies to Clouds and Integration Appliances.

Parameter

logComponent

The specified component for which logs are generated.

Returns:

The log level for the specified component.

Examples

The following example is a SOAP request to get the log level for orchestrations.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>AD2E025868AC1392A44E6E27E4594EF9</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getLogLevel>
      <log:logComponent>orchestration</log:logComponent>
    </log:getLogLevel>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:getLogLevelResponse xmlns:ns2="http://www.approuter.com/

searchLogs

Gets the logs for the specified parameters.

Applies to Clouds and Integration Appliances.

Parameters:

logComponent

The specified component for which logs are generated. **logComponent** is one of:

- hardware
- resources
- network
- security

- orchestration
- deployment
- all

logLevel

The level of logging to be done for the specified component. **logLevel** is one of:

- critical
- error
- warning
- info
- all

maxDaysOld

The maximum number of days to go back to get logs. Use -1 for no maximum.

status

The specified status of logs to be included in the search. **status** is one of:

- resolved
- unresolved
- all

page

Uses 0-based page numbering. Log pagination starts with zero. Maximum size of page should be documented as 2,147,483,647.

pageSize

Specifies the size of the log pages that are returned. Maximum size of pageSize should be documented as 2,147,483,647.

Returns:

The logs that match the specified parameters.

Examples:

The following example is a SOAP request to search the logs for logs that match the specified parameters.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>

setEmailEndpoint

Sets the email endpoint for notifications.

Applies to Integration Appliances only.

Parameter:

emailEndpoint

The email endpoint.

Returns:

Success or failure.

Examples:

The following example is a SOAP request to set an email endpoint.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif" xmlns:typ="http://www.approuter.com/schemas/2008/1/lognotif/types">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:setEmailEndpoint>
      <log:emailEndpoint>
        <typ:active>true</typ:active>
        <typ:credentials>
          <typ:password>test</typ:password>
          <typ:user>test</typ:user>
        </typ:credentials>
        <typ:host>hq-exch-01</typ:host>
        <typ:port>123</typ:port>
        <typ:sender>user@mydomain.com</typ:sender>
        <typ:subject>Notification</typ:subject>
      </log:emailEndpoint>
    </log:setEmailEndpoint>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setEmailEndpointResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/lognotif/types">
      <ns2:success>true</ns2:success>

System

Information about the system WSDL.

The system WSDL applies to Integration Appliances only. Using system WSDL you can set or get an appliance name or network configuration. You can also run system commands or get system information.

This section contains the following topics:

- [downloadPostmortem](#)
- [executeCommand](#)
- [getApplianceName](#)
- [getNetworkConfiguration](#)
- [getResourceUtilizationData](#)
- [setApplianceName](#)
- [setNetworkConfiguration](#)

 Last updated: Wednesday, December 16, 2015
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00148.html>

downloadPostmortem

Downloads the postmortem file.

Use the information in this file to resolve Integration Appliance issues.

Applies to Integration Appliances only.

Returns:

The postmortem file.

 Last updated: Wednesday, December 16, 2015

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00149.html>

executeCommand

Runs the specified system command.

Applies to Integration Appliances only.

Parameter:

command

The specified system command to run.

Returns:

Success or failure.

Enums:

The system commands are defined as enumerated constants.

The following table lists the system commands.

Command	Description
removeJobHistory	Removes job histories from the Integration Appliance.
removeProjects	Removes projects from the Integration Appliance.
removeRunningJobs	Stops and removes running jobs from the Integration Appliance.
generatePostmortem	Generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores. Use this information to debug Integration Appliance issues. Run this command before rebooting the Integration Appliance.
restart	Restarts the Integration Appliance routing subsystem.
reboot	Shuts down all routing services and then reboots the Integration Appliance.

getApplianceName

Gets the appliance name.

Applies to Integration Appliances only.

Returns:

The appliance name.

Examples:

The following code is an example of a SOAP request to get the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getApplianceName/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:getApplianceNameResponse xmlns:ns2="http://www.approuter.com/
schemas/router/1000/NetConfig02.xsd" xmlns:ns3="http://www.approuter.com/

getResourceUtilizationData

Gets the resource utilization data for the given appliance.

Applies to Integration Appliances only.

Returns:

Appliance resource utilization data.

Examples:

The following code is an example of a SOAP request to get the Integration Appliance resource utilization data.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>9705D42CDA8D28BA04CEBAB3D9C44B5A</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getResourceUtilizationData/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getResourceUtilizationDataResponse xmlns:ns4="http://www.approuter.com/
schemas/router/1000/NetConfig02.xsd" xmlns:ns3="http://www.approuter.com/
schemas/2008/1/util/types" xmlns:ns2="http://www.approuter.com/schemas/2008/1/
system">
      <ns2:applianceUtilization>
        <diskPercentUsed>6</diskPercentUsed>
        <usedMemory>35813024</usedMemory>
        <maxMemory>1509949440</maxMemory>
        <collectionCount>1</collectionCount>
        <totalRunningJobs>0</totalRunningJobs>
        <time>
          <ns3:offset>0</ns3:offset>
          <ns3:time>1379634870597</ns3:time>
        </time>
      </ns2:applianceUtilization>
    </ns2:getResourceUtilizationDataResponse>
  </S:Body>
</S:Envelope>
```

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00160.html>

setApplianceName

Sets the appliance name.

Applies to Integration Appliances only.

Parameter:

applianceName

The specified name for the appliance.

Returns:

Success or failure.

Examples:

The following code is an example of a SOAP request to the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:setApplianceName>
      <sys:applianceName>TheIntegrator</sys:applianceName>
    </sys:setApplianceName>
  </soapenv:Body>
</soapenv:Envelope>>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:setApplianceNameResponse xmlns:ns2="http://www.approuter.com/
schemas/router/1000/NetConfig02.xsd"
xmlns:ns3="http://www.approuter.com/schemas/2008/1/system"
xmlns:ns4="http://www.approuter.com/schemas/2008/1/util/types">
      <ns3:success>true</ns3:success>
    </ns3:setApplianceNameResponse>
  </S:Body>
</S:Envelope>
```

Staging

Information about the staging WSDL.

The staging WSDL applies to Integration Appliances only. Using the staging WSDL, you can check whether the staging database is started. You can start or stop the staging database.

This section contains the following topics:

- [isStagingDatabaseStarted](#)
- [startStagingDatabase](#)
- [stopStagingDatabase](#)

Feedback | Notices

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00155.html>

isStagingDatabaseStarted

Returns whether the staging database is started (True or False).

Applies to Integration Appliances only.

Returns:

True if the staging database is started.

Examples:

The following code is an example of a SOAP request to check if the staging database is started.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">
  <soapenv:Header>
    <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <stag:isStagingDatabaseStarted/>
  </soapenv:Body>
</soapenv:Envelope>
```

```
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <isStagingDatabaseStartedResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
      <isStarted>true</isStarted>
    </isStagingDatabaseStartedResponse>
  </S:Body>
</S:Envelope>
```

startStagingDatabase

Starts the staging database. Returns success if the database starts or failure if the database fails to start.

Applies to Integration Appliances only.

Returns:

Success or failure.

Examples:

The following code is an example of a SOAP request to start the staging database.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">
  <soapenv:Header>
    <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <stag:startStagingDatabase/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <startStagingDatabaseResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
      <success>true</success>
    </startStagingDatabaseResponse>
  </S:Body>
</S:Envelope>
```

簡介

《IBM® Cast Iron® 連接器開發套件 (CDK) 開發人員手冊》適用於想要使用 Cast Iron Studio (Studio) 開發平台來開發和部署外掛程式連接器的開發人員，而外掛程式連接器可從應用程式系統或其他資料來源擷取資料。

連接器可將外部應用程式的 API 外露給 Cast Iron 開發平台，來加強 Studio 的核心功能。API 會以新的程式庫和物件類型來擴充 Scripting 引擎，並將通知事件從外部系統發佈到 Cast Iron 實體或虛擬整合設備中。Cast Iron 設備支援連接到多種類型的端點，包括 FTP、SFTP、HTTP、HTTPS、電子郵件 (SMTP、POP)、SAP、MQ、Web 服務，以及許多商業資料庫系統。

每一個連接器都有關聯的 XML 描述子檔案，可讓連接器在設計時期於 Studio 中使用。XML 綱目定義 (XSD) 檔會定義 XML 檔的元素和屬性。

Cast Iron 開發平台的特色是提供了可引導您進行開發程序的「CDK 連接器精靈」。Studio 提供直覺式的拖放介面，可大幅縮短開發時間。

本手冊提供連接器的概觀、介紹 Cast Iron 開發平台元件，並提供開發和部署您專屬連接器時所需的逐步程序。

必備項目

開發連接器時會在 Studio 內進行許多工作，這表示您應該有使用 Studio 和 Cast Iron 產品的知識。您也應該熟悉下列語言和檔案格式：

- 延伸標記語言 (XML)
- Web 服務說明語言 (WSDL)
- 可延伸樣式表語言轉換 (XSLT)

註：對於許多活動，Studio 都支援「探索」處理程序，來決定傳送給端點或從端點接收的參數結構。如果您的輸入活動將在設計時期供探索，您必須利用抽象 WSDL 或綱目元素類型。將元素宣告為抽象時，需要使用替代群組。如果無法使用抽象版本，則您必須修改 WSDL 檔或綱目。接著在設計時期即會以實際的資料類型替代您的抽象檔。如需抽象檔的相關資訊，請參閱[使用新增活動視窗](#)。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_intro.html

