## [Managing Orchestrations](#)

---

Managing Orchestrations topics provide information about editing orchestration settings and exporting job reports.

- [About Orchestration Settings](#)

Orchestration settings allow you to configure properties for individual orchestrations in a project configuration. For each orchestration you can specify whether the orchestration is enabled, the logging levels, logging behavior, and the maximum number of jobs that the orchestration can simultaneously run.

- [Editing Orchestration Settings](#)

- [Exporting Orchestration Monitoring Data](#)

---

[Feedback](#) | [Notices](#)

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Oorchestrations/toc\\_managing\\_orchestrations.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Oorchestrations/toc_managing_orchestrations.html)

## About Orchestration Settings

---

Orchestration settings allow you to configure properties for individual orchestrations in a project configuration. For each orchestration you can specify whether the orchestration is enabled, the logging levels, logging behavior, and the maximum number of jobs that the orchestration can simultaneously run.

When a project configuration is undeployed you can edit the following orchestration settings:

Orchestration Settings	Description
Enabled	Indicates whether an orchestration is enabled and can be deployed. At least one orchestration in a project configuration must be enabled to deploy a project configuration. By default, all orchestrations in a project configuration are enabled.
Logging Level	Allows you to specify the level of orchestration details that are logged in the System Logs. <ul style="list-style-type: none"><li>• <b>None</b> - Orchestration status and activity are not logged.</li><li>• <b>Initial Values</b> - Only the initial values of orchestration variables are logged.</li><li>• <b>Initial and Error Values</b>- Both the initial values of orchestration variables and orchestration errors are logged.</li><li>• <b>Error Values</b>- Only orchestration errors are logged.</li><li>• <b>Inline</b> - Orchestration job details are logged for suborchestrations inline with the job details of the calling orchestration.</li><li>• <b>All</b>- The highest level of logging. All orchestration activity is logged.</li></ul>
Log Synchronously	Allows the runtime to synchronize the writing of orchestration events to the orchestration monitoring logs as the orchestration is running.  By default, this orchestration setting is disabled and orchestration jobs are not synchronously logged.  Note:  When you enable this orchestration setting, the time it takes to process an orchestration job increases.
Max Simultaneous Job	Allows you to specify the number of orchestration jobs that can run simultaneously.

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Oorchestrations/aboutOrc hestrationSettings.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Oorchestrations/aboutOrc hestrationSettings.html)

## Editing Orchestration Settings

---

## Before you begin

---

To edit orchestration settings, the project configuration must be undeployed.

Tenant administrators, environment administrators (for the environment where the project is published), and publisher of a project can edit its orchestration properties.

## About this task

---

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration--user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

## Procedure

---

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
  - o Finish Jobs - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allows the jobs to end.
  - o Cancel Jobs - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Undeploy the project Configuration, by clicking the icon in the Action Column.
5. Click the project configuration you want to edit. The Configuration Details page is displayed.
6. In the Orchestration section, click Edit to edit the orchestration settings. The Edit Orchestration Settings window is displayed.
7. Click Save.
8. Deploy the project configuration to begin processing orchestration jobs.

## Results

---

The updates you made display in the Orchestration section of the Configuration Details page and the runtime processes the orchestration as specified.

### [Feedback | Notices](#)

Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.appliance.doc/ApplianceHelp/Managing\\_Orchestrations/editingOrchestrationSettings.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.appliance.doc/ApplianceHelp/Managing_Orchestrations/editingOrchestrationSettings.html)

## Exporting Orchestration Monitoring Data

---

### About this task

---

You can export orchestration monitoring data. When you export orchestration monitoring data, you can choose to delete the orchestration monitoring data that you export or choose to persist the orchestration monitoring data on the system.

If you choose to delete the orchestration monitoring data, there is no mechanism to recover the data.

## Procedure

---

1. In the navigation pane, select Logs > Job Logs. The Results page is displayed.
2. Click Export. The Export Jobs window is displayed.
3. Choose one of the following export options:
  - o Export and Delete - Exports the monitoring data and deletes the data from the environment.
  - o Export - Exports monitoring data and preserves data on the environment.

4. Click Download Now to download the exported log file.
5. Choose to open or save the file. If you choose to save the file, specify a location and click Save. The XML file is saved to the location you specified.

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing\\_Projects/toc\\_managing\\_projects.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing_Projects/toc_managing_projects.html)

## About Assets

---

The Management Console groups assets by endpoint. Assets must be generated for database and Web Services endpoints that connect to the following orchestration activities:

- Starter database activities.
- Non-starter database activities with the exactly once delivery option specified.
- Provide Services activity.

For each database endpoint, you must specify unique values for configuration properties associated with the database assets before you can deploy a project configuration. Database assets are control tables, buffer tables, sequence tables, or triggers. All starter database activities are managed in one buffer table, while it manages events for each non-starter database activity with the exactly once delivery option specified in individual control tables

A WSDL for the Provide Services activity is generated by the integration environment. From the Management Console, you can save this Web Services asset.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing\\_Projects/aboutAssets.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing_Projects/aboutAssets.html)

## About Naming Projects and Configurations

Project and project configuration names cannot be longer than 42 characters. When you create a project or project configuration avoid using the following list of reserved characters.

Reserved Characters	Description
&	ampersand
{ } [ ] < > ^	any brackets
*	asterisk
\	backslash
^	caret
:	colon
\$	dollar sign
/	forward slash
#	number sign
( )	parenthesis
	pipe
.	period
?	question mark
;	semicolon
	space
~	tilde

[Feedback](#) | [Notices](#)

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Projects/aboutNamingProjects.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Projects/aboutNamingProjects.html)

## About Project Configurations

---

Project configurations allow you to create multiple variations of the same integration project, so you can create and publish one project and deploy it to many different scenarios. Within a project configuration you can specify which orchestrations are enabled, modify configuration properties for endpoints, generate or modify assets, manage scheduled downtime rules, and control permissions for the project configuration.

Each project you publish has a Default project configuration. In the Management Console, you can create additional project configurations. The project name, project version, configuration name, and project state uniquely identify each project configuration.

You must have Administrator privileges or be the publisher of the specific project to create, edit, and delete project configurations. Administrators and publishers can grant users and groups permissions that allow them to a create, edit, and delete project configurations.

The Summary section displays the details of the project configuration selected from Repository > Configurations. The summary section includes the project configuration name, status of the configuration, the date and time when the project was last published, the name of the user who published or cloned the project configuration. In addition, the summary page also displays the number of orchestrations, properties, assets, and the scheduled downtimes associated with the configuration.

Note: The name of the user who published or cloned the project configuration is displayed in the following formats:

- username [groupname] - indicates that this particular user (username) belonging to (groupname) is the one who published or cloned the project configuration.
- username {user does not exist} - indicates that the user does not exist in the integration appliance.

## Enabling and Disabling Orchestrations

---

The runtime only runs orchestration jobs for enabled orchestration. Before you can deploy a project configuration, the project configuration must contain at least one enabled orchestration. By default, all orchestrations are enabled.

Specifying the orchestration logging level allows you to control the type of orchestration errors that are written to the system logs. The Management Console also allows you to limit the number of jobs that run simultaneously. The number of jobs that run simultaneously can affect performance.

You must have administrator or publisher permissions to specify orchestration properties.

## Understanding Configuration Properties

---

You create these configuration properties for a project in Studio. For more information about creating project properties and specifying a project version, see the Studio online help.

When you publish the project, you can specify values for the configuration properties. The values you specify for the configuration properties determine how the project is deployed. For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

You must have administrator or publisher permissions to edit configuration properties in the Management Console.

## Modifying Assets

---

If your project configuration contains a database or WebServices endpoint, you must generate assets before you can deploy the project configuration. If your project does not contain a database or WebServices endpoint, assets are irrelevant to your project configuration.

You must have administrator or publisher permissions to generate or modify assets.

## Scheduling Downtimes

---

Scheduling downtime allows you to perform maintenance. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals.

You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

## Editing Project Configuration Permissions

---

As an administrator or project publisher, you can grant permissions for project configurations to other users and groups. When you grant users or groups permissions to a project configuration they are able to create, edit, and delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher. For more information, see [Granting Project Configuration Permissions](#).

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Projects/aboutProjectConfigurations.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Projects/aboutProjectConfigurations.html)

## About Projects

---

Projects contain components that the runtime needs to execute an integration scenario: orchestrations, endpoints, maps, and other documents. Use Studio to create and test projects without being connected to an integration environment.

Multiple people can publish multiple projects to the same integration environment. Use Studio to publish projects to an integration environment or export projects to a staging location. You can later use the Management Console to upload the exported project. You must have Administrator or Publisher privileges to publish or upload a project to the integration environment.

When you publish a project from Studio, the Management Console displays the project with default project settings; creating a default project configuration. You can clone this default project configuration to create new project configurations, which you can configure for separate development and production environments.

Use the Studio to create projects and specify endpoint configurations properties and then use the Management Console to specify project configurations and deploy project configurations.

## Cloning Project Configurations

---

### Before you begin

---

You must have Administrator privileges or be the publisher of a project to clone project configurations.

## About this task

---

Project configurations contain properties and assets that you can configure in the Management Console to create multiple variations of the same integration project. When you create a new configuration you can choose to clone an existing project configuration. A cloned project configuration inherits all the configurations from the original project configurations. However, if you edit the original configuration project, the changes are not propagated to the cloned project.

Note: The project configuration you clone does not display on the Favorites view, unless you explicitly add the project configuration to the view.

## Procedure

---

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. From the Configuration Filter list, select All. All project configurations are displayed.
3. Locate the project configuration you want to clone.
4. Click the Clone icon . The Create Project Configuration dialog box is displayed.
5. Provide a unique name for the new project configuration.
6. Click OK.

## Results

---

The cloned project configuration displays on the Project Configurations page. The cloned project has all the same project configuration details as the original project configuration.

## Copying Projects

---

### About this task

---

The Management Console allows you to copy a project by assigning a new version number to an existing project.

## Procedure

---

1. Click the Modify tab. The Projects page is displayed.
2. Click the project you want to copy. The Copy Project dialog is displayed.
3. Enter a new project version. The version number can contain a decimal.
4. Click Save.

## Results

---

The copy of the project is displayed in alphabetical order in the Projects page.

**Parent topic:** [Managing Projects](#)

---

[Feedback](#) | [Notices](#)

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing\\_Projects/copyingProjects.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Managing_Projects/copyingProjects.html)

## Creating Projects From Scratch

---

### About this task

---

You can create a project from scratch in the cloud.

### Procedure

---

1. Click the Create tab. The Solutions page is displayed.
2. Click Create One From Scratch. The Create Project dialog box is displayed.
3. Specify a unique project name.
4. Click Save. The project is displayed in the Projects page of the Modify tab.

### Results

---

You can now take edit, publish, delete or copy your project. Select the project to view the project details and assign permissions to your project. If you do assign permissions, click Save to save your updates.

Project details include the environment to which the project configuration was published, a timestamp of the last time you published the project, and the current state of the project configuration. For example: deployed.

## Creating Projects From a Template

---

### About this task

---

You can create a project from a template. Templates are stored in the Solutions Repository. All users can create a template solution and upload it to the Solutions Repository.

Note:

Not all templates in the Solutions Repository are certified. The templates that are certified are denoted with a WebSphere® DataPower® Cast Iron® logo.

### Procedure

---

1. Click the Create tab. The Solutions page is displayed.
2. Search for a template.
  - a. Select a source endpoint.
  - b. Select a target endpoint.
  - c. Click Search.

You can also select the Keyword Search option to search for a template using a keyword.

3. Choose a template from the solutions that are returned. Template details display.

4. Click Create a project based on this template. Studio Cloud launches and the wizard steps you through the process of creating your project.

## Results

---

## Deleting Project Configurations

---

### Before you begin

---

The publisher of a project configuration, the environment administrator, or tenant administrator can delete project configurations. The publisher of a project configuration can grant permissions that allow other users to delete his project configuration. The environment administrator can grant permissions that allow other users to delete any project configuration in the environment. The tenant administrator can grant permissions that allow other users to delete any project configuration in the tenant.

Project configurations must be undeployed before you can delete them.

### About this task

---

When you delete a project configuration, all monitoring history associated with the project configuration is also deleted.

### Procedure

---

1. Select the environment tab, where the project configuration is published. A list of project configurations is displayed in the Project Configuration section of the Dashboard.
2. Verify that the project configuration you want to delete is undeployed. The state displays in parentheses () at the end of the project configuration name. For example, (undeployed)
3. If the project configuration is in any other state but undeployed, undeploy the project configuration by clicking the Undeploy icon in the Actions column.
4. In the Actions column, click the Delete icon. The Delete Project Configuration dialog box displays.
5. Click Yes.

## Results

---

The project configuration is deleted and no longer available.

# Deploying Project Configurations

---

## Before you begin

---

To deploy or undeploy project configurations, you must have tenant administrator or environment administrator privileges, or be the publisher of the project configuration.

## About this task

---

The type of endpoint in an orchestration determines the steps you must complete to deploy a project configuration. A project configuration must contain at least one enabled orchestration before you can deploy the project configuration. If the orchestration contains a database or Web Services endpoint, you must also generate assets for the endpoints before you can deploy the project configuration.

By default, all the orchestrations in a project configuration are enabled. Therefore, if the orchestrations in a project configuration do not require additional configuration and do not access database or WebServices endpoints, you can deploy your project configuration by clicking the deploy icon next to the project configuration in any of the Project tabs. If your project configuration requires assets or additional configuration, see the following deployment procedure.

Note: A project configuration must be in the stopped state for you to undeploy the project configuration.

## Procedure

---

1. Select the environment tab to which you published your project.
2. In the Project Configuration section, select the project configuration you want to deploy. The Configuration Details page is displayed.
3. In the Orchestrations section, verify that at least one orchestration in the project configuration is enabled. Edit orchestration settings, as needed.

You cannot edit orchestration settings while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

4. In the Properties section, edit configuration properties, as needed.

You cannot edit configuration properties while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

5. If the project configuration contains a Database or Web Services endpoint, you must generate assets for these endpoints.
6. Optional: Add a schedule downtime rule.
7. Optional: Assign permissions for the project configuration, which specify which group of users can edit and deploy a project configuration. By default, tenant administrators, environment administrators, and the publisher of a project configuration can edit and deploy a project configuration.
8. If you assign permissions, click Save.
9. In the Summary section, click the Deploy icon () to deploy the project configuration.

## Results

---

The project configuration deploys, the runtime starts to process orchestration jobs, and the status is appropriately updated in the Summary section.

# Editing Project Configuration Properties

---

## Before you begin

---

You must have administrator or publisher permissions to edit configuration properties.

## About this task

---

You create configuration properties for an integration project in Studio, before you publish the project to an environment in the cloud. When you publish the project, you can specify values for the configuration properties. Configuration properties allow you to move a project configuration from a staging environment to a production environment.

For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

## Procedure

---

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
  - Finish Jobs - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allows the jobs to end.
  - Cancel Jobs - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Click the project configuration you want to edit. The Configuration Details page is displayed.
5. In the Properties section, click Edit to edit configuration property values.
6. Modify the configuration properties.
7. Click Save.

## Results

---

The Configuration Details page displays the updated configuration property values.

[Feedback](#) | [Notices](#)

## Editing Projects

---

### About this task

You can edit projects in the cloud using Studio Cloud.

### Procedure

1. In the Modify tab, click the project name. Studio Cloud opens.
2. Edit the project as needed.
3. Click Save.

## About Database Assets

---

The type of database endpoint you use determines the assets that must be generated. The following table shows the assets that are generated for each supported database:

Note: In Cast Iron, asset tables are created with the identifier size of 30 characters. For asset tables, the format that Cast Iron follows is: CI\_CT\_<respective-table-name> (for Control Table), and CI\_BT\_<respective-table-name> (for Buffer Table). So you must use tables with names having a maximum of 24 characters.

Database	Assets Generated
<ul style="list-style-type: none"><li>• DB2® AS/400</li><li>• Informix®</li><li>• Microsoft SQL</li><li>• Sybase</li></ul>	<ul style="list-style-type: none"><li>• Buffer tables</li><li>• Control tables</li><li>• Triggers</li></ul>
Local Staging Database	<ul style="list-style-type: none"><li>• Buffer tables</li><li>• Control tables</li><li>• Index tables</li><li>• Triggers</li></ul>

Database	Assets Generated
Oracle	<ul style="list-style-type: none"> <li>• Buffer tables</li> <li>• Control tables</li> <li>• Triggers</li> <li>• Sequences</li> </ul>

Assets are only generated for starter activities and non-starter activities that specify the Exactly Once delivery option. Assets are not generated for non-starter activities that specify At Least Once or At Most Once delivery options.

Note: Control table names are appended with an activity ID to ensure all assets have unique names. This number does not distinguish multiple endpoints in an orchestration using the same control table.

**Parent topic:** [Managing Projects](#)

## Validating Database Assets

---

### About this task

Before you generate database assets, validate the assets. When you validate an asset, the integration environment verifies whether the buffer table or control table exists in the source database and verifies that table structures are correct.

Note:

Triggers and sequences are not validated .

### Procedure

1. In the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
2. Click the project configuration that requires database assets. The Configuration Details page is displayed.
3. Verify the project configuration is in the undeployed state.
4. In the Assets section, click Database. The Database Assets page is displayed.
5. Select all the assets you want to validate and click Validate.
6. The results returned determine the next step. The following table tells you how to interpret the feedback and how to proceed.
  - A green check mark - valid
  - A yellow warning sign = warning

### Database Asset Validation Feedback

---

Exists?	Valid?	Action
valid	valid	The asset exists in the database and the asset structure matches the project configuration you created in Studio. You can now deploy the project configuration.
valid	warning	The asset exists in the database, but the asset structure is incorrect. Check that the database script contains the appropriate columns and that the columns are in the correct order. If there is an error, recreate the asset.
warning	warning	The asset does not exist in the source database table. You must create the asset before you can deploy the project configuration.

Warning: Constraint names ending in a unique ID are generated. However, if the size of the database table name is greater than 18 characters, the constraint name is truncated resulting in a naming conflict. If the database table name is greater than 18 characters, edit the database assets script generated and make the constraint names unique.

## Generating Database Assets

---

### About this task

The project configuration must be undeployed before you can validate or generate assets. Validate assets before you generate them.

## Procedure

---

1. In the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
2. Click the project configuration that requires database assets. The Configuration Details page is displayed.
3. Verify the project configuration is in the undeployed state.
4. In the Assets section, click Database. The Database Assets page is displayed.
5. Select all the assets you want to generate. You can select all the assets by selecting the top-most check box.
6. Click Create.
7. Review and modify the database script as needed.

---

## Publishing Projects

---

### Before you begin

---

You must be a tenant administrator, environment administrator, or environment publisher to publish projects.

### About this task

---

Publishing a project uploads a project from Studio to a runtime environment.

### Procedure

---

1. In the Management console, select the Modify tab. The Projects page displays.
2. In the Actions column, click the Publish Project icon. A list displays all the environments in the tenant.
3. Select the environment to which you want to publish the project.

### Results

---

A confirmation displays. The project is available in the environment you selected.

## Push WSDL from Cast Iron Project to API Management

---

### Before you begin

---

You need to have valid IBM ID account on Cast Iron Appliance & API management to use this feature.

## About this task

---

This topic details how you can quickly create API in IBM API Management from WebSphere Cast Iron Project (WSDL) in a seamless manner.

## Procedure

---

1. Login to Cast Iron Web Management Console using your IBM ID.
2. Navigate to Repository > Configurations on the left panel.
3. Go to your Project configuration screen, click on the project which needs to be published to IBM API Management. This displays the Configuration Details of the project to be published.
4. Under Assets, click WebService. The Web Services Assets screen is displayed.
5. Select the orchestration whose WSDL need to created as API in IBM API Management.
6. Click on Push to API Management button at the bottom of the screen. The Push to API Management screen is displayed.
7. In the Push to API Management screen, enter the details of the following to create a connection to the API management system.

Field Name	Description
Host	Specifies the host name of the Management Cluster/Server/Cloud address.
Port	Specifies the port number needed to connect to the Management Cluster/Server/Cloud address.
User ID	Specifies the authentication user name used for accessing the Management Cluster/Server/Cloud address.
Password	Specifies the authentication password used for accessing the Management Cluster/Server/Cloud address.

8. Click Load Organizations button and then select the Organizations from the drop down list.
9. Click Pust to APIM. Click OK in the popup confirmation window.
10. Click Close.

## Results

---

A new tab on your browser opens with the newly created API.

# Push REST API (Swagger) from Cast Iron Project to API Management

---

## Before you begin

---

You need to have valid IBM ID account on Cast Iron Appliance & API management to use this feature. Also, you need to [Specifying Swagger information](#) in HTTP Receive Request activity.

## About this task

---

This topic details how you can quickly create API in IBM API Management from WebSphere Cast Iron Project in a seamless manner.

## Procedure

---

1. Login to Cast Iron Web Management Console using your IBM ID.
2. Navigate to Repository > Configurations on the left panel.
3. Go to your Project configuration screen, click on the project which needs to be published to IBM API Management.

Note: You can only push the Swagger for the projects whose status is either running or deployed. Otherwise, the Push to API Management button will not be displayed.

This displays the Configuration Details of the project to be published.

4. Click on Push to API Management button. The Push to API Management screen is displayed.

5. In the Push to API Management screen, enter the details of the following to create a connection to the API management system.

Field Name	Description
Host	Specifies the host name of the Management Cluster/Server/Cloud address.
Port	Specifies the port number needed to connect to the Management Cluster/Server/Cloud address.
User ID	Specifies the authentication user name used for accessing the Management Cluster/Server/Cloud address.
Password	Specifies the authentication password used for accessing the Management Cluster/Server/Cloud address.

6. Click Load Organizations button and then select the Organizations from the drop down list.

7. Click Push to APIM. Click OK in the popup confirmation window.

8. Click Close.

## Results

---

A new tab on your browser opens with the newly created API.

## Recreating Database Assets

---

### About this task

---

If a database asset exists but its structure does not match the source table, you must recreate the database asset before you can deploy the project configuration.

### Procedure

---

1. In the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
2. Click the project configuration that requires database assets. The Configuration Details page is displayed.
3. Verify the project configuration is in the undeployed state.
4. In the Assets section, click Database. The Database Assets page is displayed.
5. Select the assets you want to recreate.
6. Click Recreate.
7. Review and modify the scripts as needed.

## Reviewing TIPs

---

You can rate and provide a review for all TIPs that you download.

Ratings are given on a scale of 1-5, where 5 is the highest rating. When you submit your rating and review for a TIP, Studio uploads the information to the WebSphere® Cast Iron® Solutions Repository. Your rating is combined with any other ratings that have been submitted by other reviewers and the average is displayed in the Details pane of the specific TIP.

## Stopping Project Configurations

---

### About this task

There are two ways to stop a running project configuration:

- **Stop (allows jobs to finish)** - When you click Finish Jobs, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows the Integration Appliance to gracefully stop.
- **Stop (cancel running jobs)** - When you click Cancel Jobs, this option prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.

### Procedure

---

1. From the Project Configurations page, select a project configuration.
2. In the Actions column, click the Stop icon . The Stop Configuration window is displayed.
3. Click either Finish Jobs or Cancel Jobs to stop the project configuration.

## Uploading Project Configurations

---

### Before you begin

To upload a project configuration to the cloud, you must have tenant administrator, environment administrator, or environment publisher permissions.

### About this task

When you upload a project configuration, you are publishing a project using a two-stage process. First, you export a project from Studio to an intermediate location. Then from the Management Console, you upload the project to an Integration Appliance or cloud environment.

### Procedure

1. Select the environment tab, to which you want to upload the project configuration.
2. From the Navigation pane, select Repository > Upload Project. The Upload Project Configuration dialog box displays.
3. Enter the path from which to upload the project in the Local Project File field. You can click Browse to select a file from your local machine.
4. Specify a project name. The name should not exceed 42 characters and should not contain any restricted characters.
5. Specify a product version number. This field is not populated with the project version you specified in Studio. However as a best practice, you should specify a project version that matches the version you specified in Studio.
6. Click Upload.

### Results

The project configuration displays in the Project Configuration page.

## Working with Project Configurations

---

Various views are available for project configurations:

- **All** - Displays the deployment state and status of all project configurations, regardless of the state of the project configuration. You can clone or delete project configurations from this view.
- **Recent** - Displays the deployment state and status of the most recently published or modified project configurations. You can clone or delete project configurations from this view.
- **Favorites** - Displays the deployment state and status of project configurations for which you have permissions. By default, this view is not populated. You must explicitly add project configurations from either the Recent view or All view.
- **My Configurations** - Displays the deployment state and the status of the project configurations that you have published or cloned (configurations published by the user currently logged on).

You can access these views from the Dashboard or by selecting the following path in the Navigation pane: Repository > Configurations. The Configuration Filter allows you to choose your view from a list.

The following table describes information available in the various project configuration views:

Columns in Project Configuration Views	Descriptions
Configuration	Displays published project configurations.
Running	Displays the number of currently running jobs for the project configuration.
Completed	Displays the number of orchestration jobs, for the project configuration, that were completely processed.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.
Errored	Displays the number of orchestration jobs where a runtime error occurred for the project configuration.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.
Total	Displays the total number of orchestration jobs, for the project configuration, that have run.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.

Columns in Project Configuration Views	Descriptions
Actions	<p>Displays the state of project configurations, as well as options for you to delete  or clone  project configurations.</p> <p>▶ Clicking this icon deploys and runs a project configuration.</p> <p>⏸ Clicking this icon causes the runtime to suspend the orchestration job processing of the project configuration.</p> <p>⏏ Clicking this icon undeploys a project configurations. You must stop the project configuration before you can undeploy the project configuration.</p> <p>⏹ Clicking this icon stops the runtime from processing orchestration jobs for the project configuration.</p> <p>When you stop a project configuration, you can choose to have the runtime completely process all currently running jobs or have the runtime cancel all currently running jobs.</p> <p>★ Only available in All and Recent views. Clicking this icon adds the project configuration to Favorites.</p> <p>When the Management Console displays the project configuration in Favorites, this icon is no longer active next to the project configuration in the All and Recent views.</p> <p>✖ Clicking this icon removes the project configuration from Favorites, but does not delete the project configuration from the environment. You can view the project configuration from the All and Recent views.</p>

## Monitoring

---

Monitoring topics provide information about creating and managing notifications, viewing hardware status, searching orchestration jobs, and viewing orchestration job logs.

- [About the Web Management Console](#)
- [Choosing a Notification Level](#)

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that exceed the level you choose.

- [Creating Notification Policies](#)

Notification policies allow you to monitor potential errors in a specific system.

- [Deleting Notification Policies](#)

You can delete one or more notification policies.

- [Editing Notification Policies](#)
- [Enabling Email Notification Policies](#)
- [Searching for Orchestration Jobs](#)
- [Viewing Hardware Status](#)
- [Viewing Orchestration Job Logs](#)

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:

- [SNMP basics](#)

The Simple Network Management Protocol (SNMP) is an Internet standard protocol used primarily in network management systems to monitor network devices for conditions that warrant administrative attention. Devices that typically support SNMP

include routers, switches, servers, workstations and printers. This section introduces SNMP basics and provides an overview of Cast Iron MIBs.

- [Setting up an SNMP receiver](#)

You can use the WMC to create notifications for events that happen in runtime components such as orchestrations, security, hardware and others. A delivery mechanism for these notifications is SNMP in which a trap is set for events. To retrieve these events, you must set up a receiver or manager that is registered with the appliance. Use the procedures in this section to set up an SNMP receiver.

- [Adding a notifications policy](#)

When you add a notifications policy, you inform administrators of alerts, policy violations and the status changes of job executions. Using SNMP traps, the notification system also allows you to send traps to SNMP-enabled third-party applications. Perform the following steps to add a notifications policy and assign it a name.

- [About the Resource Utilization Graph](#)

Describes how to use the data the Resource Utilization graph provides for capacity planning and understanding the health of the runtime environment.

- [Hardware health](#)

Use the information in this section to obtain notifications based on the hardware health of the appliance.

- [Testing the system](#)

---

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/toc\\_monitoring.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/toc_monitoring.html)

## About the Web Management Console

---

The Web Management Console (WMC) is a web-based management tool that allows you to:

- Manage the Integration Appliance
- Manage integration projects
- Monitor integration projects

You can access the same Integration Appliance from multiple WMCs. However, each WMC can only monitor and manage one Integration Appliance at a time. The tasks you can complete in the WMC depend on the user account you log in with. The WMC has built-in groups, which you can use to further control access to the Integration Appliance. Alternatively, you can specify an LDAP server to manage user and group authentication and authorization.

When you log into an Integration Appliance through the WMC, the Dashboard appears. The Dashboard provides multiple snapshot views of project configurations and jobs, a resource utilization graph, a list of unresolved critical system errors, and an overall project configuration summary. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

The WMC displays the name of the current user as well as the date and timestamp set on the Integration Appliance. This date and timestamp do not necessarily represent the local date and time. For example, the Integration Appliance is set to GMT; however, you can log on to this Integration Appliance from a WMC in San Francisco, CA, which is in the PST time zone. Use the Command Line Interface (CLI) to modify the time zone of the Integration Appliance.

# Choosing a Notification Level

---

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that exceed the level you choose.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

You can specify the following notification levels:

Notification Level	Description
Critical	Sends an alert when an error condition causes the a shutdown.
Error	Sends an alert when non-critical issues that must be handled immediately occur.
Warning	Sends an alert when potential error conditions occur.
Info	Sends an alert for informational usage.

# Creating Notification Policies

---

Notification policies allow you to monitor potential errors in a specific system.

## About this task

---

When you create a notification policy, the notification policy monitors the system log for the system you specify. When a system log event occurs that meets or exceeds the notification level of a notification policy, an alert is sent to the specified users.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification or you did not enable the notification policy. For more information about specifying system log settings, see "[Specify System Log Settings](#)". For more information about enabling email notification policies, see "[Enabling Email Notification Policies](#)".

## Procedure

---

1. Click the environment for which you will create a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Click New Policy. The New Policy dialog box is displayed.
4. Enter a policy name.
5. From the Level Exceeds list, select a level. Alerts are only sent for errors that exceed the level you choose.
6. From the With System list, select the system you want the notification policy to monitor.
7. Specify the email address or addresses of the person or people that will receive the email notification. When you have multiple email addresses, add one email address per line.
8. Click Save.

## Results

---

The new policy is displayed on the Notifications page. You must enable e-mail notifications before any alerts can be sent. If the email status is displayed as (inactive), email notifications are not enabled.

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/creatingNotificationPolicies.html>

## Deleting Notification Policies

---

You can delete one or more notification policies.

### Procedure

---

1. Click the environment for which you will delete a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Select the check box for the policy you want to delete.

To delete multiple policies, select the top check box. All the policies are selected.

4. Click Delete. The Delete Policies? confirmation window is displayed.
5. Click Yes.

### Results

---

The policy is deleted and no longer displays in the Notifications page.

**Parent topic:** Monitoring

---

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/deletingNotificationPolicies.html>

## Editing Notification Policies

---

### Procedure

---

1. In the Navigation pane, select Logs > Notifications. The Notifications page is displayed.
2. Click a notification policy. The Edit Policy dialog box is displayed.
3. Update the appropriate notification settings.
4. Click Save.

### Results

---

The updated policy is displayed on the Notifications page. You must enable email notifications before any alerts can be sent. If the Email status displays as (inactive), email notifications are not enabled.

**Parent topic:** Monitoring

---

 Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Monitoring/editingNotificationPolicies.html>

## Enabling Email Notification Policies

---

### About this task

---

When you create an email notification policy, you must enable the email notification policy for alerts to be sent. By default, email notifications are not enabled.

If you enable email notification policies, the settings you specified when you created the email notification determine when an email alert is sent.

Note: If you disable the email notification policy by clearing the Enable Email option, alerts are not delivered for any email notification policy.

### Procedure

---

1. Click the environment for which you will enable an email notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. At the top of the page, click the Email link. The Enable Email option is displayed.
4. Click the Enable Email option.
5. Optional: Provide an email subject line that will qualify the alert sent.
6. Click Save.

### Results

---

The Notifications page displays the new policy and Email status changes from (Inactive) to (Active). Email notifications will now be sent when an event that triggers the notification policy occurs.

**Parent topic:** [Monitoring](#)

## Searching for Orchestration Jobs

---

### About this task

---

Job IDs and keys allow you to search for orchestration jobs. You define primary message keys in Studio, when you configure connectors. The primary message key must be a unique value. For example, the purchase order number for a purchase order message. If you do not define a primary key, the runtime uses the job ID, a unique number that the runtime generates, to identify an orchestration job.

From the Management Console, you can search orchestration jobs by job ID. By default, the Management Console searches only for completed orchestration jobs that match the job ID you specify. Use the Advanced Search option to search for all other orchestration jobs.

## Procedure

---

1. From the navigation pane, select Dashboard.
2. In the Results section, enter a job ID in the Key Search field.
3. From your keyboard, press Enter. The completed job with the matching job ID is displayed.

**Parent topic:** [Monitoring](#)

# Using Advanced Search

---

## About this task

---

Use the Advanced Search option to further refine your job search. If you enter values for multiple fields in the Advanced Search box, the Management Console uses AND logic to refine the search.

For example, you specify a time range in addition to selecting the status that has an error. The Management Console searches for all orchestration jobs that had an error within the time range specified.

Note: If you choose to search by date and time, you must specify a start and end date and time.

## Procedure

---

1. From the navigation pane, select Dashboard.
2. In the Results section, select an orchestration. The Orchestration Details page displays all the jobs associated with the orchestration.
3. In the Advanced Search box, specify values for Job ID, Key, Status, Start Date and Time, or End Date and Time as appropriate for your search.  
Note: If you choose to search by date and time, you must specify a start and end date and time.
4. Click Search.

## Results

---

The search results are displayed in the table.

---

# Viewing Hardware Status

---

The WMC allows you to monitor Integration Appliance resource utilization and hardware health.

## Viewing Resource Utilization

---

To view Integration Appliance CPU usage, memory usage, and disk space usage select System > Hardware Status. The Resource Utilization page is displayed.

The WMC displays a usage percentage for each resource utilization category listed. In cases where a category contains multiple components, like multiple CPUs, the percentage shown is an average of all the components displayed. In the Dashboard, the WMC provides a graphical summary of the Integration Appliance resource utilization data. For more information about interpreting the Resource Utilization graph, see [About the Web Management Console](#).

## Viewing Hardware Health

---

To view status about Integration Appliance hardware components, select System > Hardware Status. The Hardware Health page displays the status of fans, temperature, disks, and network links. A green checkmark indicates that the component is good working order

**Parent topic:** [Monitoring](#)

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/viewingHardwareStatus.html>

## Viewing Orchestration Job Logs

---

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:

- **All** - displays orchestration job information for all project configurations.
- **Recent** - displays orchestration job information for the most recently published or modified project configurations.
- **Favorites** - displays orchestration job information for the project configurations displayed in the Favorites filter. Orchestration job information displayed through this filter also displays in the Recent and All filters.

In some cases, the Management Console displays an orchestration job status of Unknown, even though the orchestration job completed successfully. Rebooting the environment, while orchestration jobs are processing, can result in the Unknown status because monitoring data is lost during the reboot. Stop all orchestration jobs before rebooting the environment to avoid an Unknown status.

Click an orchestration job to view the orchestration details for that orchestration. The Orchestration Details page displays all the jobs associated with the orchestration you selected and the status of each individual job. Use the Left and Right arrows (<<, <, >, >>) to view all orchestration jobs.

**Parent topic:** [Monitoring](#)

## Sorting Orchestration Jobs

---

### About this task

You can search orchestration jobs by job ID. To sort orchestration jobs by project configuration name, orchestration name, status, time, or job ID click the appropriate column header.

---

## SNMP basics

---

The Simple Network Management Protocol (SNMP) is an Internet standard protocol used primarily in network management systems to monitor network devices for conditions that warrant administrative attention. Devices that typically support SNMP include routers, switches, servers, workstations and printers. This section introduces SNMP basics and provides an overview of Cast Iron MIBs.

In the lexicon of SNMP, a Cast Iron Integration Appliance is referred to as a "network element" or "managed device," indicating that it is a citizen on a network and available to be managed. Network elements include an *agent* that provides information about the element. Agents perform two key functions. First, they respond to requests from the management system and secondly, send notifications about events on the network element. Asynchronous notifications from agent to manager are referred to as *traps*.

SNMP traps enable an agent to notify the management station of significant events by way of an unsolicited SNMP message. Information provided through polling or traps are defined in Management Information Bases (MIBs). A MIB is a virtual database used for managing the entities in a communications network. MIBs define a hierarchy of objects, with each object having its own Object Identifier (OID). An OID is specified by numbers separated by periods, for example: ".1.3.6.1.2.1.1." A OID is sometimes referred to by a common name. For example, the specific OID .1.3.6.1.2.1.1 can be referred to as "system." The SNMP protocol defines many public MIBs, and also allows for organizations to define custom, application-specific MIBs.

## Understanding Cast Iron MIBs

---

Files downloaded from the Cast Iron WMC have multiple MIB DEFINITIONS = BEGIN - END sections. Each section comprises a MIB with its own hierarchy. To poll for Cast Iron-specific information, use CASTIRON-IA-MIB. Each MIB has a MODULE-IDENTITY that describes the MIB function. A comment section that follows MODULE-IDENTITY provides an overview of the MIB contents and contains an Object Summary that lists the name and OID of every MIB object.

Note: Some tools, such as those provided by NET-SNMP, require each MIB to be split into a single file. For more information on splitting MIBs, see [Setting up an SNMP receiver](#).

A section of the Object Summary from a CASTIRON-IA-MIB follows:

-- ciIaProjectSummary	ciiia.1.1.1
-- ciIaNbrProjects	ciiia.1.1.1.1
-- ciIaNbrRunningOrchs	ciiia.1.1.1.2
-- ciIaNbrStoppedOrchs	ciiia.1.1.1.3
-- ciIaNbrRunningJobs	ciiia.1.1.1.4
-- ciIaNbrCompletedJobs	ciiia.1.1.1.5
-- ciIaNbrErroredJobs	ciiia.1.1.1.6

As shown, an organizational node (in this case, OBJECT-IDENTITY, which is similar to a directory) called ciIaProjectSummary contains general information about projects. Inside that "directory" are specific items (OBJECT-TYPEs) containing the number of projects, the number of running and stopped orchestrations and more. To get more information about the meaning of these items, search the file for the name of the item. For example, to get information about ciIaNbrRunningJobs, searching the file for that string turns up the following:

```
ciIaNbrRunningJobs OBJECT-TYPE                                -- ciiia.1.1.1.4
    SYNTAX Unsigned32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "Total number of currently running jobs.
    "
::= { ciIaProjectSummary 4 }
```

The key areas are:

- ciIaNbrRunningJobs OBJECT-TYPE - Defines the name of the object. Note that there is a comment at the end giving a shortened form of the OID.
- SYNTAX Unsigned32 - This is an unsigned integer whose value could go up or down.
- MAX-ACCESS read-only - A read-only value. The manager may ask for it but cannot change it.
- DESCRIPTION - Describes the object.

The following example illustrates the data displayed when polling for ProjectSummary information:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2
ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

The following data is displayed when polling lciIaProjectTable:

-- ciIaProjectTable	ciiia.1.1.2
-- ciIaProjectEntry	ciiia.1.1.2.1
-- ciIaProjEntryIndex	ciiia.1.1.2.1.1

```

-- ciIaProjEntryName          cia.1.1.2.1.2
-- ciIaProjEntryVersion       cia.1.1.2.1.3
-- ciIaProjEntryConfig        cia.1.1.2.1.4
-- ciIaProjEntryState         cia.1.1.2.1.5
-- ciIaProjEntryNbrRunning    cia.1.1.2.1.6
-- ciIaProjEntryNbrCompleted  cia.1.1.2.1.7
-- ciIaProjEntryNbrErrored   cia.1.1.2.1.8
-- ciIaProjEntryTimePublished cia.1.1.2.1.9

```

SNMP Tables can be challenging. SNMP tables indicate the name, version, configuration, state and other information about each project on the appliance, similar to a database schema. Each entry item (for example, ciIaProjEntryName, ciIaProjEntryVersion) describes a column in the table. You can search through the MIB for the string to find more information on each item. Note: Attempting to "walk" the Project table in an iterative fashion may present problems. Instead, always use a tool feature that understands tables when viewing table information. The following example illustrates a "walk" technique. In this case a project was published and then cloned to create a new configuration, resulting in two table rows. As the output indicates, it is difficult to understand which items are associated with specific rows. In this case, you need to view the index (the last piece of the OID) to determine the correct arrangement of items and rows.

```

$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2 ciIaProjectTable
CASTIRON-IA-MIB::ciIaProjEntryName.98304 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryName.98305 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryVersion.98304 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryVersion.98305 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryConfig.98304 = STRING: Default
CASTIRON-IA-MIB::ciIaProjEntryConfig.98305 = STRING: OnlineLicensingClone
CASTIRON-IA-MIB::ciIaProjEntryState.98304 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryState.98305 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98304 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98305 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98304 = STRING: 2009-6-12,16:36:20.0,+0:0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98305 = STRING: 2009-6-12,16:36:20.0,+0:0

```

When information is mapped using the snmptable command, it is displayed more clearly, as shown in the following example:

```

$ snmptable -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2
ciIaProjectTable
SNMP table: CASTIRON-IA-MIB::ciIaProjectTable

  PEN*      PEV PEC          PES      PER COM PEE      PETP
OnlineLicensing  1.0 Default  undeployed  0  0  0  2009-6-12,16:36:20.0,
                                         +0:0
OnlineLicensing  1.0 OnlineLicensingClone undeployed  0  0  0  2009-6-12,16:36:20.0,
                                         +0:0

```

\*Table Key: PEN=ciIaProjEntryName, PEV=ciIaProjEntryVersion, PEC=ciIaProjEntryConfig, PES=ciIaProjEntryState, PER=ciIaProjEntryNbrRunning, COM=ciIaProjEntryNbrCompleted, PEE=ciIaProjEntryNbrErrored, PETP=ciIaProjEntryTimePublished

Note that these examples use textual names rather than OIDs. Because a function of the MIB is to map between OID and textual name, you should not need to use OIDs on a regular basis.

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Monitoring/snmp\\_basics.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Monitoring/snmp_basics.html)

## Setting up an SNMP receiver

You can use the WMC to create notifications for events that happen in runtime components such as orchestrations, security, hardware and others. A delivery mechanism for these notifications is SNMP in which a trap is set for events. To retrieve these events, you must set up a receiver or manager that is registered with the appliance. Use the procedures in this section to set up an SNMP receiver.

## About this task

---

When you set up an SNMP receiver, you download and split the MIBs, create the configuration file, enable notifications, add a notification policy and then test the system:

## Procedure

---

1. Click on **WMC: Logs-> Notifications -> SMNP**.
2. In the dialog box click **Download MIB**.
3. Add the MIBs to the machine you've designated to be the receiver.
4. Run the following script to split the MIBs into logical units. Note: the script assumes the file is in the local directory and that the file you downloaded is named castironsys.mib.

```
#!/bin/bash

sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castironsys.mib |
while read mib; do
    echo $mib
    sed -ne "/^$mib/,/^END/p" castironsys.mib > $mib
done
```

5. Set up your SNMP manager of choice.
6. Select **WMC: Logs-> Notifications -> SMNP** to enable SNMP notifications. Be sure that the **Enable SNMP** checkbox is checked.
7. Add the receiver hostname.
8. Set the trap community to be **public**. This is defined in /etc/snmp/snmptrapd.conf as the **authCommunity** entry.
9. Click **Save**.

**Parent topic:** [Monitoring](#)

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/set\\_up\\_snmp\\_receiver.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/set_up_snmp_receiver.html)

## Adding a notifications policy

---

When you add a notifications policy, you inform administrators of alerts, policy violations and the status changes of job executions. Using SNMP traps, the notification system also allows you to send traps to SNMP-enabled third-party applications. Perform the following steps to add a notifications policy and assign it a name.

## Procedure

---

1. Click on the **Policies** tab.
2. Click the **New Policy** link at the bottom left of the screen and give the policy a name.
3. In the **Notify When** row, select a level and system. Be sure the **SNMP checkbox** under the **Notify** section is checked.
4. Click **Save**.

## Example

---

The following table shows the system, level and messages delivered via the Uncategorized trap. The Uncategorized trap is named CASTIRON-IA-MIB::ciIaUncategorizedEv, Enterprise 1.3.6.1.4.1.13336.2.2.2.1.1.10, Trap 1.

Table 1.

## About the Resource Utilization Graph

---

Describes how to use the data the Resource Utilization graph provides for capacity planning and understanding the health of the runtime environment.

The Resource Utilization graph tracks the following variables, which you can use to analyze the overall health of the runtime and calculate the available capacity for additional projects and orchestrations:

- % Disk Used
- % Memory Used
- GC Activity
- # Running Jobs

### % Disk Used

---

This variable tracks the percentage of disk space used by orchestration job variables and historical data.

When you run an orchestration job, the runtime uses the disk to store the variable data for that job. When you enable persistence, the stored variable data for jobs allows the Integration Appliance to provide a point-in-time recovery of orchestration jobs should the Integration Appliance encounter a fault that requires restarting the runtime.

The runtime also stores historical data about orchestration jobs, which you can view on the Web Management Console (WMC) Job Log page.

If the amount of disk space available becomes too low, the Integration Appliance generates an alert, which sends a notification to designated users.

### % Memory Used

---

The Integration Appliance has a fixed amount of available memory to run orchestrations. The % Memory Used variable tracks the amount of this fixed memory used by orchestration jobs and the corresponding variable data. When the memory allocated to orchestration jobs and variable data is no longer being used, the memory is returned to the pool of available memory using a process called garbage collection.

There is a direct relationship between the amount of memory used and garbage collection cycles. However, high memory usage does not necessarily mean an increase in full garbage collection cycles.

For more information about factors that affect the amount of memory used, see [Best Practices for Memory Management](#).

### GC Activity

---

Garbage collection is a process that returns memory, held by completed jobs and variable data, back to a pool of memory used by all orchestration jobs. This garbage collection process ensures that the Integration Appliance has a constant supply of free memory to be used by new orchestration jobs.

The GC Activity variable tracks the percentage of full garbage collections that occur in a minute. This percentage is calculated by dividing the number of full garbage collections by 6. Ideally, the GC activity should be at or below 50%, that is 3 full garbage collections per minute. Orchestration performance is severely degraded when 6 or more full garbage collections happen per minute.

For more information about garbage collection and factors that impact garbage collection, see [Best Practices for Memory Management](#).

### # Running Jobs

---

Displays the number of jobs currently running on the Integration Appliance.

**Parent topic:** [Monitoring](#)

---

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/about\\_the\\_resource\\_utilization\\_graph.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Monitoring/about_the_resource_utilization_graph.html)

## Hardware health

---

Use the information in this section to obtain notifications based on the hardware health of the appliance.

First you must prepare the SNMP Manager to receive Uncategorized traps (CASTIRON-IA-MIB::ciIaUncategorizedEv .1.3.6.1.4.1.13336.2.2.2.1.1.10 #1). Next you configure the SNMP Manager to poll for the following items and generate notifications when the conditions are met:

Table 1.

Parameters to Monitor	Recommended Thresholds	Snmp OID
Garbage Collections	Alert if this value changes quickly (by more than 6 counts in a 1-minute time period).	CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0
Memory Usage	Alert if this value goes over 80% (raw value of 8000).	CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0
Disk Usage	Alert if this value goes over 75% (raw value of 7500).	CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0

### Garbage collections

---

CASTIRON-IA-MIB::ciIaResNbrGarbageCollects counts the number of garbage collections that have occurred since the system was last restarted. While occasional garbage collections are normal, collections of 6 or more per minute is excessive and indicates that an appliance is overworked and as a result, may experience performance issues.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0 = Counter32: 149
```

### Memory usage

---

CASTIRON-IA-MIB::ciIaResPctMemoryUsed shows the percentage of total memory in use, expressed in hundredths of a percent. This number is updated after each garbage collection.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 = Gauge32: 1.84
```

Note that this value is provided as an integer (184 in this case), but the MIB causes the SNMP manager to alter its displayed value. Values expressed in hundredths of a percent are *usually* modified automatically. For example in this case, '1234' should be displayed as '12.34'. However, take care to ensure that the SNMP management tool handles this automatically. If it does not, the value will appear as follows:

```
$ snmpwalk -On -v 2c -c public pebbles2.sanjose.ibm.com
.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 = Gauge32: 184
```

Recommendation: Alert if this value goes over 80% (raw value of 8000).