設計考量

由於近來透過 Web 以服務形式遞送之應用程式導向軟體的急速成長，使得對專案實作有效的準則更加重要。小心規劃設計活動有助於確保專案的成功。

開始開發之前，請仔細考量下列準則：

- 作業與使用者分析 - 請考量開始專案之前要由一般使用者執行的作業。利用綱目檔所提供的元素以及 XML 檔的配置內容，您可以控制使用者對 Studio 和其功能所擁有的存取權層次。例如，藉由定義使用者的端點，您可以限制或增加可新增至其編排的活動數。瞭解一般使用者如何執行其作業也非常重要。以使用者可能需要的順序提供資訊，這有助於專案順利整合，並且可產生一致的使用者經驗。
- 命名慣例 - 有時候，在使用截止時間緊湊的專案時，很可能會草率將應用程式的元件加上標籤。例如，在設計端點畫面時，您可能會傾向快速定義一個「類型」欄位，以便能夠進行更重要的功能作業。不過，直

覺式命名實務的好處通常不明顯，除非之後使用者面臨任意且混淆的命名方法。請記得，部署之後，連接器即會被重複使用，因此請務必使用有邏輯、一致且直覺式的命名慣例。

開始之前

開始專案之前，請先收集下列資訊。將這些資訊供存取，可讓您的開發程序進行得更加順利：

- 連線欄位 - 準備好指定連接端點所需的連線欄位詳細資料（例如名稱和類型）。
- 輸入活動 - 在設計時期決定哪些輸入活動將供動態探索，而哪些會是靜態。
- 輸入和輸出資料類型 - 準備好指出每一項活動要支援的輸入和輸出資料類型。

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_designconsider.html

本手冊的內容架構

這份文件的設計是為了讓您在盡可能短的時間內開始開發專案。第一章介紹「CDK 連接器精靈」，並提供進行專案所需的程序。不過，如果您偏好先自行熟悉 CDK 開發平台再開始開發，則請先花幾分鐘檢閱第四章 [CDK 元件](#) 中的資訊再開始。

本手冊分為以下幾節。

- [開始使用 CDK 連接器精靈](#)
介紹「CDK 連接器精靈」，並提供建置連接器的逐步指示。
- [測試與除錯](#)
提供測試及除錯連接器的程序。
- [匯出和匯入連接器專案](#)
提供如何匯出或匯入連接器專案的相關資訊。
- [Cast Iron CDK 元件](#)
提供 Studio 開發平台的概觀並介紹 CDK 元件。
- [常見問題 \(FAQ\)](#)
提供一些常見問題的解答。
- [取得協助](#)
提供 IBM 資源的相關資訊，並告訴您如何取得協助。

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_docorganized.html

開始使用 CDK 連接器精靈

「CDK 連接器精靈」會呈現一系列可在其中輸入連接器基本詳細資料的三個視窗，引導您進行開發處理程序。該「精靈」接著會產生您可測試、認證並部署到 Studio 的編排。

程序

1. 啟動 Studio。
2. 選取檔案 -> 新建連接器專案。

結果

「精靈」會在 Studio 工作區中開啟，並顯示「連接器資訊」視窗。

下一步

在下一個階段中，您會使用「連接器資訊」視窗來新增連接器的基本資訊。

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_wizard.html

「連接器資訊」視窗

在這個階段期間，您會將連接器的一般資訊（例如名稱、版本和說明）新增至「連接器資訊」視窗，並新增用於連接器活動的 WSDL 或綱目檔。

關於這項作業

您可以在「連接器資訊」視窗中輸入連接器專案的基本詳細資料。「連接器資訊」視窗看起來如下：

圖 1. 「連接器資訊」視窗

Connector Information

Provide Connector Name, Version and Description

Provide Basic Connector Detail

Name: SampleSalesforceConnector Description: Salesforce sample connector

Version: 1.0.0

Add WSDL Or Schema Files

Add WSDL/Schema: /WSDLs/SalesforceNew Browse

Add Schema or WSDL file

程序

1. 在「名稱」文字欄位中，輸入連接器的名稱。
註：因為 NCName 的實際限制，所以「名稱」文字欄位中的字元不能包含符號字元，例如 :、@、\$、%、&、/、+、,、;、空格字元或不同括弧。此外，「名稱」文字欄位中字元的開頭不能是數字、點或減號字元，雖然它們之後可以出現在 NCName 中。
2. 在「說明」文字欄位中，輸入連接器的說明。
3. 在「版本」文字欄位中，輸入連接器的版本號碼。
4. 如果要新增 WSDL 或綱目檔，請按一下瀏覽按鈕，並導覽至您要的檔案。所選取的檔案會顯示在「新增 WSDL/綱目檔」欄位中。
註：如果在設計時期會動態探索到輸入活動，您必須針對這個步驟提供包含抽象類型的 WSDL 或綱目。如需抽象檔的相關資訊，請參閱[使用新增活動視窗](#)。
5. 按下一步。

結果

這時會顯示「新增連線欄位」視窗。

下一步

在下一個階段中，您會使用「新增連線欄位」視窗來指定端點連線內容。

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_connectinfowindow.html

使用新增連線欄位視窗

您可以在「新增連線欄位」視窗中指定要外露給使用者的端點連線參數。您的使用者會使用這些值來連接至其端點。

關於這項作業

在此設計階段期間，您新增連線欄位以及連接至端點所需的對應詳細資料。「新增連線欄位」視窗看起來如下：
圖 1. 「新增連線欄位」視窗

Add Connection Fields

Provide the Endpoint Connection Fields - These fields are used to connect to the endpoint

Double-click table cell to edit the Connection Field Name. Press ENTER to complete editing.

Connection Field Name	Connection Field Default Value
UserName	
Password	

Add/Delete endpoint connection fields.

Double-click table cell to edit the Connection Field Default Value. Press ENTER to complete editing.

Endpoint Connection Fields Details

Name: Format:

Type:

Field Constraints

Enable Constraints

ValueMinLength: FieldMinRange:

ValueMaxLength: FieldMaxRange:

Provide details for the fields selected in the table shown above.

程序

1. 按一下加號圖示 (+)。「新增端點連線欄位」畫面中會顯示空白的連線欄位。
2. 在「新增端點連線欄位」畫面中，輸入欄位類型（例如：密碼），來指定與使用者名稱相關聯的密碼。如果要開始編輯，請按兩下「連線欄位名稱」資料格中的某一列來啟動它，然後輸入資訊。完成時，按 **Enter** 鍵。欄位類型資訊會顯示在「名稱」欄位中。
3. 在「端點連線欄位詳細資料」畫面中，按一下類型和格式下拉功能表，然後選取與您在「新增端點連線欄位」畫面中輸入之資訊對應的種類。在「新增端點連線欄位」畫面中，輸入欄位類型（例如：密碼），來指定與使用者名稱相關聯的密碼。
4. 重複這些步驟來新增其他連線欄位。在您新增其他欄位之後，請按下一步。

結果

這時會顯示「新增活動」視窗。

下一步

在下一個階段中，您會使用「新增活動」視窗來定義連接器活動。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_addconnectfieldswindow.html

使用新增活動視窗

您可以在「新增活動」視窗中建立和定義連接器活動，以及將輸入和輸出資料的資訊輸入至該視窗中。

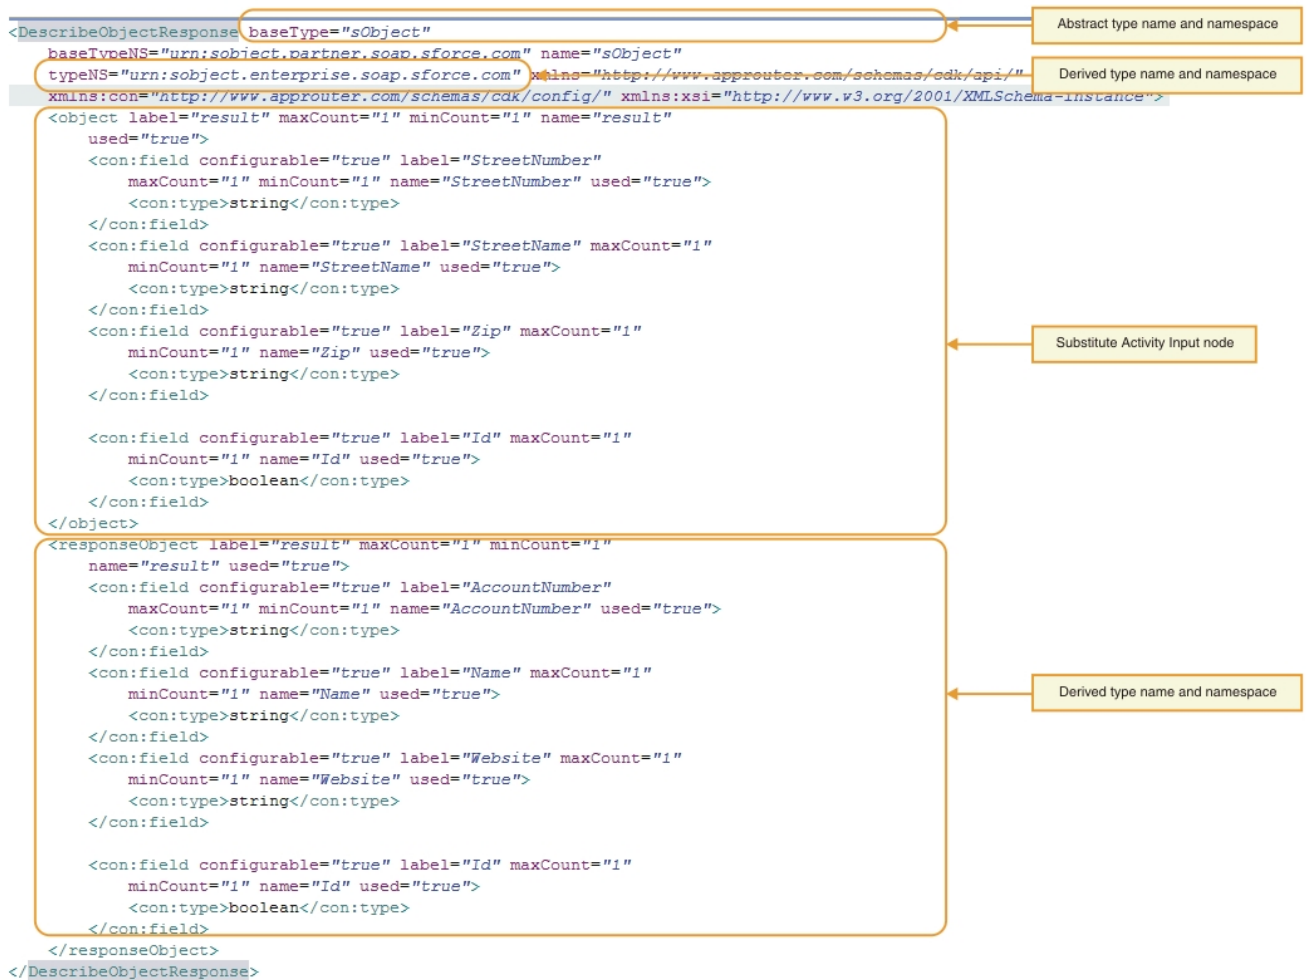

關於這項作業

在此階段期間，您可以指定在設計時期靜態還是動態探索輸入資料。例如，如果要在設計時期探索資料，則可以使用建立活動來建立不同的物件類型（如 Account、Contact 或 User）。對建立活動的輸入會視要建立的物件而有所不同。在這種狀況下，建立會被視為可瀏覽的活動，其輸入會視要產生的物件而有所不同。

註：如果要讓您的輸入活動在設計時期可供探索，您必須提供抽象 WSDL 或綱目類型。抽象 WSDL 或綱目類型會以實作中立的詞彙來說明 Web 服務，反之，具體 WSDL 或綱目類型則會定義實作服務的端點在網路上如何外露。

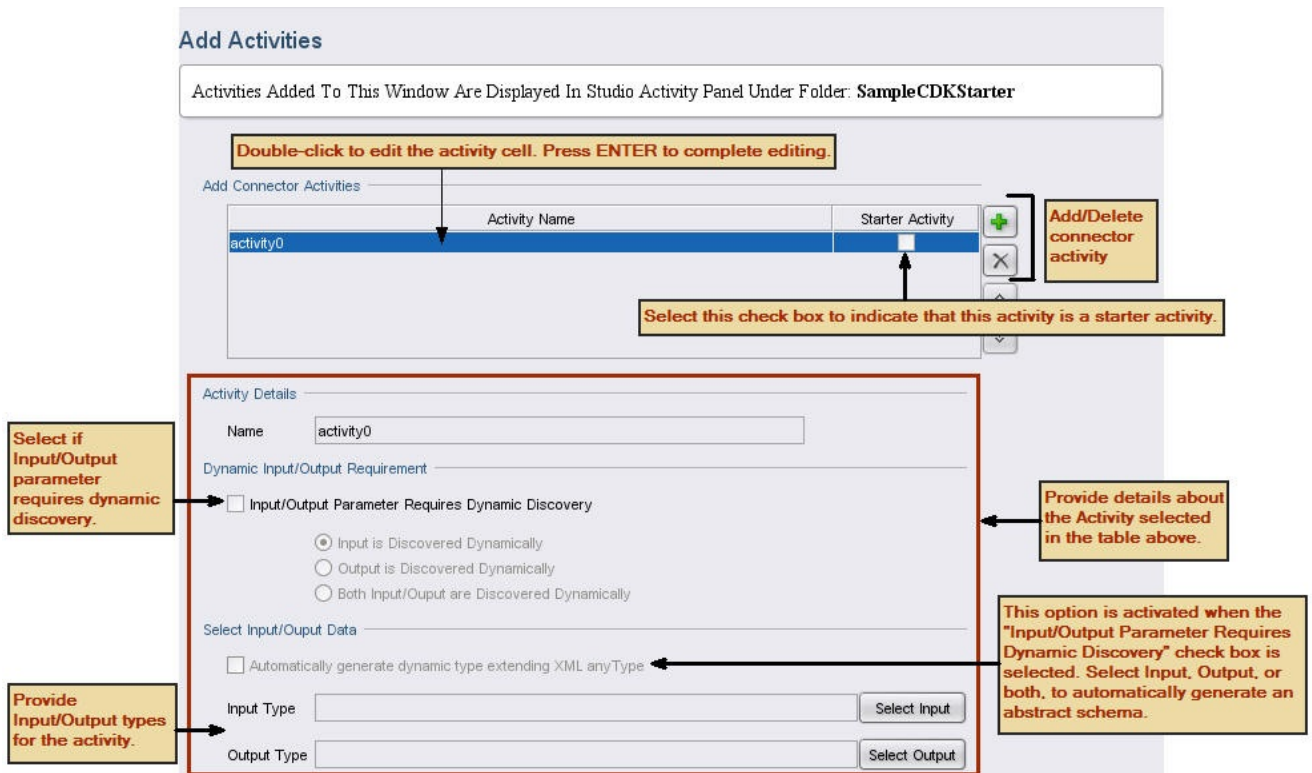

圖 1 顯示含有抽象類型定義的 WSDL 範例：

圖 1. 含有抽象定義的 WSDL

「新增活動」視窗看起來如下：

圖 2. 「新增活動」視窗

程序

1. 按一下加號 (+) 圖示。「新增連接器活動」畫面中會顯示空白的文字欄位。
2. 在「新增連接器活動」畫面中，新增活動名稱。如果要開始編輯，請按兩下「活動名稱」資料格中的某一列來啟動它，然後輸入資訊。完成時，按 **Enter** 鍵。
註：因為 NCName 的實際限制，所以「名稱」文字欄位中的字元不能包含符號字元，例如 :、@、\$、%、&、/、+、,、;、空格字元或不同括弧。此外，「名稱」文字欄位中字元的開頭不能是數字、點或減號字元，雖然它們之後可以出現在 NCName 中。
3. 在「新增連接器活動」畫面中，選取起始者活動勾選框，指示所選取的活動是否為起始者活動。
4. 在「動態輸入/輸出需求」畫面中，指定輸入參數和（或）輸出參數是否需要動態探索。如果您想要輸入活動在設計時期可供探索，則必須提供抽象綱目類型。
5. 如果一或多個參數需要動態探索，請在「選取輸入/輸出資料」畫面中，使用選取輸入或選取輸出按鈕，來選取每一個活動的輸入和（或）輸出資料。附註：請勿將特定的輸入資料類型指派給多個活動。
註：「起始者活動」只有輸出類型。因此，您只能選取「活動詳細資料」區段中的輸出類型。
6. 對每一個新活動重複這些步驟。
7. 完成之後，按下一步。

結果

這時會顯示「最終摘要」視窗。

下一步

在「最終摘要」視窗中檢視結果。

[意見](#) | [注意事項](#)