### Disk usage

---

CASTIRON-IA-MIB::ciIaResPctWipFull indicates the percentage of total Work-in-progress (WIP) disk space in use, expressed in hundredths of a percent. This number is key for predicting job purging activities.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0 = Gauge32: 6.00
```

Recommendation: Alert if this value goes over 75% (raw value of 7500).

## About Built-In Groups

---

Built-in groups are predefined groups. In the cloud, in addition to a tenant administrator group, each environment has a built-in administrator, publisher, and user group.

For example: A tenant, named Cumulus, is created for your organization. Within this tenant there are two environments: Development and Production. The following built-in groups would be available:

- admin [cumulus.com]
- admin [Development]
- publisher [Development]
- user [Development]
- admin [Production]
- publisher [Production]
- user [Production]

The same user can be a part of multiple groups. You can assign users to a built-in group or create a new group.

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration--user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

The following list defines the permissions granted to each of the built-in groups:

- **Tenant Administrator Group.** Provides privileges to all environments, users, groups, and projects in a specific tenant. Permits users to create, edit, and delete users and custom groups in the tenant. Users in this group can add and delete users to and from any built-in or custom group in the tenant. Users in this group can view, edit, and delete permissions for all source projects in the tenant.

Users in this group can view all the environments in the tenant and have all the permissions of an environment administrator in each of the tenant environments.

- **Environment Administrator Group.** Provides privileges to all users, groups, and projects in a specific environment. Permits users to create, edit, and delete users and custom groups in a specific environment. Users in this group can add and delete users to and from any built-in or custom group in the environment.

Environment Administrators can also create and deploy project configurations for project that any environment publisher publishes, and view orchestration job details for any project configuration in the environment. With environment administrator group privileges you can edit permissions that publishers for the same environment set for their individual project configurations.

Even though members of the Environment Administrator group have Environment Publisher group and Environment User group privileges, the members of the Environment Administrator Group are not displayed in other groups in the same environment until you explicitly add the user.

- **Environment Publisher Group.** Provides project privileges in a specific environment. Permits users to create, deploy, or delete project configurations for any project that they publish in the environment. Users in this group can also start and stop orchestrations and view orchestration job details for project configurations they deployed in the environment. As an environment publisher, you can grant permissions for individual project configurations you create to another user with environment publisher privileges for the same environment.

The members of the Environment Publisher Group do not appear in the Environment User Group, until you explicitly add the user.

- **Environment User Group.** Permits users to monitor alerts and orchestrations in a specific environment. Users in this group can create and edit projects; however, they cannot publish the project to an environment. You must have Publisher privileges for the specific environment to which you want to publish a project. All users are automatically members of the Environment User group.

In a multi-environment tenant, users in this group only see the environment tab for environments of which they are a member. For example, a tenant has a Development, a Staging, and a Production environment. The tenant administrator or administrator of the Development environment adds a user to the User [Development] group. When the user logs in to the tenant, the user can only see the Development environment, even though the tenant has two other environments.

## About Libraries Environments

---

Libraries Environment is a user profile parameter that specifies the environment from which Studio retrieves connector libraries.

In a multi-environment tenant, each environment can potentially have different versions of connector libraries installed. Setting this parameter points Studio to the libraries you want to use while verifying your projects. This parameter is not as critical if your project does not use an endpoint that requires additional libraries to be installed. See the Connector Release Notes® for a complete list of endpoints that require you to install additional libraries.

Note: The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.

## About User Profiles

---

A user profile provides a summary of user details, such as: name, display name, email, and group memberships.

You can access and edit user profile settings from the Settings link in the top right-hand corner of the Management Console. The user profile displayed is for the user currently logged in to the Management Console.

**Parent topic:** [Permissions](#)

## Accessing User Profile Information

---

### Procedure

---

1. Click the Settings link in the upper right-hand corner of the Management Console. The Settings window is displayed.
2. Optional: For the Display Name setting, click Edit to modify the display name. After you modify the setting, click Save.
3. Optional: For the Password setting, click Edit to modify the user's password. After you modify the setting, click Save.
4. Optional: For the Email setting, click Edit to modify the user's email address. After you modify the setting, click Save.
5. Optional: **Cloud:** Click Change Libraries Environment, to specify the environment from which Studio retrieves connector libraries. After you modify the setting, click Save.
6. Click Close to close the Settings window.

---

## Assigning Users to Groups

---

You must have tenant administrator or environment administrator privileges to assign users to groups. Environment administrators can only add users to groups in their specific environment.

You can assign users to groups, when you create or edit a user. You can also assign users to groups, when you create or edit groups.

For more information about assigning users and groups, see [Creating New Users](#) and [Creating New Groups](#).

## Changing Your Password

---

### About this task

You can change your own password at anytime. However, to modify another user's password, you must have tenant administrator permissions. Environment administrators cannot change passwords for users in their environment.

For example, you are the administrator for the Development environment. You can change your password, but you cannot change the password for any specific user with permissions to the Development environment.

### Procedure

1. Click the Settings link in the upper right-hand corner of the Management Console. The Settings window is displayed.
2. For the Password setting, click Edit.
3. Enter values for the Old Password, New Password, and Confirm Password fields.

If you clear the Hide Password Text option, your password displays and is no longer encrypted.

4. Click Save to change your password.

### Results

---

A confirmation message displays when the Management Console has successfully saved the new password.

## Changing User Passwords

---

### About this task

---

You can change your own password at anytime. However, to modify another user's password, you must have tenant administrator permissions. Environment administrators cannot change passwords for users in their environment.

For example, you are the administrator for the Development environment. You can change your password, but you cannot change the password for any specific user with permissions to the Development environment.

To change another user's password:

### Procedure

---

1. Log in to the Management Console as the tenant administrator.
2. Select Security > Users and Groups.
3. Click the name of the user whose password you want to change.
4. In the Edit User window, enter a password and confirm the password.

If you clear the Hide Password Text option, your password displays and is no longer encrypted.

5. Click Save to change your password.

### Results

---

A confirmation message displays when the Management Console has successfully saved the new password.

**Parent topic:** [Permissions](#)

## Creating New Groups

---

In the cloud, only the tenant admin user can create new groups. In a multi-environment tenant, environment administrators can also create new groups for their specific environment.

### Before you begin

---

On a physical or virtual Integration Appliance, only admin users can create new groups.

## Procedure

---

1. In the Management Console, login as administrator.
2. Select Security > Users and Groups.
3. In the Groups section, click New Group.
4. In the New Group dialog box, enter a Name and Display Name for your new group.
5. In the User list, select the users to join the group.  
Select the User checkbox to select all the users in the list.
6. Click Save.

## Results

---

In the Groups section of the Users and Groups page, the new group displays in alphabetical order.

**Parent topic:** [Permissions](#)

---

[Feedback](#) | [Notices](#)

## Creating New Users

---

In the cloud, only the tenant admin user can create new users. In a multi-environment tenant, environment administrators can also create new users for their specific environment.

### Before you begin

---

On a physical or virtual Integration Appliance, only admin users can create new users.

## Procedure

---

1. In the Management Console, login as administrator.
2. Select Security > Users and Groups.
3. In the Users section, click New Users.
4. In the New User window, enter a value for the following fields: Name, Display Name, Email, Password, and Confirm Password.

It is recommended that you add the tenant name to the user name and display name.

For example, if the tenant name is ibm.com®, then the new user name should be *newuser@ibm.com*. This will help you identify common user names across multiple tenants in the cloud.

5. Optional: Clear the Hide Password Text checkbox. If you clear this option, the password you entered displays and is no longer encrypted.
6. In the Groups list, select all the groups to which the new user will have access.
7. Optional: Clear the Active checkbox. If you clear this option, the user cannot log in to the Management Console.
8. **Cloud only:** From the Libraries Environment list, select the environment from which the user's projects can retrieve additional libraries and files for endpoints. The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.
9. Click Save.

## Results

---

In the Users section of the Users and Groups page, the new user displays in alphabetical order.

---

## Deleting Groups

---

In the cloud, only the tenant admin users can delete groups from a cloud environment. In a multi-environment tenant, environment administrators can also delete groups for their specific environment.

### Before you begin

---

On a physical or virtual Integration Appliance, only admin users can delete groups.

### Procedure

---

1. In the Management Console, select Security > Users and Groups.
2. In the Groups section, select the group or groups that you want to delete.
3. Click Delete.
4. Click Yes, to confirm that the Management Console should delete the selected groups.

### Results

---

The Management Console refreshes the list of groups.

## Granting Project Configuration Permissions

---

You can grant permissions to a user or a group by editing the project configuration permission. When you grant permissions to a user or group, they can edit or delete the project configuration.

### Before you begin

---

You must have Administrator privileges or you must be the publisher of a project to grant permissions to other users or groups to edit or delete project configurations.

### About this task

---

By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only you, the Administrator Group members, and the members of the Publisher group that you belong to, will have permissions to the project configuration. If you would like to include another group to have permissions to the project configuration, you must edit the permission on the project configuration to include another group.

To edit permissions:

### Procedure

---

1. Click a project configuration. The Configuration Details page is displayed.
2. In the Permissions section, click Edit under Group or User and select group or groups and user or users to grant permissions to.
3. Click Save.

Note: When permission is given to a group, all the users in that group are granted permission to the project configuration by default. You cannot remove permissions for an individual user from this group. If any user (outside this group) requires access to the project, you can grant permissions to the user by selecting only that user from the user table.

### Results

---

All the users and groups you select now have full access to the project configuration. These users and groups can now edit and delete the project configuration.

**Parent topic:** [Permissions](#)

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

## Local Staging Database Permissions

---

Only users with Administrator privileges, granted as being part of the built-in Administrator group, can start, stop, and perform operations on the Local Staging Database.

Users with Publisher privileges can view tables and perform operations on the database, only if the Local Staging Database has already been started by a user with Administrator privileges. If the Local Staging Database has not been started, users with Publisher privileges will not be able to view the database or perform operations on the database.

Users that are part of the built-in Users group or with WMC login credentials created in an LDAP Server do not have access to the Local Staging Database.

## Using Secure Connectors

---

Using Secure Connectors topics provide information about creating, installing, and managing Secure Connectors.

- [About Secure Connectors](#)
- [Secure Connector Minimum Requirements](#)

This topic provides information about minimum system requirements needed to use a Secure Connector.

- [Creating Secure Connectors](#)

This topic provides information about creating Secure Connectors.

- [Downloading Secure Connector Configuration Files](#)

How to download Secure Connector configuration files.

- [Installing Secure Connectors](#)

Provides procedures to download the Secure Connector installer and install the Secure Connector.

- [Adding or importing certificates to the Secure Connector TrustStore/KeyStore](#)

For Cast Iron connector activities, such as HTTP, FTP, Email, or Web Services (or any other connector) that need to establish connection with the SSL enabled server (HTTPS/FTPS), you must import the corresponding certificates into the TrustStore or KeyStore of the Secure Connector.

- [Installing Vendor Supplied Libraries for Secure Connectors](#)

Certain endpoints require additional libraries to be installed before the Secure Connector can communicate with them. This section provides information about using the Web Management Console (WMC) to install these vendor supplied libraries. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page in WMC.

- [Downloading and installing the SAP libraries](#)

To connect to an SAP system from studio, you must install SAP DLLs and JAR files onto your Windows development machine. You must have the SAP login credentials to enter the SAP Support Portal and download the files.

- [Uninstalling Secure Connectors \(Windows\)](#)

This topic provides information about uninstalling a Secure Connector from a Windows machine.

- [Uninstalling Secure Connectors \(Linux\)](#)

This topic provides information about uninstalling a Secure Connector from a Linux machine.

- [Starting and Stopping Secure Connectors](#)

Starting and Stopping Secure Connectors topics provide information about starting and stopping Secure Connectors on Windows and Linux machines. For Windows machines, options you chose during installation affect how you can start and stop Secure Connectors. If you installed the Secure Connector as an automatic Windows Service, as recommended, then you can use the Windows Services control panel to stop and start the Secure Connector. If you installed the Secure Connector as a Windows application, then you can start and stop the Secure Connector using Windows Start menu shortcuts or desktop

shortcuts. For Linux machines, you can start and stop Secure Connectors by using a graphical interface or by running commands from the command line.

- [Upgrading Secure Connectors](#)

This topic provides information about upgrading Secure Connectors.

- [Updating Secure Connector Configuration](#)

This topic provides information about updating Secure Connector configuration.

- [Monitoring Secure Connector](#)

You can use the Monitoring tool to check the status of a Secure Connector (SC1) and provide an alternate Toggle Secure Connector (SC2) in case of Secure Connector (SC1) stops working. In case of failure of SC1, specifying SC2 will switch all the projects using SC1 to use SC2 to provide continuous availability of Cast Iron projects.

- [Troubleshooting Secure Connectors](#)

This topic provides potential solutions for issues you have with the Secure Connector.

## About Secure Connectors

---

A Secure Connector facilitates the secure transfer of data between the IBM® WebSphere® Cast Iron® appliance and an endpoint that is located behind a firewall. The Secure Connector installer for appliance supports both 32-bit and 64-bit Windows and Linux machines.

To enable a Secure Connector, a tenant administrator must complete the following tasks:

- Create a Secure Connector
- Download the Secure Connector configuration file
- Launch the Secure Connector installer
- Install vendor supplied libraries

**Parent topic:** [Using Secure Connectors](#)

## Secure Connector Minimum Requirements

---

This topic provides information about minimum system requirements needed to use a Secure Connector.

You can run the Secure Connector on the following operating systems:

- Microsoft Windows 7
- Microsoft Windows 8
- Microsoft Windows 2008
- Microsoft Windows 2012 R2 64 bit server

- Linux (RHEL 6.5, Ubuntu 14.04)

Note: For installing Secure Connectors on Linux platform, use xWindows or KDE environment to use the GUI option.

The Secure Connector has the following minimum system requirements:

- 1 GHz CPU
- 2 GB RAM
- Java 1.7 and above.

## Creating Secure Connectors

---

This topic provides information about creating Secure Connectors.

### About this task

---

Use the Web Management Console (WMC) to create a Secure Connector for your environment.

After you create a Secure Connector in the appliance, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: If the endpoint you are creating requires extra libraries for a Secure Connector, use WMC to install the libraries before you deploy any project configurations that use the Secure Connector.

### Procedure

---

1. From the navigation pane of an environment tab, select System > Secure Connectors.
2. Click New Secure Connector. The Create Secure Connector dialog box is displayed.
3. Provide a name for the new Secure Connector.
4. Provide a brief description of the Secure Connector.
5. Click Save. The Secure Connector is displayed in the Secure Connector page.

#### Downloading the Secure Connector installer:

You can download the Secure Connector installer from the Cast Iron installer CD, Fix Central, or IBM Passport Advantage. You can download for Windows or Linux, 32-bit or 64-bit, based on your requirement.

**Parent topic:** [Using Secure Connectors](#)

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

## Downloading Secure Connector Configuration Files

---

How to download Secure Connector configuration files.

## About this task

---

When you download a configuration file, the configuration file is saved to your default download directory. You can choose to save configuration files to different locations. Regardless of the number of configuration files you download, you can only use one configuration file during the Secure Connector installation process.

When you have selected a configuration file to set up a Secure Connector, that configuration file is used to configure any subsequent Secure Connector. It is not recommended to configure multiple Secure Connectors using the same configuration file. Instead, use a new configuration file or modify the existing configuration file. The Gateway, Listen to Port, and Transmit to Port parameters should have unique values for each Secure Connector.

The Secure Connector configuration file provides the Secure Connector installer with values for the following parameters:

- **Secure Connector Name** - Specify the name of the Secure Connector you created.
- **Tenant ID** - Use the default value provided in the file. It is used for internal communication.
- **Environment ID** - Use the default value provided in the file. It is used for internal communication.
- **Gateway** - Use the default value provided in the file. It is the data network IP on which the appliance is running.
- **Listen on Port** - Only modify this parameter if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
- **Transmit on Port** - Only modify this parameter if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
- **Secure Connector Auth Key** - Specify the authentication key from the Secure Connector you created in the appliance.
- **Secure Connector Private Key** - Specify the authentication private key, which you downloaded while creating the Secure Connector in the appliance.

Note: If you are using secure connector on appliance then:

- Ensure that the appliance IP is reachable (you are able to ping) from the machine where the secure connector is installed.
- The ports mentioned below are used internally by the appliance for communication with the Secure Connector. It is recommended that you do not use these ports on the appliance in any of your orchestration activities that involves HTTP Receive Request activity and Web Service activities.
  - - 9080
    - 9442
    - 9443
    - 9445

To download the Secure Connector configuration files, complete the following steps:

## Procedure

---

1. Log into the Web Management Console as the tenant administrator.
2. From the Navigation pane of an environment tab, select System > Secure Connector.
3. In the Secure Connector window, click the Secure Connector that will communicate with an endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.
4. Click Download Secure Connector Configuration and click Download now. The Opening Secure Connector Configuration dialog box is displayed.
5. Choose Save File and click OK. The configuration file is saved to the default download directory of the current user.

# Installing Secure Connectors

---

Provides procedures to download the Secure Connector installer and install the Secure Connector.

## Before you begin

---

For Windows installations, verify that you do not have an existing version of the Secure Connector installed. If you have a previous version that is installed, uninstall it before you proceed.

For Linux installations, while it is not required, it is good practice to uninstall previous Secure Connector installations.

For Linux machines, install a desktop environment, such as GNOME or KDE, to provide a graphical interface.

## About this task

---

After you create a Secure Connector in the appliance, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: The machine on which you choose to run the installer must have access to the endpoint. You do not have to run the installer on the same machine as the endpoint.

Note: If you are using secure connector on appliance then:

- Ensure that the appliance IP is reachable (you are able to ping) from the machine where the secure connector is installed.
- The ports mentioned below are used internally by the appliance for communication with the Secure Connector. It is recommended that you do not use these ports on the appliance in any of your orchestration activities that involves HTTP Receive Request activity and Web Service activities.
- - 9080
  - 9442
  - 9443
  - 9445

### Downloading the Secure Connector installer:

You can download the Secure Connector installer from the Cast Iron® installer CD, Fix Central, or IBM® Passport Advantage®. You can download for Windows or Linux, 32-bit or 64-bit, based on your requirement.

### To install the Secure Connector:

1. Start the Secure Connector installer that you downloaded.
  - windows-secure-connector-installer.exe (for Windows)
  - linux-secure-connector-installer.sh (for Linux)

The Secure Connector Installer wizard is displayed.

2. Click Next then read and accept the licensing agreement.
3. Click Next and choose an installation directory.
4. Click Next. A message window states the location where the target directory is created.  
Note: If an installation directory exists, a warning message is displayed and you must confirm that you want to install and overwrite existing files.
5. Click OK.
6. Set up shortcut options to start, stop, and edit a Secure Connector.
  - a. Select one or both of the following options:
    - Create shortcuts in the Start menu.
    - Create additional shortcuts on the desktop.
  - b. Select a program group from which you access the shortcuts.
  - c. Choose to create shortcuts for the current user or all users.
7. Click Next. The installation progress displays.
8. Select a Secure Connector configuration file. If you have not already downloaded a Secure Connector configuration file, download one now. For more information about how to download Secure Connector configuration files, see [Downloading Secure Connector Configuration Files](#).
9. Click Next.
10. For Windows installation, choose to install and run the Secure Connector as a Windows Service. If you choose install the Secure Connector as a Windows Service, you can control the Secure Connector using the Windows Services control panel

(recommended). If you choose not to install and run the Secure Connector as a Windows Service, then the Secure Connector is installed as a Windows application. To run the Secure Connector as a Windows Service, you must specify the following service account information:

- Service Start Mode
- Service Account Domain
- Service Account User
- Service Account Password

11. Click Next. The Create Vendor Supplied Libraries screen is displayed.

12. Click Add and select the library files to upload. In the appliance, the valid files are .jar, .dll, and .so file types. The files that you select are displayed in the Files to Add column.

13. Click Update.

The files that display in the Files to Add column are not committed until you click Update.

14. Click Next. A dialog box is displayed to confirm the changes made, if you have not clicked the Update button. Click Yes to update changes and proceed further. If you click No to go to the next screen without any changes. Click the Cancel button to stay on the same screen.

15. When you click Yes to proceed further, the Vendor JAR created/updated successfully message is displayed.

16. Click OK. A message saying that the installation has completed successfully is displayed.

17. Restart the Secure Connector.

Note: If your endpoint (that is SAP) requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Supplied Libraries for Secure Connectors](#).

#### To run the Secure Connector installer:

1. Start the Secure Connector installer that you downloaded in the Creating a Secure Connector section.

- windows-agent-installer.exe (for Windows)
- linux-agent-installer.sh (for Linux)

2. Accept the licensing agreement and choose an installation directory.

3. Log in to the Web Management Console as the administrator.

4. Select Setup > Support Information. Keep the Support Information page open while configuring the Secure Connector installer parameters. You can cut and paste values from the Support Information page to the appropriate parameter field.

5. Provide values for the following parameters:

- **Secure Connector Name** - Specify the name of the Secure Connector you created.
- **Tenant ID** - Use the default value provided in the file. It is used for internal communication.
- **Environment ID** - Use the default value provided in the file. It is used for internal communication.
- **Gateway** - Use the default value provided in the file. It is the data network IP on which the appliance is running.
- **Listen on Port** - Modify this parameter only if another service is using the port that is specified or you want to run multiple Secure Connectors on the box.
- **Transmit on Port** - Modify this parameter only if another service is using the port specified or you want to run multiple Secure Connectors on the box.
- **Secure Connector Auth Key** - Specify the authentication key from the Secure Connector you created in the cloud.
- **Secure Connector Private Key** - Specify the authentication private key, which you downloaded while creating the Secure Connector in the cloud.

6. Open a command prompt and navigate to the Secure Connector installation directory.

7. If your endpoint (that is, SAP) requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Libraries on the Secure Connector](#).

8. Start the Secure Connector by running one of the following files at the command prompt:

- For Windows: runclient osgi.bat

- o For Linux: `runclient osgi.sh`

## Adding or importing certificates to the Secure Connector TrustStore/KeyStore

---

For Cast Iron connector activities, such as HTTP, FTP, Email, or Web Services (or any other connector) that need to establish connection with the SSL enabled server (HTTPS/FTPS), you must import the corresponding certificates into the TrustStore or KeyStore of the Secure Connector.

### Procedure

---

1. Use the Java keytool utility to import the required certificates to TrustStore(cacerts) or KeyStore(cert) in the path mentioned:  
`<secure_connector_install_directory>\etc\security`
2. Restart Secure Connector for the changes to take effect.

**Parent topic:** [Using Secure Connectors](#)

## Installing Vendor Supplied Libraries for Secure Connectors

---

Certain endpoints require additional libraries to be installed before the Secure Connector can communicate with them. This section provides information about using the Web Management Console (WMC) to install these vendor supplied libraries. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page in WMC.

### About this task

---

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

### Procedure

---

1. Log on to WMC.
2. Select System > Upgrade Connector Libraries .
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed are displayed in the Installed Files column.

4. Click the plus (+) icon and select the library files to upload. In the appliance, the valid files are .jar and .dll are the valid library file types. The files that you select are displayed in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, WMC does not add the files you uploaded. If WMC times out before you click Update and commit the added files, repeat the last two steps.

6. In the same environment tab, select: System > Secure Connectors.
7. Click Download Libraries and save the `SecureConnector-Default Environment-libraries.zip` file to your workstation.
8. Uncompress the `SecureConnector-Default Environment-libraries.zip` file and find a `*.tp-1.0.0.jar` for each connector module.
9. Use the .jar files in the `SecureConnector-Default Environment-libraries.zip` to replace the files in the Secure Connector installation directory: lib/plugins.
10. Copy all the remaining .zip files to the following Secure Connector installation directory: lib/thirdparty
11. Restart the Secure Connector by running one of the following files from a command line:
  - o For Windows: `runclient osgi.bat`
  - o For Linux: `runclient osgi.sh`

## Downloading and installing the SAP libraries

---

To connect to an SAP system from studio, you must install SAP DLLs and JAR files onto your Windows development machine. You must have the SAP login credentials to enter the SAP Support Portal and download the files.

### About this task

---

To download and install the SAP JAR files and DLLs:

1. Contact SAP Technical Support to obtain the compressed files for the following SAP Components:
  - o **SAP JCo Release 3.0.x - based on the platform on which studio is running.**  
Note: Latest version of JCo jar available: 3.0.14, IDoc version 3.0.12.
2. Uncompress the SAP JCo compressed file:
  - o Double-click the `sapjidoc30P_x-1000xxxx.zip` file.
  - o Use the decompression tool to extract the contents of the compressed file to a temporary directory. This compressed file contains another compressed file `sapjco3- NTintel-3.0.x.zip`. Extract this compressed file also to a temporary directory, for example: `C:\temp\sapjco3-NTintel-3.0.x`. This directory contains the required libraries `sapjco3.jar` and `sapjco3.dll`.
3. Unzip the SAP IDoc JCo compressed file:
  - o Double-click the `sapjidoc30P_x-1000xxxx.zip` file.
  - o Use the decompression tool to extract the contents of the compressed file to a temporary directory, for example, `C:\temp\sapjidoc30P_x-1000xxxx`. This directory contains the required library `sapidoc3.jar`.

### Procedure

---

1. Open studio, select Tools > Install Module Providers.
2. When the Add Providers dialog box is displayed, click the plus (+) button present beneath SAP Connector.

A text field and a Browse button are displayed.

3. Click Browse, and use the browse dialog box to locate and select the `sapjco3.jar` file.
4. Click Open to import the JAR file contents.

5. Click the next available plus (+) button to add the sapidoc3.jar and sapjco3.dll files.
6. When the JAR file is listed in the Add Providers dialog box, click OK.

## Results

---

A prompt is displayed to restart studio and activate the changes.

## What to do next

---

You can now create SAP endpoints and orchestrations.

## Uninstalling Secure Connectors (Windows)

---

This topic provides information about uninstalling a Secure Connector from a Windows machine.

### About this task

---

The following procedure allows you to uninstall a Secure Connector and all its configuration settings:

### Procedure

---

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector\_name> > Stop Secure Connector.
3. From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector\_name> > Uninstall Secure Connector. The Uninstaller window is displayed.
4. Select Force the deletion of C:\Program Files\IBM\Secure\_Connector \_<connector\_name>.
5. Click Uninstall.
6. When the status bar displays [Finished], you can close the Uninstaller window.

## Uninstalling Secure Connectors (Linux)

---

This topic provides information about uninstalling a Secure Connector from a Linux machine.

### Before you begin

---

You must have root level permissions to uninstall the Secure Connector from a Linux machine.

## About this task

---

You can uninstall the Secure Connector by using a graphical interface, issuing a command line command, or running the Javaâ„¢ `uninstall.jar` file. Choose one of the following options to uninstall a Secure Connector and all its configuration settings from a Linux machine.

**Uninstalling the Secure Connector using a graphical interface:** You must have a desktop environment, such as GNOME or KDE, to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the application directory, select IBM > Cast Iron Secure Connector `<connector_name>` > Stop Secure Connector.
3. From the application directory, select IBM > Cast Iron Secure Connector `<connector_name>` > Uninstall Secure Connector.

**Uninstalling the Secure Connector from the command prompt:**

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, issue the `./Uninstaller/uninstall.sh` command.

**Uninstalling the Secure Connector with .jar file.** You must have Java version 1.6 or higher installed to successfully uninstall the Secure Connector using this procedure.

1. Verify that another program, such as your browser or command shell, does not have any of the Secure Connector directories open.
2. From the command prompt, enter the `runclient osgi.sh stop` command.
3. In the directory where you installed the Secure Connector, navigate to the Uninstaller subdirectory to find the `uninstaller.jar` file: `"${JAVA}" -jar "${INSTALL_DIR}/Uninstaller/uninstaller.jar"` where `{JAVA}` is the Java executable and `{INSTALL_DIR}` is the Secure Connector name.  
A dialog box is displayed.
4. Select the Force the Deletionâ€¦ option.
5. Click Uninstall.
6. Click Quit.

## Results

---

The Secure Connector is uninstalled. Configuration settings are retained in the home directory.

## Starting and Stopping Secure Connectors

---

Starting and Stopping Secure Connectors topics provide information about starting and stopping Secure Connectors on Windows and Linux machines. For Windows machines, options you chose during installation affect how you can start and stop Secure Connectors. If you installed the Secure Connector as an automatic Windows Service, as recommended, then you can use the Windows Services control panel to stop and start the Secure Connector. If you installed the Secure Connector as a Windows application, then you can start and stop the Secure Connector using Windows Start menu shortcuts or desktop shortcuts. For Linux machines, you can start and stop Secure Connectors by using a graphical interface or by running commands from the command line.

- [Starting and Stopping Secure Connectors on Windows \(Installed as a Windows Service\)](#)

## Starting and Stopping Secure Connectors on Windows (Installed as a Windows Service)

---

This topic provides information about starting and stopping Secure Connectors on Windows machines, where you have a Secure Connector that is installed as a Windows Service.

### About this task

---

If you installed the Secure Connector as an automatic Windows Service, as recommended, use the Windows Services control panel to stop or restart the Secure Connector.

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

For steps to enable the interactive mode for a Windows service, see [Enabling Interactive Mode for Windows Services](#).

Note: If you use the **Start Secure Connector** Start menu shortcut or desktop shortcut to start a Secure Connector, the Secure Connector starts as a normal application rather than as a service. You must use the Windows Services control panel to start Secure Connectors as a service. You can use either the **Stop Secure Connector** Start menu shortcut or desktop shortcut to stop a Secure Connector.

#### **Starting and stopping Secure Connectors, using the Windows Services control panel:**

### Procedure

---

1. Open the Windows Services window: Start > Control Panel > Administrative Tools > Services.
2. Scroll down the list of services to locate the IBM® Secure Connector service.
3. Right-click on the IBM Secure Connector service and select the appropriate command: Start, Stop, Pause, Resume, or Restart.

**Parent topic:** [Starting and Stopping Secure Connectors](#)

## Enabling Interactive Mode for Windows Services

---

When the Secure Connector is installed as a Windows Service, enable the interactive mode for the service to view system tray icons and command window.

### About this task

---

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

### Procedure

---

1. Open the Services control panel. For example: Start > Control Panel > Administrative Tools > Services.
2. Select the Cast Iron Secure Connector service.
3. Right-click the service name, and select Properties. The Service Properties window is displayed.
4. Select the Log On tab.
5. Select Local System account and then select Allow service to interact with desktop.
6. Click OK.
7. Click Restart.

### Results

---

When the Cast Iron® Secure Connector service is restarted, system tray icons and a command window are displayed.

Note: You can minimize the command window. However, if you close the command window, the Cast Iron Secure Connector service is stopped and terminated. Closing the command window is the equivalent of stopping the Secure Connector service from the Windows Services control panel.

## Starting and Stopping Secure Connectors on Windows (Installed as a Windows Application)

---

This topic provides information about starting and stopping Secure Connectors on Windows machines, where you have a Secure Connector that is installed as a Windows application.

### About this task

---

When the Secure Connector is installed on a Windows machine as a Windows application, rather than a Windows Service, you can start and stop the Secure Connector using Windows Start menu shortcuts or desktop shortcuts.

### Procedure

---

1. Start the Secure Connector from either the Windows Start menu shortcut or desktop shortcut.
  - o From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector\_name> > Start Secure Connector.

- From the Windows desktop, click the Start Secure Connector shortcut to start the Secure Connector.
- 2. Stop the Secure Connector from either the Windows Start menu shortcut or desktop shortcut.
  - From the Windows Start button, select All Programs > IBM > Cast Iron Secure Connector <connector\_name> > Stop Secure Connector.
  - From the Windows desktop, click the Stop Secure Connector shortcut to stop the Secure Connector.

## Starting and Stopping Secure Connectors on Linux

---

This topic provides information about starting and stopping Secure Connectors on Linux machines.

### About this task

---

If you have a desktop environment, such as GNOME or KDE, you can start and stop the Secure Connector using menu shortcuts or desktop shortcuts. You can also start and stop the Secure Connector using the command line.

### Procedure

---

1. Start the Secure Connector from either the menu shortcut, desktop shortcut, or command line. Choose one of the following options:
  - Select <application> > IBMÂ® > Cast IronÂ® Secure Connector <connector\_name> > Start Secure Connector.
  - From the desktop, click the Start Secure Connector shortcut to start the Secure Connector.
  - From the command prompt, enter `runclient osgi.sh start`.
2. Stop the Secure Connector from either the menu shortcut, desktop shortcut, or command line. Choose one of the following options:
  - Select <application> > IBM > Cast Iron Secure Connector <connector\_name> > Stop Secure Connector.
  - From the desktop, click the Stop Secure Connector shortcut to stop the Secure Connector.
  - From the command prompt, enter `runclient osgi.sh stop`.

## Upgrading Secure Connectors

---

This topic provides information about upgrading Secure Connectors.

### Procedure

---

1. Create a new Secure Connector.

2. Download the latest version of the Secure Connector installer, based on your operating system. For example, Windows or Linux.
3. On a Windows or Linux machine, launch the Secure Connector installer. The Cast Iron® Secure Connector wizard guides you through the upgrade process.  
Note: If you already have a Secure Connector installation that is higher than or same as the latest version, a warning message states that you have an existing installation and alternatively you can upgrade the existing installation.  
Note: You must stop the Secure Connector (if already started) before upgrading.  
Note: Before you proceed with the Secure Connector upgrade process, ensure that you have:
  - o Stopped the Secure Connector
  - o Taken a manual backup of the certificates (if any) located at <secure\_connector\_install\_path>/etc/security or jre/lib. You may want to replace/add your certificates after upgrade.
4. Click the Upgrade option. The Select the installed path list box is displayed.
5. Select the Secure Connector installed path, if it is displayed in the list box. Else, click Browse button to select the installed path.
6. Click Next, then read and accept the licensing agreement.
7. Click Next. The installation progress is displayed. A message is displayed stating that the installation has been completed successfully. The path to the installer program is also displayed.
8. Click Done.
9. Start the Secure Connector.

## Updating Secure Connector Configuration

---

This topic provides information about updating Secure Connector configuration.

### Procedure

---

1. Download the new Secure Connector configuration file. For more information, see [Downloading Secure Connector Configuration Files](#).
2. Launch the Secure Connector Configuration wizard. To launch the wizard:
  - a. Windows machine: Go to Start > All Programs > IBM > Cast Iron Secure Connector <connector\_name> > Secure Connector Configuration.
  - b. Linux machine: Select <application> > IBM > Cast Iron Secure Connector <connector\_name> > Secure Connector Configuration.
3. The Secure Connector configuration wizard guides you through the upgrade process.
4. Click Next. The current Secure Connector Configurations are displayed if the Secure Connector is already configured. If not, browse for the newly downloaded configuration file and click Next.
5. Modify the Secure Connector configuration by completing one of the follow steps:
  - a. Modify the Cloud Gateway, Listen on Port, and Transmit on Port parameters and click Next. Or
  - b. Click the Previous button and select a new Secure Connector file.
    - i. Click Next and verify the configuration settings.
    - ii. Click Next.
6. Specify settings for a proxy server: Proxy Server, Proxy Port, Login ID, Login Password, and Retype Password. These parameters are only required if your network requires that the Secure Connector uses a proxy to connect to the Cast Iron® Cloud Gateway.
7. The Create Vendor Supplied Libraries page is displayed.
8. Click Add and select the library files to upload. In the appliance, the valid files are .jar, .dll, and .so file types. The files that you select are displayed in the Files to Add column.
9. Click Update.

The files that display in the Files to Add column are not committed until you click Update.

10. Click Next. A dialog box is displayed to confirm the changes made, if you have not clicked the Update button. Click Yes to update changes and proceed further. If you click No to go to the next screen without any changes. Click the Cancel button to stay on the same screen.
11. When you click Yes to proceed further, the Vendor JAR created/updated successfully message is displayed.
12. Click OK. A message saying that the installation has completed successfully is displayed.
13. Restart the Secure Connector.

## Monitoring Secure Connector

---

You can use the Monitoring tool to check the status of a Secure Connector (SC1) and provide an alternate Toggle Secure Connector (SC2) in case of Secure Connector (SC1) stops working. In case of failure of SC1, specifying SC2 will switch all the projects using SC1 to use SC2 to provide continuous availability of Cast Iron projects.

### Before you begin

---

- Toggle Secure Connector (backup connector) should be running on the same Cast Iron system before starting this tool.
- All the Cast Iron projects using a secure connector, should have Secure Connector Name configuration property as "secure\_connector\_name".

### About this task

---

Use the Monitoring tool to configure and check the status of the Secure Connector.

### Procedure

---

1. Start the executable jar file from SC\_INSTALL\_ROOT/monitor/agent\_monitor.jar by giving the command:

```
java -jar agent_monitor.jar
```

Note: You can copy and run the agent\_monitor.jar on any server machine which has access to Cast Iron system. It will bring up the Secure Connector Monitoring Tool screen once the jar started successfully.

2. In the Secure Connector Monitoring Tool screen specify the following information:
  - a. Specify the Cast Iron Live Hostname or Cast Iron Appliance IP address for the Hostname.
  - b. Specify the Username and Password for authenticating to the appliance.
  - c. Specify the Secure Connector Name (SC1) currently used by the Cast Iron projects and Toggle Secure Connector Name (SC2) which will backup to SC1.
3. Click the Start button to start the monitoring tool.

### Results

---

The Monitoring tool will keep checking the status of SC1 every 30 seconds, and if its status is Stopped, it will switch all Cast Iron projects to SC2. Once it has deployed on projects on SC2, it will keep monitoring the status of SC2 and it will switch it back to SC1 in case SC2 goes down. It goes recursive.

## Troubleshooting Secure Connectors

---

This topic provides potential solutions for issues you have with the Secure Connector.

Secure Connector log files are available for review. The Log directory is created after the initial start of the Secure Connector. The Log directory is in the Secure Connector installation directory. For example: C:\Program Files\IBM\Secure\_Connector\_1.development\logs

- **A port contention error occurs.** A port contention error can occur when two Secure Connectors are configured to use the same port and gateway. To resolve the issue, provide unique values for the Gateway, Listen on Port, and Transmit on Port parameters in each Secure Connector configuration file.
- **Unable to run .jar file to uninstall a Secure Connector.** Verify that the Java™ path is specified correctly and that you have Java version 1.6x or higher installed on the machine.

## About Certificates

---

Certificates enable secure communication between the Integration Appliance and endpoints located in your intranet and extranet. Use the Management Console to manage certificates.

From the Certificates page, you can generate, import, and update security certificates and security settings.

The following tables provides definitions for certificate terminology.

Certificate Terminology	Definition
Alias	A string of alphanumeric characters you assign to a KeyStore or TrustStore entry to provide a more user friendly name. Within a KeyStore or TrustStore you can use an alias to refer to the keys and certificates. Note: Aliases are not case sensitive. For example, MyCert and mycert refer to the same entry.
Certificate	A signed credential which identifies an endpoint or organization.
Key Pair	A public key and associated private key.
KeyStore	A Javaâ„¢ data store that houses private keys and certificates used by a Java SSL endpoint. For example, a local Java endpoint supplies a certificate from its KeyStore as a credential to identify itself to a remote SSL endpoint.
PKI	Public Key Infrastructure is a system for managing encryption keys and identity information. The purpose of the system is to provide standards based system for protecting/securing communications over the internet.
Private Key	A key known only to a single endpoint used to encrypt and/or sign data.
Public Key	A key associated with a private key that can be distributed to anyone.
SSL	Secure Sockets Layer enables secure web communications and permits endpoints to optionally authenticate each other.
TrustStore	A Java data store that houses certificate authority signed certificates. For example, a local Java endpoint utilizes a TrustStore to authenticate the identity (certificate) provided to it by a remote SSL endpoint.

## Configuring Kerberos

---

### About this task

When the Integration Appliance is exchanging data over a non-secure network, the Kerberos protocol allows the Integration Appliance to authenticate the server with which the Integration Appliance is communicating.

### Procedure

1. In the navigation pane, select Security > Kerberos. The Kerberos Configuration page is displayed.
2. Specify the Kerberos Server name.
3. Specify the Kerberos Realm.
4. Click Save.

Clicking Delete clears the settings that you have specified.

 Last updated: Thursday, 2 June 2016

## Configuring LDAP Mechanism Properties

---

### About this task

---

If you selected the Use Secure Connection (SASL) security option while enabling an LDAP Server, you must also specify a mechanism policy and configure the mechanism properties.

LDAP mechanism properties and LDAP mechanism policies are further described in the following tables.

### Procedure

---

1. In the navigation pane, select Security > LDAP. The LDAP Configuration page is displayed.
2. In the Security Options section, select Use Secure Connection (SASL).
3. In the Authentication section, click Advanced Settings. Options for Mechanism Policies and Mechanism Properties display.
4. Select the appropriate options and choose the appropriate value from the drop-down list.

## LDAP Mechanism Properties

---

Mechanism Properties	Description
QOP (Quality of Protection)	<p>Names a property that specifies the quality-of-protection that the LDAP directory server uses. The property contains a comma-separated, ordered list of quality-of-protection values that the client or server supports. The following are valid QOP values:</p> <ul style="list-style-type: none"><li>auth<ul style="list-style-type: none"><li>authentication only</li></ul></li><li>auth-int<ul style="list-style-type: none"><li>authentication plus integrity protection</li></ul></li><li>auth-conf<ul style="list-style-type: none"><li>authentication plus integrity and confidentiality protection</li></ul></li></ul> <p>The order of the list specifies the preference order of the client or server. If you do not specify a value, the default QOP is auth.</p>
Cipher Strength	<p>Names the property that specifies the cipher strength that the LDAP directory server uses. The property contains a comma-separated, ordered list of cipher strength values that the client or server supports. The following are valid cipher strength values:</p> <ul style="list-style-type: none"><li>• low</li><li>• medium</li><li>• high</li></ul> <p>The order of the list specifies the client or server order of preference. An implementation should allow you to configure the meaning of these values. An application might use the Java™ Cryptography Extension (JCE) with JCE-aware mechanisms to control the selection of cipher suites that match the strength values.</p> <p>If you do not specify a value, the default cipher strength is low.</p>

Mechanism Properties	Description
Max Buffer Size	Specifies the maximum size of the receive buffer in bytes. If you do not specify a value, the default size is defined by the mechanism. Valid value range is between 0 and 65536.
Mutual Authentication	Names the property that specifies whether the server must authenticate to the client. The property name contains true, if the server must authenticate the to client and contains false otherwise. By default, this value contains false.

## LDAP Mechanism Policies

---

Mechanism Policies	Description
Forward Secrecy	Names the property that specifies whether mechanisms that implement forward secrecy between sessions are required. Forward secrecy means that breaking into one session does not automatically provide information for breaking into future sessions. The property contains true if mechanisms that implement forward secrecy between sessions are required and contains false if such mechanisms are not required. By default, this value contains false.
Client Credentials	Names the property that specifies whether mechanisms that pass client credentials are required. The property contains true if mechanisms that pass client credentials are required and contains false if such mechanisms are not required. By default, this value contains false.
Susceptible to passive attacks	Names the property that specifies whether mechanisms susceptible to simple plain passive attacks, for example: PLAIN, are not permitted. The property contains true if such mechanisms are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to active attacks	Names the property that specifies whether mechanisms susceptible to active (non-dictionary) attacks are not permitted. The property contains true if mechanisms susceptible to active attacks are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to dictionary attacks	Names the property that specifies whether mechanisms susceptible to passive dictionary attacks are not permitted. The property contains true if mechanisms susceptible to dictionary attacks are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.
Susceptible to anonymous attacks	Names the property that specifies whether mechanisms that accept anonymous login are not permitted. The property contains true if mechanisms that accept anonymous login are not permitted and contains false if such mechanisms are permitted. By default, this value contains false.

---

### Feedback | Notices

>Last updated: Thursday, 2 June 2016  
 file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.appliance.doc/AppplianceHelp/Security/configuringLDAP.html>

## Editing Security Settings

---

### Procedure

1. In the Settings section, click Edit. The Edit Settings dialog box is displayed.
2. Select the certificate to use with the corresponding category. For example, Client SSL, Server SSL over data NIC, or Server SSL over mgmt NIC.
3. Select the VPeer check box if appropriate.

- Selecting VPeer means that the integration appliance authenticates the identity of the SSL peer using the certificate provided by the peer.
  - When selected for the Client SSL category, the integration appliance authenticates the identity of the SSL server using the certificate sent by the server.
  - When selected for the Server SSL over data NIC category, the integration appliance requires that SSL clients connecting to the integration appliance must send a certificate.
4. Select the VHost check box if appropriate.
    - Selecting VHost means that the integration appliance verifies that the hostname of the server in an SSL session matches the name contained in the server certificate. This check is designed to prevent a man-in-the-middle (MITM) attack and is described in RFC 2818 *HTTP Over TLS Section 3.1 Server Identity*.
    - The VHost selection is only applicable for the Client SSL category.
    - The VHost selection is only applicable when VPeer is also selected.
  5. Select the cipher strength.
    - Standard
    - Strong
  6. Click Save.

## Enabling an LDAP Directory Server

---

### About this task

From the WMC, you can choose to have an LDAP server handle user authentication and authorization. When you enable an LDAP directory server, the authentications and authorizations of the LDAP directory server override any users, groups, or permissions you specified via the WMC, except for the built-in Admin user. Therefore, with the exception of the Admin user, you can authenticate and authorize users and groups via an LDAP directory server or the WMC, but not both. Regardless if you enable LDAP or not, you can update the Admin user password via the CLI.

Note: LDAP users will not be able to access the staging database.

### Procedure

---

1. In the navigation pane, select Security > LDAP. The LDAP Configuration page is displayed.
2. Select the Enable LDAP option. If you do not select this option, the Integration Appliance uses the built-in groups and users you defined in the WMC to authenticate and authorize users and their access to the WMC.
3. Specify host information.
  - a. Enter the host name and port number of the LDAP directory server.
  - b. Choose a Base DN (Base Distinguished Name) or click Fetch DNs. The WMC fetches the Base DN of all the Directory Information Trees (DITs) from the LDAP directory server. Select the Base DN of the DIT that contains the users you want to authorize.
4. Choose one of the following security options:
  - **Use Secure Connection (SASL)** - Enables Simple Authentication and Security (SASL) mechanisms supported by the LDAP directory server. This is the most secure option.
  - **Use Simple Authentication** - Enables simple authentications, but does not encrypt credentials.
  - **Anonymous Bind** - Enables anonymous binding to the LDAP directory server. This is the least secure option.
5. If you selected the Use Secure Connection (SASL) security option, specify a mechanism and configure the mechanism properties and mechanism policies.
6. If the LDAP directory server requires authentication for a directory search, specify values for the Principal and Password, which are in the Credentials section. When you select the Composed DN Mode authentication mode, this step is not required.

However, this step might be required to fetch DNs or mechanisms when the LDAP directory server does not allow anonymous searches.

If you do not specify a password, the WMC attempts to make the initial binding into the LDAP server as an anonymous user and the LDAP server ignores the Principal credential you specified.

7. Choose one of the following authentication modes:

- Composed DN Mode
- Searched DN Mode

8. Specify the User Container RDN. The authentication mode you specify determines what value you should specify here.

- If you selected the Composed DN mode, the User Container RDN is composed of one or more attributes from the user DN. Construct the User Container RDN by walking up the tree from the immediate ancestor of the user to the entry just before the base and adding up the RDN of each entry in the path.

For example, if:

User DN = "uid=JohnK,ou=emp,dc=xyz,dc=com"

then

User Container RDN = "ou=emp"

- If you selected the Searched DN mode, the User Container RDN is typically left blank, which causes the LDAP directory server to search the entire DIT starting from the root (Base). Otherwise, the LDAP directory server searches the subtree rooted at the entry having DN = User Container RDN +BaseDN.

9. If you selected the Searched DN Mode, specify the User Search Filter that the LDAP directory server uses to search for the user DN. (required, only if you select the Search DN Mode) This entry accepts LDAP search filter specification and also accepts a user name in the form of \$USERNAME. For example:

- In MSAD, this entry could be "(samAccountName=\$USERNAME)"
- In SunOne, this could be "(uid=\$USERNAME)"

10. Specify the User Principal DN, which specifies the DN of the user that the LDAP directory server binds after the search. You can specify \$USERNAME or \$DN to represent the user name and Distinguished Name. Where \$DN represents (RDN+BaseDN) for the Compose DN Mode and searched DN for Search DN Mode. In most the cases, \$DN is the entry. However, when using SASL in MSAD, you might only need to specify \$USERNAME. For SASL in SunOne, you might only need to specify "dn:\$DN".

11. Specify Group Mapping Information.

- a. Specify the Admin Group Filter.
- b. Specify the Publisher Group Filter.
- c. Specify the Group Filter.

12. Click Save.

## Generating Certificate Signing Requests

---

### Procedure

1. In the Key Store section, click on an alias. The Certificate Details window displays.
2. Click Generate CSR. The Certificate Content window displays.
3. Click Copy. The entire contents of the window is copied.
4. Click Download and specify a location for the download.
5. Click Save. The certificate contents are downloaded to the specified location.

**Parent topic:** [Security](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Security/generatingCertificateSigningRequests.html>

## Generating Self-Signed Certificates

---

### Procedure

1. In the Key Store section, click Generate. The Generate Self-Signing Certificate dialog box is displayed.
2. Specify values for the following parameters:

Alias  
Common Name (CN)  
Organization (O)  
Organization Unit (OU)  
Country (C)  
State (ST)  
Locale (L)  
Email (EMAILADDRESS)  
OID  
Key Algorithm  
Key Length  
Valid For

3. Click Generate.

### Results

---

The self-signed certificate displays in the Key Store table.

**Parent topic:** [Security](#)

 Last updated: Thursday, 2 June 2016

## Importing Certificates

---

### About this task

---

You can import a certificate or certificate chain into the IBM® WebSphere® Cast Iron® KeyStore. You can also import trusted Certificate Authority certificates (CA Certs) to the TrustStore.

### Procedure

---

1. In the Key Store or Trust Store section, click Import. The Import Certificates dialog box is displayed.
2. Enter an alias name. This name is used to identify the imported certificate or certificate chain.
3. Optional: Enter a key password.

The password protects the private key of the key pair associated with the alias. If you do not specify a password, the password defaults to the password protecting the KeyStore.

4. If you are importing a certificate from a trusted site, select the Trusted option.

If you select the Trusted option, the certificate is imported without checking for an existing chain of trust. If you do not select the Trusted option, the KeyStore and TrustStore options are checked to ensure a chain of trust exists for the certificate being imported.

5. Choose to import the content from a file or from content in the clipboard that contains the certificate or certificate chain to be imported.

When importing into the KeyStore, supported formats include: PKCS12. When importing into the TrustStore, supported formats include CER/PEM (RFC 1421), DER and PKCS7.

6. Click Import.

### Results

---

The certificate displays in the Certificates page.

**Parent topic:** [Security](#)

---

## Renaming Certificate Alias

---

### Procedure

---

1. In the Certificate page, click an Alias. The Certificate Details dialog box displays.
2. Click Rename.
3. In the Alias field, type in a new alias.
4. Click Apply.

## Results

---

The updated alias displays on the Certificates page.

**Parent topic:** [Security](#)

---

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working\\_with\\_Logs/toc\\_working\\_with\\_logs.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working_with_Logs/toc_working_with_logs.html)

## About Archived Logs

---

The Management Console lists log files that the Integration Appliance has archived. You can download these archived log files.

**Parent topic:** [Working with Logs](#)

## Downloading an Archived Log File

---

### Procedure

1. In the navigation pane, select Logs > Archived Logs. Log files for the Integration Appliance display, along with a timestamp of when the log was last modified and details about the log file size.
2. Click Refresh to get the most up-to-date log files.
3. Click a log file to download. A message is displayed.
4. Click Download Now.
5. Choose the Save File option and click OK.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working\\_with\\_Logs/aboutArchivedLogs.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working_with_Logs/aboutArchivedLogs.html)

## About Archived Logs

---

Logs can be archived locally or exported to an FTP server. From the WMC, you can download locally archived logs: Logs > Archive Logs.

You can archive or purge orchestration monitoring logs. When you configure parameters to archive orchestration monitoring log files, the Integration Appliance archives the log files before polling for conditions that trigger the Integration Appliance to purge additional orchestration monitoring data. You can archive orchestration monitoring data to a local disk on the Integration Appliance or export the archives to an FTP server. If you do not configure archive settings, the Integration Appliance purges all orchestration monitoring data that meets the default purging trigger conditions.

You can view archived log files by selecting Logs > Archive Logs in the Navigation page. When you export the logs, the Integration Appliance names exported orchestration monitoring logs using the following convention: orcmon\_export\_<timestamp>.xml.

**Parent topic:** [Working with Logs](#)

## Archiving Orchestration Monitoring Logs Locally

---

### About this task

When you select the Archive Purged Monitor Data to a Local File option and one of the log purging trigger conditions is met, the Integration Appliance exports orchestration monitoring logs to a local disk on the Integration Appliance.

Note: When you archive orchestration monitoring logs locally, you decrease the availability of disk space on the Integration Appliance. As the disk space is filled up, the purging trigger conditions generate archives much quicker.

## Procedure

---

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. In the Archive Settings section, select Archive Purged Monitor Data to be a Local File .
5. Select Replace Exported File to replace previously exported orchestration monitoring logs. If you do not select this option, the Integration Appliance cumulatively stores orchestration monitoring logs. This can cause the Integration Appliance to run out of disk space very quickly and prematurely trigger a purge.
6. Click Save.

## Results

---

The Integration Appliance archives Orchestration Monitoring logs locally. You can download locally stored archives by selecting the archive from the Archive list and clicking Download.

# Archiving Orchestration Monitoring Logs to an FTP Server

---

## About this task

---

When you select the Archive Purged Monitor Data to a Local File option and the Transmit Archive to FTP Server option and one of the log purging trigger conditions is met, the Integration Appliance exports orchestration monitoring logs to an FTP server. You can chose to archive all the exported log files on the FTP server or chose to have the latest archive replace the previous archive.

## Procedure

---

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. In the Archive Settings section, select Archive Purged Monitor Data to be a Local File .
5. Select Transmit Archive to FTP Server (After a Purge).
6. (Optional) Select Replace Exported File to replace previously exported logs.
7. Specify FTP settings. See the following table below:[Table 1](#) for more information about the FTP settings.
8. Click Save.

# Archiving Utilization Data to an FTP Server

---

## About this task

---

The Integration Appliance collects data about disk usage, memory usage, garbage collection, and the number of running jobs. This resource utilization data can help you analyze the overall health of the runtime and calculate available capacity for additional projects. The Integration Appliance stores this data in a file called maestro.stat and provides an option to archive a snapshot of the data to an FTP server. When you select the appropriate option, all the utilization data available on the Integration Appliance is collected and archived to the specified FTP server.

After an archive file has been created and transmitted to an FTP server, the Integration Appliance continues to aggregate new utilization data to the historic utilization data. Historic utilization data is not purged from the Integration Appliance when an archive is transmitted to an FTP server.

Selecting the Transmit Archive to FTP Server option transmits a snapshot of the utilization data daily at midnight. The following procedure describes how to select the option.

## Procedure

---

1. From the Navigation pane, select Logs > Job Log. The Results page displays all orchestration monitoring logs.
2. Click Settings. The Job Log Settings dialog is displayed.
3. Click Archive.
4. Select Transmit archive utilization data to FTP Server (at midnight) .

5. Specify FTP settings. See the following table below: [Table 1](#) for more information about the FTP settings.
6. Click Save.

## FTP Settings

---

Specifying FTP settings to archive orchestration monitoring logs and utilization data.

**Table 1. Job Log FTP Settings**

Parameter	Description
Host	Specifies the name of the FTP server, where the exported log files are archived.
Port	Specifies the port number of the FTP server, where the exported log files are archived.
Username	Specifies the user ID that the Integration Appliance uses to log in to the FTP server, where the exported log files are archived.
User Password	Specifies the password that the Integration Appliance uses to log in to the FTP server, where the exported log files are archived.
Hide Password Text	If you clear this option, the password you entered displays in plain text and is no longer encrypted.
Directory	Specifies the FTP directory to which the Integration Appliance exports the log file.

---

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working\\_with\\_Logs/archivingJobLogs.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Working_with_Logs/archivingJobLogs.html)

## Purging Orchestration Monitoring Logs

---

You can purge and archive orchestration monitoring logs.

### About this task

When the Integration Appliance purges orchestration monitoring data, it can take a few minutes for the Dashboard to display the updated job counts.

By default, an Integration Appliance purges orchestration monitoring logs older than 30 days when any of the following conditions occurs on the Integration Appliance:

- The amount of available disk space falls below 50%.
- One day has passed since the last purge.
- More than 5,000 orchestration jobs have completed.
- More than 1,000 orchestration jobs have contained an error.

Using the WMC, you can configure the job log purging parameters on the Integration Appliance that determine:

- **Trigger Conditions** - What conditions trigger the Integration Appliance to purge orchestration monitoring data.
- **Frequency** - How often to purge orchestration monitoring data.
- **Job Scope** - What type of orchestration monitoring data to purge.

### Procedure

---

1. From the Navigation pane, select Logs > Job Log. The Results page is displayed.
2. Click Settings. The Job Log Settings dialog box is displayed. By default the Purge page is displayed.
3. Specify the parameters as described in the following section.
4. Click Save.

## Job Log Purging Parameters

---

### Trigger Conditions

---

The amount of free disk space on the Integration Appliance, the time lapse since the last orchestration monitoring logs were purged, the number of completed jobs, and the number of jobs containing errors are all triggers that can initiate the purging or archiving of orchestration monitoring logs. The Integration Appliance uses "OR" logic and purges orchestration monitoring data when any one of the trigger conditions occurs.

Parameter	Description	Default
Available disk space	<p>This trigger fires when the percentage of free disk space is less than the specified value. When this trigger fires, the Integration Appliance purges the orchestration monitoring data as you specify in the Job Scope parameters.</p> <p>If the percentage of free disk space is still short of the percentage you specified, the Integration Appliance purges 50% of the remaining orchestration monitoring data until the value is reached.</p> <p>For example, you specify the following values for purging parameters:</p> <ul style="list-style-type: none"> <li>• Available disk space = 40%</li> <li>• Job status = completed</li> <li>• Jobs older than = 30 days</li> </ul> <p>If only 10% of the Integration Appliance disk is free, the Available disk space trigger fires and the Integration Appliance purges all completed jobs that are older than 30 days. However, purging this data only frees 10% of the disk space. Since the minimum amount of free disk space is still not satisfied, the Integration Appliance purges an additional 50% of the remaining orchestration monitoring data. The Integration Appliance continues to purge the remaining orchestration monitoring data by 50%, until the minimum available disk space is greater than or equal to the specified value.</p> <p>You can specify a value between 1-100 percent, any value outside a 40-75 percent range results in the Integration Appliance using the default value of 50%.</p> <p>Note: This is a required parameter.</p>	50%
Schedule	<p>This trigger fires when the period since the last purge is greater than the specified day, hours, minutes value.</p> <p>You can more precisely schedule a purge by selecting the Fixed option. When you select the Schedule Fixed option, the schedule you specify overrides the day, hours, minutes value specified since last purge.</p> <p>To schedule a purge:</p> <ol style="list-style-type: none"> <li>1. Select the Fixed option.</li> <li>2. Specify the number of days, weeks, or months.</li> <li>3. In the list, qualify the value by choosing Days, Weeks, or Months.</li> <li>4. Specify the start date.</li> </ol>	1 day
Completed job count	<p>This trigger fires when the number of completed jobs is greater than the specified value. This parameter must be a positive integer value.</p> <p>Note: After the Integration Appliance purges the jobs, the job count is no longer visible from the WMC.</p>	5,000 jobs

Parameter	Description	Default
Errored job count	<p>This trigger fires when the number of jobs containing errors is greater than the specified value. Errored job count includes any orchestration job in the following states: unknown, cancelled, terminated, or errored. This parameter must be a positive integer value.</p> <p>Note: After the Integration Appliance purges the jobs, the job count is no longer visible from the WMC.</p>	1,000 jobs

## Frequency

---

The frequency determines the interval at which the Integration Appliance checks the set of defined triggers for an actionable condition. You can specify the frequency interval in increments of hours, minutes, and seconds.

By default, this parameter is set to 10 seconds.

## Job Scope

---

Along with specifying trigger conditions and frequency, you must also specify the type of orchestration job data you want to purge. The Integration Appliance uses the values you specify for the Job Status AND the Jobs Older Than parameters OR the values you specify for Job Status AND Jobs Older Than the Most Recent parameters to determine when the Integration Appliance purges data.

Parameter	Description	Default
Job status	This parameter specifies the type of orchestration jobs that the Integration Appliance purges. By default, this parameter is set to ANY, which purges completed and jobs containing errors. You can choose to purge only the completed jobs by specifying COMPLETED.	Any
Jobs older than	This parameter specifies the minimum age of orchestration jobs to purge. The Integration Appliance purges anything older than the amount of time you specify. You can specify the age of an orchestration job in months, days, hours, and minutes.	7 days
Jobs older than the most recent	This parameter specifies the number of most recent jobs that the orchestration job must be older than before the Integration Appliance purges data.	1,000 jobs

---

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Working\\_with\\_Logs/purgingJobLogs.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/AppplianceHelp/Working_with_Logs/purgingJobLogs.html)

## Specify System Log Settings

---

You can specify the level of details that appears in the system logs. The log level you specify affects alerts for notification policies. Alerts are only sent for events that meet or exceed the log level you specify.

### About this task

---

The system log levels are shown in the following table. The Description column provides a description of each level and explains how it corresponds to the Cast Iron Management API log level.

Severity	Description
INFO	Informational messages. (Corresponds the Cast Iron Management API "INFO" log level).
WARNING	Warning messages. (Corresponds to the Cast Iron Management API "WARNING" log level).
ERROR	Serious errors that may need user attention. (Corresponds to the Cast Iron Management API "SEVERE" log level).
CRITICAL	Critical errors requiring user or administrator attention. (Corresponds to the Cast Iron Management API "FATAL" log level).
FINEST	Retrieves all logs at level above FINEST. (Corresponds to the Cast Iron Management API "ALL" log level).

Note: In certain cases, log levels set in the WMC override settings in the Cast Iron Management API. For example, if the WMC logging level for a component is set to FINEST, logs retrieved by the Cast Iron Management API are also set at the FINEST level. Additionally, if the WMC system logging level is set to INFO, logs retrieved by the Cast Iron Management API are also set at INFO.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set high enough to produce entries that would trigger a notification.

## Procedure

1. In the Navigation pane, select Logs > System Log. The System Log page is displayed.
2. Click Settings. The System Log Settings dialog box is displayed.
3. From the list, select a log level for each system.
4. Click Save.

## Results

A confirmation message is displayed. The system log logs all events that occur at the level you specified or higher for the specific system. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

## Viewing System Logs

You can view system logs from the Management Console and use the system log filters to sort through system log entries.

## About this task

When you upgrade, the Management Console does not persist system logs. To retain system log information, export system logs before you upgrade.

Note: The Management Console displays a maximum of 99,999 system log entries. When the number of system log entries exceeds 99,999, the oldest log entry is deleted from the system log.

## Procedure

1. From the navigation pane, select Logs > System Log. The System Log page is displayed.
2. Choose the filter values from the lists at the top of the System Log page. You can filter the log entries according to the level of severity for the event, the environment system that generated the log event, dates, and resolution state. The filters use AND logic.

## System Log Content

---

The system log provides the following information:

System Log Content	Description
Level	Identifies the level of severity of the log event: <ul style="list-style-type: none"><li>• Critical</li><li>• Error</li><li>• Warning</li><li>• Info</li></ul>
System	Identifies the system where the log event occurred: <ul style="list-style-type: none"><li>• Hardware</li><li>• Resources</li><li>• Network</li><li>• Security</li><li>• Orchestration</li><li>• Deployment</li></ul>
Message	Text messages that provides details about the log event.
Job	When available displays Job ID information for log events that occur in the Orchestration system.
When	Records the time when the log event occurred.
Resolved On	Provides a time stamp of when you resolved a log event.
Resolved By	Identifies which user resolved a log event.
Resolved	Select this checkbox to acknowledge that you have resolved a log event. When a user resolves a log event, a time stamp documents the date and time the issue was resolved. Information about the user who resolved the log event is tracked in the Resolved By column. You can resolve all the system log issues, by clicking Resolve All. Clear the checkbox next to any log events that are not resolved and the Resolved On and Resolved By values are cleared.

## Customizing columns in System log and Job log

---

You can customize the columns displayed in the System log and Job log pages, respectively.

### About this task

---

You can customize the columns to be displayed in the System Log and Job Log pages by editing the column display settings. To customize the log page columns, complete the following steps:

### Procedure

---

1. From the navigation pane, select Logs > System Log or Job Log. The System Log page or the Job Log page is displayed.
2. Click Edit Columns. The Display Columns window is displayed.
3. Select the columns that need to be displayed on the System Log or Job Log page. By default, all the columns are selected in the Display Columns window.
4. Click Save. Only those columns selected by you will be displayed in the System Log or Job Log page.

## Managing Appliances

---

You can now manage other appliances from the Web Management Console. This feature is helpful when you have multiple appliances; and you can manage these appliances from a single console.

One appliance is designated as the master appliance, which is used to manage other appliances.

The following features are available as part of managing appliances:

- Appliances can be registered and unregistered with the master appliance.
- Resource utilization details of each of the appliances can be viewed from the master appliance. For more information about the Resource Utilization Graph, see [About the Resource Utilization Graph](#).
- Projects that are published, and the status of each project/orchestration on each of the appliances can be viewed from the master appliance.
- Upgrade of each of the registered appliances can be performed from the master appliance.
- Supports both physical and virtual appliances.
- Supports Cast Iron® version 7.0 and earlier versions (6.0.0.x, 6.1.x.x, 6.3.x.x, 6.4.x.x) for managing and monitoring. The earlier version of Cast Iron must be on the required patch level for using this feature.
- Users of the master appliance must have administrator privileges to use this feature.
- This feature is also available when the appliance is configured with high availability.
- [Registering, editing, and unregistering appliances](#)
- [Upgrading Cast Iron appliance](#)

This feature is used to upgrade the Cast Iron appliance by using the upgrade files `vcrypt2` and `scrypt2` files. The upgrade files are obtained as a part of Cast Iron software or from Fix Central depending on the version (FixPacks/patch/major release) of the appliance.

- [Running commands](#)
- [Managing Project Configurations](#)

The managing multiple appliances feature allow you to manage the life cycle of projects (start, stop, delete, and clone projects) present in the registered remote appliances. You can modify the life cycle of the projects running on different appliances through the single master appliance. The life cycle includes stop, start, clone, resume, pause, and undeploy. The list of registered appliances are displayed in the appliance filter through which you can select the appliance and modify the life cycle of the projects in the selected appliance.

# Registering, editing, and unregistering appliances

---

## About this task

---

To register a new appliance, complete the following steps:

## Procedure

---

1. Log on to the Web Management Console as an administrator.
2. Select Manage > Appliances.
3. Click Register to register a new appliance. The Register New Appliance window is displayed.
4. In the Register New Appliance window, complete the following details:
  - a. Display Name - Specify a display name that can be used to identify the remote appliance.
  - b. Host Name - Specify the host name or IP address of the remote appliance that you want to register.
  - c. User Name - Specify the user name, with administrator privileges, to communicate with the remote appliance.
  - d. Password - Specify the password for the user name.
  - e. Optional: Description - Specify a brief description for this appliance.
  - f. LDAP - Select this option if the remote appliance is configured for LDAP. Also, provide the LDAP credentials that are used for connecting to the appliance, in the User Name and Password fields.
  - g. Enabled - Select this option if you want to enable the appliance for managing and monitoring. If disabled, the data will not be displayed for this appliance.
5. Click Save.

Note:

- o An appliance, which is already registered to a master cannot be made as a master appliance.
- o You cannot register an appliance, which is already a master to another master appliance.
- o You can register an appliance with multiple master appliances.
- o You can register the master appliance to itself for managing and monitoring.

Note:

- o A user with the name `masteradmin4ma` is created in the master appliance that indicates that the current appliance is a master appliance.
- o A user with the name `slaveadmin4ma` is created in the appliances that are registered in the master appliance.
- o Both these users must not be deleted unless you want to unregister the appliance from the master appliance.

## Results

---

A confirmation message is displayed. A new appliance is registered. When the registration is successful, the version of the appliance and the type (physical/virtual) is displayed.

**Parent topic:** [Managing Appliances](#)

## Editing the registered appliance details

---

### About this task

When you click the display name of any of the registered appliances, you can edit the appliance details in the Edit Appliance Details dialog. You can edit the following fields:

- Display Name
- User Name
- Password
- Description
- LDAP
- Enabled

## Unregistering an appliance

---

## Procedure

1. From the list of registered appliances, select the appliances to be unregistered.
2. Click the Unregister button. The Delete Appliances confirmation message is displayed.
3. Click Yes to unregister the appliance.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Appliances/registeringAppliances.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Appliances/registeringAppliances.html)

## Upgrading Cast Iron appliance

---

This feature is used to upgrade the Cast Iron® appliance by using the upgrade files `vcrypt2` and `scrypt2` files. The upgrade files are obtained as a part of Cast Iron software or from Fix Central depending on the version (FixPacks/patch/major release) of the appliance.

### About this task

---

To upgrade remote appliances, complete the following steps:

### Procedure

---

1. Copy the `vcrypt2` and/or `scrypt2` file to the workstation from where you can access the appliance from Web Management Console.
2. In WMC, log on to the Integration Appliance and go to Manage > Appliances.
3. Select the appliances that you want to upgrade, from the list of registered appliances.
4. Click the Upgrade Operating System link. The Upgrade Appliances Operating System Wizard is displayed.
5. Browse the `.vcrypt2` file in the Virtual appliance Upgrade File field, to upgrade the virtual appliance.
6. Browse the `.scrypt2` file in the Physical appliance Upgrade File field, to upgrade the physical appliance.
7. Click Upgrade. All the selected appliances will be upgraded one after the other sequentially.

### Results

---

The results of the upgrade are displayed after all the appliance upgrade is complete. The appliance version is also updated in the registered list of appliances, after the data gets updated.

Note:

- Before making changes like Upgrade/Reboot of appliance, please stop all projects in the runtime. After appliance comes back, starts the projects one-by-one.
- If the master appliance is a part of the upgrade list, it will be upgraded only after the upgrade of the other appliances are complete.
- When the files for both physical appliance and virtual appliance, `scrypt2` and `vcrypt2`, are browsed, upgrade is based on the type information (physical or virtual) available for the appliance in the table. If the type information is not available (earlier version without an interim fix), then these appliances are skipped from being upgraded.
- When only one file is browsed, that file is used as an input to upgrade all selected appliances, including appliances, which do not have type information (represented by -).

# Running commands

---

## About this task

---

With the help of commands you can manage the operation on a remote Integration Appliance. To run commands on the appliance, complete the following steps:

## Procedure

---

1. Log on to the Web Management Console as an administrator.
2. Select Manage > Commands.
3. Select one of the following commands listed under Execute.

Table 1. Description of commands

Commands	Description
Remove job history	Removes all job records. This is equivalent to the CLI command <code>system clean orchmon</code> .
Remove projects and configurations	Removes all projects, orchestrations, and project configurations. This is equivalent to the CLI command <code>system clean deploy</code> .
Remove all jobs in progress	Removes the currently running project data. This is equivalent to the CLI command <code>system clean running</code> .
Restart	Stops and restarts the Integration Appliance run time. This is equivalent to the CLI command <code>system restart</code> .
Reboot	Shuts down all services, then reboots the Integration Appliance. This is equivalent to the CLI command <code>system reboot</code> .

4. Select the appliance from the list of registered and active appliances and click Submit to run the command on the chosen appliance.

# Managing Project Configurations

---

The managing multiple appliances feature allow you to manage the life cycle of projects (start, stop, delete, and clone projects) present in the registered remote appliances. You can modify the life cycle of the projects running on different appliances through the single master appliance. The life cycle includes stop, start, clone, resume, pause, and undeploy. The list of registered appliances are displayed in the appliance filter through which you can select the appliance and modify the life cycle of the projects in the selected appliance.

## Before you begin

---

You must have Administrator privileges or be the publisher of a project to manage project configurations on remote appliances

## About this task

---

To run, clone, undeploy, stop, pause, or delete project configurations on remote appliances, complete the following steps:

## Procedure

---

1. From the Navigation pane, select Manage > Configurations. The Project Configurations page is displayed.

2. Locate the project configuration you want to manage.

3. Click the following icons as per your requirement:

- o - to clone a project configuration.
- o - to run a project configuration.
- o - to delete a project configuration.
- o - to stop a project configuration.
- o - to undeploy a project configuration.
- o - to pause a project configuration.

Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing\\_Appliances/managingConfigurations.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.appliance.doc/ApplianceHelp/Managing_Appliances/managingConfigurations.html)

## About the Command Line Interface

---

The Cast Iron® Command Line Interface (CLI) is available to administrators to manage the Integration Appliance and to maintain and update its configuration information.

The CLI is preinstalled on the Integration Appliance and is ready to respond to the commands described in this documentation.

Note: The CLI is case sensitive. In general, you must enter commands and keywords using lowercase characters.

Only a user logged in as an administrator can use the CLI. More than one administrator can be logged in to an Integration Appliance at the same time.

### Logging into the CLI

---

You can log in to the CLI on the Integration Appliance through a secure shell (SSH) session, terminal emulation, or telnet. By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation.

When using an SSH client or a telnet client to log in to the CLI, the 5th consecutive log-in failure (regardless of which user or any span of time) triggers a lock-out. The lock-out is characterized by a limit of one log in attempt per minute without regard for the user. A successful log-in by any user resets the log-in failure count and ends the lock-out.

### Logging out of the CLI

---

At the command prompt, use the exit command to log out of the CLI. This also closes the terminal emulation or telnet session connection.

### Viewing CLI help

---

In the CLI, you can view a list of command categories by typing help or ?. To view syntax help for the commands in a specific category, enter *Category* help. For example, net help or net ? lists syntax information for each network command.

Tab completion also guides you through the CLI syntax. From the CLI, you can enter a partial command and press the Tab key. Pressing the Tab key completes the command or provides a list of options to complete the command syntax.

Note: Tab completion is sensitive to spaces in the CLI syntax. For example, typing system show in the CLI and then pressing the Tab key appears to have no results. Add a space after show and press the Tab key to view valid command parameters.

### Command conventions

---

The following conventions are used to illustrate command syntax rules:

Table 1.

Convention	Description
keyword <value>	Most command parameters combine a keyword and a value. Some parameters might not require a value.
<value>	Values for parameters are enclosed in angle brackets. In many cases, the text shown indicates the type of information you supply, such as <hostname>. Values may be explicit, such as <yes>.
[x]	Optional parameters are enclosed in brackets.
{x y z}	Groups of mandatory parameters are enclosed in braces.
x / y / z	Choices are separated by bars, select only one.
x...	Parameters that may occur more than once are followed by an ellipse.

- [Logging into the CLI with an secure shell session connection](#)

By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation. You can log in to the CLI on the Integration Appliance by using a secure shell session (SSH).

- [Logging into the CLI with a Serial Connection](#)

A serial connection allows you to monitor and issue commands against an Integration Appliance from an ASCII terminal or PC running terminal emulation software. To establish a serial connection:

- [Logging into the CLI with a telnet connection](#)

When secure management access is disabled for the Integration Appliance, you can connect to the Integration Appliance via the network through a telnet session.

- [Command Line Interface modes](#)

The mode of an Integration Appliance determines the type of Command Line Interface (CLI) commands that you can use.

- [Command Line Interface commands](#)

A list of the various command categories available from the Command Line Interface (CLI), and describes the purpose of each command category:

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_about\\_CLI.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_about_CLI.html)

## Logging into the CLI with an secure shell session connection

By default, secure management is enabled on the Integration Appliance and you must use secure connections to access the Integration Appliance. Secure connections use the default host key provided with the Integration Appliance at installation. You can log in to the CLI on the Integration Appliance by using a secure shell session (SSH).

### Procedure

1. In Windows, start an application, for example PuTTY, that performs SSH connections.
2. Enter the *appliance-host-name*.
3. If needed, select SSH as the connection protocol or set other connection parameters offered by the application.
4. Initiate® the connection. The login prompt is displayed at first access.
5. Log in to the Integration Appliance with a username and password, which have administrative privileges. The default username and password are:
  - o Login: admin
  - o Password: !n0r1t5@C

### Results

When you log in, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

## Logging into the CLI with a Serial Connection

---

A serial connection allows you to monitor and issue commands against an Integration Appliance from an ASCII terminal or PC running terminal emulation software. To establish a serial connection:

### Procedure

---

1. Connect a console or laptop computer to an Integration Appliance with a serial cable. The serial connection must be between an ASCII terminal or a PC running terminal emulation software to the serial port on the Integration Appliance.
2. Use the included serial cable to connect the terminal or PC to the Serial connector on the Integration Appliance. If the terminal or PC does not have a serial port and has only a USB port, then use a USB-to-serial converter cable (not included).
3. Configure the terminal or PC for standard 9600 8N1 and no flow control operation. 8N1 is a notation for a serial configuration in asynchronous mode, where there are eight (8) data bits, no (N) parity bit, and one (1) stop bit. The terminal emulation suggested for the terminal or PC is VT100.

### Results

---

When you log in to the Integration Appliance, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

## Logging into the CLI with a telnet connection

---

When secure management access is disabled for the Integration Appliance, you can connect to the Integration Appliance via the network through a telnet session.

### About this task

---

Note: By default, secure management access is enabled for the Integration Appliance; therefore, you will not be able to connect to the Integration Appliance using a telnet connection. See the mgmt secure command for more information about enabling and disabling secure management access.

### Procedure

---

1. In Windows, select Start > Run.
2. Enter `telnet appliance-host-name`. The login prompt is displayed at first access.

3. Log in to the Integration Appliance with a username and password, which have administrative privileges. The default username and password are:
  - o Login: admin
  - o Password: !n0r1t5@C

## Results

---

When you log in, the prompt changes to the host name of the Integration Appliance.

If you have not selected a hostname, the prompt defaults to the IP address of the Integration Appliance.

## Command Line Interface modes

---

The mode of an Integration Appliance determines the type of Command Line Interface (CLI) commands that you can use.

An Integration Appliance can be in one of the following modes:

Active

An Integration Appliance in an high availability (HA) pair that is actively processing data is in the Active mode. You can run all CLI commands in this mode. The active Integration Appliance can be in one of the following states:

- Active 1 - The active Integration Appliance is not communicating with its HA peer. If the peer Integration Appliance is rebooting or the R1 and R2 cables are disconnected, this status can occur.
- Active 2 - The active Integration Appliance is communicating with its HA peer.

Idle

An Integration Appliance enters the Idle mode when an error that requires user action occurs. This state indicates that the non-active Integration Appliance is unable to be in either the Active or Standby mode. Only Integration Appliances that are part of an HA pair enter the Idle mode. You can run diagnet, ha, netspect, and system commands in this mode.

Standalone

A single Integration Appliance that processes all messages. A standalone Integration Appliance cannot be part of an HA pair. In this mode, you can run all commands except the commands associated with an HA pair.

Standby

An Integration Appliance in an HA pair that monitors the processing of the Active Integration Appliance runs in Standby mode. The Integration Appliance running in Standby mode stays in sync with the Integration Appliance running in the Active mode, ready to take over processing if the Active Integration Appliance goes down. You can run ha and system commands in this mode.

Unknown

In an HA pair, when an active Integration Appliance does not know the status of the standby Integration Appliance.

## Typical HA pair mode combinations

---

When working with an HA pair, the following mode combinations are typical:

- ACTIVE\_2 and STANDBY - The active machine is communicating with its peer and vice versa. The pair is only highly available after the standby peer has synchronized all the data from the active peer.
- ACTIVE\_2 and IDLE - The active machine has been disconnected from the peer machine most likely as the result of a user issuing the ha disconnect command. Issue the ha connect command to restore the HA pair.
- ACTIVE\_1 and UNKNOWN - The active machine is not communicating with its peer most likely because the peer is rebooting, powered down, or the cables are disconnected.

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI\\_modes.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI_modes.html)

## Command Line Interface commands

---

A list of the various command categories available from the Command Line Interface (CLI), and describes the purpose of each command category:

Table 1.

Command Category	Description
Auth Commands	Authorization commands allow you to manage user accounts.
Config Commands	Configuration commands allow you to manage both management and integration configuration for the Integration Appliance.
Debug Commands	Debugging commands allow you to view queues and process stacks.
HA Commands	High availability management commands. These commands are only available with an Integration Appliance high availability (HA) pair.
Mgmt Commands	Management commands allow you to enable and manage security settings.
Net Commands	Network commands allow you to manage network configuration.
Netspect Commands	Network introspection commands allow you to manage network configurations and query the network for DHCP server, DNS server, gateway, and route information.
Stat Commands	Status commands allow you to view Integration Appliance status.
System Commands	System commands allow you to manage the operation of the Integration Appliance, which includes managing licenses for the Integration Appliance and connectors.
Time Commands	Time commands allow you to set or synchronize the date and time on the Integration Appliance.

Parent topic: [About the Command Line Interface](#)

 Last updated: Thursday, 2 June 2016

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI_commands.html)

## Authorization commands

---

Authorization commands allow you to manage user accounts.

- [The auth set user command](#)

The auth set user command sets the password for a user. Users can change their own password using the Web Management

Console (WMC), or have the administrator change their password. The administrator can use either the WMC, or this command. The Integration Appliance does not require the administrator to know a user's old password to update the user's password.

- [The auth set recovery command](#)

The auth set recovery command allows the admin password to be reset from the serial console for the IBM® DataPower® Cast Iron® Appliance. The default is on.

- [The auth show recovery command](#)

The auth show recovery command shows whether recovery is on or off. In the on state, the admin password can be reset from the serial console for the IBM DataPower Cast Iron Appliance.

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_auth\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_auth_commands.html)

## The auth set user command

---

The auth set user command sets the password for a user. Users can change their own password using the Web Management Console (WMC), or have the administrator change their password. The administrator can use either the WMC, or this command. The Integration Appliance does not require the administrator to know a user's old password to update the user's password.

When you enable an LDAP directory server to manage authorization and authentication for users and groups, this command can only be used to change admin's password.

### Syntax

---

`auth set user <user>`

**Parent topic:** [Authorization commands](#)

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_auth\\_set.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_auth_set.html)

## The auth set recovery command

---

The auth set recovery command allows the admin password to be reset from the serial console for the IBM® DataPower® Cast Iron® Appliance. The default is on.

If the option is enabled, you can type `resetpass` for the username at the serial login and any non-empty password. Immediately after you login, you will be asked to verify physical access to the machine. To verify that you have physical access to the appliance, you will be asked to unplug and replug the ethernet cable into the MGMT port of the appliance. This verifies that no one is accessing the serial console over a remote port replicator. If you do not have physical access to the appliance, you should set the recovery option to off.

### Syntax

---

`auth set recovery <on|off>`

**Parent topic:** [Authorization commands](#)

## Configuration commands

---

Configuration commands allow you to manage both management and integration configuration for the Integration Appliance.

- [The config load command](#)  
The config load command loads a management configuration file from an FTP or SFTP server. After the configuration file is loaded on the Integration Appliance, the Integration Appliance automatically reboots.
- [The config save command](#)  
The config save command saves a management configuration file to an FTP or SFTP server.

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI\\_config\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI_config_commands.html)

## The config load command

---

The config load command loads a management configuration file from an FTP or SFTP server. After the configuration file is loaded on the Integration Appliance, the Integration Appliance automatically reboots.

Do not use reserved words in the user name, host name, or file name. Reserved words include: `ftp`, `sftp`, `ibm`, `port`, `user`, and `file`.  
Note: When using SFTP, you must specify a user name. Anonymous logins are not allowed with SFTP.

## FTP Syntax

---

```
config load system ftp <host> [port <number>] [user <username>] file [<path>/]<filename>
```

## SFTP Syntax

---

```
config load system sftp <host> [port <number>] user <username> file [<path>/]<filename>
```

**Parent topic:** Configuration commands

---

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_config\\_configload.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_config_configload.html)

## The config save command

---

The config save command saves a management configuration file to an FTP or SFTP server.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, ibm, port, user, and file.

## FTP Syntax

---

When saving the configuration file to an FTP server, the Integration Appliance uses anonymous if you omit the user name.

```
config save system ftp <host> [port <number>] [user <username>] file [<path>/]<filename>
```

**Example:** Saves the current system configuration as old\_sys\_config.cfg to the FTP server running on host tern. The FTP user's login name is Joe.

```
config save system ftp tern user joe file old_sys_config.cfg
```

## SFTP Syntax

---

When saving the configuration file to an SFTP server, you must specify a user name. Anonymous logins are not allowed with SFTP.

```
config save system sftp <host> [port <number>] user <username> file [<path>/]<filename>
```

**Parent topic:** Configuration commands

---

## Debugging commands

---

Debugging commands allow you to view queues and process stacks.

- [The debug postmortem export command](#)

The debug postmortem export command exports the postmortem archive to the FTP or SFTP Server you specify.

- [The debug postmortem generate all command](#)

The debug postmortem generate all command generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores, that can help debug an Integration Appliance issue.

- [The debug postmortem generate full logs command](#)

The debug postmortem generate full logs command generates a postmortem archive of all the Integration Appliance logs,

which includes new logs in addition to archived logs, and possibly several stacks that are generated by previously running the debug show stack command.

- [The debug postmortem generate new logs command](#)

The debug postmortem generate new logs command generates a postmortem archive of all the latest Integration Appliance logs and possibly several stacks that are generated by previously running the debug show stack command.

- [The debug postmortem generate store command](#)

The debug postmortem generate store command is similar to the debug postmortem generate all command, except that the Integration Appliance only generates a postmortem archive of all the Integration Appliance logs and the data in the transactional store.

- [The debug show stacks command](#)

The debug show stacks command displays current runtime stack traces.

- [The debug system command](#)

The debug system command allows you to start and stop the Integration Appliance runtime. When you issue the debug system stop command, all running orchestration jobs are cancelled and the Integration Appliance does not process any new orchestration jobs..

- [The debug tail file command](#)

The debug tail file command displays log file contents as they are added to the log.

- [The debug top command](#)

The debug top file command dynamically displays process status.

- [The debug job command](#)

The debug job command allows you to capture the instruction set and log of a running job.

---

#### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_debug\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_debug_commands.html)

## The debug postmortem export command

---

The debug postmortem export command exports the postmortem archive to the FTP or SFTP Server you specify.

The Integration Appliance does not require that you specify an export file name; however, as a best practice, you should include the Integration Appliance serial number, date, and timestamp. If you do not specify an export file name, the Integration Appliance exports a file named postmortem.tar.gz.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, postmortem, debug, export, ibm, port, user, and file.

### FTP Syntax

---

```
debug postmortem export ftp <hostname> [port <number>] [user <user>] [file <filename> ]  
where:
```

Table 1.

Option	Description
<i>hostname</i>	Specifies the name of the FTP Server.
<i>number</i>	Specifies the port number to use to connect to the FTP Server.
<i>user</i>	Specifies the username used to login to the FTP Server.
<i>filename</i>	Specifies the name of the file storing the postmortem archive.

User Input:

- debug postmortem export ftp 192.168.1.2 user user1 file logs/B2XXW56\_04152005\_172341.tgz
- debug postmortem export ftp ftpserver.yourcompany.com user user1 file logs/B2XXW56\_04152005\_172341.tgz

### SFTP Syntax

---

To export the postmortem using SSH File Transfer Protocol, use the following SFTP syntax.

Note: When exporting a postmortem file to an SFTP server, you must specify a user name. Anonymous logins are not allowed with SFTP.

```
debug postmortem export sftp <hostname> [port <number>] user <user> [file <filename> ]  
where:
```

Table 2.

Option	Description
<i>hostname</i>	Specifies the name of the SFTP Server.
<i>number</i>	Specifies the port number to use to connect to the SFTP Server.
<i>user</i>	Specifies the username used to login to the SFTP Server.
<i>filename</i>	Specifies the name of the file storing the postmortem archive.

User Input:

- debug postmortem export sftp 192.168.1.2 user user1 file logs/B2XXW56\_04152005\_172341.tgz
- debug postmortem export sftp ftpserver.yourcompany.com user user1 file logs/B2XXW56\_04152005\_172341.tgz

## Exporting Files to IBM Support

---

Exports a postmortem file to IBM Support.

```
debug postmortem export ibm pmr <pmrnumber>  
where :
```

- pmrnumber - PMR number open with IBM Support. For example, debug postmortem export ibm pmr 55555.555.555

**Parent topic:** [Debugging commands](#)

## The debug postmortem generate all command

---

The debug postmortem generate all command generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores, that can help debug an Integration Appliance issue.

The postmortem archive remains on the Integration Appliance until you reissue the command. When you issue this command, the Integration Appliance generates a new archive that overwrites the previous postmortem archive.

Issue this command before rebooting the Integration Appliance and calling technical support.

## Syntax

---

```
debug postmortem generate all
```

**Parent topic:** [Debugging commands](#)

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

## The debug postmortem generate full logs command

---

The debug postmortem generate full logs command generates a postmortem archive of all the Integration Appliance logs, which includes new logs in addition to archived logs, and possibly several stacks that are generated by previously running the debug show stack command.

The postmortem archive remains on the Integration Appliance until you reissue the command. When you issue this command, the Integration Appliance generates a new archive that overwrites the previous postmortem archive.

### Syntax

---

```
debug postmortem generate fulllogs
```

## High availability commands

---

High availability (HA) management commands. These commands are only available with an Integration Appliance HA pair.

- [The ha active command](#)  
The ha active command orders the idle machine to become active. You can only issue this command if there is no peer, or the peer machine is idle.
- [The ha conncheck command](#)  
The ha conncheck command provides information to help diagnose possible connection problems related to a high availability pair. This command is only available in active mode.
- [The ha disconnect command](#)  
The ha disconnect command Temporarily disconnects an HA pair without causing the standby machine to takeover the active machine.. This command is only available in active mode.
- [The ha power off standby command](#)  
The ha power off standby command powers off the Standby Integration Appliance in a high availability pair. This command is only available in active mode.

- [The ha power on standby command](#)

The ha power on standby command powers on the Standby Integration Appliance in a high availability pair. This command is only available in active mode.

- [The ha reboot command](#)

The ha reboot command completes a system reboot of the Integration Appliance you specify: active or standby. The ha reboot command is only available for use in an HA pair. When you issue the ha reboot standby command, the Standby Integration Appliance reboots, while the Active Integration Appliance continues to process data. When you issue the ha reboot active command, the Active Integration Appliance shuts down all routing services and then reboots. The Standby Integration Appliance does not provide failover capabilities and data is not processed until the Active Integration Appliance is back online. To simulate failover capabilities, switch the modes of the machines in the HA pair using the ha switch command — the Active Integration Appliance (A1) becomes the Standby Integration Appliance (S2) and Standby Integration Appliance (S1) becomes the Active Integration Appliance (A2). After the Integration Appliances in the HA pair have switched modes, issue the ha reboot standby command. S1 continues to process data, while A1 is rebooting.

- [The ha show lastaccess command](#)

The ha show lastaccess command displays the last 10 state transitions on the Integration Appliance. Only available in idle mode.

- [The ha show pairstatus command](#)

The ha show pairstatus command displays status of the high availability pair, providing information about which Integration Appliance is Active and which is Standby. Only available in active mode.

- [The ha switch command](#)

The ha switch command switches the roles of the Integration Appliance in a high availability pair. The Active machine becomes the Standby machine and the standby machine becomes Active. Only available in active mode.

## The ha active command

---

The ha active command orders the idle machine to become active. You can only issue this command if there is no peer, or the peer machine is idle.

### Syntax

---

Note: Using this command incorrectly can lead to data corruption.

ha active

**Parent topic:** [High availability commands](#)

## The ha disconnect command

---

The ha disconnect command Temporarily disconnects an HA pair without causing the standby machine to takeover the active machine.. This command is only available in active mode.

This action allows you to perform any necessary hardware or software maintenance on the Standby machine without interrupting orchestration processing.

When you choose this action, the Standby machine transitions to an idle state. Reboot the active machine or run the connect action to reestablish communications between an HA pair and resumes data synchronization and fail-over operations.

To perform maintenance on an Active machine, run the switch action. The active machine becomes the standby machine, where you can execute the disconnect action and perform Integration Appliance maintenance without interrupting orchestration processing.

### Syntax

---

ha disconnect

**Parent topic:** [High availability commands](#)

## The ha reboot command

---

The ha reboot command completes a system reboot of the Integration Appliance you specify: active or standby. The ha reboot command is only available for use in an HA pair. When you issue the ha reboot standby command, the Standby Integration Appliance reboots, while the Active Integration Appliance continues to process data. When you issue the ha reboot active command, the Active Integration Appliance shuts down all routing services and then reboots. The Standby Integration Appliance does not provide failover capabilities and data is not processed until the Active Integration Appliance is back online. To simulate failover capabilities, switch the modes of the machines in the HA pair using the ha switch command – the Active Integration Appliance (A1) becomes the Standby Integration Appliance (S2) and Standby Integration Appliance (S1) becomes the Active Integration Appliance (A2). After the Integration Appliances in the HA pair have switched modes, issue the ha reboot standby command. S1 continues to process data, while A1 is rebooting.

## Syntax

---

```
ha reboot {active|standby}
```

**Parent topic:** [High availability commands](#)

---

## Management commands

---

A list of the management (mgmt) commands available.

Note: If you specify community names that require quotation marks, you must use ("") double quotation marks.

Table 1.

Com man d nam e	Action	Syntax

Com man d nam e	Action	Syntax
mg mt kerb eros del confi g	Deletes the Kerberos realm and KDC server configurations.	mgmt kerberos del config
mg mt kerb eros set real m	Allows you to specify the Kerberos realm and KDC server configuration settings.	mgmt kerberos set realm<name>kdc<name   ipaddress>
mg mt kerb eros sho w confi g	Displays the Kerberos realm and KDC server configuration settings.	mgmt kerberos show config
mg mt mot d	Allows you to set a message of the day that is displayed when a user logs in to the CLI. You can view the message of the day that was set, by choosing the show parameter. Choose the clear parameter and no message of the day is displayed when a user logs in to the CLI.	mgmt motd{set show clear}
mg mt secu re	<p>Enables or disables secure access to the Integration Appliance for the management interface. The default option is on, which enables secure management access. When secure management access is enabled (on), you must access the CLI by using SSH (secure shell) and access the Web Management Console (WMC) by using HTTPS. When you disable secure management access, by choosing the off option, you can access the CLI by using telnet and access the WMC by using HTTP.</p> <p>Verify the current security setting by using the mgmt secure setting command</p>	mgmt secure { on   off   setting}
mg mt snmp p set	Allows you to set up or update current SNMP configurations, as well as enable and disable the SNMP MIB2 service. For more information on using SNMP commands, see <a href="#">SNMP basics</a> .	1. mgmt snmp set { community   description   location   contact } <value> 2. mgmt snmp set { on   off }
mg mt snmp p sho w	Displays current SNMP configuration settings.	mgmt snmp show { community   description   location   contact   all   status }
mg mt ssh add	<p>Adds a public key for the specified host to the SSH Store on the Integration Appliance. If strict SSH key checking is enabled on the Integration Appliance, public keys must reside in the SSH Store for all participating endpoint systems that the Integration Appliance connects to with SFTP.</p> <p>Restart the Integration Appliance after you issue this command.</p> <p>Note: The keytype is a required parameter.</p>	mgmt ssh add<rsa dsa>host<name ipaddr name,ipaddr>

Com man d nam e	Action	Syntax
mg mt ssh del	<p>Deletes the public key for the specified host from the SSH Store on the Integration Appliance.</p> <p>Restart the Integration Appliance after you issue this command.</p> <p>Note: The keytype is a required parameter.</p>	mgmt ssh del host<hostname>   host IP address>
mg mt ssh keyc heck	<p>Enables or disables strict SSH key checking.</p> <p>In strict mode, SFTP connectors only connect to participating endpoint systems if the public key for that system matches the public key stored in the SSH Store of the Integration Appliance.</p> <p>In easy mode, SFTP connectors connect to participating endpoint system if either:</p> <ul style="list-style-type: none"> <li>The public key for that system matches the public key stored in the SSH Store</li> <li>No public key exists in the SSH Store. If no key exists, the connector loads the current public key from the participating endpoint system to the SSH Store</li> </ul>	mgmt ssh keycheck<strict easy >
mg mt ssh list	Displays all or a specified host that have public keys in the SSH Store. Public keys in the SSH Store are used with SFTP connectors to ensure secure connections.	mgmt ssh list[host<name   host IP address>]
mg mt ssh sho w keyc heck	Displays the current setting of SSH key checking: strict or easy.	mgmt ssh show keycheck
mg mt sysl og del confi g	Allows you to delete system log (syslog) configurations.	mgmt syslog del config
mg mt sysl og set rem ote host	Allows you to specify the remote host to which logs are sent.	mgmt syslog set remote host<name   host IP address>
mg mt sysl og sho w confi g	Displays current system log (syslog) configuration settings.	mgmt syslog show config

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI\\_mgmt\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI_mgmt_commands.html)

## Network commands

Network commands that you can use to manage the network configuration.

Table 1.

Command name	Action	Syntax
net add etchost	<p>Adds an entry to the /etc/hosts configuration file in the Integration Appliance. The IP address is typically the management IP address of the appliance. It is best practice to specify a fully qualified host name (for example, <i>myhost.mydept.mycompany.com</i>). Also, although alias is an optional parameter, it is best practice to specify an alias (for example, <i>myhost</i>).</p> <p>Here is an example of a net add etchost command.</p> <pre>net add etchost address 111.222.333.444 hostname myhost.mydept.mycompany.com alias myhost</pre> <p>If an entry was previously added with a host name that is not fully qualified, that entry must first be removed by using the net del etchost command before you add an entry with a fully qualified host name. Verify that the entry was successfully deleted by using the net show etchost command.</p>	<pre>net add etchost address &lt;ip-address&gt; hostname &lt;fully-qualified-hostname&gt; [alias &lt;short-alias-name&gt;]</pre>
net add route address	Adds a static route to the routing table.	<pre>net add route address &lt;destination&gt; mask &lt;netmask&gt; [gateway &lt;gateway&gt;] interface {emgmt   edata}</pre>
net del etchost	<p>Removes one or more entries from the /etc/hosts configuration file in the Integration Appliance.</p> <p>Specify the identical parameters that were used when the entry was added by using the net add etchost command. You can verify the details by using the net show etchost command.</p>	<pre>net del etchost address &lt;ip-address&gt; hostname &lt;fully-qualified-hostname&gt; [alias &lt;short-alias-name&gt;]</pre>
net del route address	Removes a static route from the routing table.	<pre>net del route address &lt;ip-address&gt; mask &lt;mask&gt;</pre>
net flush dhcp	Erases cached DHCP values from the Integration Appliance.	<pre>net flush dhcp</pre>
net ping	Queries the specified host to determine if it is responding on the network.	<pre>net ping {&lt;ip-address&gt; &lt;nodename&gt;}</pre>
net restart	Saves and applies any new network settings. You must use this command after net set, net add, or net del commands to apply the changes.	<pre>net restart</pre>
net restore	Restores the memory to active or backup settings.	<pre>net restore {active backup}</pre>

Command name	Action	Syntax
net trace route	Traces the network route to the specified node.	net traceroute <ip-address>   <nodename>
net validate	<p>Tests the current in-memory settings and displays any warnings or errors that might prevent the network from operating correctly.</p> <p>When all network settings are acceptable, issuing this command returns the following statement, "Current network settings can be applied."</p> <p>When an invalid setting is entered, issuing this command returns the appropriate warning or error messages. For example,</p> <pre>warning: Route to 9.43.79.4 requires static Data IP address error: Gateway 9.9.9.9 is not reachable from emgmt Current network settings cannot be applied</pre>	net validate

For the net set and net show commands, see the following topics:

- [The net set command](#)  
Sets the configuration for the network interfaces of the Integration Appliance, DNS server, host name, and default gateway. Choose the net set autohost command to automatically add the hostname/IP address to the Integration Appliance. You can also set the amount of time before reporting a lost carrier.
- [The net show command](#)  
This command displays all network configuration for the Integration Appliance. This command can also display specific configuration information for the network interfaces, DNS server, host name, default gateway, routing tables, and socket connections. If you enable the net set autohost command, use the net show autohost to view the current settings of the autohost.

#### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI\\_network\\_commands.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/CLI_network_commands.html)

## The net set command

Sets the configuration for the network interfaces of the Integration Appliance, DNS server, host name, and default gateway. Choose the net set autohost command to automatically add the hostname/IP address to the Integration Appliance. You can also set the amount of time before reporting a lost carrier.

To improve startup time in networks that do not have a DHCP server, configure all items to either static values or none so the Integration Appliance does not search for a DHCP server.

If you configure any value to be obtained through DHCP, startup time could be delayed as the Integration Appliance tries to locate an available DHCP server.

The network interfaces of the Integration Appliance use these names:

- edata - for the interface that handles all integration data
- emgmt - for the interface that handles management traffic, including both the CLI and the Web Management Console (WMC)

Table 1.

<b>O p t i o n s</b>	<b>Description</b>
a ut o h o st	Allows the Integration Appliance to find its IP address from its own hostname. When you enabled this option and the Integration Appliance cannot find an IP address corresponding to its hostname, either through DNS or an entry you entered manually into the /etc/hosts directory, the Integration Appliance automatically adds an entry into the /etc/hosts directory to allow the CIOS to operate normally. Enable or disable this option through the net set autohost command.
c ar ri er	Specifies the time, in seconds, until a missing ethernet link carrier is reported as an error. Setting the value to zero disables the carrier checking and no errors are reported.
d o m ai n	Sets the domain name for this Integration Appliance. The effect is that most queries for names within this domain can use short names relative to the local domain.
g at e w a y	Specifies the gateway and the interface to use for that gateway. The Integration Appliance supports only one default gateway for both management and data traffic (as opposed to one gateway per interface), but additional routes can be added separately.
h o st n a m e	Sets the name of the Integration Appliance. This should be the short hostname, without the domain name.
in te rf a c e	Sets the IP address, Netmask and Broadcast address for the specified interface.
li n k	Sets the ethernet link to autonegotiate (the default) or to specific values. In most cases autonegotiate is preferable, but setting specific values can sometimes help improve throughput when network conditions are not optimal.
m tu	Sets the Maximum Transmission Unit (MTU) size between a range of (68-9000). The default MTU is 1500.
n a m e s er v er	Sets DNS server list (maximum 2).
nt p	Sets the time server.

O p t i o n s	Description
s e ar c h	Specifies the search list. If you do not set this option, the search list is the same as the value of the domain setting.

## Syntax 1

---

```
net set autohost [enable|disable]
```

## Syntax 2

---

```
net set carrier timeout <timeout>
```

## Syntax 3

---

```
net set {domain|search|nameserver|ntp} {dhcp[emgmt|edata]|static <value>}|none}
```

**Example 1:** Set a specific domain name.