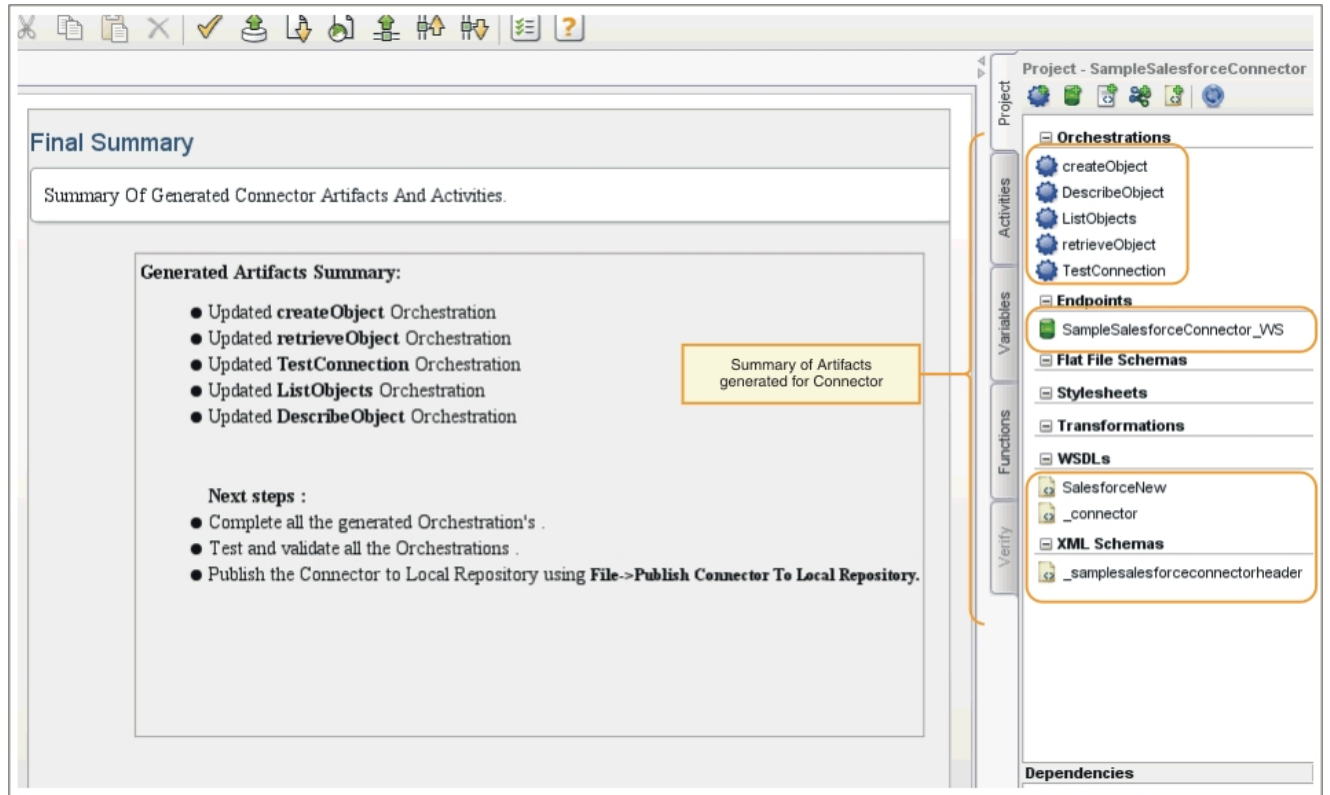

file:///dcs/markdown/workspace/Transform/out.html

「最終摘要」視窗

在開發階段結束時，「最終摘要」視窗會警示您已準備好完成所產生的編排，並將專案匯出至連接器儲存庫。

「最終摘要」視窗會確認已順利產生您的連接器活動。「最終摘要」視窗看起來如下：

圖 1. 「最終摘要」視窗

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_finalsummary.html

完成編排

您會完成編排，以便能夠將其匯出至 Studio。除了連接器編排之外，您也必須完成 Cast Iron 連接器介面的編排。

關於這項作業

在您完成開發工作之後，請執行下列程序，以完成連接器編排。在 [Cast Iron 連接器介面](#) 中已為您介紹 Cast Iron TestConnection、ListObjects 和 DescribeObjects 連接器介面，並提供了完成每一項編排的程序。

在後續步驟中，您會從「Web 服務提供服務」活動讀取輸入資料、新增邏輯，然後使用「傳送回覆」輸出活動來回應，以完成連接器的編排。「提供服務」活動提供了可從外部用戶端啟動的 Web 服務。在執行時期，「傳送回

覆」活動會將回應傳回給用戶端。

程序

1. 在「專案」工具箱標籤，選取編排，例如：CreateObjects。編排會顯示在 Studio 工作區中。
2. 在編排中，按一下提供服務活動。這時會顯示「對映輸出」畫面。
3. 在「對映輸出」畫面中，按一下主體。這時會出現顯示輸入資料的節點類型視窗。
4. 使用節點類型視窗中的資訊對映主體資料，並使用該資料在端點中建立物件。
5. 選取編排 -> 驗證。

註：為起始者活動產生的編排具有「提供服務」及「呼叫服務」活動。作為實作起始者活動的一部分，會在結束時提取所需資料，並將值傳遞給預先生產的「呼叫服務活動」。「呼叫服務活動」必須是編排中的最後一項活動。同時，將選擇性參數 `location` 移入至已接收的 `callbackURL`，作為預先生產「提供服務活動」的 `ConnectionFields` 標頭的一部分。

結果

這時會出現顯示驗證結果的「驗證結果」視窗。

下一步

完成 Cast Iron TestConnection、ListObjects 和 DescribeObjects 連接器介面的編排。

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completeorchestration.html

Cast Iron 連接器介面

Cast Iron 連接器使用您實作為編排的三個標準介面：TestConnection、ListObjects 和 DescribeObjects。

在「新增活動」階段期間，「精靈」會自動建立 TestConnection、ListObjects 和 DescribeObjects 介面的編排範本。您必須根據個別連接器的需求來完成編排。本節介紹 TestConnection、ListObjects 和 DescribeObjects 介面。在[完成連接器介面編排](#)中，您可以完成每一項的編排。

TestConnection

TestConnection 介面會反映您新增至「連線資訊」視窗的值，並且由連接器用來建立端點連線。建立連線之後，即會以布林運算子傳回連線狀態。

ListObjects

ListObjects 介面會反映您新增至「新增活動」視窗的值，並傳回特定連接器活動所支援的所有物件的清單。例如，Salesforce 建立作業可能會支援 Account、Customer、Contact、Opportunity 和 User，還有其他的物件。傳回清單應該對應於「ListObjects 回覆活動」綱目。以下是 XML 格式的 ListObjects 回應範例：

```
<ListObjectsResponse
xmlns="http://www.approuter.com/schemas/cdk/api/">
<objectType
```

```

label="Customer"
xmlns="http://www.approuter.com/schemas/cdk/api/">Account</objectType>
<objectType
label="Account Object"
xmlns="http://www.approuter.com/schemas/cdk/api/">Customer</objectType>
<objectType
label="Customer details"
xmlns="http://www.approuter.com/schemas/cdk/api/">Contact</objectType>
<objectType
label="Opportunity details"
xmlns="http://www.approuter.com/schemas/cdk/api/">Opportunity</objectType>
<objectType
label="User details"
xmlns="http://www.approuter.com/schemas/cdk/api/">User</objectType>
</ListObjectsResponse>

```

DescribeObjects

DescribeObjects 介面提供了輸入及輸出，可讓使用者順利透過連接器活動使用外露的物件。例如，如果選取 Salesforce 建立作業，則會根據從 ListObjects 選取的物件動態探索輸入綱目。以下是 DescribeObjects 傳回的回應範例：

```

<DescribeObjectResponse baseType="sObject"
  baseTypeNS="urn:object.partner.soap.sforce.com"
  name="create" typeNS="http://example.com/stockquote"
  xmlns="http://www.approuter.com/schemas/cdk/api/"
  xmlns:con="http://www.approuter.com/schemas/cdk/config/"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <object label="createInput" maxCount="1" minCount="1" name="createInput"
    used="true">
    <con:field configurable="true" label="ObjectName" maxCount="1"
      minCount="1" name="ObjectName" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="FirstName" maxCount="1"
      minCount="1" name="FirstName" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="LastName" maxCount="1"
      minCount="1" name="LastName" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="Phone" maxCount="1"
      minCount="1" name="Phone" used="true">
      <con:type>string</con:type>
    </con:field>
  </object>
  <responseObject label="createOutput" maxCount="1"
    minCount="1" name="createOutput" used="true">
    <con:field configurable="true" label="Id" maxCount="1"
      minCount="1" name="Id" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="ObjectName" maxCount="1"
      minCount="1" name="ObjectName" used="true">
      <con:type>string</con:type>
    </con:field>
    <con:field configurable="true" label="Status" maxCount="1"
      minCount="1" name="Status" used="true">
      <con:type>string</con:type>
    </con:field>
  </responseObject>
</DescribeObjectResponse>

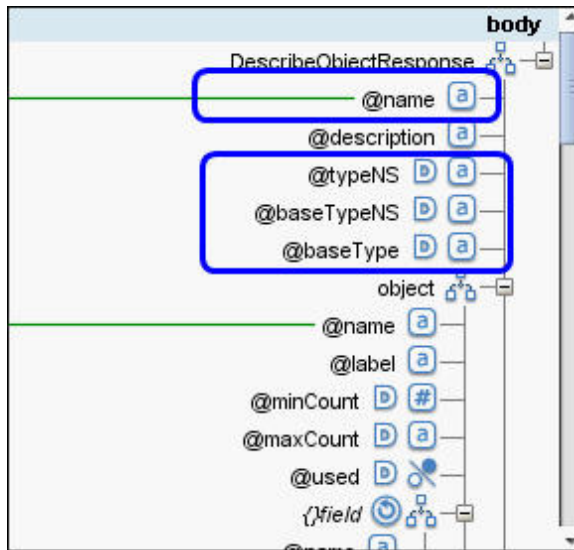

```

DescribeObjects 綱目探索特性可讓您在執行時期動態探索綱目。任何連接器活動使用綱目元素作為輸入或輸出時，會將此綱目匯入至編排。如果需要使用 `complexType QName` 探索先前匯入的綱目並動態替代為輸入或輸出活動，請在 DescribeObject 回應中設定屬性，如下列綱目所示：

```
< xsd:schema targetNamespace = " urn.sample.stock
" xmlns:xsd = "http://www.w3.org/2001/XMLSchema" >
  < xsd:element name = "TradePriceRequest" >
    < xsd:complexType >
      < xsd:all >
        < xsd:element name = "tickerSymbol" type = "xsd:string" />
      </ xsd:all >
    </ xsd:complexType >
  </ xsd:element >
  < xsd:complexType name = "ciObject" ></ xsd:complexType >
  < xsd:complexType name = " tradingPartner " >
    < xsd:sequence >
      < xsd:element name = "partnerName" type = "xsd:string" />
    </ xsd:sequence >
  </ xsd:complexType >
```

例如，若要替代之前綱目中的 `complexType tradingPartner`，請設定資訊來探索綱目，並動態替代它，如下列範例所示：

```
DescribeObject Response value to
@name -> tradingPartner [complexType name to be discovered]
@typeNS -> url.sample.stock [complexType namespace ]
@baseType -> http://www.approuter.com/schemas/cdk/api/ [CDK default]
@baseType -> cObject [CDK default]
```

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_connectorinterfaces.html

在這個階段期間，您會將商業邏輯新增至 Cast Iron TestConnection、ListObjects 和 DescribeObjects 編排。

[意見](#) | [注意事項](#)

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetestlistdescribe.html

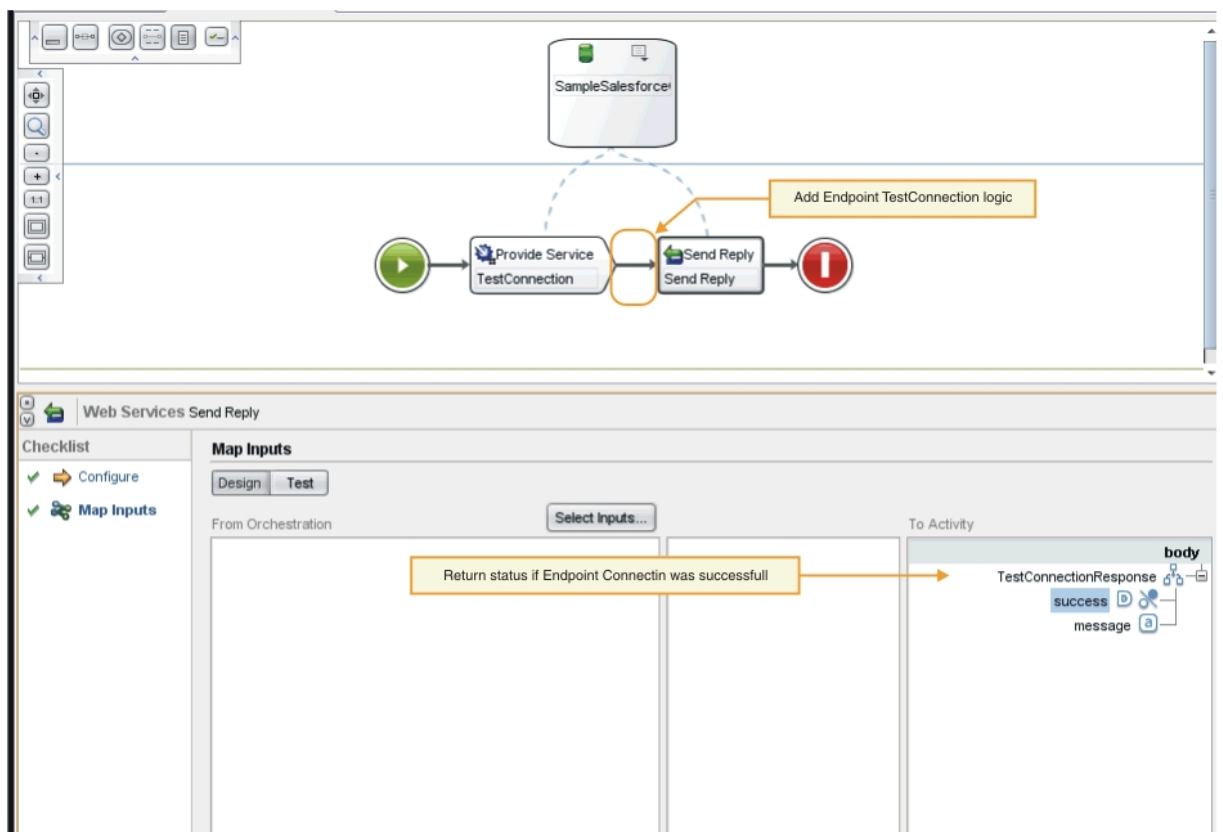

完成 TestConnection 編排

在下列步驟中，您會將值對映至物件類型，並且呼叫編排活動來測試端點連線。

程序

1. 在 Studio 「專案」 工具箱標籤中，按一下 **TestConnection** 編排。編排會顯示在 Studio 工作區中。
2. 在編排中，新增連接端點所需的邏輯，如圖 1 所示。
3. 在編排中，按一下傳送回覆活動。輸入會顯示在「來源編排」畫面中。

圖 1. TestConnection

4. 將「來源編排」畫面中顯示的值，對映到「目標活動」畫面中的物件類型。您現在已準備好測試編排。
5. 在編排中，於提供服務活動上按一下滑鼠右鍵。這時會顯示「驗證活動」功能表。
6. 在「驗證活動」功能表中，選取呼叫服務。這時會顯示「呼叫服務」視窗。
7. 在「呼叫服務」視窗中，輸入標頭和主體資料，然後按一下執行來啟動測試。如果要檢視測試活動，請按一下顯示回應按鈕。測試完成時，結果會顯示在「驗證」工具箱標籤中。
8. 如果連線成功，測試回應會顯示 "true" 值。如果要完成編排，請將 "true" 對映至「目標活動」畫面中 TestConnectionResponse 參數的 **success** 欄位。

下一步

如果您的連接器活動在設計時期可供探索，請完成完成 [ListObjects 編排](#) 中的程序。如果您的連接器活動不會供探索，則可進行完成 [DescribeObjects 編排](#)。

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completingtestconnection.html

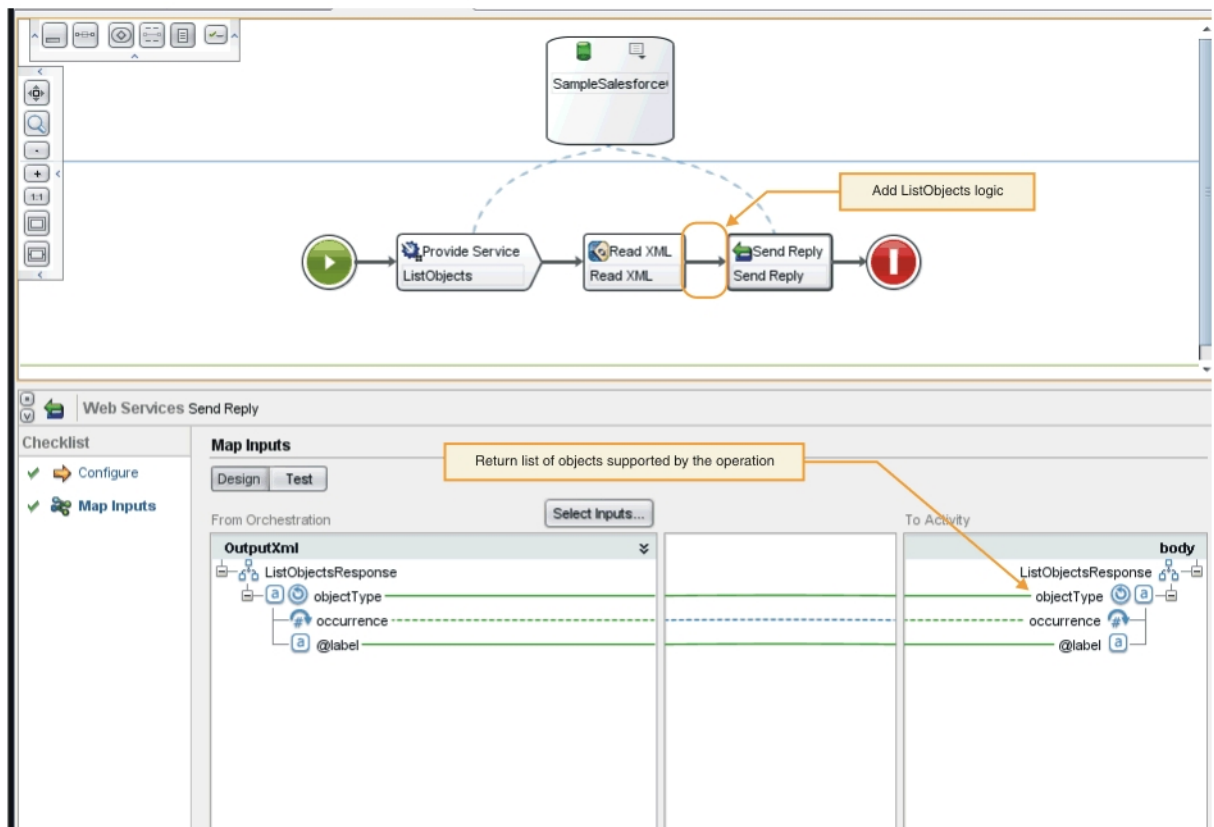

完成 ListObjects 編排

在後面的步驟中，您會將商業邏輯新增至 ListObjects 編排，並將值對映至物件類型，以及呼叫編排活動來測試端點連線。請只在您的編排活動於設計時期可供探索時，才完成本節的程序。

程序

1. 在 Studio 「專案」 工具箱標籤中，按一下 **ListObjects 編排**。編排會顯示在 Studio 工作區中。
2. 在 ListObjects 編排中新增邏輯，如圖 1 所示。「目標活動」畫面中會顯示針對提供的端點，連接器所支援的物件清單。