```
net set domain static mydomain.com
```

**Example 2:** Ask a DHCP server on the management NIC for an NTP server.

```
net set ntp dhcp emgmt
```

**Example 3:** Search for host names in specified domains.

```
net set search static a.mydomain.com b.mydomain.com
```

**Example 4:** Do not search for host names in other domains.

```
net set search none
```

## Syntax 4

---

```
net set gateway {dhcp {emgmt|edata}|static <ipaddress>} {emgmt|edata}|none}
```

## Syntax 5

---

```
net set hostname {dhcp[emgmt|edata]|static <value>}
```

## Syntax 6

---

```
net set interface {emgmt|edata} {dhcp|address <ipaddress> mask <mask> [bcast <bcast>]}
```

## Syntax 7

---

```
net set link {emgmt|edata} {autonegotiate|speed <speed>} duplex {half|full}}
```

## Syntax 8

---

```
net set mtu {emgmt|edata} <MTU>
```

**Parent topic:** [Network commands](#)

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_network\\_netset.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_network_netset.html)

## The net show command

This command displays all network configuration for the Integration Appliance. This command can also display specific configuration information for the network interfaces, DNS server, host name, default gateway, routing tables, and socket connections. If you enable the net set autohost command, use the net show autohost to view the current settings of the autohost.

You can issue a collection of network settings changes in memory with the net show command. The Integration Appliance does not persist these changes. The net show command only becomes permanent after you issue a net restart command.

- Active - Displays the network settings for the Integration Appliance that is currently running.
- Memory - Displays the network settings of a staging Integration Appliance that becomes active when you issue the net restart command.
- Backup - Specifies the Integration Appliance that was active before you issued the previous net restart command.

The network interfaces of the Integration Appliance use these names:

- edata - for the interface that handles all integration data
- emgmt - for the interface that handles management traffic, including both the CLI and the Web Management Console

Table 1. . The following table provides descriptions for options available in the various command syntaxes:

<b>Options</b>	<b>Description</b>
all	Displays all network configuration information for the Integration Appliance.
active	Displays complete network configurations.
autohost	Allows the Integration Appliance to find its IP address from its own hostname. When you enabled this option and the Integration Appliance cannot find an IP address corresponding to its hostname, either through DNS or an entry you entered manually into the /etc/hosts directory, the Integration Appliance automatically adds an entry into the /etc/hosts directory to allow the runtime to operate normally. Enable or disable this option through the net set autohost command.
bakcup	Displays complete network configurations.
carrier	Specifies the time, in seconds, until a missing ethernet link carrier is reported as an error. Setting the value to zero disables the carrier checking and no errors are reported.
domain	Displays the domain name for this Integration Appliance. The effect is that most queries for names within this domain can use short names relative to the local domain.

<b>O p t i o n s</b>	<b>Description</b>
et c h o st	Displays the entries within /etc/hosts.
g at e w a y	Specifies the gateway and the interface to use for that gateway. The Integration Appliance supports only one default gateway for both management and data traffic (as opposed to one gateway per interface), but additional routes can be added separately.
h o st n a m e	Displays the name of the Integration Appliance. This should be the short hostname, without the domain name.
in te rf a c e	Displays the IP address, Netmask and Broadcast address for the specified interface.
li n k	Sets the ethernet link to autonegotiate (the default) or to specific values. In most cases autonegotiate is preferable, but setting specific values can sometimes help improve throughput when network conditions are not optimal.
m e m or y	Displays complete network configurations.
m tu	Displays Maximum Transmission Unit (MTU) size for data in an IP packet.
n a m e s er v er	Displays the DNS server list (maximum 2).
n o d e	Displays the IP address for the node.
nt p	Displays the network protocol for clock synchronization between an appliance and network.
ro ut e	Displays active routes.

<b>O p t i o n s</b>	<b>Description</b>
s e ar c h	Specifies the search list. If you do not set this option, the search list is the same as the value of the domain setting.
s o c k et s	Displays a list of socket addresses.
st at u s	Displays the network status of the Integration Appliance, including the last attempt to start networking, the last time networking started, the last time networking stopped, the reason for last networking stop and the current networking activity.

## Syntax 1

---

```
net show {active|memory|backup}
```

## Syntax 2

---

```
net show {hostname|domain|search|nameserver|gateway|ntp} [ all|active|memory|backup]
```

If not specified, the last parameter defaults to active.

## Syntax 3

---

```
net show autohost
```

## Syntax 4

---

```
net show carrier [all|active|memory|backup]
```

## Syntax 5

---

```
net show etchost
```

## Syntax 6

---

```
net show interface {emgmt|edata} [all|active|memory|backup]
```

## Syntax 7

---

```
net show link [all|active|memory|backup]
```

## Syntax 8

---

```
net show node {<ip address>|<hostname> }
```

## Syntax 9

---

```
net show route [active|memory|backup]
```

If not specified, the last parameter defaults to active.

## Syntax 10

---

```
net show sockets
```

## Syntax 11

---

```
net show status
```

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI\\_network\\_netshow.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cli.doc/CLI_network_netshow.html)

## Network introspection commands

---

Network introspection (Netspect) commands allow you to manage network configurations and query the network for DHCP server, DNS server, gateway, and route information.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, export, ibm, port, user, and file.

Table 1.

Com man d nam e	Action	Syntax
netspect arp	Issues an ARP request for the IP address you specify and displays the result of the ARP reply or displays the ARP cache content.	<code>netspect arp &lt;lookup ipv4-address show cache&gt;</code>
netspect capture clean	Deletes all existing packet capture files.	<code>netspect capture clean</code>
netspect capture show	Displays the captured packets. Issuing this command also stops any running packet capture.	<code>netspect capture show</code>

Command name	Action	Syntax
netspect capture start	<p>Initiates a packet trace and produces a gzip (.gz) file. Packet traces can be useful for debugging network connection errors.</p> <p>Only one packet trace capture can run at a time. The capture continues running until you stop it using &lt;CTRL + C&gt; or until a maximum number of packets is reached.</p> <p>Note: When you start a capture with packet size parameter set to full, <code>pktsize full</code>, fewer packets can be captured.</p> <p>You can transfer packet traces to another host using the <code>netspect export</code> command.</p> <p>Note: Capturing a packet trace overwrites the previous capture.</p>	<pre>netspect capture start [interface &lt;emgmt edata all&gt;] [pktsize &lt;header full&gt;] [find &lt;hostname network&gt;]</pre> <p>where</p> <ul style="list-style-type: none"> <li>• <code>hostname</code> - Captures to/from specified host (nn.nn.nn.nn).</li> <li>• <code>network</code> - Captures to/from certain network in CIDR.</li> </ul> <p>Note: If you do not specify <code>emgmt</code> or <code>edata</code> for the interface parameter, the Integration Appliance uses the default value of <code>all</code> and capture starts for both interfaces.</p> <p><b>Example 1:</b> Capture packet headers on both interfaces.</p> <pre>netspect capture start</pre> <p><b>Example 2:</b> Capture full packets on <code>edata</code>.</p> <pre>netspect capture start interface edata pktsize full</pre> <p><b>Example 3:</b> Capture packet headers on <code>edata</code> to/from certain network.</p> <pre>netspect capture start interface edata find 123.12.0.0/24</pre> <p><b>Example 4:</b> Capture full packets on <code>emgmt</code> to/from certain host.</p> <pre>netspect capture start interface emgmt pktsize full find 123.12.0.123</pre>
netspect connect	Using the protocol you specify, this command attempts to open a connection to the network host port and displays the result of the connection attempt. If a connection is established, the connection is closed prior to this command returning.	<pre>netspect connect host &lt;host-id&gt; &lt;protocol&gt; port &lt;port-num&gt; where</pre> <ul style="list-style-type: none"> <li>• <code>host-id</code> - The name or IP address of a network host.</li> <li>• <code>protocol</code> - The protocol to use for the connection. Must be "tcp".</li> <li>• <code>port-num</code> - Any valid tcp port number.</li> </ul>
netspect dhcp	Queries the network for DHCP servers on the network interface you specify. Also displays DHCP server supplied network configuration information, plus the offered IP address and its lease terms.	<pre>netspect dhcp interface &lt;emgmt edata&gt;</pre>
netspect dns	Queries the system configured DNS server for the specified network host (i.e. perform either a forward lookup: return the IP address for a given host name, or perform a reverse lookup: return a host name for a given IP address), and display the result of the lookup.	<pre>netspect dns lookup host &lt;host-id&gt;</pre>

Command name	Action	Syntax
netspect export	Exports a packet capture file to an FTP Server. For more information about capturing packet traces, see the netspect capture start command.	<pre>netspect export &lt;ftp sftp&gt; host &lt;host-id&gt; [port &lt;number&gt;] [user &lt;user&gt;] [file &lt;filename&gt;] where:</pre> <ul style="list-style-type: none"> <li>• <b>host-id</b> - The name or IP address of the network host.</li> <li>• <b>port</b> - A valid port on the specified network host to which to connect.</li> <li>• <b>user</b> - Specifies the username used to log into the host.</li> </ul> <p>Note: When using sftp, this parameter must be specified. Anonymous logins are not allowed with sftp.</p> <ul style="list-style-type: none"> <li>• <b>filename</b> - File path on the destination host.</li> </ul> <p><b>Example 1:</b> netspect export ftp.</p> <pre>netspect export ftp host 123.12.12.123</pre> <p><b>Example 2:</b> netspect export sftp.</p> <pre>netspect export sftp host 123.12.12.123 user myname file /home/myname/mycap.gz</pre>
netspect gateways	Queries the gateways and routes for the specified IP protocol family, and reports whether or not the gateway responded to the query/ping. The IP protocol family can be either ipv4, which is the default or ipv6.	netspect gateways <ip-protocol>
netspect help	Displays help text for the specified netspect command. If a command is not specified, then a help summary for all netspect commands is displayed.	netspect help <command>
netspect ifconfig	Displays network interface configuration information for the specified interface. If a network interface name is not specified, then interface configuration information is displayed for all network interfaces.	netspect ifconfig interface <emgmt edata>
netspect ping	Attempts to query the specified network host, and displays the result of the query attempt.	netspect ping host <host-id>
netspect routes	Displays currently configured routes for the specified IP protocol family. The IP protocol family can be either IPv4 (the default if none specified) or IPv6.	netspect routes [<ip-protocol> ]

<b>Com mand name</b>	<b>Action</b>	<b>Syntax</b>
netspect summary	Provides a summary of network configuration information.	<code>netspect summary</code>
netspect traceroute	Attempts to determine the route to the specified network host, and displays the route packets took to get to the specified network host.	<code>netspect traceroute host &lt;host-id&gt;</code>

## System commands

System commands allow you to manage the operation of the Integration Appliance, which includes managing licenses for the Integration Appliance and connectors.

Note: Do not use reserved words in the user name, host name, or file name. Reserved words include: ftp, sftp, ibm, port, user, and file.

Table 1.

<b>Com mand name</b>	<b>Action</b>	<b>Syntax</b>
system autorboot	Allows you to enable or disable automatic reboot for an Integration Appliance.  Note: During a Cast Iron® firmware upgrade, the Integration Appliance reboots even if the automatic reboot is disabled.	<code>system autorboot &lt;on   off&gt;</code>

Command name	Action	Syntax
system autorereboot setting	Use the setting parameter to print autoreboot settings.	system autoreboot setting
system clean	<p>Clears the system states of the Integration Appliance. When you issue a system clean all command, the IBM® DataPower® Cast Iron® Appliance may reboot.</p> <p>Running the <code>all</code> option results in the removal of all data and configurations, including High Availability configurations, from disk. The results are equivalent to restoring factory default settings for the appliance. After the reboot, you will be asked to accept the license agreement before logging in to the Web Management Console for the appliance.</p>	<code>system clean{ [running] [orchmon] [deploy] }  all</code> <b>where:</b> <ul style="list-style-type: none"> <li>• <code>running</code> - Removes currently running project data.</li> <li>• <code>orchmon</code> - Removes orchestration monitoring data.</li> <li>• <code>deploy</code> - Removes all projects and configurations.</li> <li>• <code>all</code> - Resets the appliance to factory default settings.</li> </ul>
system persist	<p>Enables or disables the disk cache on the Integration Appliance. The default and recommended setting is <code>system persist on</code>.</p> <p>When persistence is enabled, writes are synchronized to ensure that all requested data is completely written to disk. This behavior helps protect data integrity, particularly when accessing external transactional systems such as databases.</p> <p>When persistence is disabled, on an appliance that supports this feature, performance might be improved. However, there is a risk of losing job progress state.</p>	<code>system persist { on   off }</code>
system persist setting	Displays the current system persist setting: on or off. Use the <code>system persist</code> command to specify whether the disk cache is enabled or disabled.	<code>system persist setting</code>
system poweroff	Shuts down all routing services and then powers off the Integration Appliance. If the force parameter is used, power is cut off immediately.	<code>system poweroff</code>
system reboot	<p>Shuts down all routing services and then reboots the Integration Appliance.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• Before making changes like Upgrade/Reboot of appliance, please stop all projects in the runtime. After appliance comes back, starts the projects one-by-one.</li> <li>• When the system reboots, any network settings that have not been saved are lost. To commit network settings to the Integration Appliance, use the <code>net restart</code> command.</li> </ul>	<code>system reboot</code>
system restart	Restarts the runtime and Web Management Console, without affecting the network connectivity.	<code>system restart</code>

Command name	Action	Syntax
system show platform	Displays information about the Integration Appliance, such as: ROM version, appliance platform, serial number, and MAC addresses.	system show platform
system show status	Available for Standalone Integration Appliances as well as the Active Integration Appliance in an HA pair. Shows whether the following components are up or down: System, Network, and Runtime.	system show status Example output: Appliance Status ----- System: Up Network: Up Runtime: Up
system show version	Displays the version of the Cast Iron operating system on the Integration Appliance.	system show version
system update ci os image	Updates the Cast Iron Operating System on the Integration Appliance using an image from an FTP Server based file or an SFTP Server based file.	system update ci os image from <source> where source can specify an FTP Server or an SFTP Server: <ul style="list-style-type: none"> <li>• ftp &lt;hostname&gt; [port &lt;number&gt;] [user &lt;user&gt;] file &lt;filename&gt;</li> <li>• sftp &lt;hostname&gt; [port &lt;number&gt;] user &lt;user&gt; file &lt;filename&gt;</li> <li>• http &lt;hostname&gt; [port &lt;number&gt;] [user &lt;user&gt;] file &lt;filename&gt;</li> <li>• https &lt;hostname&gt; [port &lt;number&gt;] user &lt;user&gt; file &lt;filename&gt;</li> </ul> <p>Note: When using sftp, you must specify the user parameter. Anonymous logins are not allowed with sftp.</p>

## Time commands

---

Time commands allow you to set or synchronize the date and time on the Integration Appliance.

Note: To avoid time drift on Virtual Appliances, run NTP on the host and guest. Running NTP sets the system time to UTC. Do not use the time set clock command to reset time on a Virtual Appliance.

Table 1.

Comm and name	Action	Syntax
time set	<p>Sets individual time and date components relative to the time zone you choose. The Integration Appliance restarts after you issue this command using the <code>clock</code> parameter.</p> <p>If you do not know the syntax for a specific time zone, choose the last option and do not specify a value for zone.</p>	<pre>time set { {   clock&lt;string&gt;}   { zone&lt;zone&gt;}   { zone} }</pre> <p>Example 1:</p> <ul style="list-style-type: none"><li>• <code>time set clock&lt;string&gt;</code></li><li>• User input: <code>time set clock Sat Jan 1 00:00:00 2005</code></li></ul> <p>Example 2:</p> <ul style="list-style-type: none"><li>• <code>time set zone&lt;zone&gt;</code></li><li>• User input: <code>time set zone America/Los_Angeles</code></li></ul>
time show	Display all time settings or individual time components (the current time, date, or time zone).	<code>time show</code>

## About High Availability Pairs

---

A High Availability (HA) pair is an Integration Appliance configuration that connects two physical Integration Appliances together, allowing them to automatically synchronize data and perform fail-over operations. The machines that make up the HA pair share the same MAC and IP addresses, thus creating a single network identity.

There is one Active and one Standby Integration Appliance in an HA pair. The Integration Appliance that actively processes orchestrations is the Active machine. The Integration Appliance that automatically synchronizes data and performs fail-over operations is the Standby machine. When the machines that make up an HA pair initially connect to each other, they immediately synchronize with each other and determine which machine assumes the active role and which machine assumes the standby role. During the initial synchronization operation, the Active machine can process orchestrations; however, fail-over cannot occur until the HA pair is completely synchronized. Once the HA pair is synchronized, the HA pair persists data and automatically synchronizes this data between the two machines.

When an Active machine failure occurs, the Standby machine initiates a take over procedure, becomes the Active machine, and resumes processing orchestrations exactly where the other machine stopped. The take over process typically takes less than a minute to complete, but DHCP response times can slow the take over process. During the take over procedure, the Standby machine power cycles the Active machine to ensure the Active machine is not still processing orchestrations. Only when the Standby machine can successfully power cycle the failed Active machine does it become the Active machine. If the Standby machine is unable to power cycle the Active machine, the Standby machine goes into an IDLE state.

Examples of failures that can cause an HA fail-over to occur include the following failures:

- Hardware failures generated by CPUs, hard drives, RAM, motherboards, network interfaces, power supplies, and raid-controllers.
- Integration Appliance runtime failures, such as fatal errors during processing.
- Communication failures between the Integration Appliances caused by replication port network interface issues or replication cable issues.

When the Active machine loses contact with the Standby machine, the Active machine stops running orchestrations to prevent an asynchronous data commit and waits to see if the Standby machine initiates the take over procedure. If the Standby machine does not power cycle the Active machine, the Active machine resumes processing orchestrations. When the Standby machine is able to reconnect to the Active machine, the Standby machine synchronizes with the Active machine.

From the WMC, you can monitor an HA pair's status and manipulate the roles of the Integration Appliances in an HA pair.

---

## About Integration Appliance States

---

Integration Appliances in a High Availability (HA) pair can be in one of many states. States for Integration Appliances in an HA pair include:

States for Integration Appliances in an HA pair include:

**ACTIVE\_1**

The Active machine cannot communicate with the Standby machine; however, the Active machine continues to process data.

**ACTIVE\_2**

The Active machine is successfully processing data and can communicate with the peer HA machine.

**IDLE**

Displays when the Active machine or Standby machine encounters a hardware or software problem. An IDLE state helps to ensure data integrity between an HA pair. IDLE is not always an error state.

For example, the Active machine enters an IDLE state when it power cycles and remains in this state until it can verify the state of the Standby machine.

**STANDBY**

The Standby machine is successfully synchronizing with the Active machine.

**TRANSITIONING**

Can occur immediately before or after rebooting. Typically, a machine in an HA pair remains in this state after rebooting long enough to perform some initialization, find its peer, and then transition into the appropriate state.

**UNKNOWN**

Occurs when the peer machine is unavailable. For example, when a Standby machine is powered off, the Active machine states that the state of the peer machine (Standby machine) is UNKNOWN.

## Requirements for Configuring High Availability Pairs

---

A High Availability (HA) pair requires a very specific hardware configuration, and the two Integration Appliances must meet certain requirements.

To operate as an HA pair, the two Integration Appliances must meet the following requirements:

- Both Integration Appliances must use the same version of the Cast Iron® Operating System. When you apply a patch to one Integration Appliance, the same patch is automatically applied to the other Integration Appliance in the HA pair.
- The replication interfaces on one machine must be connected by cable to the corresponding interface on the other machine.

- The management network port on each Integration Appliance must be connected to the same subnet.
- The data network port on each Integration Appliance must be connected to the same subnet.

Note: A note regarding High Availability pairs and Hybrid Cloud Integration (HCI) support – If you are using HCI functionality and attempt to convert two Integration Appliances to HA, the HCI function will no longer be supported.

# Setting Up a High Availability Pair

## About this task

Perform the following steps to set up a High Availability pair.

## Procedure

1. If you are using 9005 appliances to set up an HA pair, do the procedures in Step 1a. If you are using 9004 appliances, do the procedures in Step 1b. .

Note: High Availability can only be obtained by connecting homogeneous appliances. Do not attempt to connect dissimilar appliances (such as a 9005 appliance and a 9004 appliance) to one another to attain High Availability

- a. For the 9005 appliance - To create an HA pair, you need a total of six Ethernet cables in addition to the recommended serial console cable. Directly connect the replication interfaces of the two appliances with two Ethernet cables:

```
1 x ethernet cable for emgmt of Appliance A
1 x ethernet cable for emgmt of Appliance B
1 x ethernet cable for edata of Appliance A
1 x ethernet cable for edata of Appliance B
1 x ethernet cable for repl1 between Appliance A and Appliance B
1 x ethernet cable for repl2 between Appliance A and Appliance B
```

Connected as follows:

Appliance 1	Appliance 2
Repl 1 <----->	Repl 1
MGMT	MGMT
Data 1	Data 1
Data 2	Data 2
Data 3	Data 3
Repl 2 <----->	Repl 2

Connect MGMT and Data 1 for both appliances to the appropriate management and data networks. Data 2 and Data 3 should remain disconnected.

- b. For the 9004 appliance - Note that the network interfaces labelled externally on the Cast Iron appliance are mapped to different interfaces internally:

External Label	Internal designation
MGMT	emgmt
ETH0	r1
ETH2	edata
ETH1	r2

Connect the appliances with two Ethernet cables:

Appliance 1	Appliance 2
MGMT (internal:emgmt)	MGMT (internal:emgmt)
ETH0 (internal:r1) ----->	ETH0 (internal:r1)
ETH1 (internal:r2) ----->	ETH1 (internal:r2)
ETH2 (internal:edata)	ETH2 (internal:edata)

MGMT (emgmt) and ETH2 (edata) for both appliances should be connected to the appropriate management and data networks.

2. Select an appliance to be the initial Active peer. The second appliance will be the Standby peer.
3. Connect a serial console to the selected Cast Iron appliance. Log in to the Cast Iron command line interface (CLI) on the Active peer appliance as user `admin`. The default admin password is `!n0r1t5@C`. You should get a command prompt similar to:  
`none/Standalone>`
4. Configure the management and data networks to use statically assigned IP addresses. From the CLI, you do this by issuing a `net set interface` command followed by `net restart`:

```
appliance name/Standalone> net set interface emgmt address <MGMT IP  
ADDRESS> mask <MGMT NETMASK> bcast <MGMT BROADCAST>
```

```
appliance name/Standalone> net set interface edata address <DATA IP  
ADDRESS> mask <DATA NETMASK> bcast <DATA BROADCAST>  
appliance name/Standalone> net restart
```

5. To avoid problems, you should upgrade Cast Iron appliances with the latest software version. The software can be located on the IBM Fix Central website at <http://www.ibm.com/support/fixcentral/> and should be downloaded onto a machine that is accessible from the Cast Iron appliance to be upgraded. Upgrade of the Cast Iron software can be done through the Cast Iron Web Management Console (WMC) or alternatively, through commands issued on the command line interface. To check the software level, connect a serial console to the selected Cast Iron appliance, then log in to the Cast Iron command line interface on the Active peer appliance as user `admin`. By default the admin password is `!n0r1t5@C`. Issue the following command to check the software level:

```
none/standalone>system show version
```

If an update is required, issue the `update` command, providing the `ftp` location and user credentials required. For example:

```
none/standalone>system update cios image from ftp 10.10.17.166 user  
billbloggs file Downloads/fixcentral/castiron/myciupdate
```

The appliance reboots during the upgrade process.

6. Repeat steps 3 and 5 for the Standby appliance. Because the appliance temporarily requires two IP addresses for the duration of the upgrade, you may also need to perform step 4 on the Standby peer.

Note: After HA setup is complete, only two IP addresses (one for management and one for data) are required for the HA pair. Any IP addresses used on the Standby peer for this step are discarded upon completion of HA setup and may be used elsewhere in the network environment.

7. Issue the following command on both peers to ensure that they have the same level of software installed and that it is the required software level:

```
none/standalone>system show version
```

8. Configure the Active appliance as HA:

```
none/standalone> system haconfig enable active
```

The appliance reboots and restarts as the Active appliance.

9. Log in to the Active appliance. The command prompt shows the appliance is active:

```
none/Active>  
or  
appliance name/Active>
```

10. Connect a serial console to the selected Standby appliance, then log into the Standby peer and issue the following command to configure it as HA:

```
none/standalone> system haconfig enable standby
```

11. Log back into the Standby appliance. The command prompt shows the appliance is standby:

```
none/Standby>
```

12. On the Active appliance check the status of the HA pair:

```
appliance name/Active>ha show pairstatus
```

The output indicates if the appliances are highly available. For example:

```
appliance name/Active>ha show pairstatus
```

```
Pair Status  
-----
```

```
NOT Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: 74%
```

```
Appliance Services
-----
Network: Up
Runtime: Starting

Command complete
```

In this example, the HA pair is not highly available because synchronization of the disks is only 74% complete. Issue the command again and the status changes:

```
appliance name/Active>ha show pairstatus
```

```
Pair Status
-----
Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: Synced
```

```
Appliance Services
-----
Network: Up
Runtime: Up

Command complete
```

13. After synchronization completes, it is important to ensure that the HA pair can properly switch roles when necessary. Use `ha show pairstatus` to confirm that the pair is Highly Available and that the network and runtime appliance services are reported as up. Identify the serial number of the appliance that is currently active.

```
appliance name/Active> system show version
```

Issue the following command to switch the roles of the HA pair:

```
appliance name/Active> ha switch
```

The Standby peer takes over and becomes Active. (Typically this process requires about 2 minutes). The peer that was previously Active becomes Standby. Use the command `system show version` to view the serial number of the Active appliance and confirm that it has changed. Use the command "`ha show pairstatus`" to verify that the HA pair returns to the Highly Available state.

14. After confirming that the HA pair can switch roles in one direction (for example: Peer A -> Peer B), do Step 13 again to ensure the HA pair can switch roles in the other direction (Peer B -> Peer A).

Note: A note regarding High Availability pairs and Hybrid Cloud Integration (HCI) support – If you are using HCI functionality and attempt to convert two Integration Appliances to HA, the HCI function will no longer be supported.

## Working with High Availability Pairs

---

High Availability (HA) pairs consist of two Integration Appliances: an Active machine and a Standby machine. This HA pair can then process orchestrations as a single entity.

The Active machine actively processes orchestrations, while the Standby machine automatically synchronizes data with the Active machine in case the Standby machine needs to perform any fail-over operations. When the appropriate scenario occurs, the Active machine and Standby machine can switch roles.

From the WMC, you can change the state or role of the Integration Appliances in an HA pair.

- [Running High Availability Commands](#)  
You can run commands against a High Availability (HA) pair from the navigation pane.

## Running High Availability Commands

---

You can run commands against a High Availability (HA) pair from the navigation pane.

### Procedure

---

1. Select System > Command. The System Commands page is displayed.
2. From the Choose Command drop-down list, select a command. You can view command details by clicking the drop-down arrow.
3. Click Go.

**Parent topic:** [Working with High Availability Pairs](#)

---

## High Availability Commands

---

These commands can be run against a High Availability (HA) Pair.

Table 1.

Syste m Co ntr ol Co mma nds	Description
HA Conn ect	Reconnects the Active and Standby Integration Appliance so that they can resume fail-over operations.

System Control Commands	Description
HA Disconnect	Temporarily disconnects an HA pair without causing the Standby machine to take over the Active machine. This action allows you to perform any necessary hardware or software maintenance on the Standby machine without interrupting orchestration processing. When you choose this action, the Standby machine transitions to an idle state. Reboot the Active machine or execute the Connect action to reestablish communications between an HA pair and resumes data synchronization and fail-over operations. To perform maintenance on an Active machine, use the Switch action. The Active machine becomes the Standby machine, where you can use the Disconnect action and perform Integration Appliance maintenance without interrupting orchestration processing.
HA Switch	Causes the Integration Appliances in an HA pair to switch roles: the Active machine becomes the Standby machine and the Standby machine becomes the Active machine.

## Troubleshooting a High Availability Pair

---

If both the Active and Standby machines enter an IDLE state, use the CLI to resolve the issue.

### Procedure

---

To resolve an IDLE/IDLE state:

1. From the CLI on both the Active machine and the Standby machine, type `ha show lastaccess`.
2. Determine which Integration Appliance has the most valid set of data. Usually the Integration Appliance with the most recent activity generates the most recent timestamp.
3. Type `ha active` on the Integration Appliance you determine to have the most valid data.

### Results

---

This Integration Appliance is now the Active machine in a HA pair.

If you require specific technical support for high availability pairs, contact IBM Technical Support.

## About the virtual appliance

---

This guide provides information about creating, configuring, backing up and recovering virtual appliances. Virtual appliances run in a virtual environment and are packaged with a guest operating system and optional application software, while integration appliances are physical machines.

Cast Iron® products perform equally well in both the virtual and physical worlds. You can install the Cast Iron Operating System (CIOS) on a single virtual machine running one integration project or on multiple virtual machines running many projects to create a data center infrastructure. For information on creating virtual appliances with CIOS as the guest operating system, see [Deploying an OVF template](#).

Your virtual appliance environment should consist of the following:

- A host machine (desktop computer or server).
- CPU (for example Intel® VT-x or AMD®-V) with virtualization technology enabled. (In some cases, virtualization technology must be enabled through BIOS).
- 60 GB disk space.
- Supported configuration of either 1 CPU, 4 GB RAM or 2 CPU, 8 GB RAM. Ensure that the host has enough physical RAM to run the selected configuration or system performance might be affected.
- VMware® ESX® or ESXi version 5.0 or later. For more information on VMware products and ESX, go to <http://kb.vmware.com/selfservice/microsites/microsite.do> and click *VMware ESX and ESXi Comparison*.
- Cast Iron Hypervisor Edition installation file (in OVA format).
- VMware vCenter® Server, 4.0.0, 258672 (optional).
- VMware VMotion® and VMware High Availability add-ons (optional). When added to your installation, VMware add-ons can manage and balance your workload across virtual machines, find an optimum data center location for a virtual machine and manage OS related failures. Refer to VMware documentation to learn more about add-ons and for tips on setting up your virtual environment.

Note: Shared storage, such as a SAN, is optional. Shared storage is required to enable VMware features such as VMware VMotion and VMware High Availability.

---

## Getting started with the IBM WebSphere Cast Iron Hypervisor Edition

---

This guide introduces the IBM® WebSphere® Cast Iron® Hypervisor Edition (HVE) and provides an overview of virtualization technology. Virtualization refers to hardware virtualization where a virtual appliance runs in a virtual environment and is packaged with a guest operating system and optional application software.

Virtualization allows you to run several instances of an operating system on the same physical piece of hardware at the same time. Virtualization is accomplished through technology called *hypervisor*. A hypervisor allows many different simultaneously running operating systems to share the same set of physical resources (memory, CPU, disk and network) on one physical server. The physical machine on which the virtualization software runs is the *host* and virtual machines running on the host are *guests*.

Cast Iron products perform equally well in both the virtual and physical worlds. You can install the Cast Iron Operating System (CIOS) on a single virtual machine running one integration project or on multiple virtual machines running many projects to create a data center infrastructure. For information on creating virtual appliances with CIOS as the guest operating system, see [Deploying an OVF template](#).

- Requirements

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_virtualization\\_basics.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_virtualization_basics.html)

## Requirements

---

This section outlines the requirements and resources needed to establish a virtual appliance environment. For detailed information on mapping between resources, see [Resource mapping](#).

Requirements:

- A host machine (desktop computer or server).
- CPU (for example Intel® VT-x or AMD®-V) with virtualization technology enabled. (In some cases, virtualization technology must be enabled through BIOS).
- 60GB disk space.
- Supported configuration of either 1 CPU, 4GB RAM or 2 CPU, 8GB RAM. Ensure the host has enough physical RAM to run the selected configuration or system performance may be affected.
- VMware® ESX® or ESXi version 5.0 or later. For more information on VMware products and ESX, go to <http://kb.vmware.com/selfservice/microsites/microsite.do> and click on *VMware ESX and ESXi Comparison*.
- Cast Iron® Hypervisor Edition installation file (in OVA format).
- VMware vCenter® Server, 4.0.0, 258672 (optional).
- VMware VMotion® and VMware High Availability add-ons (optional). When added to your installation, VMware add-ons can manage and balance your workload across virtual machines, find an optimum data center location for a virtual machine and manage OS related failures. Refer to VMware documentation to learn more about add-ons and for tips on setting up your virtual environment.

Note: Shared storage, such as a SAN, is optional. Shared storage is required to enable VMware features such as VMware VMotion and VMware High Availability.

**Parent topic:** [Getting started with the IBM WebSphere Cast Iron Hypervisor Edition](#)

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_requirements.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_requirements.html)

## Resource mapping

---

This section provides information on mapping between virtual and physical resources when provisioning virtual machines.

When you instantiate a new virtual machine to run the Cast Iron HVE, you first must select a size for the virtual machine. As referenced in [Requirements](#), the supported sizes are:

- 1 CPU, 4GB RAM, minimum 60GB disk space. (Standard configuration).
- 2 CPU, 8GB RAM, minimum 60GB disk space. (Enhanced configuration).

The preceding resources sizes refer to the amount of a resource that is visible to a running virtual machine. For the Standard configuration, 1 CPU and 60GB disk space refer to the number of virtual CPUs and the amount of disk space the virtual machine must see. Because virtualization allows many different virtual machines running different operating system instances to share the same physical resources, it's important to size your physical host environment to account for the number of virtual machines you have running.

## Memory

---

In addition to your host environment, it's important to size your physical host to properly account for the amount of memory needed for your running guests. Best practice dictates that your host should have more physical memory than the sum of the memory set up for the simultaneously running guests. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, you should pick a host that has  $4 + 8 + 2 \Rightarrow$  at least 14GB of RAM. (The extra 2GB of RAM is recommended for the hypervisor processes).

## CPU

---

When mapping virtual CPUs to physical CPUs you should count one physical CPU core per virtual CPU that will be running simultaneously, and leave at least one core as a buffer for the hypervisor processes. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, you should pick a host that has  $1 + 2 + 1 = 4$  physical CPU cores. Because most physical CPUs are multicore, a physical host with one quad-core CPU is sufficient to run the configurations. Because the Cast Iron HVE uses a 64-bit kernel, your host must have a physical CPU with virtualization technology support available and enabled, (for example, Intel's VT-x or AMD's AMD-V). In some cases, virtualization technology must be enabled through BIOS.

## Disk

---

Disk are typically the cheapest resource in a virtualized environment. Best practices dictate that a virtual machine should preallocate the amount of disk space required onto physical disks so that performance does not suffer when trying to expand disks later. When sizing disks, you should significantly oversize the disks so you can store many suspended virtual machines at the same time and only instantiate the ones needed. For example, if you are trying to size a physical host to run both the Standard and Enhanced configurations, the minimum requirement for disk space is  $60 + 60 + 5 = 125$ GB. (The remaining 5GB of space is for the hypervisor software). However, best practice is to get a physical host with significantly larger disks so that you can store more inactive virtual machines as your needs grow.

## Upload an appliance patch

---

By uploading an appliance patch, you can upgrade to the newest version of the Cast Iron® operating system and access the latest features.

### Before you begin

---

Important: If you use SAP projects, you must ensure that you install the SAP 64-bit libraries. Remove any SAP 32-bit libraries before you upgrade to WebSphere® Cast Iron Hypervisor Edition Version 7. If there are any SAP 32-bit libraries that are installed, you cannot upgrade to WebSphere Cast Iron Hypervisor Edition Version 7.

### About this task

---

Use the Web Management Console (WMC) to upgrade to the latest version of Cast Iron operating system by uploading an upgrade image onto the appliance. This upgrade process only replaces or adds necessary files, it does not destroy any data. Note, the WMC forces any running projects to be undeployed and stops any active orchestration jobs currently running on the appliance during the upgrade procedure. After the appliance is upgraded, you cannot undo or roll back to the previous version.

Note: Upgrades can also be applied through the Command Line Interface (CLI). For more information, see the system update command in the *CLI Reference Guide*.

### Procedure

---

1. Download the WebSphere Cast Iron Hypervisor firmware upgrade file (type = vcrypt2) from Fix Central:  
<http://www.ibm.com/support/fixcentral/>.
2. Download the appliance upgrade image file to a location you can access from your Windows workstation, for example:  
C:\Desktop.

3. Use the WMC to log into the appliance that is running the Cast Iron operating system.
4. In the WMC, select Set Up > Install/Upgrade. The Install/Upgrade Appliance and Libraries panel is displayed.
5. In the Upgrade Appliance section, click Install Upgrade. The upgrade wizard is displayed.
6. Click Next.
7. Click Next to check for running projects. If projects are running on the appliance, the upgrade wizard asks for confirmation to stop the projects before proceeding. Click Continue to proceed. If there are no projects running on the appliance, a green check mark is displayed. Click Next.
8. In the text field, either specify the path to the appliance upgrade image file or browse to locate the appliance upgrade image file.
9. Click Next. In the Upgrade panel, the following message is displayed: Upload in progress. Please wait. A progress bar displays the status of the upload. When the upload is complete, the WMC validates the upgrade.
10. Verify the patch version number and click Install.
11. A series of dialog boxes are displayed asking for confirmation to stop any running orchestrations. Click OK and OK. The Upgrade Appliance panel displays. After the upgrade completes in about 5 minutes, the appliance reboots and the following message is displayed in the Upgrade Appliance panel: Installation Successful! Please wait. The Appliance is rebooting. If a console window to the appliance is open, the rebooting messages are displayed.
12. Use the WMC to log into the appliance. You might need to click the refresh button of the browser.

## What to do next

---

Using the WMC, redeploy any projects that were undeployed by this upgrade procedure. Upgrade to a Studio version compatible with the installed Cast Iron operating system. For more information about appliance and Studio compatibility, see the Compatibility section of the *Cast Iron Operating System Release Notes*® or the *Cast Iron Studio Release Notes*. For the procedure on upgrading Studio, see *Installing Studio*.

---

[Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_upgradeOS.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_upgradeOS.html)

## Deploying an OVF template

---

You can deploy an OVF template which creates a virtual machine with the CIOS and VMwareTools installed. After the OVF template is deployed, you can manage the virtual appliance from the vSphere Client Console tab, as you would manage a physical integration appliance through the CLI.

### Before you begin

---

Note: The steps in this section apply to VMware only. Note also that after deploying an OVF template, the vSphere client might display the VMware Tools status as "Not Installed." However, if the OVF template is correctly deployed, VMware Tools are installed on the virtual machine.

### Procedure

---

1. Download a local copy of the CIOS OVA file. It is recommended that you download the OVA to a storage device that is accessible by the host machine, where the virtual machine will reside.
  2. In the VMware Infrastructure Client navigation pane, select the virtual machine on which to install the CIOS.
  3. Select File > Deploy OVF Template. The Deploy OVF Template Wizard is displayed.
  4. Choose an option to deploy the OVF template and specify the location of the OVF template, and click Next.
    - Deploy from file - Choose this option if the source OVF template is on the local file system.
    - Deploy from URL - Choose this option to download the OVF template from the Internet and enter a URL
  5. Verify the template details that display and click Next.
  6. Specify the name and location for the deployed template and click Next.
  7. Select a configuration option and click Next.
    - Standard - 1CPU, 4GB RAM
    - Enhanced - 2CPU, 8GB RAM
- The Host/Cluster page is displayed.

8. Select the host or cluster on which to run the deployed template, and click Next.
9. Select a resource pool, and click Next.
10. Select the datastore to which you want to store the virtual machine files, and click Next.
11. Map the networks used in the OVF template to networks in your inventory, by selecting the drop-down list in the Destination Networks column. Then click Next.
12. Verify the options you have specified and click Finish. The OVF template is deployed to your virtual machine.

## What to do next

---

After you have successfully deployed the OVF template, do not attempt to modify the settings for hard disk 1 or hard disk 2.

---

## Configuring to use DHCP addressing

---

You can configure a virtual machine in a network to use a DHCP server for addressing.

### Procedure

---

1. Using the virtual machine console, log in to the virtual machine with the default user name and password.
  - localhost login: admin
  - Password: !n0r1t5@CThe following prompt displays:

```
localhost>
```

Note: The keyboard mapping of the vSphere Client terminal uses a US layout. If your workstation keyboard uses another layout, your login attempt might fail.
2. Assign the host name and IP address in the DNS server for the following interfaces:
  - Host name and IP address for the data interface
  - Host name and IP address for the management interfaceThe data interface is used by the integration appliance during run time to communicate to endpoints on the network, for example a database server. The management interface is used to communicate with the integration appliance from the WMC.
3. Enter the following settings:
  - MAC address for the data interface
  - Hostname assigned to the data interface in the DNS server
  - MAC address for the management interface
  - Hostname assigned to the management interface in the DNS server
  - Hostname assigned to the BMC interface in the DNS server
4. Apply the network settings: `localhost> net restart`
5. Monitor the status of the system, by repetitively issuing the following command: `localhost> system show status`. As the network settings are applied, the network status transitions through the following states:
  - Up
  - Stopping
  - Starting
  - Up
6. Monitor the state of the network: `localhost> net show status`. The network settings have been applied when status of the Current activity lists Monitoring network.
7. Verify the data and management interface network settings, using the following command: `localhost> net show active`
8. Reset any address that is incorrect. If you run `net show all`, the EData display as disabled.
9. Verify the connection to the management interface using the WMC.

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_configuringDCHP.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_configuringDCHP.html)

## Configuring to use static addressing

---

You can configure a virtual machine in a network to use static addressing.

### About this task

---

Network settings you specify are only committed to the Integration Appliance when you run the `net restart` command. If a system reboot occurs before you commit your network settings, those network settings are lost.

### Procedure

---

1. Using the virtual machine console, log in to the virtual machine with the default user name and password.
  - o localhost login: admin
  - o Password: !n0rlt5@CThe following prompt is displayed::

```
localhost>
```

  2. Assign the host name and IP address in the DNS server for the following interfaces:
    - o Host name and IP address for the data interface
    - o Host name and IP address for the management interfaceThe data interface is used by the integration appliance during run time to communicate to endpoints on the network, for example a database server. The management interface is used to communicate with the integration appliance from the WMC.
  3. Set the host name for the management interface: `localhost> net set hostname static appliancehostname`. Once the host machine is restarted at the end of this procedure, the prompt changes to the following setting:

```
hostname>
```
  4. Set the DNS domain name: `localhost> net set domain static domain-name`
  5. Set the DNS name server: `localhost> net set nameserver static dns-ipaddress`
  6. Set the network address for the data interface: `localhost> net set interface edata address ipaddress mask netmask bcast broadcast`
  7. Set the network address for the management interface: `localhost> net set interface emgmt address ipaddress mask netmask bcast broadcast`
  8. Set the gateway address: `localhost> net set gateway static ip-address emgmt`
  9. Disable searching the domain list: `localhost> net set search none`
  10. Set the Network timeserver to the appropriate setting for your environment:
    - o If you have a timeserver on your network: `localhost> net set ntp static ntp-address`
    - o If you do not have a timeserver on your network: `localhost> net set ntp none`
  11. Review the settings: `localhost> net show memory`
  12. Apply the network settings: `localhost> net restart`
  13. Monitor the status of the system, by repetitively issuing the following command: `localhost> system show status` As the network settings are applied, the network status transitions through the following states:
    - o Up
    - o Stopping
    - o Starting
    - o UpNote: As network settings are applied, you can expect the runtime to be down.
  14. Monitor the state of the network: `hostname> net show status` The network settings have been applied when status of the Current activity lists Monitoring network.
  15. Verify the settings you entered using this command: `hostname> net show active`
  16. Reset any address that is incorrect. If you run `net show all`, the EData display as disabled.
  17. Log out `hostname> exit` The session closes.

file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_configuringstatic.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_configuringstatic.html)

## Backing up and recovering virtual appliances

---

You can purchase the VMware Consolidated Backup add-on to handle a disaster recovery scenario for your virtual environment or you can use the Export/Import functionality of the virtual appliance.

For more information about VMware Consolidated Backup, see the VMware Consolidated Backup Guide.

The following topics describe how to export and import virtual appliance repositories and provide details about which components of the virtual appliance are affected by these operations.

- [Exporting a virtual appliance repository](#)

Export the project repository to create a backup of the virtual appliance. You can export all project configuration and user settings from the WMC to another location. The virtual appliance system logs are not exported when you export a repository.

- [Importing a virtual appliance repository](#)

When you import a repository, the WMC deletes all existing projects, project configurations, and job history. The virtual appliance system logs remain unaffected. Once you have imported a repository, you cannot roll back to a previous repository.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_backingupVA.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_backingupVA.html)

## Exporting a virtual appliance repository

---

Export the project repository to create a backup of the virtual appliance. You can export all project configuration and user settings from the WMC to another location. The virtual appliance system logs are not exported when you export a repository.

### About this task

---

You can export a repository with the project configurations running. However, when you import this repository, the project configurations will all be in the undeployed state.

Use the WMC to export a virtual appliance repository.

Note: Encryption of virtual appliance disks utilizes the VMware-assigned UUID of the virtual appliance. As a result, attempting to clone and/or copy a virtual appliance yields a non-functioning clone/copy because such operations yield a new UUID. To create a back-up appliance, create a new a virtual appliance with the same configuration (for example: standard or enhanced) and use the CLI command `config save/load` to export/import virtual appliance settings and WMC repository functions. (Be aware, however, that these operations do not export/import data, including variables, stored on the disk or in memory as part of the process of the orchestration).

Note: VMotion remains a valid operation for migrating a virtual appliance to a new host.

### Procedure

---

1. From the Deploy tab, select Export Repository. The File Download window is displayed.
2. Click Save. The Save As window is displayed.
3. Specify the location where you would like to save the exported repository.
4. Click Save. The WMC exports a copy of the repository as a .tar.gz file.

**Parent topic:** [Backing up and recovering virtual appliances](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA\\_exportingVA.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/VA_exportingVA.html)

## Importing a virtual appliance repository

---

When you import a repository, the WMC deletes all existing projects, project configurations, and job history. The virtual appliance system logs remain unaffected. Once you have imported a repository, you cannot roll back to a previous repository.

### Before you begin

---

You must stop and undeploy all project configurations on the WMC before you can import a repository. When the WMC successfully imports a repository, all project configurations are in an undeployed state. You can import repositories from CIOS version 3.7.1 to 6.x. Note: Before you import a repository from one virtual appliance to another, you must power off the virtual appliance from which you are importing a repository.

### About this task

---

In the steps that follow, you undeploy all projects, then use the WMC to import a virtual appliance repository:

### Procedure

---

1. From the Deploy tab, select Projects. All project configurations are displayed.
2. Verify that all the project configurations are undeployed.
3. If any project is not in the undeployed state, click the project configuration link, then stop and undeploy the project configuration.
4. From the Deploy tab, select Import Repository. The Import Repository page is displayed.
5. Specify the repository file you want to import or click Browse to search for a repository file.
6. Select one of the following import options:
  - o Project & User Settings - Imports all the contents of the repository file you select. All projects are imported in the undeployed state.
  - o Project Only - Imports only project information from the repository file you select. All projects are imported in the undeployed state.
  - o User Settings Only - Imports only the user setting information from the repository file you select. User setting information includes: network configurations, users and groups, licenses, job log parameters, log levels, notifications, downtime rules and passwords.
7. Click Import. A warning is displayed.
8. Click Import to verify that you would like to proceed with the import. The virtual appliance restarts and the WMC login window is displayed when the import is complete.
9. Log into the virtual appliance.
10. From the Deploy tab, select Projects to deploy all appropriate project configurations.

## Getting Started with Cast Iron Docker Container

---

Following are the minimum requirements for creating a WebSphere Cast Iron Docker Container image and deploy it as a Docker container:

### Requirements

- Ubuntu 14.04 64-bit server
- 32 GB RAM
- 8 CPU
- Docker package version 1.8 on Ubuntu 14.04
- 100 GB HDD space
- 2 Ethernet ports (one for Cast Iron Management Console and one for Cast Iron Data)

Note: Cast Iron does not have control over the IP addresses of these ports as these ports are given by the underlying Ubuntu.

### Supported Environments

- As a standalone on-premise Ubuntu server 14.04
- Ubuntu on Cloud such as Soft Layer, Amazon EC 2, Microsoft Azure

Note:

- The default website to log into after installation:  
`https://<castiron IP>:443`
- No support for LDAP in docker containers.

**Parent topic:** [WebSphere Cast Iron Docker Container](#)

---

## Creating a Cast Iron Docker Image

---

## Before you begin

---

- Download the Cast Iron docker tar file from the fix central (passport).
- Transfer the downloaded Cast Iron docker tar file to the Ubuntu server that has the Docker package.

## About this task

---

Use this task to create a Cast Iron Docker image using the Cast Iron Docker tar file.

## Procedure

---

1. In the Ubuntu server, extract the tar file using the following command:

```
tar xf <file name>.tar.gz
```

2. Navigate to the extracted folder and locate castiron\_docker folder.
3. Create the docker image by executing the following command:

```
docker build --no-cache -t castironv7510/<CI build number> castiron_docker
```

For example, `docker build --no-cache -t castironv7510/20160302-1536 castiron_docker`

## Results

---

You have successfully created a Cast Iron Docker Container.

Note:

On successful creation of the docker image, a message is displayed Successfully built <*docker image ID*>. You can verify the image by running the command `docker images`.

## Creating a Cast Iron Container using the Docker Image

---

## Before you begin

---

Make sure you have a proper Cast Iron Docker image created and available for deployment.

## About this task

---

Use this task to create a new Cast Iron container from a docker image.

Note: You can create and use only one Cast Iron container per single docker host as the container uses the docker host's network resources.

## Procedure

---

In the Ubuntu server (version 14.04), where you have your docker image, execute the following command:

```
docker run --net=host --pid=host -t -i -d <cast iron docker image ID>
```

For example, `docker run --net=host --pid=host -t -i -d castironv7510/20160302-1535`, where `castironv7510/20160302-1535` is the Cast Iron docker image ID.

## Results

---

On executing the above command, a Cast Iron container will be created along with a container ID. Use the Cast Iron Container ID to validate the Cast Iron Installation and configuration. The Cast Iron container ID is dynamically generated by Docker.

Note:

You can validate the Cast Iron Installation and configuration using the following command until you get the Cast Iron component Status.