圖 1. ListObjects

3. 在編排中，選取傳送回覆活動。輸入會顯示在「來源編排」畫面中。
4. 在「來源編排」畫面中，按一下某個活動。「目標活動」畫面中會顯示該作業所支援的物件清單。

5. 將「來源編排」畫面中顯示的值，對映到「目標活動」畫面中 ListObjectsResponse 下的物件類型，如圖 1 所示。您現在已準備好測試編排。
6. 在編排中，於提供服務活動上按一下滑鼠右鍵。這時會顯示「驗證活動」功能表。
7. 在「驗證活動」功能表中，選取呼叫服務。這時會顯示「呼叫服務」視窗。
8. 在「呼叫服務」視窗中，輸入標頭和主體資料，然後按一下執行來啟動測試。如果要檢視測試活動，請按一下顯示回應按鈕。

結果

測試完成時，結果會顯示在「驗證」工具箱標籤中。如果有錯誤，請進行必要的更正，然後重新執行單元測試。

下一步

完成 DescribeObjects 編排。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetest_describe_list.html

完成 DescribeObjects 編排

若要完成 DescribeObjects 編排，您可以將輸出對映至輸入資料，並將物件 meta 資料轉換成 XML 格式，以符合 `ci-connector-api.xsd` 檔，然後測試編排。

程序

1. 在 Studio 「專案」工具箱標籤中，按一下 **DescribeObjects** 編排。編排會顯示在 Studio 工作區中。
2. 在編排中，按一下提供服務活動。這時會顯示「對映輸出」畫面。
3. 在「對映輸出」畫面中，按一下主體。這時會出現顯示輸入資料的節點類型視窗。
4. 根據 `object` 和 `operation_name` 將邏輯新增至編排（如圖 1 所示），來取得物件 meta 資料。

圖 1. DescribeObjects

5. 將物件 meta 資料轉換成 XML 格式，以符合 [Cast Iron CDK 綱目檔](#) 中說明的 `ci-connector-api.xsd` 檔。將 meta 資料轉換成 XML 之後，您的綱目看起來如下：

```

< DescribeObjectResponse
baseType = "sObject"
baseTypeNS = "urn:object.partner.soap.sforce.com"
name = "create"
typeNS = "http://example.com/stockquote"
xmlns = "http://www.approuter.com/schemas/cdk/api/"
xmlns:con = "http://www.approuter.com/schemas/cdk/config/"
xmlns:xsi = "http://www.w3.org/2001/XMLSchema-instance" >
  < object
label = "createInput"
maxCount = "1"
minCount = "1"
name = "createInput"
used = "true" >
    < con:field
configurable = "true"
label = "ObjectName"
maxCount = "1"
minCount = "1"
name = "ObjectName"
used = "true" >
      < con:type > string </ con:type >
    </ con:field >
    < con:field
configurable = "true"
label = "FirstName"
maxCount = "1"
minCount = "1"
name = "FirstName"
used = "true" >
      < con:type > string </ con:type >
    </ con:field >
  </ object >

```

```

< con:field
  configurable = "true"
  label = "LastName"
  maxCount = "1"
  minCount = "1"
  name = "LastName"
  used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
  configurable = "true"
  label = "Phone"
  maxCount = "1"
  minCount = "1"
  name = "Phone"
  used = "true" >
< con:type > string </ con:type >
</ con:field >
</ object >
< responseObject
  label = "createOutput"
  maxCount = "1"
  minCount = "1"
  name = "createOutput"
  used = "true" >
  < con:field
    configurable = "true"
    label = "Id"
    maxCount = "1"
    minCount = "1"
    name = "Id"
    used = "true" >
    < con:type > string </ con:type >
  </ con:field >
  < con:field
    configurable = "true"
    label = "ObjectName"
    maxCount = "1"
    minCount = "1"
    name = "ObjectName"
    used = "true" >
    < con:type > string </ con:type >
  </ con:field >
  < con:field
    configurable = "true"
    label = "Status"
    maxCount = "1"
    minCount = "1"
    name = "Status"
    used = "true" >
    < con:type > string </ con:type >
  </ con:field >
</ responseObject >
</ DescribeObjectResponse >

```

6. 在 DescribeObjects 編排中，選取傳送回覆活動。這時會顯示「對映輸入」畫面。
7. 在「對映輸入」畫面中，將產生的 XML 對映到「目標活動」畫面中的 DescribeObjectResponse 參數。您現在已準備好測試編排。
8. 在編排中，於提供服務活動上按一下滑鼠右鍵。這時會顯示「驗證活動」功能表。
9. 在「驗證活動」功能表中，選取呼叫服務。這時會顯示「呼叫服務」視窗。
10. 在「呼叫服務」視窗中，輸入標頭和主體資料，然後按一下執行來啟動測試。如果要檢視測試活動，請按一下顯示回應按鈕。

結果

測試完成時，結果會顯示在「驗證」工具箱標籤中。如果有錯誤，請進行必要的更正，然後重新執行單元測試。

下一步

在下一個階段中，您會學習如何將連接器專案發佈至本端儲存庫。

意見 | 注意事項

file:///dcs/markdown/workspace/Transform/out.html

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completingdescribeobjects.html

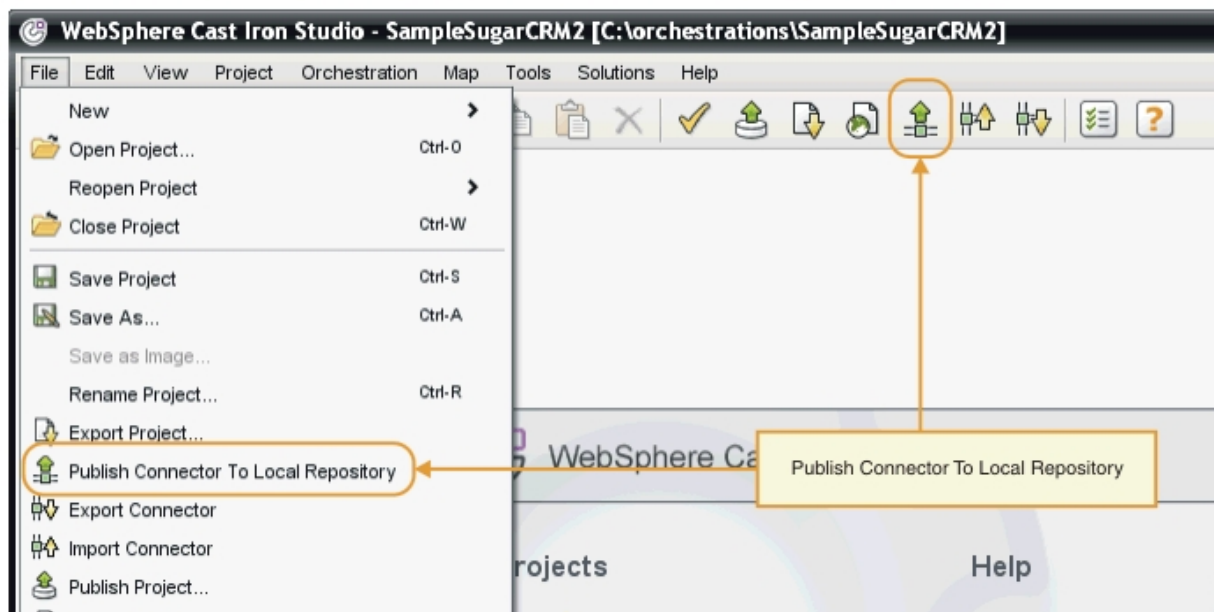

發佈至本端儲存庫

在此階段期間，Studio 會驗證您的編排。如果驗證成功，則您可以將連接器發佈至本端電腦上的儲存庫，以進行測試和除錯。

程序

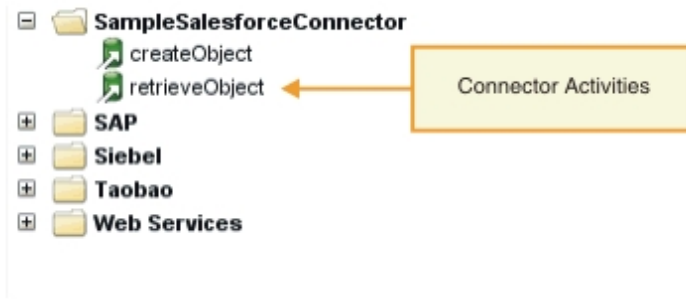

1. 選取檔案 -> 將連接器發佈至本端儲存庫，或按一下發佈工具列圖示，如圖 1 所示。Studio 會驗證編排。如果驗證成功，連接器即會發佈至位於 `<user_home>/castiron/connector-repository` 的連接器儲存庫。如果驗證失敗，則會顯示錯誤訊息。請更正問題，再重新發佈。
2. 重新啟動 Studio。您的連接器活動會顯示在 Studio 「活動」工具箱標籤中，且可供使用。

圖 1. 將連接器發佈至本端儲存庫

在開發工作結束之後，您的連接器和連接器活動會顯示在 Studio 「活動」工具箱標籤中，如圖 2 所示。

圖 2. Studio 「活動」工具箱標籤中顯示的連接器和連接器活動。

註：請不要嘗試將連接器專案直接部署至設備，因為這會導致錯誤。為獲得最佳結果，請只部署在 Studio 內顯示為端點的連接器專案。

下一步

在下一節中，您會進行執行時期驗證，以及測試端點。

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_deployconnector.html

測試與除錯

Studio 提供了數個機能來測試您的連接器元件。在測試與除錯階段期間，您可以進行執行時期驗證，來測試您的連接器及診斷配置或資料錯誤。所有出埠端點都應該加以測試。

當您測試連接器時，Studio 建置程序會檢查 XML 檔的形式是否完整，並對照綱目檔加以驗證。接著其會產生出埠對映、建立並傳送出埠訊息、接收回應，以及執行入埠對映。CDK 會執行兩種類型的測試：

- 單元測試
- 整合測試

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_testdebug1.html

單元測試連接器元件

單元測試是任何開發專案的成功關鍵，其基本上是通過或失敗的測試，可驗證連接器的元件是否能如預期般執行。

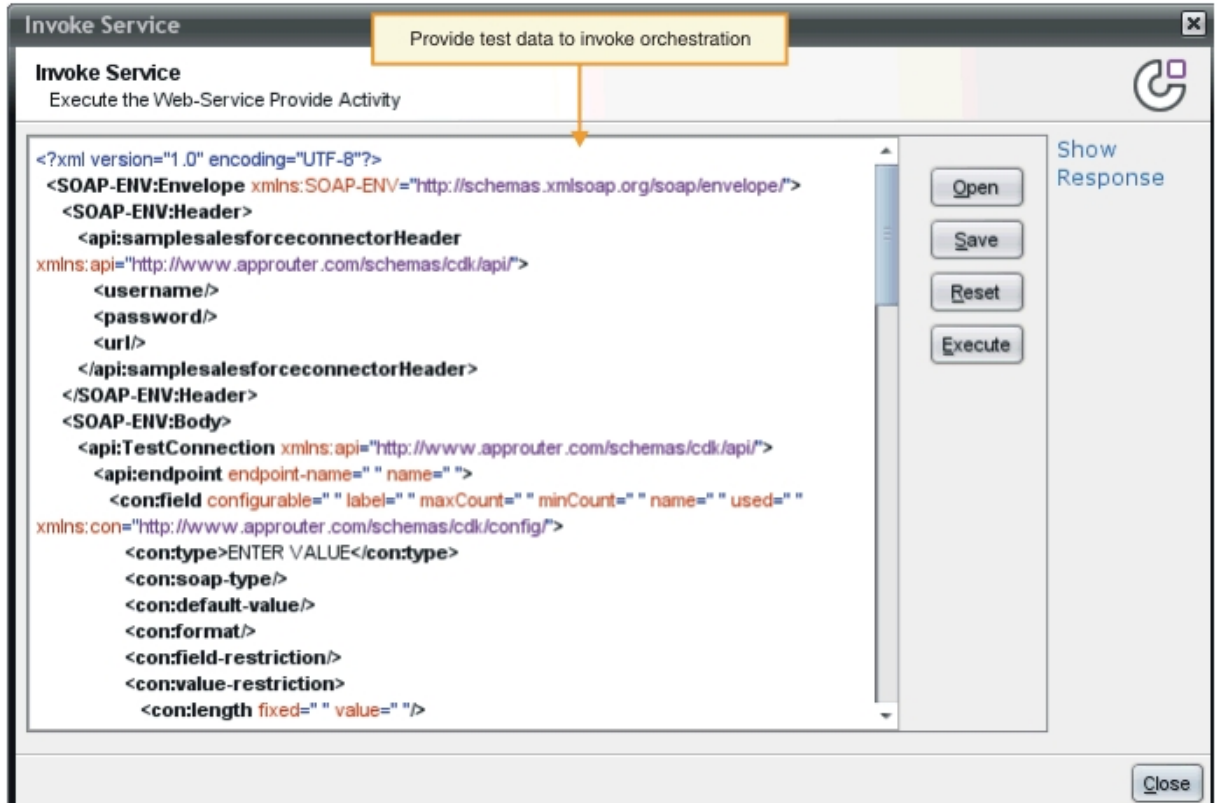

關於這項作業

在這個階段期間，您會執行單元測試來模擬用戶端與 Web 服務（其外露為「Web 服務提供」活動）之間的通訊。

程序

1. 在「專案」工具箱標籤，選取編排。編排會顯示在 Studio 工作區中。
2. 在編排中，於提供服務活動上按一下滑鼠右鍵。這時會顯示「驗證活動」功能表。
3. 在「驗證活動」功能表中，選取呼叫服務。這時會顯示「呼叫服務」視窗，如圖 1 所示。
4. 在「呼叫服務」視窗中，輸入標頭和主體資料，然後按一下執行來啟動測試。如果要檢視測試活動，請按一下顯示回應按鈕。