```
docker logs -f <CI Container ID>
```

For example,

```
Cast Iron Component Status
-----
DerbyServer : Up
WMC         : Up
Maestro     : Up
Gateway     : Up
```

Also use Docker Host machine's ETH0 IP address to open Cast Iron Web Management Console and ensure it is accessible.

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/CIDC\\_creating\\_cic.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.VAuserguide.doc/CIDC_creating_cic.html)

## Working with Cast Iron Container

---

### Before you begin

---

Log into the Cast Iron Container using the CI Container ID using the following command:

```
docker exec -it <CI Container ID> /bin/bash
```

For example. `docker exec -it 1f79e655352c536161313eb5e9ea8b0d5a72e0104358b106bb6b1e70892be022 /bin/bash`, where `1f79e655352c536161313eb5e9ea8b0d5a72e0104358b106bb6b1e70892be022` is the CI Container ID.

Note:

- There is no separate Cast Iron CLI prompt enabled in Docker platform hence you will be using the same Ubuntu prompt for various tasks.
- There is no direct communication to the Cast Iron Container using ssh or telnet. The only way to communicate is to log into the docker host system and use the above command to login.

### About this task

---

Use this task to login and interact with Cast Iron container.

### Procedure

---

Inside Cast Iron Container, to interact with Cast Iron, use the command `castiron`.

```
castiron
Usage : castiron <options>
--start  start all the castiron process
--stop   stop all the castiron process
--restart restart all the castiron process
--status  print status of all the castiron process
--version print current version of castiron
```

```
--upgrade <castiron upgrade file path> upgrades castiron to a new version  
--generatepostmortem generate postmortem logs
```

Note: Cast Iron logs will be available under /var/log for any troubleshooting.

**Warning**

Note: It is recommendation not to install any additional applications/Ubuntu packages which may lead to change in Cast Iron instance and make it not usable.

## Results

---

Successful login and usage of Cast Iron.

**Parent topic:** [WebSphere Cast Iron Docker Container](#)

---

## Upgrading Cast Iron Instance in Cast Iron Container

---

### Before you begin

---

- Download the Cast Iron docker tar file (the version which you want to upgrade) from the fix central (passport).
- Transfer to the Ubuntu server that has the Docker package.
- Transfer the tar file to the Cast Iron Docker container using the following command:

```
docker cp <CI docker file name>.tar.gz <existing CI Container ID>:/var/tmp/
```

For example, docker cp 7.5.1.0-docker\_build-20160302-1709\_H8\_64.tar.gz  
1f79e655352c536161313eb5e9ea8b0d5a72e0104358b106bb6b1e70892be022:/var/tmp/, where  
1f79e655352c536161313eb5e9ea8b0d5a72e0104358b106bb6b1e70892be022 is the container ID.

### About this task

---

Use this task to upgrade an existing Cast Iron instance in Cast Iron Container with the later versions downloaded from the fix central.

### Procedure

---

1. Login into Cast Iron Web management console.
2. Stop and undeploy all the Cast Iron projects.
3. Stop secure connector instances, if you have already configured.
4. From the Cast Iron Container CLI prompt, execute the following command to upgrade to the latest version.

```
castiron --upgrade /var/tmp/<CI Docker file name>.tar.gz
```

For example, castiron --upgrade /var/tmp/7.5.1.0-docker\_build-20160302-1709\_H8\_64.tar.gz, where  
7.5.1.0-docker\_build-20160302-1709\_H8\_64 is the CI Docker file name.

## Results

---

On successful upgrade, you will be displayed with a similar message as the following:

Current Cast Iron Version (Before Upgrade)

```
Product: IBM WebSphere Cast Iron  
Version: Cast Iron Operating System 7.5.1.0.20160302-1709_H8_64 (Mar 02 2016)  
Cast Iron Container Id: 1f79e655352c
```

Stopping all the Cast Iron Components before upgrade

Stopping Gateway...

```
Stopping Maestro...
Stopping Web Management Console(WMC)...
Stopping DerbyServer...
Taking backup of older Cast Iron version
Upgrading Cast Iron components
Upgrade Completed
Current Cast Iron Version (After Upgrade)
```

```
Product: IBM WebSphere Cast Iron
Version: Cast Iron Operating System 7.5.1.0.20160302-1709_H8_64 (Mar 02 2016)
Cast Iron Container Id: 1f79e655352c
```

```
Cast Iron Component Status
```

```
-----
DerbyServer : Up
WMC : Up
Maestro : Up
Gateway : Up
```

## Migrating Projects from Cast Iron Appliance to Cast Iron Container

---

### Before you begin

---

- From Cast Iron Appliance, export all the projects through Web Management Console Export Project option (as a .tar file).
- Transfer the .tar file to the system where you have access to the Cast Iron Container Web Management Console.

### About this task

---

Use this task to migrate projects from Cast Iron Appliance to Cast Iron Container.

### Procedure

---

- Login into Cast Iron Web management Console of the Cast Iron Container.
- Import the .tar file containing the projects to the Cast Iron Container using Web Management Console's Import Project option.
- Start all the projects and verify the same.

Note:

- Chrome web browser is recommended for uploading any files to Cast Iron Web Management Console.
- Secure connectors need to be created afresh and configured in the project.
- Certificates needs to be manually imported in the Cast Iron Containers Web Management Console.
- Import all the third party libraries accordingly.

### Results

---

You have successfully migrated projects from Cast Iron Appliance to Cast Iron Container.

**Parent topic:** [WebSphere Cast Iron Docker Container](#)

## Troubleshooting in Cast Iron Container

---

### Deprecated functionality

---

Following are the features/functions of Appliance that are deprecated in Cast Iron Container:

- No Cast Iron CLI prompt
- No hardware status in Web Management Console
- No log notifications in Web Management Console

### Getting the Cast Iron Container log for help

---

All the Cast Iron Container log will be available inside the Docker under the folder /var/log.

Also you can generate the post mortem logs using the command:

```
castiron --generatepostmortem
```

postmortem tar is available at /var/tmp/postmortem\_all.tar.gz.

## Integration Appliance Monitoring Options

---

Overview of monitoring options available on the Integration Appliance.

The Integration Appliance logs system events, such as a fan failing or Standby machine assuming the active role in an HA pair. You can view these system events from the Web Management Console (WMC). When system events occur, individual users as well as network management systems can receive notification alerts from the Integration Appliance via email and SNMP traps respectively. Using SNMP, network management systems can also poll an Integration Appliance to actively monitor resources such as disk usage, memory usage, and garbage collection cycles. For more information about systems and notification severity levels you can monitor from the WMC, see the management console online help.

While any user can view the systems events log and monitor disk and memory usage from the WMC, you must create a notification policy to receive alerts from the Integration Appliance. Use the WMC to create a notification policy. Notification policies contain details about which systems to monitor, notification levels to monitor, and notification alert recipients. The Integration Appliance only sends alerts when an event meets or exceeds the notification level specified in a notification policy. For more information about creating notification policies and notification levels, see the management console online help.

The Cast Iron Notifications Reference provides details about reading and using Cast Iron SNMP MIB and individual messages from each Cast Iron MIB module. The version of SNMP is SNMPv1. (Although the MIBs are set to SNMP version 2, Cast Iron generates SNMPv1 traps only.)

## About the Cast Iron SNMP MIB

---

An overview of the Cast Iron SNMP MIB and a list of available MIB modules.

As a network element, the Integration Appliance is able to respond to requests from a network management system. The Integration Appliance is also able to send notifications to the network management system about events that occur on the Integration Appliance. This communication between the Integration Appliance and your network management system allows you to use traps to monitor the Integration Appliance.

Whether you choose to receive notification alerts from the Integration Appliance by enabling SNMP traps or you choose to actively monitor Integration Appliance activities like memory usage by polling the Integration Appliance, the Cast Iron MIB provides data structure and defines content type for the information exchange.

When you use the WMC to download the Cast Iron MIB, you are downloading one file that contains multiple MIB definitions. Some SNMP MIB parsers are unable to read a file that contains multiple MIB modules, so you must separate each MIB module into individual files. For more information about generating separate MIB module files, see [Downloading the Cast Iron SNMP MIB](#).

The Cast Iron MIB contains notification messages for the following modules:

- [Downloading the Cast Iron SNMP MIB](#)  
Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.
- [Reading the Cast Iron SNMP MIB](#)  
Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

---

### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications\\_reference.doc/about\\_the\\_castiron\\_snmp\\_mib.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/about_the_castiron_snmp_mib.html)

## Downloading the Cast Iron SNMP MIB

---

Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.

Use the Web Management Console (WMC) to download the Cast Iron SNMP MIB from an Integration Appliance. For more information about how to use the WMC to download the Cast Iron SNMP MIB, see the management console online help.

The WMC downloads the Cast Iron SNMP MIB as a single text file. This text file is comprised of multiple sections, where each section is a full MIB module. For example, the NetSuite Module is defined in one section and the Salesforce Module is defined in another section.

Note: If your SNMP MIB parser is unable to read a file that contains multiple MIB modules, separate each section (MIB module) into individual files. On Linux, you can use the following script to generate a separate file for each MIB module in the Cast Iron SNMP MIB.

```
#!/bin/bash

sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castiron.sys.mib |
while read mib; do
echo $mib
sed -ne "/^$mib/,/^END/p" castiron.sys.mib > $mib
done
```

**Parent topic:** [About the Cast Iron SNMP MIB](#)

Last updated: Thursday, 2 June 2016

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications\\_reference.doc/downloading\\_the\\_castiron\\_mib.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.notifications_reference.doc/downloading_the_castiron_mib.html)

## Reading the Cast Iron SNMP MIB

---

Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

Each MIB module has a module-identity, which describes the purpose for the MIB. For example, the NetSuite Module provides access to the NetSuite online service. Each MIB module also contains a comment section that provides a high-level overview of its contents. Content like the Object Summary lists the name and OID of every object in the MIB, much like a table of contents, and allows you to examine the layout and the type of data that is being provided.

In the following example, ciIaProjectSummary is an organizational node that contains general information about projects on the Integration Appliance. Like a directory, the ciIaProjectSummary organizational node contains object types that provide information about the number of projects, number of running orchestrations, number of stopped orchestrations, number of running jobs, number of completed jobs, and number of errored jobs.

```
-- ciIaProjectSummary          ciia.1.1.1
-- ciIaNbrProjects            ciia.1.1.1.1
-- ciIaNbrRunningOrchs        ciia.1.1.1.2
-- ciIaNbrStoppedOrchs       ciia.1.1.1.3
-- ciIaNbrRunningJobs         ciia.1.1.1.4
-- ciIaNbrCompletedJobs      ciia.1.1.1.5
-- ciIaNbrErroredJobs         ciia.1.1.1.6
```

To get more information about the meaning of one of the objects, search the file for the name of the object. For example, searching for ciIaNbrRunningJobs returns the following block of information:

```
ciIaNbrRunningJobs OBJECT-TYPE           -- ciia.1.1.1.4
  SYNTAX Unsigned32
  MAX-ACCESS read-only
  STATUS current
  DESCRIPTION
    "Total number of currently running jobs.
   "
 ::= { ciIaProjectSummary 4 }
```

where:

- **ciIaNbrRunningJobs OBJECT-TYPE** - Defines the name of the object.  
Note: Next to the object name, there is a shortened form of the OID ("ciia.1.1.1.4").
- **SYNTAX Unsigned32** - An unsigned integer whose value could go up or down over time.
- **MAX-ACCESS read-only** - A read-only value that the system manager can ask for but cannot change.
- **STATUS** -
- **DESCRIPTION** - Describes the object.

Polling for ProjectSummary information retrieves data that is similar to the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2
ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

ciIaProjectTable is another example of an organizational node that contains information about each project on the Integration Appliance. Like a directory, the ciIaProjectTable organizational node contains object types that provide information like the project name, project version, project configuration, project state, and so on.

```
-- ciIaProjectTable          ciia.1.1.2
-- ciIaProjectEntry           ciia.1.1.2.1
-- ciIaProjEntryIndex         ciia.1.1.2.1.1
-- ciIaProjEntryName          ciia.1.1.2.1.2
```

```
-- ciIaProjEntryVersion          cia.1.1.2.1.3
-- ciIaProjEntryConfig           cia.1.1.2.1.4
-- ciIaProjEntryState            cia.1.1.2.1.5
-- ciIaProjEntryNbrRunning       cia.1.1.2.1.6
-- ciIaProjEntryNbrCompleted     cia.1.1.2.1.7
-- ciIaProjEntryNbrErrored       cia.1.1.2.1.8
-- ciIaProjEntryTimePublished    cia.1.1.2.1.9
```

Polling for ProjectTable information retrieves data that is similar to the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2
ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

The object types are much like columns in a table that store data generated by events that occur on the Integration Appliance. For example, publishing and cloning projects are events that generate ProjectTable data. You can poll the Integration Appliance to retrieve this data. Data for two events: publishing a project and cloning a project are displayed in the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2 ciIaProjectTable
CASTIRON-IA-MIB::ciIaProjEntryName.98304 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryName.98305 = STRING: OnlineLicensing
CASTIRON-IA-MIB::ciIaProjEntryVersion.98304 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryVersion.98305 = STRING: 1.0
CASTIRON-IA-MIB::ciIaProjEntryConfig.98304 = STRING: Default
CASTIRON-IA-MIB::ciIaProjEntryConfig.98305 = STRING: OnlineLicensingClone
CASTIRON-IA-MIB::ciIaProjEntryState.98304 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryState.98305 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98304 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98305 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98304 = STRING: 2009-6-12,16:36:20.0,+0:0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98305 = STRING: 2009-6-12,16:36
```

As more events occur, the output can become increasingly difficult to read. To generate a more readable output, it is recommended to use the `snmpstable` command to display the data in a table format. Data for each event displays as a new row.

```
$ snmpstable -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB" flintstone2
ciIaProjectTable
SNMP table: CASTIRON-IA-MIB::ciIaProjectTable

  ciIaProjEntryName ciIaProjEntryVersion ciIaProjEntryConfig ciIaProjEntryState
  ciIaProjEntryNbrRunning ciIaProjEntryNbrCompleted ciIaProjEntryNbrErrored ciIaProjEntryTimePublished
    OnlineLicensing           1.0          Default      undeployed
  0                      0              0  2009-6-12,16:36:20.0,+0:0
    OnlineLicensing           1.0  OnlineLicensingClone      undeployed
  0                      0              0  2009-6-12,16:36:20.0,+0:0
```

## SNMP Items Available Using SNMP Get

Presents a table of OID trees that you can poll using SNMP Get.

Each entry in the table represents many individual items. Use snmpwalk or another SNMP polling utility to see the complete list. You can poll the following OID trees:

<b>OID</b>	<b>SNMP Name</b>	<b>Notes</b>
.1.3.6.1.2.1.1	SNMPv2-MIB::system	Â
.1.3.6.1.2.1.2	IF-MIB::interfaces	Â
.1.3.6.1.2.1.4	IP-MIB::ip	Â
.1.3.6.1.2.1.5	IP-MIB::icmp	Â
.1.3.6.1.2.1.6	TCP-MIB::tcp	Â
.1.3.6.1.2.1.7	UDP-MIB::udp	Â
.1.3.6.1.2.1.11	SNMPv2-MIB::snmp	Â
.1.3.6.1.2.1.25.1	HOST-RESOURCES-MIB::hrSystem	Excluding .1.3.6.1.2.1.25.1.3 HOST-RESOURCES-MIB::hrSystemInitialLoadDevice  Excluding .1.3.6.1.2.1.25.1.4 HOST-RESOURCES-MIB::hrSystemInitialLoadParameters
.1.3.6.1.2.1.25.2	HOST-RESOURCES-MIB::hrStorage	Â
.1.3.6.1.2.1.25.3	HOST-RESOURCES-MIB::hrDevice	Â
.1.3.6.1.4.1.202 1.4	UCD-SNMP-MIB::memory	Â
.1.3.6.1.4.1.202 1.10	UCD-SNMP-MIB::laTable	CPU Load Average
.1.3.6.1.4.1.202 1.11	UCD-SNMP-MIB::systemStats	Â
.1.3.6.1.4.1.133 36	CASTIRON-REGISTRATIONS-MIB::castironsys	See the Cast Iron MIB, particularly CASTIRON-IA-MIB.

## Using Traps to Monitor Appliance Health

---

Recommendations for configuring alerts that monitor appliance health.

When monitoring the health of the Integration Appliance, you can use one or both of the following methods:

- Poll - Actively monitor runtime resource usage including appliance garbage collection cycles, appliance memory usage, and appliance disk usage.
- Trap - Receive notifications indicating hardware situations such as failed fans, high temperatures, or failed disks. For more information about hardware related SNMP traps, see [About the Platform Module](#).

For more information about creating and enabling notification alerts, see the WMC Online Help or the Cast Iron Web Management Console Guide in the IBM WebSphere Cast Iron Information Center.

[Table 1](#) provides recommended thresholds for notifications regarding garbage collection, memory usage, and disk usage.

- **Garbage Collection** - This parameter counts the number of garbage collections that have occurred since the last system restart. Garbage collection that occurs at a rate over the recommended threshold can indicate that the appliance is overworked and might start to experience performance issues.

- **Memory Usage** - This parameter measures the percentage of total memory in use, expressed in hundredths of a percent. This number is updated after each garbage collection.  
Note: This value is provided as an integer, but the MIB causes the SNMP Manager to alter its displayed value by a hundredths of a percent. For example: a value of '1234' displays as '12.34'! The SNMP Management tool should handle this automatically, but verify that it does so.
- **Disk Usage** - This parameter measures the percentage of total work-in-progress (WIP) disk space that is in use, expressed in hundredths of a percent. The percentage of disk usage determines job purging activities for the appliance.

Table 1. Recommended Notification Thresholds

Parameters to Monitor	Recommended Thresholds	SNMP Name and OID
Garbage Collection	Create a notification that triggers an alert if this value changes quickly, by more than 6 counts in a 1-minute time period.	CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0
Memory Usage	Create a notification that triggers an alert if this value goes over 80% (raw value of 8000).	CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0
Disk Usage	Create a notifications triggers an alert if this value goes over 75% (raw value of 7500).	CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0

Note: The parameters to monitor, described in the table above, are for SNMP polling only.

## Archive Module

The Archive Module provides activities that allow creating and reading compressed archives. This section contains details for the messages delivered from the Archive Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Archive Module.

MIB Name : *CASTIRON-COMP-ARCHIVE-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.4

The following table provides an alphabetical list of all notifications that can be issued by the Archive Module.

Table 1. Notifications issued by the Archive Module

Notification	Level	System	Description
<a href="#">ArchiveDone</a>	Info	Orchestration	Activity has successfully completed archiving.
<a href="#">ArchiveEntryBlank</a>	Severe	Orchestration	Archive input entry does not have any content.
<a href="#">ArchiverCreated</a>	Info	Orchestration	Activity has successfully created an archiver for archiving.
<a href="#">ErrorIdentifyArchive</a>	Severe	Orchestration	There was an error identifying the archive entry.
<a href="#">ErrorUnZipOperation</a>	Severe	Orchestration	There was an error performing unzip operation.
<a href="#">ErrorZipOperation</a>	Severe	Orchestration	There was an error performing zip operation.
<a href="#">IncorrectParameters</a>	Severe	Orchestration	Parameters provided to the activity are invalid.
<a href="#">InvalidArchiveEntry</a>	Severe	Orchestration	There was an error reading archive entry.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
<a href="#">InvalidArchiveFormat</a>	Severe	Orchestration	Activity could not create an archiver for the supplied archiving format. This format might not be supported by the activity.
<a href="#">InvalidBzipEntry</a>	Severe	Orchestration	The bzip entry has more than one entry.
<a href="#">InvalidDateTime</a>	Warning	Orchestration	Error occurred while parsing datetime from archive entries.
<a href="#">InvalidGzipEntry</a>	Severe	Orchestration	The gzip entry has more than one entry.
<a href="#">InvalidNumInArchEntry</a>	Warning	Orchestration	The numeric value in archive entry is not valid.
<a href="#">InvalidUnArchFormat</a>	Severe	Orchestration	Activity could not create an unarchiver for the supplied archiving format. This format might not be supported by the activity.
<a href="#">InvalidUnarchiveInput</a>	Severe	Orchestration	The input to unarchive is invalid.
<a href="#">UnArchiverCreated</a>	Info	Orchestration	Activity has successfully created an unarchiver for unarchiving.
<a href="#">UnarchiveDone</a>	Info	Orchestration	Activity has successfully completed unarchiving.
<a href="#">ValidationError</a>	Severe	Orchestration	The input entries were not successfully validated against the schema.
<a href="#">ValidationFine</a>	Info	Orchestration	The input entries were successfully validated against the schema.

- [Archive Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Archive Module.

## Archive Operation Notifications

Provides a comprehensive list of operation notifications sent from the Archive Module.

- [ArchiveDone](#)  
Activity has successfully completed archiving.
- [ArchiveEntryBlank](#)  
Archive input entry does not have any content.
- [ArchiverCreated](#)  
Activity has successfully created an archiver for archiving.
- [ErrorIdentifyArchive](#)  
There was an error identifying the archive entry.
- [ErrorUnZipOperation](#)  
There was an error performing unzip operation.
- [ErrorZipOperation](#)  
There was an error performing zip operation.
- [IncorrectParameters](#)  
Parameters provided to the activity are invalid.
- [InvalidArchiveEntry](#)  
There was an error reading archive entry.
- [InvalidArchiveFormat](#)  
Activity could not create an archiver for the supplied archiving format. This format might not be supported by the activity.
- [InvalidBzipEntry](#)  
The bzip entry has more than one entry.

- [InvalidDateTime](#)  
Error occurred while parsing datetime from archive entries.
- [InvalidGzipEntry](#)  
The gzip entry has more than one entry.
- [InvalidNumInArchEntry](#)  
The numeric value in archive entry is not valid.
- [InvalidUnArchFormat](#)  
Activity could not create an unarchiver for the supplied archiving format. This format might not be supported by the activity.
- [InvalidUnarchiveInput](#)  
The input to unarchive is invalid.
- [UnArchiverCreated](#)  
Activity has successfully created an unarchiver for unarchiving.
- [UnarchiveDone](#)  
Activity has successfully completed unarchiving.
- [ValidationErrorResponse](#)  
The input entries were not successfully validated against the schema.
- [ValidationFine](#)  
The input entries were successfully validated against the schema.

## ArchiveDone

---

Activity has successfully completed archiving.

Level : *Info*

Log Message : *Archiving done successfully.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-ARCHIVE-MIB::ciC4oArchiveDoneEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.4.1.2*

SNMP Trap Number : *17*

## Variables

---

The ArchiveDone message contains the following variables:

Table 1. ArchiveDone Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : <i>CASTIRON-IA-MIB::ciIaPlatSerialNumber</i></li> <li>• <b>SNMP OID</b> : <i>1.3.6.1.4.1.13336.2.2.2.1.1.3.3</i></li> </ul>
<b>2. Severity</b>
Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## ArchiveEntryBlank

Archive input entry does not have any content.

Level : *Severe*

Log Message : *Input entry has no content or it's a blank entry.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-ARCHIVE-MIB::ciC4oArchiveEntryBlankEv19

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.4.1.2

SNMP Trap Number : 19

## Variables

The ArchiveEntryBlank message contains the following variables:

Table 1. ArchiveEntryBlank Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## Crypto Service Module

---

The Crypto Service Module provides activities that allow encrypting and decrypting the binary content. This section contains details for the messages delivered from the Crypto Service Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Crypto Service Module.

MIB Name : **CASTIRON-COMP-CRYPTOSERVICE-MIB**

MIB OID : .1.3.6.1.4.1.13336.2.2.3.26

The following table provides an alphabetical list of all notifications that can be issued by the Crypto Service Module.

Table 1. Notifications issued by the Crypto Service Module

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
DecryptDone	Info	Orchestration	Activity completed decrypting the content.
DecryptStarted	Info	Orchestration	Activity started decrypting the content.
EncryptDone	Info	Orchestration	Activity completed encrypting the content.
EncryptStarted	Info	Orchestration	Activity started encrypting the content.
FoundPrivateKey	Info	Orchestration	Crypto Service was successfully able to read the private key from the java key store.
FoundPublicKey	Info	Orchestration	Crypto Service was successfully able to read the public key from the java key store.
IOException	Severe	Orchestration	Activity could not read or write to one of the Input / Output files.
InputEntryCount	Info	Orchestration	Activity successfully filtered specified number of entries.
IntegrityCheckFailed	Info	Orchestration	Message failed integrity check.
IntegrityCheckPassed	Info	Orchestration	Message passed integrity check.
InvalidAlgorithm	Severe	Orchestration	Activity could not find key because of invalid algorithm.
InvalidContent	Severe	Orchestration	The input content cannot be empty.
InvalidDateFormat	Severe	Orchestration	The date format is not valid. Enter date in dd-MM-yyyy format
InvalidFormat	Severe	Orchestration	Activity could not complete due invalid crypto format.
InvalidKeyOrPwd	Severe	Orchestration	Activity could not find a specified key handle in the java keystore with provided name and password.
InvalidKeyStore	Severe	Orchestration	Activity could not find a specified entry in key store.
InvalidKeyhandle	Severe	Orchestration	The input keyhandle cannot be empty.
InvalidPassword	Severe	Orchestration	The input password cannot be empty.
NoIntegrityCheck	Info	Orchestration	No Message integrity check.
PGPException	Severe	Orchestration	PGP Exception.

- [Crypto Service Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Crypto Service Module.

SNMP Name : CASTIRON-COMP-CRYPTOSERVICE-MIB::ciC26oInvalidPasswordEv15

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.26.1.2

SNMP Trap Number : 15

## Variables

The InvalidPassword message contains the following variables:

Table 1. InvalidPassword Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## Data Module

The Data Module provides activities for serializing and parsing textual and binary data. This section contains details for the messages delivered from the Data Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Data Module.

MIB Name : *CASTIRON-COMP-DATA-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.16

The following table provides an alphabetical list of all notifications that can be issued by the Data Module.

Table 1. Notifications issued by the Data Module

Notification	Level	System	Description
<a href="#">BadEncoding</a>	Severe	Orchestration	Encoding parameter specified is not supported by the activity.
<a href="#">MissingEncParse</a>	Severe	Orchestration	Encoding parameter was not set and there was no value specified in configuration.
<a href="#">MissingEncSerialize</a>	Severe	Orchestration	Encoding parameter was not set and there was no value specified in configuration.
<a href="#">ParsingError</a>	Severe	Orchestration	Error occurred while parsing the error.
<a href="#">SerializeError</a>	Severe	Orchestration	Error occurred while serializing.
<a href="#">SerializeIOError</a>	Severe	Orchestration	IO Error occurred while serializing.

- [Data Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Data Module.

## BadEncoding

Encoding parameter specified is not supported by the activity.

Level : *Severe*

Log Message : *Encoding parameter not supported: {Encoding}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DATA-MIB::ciC16oBadEncodingEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.16.1.2*

SNMP Trap Number : *3*

## Variables

The BadEncoding message contains the following variables:

Table 1. BadEncoding Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Encoding

The encoding parameter not supported by the activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATA-MIB::ciC16oEv3Encoding
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.16.1.2.1.3.1

## Data Quality Module

---

The Data Quality Module provides activities to validate and cleanse data records. This section contains details for the messages delivered from the Data Quality Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Data Quality Module.

MIB Name : CASTIRON-COMP-DQ-MIB

MIB OID : .1.3.6.1.4.1.13336.2.2.3.14

The following table provides an alphabetical list of all notifications that can be issued by the Data Quality Module.

Table 1. Notifications issued by the Data Quality Module

Notification	Level	System	Description
BadPreloadQuery	Warning	Orchestration	Activity could not execute query to preload lookup cache.
DQLookupFuzzyOnCloud	Severe	Orchestration	Data Quality Lookup activity with Fuzzy option is not supported in cloud
FilterError	Severe	Orchestration	Activity failed to filter data.
InputEntryCount	Info	Orchestration	Activity successfully filtered specified number of entries.
LeftMergeInputEntry	Info	Orchestration	Activity successfully merged specified number of entries.
LookUpEntryCount	Info	Orchestration	Activity successfully looked up specified number of entries.
LookUpError	Severe	Orchestration	Activity failed to perform lookup for data.

## Data Quality Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the Data Quality Module.

- [BadPreloadQuery](#)

Activity could not execute query to preload lookup cache.

- [FilterError](#)

Activity failed to filter data.

- [InputEntryCount](#)

Activity successfully filtered specified number of entries.

- [LeftMergeInputEntry](#)  
Activity successfully merged specified number of entries.
- [LookUpEntryCount](#)  
Activity successfully looked up specified number of entries.
- [LookUpError](#)  
Activity failed to perform lookup for data.
- [MergeError](#)  
Activity failed to merge data.
- [NoAssetsError](#)  
Failed to perform lookup for data, database assets may not have been created.
- [NoPreloadedCache](#)  
Lookup cache was not preloaded by the activity.
- [OutputEntryCount](#)  
Activity successfully outputted specified number of entries.
- [PreloadedCache](#)  
Lookup cache was preloaded by activity with specified number of entries.
- [RightMergeInputEntry](#)  
Activity successfully merged specified number of entries.
- [SortError](#)  
Activity failed to sort data.
- [SortInputEntryCount](#)  
Activity successfully sorted specified number of entries.

## BadPreloadQuery

---

Activity could not execute query to preload lookup cache.

Level : *Warning*

Log Message : *Could not execute query to preload lookup cache*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DQ-MIB::ciC14oBadPreloadQueryEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.14.1.2

SNMP Trap Number : 6

## Variables

---

The BadPreloadQuery message contains the following variables:

Table 1. BadPreloadQuery Message Variables

**1. SerialNumber**

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## FilterError

---

Activity failed to filter data.

Level : *Severe*

Log Message : *Failed to filter data, error was: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DQ-MIB::ciC14oFilterErrorEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.14.1.2

SNMP Trap Number : 1

## Variables

---

The FilterError message contains the following variables:

Table 1. FilterError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## OutputEntryCount

Activity successfully outputted specified number of entries.

Level : *Info*

Log Message : *Emitted {NumberOfEntries} entries to "{Target}"*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DQ-MIB::ciC14oOutputEntryCountEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.14.1.2

SNMP Trap Number : 3

## Variables

The OutputEntryCount message contains the following variables:

Table 1. OutputEntryCount Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. NumberOfEntries

Number of entries outputted by the activity.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-DQ-MIB::ciC14oEv3NumberOfEntries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.14.1.2.1.3.1

#### 6. Target

Output variable where entries were placed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DQ-MIB::ciC14oEv3Target
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.14.1.2.1.3.2

## PreloadedCache

Lookup cache was preloaded by activity with specified number of entries.

Level : *Info*

Log Message : *Lookup cache preloaded with {NumberOfEntries} entries*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DQ-MIB::ciC14oPreloadedCacheEv9

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.14.1.2

SNMP Trap Number : 9

## Variables

The PreloadedCache message contains the following variables:

Table 1. PreloadedCache Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. NumberOfEntries

Number of entries preloaded up by the activity.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-DQ-MIB::ciC14oEv9NumberOfEntries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.14.1.2.1.9.1

## Database Module

The Database Module provides activities for accessing various SQL databases. This section contains details for the messages delivered from the Database Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Database Module.

MIB Name : *CASTIRON-COMP-DATABASE-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.2

The following table provides an alphabetical list of all notifications that can be issued by the Database Module.

Table 1. Notifications issued by the Database Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	A problem occurred while activating the activity.
ConnectionError	Warning	Orchestration	An error occurred while connecting to the database endpoint.
ConnectionRetry	Warning	Orchestration	An error occurred while attempting to connect to the database.
DataSourceHashCode	Info	Orchestration	Information regarding the hash code used to register the datasource.
DataSourceRegistered	Info	Orchestration	Information about the datasource name registered with the system.
DateTimeParseError	Severe	Orchestration	Unable to parse the date and time
DeleteRowsError	Severe	Orchestration	An exception occurred while deleting the row from the control table.
DeleteRowsFailure	Severe	Orchestration	Unable to delete rows from the buffer table.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
DeleteSQL	Info	Orchestration	The delete query issued to the buffer table.
DeleteSQLWithId	Info	Orchestration	The delete query, with id, issued to the buffer table.
ErrorDeletePost	Severe	Orchestration	An exception occurred while deleting the row from the control table due to a connection error.
ErrorSingleTableJob	Severe	Orchestration	An exception occurred while processing a SingleTableNotification job
InboundOperationError	Severe	Orchestration	An error occurred while executing the inbound job.
InsertTableStatement	Info	Orchestration	An insert statement was issued to the control table.
JDBCConnectionClose	Warning	Orchestration	An error occurred while closing the connection in the exception path.
MaxRowExceeded	Info	Orchestration	The maximum number of rows for one poll on the table was reached. If this happens frequently, it is advisable to alter the threshold
MethodNotFound	Info	Orchestration	Unable to invoke the method specified in the connection properties.
OperationNameAbsent	Severe	Orchestration	The buffer table contains the operation but there is no activity in the orchestration for that operation. This is not a valid configuration.
OutboundActivateError	Severe	Orchestration	A problem occurred while activating the database outbound activity.
ParamQueryActivate	Severe	Orchestration	An exception occurred while activating the parameterized query activity.
ParamQueryError	Severe	Orchestration	An error occurred while processing the message for the parameterized query activity.
ParameterizedQuery	Info	Orchestration	The query for the parameterized query activity.
PollTblActivateError	Severe	Orchestration	A problem occurred while activating the database poll table activity.
QueryString	Info	Orchestration	The query which was issued for buffer table.
RedeliverSkip	Warning	Orchestration	This row is already delivered to the database and will be skipped now.
SelectStatement	Info	Orchestration	A select statement was issued to the control table to check for duplicate rows.
SetQueryTimeout	Warning	Orchestration	Unable to set the query time out for the database.
StoredProcActivate	Severe	Orchestration	An exception occurred while activating the stored procedure activity.
StoredProcException	Severe	Orchestration	A data error occurred while processing an outbound job in the stored procedure activity.
StoredProcQuery	Info	Orchestration	The stored procedure query issued to the database.
UnexpectedEmptyRows	Warning	Orchestration	An unexpected result returned from the buffer table. Expecting rows to present in result, instead the result is empty.
UpdateQuery	Info	Orchestration	The update query issued to the buffer table for marking rows.

## ConnectionError

---

An error occurred while connecting to the database endpoint.

Level : *Warning*

Log Message : *An error occurred while connecting to the database. The exception is {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DATABASE-MIB::ciC2cConnectionErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.2.1.1*

SNMP Trap Number : *1*

## Variables

---

The ConnectionError message contains the following variables:

Table 1. ConnectionError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
• <b>Type</b> : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## JDBCConnectionClose

---

An error occurred while closing the connection in the exception path.

Level : *Warning*

Log Message : *An error occurred while closing the connection in the exception path. The exception is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2cJDBCCloseEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.2.1.1

SNMP Trap Number : 4

## Variables

---

The JDBCConnectionClose message contains the following variables:

Table 1. JDBCConnectionClose Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## SetQueryTimeout

Unable to set the query time out for the database.

Level : *Warning*

Log Message : *Unable to set the query time out for database {DBType}. The exception is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2cSetQueryTimeoutEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.2.1.1

SNMP Trap Number : 3

## Variables

The SetQueryTimeout message contains the following variables:

Table 1. SetQueryTimeout Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. DBType

The type of database

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2cEv3DBType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.2.1.1.1.3.1

#### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## Database Operation Notifications

Provides a comprehensive list of operation notifications sent from the Database Module.

- [ActivateError](#)  
A problem occurred while activating the activity.
- [DataSourceHashCode](#)  
Information regarding the hash code used to register the datasource.
- [DataSourceRegistered](#)  
Information about the datasource name registered with the system.
- [DateTimeParseError](#)  
Unable to parse the date and time
- [DeleteRowsError](#)  
An exception occurred while deleting the row from the control table.
- [DeleteRowsFailure](#)  
Unable to delete rows from the buffer table.
- [DeleteSQL](#)  
The delete query issued to the buffer table.
- [DeleteSQLWithId](#)  
The delete query, with id, issued to the buffer table.
- [ErrorDeletePost](#)  
An exception occurred while deleting the row from the control table due to a connection error.

- [ErrorSingleTableJob](#)  
An exception occurred while processing a SingleTableNotification job
- [InboundOperationError](#)  
An error occurred while executing the inbound job.
- [InsertTableStatement](#)  
An insert statement was issued to the control table.
- [MaxRowExceeded](#)  
The maximum number of rows for one poll on the table was reached. If this happens frequently, it is advisable to alter the threshold
- [MethodNotFound](#)  
Unable to invoke the method specified in the connection properties.
- [OperationNameAbsent](#)  
The buffer table contains the operation but there is no activity in the orchestration for that operation. This is not a valid configuration.
- [OutboundActivateError](#)  
A problem occurred while activating the database outbound activity.
- [ParamQueryActivate](#)  
An exception occurred while activating the parameterized query activity.
- [ParamQueryError](#)  
An error occurred while processing the message for the parameterized query activity.
- [ParameterizedQuery](#)  
The query for the parameterized query activity.
- [PollTblActivateError](#)  
A problem occurred while activating the database poll table activity.
- [QueryString](#)  
The query which was issued for buffer table.
- [RedeliverSkip](#)  
This row is already delivered to the database and will be skipped now.
- [SelectStatement](#)  
A select statement was issued to the control table to check for duplicate rows.
- [StoredProcException](#)  
A data error occurred while processing an outbound job in the stored procedure activity.
- [StoredProcQuery](#)  
The stored procedure query issued to the database.
- [UpdateQuery](#)  
The update query issued to the buffer table for marking rows.

## ActivateError

---

A problem occurred while activating the activity.

Level : *Severe*

Log Message : *Exception while activating the database inbound activity.Exception is : {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-DATABASE-MIB::ciC2oActivateErrorEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.2.1.2*

## Variables

---

The ActivateError message contains the following variables:

Table 1. ActivateError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. Message</b>
Textual description of the error.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li> </ul>

Unable to delete rows from the buffer table.

Level : *Severe*

Log Message : *Unable to delete rows from buffer table {TableName}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oDeleteRowsFailureEv9

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 9

## Variables

---

The DeleteRowsFailure message contains the following variables:

Table 1. DeleteRowsFailure Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. TableName

Name of the buffer table.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv9TableName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.2.1.2.1.9.1

## InboundOperationError

An error occurred while executing the inbound job.

Level : *Severe*

Log Message : *An exception occurred while processing the inbound job: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oInboundOperationErrorEv22

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 22

## Variables

The InboundOperationError message contains the following variables:

Table 1. InboundOperationError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ParamQueryActivate

---

An exception occurred while activating the parameterized query activity.

Level : *Severe*

Log Message : *An exception occurred while activating the parameterized query activity. The exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oParamQueryActivateEv13

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 13

## Variables

---

The ParamQueryActivate message contains the following variables:

Table 1. ParamQueryActivate Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type :** String
- **SNMP Object Name :** CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type :** String
- **SNMP Object Name :** CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [Database Operation Notifications](#)

## ParamQueryError

---

An error occurred while processing the message for the parameterized query activity.

Level : Severe

Log Message : *An error occurred while processing the message for the parameterized query activity at row number {RowNumber}. The error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oParamQueryErrorEv15

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 15

## Variables

---

The ParamQueryError message contains the following variables:

Table 1. ParamQueryError Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. RowNumber

The row number at which the error occurred.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv15RowNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.15.1

### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

2. Severity
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
3. JobID
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. RowNumber

The row number at which the error occurred.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv16RowNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.16.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## StoredProcQuery

---

The stored procedure query issued to the database.

Level : *Info*

Log Message : *The stored procedure query issued to the database is {QueryString}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oStoredProcQueryEv17

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 17

## Variables

---

The StoredProcQuery message contains the following variables:

Table 1. StoredProcQuery Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. QueryString

The exact query string issued to the database.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv17QueryString
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.17.1

## UpdateQuery

---

The update query issued to the buffer table for marking rows.

Level : *Info*

Log Message : *The update query issued to the buffer table for marking rows is {Query}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DATABASE-MIB::ciC2oUpdateQueryEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.2.1.2

SNMP Trap Number : 6

## Variables

---

The UpdateQuery message contains the following variables:

Table 1. UpdateQuery Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Query

The query string.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DATABASE-MIB::ciC2oEv6Query
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.2.1.2.1.6.1

## Domino Module

---

The Domino Module provides activities for accessing IBM Lotus Domino servers. This section contains details for the messages delivered from the Domino Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Domino Module.

MIB Name : *CASTIRON-COMP-DOMINO-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.22

The following table provides an alphabetical list of all notifications that can be issued by the Domino Module.

Table 1. Notifications issued by the Domino Module

Notification	Level	System	Description
ActivateFailureBlank	Severe	Orchestration	The specified activity name is not executed successfully because the activity name was blank.
ActivateSuccess	Info	Orchestration	The specified activity name is activated successfully.
ActivityCreateSuccess	Info	Orchestration	The specified activity name is created successfully and is ready for invocation.
ActivityFailure	Severe	Orchestration	The specified activity name failed to execute.
ActivitySuccessful	Info	Orchestration	The specified activity name is executed successfully. The response parameter is populated successfully.
ConnectError	Severe	Orchestration	An error occurred while processing the connection parameters sent as part of the request in the activity.
InitializationError	Severe	Orchestration	Exception while initializing Lotus Domino connector.
RetryCount	Info	Orchestration	The specified activity re tried the execution so many times specified above.
RunningInfo	Warning	Orchestration	Encountered few warnings or errors while running Domino activity.
RunningMessages	Warning	Orchestration	Received messages while executing the activity.
SchemaInvoke	Info	Orchestration	The specified activity name is generating schemas.
StopSuccess	Info	Orchestration	The specified activity name is successfully stopped.
UnmarshalError	Severe	Orchestration	An error occurred while reading input connection parameters in the activity.

- [Domino Operation Notifications](#)  
Provides a comprehensive list of operation notifications sent from the Domino Module.
- [Domino Internal Notifications](#)  
Provides a comprehensive list of internal notifications sent from the Domino Module.

## ActivityFailure

The specified activity name failed to execute.

Level : *Severe*

Log Message : *An error occurred while trying to execute activity {ActivityName}. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DOMINO-MIB::ciC22oActivityFailureEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.22.1.2

SNMP Trap Number : 6

## Variables

The ActivityFailure message contains the following variables:

Table 1. ActivityFailure Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ActivityName

The activity name that failed to execute.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv6ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.6.1

#### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## ActivitySuccessful

The specified activity name is executed successfully. The response parameter is populated successfully.

Level : *Info*

Log Message : *{ActivityName} activity executed successfully.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DOMINO-MIB::ciC22oActivitySuccessfulEv5

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.22.1.2

SNMP Trap Number : 5

## Variables

The ActivitySuccessful message contains the following variables:

Table 1. ActivitySuccessful Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ActivityName

The activity name that is executed successfully.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv5ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.22.1.2.1.5.1

SNMP Name : CASTIRON-COMP-DOMINO-MIB::ciC22oSchemaInvokeEv10

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.22.1.2

SNMP Trap Number : 10

## Variables

The SchemaInvoke message contains the following variables:

Table 1. SchemaInvoke Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ActivityName

The activity name that invoked the generation of schemas.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv10ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.10.1

#### 6. Name

The name of the schema that is not in the configuration document.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-DOMINO-MIB::ciC22oEv10Name
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.22.1.2.1.10.2

# Domino Internal Notifications

Provides a comprehensive list of internal notifications sent from the Domino Module.

- **ConnectError**  
An error occurred while processing the connection parameters sent as part of the request in the activity.
- **InitializationError**  
Exception while initializing Lotus Domino connector.
- **UnmarshalError**  
An error occurred while reading input connection parameters in the activity.

**Parent topic:** [Domino Module](#)

## UnmarshalError

An error occurred while reading input connection parameters in the activity.

Level : *Severe*

Log Message : *Error while trying to read optional connection input parameter. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-DOMINO-MIB::ciC22iUnmarshalErrorEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.22.1.3

SNMP Trap Number : 12

## Variables

The UnmarshalError message contains the following variables:

Table 1. UnmarshalError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## Email Module

---

The Email Module provides connectivity to POP3 and SMTP mail servers. This section contains details for the messages delivered from the Email Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Email Module.

MIB Name : **CASTIRON-COMP-EMAIL-MIB**

MIB OID : .1.3.6.1.4.1.13336.2.2.3.7

The following table provides an alphabetical list of all notifications that can be issued by the Email Module.

Table 1. Notifications issued by the Email Module

Notification	Level	System	Description
BodyNull	Severe	Orchestration	The 'body' input parameter from the container is null. This is an error condition.
ConPoolReleaseError	Warning	Orchestration	Error while closing the connection pool.
ConnectError	Severe	Orchestration	The email activity operation failed because a connection to the server could not be established.
ConnectErrorRetry	Warning	Orchestration	The email activity operation failed while trying to connect to the server. This will cause a retry.
ConnectHeaderAbsent	Info	Orchestration	The optional input header - emailConnection - is mapped.
ConnectHeaderPresent	Info	Orchestration	The optional input header - emailConnection - is mapped.
ConnectionPoolReturn	Warning	Orchestration	Error occurred while returning connection to pool.
CouldNotGetHostIP	Warning	Orchestration	Error occurred while getting IP of the router. Continuing activity without the host IP.
DisconnectException	Warning	Orchestration	Error while trying to disconnect from server. Discarding error and continuing the activity.
EmailMatched	Info	Orchestration	Found an email matching From and subject fields specified in configuration.
EmailSent	Info	Orchestration	The activity successfully sent email to the server.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
EndpointData	Info	Orchestration	The information regarding the email endpoint data.
IncorrectPort	Warning	Orchestration	The email port needs to be a positive integer. Defaulting to 110 in case its not specified as positive integer.
IncorrectSmtpPort	Warning	Orchestration	The email port needs to be a positive integer. Defaulting to 25 in case its not specified as positive integer.
IncorrectSmtpTimeout	Warning	Orchestration	The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
IncorrectTimeout	Warning	Orchestration	The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
InvalidAddressFormat	Warning	Orchestration	The email address in the specified field is in incorrect format.
InvalidEmailID	Warning	Orchestration	The email id specified is not valid.
MailHeaderAbsent	Info	Orchestration	The optional input header - mailheader - is not mapped.
MailHeaderPresent	Info	Orchestration	The optional input header - mailheader - is mapped.
MailsDeleted	Info	Orchestration	The mails processed in the current poll have been deleted from the server.
MailsToDelete	Info	Orchestration	There are some mails to be deleted as they were processed earlier.
MakeConPoolError	Warning	Orchestration	Error while creating the connection.
NewConnectEverytime	Info	Orchestration	The additional property 'smtpNewConnEveryTime' was added to connection pool.
NoEmailMatched	Info	Orchestration	Could not find an email matching From and subject fields specified in configuration.
NoMailOnServer	Info	Orchestration	No mail was found on server.
PatternIncorrect	Severe	Orchestration	Pattern specified in the activity is incorrect.
Pop3ConfigParams	Info	Orchestration	Configuration parameters specified in the activity.
Pop3Connected	Info	Orchestration	The activity was successfully able to connect to the email server.
Pop3DataError	Severe	Orchestration	A pop3 data error occurred while executing the activity.
Pop3InternalError	Severe	Orchestration	Internal error occurred while executing pop3 activity.
Pop3MailSent	Info	Orchestration	Activity has outputted 'mailheader' and 'body' output parameters. Mail marked for deletion from server
Pop3NumMails	Info	Orchestration	Number of mails found on the email server.
Pop3ServerError	Severe	Orchestration	A pop3 command unexpectedly returned an error while executing the activity.
SaveStateError	Warning	Orchestration	Error occurred while trying to save duplist state after disconnect. Will cleanup in next poll.
SetBCCFieldValue	Info	Orchestration	Setting the value of 'BCC' field to specified value
SetCCFieldValue	Info	Orchestration	Setting the value of 'CC' field to specified value
SetFromFieldValue	Info	Orchestration	Setting the value of 'From' field to specified value
SetSubjectFieldValue	Info	Orchestration	Setting the value of the 'Subject' field to the specified value.
SetTimeout	Info	Orchestration	Setting the timeout to specified value.
SetToFieldValue	Info	Orchestration	Setting the value of 'To' field to specified value
SmtpConfigParams	Info	Orchestration	Information regarding configuration parameters specified in email activity.
SmtpConnectFailed	Severe	Orchestration	The email activity operation failed because a connection to the server could not be established.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
SmtpConnectRetry	Warning	Orchestration	The email activity operation failed while trying to connect to the server. This will cause a retry.
SmtpConnected	Info	Orchestration	The activity was successfully able to connect to the email server.
SmtpDataError	Severe	Orchestration	Smtp data error occurred while executing the activity.
SmtpDisconnectError	Warning	Orchestration	Error while trying to disconnect from server. Discarding error and continuing the activity.
SmtpEndpointData	Info	Orchestration	The information regarding the email endpoint data.
SmtpInternalError	Severe	Orchestration	Internal error occurred while executing smtp activity.
SmtpSendEmail	Info	Orchestration	The activity is sending email to the server.
SmtpTimeout	Info	Orchestration	Setting the timeout to specified value.
SubjectPatternError	Severe	Orchestration	Subject pattern specified in the activity is incorrect.
ToAndCCEmpty	Severe	Orchestration	There was no valid To, CC, BCC specified in the activity.

## Email Connection Notifications

---

Provides a comprehensive list of connection notifications sent from the Email Module.

- [ConPoolReleaseError](#)  
Error while closing the connection pool.
- [ConnectError](#)  
The email activity operation failed because a connection to the server could not be established.
- [ConnectErrorRetry](#)  
The email activity operation failed while trying to connect to the server. This will cause a retry.
- [ConnectHeaderAbsent](#)  
The optional input header - emailConnection - is mapped.
- [ConnectHeaderPresent](#)  
The optional input header - emailConnection - is mapped.
- [ConnectionPoolReturn](#)  
Error occurred while returning connection to pool.
- [DisconnectException](#)  
Error while trying to disconnect from server. Discarding error and continuing the activity.
- [EndpointData](#)  
The information regarding the email endpoint data.
- [IncorrectPort](#)  
The email port needs to be a positive integer. Defaulting to 110 in case its not specified as positive integer.
- [IncorrectSmtpPort](#)  
The email port needs to be a positive integer. Defaulting to 25 in case its not specified as positive integer.
- [IncorrectSmtpTimeout](#)  
The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer

- [IncorrectTimeout](#)  
The connection timeout needs to be a positive integer. Defaulting to 300 seconds in case its not specified as positive integer
- [MakeConPoolError](#)  
Error while creating the connection.
- [NewConnectEverytime](#)  
The additional property 'smtpNewConnEveryTime' was added to connection pool.
- [Pop3Connected](#)  
The activity was successfully able to connect to the email server.
- [SetTimeout](#)  
Setting the timeout to specified value.
- [SmtpConnectFailed](#)  
The email activity operation failed because a connection to the server could not be established.
- [SmtpConnectRetry](#)  
The email activity operation failed while trying to connect to the server. This will cause a retry.
- [SmtpConnected](#)  
The activity was successfully able to connect to the email server.
- [SmtpDisconnectError](#)  
Error while trying to disconnect from server. Discarding error and continuing the activity.
- [SmtpEndpointData](#)  
The information regarding the email endpoint data.
- [SmtpTimeout](#)  
Setting the timeout to specified value.

## ConPoolReleaseError

---

Error while closing the connection pool.

Level : *Warning*

Log Message : *Error while closing the connection pool. The error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7cConPoolReleaseErrorEv21

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.1

SNMP Trap Number : 21

## Variables

---

The ConPoolReleaseError message contains the following variables:

Table 1. ConPoolReleaseError Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [Email Connection Notifications](#)

The ConnectionPoolReturn message contains the following variables:

Table 1. ConnectionPoolReturn Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## DisconnectException

Error while trying to disconnect from server. Discarding error and continuing the activity.

Level : *Warning*

Log Message : *Error while trying to disconnect from server. Discarding error: {Message}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7cDisconnectExceptionEv7

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.1

SNMP Trap Number : 7

## Variables

The DisconnectException message contains the following variables:

Table 1. DisconnectException Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## SmtpConnectRetry

The email activity operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to server. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7cSmtpConnectRetryEv15

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.1

SNMP Trap Number : 15

## Variables

The SmtpConnectRetry message contains the following variables:

Table 1. SmtpConnectRetry Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

#### 6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv15RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.15.2

#### 7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv15TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.15.3

#### 8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv15IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.15.4

## SmtpTimeout

---

Setting the timeout to specified value.

Level : *Info*

Log Message : *Setting timeout as {Timeout} milliseconds.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7cSmtpTimeoutEv19

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.1

SNMP Trap Number : 19

## Variables

---

The SmtpTimeout message contains the following variables:

Table 1. SmtpTimeout Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Timeout

The timeout value.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7cEv19Timeout
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.1.1.19.1

## Email Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the Email Module.

- [CouldNotGetHostIP](#)  
Error occurred while getting IP of the router. Continuing activity without the host IP.
- [EmailMatched](#)  
Found an email matching From and subject fields specified in configuration.
- [EmailSent](#)  
The activity successfully sent email to the server.
- [InvalidAddressFormat](#)  
The email address in the specified field is in incorrect format.
- [InvalidEmailID](#)  
The email id specified is not valid.
- [MailHeaderAbsent](#)  
The optional input header - mailheader - is not mapped.
- [MailHeaderPresent](#)  
The optional input header - mailheader - is mapped.
- [MailsDeleted](#)  
The mails processed in the current poll have been deleted from the server.
- [MailsToBeDeleted](#)  
There are some mails to be deleted as they were processed earlier.
- [NoEmailMatched](#)  
Could not find an email matching From and subject fields specified in configuration.
- [NoMailOnServer](#)  
No mail was found on server.
- [PatternIncorrect](#)  
Pattern specified in the activity is incorrect.

- [Pop3ConfigParams](#)  
Configuration parameters specified in the activity.
- [Pop3DataError](#)  
A pop3 data error occurred while executing the activity.
- [Pop3MailSent](#)  
Activity has outputted 'mailheader' and 'body' output parameters. Mail marked for deletion from server
- [Pop3NumMails](#)  
Number of mails found on the email server.
- [Pop3ServerError](#)  
A pop3 command unexpectedly returned an error while executing the activity.
- [SaveStateError](#)  
Error occurred while trying to save duplist state after disconnect. Will cleanup in next poll.
- [SetBCCFieldValue](#)  
Setting the value of 'BCC' field to specified value
- [SetCCFieldValue](#)  
Setting the value of 'CC' field to specified value
- [SetFromFieldValue](#)  
Setting the value of 'From' field to specified value
- [SetSubjectFieldValue](#)  
Setting the value of the 'Subject' field to the specified value.
- [SetToFieldValue](#)  
Setting the value of 'To' field to specified value
- [SmtpConfigParams](#)  
Information regarding configuration parameters specified in email activity.
- [SmtpDataError](#)  
Smtp data error occurred while executing the activity.
- [SmtpSendEmail](#)  
The activity is sending email to the server.
- [SubjectPatternError](#)  
Subject pattern specified in the activity is incorrect.

Log Message : *Error while trying to get IP of router. Error is: {Message}. Continuing without getting IP.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-EMAIL-MIB::ciC7oCouldNotGetHostIPEv20*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.7.1.2*

SNMP Trap Number : *20*

## Variables

---

The CouldNotGetHostIP message contains the following variables:

Table 1. CouldNotGetHostIP Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. Message</b>
Textual description of the error.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li> </ul>

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## PatternIncorrect

Pattern specified in the activity is incorrect.

Level : Severe

Log Message : *From pattern |'{FromPattern}'| "incorrect. Error is: {Message}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7oPatternIncorrectEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.2

SNMP Trap Number : 2

## Variables

The PatternIncorrect message contains the following variables:

Table 1. PatternIncorrect Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. FromPattern

From Pattern Specified in the activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv2FromPattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.7.1.2.1.2.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## SmtpConfigParams

---

Information regarding configuration parameters specified in email activity.

Level : *Info*

Log Message : *Config Parameters: From: |"From"|, To: |"To"|, CC: |"CC"|, BCC: |"BCC"|, Subject: |"Subject"|.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7oSmtpConfigParamsEv13

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.2

SNMP Trap Number : 13

## Variables

---

The SmtpConfigParams message contains the following variables:

Table 1. SmtpConfigParams Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>

## 5. From

The value specified for From field.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv13From
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.2.1.13.1

## 6. To

The value specified for To field.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv13To
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.2.1.13.2

## 7. CC

The value specified for CC field.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv13CC
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.2.1.13.3

## 8. BCC

The value specified for BCC field.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv13BCC
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.2.1.13.4

## 9. Subject

The value specified for subject field.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-EMAIL-MIB::ciC7oEv13Subject
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.7.1.2.1.13.5

## SmtpInternalError

Internal error occurred while executing smtp activity.

Level : *Severe*

Log Message : *Error: {Message}*.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-EMAIL-MIB::ciC7iSmtpInternalErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.7.1.3

SNMP Trap Number : 3

## Variables

---

The SmtpInternalError message contains the following variables:

Table 1. SmtpInternalError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>

## FTP Module

---

The FTP Module provides connectivity to remote FTP servers. This section contains details for the messages delivered from the FTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the FTP Module.

MIB Name : *CASTIRON-COMP-FTP-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.6

The following table provides an alphabetical list of all notifications that can be issued by the FTP Module.

Table 1. Notifications issued by the FTP Module

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
AppendAfter	Info	Orchestration	Response received after issuing an append command to the file on remote server.
AppendBefore	Info	Orchestration	In process of issuing an append command to the file on remote server.
ConnectionFailure	Severe	Orchestration	The FTP operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The FTP operation failed while trying to connect to the server. This will cause a retry.
DeleteAfter	Info	Orchestration	Response received when a file was deleted from the remote server.
DeleteBefore	Info	Orchestration	In process of deleting a file to the remote server.
DeleteDupListEntry	Info	Orchestration	Duplicate list is at maximum capacity. Removing a file from the duplicate list.
DeleteInfoSummary	Info	Orchestration	A complete summary of delete file activity configuration.
DirChangeAfter	Info	Orchestration	Changed to the specified directory on remote server.
DirChangeBefore	Info	Orchestration	Changing directory on the remote server.
DuplicateFile	Info	Orchestration	The file was previously processed by FTP poll activity.
EncodingException	Severe	Orchestration	The data encoding specified is not supported by FTP activity.
EndpointInfoSummary	Info	Orchestration	A complete summary of endpoint information specified.
FileNotMoved	Warning	Orchestration	File was not moved from original location as there is already another file in the destination location and overwrite option is false.
FileProcessed	Info	Orchestration	The file is processed by FTP activity and is left in place.
FileProcessingError	Warning	Orchestration	Error occurred while processing the file.
FtpPatternConversion	Warning	Orchestration	In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
GetAfter	Info	Orchestration	Response received when a file was downloaded to the remote server.
GetBefore	Info	Orchestration	In process of downloading a file to the remote server.
GetInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
InternalException	Severe	Orchestration	A internal error occurred while executing FTP activity.
ListAfter	Info	Orchestration	Response received when the directory was listed on the remote server.
ListBefore	Info	Orchestration	In process of listing a directory on the remote server.
ListFileSummary	Info	Orchestration	A complete summary of list file activity configuration.
NListAfter	Info	Orchestration	Response received when the directory was name listed on the remote server.
NListBefore	Info	Orchestration	In process of name listing a directory on the remote server.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
OperationError	Severe	Orchestration	FTP activity was unable to perform operation on FTP server.
PutAfter	Info	Orchestration	Response received when a file was uploaded to the remote server.
PutBefore	Info	Orchestration	In process of uploading a file to the remote server.
PutDuplicateFileName	Severe	Orchestration	File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
PutEmptyFileName	Severe	Orchestration	The file name specified in put activity is empty.
PutInfoSummary	Info	Orchestration	A complete summary of put file activity configuration.
RenameAfter	Info	Orchestration	Response received when a file was renamed to the remote server.
RenameBefore	Info	Orchestration	In process of renaming a file to the remote server.
RenameDupError	Severe	Orchestration	Rename operation errored as file with same name already exists.
RenameInfoSummary	Info	Orchestration	A complete summary of get file activity configuration.
SshFingerprintInfo	Info	Orchestration	SSH finger print information for communication with FTP server.
SshModeInfo	Info	Orchestration	SSH mode information for communication with FTP server.
TimeStampError	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
TimestampCommand	Warning	Orchestration	The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
UnableToDelete	Warning	Orchestration	Error occurred while deleting file from the specified location.
UnableToMove	Warning	Orchestration	Error occurred while moving file to destination location.

## ConnectionFailure

---

The FTP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the server |"{ServerName}"| after {NumberOfRetryAttempts} attempts. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6cConnectionFailureEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.1*

SNMP Trap Number : *1*

## Variables

---

The ConnectionFailure message contains the following variables:

Table 1. ConnectionFailure Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. ServerName</b>  The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1ServerName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.1

## 6. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2

## 7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [FTP Connection Notifications](#)

## ConnectionRetry

The FTP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the server |"{ServerName}|". Error is: {Message} Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6cConnectionRetryEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.1

SNMP Trap Number : 2

## Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ServerName

The server name to which connection failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2ServerName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.1

### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

### 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.3

### 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.4

### 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6cEv2IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.1.1.2.5

## FTP Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the FTP Module.

- [AppendAfter](#)  
Response received after issuing an append command to the file on remote server.
- [AppendBefore](#)  
In process of issuing an append command to the file on remote server.
- [DeleteAfter](#)  
Response received when a file was deleted from the remote server.
- [DeleteBefore](#)  
In process of deleting a file to the remote server.
- [DeleteDupLstEntry](#)  
Duplicate list is at maximum capacity. Removing a file from the duplicate list.
- [DeleteInfoSummary](#)  
A complete summary of delete file activity configuration.
- [DirChangeAfter](#)  
Changed to the specified directory on remote server.
- [DirChangeBefore](#)  
Changing directory on the remote server.
- [DuplicateFile](#)  
The file was previously processed by FTP poll activity.
- [EndpointInfoSummary](#)  
A complete summary of endpoint information specified.
- [FileNotMoved](#)  
File was not moved from original location as there is already another file in the destination location and overwrite option is false.
- [FileProcessed](#)  
The file is processed by FTP activity and is left in place.
- [FileProcessingError](#)  
Error occurred while processing the file.
- [FtpPatternConversion](#)  
In the versions greater than 3.6 FTP use different style of pattern. If project is published from studio version before that, FTP will automatically change the pattern to new style.
- [GetAfter](#)  
Response received when a file was downloaded to the remote server.
- [GetBefore](#)  
In process of downloading a file to the remote server.
- [GetInfoSummary](#)  
A complete summary of get file activity configuration.
- [ListAfter](#)  
Response received when the directory was listed on the remote server.
- [ListBefore](#)  
In process of listing a directory on the remote server.
- [ListFileSummary](#)  
A complete summary of list file activity configuration.
- [NListAfter](#)  
Response received when the directory was name listed on the remote server.
- [NListBefore](#)  
In process of name listing a directory on the remote server.
- [OperationError](#)  
FTP activity was unable to perform operation on FTP server.
- [PutAfter](#)  
Response received when a file was uploaded to the remote server.

- [PutBefore](#)  
In process of uploading a file to the remote server.
- [PutDuplicateFileName](#)  
File with same name exists on the specified server location. Configuration specified not to overwrite, so erroring out.
- [PutEmptyFileName](#)  
The file name specified in put activity is empty.
- [PutInfoSummary](#)  
A complete summary of put file activity configuration.
- [RenameAfter](#)  
Response received when a file was renamed to the remote server.
- [RenameBefore](#)  
In process of renaming a file to the remote server.
- [RenameDupError](#)  
Rename operation errored as file with same name already exists.
- [RenameInfoSummary](#)  
A complete summary of get file activity configuration.
- [SshFingerprintInfo](#)  
SSH finger print information for communication with FTP server.
- [SshModeInfo](#)  
SSH mode information for communication with FTP server.
- [TimeStampError](#)  
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation using default timestamp.
- [TimestampCommand](#)  
The timestamp command is not supported by the FTP server. Continuing the FTP activity operation.
- [UnableToDelete](#)  
Error occurred while deleting file from the specified location.
- [UnableToMove](#)  
Error occurred while moving file to destination location.

## AppendAfter

---

Response received after issuing an append command to the file on remote server.

Level : *Info*

Log Message : *Append data to file "{FileName}" completed with return code {ResponseCode}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6oAppendAfterEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.2*

SNMP Trap Number : *4*

## Variables

---

The AppendAfter message contains the following variables:

Table 1. AppendAfter Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. FileName

Name of the file to which append command was issued.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv4FileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.4.1

## 6. ResponseCode

Response code returned by the remote server on the append command.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv4ResponseCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.4.2

# EndpointInfoSummary

---

A complete summary of endpoint information specified.

Level : *Info*

Log Message : *FTP Endpoint Summary - Host: {HostName}, Port: {PortName}, UserName: {UserName}, Protocol: {Protocol}, Timeout: {Timeout}, FTP Mode: {FtpMode}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oEndpointInfoSummaryEv36

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 36

## Variables

---

The EndpointInfoSummary message contains the following variables:

Table 1. EndpointInfoSummary Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. HostName

Host name specified in the endpoint configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36HostName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.36.1

### 6. PortName

Port name specified in the endpoint configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36PortName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.36.2

### 7. UserName

User name specified in the endpoint configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36UserName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.36.3

### 8. Protocol

Protocol specified in the endpoint configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36Protocol
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.36.4

### 9. Timeout

Timeout specified in the endpoint configuration.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36Timeout
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.36.5

### 10. FtpMode

Active or Passive mode specified in the endpoint configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv36FtpMode

## FileProcessed

---

The file is processed by FTP activity and is left in place.

Level : *Info*

Log Message : *Processed file "{FileName}"*. Leaving in place.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oFileProcessedEv25

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 25

## Variables

---

The FileProcessed message contains the following variables:

Table 1. FileProcessed Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. FileName

The name of the file that was processed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv25FileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.25.1

## GetInfoSummary

A complete summary of get file activity configuration.

Level : *Info*

Log Message : *Get file summary - Directory: {DirectoryName}, Filename: {FileName}, IsBinary? {BinaryOption}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oGetInfoSummaryEv30

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 30

## Variables

The GetInfoSummary message contains the following variables:

Table 1. GetInfoSummary Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. DirName

Directory name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv30DirName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.30.1

#### 6. FileName

File name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv30FileName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.30.2

#### 7. BinaryOption

Binary or Text value specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv30BinaryOption
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.30.3

## ListFileSummary

A complete summary of list file activity configuration.

Level : *Info*

Log Message : *List directory summary - Directory: {DirectoryName}, Pattern: {Pattern}, NLIST? {ListOption}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oListFileSummaryEv35

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 35

## Variables

The ListFileSummary message contains the following variables:

Table 1. ListFileSummary Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. DirName</b>  Directory name specified in the configuration. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-FTP-MIB::ciC6oEv35DirName</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.35.1</li></ul>
<b>6. Pattern</b>

Pattern specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv35Pattern
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.35.2

## 7. ListOption

List or NList option specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv35ListOption
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.35.3

## NListAfter

---

Response received when the directory was name listed on the remote server.

Level : *Info*

Log Message : *Name listing completed with a return code {ResponseCode}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oNListAfterEv16

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 16

## Variables

---

The NListAfter message contains the following variables:

Table 1. NListAfter Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>

<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>

<b>3. JobID</b>
-----------------

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ResponseCode

Response code returned by the remote server when the directory was name listed.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv16ResponseCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.16.1

## NListBefore

---

In process of name listing a directory on the remote server.

Level : *Info*

Log Message : *Getting a name listing for pattern "{Pattern}" for current directory.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oNListBeforeEv15

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 15

## Variables

---

The NListBefore message contains the following variables:

Table 1. NListBefore Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Pattern

The pattern match used to name list the directory.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv15Pattern
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.15.1

## OperationError

---

FTP activity was unable to perform operation on FTP server.

Level : *Severe*

Log Message : *Unable to perform operation |"{{OperationName}}|". Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oOperationErrorEv18

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 18

## Variables

---

The OperationError message contains the following variables:

Table 1. OperationError Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. OperationName

Name of the operation that could not be performed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv18OperationName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.18.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. DirName

Directory name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv27DirName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.27.1

#### 6. FileName

File name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv27FileName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.27.2

#### 7. OverwriteOption

Overwrite Option specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv27OverwriteOption
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.27.3

#### 8. BinaryOption

Binary or Text value specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv27BinaryOption
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.2.1.27.4

## RenameDupError

Rename operation errored as file with same name already exists.

Level : *Severe*

Log Message : *{FileName}: File with the same name exists on the FTP server. It is a duplicate!*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oRenameDupErrorEv33

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 33

## Variables

The RenameDupError message contains the following variables:

Table 1. RenameDupError Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. FileName

The name of file for which rename operation failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv33FileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.33.1

## RenameInfoSummary

A complete summary of get file activity configuration.

Level : *Info*

Log Message : *Rename file summary - fromDirectory: {DirName}, fromFilename: {FromFileName}, toPath: {ToPath}, Overwrite: {OverwriteOption}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6oRenameInfoSummaryEv32

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.2

SNMP Trap Number : 32

## Variables

The RenameInfoSummary message contains the following variables:

Table 1. RenameInfoSummary Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. DirName

Directory name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32DirName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.1

## 6. FromFileName

Source file name specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32FromFileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.2

## 7. ToPath

Destination path specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32ToPath
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.3

## 8. OverwriteOption

Overwrite option specified in the configuration.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv32OverwriteOption
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.32.4

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. FileName

The name of file which was not deleted.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6oEv23FileName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.6.1.2.1.23.1

### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## EncodingException

---

The data encoding specified is not supported by FTP activity.

Level : *Severe*

Log Message : *The data encoding specified: |'{DataEncoding}'| is not supported.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-FTP-MIB::ciC6iEncodingExceptionEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.6.1.3*

SNMP Trap Number : *2*

## Variables

---

The EncodingError message contains the following variables:

Table 1. EncodingError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li></ul>

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. DataEncoding

The data encoding that is not supported by FTP activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-FTP-MIB::ciC6iEv2DataEncoding
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.6.1.3.1.2.1

## InternalException

A internal error occurred while executing FTP activity.

Level : *Severe*

Log Message : *General FTP module exception. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-FTP-MIB::ciC6iInternalExceptionEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.6.1.3

SNMP Trap Number : 1

## Variables

The InternalException message contains the following variables:

Table 1. InternalException Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## HTTP Module

The HTTP Module provides HTTP/HTTPS client and server facilities. This section contains details for the messages delivered from the HTTP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the HTTP Module.

MIB Name : *CASTIRON-COMP-HTTP-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.1

The following table provides an alphabetical list of all notifications that can be issued by the HTTP Module.

Table 1. Notifications issued by the HTTP Module

Notification	Level	System	Description
<a href="#">AcceptEncodingType</a>	Info	Orchestration	The type of Accept-Encoding in the request-header field.
<a href="#">ClientConMgrTimeout</a>	Info	Orchestration	Setting the client connection manager timeout value. This is configurable on the JConsole.
<a href="#">ClientIdleTimeout</a>	Info	Orchestration	The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
ClientMaxTotalConn	Info	Orchestration	Setting the client connection manager maximum number of connections from the JConsole.
ClientReclaimPeriod	Info	Orchestration	The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set from the JConsole.
CommonHandlerError	Severe	Orchestration	An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
CompressFormat	Info	Orchestration	Indicates the type of Content-Encoding in the response from the server.
ConnectionRetry	Warning	Orchestration	The send request operation failed while trying to connect to the server. This will cause a retry.
ContentEncodingType	Info	Orchestration	The type of Content-Encoding used in the header in the outgoing request.
DecompressedEncoding	Info	Orchestration	Content-Encoding of the incoming request to the receive activity.
EndpointInformation	Info	Orchestration	Request for endpoint information.
GeneralRequestFailed	Severe	Orchestration	The send request failed while executing the activity.
HttpListenerStop	Info	Orchestration	Information regarding the stopping of a listener on a specific port.
HttpLoopBackValues	Info	Orchestration	Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
IdleConTimeoutStart	Info	Orchestration	The idle connection timeout thread is enabled.
IdleConTimeoutStop	Info	Orchestration	The idle connection thread is disabled.
IncomingContentEnc	Info	Orchestration	The Content-Encoding type in the request header received by the receive activity
LoopBackInitialize	Info	Orchestration	Loopback values for initializing the MBean. It is set on the JConsole.
ReadConnectionParam	Info	Orchestration	The input connection parameter is not mapped by the user.
ReadInputHeaders	Info	Orchestration	The input parameter header is not mapped by the user.
ReceiveActivate	Severe	Orchestration	The receive activity failed to activate.
ReceiveDeActivate	Severe	Orchestration	The receive activity failed to stop.
ReceiveIOError	Severe	Orchestration	An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.
ReceiveInternalError	Severe	Orchestration	An error occurred while the receive activity processed the request.
ReceiveOperationError	Severe	Orchestration	An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
ReceiveResponseBody	Info	Orchestration	The response sent by the receive activity to a request.
ReceiveSendReplyError	Severe	Orchestration	A connection problem caused an error while sending the response from the receive activity.
ReceiveURIPortInfo	Info	Orchestration	Information regarding the URI and Port where the server is listening.
RegisterKeyStore	Severe	Orchestration	An error occurred while registering the key store.
ReplyCompressFormat	Info	Orchestration	The Content-Encoding used by the send reply activity.
ReplyConnectionError	Severe	Orchestration	An error occurred while sending the response. Probable cause is a connection error.
ReplyGeneralError	Severe	Orchestration	An internal error occurred while sending the reply from the receive activity.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
ReplyHandlerNull	Severe	Orchestration	Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
ReplyUnMarshalHeader	Severe	Orchestration	An error occurred while reading input headers in the reply activity.
ReplyUnknownError	Severe	Orchestration	An unknown exception occurred while sending the response to the client.
RequestActivate	Severe	Orchestration	The request activity failed to activate.
RequestIgnoredHeader	Info	Orchestration	The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
RequestParamsDetails	Info	Orchestration	Parameter details, including URL and method, used for the post activity
ResponseBodyBinary	Info	Orchestration	The response body is binary.
ResponseBodyNotBinary	Info	Orchestration	The response body is not binary.
ResponseDefinition	Info	Orchestration	Response definition received from the server for the performed post.
SendRequestConnection	Severe	Orchestration	The send request operation failed because a connection to the server could not be established.
SendRequestOperation	Severe	Orchestration	The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
ServerResponseCode	Info	Orchestration	Post response code received from the server.
SockCollectorFinish	Info	Orchestration	Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorRunInfo	Info	Orchestration	Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
SockCollectorSched	Info	Orchestration	Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.
StaleConnectionCheck	Info	Orchestration	Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.
UnSupportedMedia	Warning	Orchestration	Request is an unsupported media type.
UnsolicitedEncoding	Severe	Orchestration	The server reply contains Content-Encoding which is not acceptable by the client.
UnsupportedEncoding	Severe	Orchestration	The Content-Encoding in the request header is not supported by the receive activity.

## HTTP Connection Notifications

---

Provides a comprehensive list of connection notifications sent from the HTTP Module.

- [ClientConMgrTimeout](#)  
Setting the client connection manager timeout value. This is configurable on the JConsole.
- [ClientIdleTimeout](#)  
The amount of idle time for the connection after which the connection can be reclaimed. This is configurable from the JConsole.
- [ClientMaxTotalConn](#)  
Setting the client connection manager maximum number of connections from the JConsole.
- [ClientReclaimPeriod](#)  
The number of seconds to wait before the reclaim thread is run to reclaim an idle connection. This is set from the JConsole.
- [ConnectionRetry](#)  
The send request operation failed while trying to connect to the server. This will cause a retry.
- [EndpointInformation](#)  
Request for endpoint information.
- [HttpLoopBackValues](#)  
Loopback port values set by the user, on the JConsole, and persisted in the sysconf.
- [ReadConnectionParam](#)  
The input connection parameter is not mapped by the user.
- [ReceiveActivate](#)  
The receive activity failed to activate.
- [ReceiveDeActivate](#)  
The receive activity failed to stop.
- [ReceiveIOError](#)  
An I/O error occurred while the receive activity processed the request. Possible cause might be a broken connection.
- [ReceiveSendReplyError](#)  
A connection problem caused an error while sending the response from the receive activity.
- [ReplyConnectionError](#)  
An error occurred while sending the response. Probable cause is a connection error.
- [SendRequestConnection](#)  
The send request operation failed because a connection to the server could not be established.
- [StaleConnectionCheck](#)  
Specifies if the stale connection check should be run on the connection manager. This is set (True or False) from the JConsole.

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ReplyConnectionError

An error occurred while sending the response. Probable cause is a connection error.

Level : Severe

Log Message : *A connection error occurred while sending the response. Error is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1cReplyConnectionErrorEv10

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.1

SNMP Trap Number : 10

## Variables

The ReplyConnectionError message contains the following variables:

Table 1. ReplyConnectionError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## HTTP Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the HTTP Module.

- [AcceptEncodingType](#)  
The type of Accept-Encoding in the request-header field.
- [CommonHandlerError](#)  
An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.
- [CompressFormat](#)  
Indicates the type of Content-Encoding in the response from the server.
- [ContentEncodingType](#)  
The type of Content-Encoding used in the header in the outgoing request.
- [DecompressedEncoding](#)  
Content-Encoding of the incoming request to the receive activity.
- [HttpListenerStop](#)  
Information regarding the stopping of a listener on a specific port.
- [IncomingContentEnc](#)  
The Content-Encoding type in the request header received by the receive activity
- [ReadInputHeaders](#)  
The input parameter header is not mapped by the user.
- [ReceiveOperationError](#)  
An error occurred while processing the request received by the receive activity due to an unsupported Accept-Charset encoding.
- [ReceiveResponseBody](#)  
The response sent by the receive activity to a request.
- [ReceiveURIPortInfo](#)  
Information regarding the URI and Port where the server is listening.
- [RegisterKeyStore](#)  
An error occurred while registering the key store.
- [ReplyCompressFormat](#)  
The Content-Encoding used by the send reply activity.
- [ReplyUnMarshalHeader](#)  
An error occurred while reading input headers in the reply activity.
- [RequestActivate](#)  
The request activity failed to activate.
- [RequestIgnoredHeader](#)  
The header was ignored because it is not a supported type. Supported types are gzip, deflate or compress.
- [RequestParamsDetails](#)  
Parameter details, including URL and method, used for the post activity
- [ResponseBodyBinary](#)  
The response body is binary.
- [ResponseBodyNotBinary](#)  
The response body is not binary.
- [ResponseDefinition](#)  
Response definition received from the server for the performed post.
- [SendRequestOperation](#)  
The Send Request operation failed either while starting the activity or while executing it. Caused by an I/O or operation exception.
- [ServerResponseCode](#)  
Post response code received from the server.
- [UnsupportedMedia](#)  
Request is an unsupported media type.
- [UnsolicitedEncoding](#)  
The server reply contains Content-Encoding which is not acceptable by the client.

- [UnsupportedEncoding](#)

The Content-Encoding in the request header is not supported by the receive activity.

## AcceptEncodingType

The type of Accept-Encoding in the request-header field.

Level : *Info*

Log Message : *The type of Accept-Encoding in the request-header field is {AcceptEncodingValue}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oAcceptEncodingTypeEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 12

## Variables

The AcceptEncodingType message contains the following variables:

Table 1. AcceptEncodingType Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> </ul>

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. AcceptEncodingValue

The type of Accept-Encoding header.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv12AcceptEncodingValue
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.2.1.12.1

## CommonHandlerError

An error occurred handling the request received by the activity. Possible reasons are I/O or operation exceptions.

Level : Severe

Log Message : *An error occurred handling a receive request. Exception: {Message}*

System : Orchestration

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oCommonHandlerErrorEv22

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 22

## Variables

The CommonHandlerError message contains the following variables:

Table 1. CommonHandlerError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [HTTP Operation Notifications](#)

## CompressFormat

Indicates the type of Content-Encoding in the response from the server.

Level : *Info*

Log Message : *The response Content-Encoding from the server is {ContentEncodingValue}. Decompressing the body.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oCompressFormatEv15

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 15

## Variables

The CompressFormat message contains the following variables:

Table 1. CompressFormat Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ContentEncodingValue

The type of Content-Encoding in the response header.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv15ContentEncodingValue
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.2.1.15.1

## ContentEncodingType

The type of Content-Encoding used in the header in the outgoing request.

Level : *Info*

Log Message : *The Content-Encoding header is {ContentEncodingValue}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1oContentEncodingTypeEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.2*

SNMP Trap Number : *11*

## Variables

The ContentEncodingType message contains the following variables:

Table 1. ContentEncodingType Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ContentEncodingValue

The type of Content-Encoding used in the header.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv11ContentEncodingValue
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.2.1.11.1

## HttpListenerStop

---

Information regarding the stopping of a listener on a specific port.

Level : *Info*

Log Message : There are no more activities to listen for on port {PortNumber}. Stopping the listener on port {PortNumber}.

System : Orchestration

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oHttpListenerStopEv24

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 24

## Variables

---

The HttpListenerStop message contains the following variables:

Table 1. HttpListenerStop Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. ## ReceiveResponseBody

---

The response sent by the receive activity to a request.

Level : *Info*

Log Message : *Response is : {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oReceiveResponseBodyEv21

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 21

## Variables

---

The ReceiveResponseBody message contains the following variables:

Table 1. ReceiveResponseBody Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oRequestParamsDetailsEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 6

## Variables

The RequestParamsDetails message contains the following variables:

Table 1. RequestParamsDetails Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. URL

The URL used to perform Http post.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv6URL
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.2.1.6.1

### 6. MethodName

Method specified for the post activity

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv6MethodName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.1.1.2.1.6.2

## UnsolicitedEncoding

---

The server reply contains Content-Encoding which is not acceptable by the client.

Level : *Severe*

Log Message : *The server response contained an unsolicited Content-Encoding: {ContentEncoding}. Acceptable values are: {AcceptEncoding}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-HTTP-MIB::ciC1oUnsolicitedEncodingEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.1.1.2*

SNMP Trap Number : 2

## Variables

---

The UnsolicitedEncoding message contains the following variables:

Table 1. UnsolicitedEncoding Message Variables

<b>1. SerialNumber</b> <p>The serial number of the appliance sending the trap.</p> <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b> <p>Severity of the Notification.</p> <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b> <p>The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.</p> <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li></ul>

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ContentEncoding

The Content-Encoding in the server reply.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv2ContentEncoding
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.1.1.2.1.2.1

#### 6. AcceptEncoding

Encodings which are acceptable by the client.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-HTTP-MIB::ciC1oEv2AcceptEncoding
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.1.1.2.1.2.2

## UnsupportedEncoding

The Content-Encoding in the request header is not supported by the receive activity.

Level : *Severe*

Log Message : *Exception : {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1oUnsupportedEncodingEv20

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.2

SNMP Trap Number : 20

## Variables

The UnsupportedEncoding message contains the following variables:

Table 1. UnsupportedEncoding Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

# HTTP Internal Notifications

Provides a comprehensive list of internal notifications sent from the HTTP Module.

- [GeneralRequestFailed](#)  
The send request failed while executing the activity.
- [IdleConTimeoutStart](#)  
The idle connection timeout thread is enabled.
- [IdleConTimeoutStop](#)  
The idle connection thread is disabled.
- [LoopBackInitialize](#)  
Loopback values for initializing the MBean. It is set on the JConsole.
- [ReceiveInternalError](#)  
An error occurred while the receive activity processed the request.
- [ReplyGeneralError](#)  
An internal error occurred while sending the reply from the receive activity.

- [ReplyHandlerNull](#)  
Connection handler stored in the receive activity and retrieved by the reply activity is null. This is an internal error and likely caused by an out of memory error or an appliance reboot while executing an activity.
- [ReplyUnknownError](#)  
An unknown exception occurred while sending the response to the client.
- [SockCollectorFinish](#)  
Information about the completion status of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorRunInfo](#)  
Information about this run of the Socket Janitor. The Socket Janitor is configured on the JConsole.
- [SockCollectorSched](#)  
Sets the frequency for garbage collection by the Socket Janitor. It is set on the JConsole.

## GeneralRequestFailed

---

The send request failed while executing the activity.

Level : *Severe*

Log Message : *The send request failed. Exception: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1iGeneralRequestFailedEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.3

SNMP Trap Number : 1

## Variables

---

The GeneralRequestFailed message contains the following variables:

Table 1. GeneralRequestFailed Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification. <ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## IdleConTimeoutStart

The idle connection timeout thread is enabled.

Level : *Info*

Log Message : *Starting the idle connection timeout thread.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1iIdleConTimeoutStartEv10

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.3

SNMP Trap Number : 10

## Variables

The IdleConTimeoutStart message contains the following variables:

Table 1. IdleConTimeoutStart Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## IdleConTimeoutStop

The idle connection thread is disabled.

Level : *Info*

Log Message : *Stopping the idle connection timeout thread.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1iIdleConTimeoutStopEv11

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.3

SNMP Trap Number : 11

## Variables

The IdleConTimeoutStop message contains the following variables:

Table 1. IdleConTimeoutStop Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration

## LoopBackInitialize

Loopback values for initializing the MBean. It is set on the JConsole.

Level : *Info*

Log Message : *Initializing the values in the MBean: {LoopBackString}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-HTTP-MIB::ciC1iLoopBackInitializeEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.1.1.3

SNMP Trap Number : 4

## Variables

The LoopBackInitialize message contains the following variables:

Table 1. LoopBackInitialize Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

## JD Edwards Module

---

JD Edwards Module. This section contains details for the messages delivered from the JD Edwards Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JD Edwards Module.

MIB Name : *CASTIRON-COMP-JDE-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.15*

The following table provides an alphabetical list of all notifications that can be issued by the JD Edwards Module.

Table 1. Notifications issued by the JD Edwards Module

Notification	Level	System	Description
<a href="#">ActivateSuccessful</a>	Info	Orchestration	JDE activity was activated successfully.
<a href="#">ActivateUnSuccessful</a>	Info	Orchestration	The activity which was not activated successfully. Activity activated, will try to establish connectivity at activity execute time.
<a href="#">ActivityError</a>	Severe	Orchestration	The specified activity was not successful.
<a href="#">ActivitySuccessful</a>	Info	Orchestration	The specified activity was successful.
<a href="#">ClassesMissing</a>	Severe	Orchestration	JDE is missing classes required to start the activity. Please install the libraries from the WMC.
<a href="#">CloseConnectionError</a>	Severe	Orchestration	Error occurred while closing the connection to JDE.
<a href="#">ConnectException</a>	Warning	Orchestration	Error while connecting to JDE.
<a href="#">ConnectPoolRelease</a>	Warning	Orchestration	There was an error while closing the connection pool.
<a href="#">CreateSchemaError</a>	Severe	Orchestration	Error occurred while creating request schema for the business function.
<a href="#">DataStructureError</a>	Severe	Orchestration	Error occurred while creating a schema for the business function name.
<a href="#">DisconnectException</a>	Warning	Orchestration	Error while disconnecting from JDE.
<a href="#">GetConnectionError</a>	Severe	Orchestration	Error occurred while creating a connection to JDE.
<a href="#">JDEConnectError</a>	Severe	Orchestration	The JDE operation failed because a connection to the server could not be established.
<a href="#">JDEInternalerror</a>	Severe	Orchestration	Error occurred while processing the request.
<a href="#">JDERetryError</a>	Warning	Orchestration	The JDE operation failed while trying to connect to the server. This will cause a retry.
<a href="#">MakeConnectionError</a>	Warning	Orchestration	There was an error while creating a connection to destination.
<a href="#">NumberFormatError</a>	Warning	Orchestration	There was an error due to invalid port number.
<a href="#">ResourceCleanError</a>	Severe	Orchestration	Error occurred while closing the statement or result set in database.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
<a href="#">ResponseSchemaError</a>	Severe	Orchestration	Error occurred while creating response schema for the business function.
<a href="#">SetUpInfo</a>	Warning	Orchestration	JDE activity got warning or error messages while setting up the specified activity.
<a href="#">UnSupportedEncoding</a>	Severe	Orchestration	Error while processing unsupported encoding.

## CloseConnectionError

Error occurred while closing the connection to JDE.

Level : *Severe*

Log Message : *Exception while closing connection to JDE. The Exception is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15cCloseConnectionErrorEv8

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.15.1.1

SNMP Trap Number : 8

## Variables

The CloseConnectionError message contains the following variables:

Table 1. CloseConnectionError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ConnectException

Error while connecting to JDE.

Level : *Warning*

Log Message : *Error while connecting to JDE. The error is : {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15cConnectExceptionEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.15.1.1

SNMP Trap Number : 6

## Variables

The ConnectException message contains the following variables:

Table 1. ConnectException Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ConnectPoolRelease

There was an error while closing the connection pool.

Level : *Warning*

Log Message : *Error while closing the connection pool. The error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15cConnectPoolReleaseEv4

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.15.1.1

SNMP Trap Number : 4

## Variables

The ConnectPoolRelease message contains the following variables:

Table 1. ConnectPoolRelease Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## DisconnectException

Error while disconnecting from JDE.

Level : *Warning*

Log Message : *Error while disconnecting from JDE. The error is : {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15cDisconnectExceptionEv7

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.15.1.1

SNMP Trap Number : 7

## Variables

The DisconnectException message contains the following variables:

Table 1. DisconnectException Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## JDERetryError

---

The JDE operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Connection error while executing activity {ActivityName}. The error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s)*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15cJDERetryErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.15.1.1

SNMP Trap Number : 3

## Variables

---

The JDERetryError message contains the following variables:

Table 1. JDERetryError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.  <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. ActivityName</b>

The activity which faced errors.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15cEv3ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.15.1.1.1.3.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15cEv3RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.15.1.1.1.3.3

## 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15cEv3TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.15.1.1.1.3.4

## 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15cEv3IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.15.1.1.1.3.5

## JD Edwards Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the JD Edwards Module.

- **ActivateSuccessful**  
JDE activity was activated successfully.
- **ActivityError**  
The specified activity was not successful.
- **ActivitySuccessful**  
The specified activity was successful.
- **ClassesMissing**  
JDE is missing classes required to start the activity. Please install the libraries from the WMC.
- **CreateSchemaError**  
Error occurred while creating request schema for the business function.
- **DataStructureError**  
Error occurred while creating a schema for the business function name.
- **NumberFormatException**  
There was an error due to invalid port number.
- **ResourceCleanError**  
Error occurred while closing the statement or result set in database.
- **ResponseSchemaError**  
Error occurred while creating response schema for the business function.
- **SetUpInfo**  
JDE activity got warning or error messages while setting up the specified activity.
- **UnSupportedEncoding**  
Error while processing unsupported encoding.

## ActivateSuccessful

---

JDE activity was activated successfully.

Level : *Info*

Log Message : *Activity {ActivityName} activated successfully*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-JDE-MIB::ciC15oActivateSuccessfulEv5*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.15.1.2*

SNMP Trap Number : *5*

## Variables

---

The ActivateSuccessful message contains the following variables:

Table 1. ActivateSuccessful Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ActivityName

The activity which was activated successfully.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15oEv5ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.15.1.2.1.5.1

## CreateSchemaError

Error occurred while creating request schema for the business function.

Level : Severe

Log Message : *Exception while creating request schema for the business function {FunctionName}, function code {FunctionCode}, module code {ModuleCode}. The exception is {Message}*

System : Orchestration

SNMP Name : CASTIRON-COMP-JDE-MIB::ciC15oCreateSchemaErrorEv8

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.15.1.2

SNMP Trap Number : 8

## Variables

The CreateSchemaError message contains the following variables:

Table 1. CreateSchemaError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. FunctionName

The name of function for which error occurred.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15oEv8FunctionName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.15.1.2.1.8.1

#### 6. FunctionCode

The code of function for which error occurred.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15oEv8FunctionCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.15.1.2.1.8.2

#### 7. ModuleCode

The code of module for which error occurred.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JDE-MIB::ciC15oEv8ModuleCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.15.1.2.1.8.3

#### 8. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage

# JMS Module

JMS Module. This section contains details for the messages delivered from the JMS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JMS Module.

MIB Name : *CASTIRON-COMP-JMS-MIB*

MIB OID : *.1.3.6.1.4.1.13336.2.2.3.8*

The following table provides an alphabetical list of all notifications that can be issued by the JMS Module.

Table 1. Notifications issued by the JMS Module

Notification	Level	System	Description
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
FactoryUnknownError	Severe	Orchestration	Unknown exception while looking up the connection factory
FirstID	Warning	Orchestration	The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message. Messages in the queue is tampered and will impact the delivery of messages
GetConnectRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
GetMarshallError	Severe	Orchestration	Error occurred while marshalling the JMS message.
JMSError	Severe	Orchestration	Error occurred while getting message from the provider.
LibraryNotInstalled	Severe	Orchestration	This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
MakeConnectError	Severe	Orchestration	Error occurred while creating the connection to destination.
NamingException	Severe	Orchestration	Naming exception occurred while getting message from destination.
NoMessage	Info	Orchestration	There is no message to be retrieved from the destination specified.
PollMessageError	Severe	Orchestration	Error occurred while getting a message from queue.
PollMessageRetry	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
PoolFactoryError	Severe	Orchestration	Error occurred while looking up for connection factory.
PoolReleaseError	Severe	Orchestration	Error occurred while closing the connection pool.
PooledConnException	Warning	Orchestration	A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.
RecoveryInfo	Info	Orchestration	The activity is recovering and its skipping message with specified id as its already delivered.
RecoveryInfo	Info	Orchestration	The JMS connector is in recovery mode.
RestartError	Severe	Orchestration	Error occurred while trying to restart the subscriber on the specified topic.
SendConnectRerty	Warning	Orchestration	The JMS operation failed while trying to connect to the server. This will cause a retry.
SendMarshallError	Severe	Orchestration	Error occurred while unmarshalling the JMS message.
SendMessageError	Severe	Orchestration	Error occurred while sending message.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
SendNamingException	Severe	Orchestration	Naming exception occurred while sending message to destination.
SubscriberConfigError	Severe	Orchestration	Error occurred while configuring the subscriber activity.
SubscriberConnect	Severe	Orchestration	The JMS operation failed while trying to connect to the server.
SubscriberError	Severe	Orchestration	Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
SubscriberNameError	Severe	Orchestration	Naming exception occurred while configuring the subscriber activity.
SubscriberStartInfo	Info	Orchestration	Subscriber started successfully for the specified topic.
UnsubscribeError	Warning	Orchestration	Error occurred while unsubscribing on the topic.

## JMS Connection Notifications

---

Provides a comprehensive list of connection notifications sent from the JMS Module.

- [ConnectionPoolError](#)  
Error occurred while returning connection to the pool. Continuing the activity.
- [FactoryUnknownError](#)  
Unknown exception while looking up the connection factory
- [GetConnectRetry](#)  
The JMS operation failed while trying to connect to the server. This will cause a retry.
- [MakeConnectError](#)  
Error occurred while creating the connection to destination.
- [PollMessageRetry](#)  
The JMS operation failed while trying to connect to the server. This will cause a retry.
- [PoolFactoryError](#)  
Error occurred while looking up for connection factory.
- [PoolReleaseError](#)  
Error occurred while closing the connection pool.
- [PooledConnException](#)  
A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.
- [RecoveryInfo](#)  
The JMS connector is in recovery mode.
- [RestartError](#)  
Error occurred while trying to restart the subscriber on the specified topic.
- [SendConnectRerty](#)  
The JMS operation failed while trying to connect to the server. This will cause a retry.
- [SubscriberConnect](#)  
The JMS operation failed while trying to connect to the server.

## ConnectionPoolError

---

Error occurred while returning connection to the pool. Continuing the activity.

Level : *Warning*

Log Message : *Exception while returning connection to pool. The Exception is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cConnectionPoolErrorEv5

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 5

## Variables

---

The ConnectionPoolError message contains the following variables:

Table 1. ConnectionPoolError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## FactoryUnknownError

---

Unknown exception while looking up the connection factory

Level : *Severe*

Log Message : *Exception while looking up the connection factory {Message}. The exception is unknown error message from Provider. One of the reason for the error is If the provider is ActiveMQ and the binding file name or path is not correct.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cFactoryUnknownErrorEv11

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 11

## Variables

---

The FactoryUnknownError message contains the following variables:

Table 1. FactoryUnknownError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [JMS Connection Notifications](#)

## GetConnectRetry

The JMS operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Connection exception while getting message from the provider. The error code is {ErrorCode} and message is {ErrorMessage}. The job is retrying {RetryAttemptNumber}, out of {TotalRetryAttempts} attempts to connect to JMS provider. The next attempt will be after {IntervalForRetries} seconds.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cGetConnectRetryEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 1

## Variables

The GetConnectRetry message contains the following variables:

Table 1. GetConnectRetry Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ErrorCode

The error code specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1ErrorCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.1

### 6. ErrorMessage

The error message specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1ErrorMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2

### 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.3

### 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.4

### 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv1IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.5

**Parent topic:** [JMS Connection Notifications](#)

## PollMessageRetry

The JMS operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Connection exception while polling message. The exception is {Message}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cPollMessageRetryEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 4

## Variables

The PollMessageRetry message contains the following variables:

Table 1. PollMessageRetry Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## 6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv4RetryAttemptNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.4.2

## 7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv4TotalRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.4.3

## 8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv4IntervalForRetries
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.4.4

## PoolReleaseError

Error occurred while closing the connection pool.

Level : Severe

Log Message : *Exception while closing the connection pool. The Exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cPoolReleaseErrorEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 6

## Variables

The PoolReleaseError message contains the following variables:

Table 1. PoolReleaseError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>

## PooledConnException

---

A JMS Connection exception occurred while the connection was in the idle pool. This can occur if the JMS provider terminates the connection ungracefully.

Level : *Warning*

Log Message : *Exception received on JMS connection while it was in the idle connections pool. The error code is: {ErrorCode}, and the exception is: {ErrorMessage}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cPooledConnExceptionEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 12

## Variables

---

The PooledConnException message contains the following variables:

Table 1. PooledConnException Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li></ul>

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ErrorCode

The error code specified in the exception

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv12ErrorCode
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.12.1

## 6. ErrorMessage

The error message specified in the exception

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv12ErrorMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.12.2

## RestartError

Error occurred while trying to restart the subscriber on the specified topic.

Level : Severe

Log Message : Failed to start the subscriber for the topic {TopicName}. Will try to start the subscriber after {IntervalForRestart} seconds

System : Orchestration

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cRestartErrorEv10

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

SNMP Trap Number : 10

## Variables

The RestartError message contains the following variables:

Table 1. RestartError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. TopicName

The name of specified topic.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv10TopicName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.10.1

### 6. IntervalForRestart

The specified time interval for restart.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv10IntervalForRestart
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.10.2

## SendConnectRerty

The JMS operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Connection exception while sending message. The error code is {ErrorCode} and exception is {ErrorMessage}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8cSendConnectRertyEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.1

## Variables

---

The SendConnectRerty message contains the following variables:

Table 1. SendConnectRerty Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. ErrorCode</b>
The error code specified in the error message
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-JMS-MIB::ciC8cEv2ErrorCode</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2.1</li> </ul>
<b>6. ErrorMessage</b>
The error message specified in the error message
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-JMS-MIB::ciC8cEv2ErrorMessage</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2.2</li> </ul>
<b>7. RetryAttemptNumber</b>
The current number of retries.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-JMS-MIB::ciC8cEv2RetryAttemptNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2.3</li> </ul>
<b>8. TotalRetryAttempts</b>

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2.4

## 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.1.1.2.5

## JMS Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the JMS Module.

- [FirstID](#)  
The appliance is in recovery mode and the first message specified is not matching the id specified of delivered message.  
Messages in the queue is tampered and will impact the delivery of messages
- [NamingException](#)  
Naming exception occurred while getting message from destination.
- [NoMessage](#)  
There is no message to be retrieved from the destination specified.
- [RecoveryInfo](#)  
The activity is recovering and its skipping message with specified id as its already delivered.
- [SendMessageError](#)  
Error occurred while sending message.
- [SendNamingException](#)  
Naming exception occurred while sending message to destination.
- [SubscriberConfigError](#)  
Error occurred while configuring the subscriber activity.