圖 1. 「呼叫服務」視窗

註：使用「重設」按鈕時請小心。其會消除「呼叫服務」視窗中現有的內容，並重新移入 Web 服務範本資訊。請只有在要重新開始進行單元測試時，才按一下「重設」。

結果

測試完成時，結果會顯示在「驗證」工具箱標籤中。如果有錯誤，請進行必要的更正，然後重新執行單元測試。

下一步

執行整合測試，以判斷您的連接器元件是否適當地執行。

意見 | 注意事項

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_unittest.html

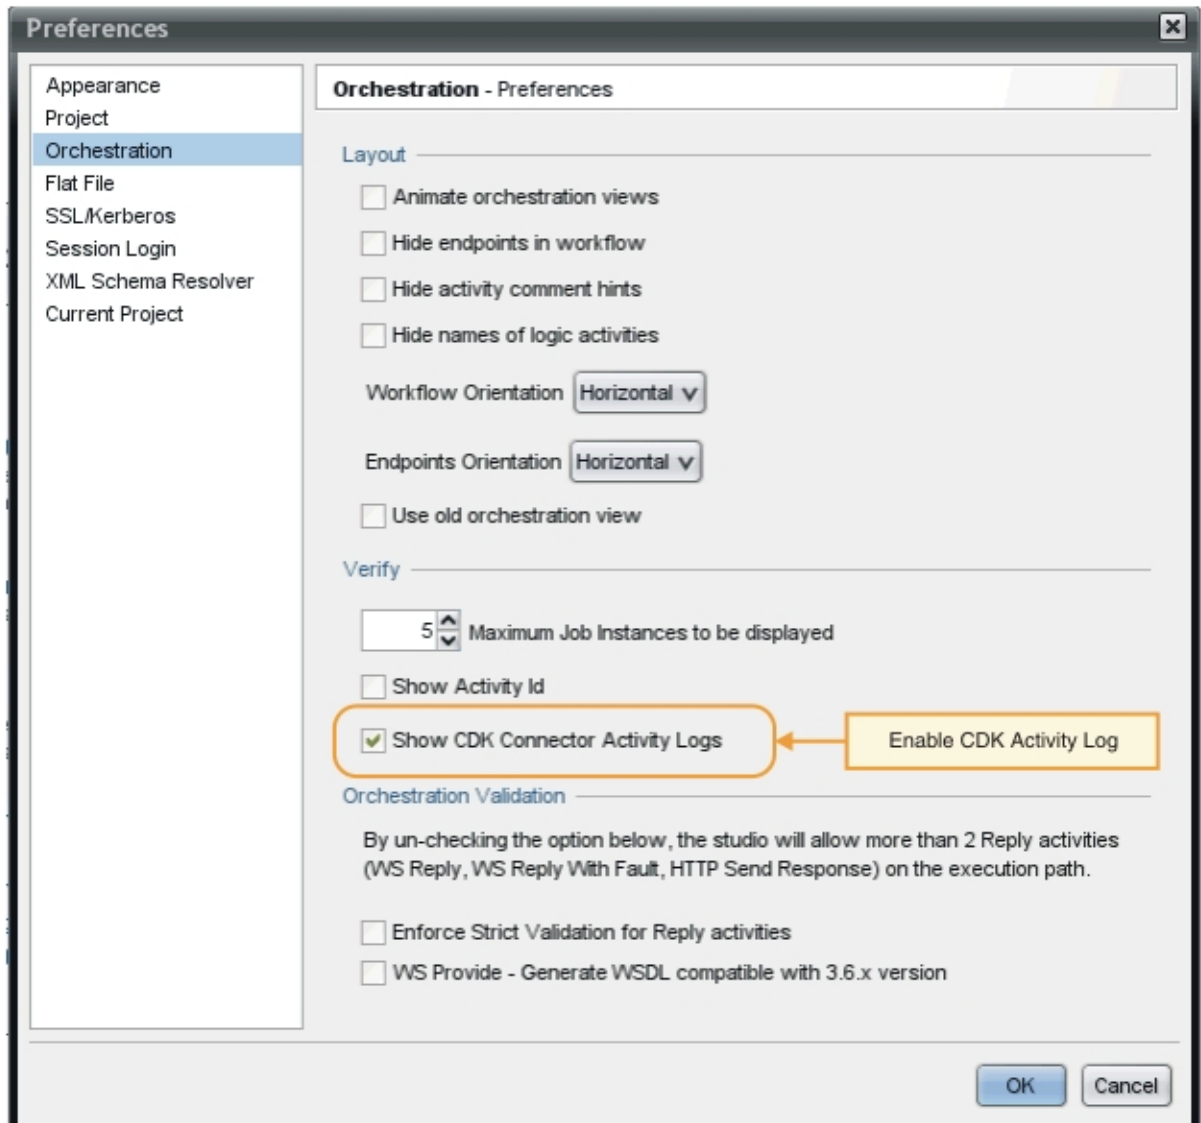

整合測試連接器服務和活動

在整合測試期間，您會驗證連接器服務、訊息與介面是否適當地執行。

程序

1. 在「專案」工具箱標籤，選取編排。編排會顯示在 Studio 工作區中。
2. 在「活動」工具箱標籤中，選取一個活動，然後將它拖放到編排中。
3. 在 Studio 工作區中，按一下該活動。該活動會強調顯示。
4. 在「核對清單」畫面中，按一下挑選端點。這時會顯示「挑選端點」畫面。
5. 在「挑選端點」畫面中，按一下新建。這時會顯示「建立端點」畫面。
6. 在「建立端點」畫面中，輸入連線資訊，然後按一下 **TestConnection**。
7. 如果連線成功，請按一下**確定**。
8. 在「核對清單」畫面中，按一下配置。這時會顯示「配置」畫面。
9. 選用項目：在「配置」畫面中，按一下瀏覽以搜尋可瀏覽的活動。（不可瀏覽的活動不需要這個步驟。）這時會顯示 ListObjects 對話視窗。
10. 在 ListObjects 對話視窗中，選取要成為選定活動之輸入的綱目。
11. 完成輸入及輸出對映。
12. 測試編排。如果您要檢視處理器活動，請在 Studio 的「喜好設定」視窗中勾選顯示 **CDK 連接器活動日誌** 選項，如圖 1 所示。

圖 1. 「喜好設定」視窗

結果

處理器活動和最終測試結果會顯示在 Studio 「驗證」 工具箱標籤中。

下一步

在下一節中，您會學習如何匯出和匯入連接器專案。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_integrationtest.html

匯出和匯入連接器專案

建立並測試完連接器之後，您可以將它匯出至外部位置，以供其他人使用。您也可以將連接器保存檔匯入 Studio。

您可以使用 Studio 功能表或按一下「匯出」或「匯入」工具列圖示，來匯出和匯入連接器專案。

註：請不要嘗試將連接器專案直接部署至設備，因為這會導致錯誤。為獲得最佳結果，請只部署在 Studio 內顯示為端點的連接器專案。

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_exporting_importing.html

匯出連接器專案

當您將完成的連接器從 Studio 匯出至外部位置時，即可供其他人載入及使用。匯出的連接器會包裝為標準的 .zip 檔。

關於這項作業

您可以使用 Studio 功能表選項或工具列，來匯出連接器。如果您不指定目錄，匯出的連接器專案會放在專案目錄的子目錄中。如果您選擇匯出至保存檔，則專案會包裝在專案目錄下的 .zip 保存檔中。

程序

1. 選取檔案 -> 匯出連接器，或按一下匯出連接器工具列圖示。這時會顯示「檔案」對話視窗，顯示可用連接器的清單。
2. 在「檔案」對話視窗中，選取連接器，然後按一下確定。這時會顯示「儲存」對話視窗。
3. 在「儲存」對話視窗中，瀏覽至要用來匯出專案的位置，然後按一下儲存。

結果

您的連接器即會匯出為標準 .zip 保存檔。

下一步

在下一節中，您會學習如何匯入連接器專案。

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_exportyourconnectorproject.html

匯入連接器專案

您可以使用 Studio 來匯入已開發為標準壓縮保存檔的連接器專案。

關於這項作業

您可以使用 Studio 功能表選項或工具列，將連接器匯入 Studio。

程序

1. 選取檔案 -> 匯入連接器，或按一下匯入連接器工具列圖示。這時會顯示「檔案」對話視窗。
2. 在「檔案」對話視窗中，選取連接器，然後按一下確定。

結果

連接器會以 .zip 保存檔形式匯入至 Studio。

下一步

在下一節中，會呈現 CDK 元件的概觀。

[意見](#) | [注意事項](#)

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_importaconnector.html

Cast Iron CDK 元件

「連接器開發者套件」含有四個主要元件，這些元件共同運作即構成了 CDK 開發平台。

圖 1 顯示這些元件，並說明其與 Studio 的關係：

圖 1. CDK 元件

意見 | 注意事項

<file:///dcs/markdown/workspace/Transform/out.html>

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_components.html

Cast Iron CDK 綱目檔

XML 綱目檔提供語法，而且會定義如何在 XML 檔中表示元素和屬性。您可以將 Cast Iron CDK 綱目檔匯入至 Studio 開發環境，然後將綱目元素從專案工具箱標籤拖曳到您的編排，來建立端點和連線。

這些 CDK 綱目檔為：

ci-connector-config.xsd - Studio 和部署引擎會使用這個檔案來定義連接器可使用的基本配置選項。外掛程式 meta 資料會儲存為 XML 檔中的元素，且配置之後，端點內容即會定義一般使用者會看到的內容，以及對其外露的活動。這裡是 ci-connector-config.xsd 檔案：

```

                    value="testConnection" />
                <xs:enumeration
                    value="listObjects" />
                <xs:enumeration
                    value="describeObject" />
            </xs:restriction>
        </xs:simpleType>
    </xs:attribute>
</xs:complexType>
</xs:schema>

```

ci-connector-api.xsd - 您的應用程式需要能夠利用來自連接器 API 的呼叫，與適當的連接器交談，您才能存取端點。這個檔案說明 TestConnection、ListObjects 和 DescribeObject API 的要求/回應類型。這裡是 ci-connector-api.xsd 檔案：

```

<xs:schema

Cast Iron CDK XML 檔

您的 XML 檔定義外掛程式所執行的活動。XML 檔中的每一個活動都必須與 WSDL 檔中定義的一項作業對映。

XML 已新興為一種通用語言，可代表及傳輸與程式設計語言、軟體平台和硬體無關之結構化資料。針對您的開發專案，您可以使用任何文字編輯器或符合 XML 的編寫工具，來建立 XML 檔。您的檔案必須符合綱目檔的規則，否則外掛程式會失敗。

http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_xmlfiles.html

Cast Iron CDK WSDL 檔

WSDL 檔是一種 XML 格式的檔案，將網路服務定義為一組端點。WSDL 檔會說明如何存取 Web 服務，並指定服務所執行的作業。WSDL 通常是由 Web 服務提供者所開發，且可透過 UDDI（通用說明、探索與整合）登錄來使用。

在專案一開始，您必須將符合 WS-I（Web 服務交互作業能力）的 WSDL 檔匯入開發平台，使得您的開發環境可以產生建置用戶端 Web 服務應用程式所需的物件。Web 服務 API 會提供一組物件或 WSDL 類型的定義，以及一組 Web 服務作業。

Cast Iron CDK .par 檔

您的外掛程式會包裝成 .par 檔。您的 .par 是您重新命名並匯入至 Studio 的標準 .zip 檔。

.par 檔包含您的外掛程式。它是從 Studio 專案匯出，並且是您實作介面作業的位置，該作業可讓您識別及盤存外掛程式內含的物件。當您遞送 .par 時，其會自動展開至外掛程式的目錄中。

常見問題 (FAQ)

以下是一些常見問題，可協助您解決在開發程序期間可能發生的問題。

問：如何判斷我的輸入活動在設計時期是否可供探索？

- 答：如果活動的輸入會視物件類型而有所不同，您應選取可供探索，並對輸入使用抽象 WDSL 或綱目元素類型。

問：我的綱目或 WSDL 不含抽象元素類型。如何將它新增至我的檔案中？

- 答：WSDL 和綱目提供了一個機制，可強制替代特定的元素或類型。如果要將抽象元素新增到檔案中，請將下列 `complexType` 元素新增至 WSDL 或綱目中：`complexType name="MyObject"`。請務必在與輸入類型相同的名稱空間中定義它。

問：我可以修改現有的連接器嗎？

- 答：只要連接器是使用「CDK 連接器精靈」所建置，您只需啟動「精靈」，然後在其中新增活動或修訂現有的活動，即可加以更新。

問：我有現有的專案。我可以對其執行「精靈」，再使用編排來外露連接器活動嗎？

- 答：是的。您可以對現有的專案執行「精靈」，但請確定您的活動名稱未與現有的編排名稱衝突。

問：Studio 中未顯示我的連接器。為什麼？

- 答：許多錯誤只要檢查錯誤即可更正。請檢查位於 `Studio_Install_dir` 下的日誌檔，以查看失敗的相關資訊。

取得協助

本節告訴您如何取得 IBM 和其產品的相關資訊，以及如何聯絡銷售和技術支援人員。

您可以在以下網址存取 IBM 公司網站：<http://www.ibm.com>。

這個網站包含 IBM 公司、其背景以及產品等相關資訊。此網站也提供了銷售與技術支援的聯絡資訊。

在聯絡 IBM 支援中心之前，請驗證您已符合下列準則：

- 您的公司具有作用中的維護合約。
- 您已獲得提交問題的授權。
- 您擁有設備序號。
- 您擁有用於購買設備的客戶號碼。

您可以採用下列兩種方式之一，向 IBM 提交軟體問題報告：

1. 使用服務要求 (SR) 問題提交網頁。您需要使用您的 IBM 使用者 ID 和密碼來登入。
2. 透過電話聯絡 IBM。請參閱 IBM Software Support Handbook 中的全球聯絡目錄，取得適當的軟體支援中心電話號碼。