- [SubscriberError](#)  
Error occurred while subscribing the message. This message should be re-delivered manually from the Provider.
- [SubscriberNameError](#)  
Naming exception occurred while configuring the subscriber activity.
- [SubscriberStartInfo](#)  
Subscriber started successfully for the specified topic.
- [UnsubscribeError](#)  
Error occurred while unsubscribing on the topic.

## JMS Internal Notifications

---

Provides a comprehensive list of internal notifications sent from the JMS Module.

- [GetMarshallError](#)  
Error occurred while marshalling the JMS message.
- [JMSError](#)  
Error occurred while getting message from the provider.
- [LibraryNotInstalled](#)  
This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.
- [PollMessageError](#)  
Error occurred while getting a message from queue.
- [SendMarshallError](#)  
Error occurred while unmarshalling the JMS message.

**Parent topic:** [JMS Module](#)

## GetMarshallError

---

Error occurred while marshalling the JMS message.

Level : *Severe*

Log Message : *Exception while marshalling the jms message. The exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8iGetMarshallErrorEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.3

SNMP Trap Number : 1

## Variables

---

The GetMarshallError message contains the following variables:

Table 1. GetMarshallError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Message</b>  Textual description of the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>

## JMSError

Error occurred while getting message from the provider.

Level : Severe

Log Message : *Exception while getting message from the provider. The error code is {ErrorCode} and message is {ErrorMessage}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8iJMSErrorEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.3

SNMP Trap Number : 2

## Variables

The JMSError message contains the following variables:

Table 1. JMSError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. ErrorCode</b>  The error code specified in the error message <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-JMS-MIB::ciC8iEv2ErrorCode</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.8.1.3.1.2.1</li></ul>
<b>6. ErrorMessage</b>

The error message specified in the error message

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-JMS-MIB::ciC8iEv2ErrorMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.8.1.3.1.2.2

## LibraryNotInstalled

---

This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console.

Level : *Severe*

Log Message : *This error may be due to JMS Provider library being not installed on the appliance. Please install the JMS provider library using Web management console. The error is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8iLibraryNotInstalledEv5

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.3

SNMP Trap Number : 5

## Variables

---

The LibraryNotInstalled message contains the following variables:

Table 1. LibraryNotInstalled Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>

<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>

<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## PollMessageError

---

Error occurred while getting a message from queue.

Level : *Severe*

Log Message : *Exception while getting the message from the queue. The Exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8iPollMessageErrorEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.3

SNMP Trap Number : 4

## Variables

---

The PollMessageError message contains the following variables:

Table 1. PollMessageError Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## SendMarshallError

---

Error occurred while unmarshalling the JMS message.

Level : Severe

Log Message : *Exception while unmarshalling the jms message. The exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-JMS-MIB::ciC8iSendMarshallErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.8.1.3

SNMP Trap Number : 3

## Variables

---

The SendMarshallError message contains the following variables:

Table 1. SendMarshallError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## JSON Module

---

The JSON Module provides activities for generating and parsing JSON content. This section contains details for the messages delivered from the JSON Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the JSON Module.

MIB Name : CASTIRON-COMP-JSON-MIB

MIB OID : 1.3.6.1.4.1.13336.2.2.3.21

The following table provides an alphabetical list of all notifications that can be issued by the JSON Module.

Table 1. Notifications issued by the JSON Module

Notification	Level	System	Description
<a href="#">JSONParseError</a>	Severe	Orchestration	There was an error while parsing the JSON.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
<a href="#">JSONSerializeError</a>	Severe	Orchestration	There was an error while serializing the JSON.
<a href="#">TransformError</a>	Severe	Orchestration	There was an error while transforming the JSON.

- [JSON Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the JSON Module.

## Log Module

---

The Log activity allows users to log messages in the orchestration. This section contains details for the messages delivered from the Log Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Log Module.

MIB Name : *CASTIRON-COMP-LOGACTIVITY-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.25

The following table provides an alphabetical list of all notifications that can be issued by the Log Module.

Table 1. Notifications issued by the Log Module

Notification	Level	System	Description
<a href="#">FailLogMessage</a>	Severe	Orchestrator	The Log activity failed.

- [Log Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Log Module.

## MIME Module

The MIME Module provides activities for creating and parsing Multipurpose Internet Mail Extensions. This section contains details for the messages delivered from the MIME Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the MIME Module.

MIB Name : CASTIRON-COMP-MIME-MIB

MIB OID : .1.3.6.1.4.1.13336.2.2.3.10

The following table provides an alphabetical list of all notifications that can be issued by the MIME Module.

Table 1. Notifications issued by the MIME Module

Notification	Level	System	Description
AttachmentNumber	Info	Orchestration	Activity is processing the specified attachment number.
AttachmentsFound	Info	Orchestration	The activity found specified number of attachments.
AutoGeneratedBody	Info	Orchestration	No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
BoundaryAbsent	Info	Orchestration	Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
BoundaryInfo	Info	Orchestration	Boundary of mime attachment is as specified.
BoundaryMoreThan70	Warning	Orchestration	Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
BoundarySpecified	Info	Orchestration	Activity found boundary in mime message.
DefaultContentType	Info	Orchestration	Activity did not find any content type specified. Setting content type to text/plain.
EmptyParts	Severe	Orchestration	The input parameter - parts - is empty and there is no data to serialize.
FoundBoundary	Info	Orchestration	Activity found boundary parameter in the mime message.
HeaderAbsent	Severe	Orchestration	Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
InputBodyNull	Severe	Orchestration	Input parameter body from container is NULL. This is due to internal exception.
MainAndSubType	Severe	Orchestration	The main and sub type found in content type.
MainType	Info	Orchestration	Main type specified in the serialize activity.
MimeHeaderMapped	Info	Orchestration	Optional input parameter 'mimeheader' is mapped.
MimeHeaderNotMapped	Info	Orchestration	Optional input parameter 'mimeheader' was not mapped in the activity.
NoAttachments	Severe	Orchestration	Activity did not find any attachments to serialize.
NoBoundaryFound	Warning	Orchestration	Boundary was specified in header but no boundary found in the body. Returning single body.
NoPartBody	Info	Orchestration	This part does not have any body. Setting blank body.
NumberOfParts	Info	Orchestration	The number of parts found in the mime message.
ParseActivityDone	Info	Orchestration	The activity has outputted parts output parameter.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
ParseException	Severe	Orchestration	Error occurred while parsing the data.
SerialActivityDone	Info	Orchestration	The activity is done outputting mimeheader and body output parameters.
SerializeException	Severe	Orchestration	Error occurred while serializing the data.
SubType	Info	Orchestration	Sub Type found in content type of the message.
TransferEncChanged	Warning	Orchestration	The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
TransferEncLimit	Severe	Orchestration	Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
TransferEncMissing	Warning	Orchestration	Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.
TransferEncodingException	Severe	Orchestration	Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
TransferEncodingValue	Info	Orchestration	Activity found Content-Transfer-Encoding.

## MIME Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the MIME Module.

- [AttachmentNumber](#)  
Activity is processing the specified attachment number.
- [AttachmentsFound](#)  
The activity found specified number of attachments.
- [AutoGeneratedBody](#)  
No boundary value was specified for multiple parts attachment. Using auto-generated boundary.
- [BoundaryAbsent](#)  
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.
- [BoundaryInfo](#)  
Boundary of mime attachment is as specified.
- [BoundaryMoreThan70](#)  
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.
- [BoundarySpecified](#)  
Activity found boundary in mime message.
- [DefaultContentType](#)  
Activity did not find any content type specified. Setting content type to text/plain.
- [EmptyParts](#)  
The input parameter - parts - is empty and there is no data to serialize.
- [FoundBoundary](#)  
Activity found boundary parameter in the mime message.

- **HeaderAbsent**  
Empty input parameter 'mimeheader'. was found. Activity cannot parse data.
- **MainAndSubType**  
The main and sub type found in content type.
- **MainType**  
Main type specified in the serialize activity.
- **MimeHeaderMapped**  
Optional input parameter 'mimeheader' is mapped.
- **MimeHeaderNotMapped**  
Optional input parameter 'mimeheader' was not mapped in the activity.
- **NoAttachments**  
Activity did not find any attachments to serialize.
- **NoBoundaryFound**  
Boundary was specified in header but no boundary found in the body. Returning single body.
- **NoPartBody**  
This part does not have any body. Setting blank body.
- **NumberOfParts**  
The number of parts found in the mime message.
- **ParseActivityDone**  
The activity has outputted parts output parameter.
- **SerialActivityDone**  
The activity is done outputting mimeheader and body output parameters.
- **SerializeException**  
Error occurred while serializing the data.
- **SubType**  
Sub Type found in content type of the message.
- **TransferEncChanged**  
The attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.
- **TransferEncLimit**  
Entities of type specified cannot have any other Content-Transfer-Encoding apart from 7bit.
- **TransferEncMissing**  
Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.
- **TransferEncodingException**  
Content-Transfer-Encoding specified in Composite media type cannot be any other apart from 7bit, 8bit or binary.
- **TransferEncodingValue**  
Activity found Content-Transfer-Encoding.

## Variables

The BoundaryMoreThan70 message contains the following variables:

Table 1. BoundaryMoreThan70 Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## BoundarySpecified

Activity found boundary in mime message.

Level : *Info*

Log Message : Got boundary: |"**{Boundary}**|".

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MIME-MIB::ciC10oBoundarySpecifiedEv23

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.10.1.2

SNMP Trap Number : 23

## Variables

The BoundarySpecified message contains the following variables:

Table 1. BoundarySpecified Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Boundary

Boundary found in the message.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MIME-MIB::ciC10oEv23Boundary
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.10.1.2.1.23.1

## TransferEncMissing

---

Content-Transfer-Encoding value is missing for specified attachment number . Guessing based on Content-Type and charset values.

Level : *Warning*

Log Message : Content-Transfer-Encoding value missing for attachment number {AttachmentNumber}. Guessing based on Content-Type and charset values.

System : Orchestration

SNMP Name : CASTIRON-COMP-MIME-MIB::ciC10oTransferEncMissingEv28

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.10.1.2

SNMP Trap Number : 28

## Variables

---

The TransferEncMissing message contains the following variables:

Table 1. TransferEncMissing Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. AttachmentNumber</b>  The attachment number for which content transfer encoding is missing. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-MIME-MIB::ciC10oEv28AttachmentNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.10.1.2.1.28.1</li></ul>

## ParseException

---

Error occurred while parsing the data.

Level : *Severe*

Log Message : *Error while parsing data. Error is: {Message}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MIME-MIB::ciC10iParseExceptionEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.10.1.3

SNMP Trap Number : 2

## Variables

---

The ParseException message contains the following variables:

---

Table 1. ParseException Message Variables

---

## 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## Maestro Module

---

The Maestro Module represents the internal operation of the Cast Iron runtime. This section contains details for the messages delivered from the Maestro Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Maestro Module.

MIB Name : *CASTIRON-COMP-MAESTRO-MIB*

MIB OID : 1.3.6.1.4.1.13336.2.2.3.20

The following table provides an alphabetical list of all notifications that can be issued by the Maestro Module.

Table 1. Notifications issued by the Maestro Module

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
AbandonedJobs	Warning	Orchestration	A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
ActInvalidLicense (Deprecated)	Severe	Orchestration	<b>Deprecated.</b>
ActivityFailedError	Severe	Orchestration	Encountered fault of specified type, please see rest of the log for more information.
AlreadyDeployed	Severe	Orchestration	The specified orchestration is already deployed.
CallContext	Severe	Orchestration	Maestro is not able to create call context.
CallContextDestroy	Info	Orchestration	Call context created but task never started.
CatchExpression	Severe	Orchestration	Unable to parse the catch expression.
CleanUpFailed	Warning	Orchestration	Failed to clean up the activity.
CloseInputStream	Warning	Orchestration	Could not close input stream.
CloseOutputStream	Warning	Orchestration	Could not close output stream.
CloseReader	Warning	Orchestration	Could not close reader.
CloseWriter	Warning	Orchestration	Could not close writer.
DeactivateFailed	Severe	Orchestration	Maestro failed to deactivate the specified activity.
DebugFailed	Severe	Orchestration	Debugger operation failed.
DeleteObject	Warning	Orchestration	Could not clean up object with ID.
DestroyFailed	Severe	Orchestration	Maestro failed to destroy the specified activity.
EnqueueFailed	Severe	Orchestration	Unable to enqueue the orchestration.
EntryPath	Severe	Orchestration	Could not find an entry point for the specified activity in the compiled orchestration.
ErrorMap	Severe	Orchestration	Error in map activity.
ErrorTwoPhase	Severe	Orchestration	Activity could not be converted to Two phase activity.
ExecuteError	Severe	Orchestration	Unable to execute the orchestration.
FaultInfo	Severe	Orchestration	Could not initialize FaultInfo.
ForEach	Severe	Orchestration	Error occurred in for each activity.
IOError	Warning	Orchestration	Internal error occurred because of Input/Output error.
InitializeJobInfo	Severe	Orchestration	Could not initialize job info.
InputMap	Severe	Orchestration	No input maps are there for required input parameter.
InputMapXPath	Severe	Orchestration	Could not perform input map expression.
InputMapXSLT	Severe	Orchestration	Could not perform input map XSLT.
InvokeError	Severe	Orchestration	Error occurred in module.
KeyLog	Info	Orchestration	Logged key with specified name and value.
LargeInputParam	Warning	Orchestration	Specified input parameter is over the limit and is too large to log.
LargeNonpersistentVar	Severe	Orchestration	Specified variable is too large for a non-persistent orchestration.
LargeOutputParam	Warning	Orchestration	Specified output parameter is over the limit and is too large to log.
LargeTotalVarSize	Severe	Orchestration	This job cannot be run during low-memory conditions.
LargeVariable	Warning	Orchestration	Specified variable is over the limit and is too large to log.
LicenseExpireImminent (Deprecated)	Severe	Orchestration	<b>Deprecated.</b>

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
<a href="#">LicenseExpireSoon (Deprecated)</a>	Warning	Orchestration	<b>Deprecated.</b>
<a href="#">LicenseExpired (Deprecated)</a>	Severe	Orchestration	<b>Deprecated.</b>
<a href="#">LicenseInvalid (Deprecated)</a>	Severe	Orchestration	<b>Deprecated.</b>
<a href="#">LoaderCancel</a>	Severe	Orchestration	Cancel of job with specified ID of specified orchestration.
<a href="#">LoaderDelete</a>	Severe	Orchestration	Delete of specified orchestration failed.
<a href="#">LoaderDeploy</a>	Severe	Orchestration	Deployment of specified orchestration failed.
<a href="#">LoaderPublish</a>	Severe	Orchestration	Publish of specified configuration failed.
<a href="#">LoaderStart</a>	Severe	Orchestration	Start of the specified orchestration failed.
<a href="#">LoaderStop</a>	Severe	Orchestration	Stop of the specified orchestration failed.
<a href="#">LoaderSuspend</a>	Severe	Orchestration	Suspend of the specified orchestration failed.
<a href="#">LoaderunDeploy</a>	Severe	Orchestration	Undeploy of specified orchestration failed.
<a href="#">MBeanRegister</a>	Severe	Orchestration	Could not register specified object with MBean server.
<a href="#">MBeanUnregister</a>	Severe	Orchestration	Could not unregister specified object with MBean server.
<a href="#">MaxSeqNum</a>	Warning	Orchestration	Exceeded maximum number of activity events for a job.
<a href="#">ModuleConfig</a>	Severe	Orchestration	Could not read module configuration.
<a href="#">MonitorQuery</a>	Severe	Orchestration	Could not query for monitor data.
<a href="#">MonitorVariable</a>	Warning	Orchestration	Could not log monitor variable.
<a href="#">MonitorVariables</a>	Warning	Orchestration	Could not log monitor variables.
<a href="#">MontiorEvents</a>	Severe	Orchestration	Could not log monitor events.
<a href="#">MultipleActFactory</a>	Severe	Orchestration	Activity Factory with specified name and version has multiple registrations, and hence not loading it.
<a href="#">NoActivityFactory</a>	Severe	Orchestration	Activity Factory with specified name and version not registered.
<a href="#">NotDeployed</a>	Severe	Orchestration	Orchestration not deployed.
<a href="#">NotDocParameter</a>	Severe	Orchestration	Specified parameter is not an XML document.
<a href="#">NotDocVariable</a>	Severe	Orchestration	Specified variable is not an XML document.
<a href="#">NotStopped</a>	Severe	Orchestration	Could not undeploy as the orchestration is not stopped.
<a href="#">NotSuspend</a>	Severe	Orchestration	Could not suspend as the orchestration is not running.
<a href="#">NullParam</a>	Severe	Orchestration	Specified parameter is null.
<a href="#">NullVariable</a>	Severe	Orchestration	Specified variable is null.
<a href="#">OSGISyntaxError</a>	Severe	Orchestration	Invalid OSGI query syntax provided.
<a href="#">OrchCompileError</a>	Severe	Orchestration	Unable to compile the specified orchestration.
<a href="#">OutputMap</a>	Severe	Orchestration	Could not perform output map.
<a href="#">OutputMapXPath</a>	Severe	Orchestration	Could not perform output map expression.
<a href="#">OutputMapXSLT</a>	Severe	Orchestration	Could not perform output map transform.
<a href="#">ParamIndex</a>	Warning	Orchestration	Parameter at specified index is already set.
<a href="#">ProgramDestroy</a>	Severe	Orchestration	Program in non terminal state being destroyed.
<a href="#">ProgramStart</a>	Severe	Orchestration	Cannot start an orchestration that is in transient state.
<a href="#">SocketNoReply</a>	Warning	Orchestration	Could not receive socket reply.
<a href="#">SplitError</a>	Severe	Orchestration	Error occurred in split activity.
<a href="#">SwitchExpEmpty</a>	Severe	Orchestration	The condition provided for if-then activity and case label is empty.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
SwitchExpression	Severe	Orchestration	Unable to parse the if-then expression.
TaskCancelled	Warning	Orchestration	Caught exception while cancelling job.
TaskEnd	Info	Orchestration	Ended job for specified orchestration.
TaskFound	Severe	Orchestration	Found task with specified state on undeploy.
TaskRemove	Severe	Orchestration	Unable to remove the task.
TaskStart	Info	Orchestration	Started job for specified orchestration.
TaskState	Severe	Orchestration	Unable to set the task state.
TaskStateTransition	Severe	Orchestration	Invalid task state transition happened, hence marking the job as faulted.
TaskStatusChanged	Info	Orchestration	Job status changed.
TooManyWaitingJobs	Severe	Orchestration	A job was aborted due to a large number of waiting jobs.
UnCaughtError	Severe	Orchestration	Uncaught Internal error occurred.
UnExpectedError	Severe	Orchestration	Unexpected Internal error occurred.
VariableNull	Warning	Orchestration	Specified variable is null.
WhileExpEmpty	Severe	Orchestration	The condition provided for while activity is empty.
WhileExpression	Severe	Orchestration	Unable to parse while expression with specified condition.
WrongActFactory	Severe	Orchestration	Activity factory with specified name and version returned wrong class.

## [Maestro Operation Notifications](#)

---

Provides a comprehensive list of operation notifications sent from the Maestro Module.

- [AbandonedJobs](#)  
A timeout occurred while waiting for jobs to stop and some jobs were abandoned.
- [ActInvalidLicense \(Deprecated\)](#)  
Activity Factory with specified name and version had a licensing failure.
- [ActivityFailedError](#)  
Encountered fault of specified type, please see rest of the log for more information.
- [AlreadyDeployed](#)  
The specified orchestration is already deployed.
- [CallContext](#)  
Maestro is not able to create call context.
- [CallContextDestroy](#)  
Call context created but task never started.
- [CatchExpression](#)  
Unable to parse the catch expression.

- [CleanUpFailed](#)  
Failed to clean up the activity.
- [CloseInputStream](#)  
Could not close input stream.
- [CloseOutputStream](#)  
Could not close output stream.
- [CloseReader](#)  
Could not close reader.
- [CloseWriter](#)  
Could not close writer.
- [DeactivateFailed](#)  
Maestro failed to deactivate the specified activity.
- [DebugFailed](#)  
Debugger operation failed.
- [DeleteObject](#)  
Could not clean up object with ID.
- [DestroyFailed](#)  
Maestro failed to destroy the specified activity.
- [EnqueueFailed](#)  
Unable to enqueue the orchestration.
- [EntryPath](#)  
Could not find an entry point for the specified activity in the compiled orchestration.
- [ErrorMap](#)  
Error in map activity.
- [ErrorTwoPhase](#)  
Activity could not be converted to Two phase activity.
- [ExecuteError](#)  
Unable to execute the orchestration.
- [FaultInfo](#)  
Could not initialize FaultInfo.
- [ForEach](#)  
Error occurred in for each activity.
- [InitializeJobInfo](#)  
Could not initialize job info.
- [InputMap](#)  
No input maps are there for required input parameter.
- [InputMapXPath](#)  
Could not perform input map expression.
- [InputMapXSLT](#)  
Could not perform input map XSLT.
- [InvokeError](#)  
Error occurred in module.
- [KeyLog](#)  
Logged key with specified name and value.
- [LargeInputParam](#)  
Specified input parameter is over the limit and is too large to log.
- [LargeNonpersistentVar](#)  
Specified variable is too large for a non-persistent orchestration.
- [LargeOutputParam](#)  
Specified output parameter is over the limit and is too large to log.
- [LargeTotalVarSize](#)  
This job cannot be run during low-memory conditions.
- [LargeVariable](#)  
Specified variable is over the limit and is too large to log.
- [LicenseExpireImminent \(Deprecated\)](#)  
Imminent license expiration for specified bundle - expires on specified date - Please renew the license now to avoid service interruption.
- [LicenseExpireSoon \(Deprecated\)](#)  
License for specified bundle name expires soon. Please renew the license to avoid service interruption.
- [LicenseExpired \(Deprecated\)](#)  
License has expired. Please renew the license now to avoid service interruption.
- [LicenseInvalid \(Deprecated\)](#)  
License for specified bundle name is invalid.

- [LoaderCancel](#)  
Cancel of job with specified ID of specified orchestration.
- [LoaderDelete](#)  
Delete of specified orchestration failed.
- [LoaderDeploy](#)  
Deployment of specified orchestration failed.
- [LoaderPublish](#)  
Publish of specified configuration failed.
- [LoaderStart](#)  
Start of the specified orchestration failed.
- [LoaderStop](#)  
Stop of the specified orchestration failed.
- [LoaderSuspend](#)  
Suspend of the specified orchestration failed.
- [LoaderunDeploy](#)  
Undeploy of specified orchestration failed.
- [MBeanRegister](#)  
Could not register specified object with MBean server.
- [MBeanUnregister](#)  
Could not unregister specified object with MBean server.
- [MaxSeqNum](#)  
Exceeded maximum number of activity events for a job.
- [ModuleConfig](#)  
Could not read module configuration.
- [MonitorQuery](#)  
Could not query for monitor data.
- [MonitorVariable](#)  
Could not log monitor variable.
- [MonitorVariables](#)  
Could not log monitor variables.
- [MontiorEvents](#)  
Could not log monitor events.
- [MultipleActFactory](#)  
Activity Factory with specified name and version has multiple registrations, and hence not loading it.
- [NoActivityFactory](#)  
Activity Factory with specified name and version not registered.
- [NotDeployed](#)  
Orchestration not deployed.
- [NotDocParameter](#)  
Specified parameter is not an XML document.
- [NotDocVariable](#)  
Specified variable is not an XML document.
- [NotStopped](#)  
Could not undeploy as the orchestration is not stopped.
- [NotSuspend](#)  
Could not suspend as the orchestration is not running.
- [NullParam](#)  
Specified parameter is null.
- [NullVariable](#)  
Specified variable is null.
- [OSGISyntaxError](#)  
Invalid OSGI query syntax provided.
- [OrchCompileError](#)  
Unable to compile the specified orchestration.
- [OutputMap](#)  
Could not perform output map.
- [OutputMapXPath](#)  
Could not perform output map expression.
- [OutputMapXSLT](#)  
Could not perform output map transform.
- [ParamIndex](#)  
Parameter at specified index is already set.

- [ProgramDestroy](#)  
Program in non terminal state being destroyed.
- [ProgramStart](#)  
Cannot start an orchestration that is in transient state.
- [SocketNoReply](#)  
Could not receive socket reply.
- [SplitError](#)  
Error occurred in split activity.
- [SwitchExpEmpty](#)  
The condition provided for if-then activity and case label is empty.
- [SwitchExpression](#)  
Unable to parse the if-then expression.
- [TaskCancelled](#)  
Caught exception while cancelling job.
- [TaskEnd](#)  
Ended job for specified orchestration.
- [TaskFound](#)  
Found task with specified state on undeploy.
- [TaskRemove](#)  
Unable to remove the task.
- [TaskStart](#)  
Started job for specified orchestration.
- [TaskState](#)  
Unable to set the task state.
- [TaskStateTransition](#)  
Invalid task state transition happened, hence marking the job as faulted.
- [TaskStatusChanged](#)  
Job status changed.
- [TooManyWaitingJobs](#)  
A job was aborted due to a large number of waiting jobs.
- [VariableNull](#)  
Specified variable is null.
- [WhileExpEmpty](#)  
The condition provided for while activity is empty.
- [WhileExpression](#)  
Unable to parse while expression with specified condition.
- [WrongActFactory](#)  
Activity factory with specified name and version returned wrong class.

## ActivityFailedError

Encountered fault of specified type, please see rest of the log for more information.

Level : Severe

Log Message : *Encountered fault of type {FaultType}, please see rest of the log for more information*

System : Orchestration

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oActivityFailedErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 3

## Variables

The ActivityFailedError message contains the following variables:

Table 1. ActivityFailedError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. FaultType

The fault type encountered.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv3FaultType
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.3.1

## DebugFailed

Debugger operation failed.

Level : *Severe*

Log Message : *Debugger operation {Value} failed*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oDebugFailedEv8

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 8

## Variables

The DebugFailed message contains the following variables:

Table 1. DebugFailed Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String

- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Value

The operation which failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv8Value
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.8.1

## FaultInfo

---

Could not initialize FaultInfo.

Level : *Severe*

Log Message : *Could not initialize FaultInfo*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oFaultInfoEv11

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 11

## Variables

---

The FaultInfo message contains the following variables:

Table 1. FaultInfo Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ForEach

---

Error occurred in for each activity.

Level : *Severe*

Log Message : *Exception in foreach activity: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oForEachEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 12

## Variables

---

The ForEach message contains the following variables:

Table 1. ForEach Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## KeyLog

Logged key with specified name and value.

Level : *Info*

Log Message : *Logged key with name "{KeyName}" and value "{KeyValue}"*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oKeyLogEv81

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 81

## Variables

The KeyLog message contains the following variables:

Table 1. KeyLog Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. KeyName

The key name.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv81KeyName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.81.1

## 6. KeyValue

The key value.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv81KeyValue
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.81.2

## LargeInputParam

Specified input parameter is over the limit and is too large to log.

Level : *Warning*

Log Message : *Input parameter "{ParamName}" is over {Length} and is too large to log*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oLargeInputParamEv71

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 71

## Variables

The LargeInputParam message contains the following variables:

Table 1. LargeInputParam Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ParamName

The parameter name.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv71ParamName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.71.1

### 6. Length

The limit for the size.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv71Length
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.71.2

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oLicenseExpiredEv27

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 27

## Variables

The LicenseExpired message contains the following variables:

Table 1. LicenseExpired Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. BundleName</b>  The bundle for which license expired.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv27BundleName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.27.1

## 6. Date

The date on which license expired.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv27Date
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.27.2

## LicenseInvalid (Deprecated)

As of Cast Iron version 6.0, this message has been deprecated because connectors are no longer individually licensed.

License for specified bundle name is invalid.

Level : Severe

Log Message : License for {*BundleName*} is invalid: {1}

System : Orchestration

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oLicenseInvalidEv28

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 28

## Variables

The LicenseInvalid message contains the following variables:

Table 1. LicenseInvalid Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. BundleName

The bundle for which license is invalid.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv28BundleName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.28.1

## LoaderCancel

---

Cancel of job with specified ID of specified orchestration.

Level : Severe

Log Message : *Cancel of job {JobID} of Orchestration {OrchName} failed: {Message}*.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oLoaderCancelEv25

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 25

## Variables

---

The LoaderCancel message contains the following variables:

Table 1. LoaderCancel Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. JobID

The job id which was cancelled.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv25JobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.25.1

### 6. OrchName

The orchestration name.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv25OrchName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.25.2

### 7. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## LoaderunDeploy

Undeploy of specified orchestration failed.

Level : *Severe*

Log Message : *Undeploy of Orchestration {OrchName} failed: {Message}*.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oLoaderunDeployEv21

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 21

## Variables

The LoaderunDeploy message contains the following variables:

Table 1. LoaderunDeploy Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. OrchName

The orchestration name for which undeploy failed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv21OrchName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.20.1.2.1.21.1

#### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## MBeanRegister

Could not register specified object with MBean server.

Level : *Severe*

Log Message : *Could not register {ObjectName} with mbean server*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oMBeanRegisterEv30

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 30

## Variables

The MBeanRegister message contains the following variables:

Table 1. MBeanRegister Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ObjectName

The object name which could not be registered with MBean server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv30ObjectName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.30.1

## NoActivityFactory

---

Activity Factory with specified name and version not registered.

Level : *Severe*

Log Message : *ActivityFactory (name - {ActivityName}, version - {ActivityVersion}) not registered*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oNoActivityFactoryEv37

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 37

## Variables

---

The NoActivityFactory message contains the following variables:

Table 1. NoActivityFactory Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ActivityName

The name of the activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv37ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.37.1

### 6. ActivityVersion

The version of the activity.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv37ActivityVersion
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.37.2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 78

## Variables

---

The ParamIndex message contains the following variables:

Table 1. ParamIndex Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ParamIndex

The parameter index.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv78ParamIndex
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.78.1

### 6. VariableIndex

The variable index.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv78VariableIndex
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.78.2

## TaskStatusChanged

Job status changed.

Level : *Info*

Log Message : *Job status changed to {Status}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MAESTRO-MIB::ciC20oTaskStatusChangedEv83

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.20.1.2

SNMP Trap Number : 83

## Variables

The TaskStatusChanged message contains the following variables:

Table 1. TaskStatusChanged Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Status

The new job status.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MAESTRO-MIB::ciC20oEv83Status
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.20.1.2.1.83.1

## NetSuite Module

---

The NetSuite Module provides access to the NetSuite online service. This section contains details for the messages delivered from the NetSuite Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the NetSuite Module.

MIB Name : *CASTIRON-COMP-NETSUITE-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.11

The following table provides an alphabetical list of all notifications that can be issued by the NetSuite Module.

Table 1. Notifications issued by the NetSuite Module

Notification	Level	System	Description
<a href="#">ConnectionFailed</a>	Severe	Orchestration	The NetSuite operation failed because a connection to the server could not be established.
<a href="#">ConnectionPoolError</a>	Warning	Orchestration	Error occurred while returning connection to pool. Continuing the activity.
<a href="#">ConnectionRetry</a>	Warning	Orchestration	The NetSuite operation failed while trying to connect to the server. The operation will be retried.
<a href="#">CustomFieldError</a>	Severe	Orchestration	Error occurred and returned specified soap fault while getting custom fields for the recordType.
<a href="#">IOError</a>	Severe	Orchestration	Unexpected IO error occurred while performing operation with NetSuite.
<a href="#">SoapError</a>	Severe	Orchestration	Error occurred while creating SOAP message.
<a href="#">StreamError</a>	Severe	Orchestration	Unexpected IO exception occurred while streaming the message.
<a href="#">TransformationError</a>	Severe	Orchestration	An error occurred while processing a message for NetSuite.

Notification	Level	System	Description
<a href="#">UnknownError</a>	Severe	Orchestration	Unknown error while invoking an operation on NetSuite.

- [NetSuite Connection Notifications](#)  
Provides a comprehensive list of connection notifications sent from the NetSuite Module.
- [NetSuite Operation Notifications](#)  
Provides a comprehensive list of operation notifications sent from the NetSuite Module.
- [NetSuite Internal Notifications](#)  
Provides a comprehensive list of internal notifications sent from the NetSuite Module.

## ConnectionFailed

---

The NetSuite operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to NetSuite after {NumberOfRetryAttempts} attempts. Error is: {Message}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-NETSUITE-MIB::ciC11cConnectionFailedEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.11.1.1*

SNMP Trap Number : *2*

## Variables

---

The ConnectionFailed message contains the following variables:

Table 1. ConnectionFailed Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. NumberOfRetryAttempts</b>  The total number of attempted retries. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-NETSUITE-MIB::ciC11cEv2NumberOfRetryAttempts</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.11.1.1.1.2.1</li></ul>
<b>6. Message</b>  Textual description of the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>

## ConnectionRetry

---

The NetSuite operation failed while trying to connect to the server. The operation will be retried.

Level : *Warning*

Log Message : *Unable to connect to NetSuite. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-NETSUITE-MIB::ciC11cConnectionRetryEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.11.1.1

SNMP Trap Number : 1

## Variables

---

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Message</b>

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## 6. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-NETSUITE-MIB::ciC11cEv1RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.11.1.1.1.2

## 7. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-NETSUITE-MIB::ciC11cEv1TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.11.1.1.1.3

## 8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-NETSUITE-MIB::ciC11cEv1IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.11.1.1.1.4

## TransformationError

An error occurred while processing a message for NetSuite.

Level : *Severe*

Log Message : *Exception while processing a message for NetSuite. Exception is {Message}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-NETSUITE-MIB::ciC11oTransformationErrorEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.11.1.2

SNMP Trap Number : 1

## Variables

The TransformationError message contains the following variables:

Table 1. TransformationError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## SoapError

---

Error occurred while creating SOAP message.

Level : Severe

Log Message : *Exception while creating soap message. The exception is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-NETSUITE-MIB::ciC11iSoapErrorEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.11.1.3

SNMP Trap Number : 2

## Variables

---

The SoapError message contains the following variables:

Table 1. SoapError Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.  <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Message</b>  Textual description of the error.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>

## PeopleSoft Module

---

The PeopleSoft Module provides access to Oracle's PeopleSoft applications. This section contains details for the messages delivered from the PeopleSoft Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the PeopleSoft Module.

MIB Name : **CASTIRON-COMP-PEOPLESOFT-MIB**

MIB OID : **.1.3.6.1.4.1.13336.2.2.3.9**

The following table provides an alphabetical list of all notifications that can be issued by the PeopleSoft Module.

Table 1. Notifications issued by the PeopleSoft Module

Notification	Level	System	Description
ActivateFailureBlank	Severe	Orchestration	Activity could not be started as the specified name was blank.
ActivateSuccess	Info	Orchestration	Activity name specified was successfully activated.
ActivateUnsuccessful	Info	Orchestration	Error occurred while connecting to PeopleSoft system while activating activity. Activity activated, will try to establish connectivity at activity execute time.
ActivityFailure	Severe	Orchestration	Activity name specified failed to execute.
ActivitySuccessful	Info	Orchestration	Activity name specified executed successfully. The response output parameter was successfully generated.
ConfigURI	Info	Orchestration	Information regarding the URI and Port where the PeopleSoft Receive is listening.
ConnectionError	Severe	Orchestration	The peoplesoft operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while returning connection to the pool. Continuing the activity.
ConnectionRetry	Warning	Orchestration	The peoplesoft operation failed while trying to connect to the server. This will cause a retry.
CreateOnlyKeys	Warning	Orchestration	Only Create Keys was specified and no other properties were specified. Create might not have created the record.
DataLengthMore	Warning	Orchestration	The data set for specified field name has length exceeding the field length. This may cause loss of data.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
DeleteFail	Warning	Orchestration	The activity failed to delete specified item number.
GetNoReturn	Info	Orchestration	Activity name specified could not find any record.
ItemNumberBlank	Warning	Orchestration	Item number returned is empty.
MakeConnectError	Warning	Orchestration	Error occurred while creating the connection to destination.
MessageNameVersion	Severe	Orchestration	Message name and version got does not match that set in activity.
MissingLibraries	Severe	Orchestration	Peoplesoft activity is missing required libraries. Please install them from WMC.
NoOperationOnRecord	Warning	Orchestration	Activity could not find any record to do specified operation on it.
OutOfRange	Warning	Orchestration	Activity is trying to delete an item which is out of range.
PoolReleaseError	Warning	Orchestration	Error occurred while closing the connection pool.
ReceiveActivate	Severe	Orchestration	Error occurred while activating PeopleSoft Receive.
ReceiveDeActivate	Severe	Orchestration	Error occurred while deactivating PeopleSoft Receive.
ReceiveError	Severe	Orchestration	Peoplesoft receive activity was unsuccessful in receiving the request.
ReceiveGeneralError	Severe	Orchestration	Error occurred while sending the response from PeopleSoft Receive.
ReceiveIOError	Severe	Orchestration	IO Error occurred while processing request in PeopleSoft Receive.
ReceiveInfo	Info	Orchestration	Got document from specified host with specified name and version.
ReceiveProcess	Severe	Orchestration	Error occurred while processing request in PeopleSoft Receive.
ReceiveSuccessful	Info	Orchestration	Peoplesoft receive activity successfully received the request.
RunningInfo	Warning	Orchestration	Faced few warnings or errors while running Peoplesoft activity.
RunningMessages	Warning	Orchestration	Received messages while executing the activity.
SetupInfo	Warning	Orchestration	Faced few warnings or errors while setting up Peoplesoft activity.

## ActivateUnsuccessful

---

Error occurred while connecting to PeopleSoft system while activating activity. Activity activated, will try to establish connectivity at activity execute time.

Level : *Info*

Log Message : *Error connecting to PeopleSoft system while activating activity {ActivityName}, error is: {Message}. Activity activated, will try to establish connectivity at activity execute time*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cActivateUnsuccessfulEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.1*

SNMP Trap Number : *1*

## Variables

---

The ActivateUnsuccessful message contains the following variables:

Table 1. ActivateUnsuccessful Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ActivityName

The activity name which failed to connect to Peoplesoft system.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv1ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.9.1.1.1.1.1

### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

<b>5. ActivityName</b>

The activity name which failed to connect to Peoplesoft system.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv3ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.1.1.3.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv3RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.1.1.3.3

## 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv3TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.1.1.3.4

## 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9cEv3IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.1.1.3.5

## PeopleSoft Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the PeopleSoft Module.

- [ActivateFailureBlank](#)  
Activity could not be started as the specified name was blank.
- [ActivateSuccess](#)  
Activity name specified was successfully activated.
- [ActivityFailure](#)  
Activity name specified failed to execute.
- [ActivitySuccessful](#)  
Activity name specified executed successfully. The response output parameter was successfully generated.
- [ConfigURI](#)  
Information regarding the URI and Port where the PeopleSoft Receive is listening.
- [CreateOnlyKeys](#)  
Only Create Keys was specified and no other properties were specified. Create might not have created the record.
- [DataLengthMore](#)  
The data set for specified field name has length exceeding the field length. This may cause loss of data.
- [DeleteFail](#)  
The activity failed to delete specified item number.
- [GetNoReturn](#)  
Activity name specified could not find any record.
- [ItemNumberBlank](#)  
Item number returned is empty.
- [MessageNameVersion](#)  
Message name and version got does not match that set in activity.
- [NoOperationOnRecord](#)  
Activity could not find any record to do specified operation on it.
- [OutOfRange](#)  
Activity is trying to delete an item which is out of range.
- [ReceiveError](#)  
Peoplesoft receive activity was unsuccessful in receiving the request.
- [ReceiveGeneralError](#)  
Error occurred while sending the response from PeopleSoft Receive.

- [ReceiveInfo](#)  
Got document from specified host with specified name and version.
- [ReceiveProcess](#)  
Error occurred while processing request in PeopleSoft Receive.
- [ReceiveSuccessful](#)  
Peoplesoft receive activity successfully received the request.
- [RunningInfo](#)  
Faced few warnings or errors while running Peoplesoft activity.
- [RunningMessages](#)  
Received messages while executing the activity.

**Parent topic:** [PeopleSoft Module](#)

## ActivateFailureBlank

Activity could not be started as the specified name was blank.

Level : *Severe*

Log Message : *Activity {ActivityName} not started as {Name} is blank*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-PEOPLESOF-T-MIB::ciC9oActivateFailureBlankEv6*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.9.1.2*

SNMP Trap Number : *6*

## Variables

The ActivateFailureBlank message contains the following variables:

Table 1. ActivateFailureBlank Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification. <ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ActivityName

The activity name which failed to activate.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv6ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.6.1

#### 6. Name

The name which was left blank causing activate to fail.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv6Name
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.6.2

## ActivateSuccess

Activity name specified was successfully activated.

Level : *Info*

Log Message : *Activity {ActivityName} activated successfully*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oActivateSuccessEv5

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.2

SNMP Trap Number : 5

## Variables

The ActivateSuccess message contains the following variables:

Table 1. ActivateSuccess Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ActivityName

The activity name which was activated.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv5ActivityName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.9.1.2.1.5.1

# ActivitySuccessful

Activity name specified executed successfully. The response output parameter was successfully generated.

Level : *Info*

Log Message : *{ActivityName} executed and outputted response output parameter*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oActivitySuccessfulEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.2

SNMP Trap Number : 3

## Variables

The ActivitySuccessful message contains the following variables:

Table 1. ActivitySuccessful Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. ActivityName</b>  The activity name which succeeded. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv3ActivityName</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.9.1.2.1.3.1</li></ul>

## CreateOnlyKeys

Only Create Keys was specified and no other properties were specified. Create might not have created the record.

Level : *Warning*

Log Message : *Only Create Keys and no other properties specified. Create might not have created record.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oCreateOnlyKeysEv20

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.2

SNMP Trap Number : 20

## Variables

The CreateOnlyKeys message contains the following variables:

Table 1. CreateOnlyKeys Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## DataLengthMore

The data set for specified field name has length exceeding the field length. This may cause loss of data.

Level : *Warning*

Log Message : *Data being set for field named {FieldName} has length {DataLength}, where as field has length {FieldLength}. There may be loss of data.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oDataLengthMoreEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.2

SNMP Trap Number : 12

## Variables

The DataLengthMore message contains the following variables:

Table 1. DataLengthMore Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. FieldName

Name of the field for which data has been set.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv12FieldName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.12.1

#### 6. DataLength

Length of the data which has been set for this field.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv12DataLength
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.12.2

#### 7. FieldLength

Length of the field for which data has been set.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv12FieldLength
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.9.1.2.1.12.3

## NoOperationOnRecord

Activity could not find any record to do specified operation on it.

Level : *Warning*

Log Message : *Not able to get any record to do {OperationName} on. Returning false*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oNoOperationOnRecordEv8

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.2

SNMP Trap Number : 8

## Variables

The NoOperationOnRecord message contains the following variables:

Table 1. NoOperationOnRecord Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String

- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. OperationName

Operation name that could not be specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9oEv8OperationName

## MissingLibraries

---

Peoplesoft activity is missing required libraries. Please install them from WMC.

Level : *Severe*

Log Message : *Missing classes when trying to start activity {ActivitName}. PeopleSoft library may need to be installed on the appliance.*  
Error is: {Message}

System : *Orchestration*

SNMP Name : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9iMissingLibrariesEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.9.1.3

SNMP Trap Number : 1

## Variables

---

The MissingLibraries message contains the following variables:

Table 1. MissingLibraries Message Variables

1. SerialNumber
-----------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. ActivitName

The activity name which faced the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PEOPLESOFT-MIB::ciC9iEv1ActivitName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.9.1.3.1.1.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## Platform Module

---

The Platform module provides notifications for elements generally not associated with projects or the runtime such as hardware, network, security, and resources. This section contains details for the messages delivered from the Platform Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Platform Module.

MIB Name : *CASTIRON-COMP-PLATFORM-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.23

The following table provides an alphabetical list of all notifications that can be issued by the Platform Module.

Table 1. Notifications issued by the Platform Module

Notification	Level	System	Description
AccessViolation	Info	Security	An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
AuthFailure	Severe	Security	An attempt to authenticate with the appliance failed.
AuthLogOut	Info	Security	Event showing logging out of the user.
AuthSuccess	Info	Security	Attempt to authenticate with the appliance was successful.
DiskUsageCritOk	Info	Resources	Disk space usage is below the critical threshold.
DiskUsageCritical	Severe	Resources	Disk space usage has exceeded the critical threshold.
DiskUsageWarnOk	Info	Resources	Disk space usage is below the warning threshold.
DiskUsageWarning	Warning	Resources	Disk space usage has exceeded the warning threshold.
FanFailed	Severe	Hardware	A cooling fan is not operating correctly.
FanRestored	Info	Hardware	A cooling fan has resumed proper operation.
GrantRole	Info	Security	grant new role created.
GroupCreated	Info	Security	New group created.
GroupDeleted	Info	Security	Group deleted.
HighAvailFailover	Info	Hardware	The High Availability failover feature has taken effect; failover is complete.
HighAvailNotReady	Warning	Hardware	The HA system is not Highly Available.
HighAvailReady	Info	Hardware	The HA system is Highly Available.
HighAvailVersionError	Severe	Resources	The version of CIOS running on Standby does not match that running on Active.
IntrusionInform	Warning	Hardware	The appliance case has been opened.
IntrusionSevere	Severe	Hardware	The appliance case has been opened, which could result in system failure. Please contact Cast Iron Support.
LargeFileWarning	Warning	Resources	Large file taking up space on heavily loaded disk.
NetworkAutohost	Warning	Network	The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.
NetworkInvalidRoute	Warning	Network	Could not add a requested network route.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
NetworkLinkDown	Warning	Network	The network link is down (offline).
NetworkLinkUp	Info	Network	The network link is up (online).
OrcmonArchiveError	Severe	Resources	Job log archive error.
OrcmonDatabaseError	Severe	Resources	Job log database error.
OrcmonDiskFull	Warning	Resources	Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
OrcmonDiskFullNoPurge	Severe	Resources	Failed to purge any job logs to recover disk space.
OrcmonDiskTrigger	Info	Resources	Job log purge was initiated due to an available disk space trigger.
OrcmonExportCdError	Severe	Resources	Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
OrcmonExportError	Severe	Resources	Failure uploading archive file to FTP server.
OrcmonExportFTP	Info	Resources	Exporting archive file to FTP server.
OrcmonExportLocal	Info	Resources	Exporting job log data to a local archive file.
OrcmonExportStoreErr	Severe	Resources	Failure uploading archive file to FTP server: Could not store file.
OrcmonExportedJobs	Info	Resources	Exported jobs from the job log.
OrcmonPurgeByCompl	Info	Resources	Job log purge has been triggered based on the number of stored completed jobs.
OrcmonPurgeByErrored	Info	Resources	Job log purge has been triggered based on the number of stored errored jobs.
OrcmonPurgeByTime	Info	Resources	Job log purge has been triggered based on the amount of time since the last purge.
OrcmonPurgeByTimeNP	Info	Resources	Job log purge has been triggered based on the amount of time since collection began.
OrcmonPurgeFailed	Severe	Resources	Job log purge/archive failed.
PowerInterrupted	Warning	Hardware	A power module has reported that it does not have power.
PowerRestored	Info	Hardware	A power module has reported that power has been restored.
RaidArrayDegraded	Severe	Hardware	The RAID array on the appliance is degraded.
RaidArrayOffline	Severe	Hardware	The RAID array on the appliance is offline. Please contact Cast Iron Support.
RaidArrayOptimal	Info	Hardware	The RAID array on the appliance is optimal.
RaidDiskFailed	Severe	Hardware	A disk on the appliance has failed.
RaidDiskOnline	Info	Hardware	A disk on the appliance is now online and working properly.
RaidDiskRebuilding	Info	Hardware	A disk on the appliance is rebuilding.
RevokeRole	Info	Security	User role revoked.
SwapUsageCritOk	Info	Resources	Swap space usage is below the critical threshold.
SwapUsageCritical	Severe	Resources	Swap space usage has exceeded the critical threshold.
SwapUsageWarnOk	Info	Resources	Swap space usage is below the warning threshold.
SwapUsageWarning	Warning	Resources	Swap space usage has exceeded the warning threshold.
SystemInitComplete	Info	Hardware	The appliance is finished initializing after reboot.
SystemInitStarted	Info	Hardware	The appliance is initializing after being shut down or rebooted.
SystemRecoveryReboot	Warning	Hardware	Operational failure was detected. System is rebooting to recover.
SystemRecoveryRestart	Warning	Hardware	Operational failure was detected. System is restarting to recover.
TemperatureOutOfRange	Severe	Hardware	A monitored temperature within the appliance is too high, which could lead to future failures.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
TemperatureRestored	Info	Hardware	A temperature which was previously out of range (too hot) has come back into range
UpdateStatus	Info	Security	Update user status as active or inactive.
UpdateUser	Info	Security	Update display name of a user.
UpgradeComplete	Info	Hardware	The Cast Iron firmware was successfully upgraded.
UpgradeFailed	Severe	Hardware	The attempt to upgrade the Cast Iron firmware has failed.
UserCreated	Info	Security	New user created.
UserDeleted	Info	Security	User deleted.

## FanFailed

A cooling fan is not operating correctly.

The most likely cause is that the fan has become disconnected or has failed. The recommended action is to 1) confirm the appliance with the corresponding AffectedAppliance serial number has an indicator LED (usually orange), 2) confirm the fan is properly connected, and 3) contact Cast Iron Support for assistance replacing the fan.

Level : *Severe*

Log Message : *Fan {FanID} on appliance {AffectedAppliance} is not functional. Current={CurrentSpeed} RPM. Minimum={MinimumSpeed} RPM.*

System : *Hardware*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23hFanFailedEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.4*

SNMP Trap Number : *1*

## Variables

The FanFailed message contains the following variables:

Table 1. FanFailed Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.
--

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. FanID

Identifier associated with the failed fan.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv1FanID
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.1.1

## 4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

## 5. CurrentSpeed

Current speed of the fan in RPM.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv1CurrentSpeed
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.1.3

## 6. MinimumSpeed

Minimum speed of the fan in RPM.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv1MinimumSpeed
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.1.4

## FanRestored

---

A cooling fan has resumed proper operation.

This notification may occur if a fan previously failed, but has since been repaired or reconnected.

Level : Info

Log Message : Fan {FanID} on appliance {AffectedAppliance} is functional. Current={CurrentSpeed} RPM. Minimum={MinimumSpeed} RPM.

System : Hardware

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hFanRestoredEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 2

## Variables

The FanRestored message contains the following variables:

Table 1. FanRestored Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. FanID</b>  Identifier associated with the failed fan. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv2FanID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.2.1</li></ul>
<b>4. AffectedAppliance</b>  Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.5</li></ul>
<b>5. CurrentSpeed</b>  Current speed of the fan in RPM. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv2CurrentSpeed</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.2.3</li></ul>
<b>6. MinimumSpeed</b>  Minimum speed of the fan in RPM. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv2MinimumSpeed</li></ul>

## HighAvailFailover

---

The High Availability failover feature has taken effect; failover is complete.

HA systems may "fail over" to the Standby appliance based on user request or based on the needs of the system. This notification is sent when the procedure has completed, regardless of the reason that the failover occurred.

Level : *Info*

Log Message : *The High Availability peer {AffectedAppliance} has successfully taken over.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hHighAvailFailoverEv15

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 15

## Variables

---

The HighAvailFailover message contains the following variables:

Table 1. HighAvailFailover Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification. <ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. AffectedAppliance</b>
Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.5</li> </ul>

## HighAvailNotReady

---

The HA system is not Highly Available.

The Cast Iron HA pair is Highly Available when both Active and Standby appliances are fully operational. That is, when Standby is ready to take over for Active in case of a failure. This notification indicates that the Standby appliance is not currently synchronized with Active and therefore is not ready to take over if necessary.

Level : *Warning*

Log Message : *The HA system is not Highly Available. Active appliance is {AffectedAppliance}.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hHighAvailNotReadyEv23

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 23

## Variables

---

The HighAvailNotReady message contains the following variables:

Table 1. HighAvailNotReady Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. AffectedAppliance</b>  Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.5</li></ul>

## HighAvailReady

---

The HA system is Highly Available.

The Cast Iron HA pair is Highly Available when both Active and Standby appliances are fully operational. That is, when Standby is ready to take over for Active in case of a failure. This notification indicates that the Standby appliance has synchronized with Active and is ready to take over if necessary.

Level : *Info*

Log Message : *The HA system is Highly Available with appliance {AffectedAppliance} acting as Active.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hHighAvailReadyEv22

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 22

## Variables

---

The HighAvailReady message contains the following variables:

Table 1. HighAvailReady Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. AffectedAppliance</b>  Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.5</li></ul>

## IntrusionInform

---

The appliance case has been opened.

This applies to 7198-type appliances. The appliance has reported that its case was opened. This is an informational message; the intrusion sensor on this appliance does not affect the appliance's behavior. If this message occurs unexpectedly, you may wish to ensure the physical security of your appliance.

Level : *Warning*

Log Message : *The appliance {AffectedAppliance} has been opened.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hIntrusionInformEv7

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 7

## Variables

---

The IntrusionInform message contains the following variables:

Table 1. IntrusionInform Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. AffectedAppliance</b>  Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.5</li></ul>

## RaidDiskRebuilding

---

A disk on the appliance is rebuilding.

A rebuilding disk actively copies data from the online disk. While in this state, system performance may be affected and the RAID Array state is usually "Degraded". System performance and the RAID Array state should return to normal when rebuilding has completed.

Level : *Info*

Log Message : *The RAID disk {DiskID} on appliance {AffectedAppliance} is rebuilding.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hRaidDiskRebuildingEv13

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 13

## Variables

---

The RaidDiskRebuilding message contains the following variables:

Table 1. RaidDiskRebuilding Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. DiskID</b>  Identifier associated with the associated disk.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv13DiskID
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.13.1

#### 4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

## SystemInitComplete

The appliance is finished initializing after reboot.

This message indicates that the appliance is fully operational after completing a reboot.

Level : *Info*

Log Message : *The appliance {AffectedAppliance} is finished initializing after reboot.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hSystemInitCompleteEv21

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 21

## Variables

The SystemInitComplete message contains the following variables:

Table 1. SystemInitComplete Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

## SystemInitStarted

---

The appliance is initializing after being shut down or rebooted.

The appliance sends this message early in the bootup process. This message is intended as informational, indicating that a reboot has occurred.

Level : *Info*

Log Message : *The appliance {AffectedAppliance} is initializing after being shut down or rebooted.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hSystemInitStartedEv20

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 20

## Variables

---

The SystemInitStarted message contains the following variables:

Table 1. SystemInitStarted Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

## SystemRecoveryReboot

---

Operational failure was detected. System is rebooting to recover.

The Cast Iron appliance continually monitors the health of components within the system. If a component has a momentary failure, the system may choose to reboot to recover from the situation. In the case of a recurring error, further reboots are not used until an hour has passed; instead the runtime is restarted. See the CLI command "system autoreboot" for information about controlling this behavior.

Level : *Warning*

Log Message : *Operational failure was detected on appliance {AffectedAppliance}. System is rebooting to recover. Uptime {Days} days, {Hours}:{Minutes}.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hSystemRecoveryRebootEv18

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 18

## Variables

---

The SystemRecoveryReboot message contains the following variables:

Table 1. SystemRecoveryReboot Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. AffectedAppliance</b>

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

#### 4. Days

The number of days the system has been up since the last reboot.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv18Days
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.18.2

#### 5. Hours

The number of hours the system has been up since the last reboot.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv18Hours
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.18.3

#### 6. Minutes

The number of minutes the system has been up since the last reboot.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv18Minutes
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.18.4

## TemperatureOutOfRange

---

A monitored temperature within the appliance is too high, which could lead to future failures.

Level : Severe

Log Message : Temperature {TempID} on appliance {AffectedAppliance} is out of range. Current={CurrentTemperature} deg C.  
Maximum={MaximumTemperature} deg C.

System : Hardware

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hTemperatureOutOfRangeEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 3

---

## Variables

The TemperatureOutOfRange message contains the following variables:

Table 1. TemperatureOutOfRange Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. TempID

Identifier associated with the monitored temperature.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv3TempID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.3.1

## 4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.5

## 5. CurrentTemperature

Current temperature in degrees Celcius.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv3CurrentTemperature
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.3.3

## 6. MaximumTemperature

Maximum allowed temperature in degrees Celcius.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv3MaximumTemperature
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.23.1.4.1.3.4

## UpgradeFailed

The attempt to upgrade the Cast Iron firmware has failed.

Level : *Severe*

Log Message : *Attempt to upgrade Cast Iron firmware on appliance {AffectedAppliance} from version {OldVersion} to version {NewVersion} failed: {Message}.*

System : *Hardware*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23hUpgradeFailedEv17

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.4

SNMP Trap Number : 17

## Variables

The UpgradeFailed message contains the following variables:

Table 1. UpgradeFailed Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

#### 4. OldVersion

The version of firmware which is currently operating on the Cast Iron appliance.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv17OldVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.17.2

#### 5. NewVersion

The version of the attempted firmware upgrade.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23hEv17NewVersion
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.4.1.17.3

#### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## NetworkAutohost

---

The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.

The appliance requires the ability to resolve its own hostname to an IP address. The mapping is validated each time the appliance's network subsystem is started, and may be determined by DNS lookup or from an entry which was manually added via the CLI. If the appliance cannot determine the mapping this way, the autohost feature automatically adds a "best-guess" entry. While this automatic entry may work in many circumstances, it is not guaranteed to allow proper appliance operation in all environments. This notification may indicate a misconfiguration in the network. Therefore it is recommended that the user examine the appliance's network configuration and either enter the appliance's IP address and hostame to DNS, or manually add an entry to /etc/hosts by using the CLI command "net add etchost".

Level : *Warning*

Log Message : *Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}*.

System : *Network*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23nNetworkAutohostEv3*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.5*

SNMP Trap Number : 3

## Variables

---

The NetworkAutohost message contains the following variables:

Table 1. NetworkAutohost Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. Hostname</b>  Hostname of the appliance as added to /etc/hosts. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv3Hostname</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.23.1.5.1.3.1</li></ul>

## NetworkInvalidRoute

Could not add a requested network route.

One of the requested custom routes could not be added. Please check the network configuration, paying particular attention to the gateway IP address and the ethernet link.

Level : *Warning*

Log Message : *Could not add route to {DestinationIP} on {LinkName}.*

System : *Network*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23nNetworkInvalidRouteEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.5

SNMP Trap Number : 4

## Variables

The NetworkInvalidRoute message contains the following variables:

Table 1. NetworkInvalidRoute Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. DestinationIP</b>
IP address or netmask defining the requested route.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv4DestinationIP</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.23.1.5.1.4.1</li> </ul>
<b>4. LinkName</b>

Name of the network link.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv4LinkName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.5.1.4.2

## NetworkLinkDown

---

The network link is down (offline).

The network link could be reported as down because the ethernet cable has been disconnected or the remote host or switch has disabled the port. To adjust or disable network link detection, see the CLI reference guide for the command "net set carrier".

Level : *Warning*

Log Message : *Network link {LinkName} on appliance {AffectedAppliance} is down (offline).*

System : *Network*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23nNetworkLinkDownEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.5

SNMP Trap Number : 2

## Variables

---

The NetworkLinkDown message contains the following variables:

Table 1. NetworkLinkDown Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. LinkName</b>
Name of the network link.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-PLATFORM-MIB::ciC23nEv2LinkName</li></ul>

- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.5.1.2.1

#### 4. AffectedAppliance

Serial number of the affected appliance. In some cases this could be different than the serial number of the appliance sending a notification, particularly in the case of High Availability pairs where the Active peer could send a notification on behalf of the Standby peer.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvAffectedAppliance
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.5

## Platform Resources Notifications

---

Provides a comprehensive list of resources notifications sent from the Platform Module.

- [DiskUsageCritOk](#)  
Disk space usage is below the critical threshold.
- [DiskUsageCritical](#)  
Disk space usage has exceeded the critical threshold.
- [DiskUsageWarnOk](#)  
Disk space usage is below the warning threshold.
- [DiskUsageWarning](#)  
Disk space usage has exceeded the warning threshold.
- [HighAvailVersionError](#)  
The version of CIOS running on Standby does not match that running on Active.
- [LargeFileWarning](#)  
Large file taking up space on heavily loaded disk.
- [OrcmonArchiveError](#)  
Job log archive error.
- [OrcmonDatabaseError](#)  
Job log database error.
- [OrcmonDiskFull](#)  
Normal job log purging did not clear enough disk space. Purging half of all job logs in attempt to recover disk space.
- [OrcmonDiskFullNoPurge](#)  
Failed to purge any job logs to recover disk space.
- [OrcmonDiskTrigger](#)  
Job log purge was initiated due to an available disk space trigger.
- [OrcmonExportCdError](#)  
Could not upload the job log archive file to the FTP server: Could not cd to the destination directory.
- [OrcmonExportError](#)  
Failure uploading archive file to FTP server.
- [OrcmonExportFTP](#)  
Exporting archive file to FTP server.
- [OrcmonExportLocal](#)  
Exporting job log data to a local archive file.
- [OrcmonExportStoreErr](#)  
Failure uploading archive file to FTP server: Could not store file.

- [OrcmonExportedJobs](#)  
Exported jobs from the job log.
- [OrcmonPurgeByCompl](#)  
Job log purge has been triggered based on the number of stored completed jobs.
- [OrcmonPurgeByErrored](#)  
Job log purge has been triggered based on the number of stored errored jobs.
- [OrcmonPurgeByTime](#)  
Job log purge has been triggered based on the amount of time since the last purge.
- [OrcmonPurgeByTimeNP](#)  
Job log purge has been triggered based on the amount of time since collection began.
- [OrcmonPurgeFailed](#)  
Job log purge/archive failed.
- [SwapUsageCritOk](#)  
Swap space usage is below the critical threshold.
- [SwapUsageCritical](#)  
Swap space usage has exceeded the critical threshold.
- [SwapUsageWarnOk](#)  
Swap space usage is below the warning threshold.
- [SwapUsageWarning](#)  
Swap space usage has exceeded the warning threshold.

## DiskUsageCritOk

Disk space usage is below the critical threshold.

Level : *Info*

Log Message : *Disk space usage on {Disk} is now below the {Threshold}% critical threshold - current usage is {Usage}%*

System : *Resources*

SNMP Name : *CASTIRON-COMP-PLATFORM-MIB::ciC23rDiskUsageCritOkEv6*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.23.1.6*

SNMP Trap Number : *6*

## Variables

The DiskUsageCritOk message contains the following variables:

Table 1. DiskUsageCritOk Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. Disk

Name of the disk being monitored

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23rEv6Disk
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.6.1.6.1

### 4. Threshold

Disk usage threshold

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23rEv6Threshold
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.6.1.6.2

### 5. Usage

Current disk usage

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23rEv6Usage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.6.1.6.3

# Platform Security Notifications

Provides a comprehensive list of security notifications sent from the Platform Module.

- **AccessViolation**  
An authenticated user attempted to access a section of the Cast Iron product which would require additional authorization.
- **AuthFailure**  
An attempt to authenticate with the appliance failed.
- **AuthLogOut**  
Event showing logging out of the user.
- **AuthSuccess**  
Attempt to authenticate with the appliance was successful.
- **GrantRole**  
grant new role created.
- **GroupCreated**  
New group created.
- **GroupDeleted**  
Group deleted.
- **RevokeRole**  
User role revoked.
- **UpdateStatus**  
Update user status as active or inactive.

- **UpdateUser**  
Update display name of a user.
- **UserCreated**  
New user created.
- **UserDeleted**  
User deleted.

**Parent topic:** Platform Module

## AuthLogOut

---

Event showing logging out of the user.

Level : *Info*

Log Message : *User {UserName} with session id {SessionId} logged out successfully.*

System : *Security*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23sAuthLogOutEv12

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.7

SNMP Trap Number : 12

## Variables

---

The AuthLogOut message contains the following variables:

Table 1. AuthLogOut Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. UserName

Name of the user.

- **Type :** String
- **SNMP Object Name :** CASTIRON-COMP-PLATFORM-MIB::ciC23sEv12UserName
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.12.1

### 4. SessionId

Session ID of the user logging out.

- **Type :** String
- **SNMP Object Name :** CASTIRON-COMP-PLATFORM-MIB::ciC23sEv12SessionId
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.12.2

## AuthSuccess

---

Attempt to authenticate with the appliance was successful.

Level : *Info*

Log Message : *Authentication success for user {UserName}, from host {Host} with session id {SessionId}.*

System : *Security*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23sAuthSuccessEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.7

SNMP Trap Number : 3

## Variables

---

The AuthSuccess message contains the following variables:

Table 1. AuthSuccess Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type :** String
- **SNMP Object Name :** CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. UserName

Name of the user who logged on successfully.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23sEv3UserName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.3.1

### 4. Host

The name of the host the user attempted to log in from.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23sEv3Host
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.3.2

### 5. SessionId

The Session ID of the user who logged on.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23sEv3SessionId
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.3.3

## GrantRole

---

grant new role created.

Level : *Info*

Log Message : *User {UserName} has been granted role of {GroupName}*.

System : *Security*

SNMP Name : CASTIRON-COMP-PLATFORM-MIB::ciC23sGrantRoleEv9

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.23.1.7

SNMP Trap Number : 9

## Variables

---

The GrantRole message contains the following variables:

Table 1. GrantRole Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. UserName

Name of the user whose role is granted.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23sEv9UserName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.9.1

## 4. GroupName

Group name granted to the user.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-PLATFORM-MIB::ciC23sEv9GroupName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.23.1.7.1.9.2

## SAP Module

---

The SAP Module provides activities to access SAP servers. This section contains details for the messages delivered from the SAP Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the SAP Module.

MIB Name : CASTIRON-COMP-SAP-MIB

MIB OID : .1.3.6.1.4.1.13336.2.2.3.19

The following table provides an alphabetical list of all notifications that can be issued by the SAP Module.

Table 1. Notifications issued by the SAP Module

Notification	Level	System	Description
<a href="#">AddingServerInfo</a>	Info	Orchestration	Adding server gateway.
<a href="#">BAPIActivationError</a>	Severe	Orchestration	Error occurred while activating the BAPI activity.
<a href="#">BAPIParseError</a>	Severe	Orchestration	Error occurred while parsing schema for the specified BAPI.
<a href="#">BAPIReturnError</a>	Severe	Orchestration	Error returned by specified BAPI in the type field.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
CompleteFunctionExec	Info	Orchestration	This is the name of the function which is executed by the BAPI or RFC activity
ConnectError	Severe	Orchestration	The SAP operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The SAP operation failed while trying to connect to the server. This will cause a retry.
ConnectionPoolError	Severe	Orchestration	Connection Pool returned null connection.
CreateTID	Info	Orchestration	Creating a specified TID in the TID manager.
CreateTrcDirFailed	Warning	Orchestration	Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.
FuncRetStructNotFound	Info	Orchestration	This is to report that activity is not able to find the return structure for the function
FunctionLookup	Info	Orchestration	This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
FunctionLookupComp	Info	Orchestration	This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
GatewayCommWarning	Warning	Orchestration	Error occurred, while communicating to SAP Gateway.
GatewayRegisterError	Info	Orchestration	Server gateway specified already exists.
GatewayRemoveInfo	Info	Orchestration	Removing server gateway.
IDOCExtensionError	Severe	Orchestration	IDOC contains more than one type of IDOC extension type.
IDOCSentInfo	Info	Orchestration	IDOC with specified TID was sent to SAP.
IDOCTypeError	Severe	Orchestration	Received IDOC contains more than one type of IDOC type.
InitializationError	Severe	Orchestration	Error occurred while initializing the send IDOC activity.
InvalidRFCName	Severe	Orchestration	Unable to find specified RFC name.
InvalidTIDerror	Severe	Orchestration	TID was not set in the task context.
ListenerInstanceInfo	Info	Orchestration	SAP listener instance was started for SAP gateway.
ListenerStartInfo	Info	Orchestration	SAP listener started again for specified host.
ListenerStopWarning	Warning	Orchestration	Error occurred while stopping the listener for specified host.
NoHandlerError	Warning	Orchestration	Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
NoSegmentWarning	Warning	Orchestration	The specified IDOC number contains no data segment.
NonReturnStruct	Severe	Orchestration	No return structure returned by the specified BAPI.
ParseError	Severe	Orchestration	Error occurred while parsing schema for the RFC.
PoolAddInfo	Info	Orchestration	Adding Connection pool with the specified name.
PoolExistInfo	Info	Orchestration	Connection pool with specified name already exists.
ProcessDocError	Severe	Orchestration	Error occurred while processing the IDOC.
RFCActivationError	Severe	Orchestration	Error occurred while activating the RFC activity.
ReceiveTIDNotFound	Severe	Orchestration	Specified TID was not found in TID manager.
RemoveInfo	Info	Orchestration	Removing connection pool with specified name.
RollbackWarning	Warning	Orchestration	Error occurred while rolling back the transaction. Ignoring and continuing the activity.
SAPActivityError	Severe	Orchestration	Error occurred while processing SAP activity.
SAPValidationError	Severe	Orchestration	Input data was not valid for specified RFC. The items specified were invalid.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
SapLibNotFound	Severe	Orchestration	Sap activity is not able to activate because the sap provided libraries are not installed.
SendIDOCActivation	Severe	Orchestration	Error occurred while activating the Send IDOC activity.
SendIDOCCreateInfo	Info	Orchestration	Created the specified TID for starting a transaction in send IDOC activity.
SendIDOCValidation	Severe	Orchestration	Input data was not valid for IDOC. The specified item(s) were invalid.
SerializingError	Severe	Orchestration	Error occurred while creating IDOC from input parameter.
StartFunctionExec	Info	Orchestration	This is the name of the function which is going to be executed by the BAPI or RFC activity
StartWarning	Info	Orchestration	Error occurred while starting the server.
TIDCheck	Info	Orchestration	SAP TIP check for specified ID is requested by SAP.
TIDCommit	Info	Orchestration	SAP TID has been committed by SAP.
TIDCommitUnknown	Severe	Orchestration	SAP attempting to confirm an unknown or uncommitted TID.
TIDCommittedInfo	Info	Orchestration	Specified TID was committed to SAP.
TIDCommittingInfo	Info	Orchestration	Committing TID to SAP.
TIDConfirmed	Info	Orchestration	SAP TID has been confirmed and deleted from the TID manager.
TIDRollback	Info	Orchestration	SAP TID has been rolled back.
TIDSentInfo	Info	Orchestration	Sending the IDOC with specified TID to SAP.
TIDUnknown	Severe	Orchestration	SAP has requested rollback for unknown TID.
TransactionalError	Severe	Orchestration	Unable to find the BAPI transaction RFCs.
UnicodeGateway	Info	Orchestration	The unicode instance property is set through JCONSOLE.
ValidationError	Severe	Orchestration	Error occurred while validating the input data.
ValidationInfo	Info	Orchestration	Validation is on/off for the specified field value.

## ConnectError

The SAP operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to the SAP server after {NumberOfRetryAttempts} attempts. Error is: Error Group {ErrorGroup}, Error Key {ErrorKey}, Error Message {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19cConnectErrorEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.1

SNMP Trap Number : 1

## Variables

The ConnectError message contains the following variables:

Table 1. ConnectError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification. <ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>

#### **4. Orchestration**

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### **5. NumberOfRetryAttempts**

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.1

#### **6. ErrorGroup**

The group mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorGroup
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.2

#### **7. ErrorKey**

The key mentioned in the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv1ErrorKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.1.3

#### **8. Message**

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## **ConnectRetry**

---

The SAP operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the SAP server. Error is: Error Group: {ErrorGroup} Error Key {ErrorKey} Error Message {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {RetryAttemptNumber} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19cConnectRetryEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.1

SNMP Trap Number : 2

## Variables

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. ErrorGroup</b>  The group mentioned in the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorGroup</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.1</li></ul>
<b>6. ErrorKey</b>  The key mentioned in the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19cEv2ErrorKey</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.2</li></ul>
<b>7. Message</b>  Textual description of the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>

## 8. RetryAttemptNumber

The current number of retries.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-COMP-SAP-MIB::ciC19cEv2RetryAttemptNumber
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.4

## 9. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-COMP-SAP-MIB::ciC19cEv2TotalRetryAttempts
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.5

## 10. IntervalForRetries

The specified time interval between retries.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-COMP-SAP-MIB::ciC19cEv2IntervalForRetries
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.3.19.1.1.1.2.6

## PoolAddInfo

---

Adding Connection pool with the specified name.

Level : *Info*

Log Message : *Adding Connection Pool with name {PoolName}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19cPoolAddInfoEv4

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.1

SNMP Trap Number : 4

## Variables

---

The PoolAddInfo message contains the following variables:

Table 1. PoolAddInfo Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type :** String
- **SNMP Object Name :** CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID :** .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. PoolName

Adding the connection pool .

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19cEv4PoolName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.1.1.4.1

## SAP Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the SAP Module.

- [AddingServerInfo](#)  
Adding server gateway.
- [BAPIActivationError](#)  
Error occurred while activating the BAPI activity.
- [BAPIParseError](#)  
Error occurred while parsing schema for the specified BAPI.
- [BAPIReturnError](#)  
Error returned by specified BAPI in the type field.
- [CompleteFunctionExec](#)  
This is the name of the function which is executed by the BAPI or RFC activity
- [CreateTID](#)  
Creating a specified TID in the TID manager.
- [CreateTrcDirFailed](#)  
Exception while setting the log directory for SAP trace files. The trace files generated by sap will be created on default location.
- [FuncRetStructNotFound](#)  
This is to report that activity is not able to find the return structure for the function
- [FunctionLookup](#)  
This is marking the start of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [FunctionLookupComp](#)  
This is marking the completion of finding the meta data of the BAPI or RFC activity in the SAP Repository
- [GatewayCommWarning](#)  
Error occurred, while communicating to SAP Gateway.
- [GatewayRegisterError](#)  
Server gateway specified already exists.
- [GatewayRemoveInfo](#)  
Removing server gateway.
- [IDOCExtensionError](#)  
IDOC contains more than one type of IDOC extension type.
- [IDOCSentInfo](#)  
IDOC with specified TID was sent to SAP.
- [IDOCTypeError](#)  
Received IDOC contains more than one type of IDOC type.
- [InvalidRFCName](#)  
Unable to find specified RFC name.
- [ListenerInstanceInfo](#)  
SAP listener instance was started for SAP gateway.
- [ListenerStartInfo](#)  
SAP listener started again for specified host.
- [ListenerStopWarning](#)  
Error occurred while stopping the listener for specified host.
- [NoHandlerError](#)  
Received an IDOC for specified IDOC type and no activity was registered to process it. Ignoring the IDOC.
- [NoSegmentWarning](#)  
The specified IDOC number contains no data segment.
- [NonReturnStruct](#)  
No return structure returned by the specified BAPI.
- [ParseError](#)  
Error occurred while parsing schema for the RFC.
- [ProcessDocError](#)  
Error occurred while processing the IDOC.
- [RFCActivationError](#)  
Error occurred while activating the RFC activity.
- [ReceiveTIDNotFound](#)  
Specified TID was not found in TID manager.
- [RollbackWarning](#)  
Error occurred while rolling back the transaction. Ignoring and continuing the activity.
- [SAPActivityError](#)  
Error occurred while processing SAP activity.
- [SAPValidationErrors](#)  
Input data was not valid for specified RFC. The items specified were invalid.

- [SapLibNotFound](#)  
Sap activity is not able to activate because the sap provided libraries are not installed.
- [SendIDOCActivation](#)  
Error occurred while activating the Send IDOC activity.
- [SendIDOCCreateInfo](#)  
Created the specified TID for starting a transaction in send IDOC activity.
- [SendIDOCValidation](#)  
Input data was not valid for IDOC. The specified item(s) were invalid.
- [StartFunctionExec](#)  
This is the name of the function which is going to be executed by the BAPI or RFC activity
- [StartWarning](#)  
Error occurred while starting the server.
- [TIDCheck](#)  
SAP TIP check for specified ID is requested by SAP.
- [TIDCommit](#)  
SAP TID has been committed by SAP.
- [TIDCommitUnknown](#)  
SAP attempting to confirm an unknown or uncommitted TID.
- [TIDCommittedInfo](#)  
Specified TID was committed to SAP.
- [TIDCommittingInfo](#)  
Committing TID to SAP.
- [TIDConfirmed](#)  
SAP TID has been confirmed and deleted from the TID manager.
- [TIDRollback](#)  
SAP TID has been rolled back.
- [TIDSentInfo](#)  
Sending the IDOC with specified TID to SAP.
- [TIDUnknown](#)  
SAP has requested rollback for unknown TID.
- [TransactionalError](#)  
Unable to find the BAPI transaction RFCs.
- [UnicodeGateway](#)  
The unicode instance property is set through JCONSOLE.
- [ValidationError](#)  
Error occurred while validating the input data.
- [ValidationInfo](#)  
Validation is on/off for the specified field value.

## BAPIReturnError

Error returned by specified BAPI in the type field.

Level : Severe

Log Message : *Error returned by BAPI {BAPIName} in the type field. The values returned are TYPE: {Type}, MESSAGE: {Message}, LOGNO: {LogNumber}, LOGMSGNO {LogMessage}*

System : Orchestration

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oBAPIReturnErrorEv18

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 18

## Variables

The BAPIReturnError message contains the following variables:

Table 1. BAPIReturnError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. BAPIName

The name of the BAPI for which the error occurred.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv18BAPIName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.18.1

#### 6. Type

The type value returned.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv18Type
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.18.2

#### 7. Message

The message value returned.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv18Message
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.18.3

#### 8. LogNumber

The log number value returned.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv18LogNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.18.4

#### 9. LogMessage

The log message number value returned.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv18LogMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.18.5

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. FunctionName

Name of the BAPI or RFC

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv46FunctionName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.2.1.46.1

## GatewayCommWarning

Error occurred, while communicating to SAP Gateway.

Level : *Warning*

Log Message : *Error occurred, while communicating to SAP Gateway (host {HostName}, ProgramId {ProgramID}, Service {Service}), trying again in {IntervalForRetries} seconds.* |n*Original SAP error was |n {Message}* |n*If the SAP message indicates a retry interval it may not be correct.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oGatewayCommWarningEv35

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.19.1.2

## Variables

---

The GatewayCommWarning message contains the following variables:

Table 1. GatewayCommWarning Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. HostName</b>
The host name for which warning occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv35HostName</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.35.1</li> </ul>
<b>6. ProgramID</b>
The program ID for which warning occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv35ProgramID</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.35.2</li> </ul>
<b>7. Service</b>
The service name for which warning occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv35Service</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.35.3</li> </ul>
<b>8. IntervalForRetries</b>

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv35IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.35.4

## 9. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## GatewayRegisterError

---

Server gateway specified already exists.

Level : *Info*

Log Message : *Server Gateway {GatewayName} already exists, Using the existing definition.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oGatewayRegisterErrorEv29

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 29

## Variables

---

The GatewayRegisterError message contains the following variables:

Table 1. GatewayRegisterError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. GatewayName

The gateway name which already exists.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv29GatewayName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.29.1

## GatewayRemoveInfo

---

Removing server gateway.

Level : *Info*

Log Message : *Removing Server Gateway {GatewayName}*.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oGatewayRemoveInfoEv31

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 31

## Variables

---

The GatewayRemoveInfo message contains the following variables:

Table 1. GatewayRemoveInfo Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. GatewayName

The gateway name which is being removed.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv31GatewayName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.2.1.31.1

## ListenerStartInfo

---

SAP listener started again for specified host.

Level : *Info*

Log Message : SAP listener started again for host{*HostName*}, programid {*ProgramID*} and service {*Service*}.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oListenerStartInfoEv37

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 37

## Variables

---

The ListenerStartInfo message contains the following variables:

Table 1. ListenerStartInfo Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. HostName

The host name for which listener started.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv37HostName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.37.1

#### 6. ProgramID

The program ID for which listener started.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv37ProgramID
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.37.2

#### 7. Service

The service name for which listener started.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv37Service
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.37.3

## ListenerStopWarning

---

Error occurred while stopping the listener for specified host.

Level : *Warning*

Log Message : *Exception while stopping the listener for host {HostName}, ProgramId {ProgramID} and Service {Service}.The Exception is {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oListenerStopWarningEv39

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

## Variables

---

The ListenerStopWarning message contains the following variables:

Table 1. ListenerStopWarning Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. HostName</b>
The host name for which error occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv39HostName</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.39.1</li> </ul>
<b>6. ProgramID</b>
The program ID for which error occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv39ProgramID</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.39.2</li> </ul>
<b>7. Service</b>
The service name for which error occurred.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SAP-MIB::ciC19oEv39Service</li> <li>• <b>SNMP OID</b> : .1.3.6.1.4.1.13336.2.2.3.19.1.2.1.39.3</li> </ul>
<b>8. Message</b>

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## NoSegmentWarning

The specified IDOC number contains no data segment.

Level : *Warning*

Log Message : *The IDOC number {IDOCNumber} contains no data segment.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oNoSegmentWarningEv22

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 22

## Variables

The NoSegmentWarning message contains the following variables:

Table 1. NoSegmentWarning Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. IDOCNumber

The IDOC number.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv22IDOCNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.2.1.22.1

## RollbackWarning

---

Error occurred while rolling back the transaction. Ignoring and continuing the activity.

Level : *Warning*

Log Message : *Exception while rolling back the transaction.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oRollbackWarningEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 2

## Variables

---

The RollbackWarning message contains the following variables:

Table 1. RollbackWarning Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## TIDConfirmed

SAP TID has been confirmed and deleted from the TID manager.

Level : *Info*

Log Message : *SAP TID {TID} has been confirmed and deleted from the TID Manager.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19oTIDConfirmedEv6*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.2*

SNMP Trap Number : *6*

## Variables

The TIDConfirmed message contains the following variables:

Table 1. TIDConfirmed Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type :** String
- **SNMP Object Name :** CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type :** Integer
- **SNMP Object Name :** CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type :** String
- **SNMP Object Name :** CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID :** 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. TID

TID which was confirmed and deleted.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv6TID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.2.1.6.1

## TIDRollback

---

SAP TID has been rolled back.

Level : *Info*

Log Message : SAP TID {TID} has been rolled-back by SAP.

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SAP-MIB::ciC19oTIDRollbackEv7

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.19.1.2

SNMP Trap Number : 7

## Variables

---

The TIDRollback message contains the following variables:

Table 1. TIDRollback Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. TID

TID which was rolled back.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SAP-MIB::ciC19oEv7TID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.19.1.2.1.7.1

## ConnectionPoolError

---

Connection Pool returned null connection.

Level : *Severe*

Log Message : *Null connection return by the connection pool.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SAP-MIB::ciC19iConnectionPoolErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.19.1.3*

SNMP Trap Number : *1*

## Variables

---

The ConnectionPoolError message contains the following variables:

Table 1. ConnectionPoolError Message Variables

- |                        |
|------------------------|
| 1. <b>SerialNumber</b> |
|------------------------|

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## STS Module

---

The SAML STS Module This section contains details for the messages delivered from the STS Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the STS Module.

MIB Name : CASTIRON-COMP-STS-MIB

MIB OID : .1.3.6.1.4.1.13336.2.2.3.27

The following table provides an alphabetical list of all notifications that can be issued by the STS Module.

Table 1. Notifications issued by the STS Module

Notification	Level	System	Description
ActivationFailed	Severe	Orchestration	Activation of Get SAML 2.0 token failed
AssertionEmpty	Severe	Orchestration	Received empty response from Security Token Service. Cannot get the SAML Assertion.
InputBodyConsidered	Info	Orchestration	RequestSecurityToken from Map Inputs is sent as request body because data sent in Map Inputs holds higher priority than in Configure Panel
RequestLocation	Info	Orchestration	Location of request being sent to Security Token Service
UriDeprecated	Warning	Orchestration	Security Token Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.

- [STS Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the STS Module.

## Salesforce.com Module

The Salesforce.com Module provides access to the Salesforce.com online service. This section contains details for the messages delivered from the Salesforce.com Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Salesforce.com Module.

MIB Name : **CASTIRON-COMP-SFDC-MIB**

MIB OID : **.1.3.6.1.4.1.13336.2.2.3.3**

The following table provides an alphabetical list of all notifications that can be issued by the Salesforce.com Module.

Table 1. Notifications issued by the Salesforce.com Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	There was a problem in activating the activity.
ActivityOutput	Info	Orchestration	The activity has completed its operation and outputted param objects in output parameter.
BatchPollStart	Info	Orchestration	Starting a batch poll for index range specified.
ConnectFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
ConnectionFailed	Severe	Orchestration	The Salesforce.com operation failed because a connection to the server could not be established.
ConnectionRetry	Warning	Orchestration	The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
ConnectionTryAgain	Info	Orchestration	Not able to connect to Salesforce endpoint. Trying to establish a new session.
EndpointNull	Severe	Orchestration	The endpoint object provided to Salesforce.com activity is null.
ExecuteError	Severe	Orchestration	An error occurred while executing the activity.
ExecuteProblem	Severe	Orchestration	An error occurred while executing the query.
InitializeProblem	Warning	Orchestration	Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
InputParamMapped	Info	Orchestration	The optional input parameter in the activity is mapped.
InputParamNotMapped	Info	Orchestration	The optional input parameter in the activity is not mapped.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
InvalidQuery	Severe	Orchestration	The query provided to Salesforce.com was invalid.
InvalidSFDCField	Severe	Orchestration	The field is invalid in Salesforce.com.
InvalidSFDCObject	Severe	Orchestration	The object is invalid in Salesforce.com
LargeData	Severe	Orchestration	The activity was not able to get data as id limit has exceeded.
LargeDataError	Severe	Orchestration	An error occurred due to large data which activity cannot handle.
LoginFailure	Severe	Orchestration	Failure while performing a login into Salesforce.com.
MarshalError	Severe	Orchestration	An error occurred while writing output parameters in the activity.
MetadataError	Severe	Orchestration	Unable to obtain meta data from Salesforce.com.
MetadataObjectError	Severe	Orchestration	Unable to obtain meta data for the object from Salesforce.com.
NoDatafound	Info	Orchestration	No data was found by the activity in the interval specified.
OptionalInputError	Severe	Orchestration	Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
ParameterOutput	Info	Orchestration	The activity has completed its operation and outputted objects in output parameter.
ParameterResults	Info	Orchestration	The activity has completed its operation and outputted result objects in output parameter.
PollActivateError	Severe	Orchestration	The poll activity failed to activate.
PollOutput	Info	Orchestration	The number of objects outputted for a batch poll.
PollReturnedNothing	Info	Orchestration	The poll activity did not return any ids for specified interval.
PollReturnedResults	Info	Orchestration	Poll activity returned these number of ids for interval specified.
SessionInvalid	Info	Orchestration	Salesforce session timed out and activity is establishing a new session.
SfdcErrorInternal	Severe	Orchestration	An internal error occurred in Salesforce.com connector.
ShortPoll	Info	Orchestration	The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
StillRun	Info	Orchestration	There is a problem in connectivity and messages will be picked up from this time when connectivity is established.
TimeTooClose	Info	Orchestration	The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
UnexpectedSFDCFault	Severe	Orchestration	Salesforce.com returned an unexpected fault that is not declared in the method signature.
UnmarshalError	Severe	Orchestration	An error occurred while reading input parameters in the activity.

# Salesforce.com Connection Notifications

---

Provides a comprehensive list of connection notifications sent from the Salesforce.com Module.

- [ConnectionFailed](#)  
The Salesforce.com operation failed because a connection to the server could not be established.
- [ConnectionRetry](#)  
The Salesforce.com operation failed while trying to connect to the server. This will cause a retry.
- [ConnectionTryAgain](#)  
Not able to connect to Salesforce endpoint. Trying to establish a new session.
- [LoginFailure](#)  
Failure while performing a login into Salesforce.com.
- [OptionalInputError](#)  
Salesforce session timed out. The session was not created as optional connection input parameter was not mapped.
- [SessionInvalid](#)  
Salesforce session timed out and activity is establishing a new session.
- [StillRun](#)  
There is a problem in connectivity and messages will be picked up from this time when connectivity is established.

## ConnectionFailed

---

The Salesforce.com operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to Salesforce.com after {NumberOfRetryAttempts} attempts. Error is: {Message}.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3cConnectionFailedEv4*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.1*

SNMP Trap Number : *4*

## Variables

---

The ConnectionFailed message contains the following variables:

Table 1. ConnectionFailed Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3cEv4NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.1.1.4.1

### 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## LoginFailure

---

Failure while performing a login into Salesforce.com.

Level : *Severe*

Log Message : *Salesforce.com logon failure. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3cLoginFailureEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.3.1.1

SNMP Trap Number : 1

## Variables

---

The LoginFailure message contains the following variables:

Table 1. LoginFailure Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

<b>2. Severity</b>
--------------------

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

<b>3. JobID</b>
-----------------

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

## Salesforce.com Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the Salesforce.com Module.

- **ActivateError**  
There was a problem in activating the activity.
- **ActivityOutput**  
The activity has completed its operation and outputted param objects in output parameter.
- **BatchPollStart**  
Starting a batch poll for index range specified.
- **ConnectFailed**  
The Salesforce.com operation failed because a connection to the server could not be established. This happened cause of reasons other than connectivity issues.
- **ExecuteError**  
An error occurred while executing the activity.
- **ExecuteProblem**  
An error occurred while executing the query.
- **InitializeProblem**  
Error from Salesforce.com while initializing activity. Trying to ignore error and proceed.
- **InputParamMapped**  
The optional input parameter in the activity is mapped.
- **InputParamNotMapped**  
The optional input parameter in the activity is not mapped.
- **InvalidQuery**  
The query provided to Salesforce.com was invalid.
- **InvalidSFDCField**  
The field is invalid in Salesforce.com.
- **InvalidSFDCObject**  
The object is invalid in Salesforce.com

- [LargeData](#)  
The activity was not able to get data as id limit has exceeded.
- [LargeDataError](#)  
An error occurred due to large data which activity cannot handle.
- [MetadataError](#)  
Unable to obtain meta data from Salesforce.com.
- [MetadataObjectError](#)  
Unable to obtain meta data for the object from Salesforce.com.
- [NoDatafound](#)  
No data was found by the activity in the interval specified.
- [ParameterOutput](#)  
The activity has completed its operation and outputted objects in output parameter.
- [ParameterResults](#)  
The activity has completed its operation and outputted result objects in output parameter.
- [PollActivateError](#)  
The poll activity failed to activate.
- [PollOutput](#)  
The number of objects outputted for a batch poll.
- [PollReturnedNothing](#)  
The poll activity did not return any ids for specified interval.
- [PollReturnedResults](#)  
Poll activity returned these number of ids for interval specified.
- [ShortPoll](#)  
The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.
- [TimeTooClose](#)  
The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.
- [UnexpectedSFDCFault](#)  
Salesforce.com returned an unexpected fault that is not declared in the method signature.

## ActivateError

There was a problem in activating the activity.

Level : *Severe*

Log Message : *Activity could not get activated. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3oActivateErrorEv24*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.2*

SNMP Trap Number : *24*

## Variables

The ActivateError message contains the following variables:

Table 1. ActivateError Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ExecuteError

---

An error occurred while executing the activity.

Level : *Severe*

Log Message : *Error while trying to execute activity. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3oExecuteErrorEv6

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.3.1.2

SNMP Trap Number : 6

## Variables

---

The ExecuteError message contains the following variables:

Table 1. ExecuteError Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ExecuteProblem

---

An error occurred while executing the query.

Level : *Severe*

Log Message : *Error while trying to execute query. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3oExecuteProblemEv8

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.3.1.2

SNMP Trap Number : 8

## Variables

---

The ExecuteProblem message contains the following variables:

Table 1. ExecuteProblem Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## MetadataError

Unable to obtain meta data from Salesforce.com.

Level : *Severe*

Log Message : *Unable to obtain meta data from Salesforce.com. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3oMetadataErrorEv25

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.3.1.2

SNMP Trap Number : 25

## Variables

The MetadataError message contains the following variables:

Table 1. MetadataError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## ShortPoll

The current time is less than 1 minute past last polling time, so activity is skipping the poll at this interval.

Level : *Info*

Log Message : *Current time {CurrentTime} is less than 1 minute past last polling time {LastPollingTime}. Skipping this polling interval.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3oShortPollEv11*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.2*

SNMP Trap Number : *11*

## Variables

The ShortPoll message contains the following variables:

Table 1. ShortPoll Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. CurrentTime

The current time.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv11CurrentTime
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.2.1.11.1

#### 6. LastPollingTime

The last polling time.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv11LastPollingTime
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.3.1.2.1.11.2

## TimeTooClose

The end time specified is less than 1 minute past start time. Setting the interval to 1 minute and getting the data.

Level : *Info*

Log Message : *End time {StartTime} is less than 1 minute past start time {EndTime}. Setting interval to 1 minute and getting data.*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SFDC-MIB::ciC3oTimeTooCloseEv17*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.3.1.2*

SNMP Trap Number : *17*

## Variables

The TimeTooClose message contains the following variables:

Table 1. TimeTooClose Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. EndTime

The end time.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv17EndTime
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.2.1.17.1

## 6. StartTime

The start time.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SFDC-MIB::ciC3oEv17StartTime
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.3.1.2.1.17.2

## SfdcErrorInternal

---

An internal error occurred in Salesforce.com connector.

Level : *Severe*

Log Message : *Internal error in Salesforce.com connector. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3iSfdcErrorInternalEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.3.1.3

SNMP Trap Number : 1

## Variables

---

The SfdcErrorInternal message contains the following variables:

Table 1. SfdcErrorInternal Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## UnmarshalError

---

An error occurred while reading input parameters in the activity.

Level : Severe

Log Message : *Error while trying to read optional connection input parameter. Error is: {Message}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SFDC-MIB::ciC3iUnmarshalErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.3.1.3

SNMP Trap Number : 3

## Variables

---

The UnmarshalError message contains the following variables:

Table 1. UnmarshalError Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

## Scheduler Module

---

The Scheduler Module allows jobs to be started on a regular basis. This section contains details for the messages delivered from the Scheduler Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Scheduler Module.

MIB Name : *CASTIRON-COMP-SCHEDULER-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.5

The following table provides an alphabetical list of all notifications that can be issued by the Scheduler Module.

Table 1. Notifications issued by the Scheduler Module

Notification	Level	System	Description
<a href="#">ActivityException</a>	Severe	Orchestration	There was an error running scheduler activity.
<a href="#">SchedulerUnknownType</a>	Warning	Orchestration	The group configured in the activity is unknown.
<a href="#">SchedulerWarning</a>	Warning	Orchestration	There was an error in scheduler activity. Continuing to schedule further jobs.

- [Scheduler Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the Scheduler Module.

## Siebel Module

The Siebel Module provides access to Oracle's Siebel CRM. This section contains details for the messages delivered from the Siebel Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Siebel Module.

MIB Name : *CASTIRON-COMP-SIEBEL-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.17

The following table provides an alphabetical list of all notifications that can be issued by the Siebel Module.

Table 1. Notifications issued by the Siebel Module

Notification	Level	System	Description
ActivateError	Severe	Orchestration	Error occurred while activating the specified activity.
ConfigURI	Severe	Orchestration	Specified activity name is listening on the specified uri and port.
ConnectError	Severe	Orchestration	The invoke operation failed because a connection to the server could not be established.
ConnectionPoolError	Warning	Orchestration	Error occurred while setting up connection pool for specified activity.
ConnectionRetry	Warning	Orchestration	The invoke operation failed while trying to connect to the server. This will cause a retry.
DataException	Severe	Orchestration	Data error occurred while executing the activity.
GeneralError	Severe	Orchestration	General error occurred while sending the response.
IOError	Severe	Orchestration	IO error occurred while processing request.
InternalError	Severe	Orchestration	Internal error occurred while processing request.
InvokeActivate	Warning	Orchestration	Error in setup of repository/connection-pool in activate of specified activity. Setup will be done at activity execution time.
InvokeDeactivateError	Warning	Orchestration	Error occurred while deactivating the specified activity.
InvokeException	Severe	Orchestration	Error occurred while executing the activity.
InvokeSuccessful	Info	Orchestration	Activity has successfully executed activity and outputted output parameter RESPONSE.
MissingLibraries	Severe	Orchestration	Config file jas.ini needs to be present before the JD Edwards Invoke activity can be run. Please upload jas.ini file and run again.
ReceiveDeactivateErr	Severe	Orchestration	Error occurred while deactivating the specified activity.
ReceiveError	Severe	Orchestration	Error occurred while receiving in the specified activity name.
ReceiveSuccessful	Info	Orchestration	Receive activity successfully received request and outputted output parameter RESPONSE.
RepositoryError	Warning	Orchestration	Error occurred while setting up repository for specified activity.
UnSupportedEncoding	Severe	Orchestration	Error occurred while processing unsupported encoding.

## ConnectError

---

The invoke operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Unable to connect to server after {NumberOfRetryAttempts} attempts. The error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-SIEBEL-MIB::ciC17cConnectErrorEv1*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.17.1.1*

SNMP Trap Number : *1*

## Variables

---

The ConnectError message contains the following variables:

Table 1. ConnectError Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv1NumberOfRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.17.1.1.1.1.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

**Parent topic:** [Siebel Connection Notifications](#)

## ConnectionRetry

---

The invoke operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to server. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SIEBEL-MIB::ciC17cConnectionRetryEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.17.1.1

SNMP Trap Number : 2

## Variables

The ConnectionRetry message contains the following variables:

Table 1. ConnectionRetry Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Message</b>  Textual description of the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>
<b>6. RetryAttemptNumber</b>  The current number of retries. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2RetryAttemptNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.2</li></ul>
<b>7. TotalRetryAttempts</b>  The specified number of attempts to connect to the server before stopping. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2TotalRetryAttempts</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.17.1.1.1.2.3</li></ul>

## 8. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.17.1.1.2.4

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

<b>2. Severity</b>
--------------------

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

<b>3. JobID</b>
-----------------

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. ActivityName

Activity name which is listening on the uri and port specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17oEv13ActivityName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.17.1.2.1.13.1

#### 6. UriValue

The URI the server is listening on.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17oEv13UriValue
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.17.1.2.1.13.2

#### 7. PortValue

The port number the server is listening on.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-SIEBEL-MIB::ciC17oEv13PortValue
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.17.1.2.1.13.3

## ReceiveSuccessful

---

Receive activity successfully received request and outputted output parameter RESPONSE.

Level : *Info*

Log Message : *Successfully received request and outputted output parameter RESPONSE.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-SIEBEL-MIB::ciC17oReceiveSuccessfulEv8

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.17.1.2

SNMP Trap Number : 8

## Variables

---

The ReceiveSuccessful message contains the following variables:

Table 1. ReceiveSuccessful Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification.  <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.  <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

## UnSupportedEncoding

---

Error occurred while processing unsupported encoding.

Level : Severe

Log Message : *Error while processing unsupported encoding. The error is: {Message}*

System : Orchestration

SNMP Name : CASTIRON-COMP-SIEBEL-MIB::ciC17oUnSupportedEncodingEv10

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.17.1.2

SNMP Trap Number : 10

## Variables

---

The UnSupportedEncoding message contains the following variables:

Table 1. UnSupportedEncoding Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage

## Web Service Module

---

The Web Service Module provides activities to act as a Web Service client or server. This section contains details for the messages delivered from the Web Service Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Web Service Module.

MIB Name : *CASTIRON-COMP-WS-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.18

The following table provides an alphabetical list of all notifications that can be issued by the Web Service Module.

Table 1. Notifications issued by the Web Service Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Web Service activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The webservice operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The webservice operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Web Service activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Web Service activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Web Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WSFaultString	Severe	Orchestration	The fault string returned by the WebService activity.
WebServiceException	Severe	Orchestration	Error occurred while processing Web Service activity.

- [Web Service Connection Notifications](#)  
Provides a comprehensive list of connection notifications sent from the Web Service Module.
- [Web Service Operation Notifications](#)  
Provides a comprehensive list of operation notifications sent from the Web Service Module.
- [Web Service Internal Notifications](#)  
Provides a comprehensive list of internal notifications sent from the Web Service Module.

## ConnectFailed

---

The webservice operation failed because a connection to the server could not be established.

Level : *Severe*

Log Message : *Error sending SOAP request to location: {LocationName}. Error is: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WS-MIB::ciC18cConnectFailedEv2*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.18.1.1*

SNMP Trap Number : *2*

## Variables

---

The ConnectFailed message contains the following variables:

Table 1. ConnectFailed Message Variables

**1. SerialNumber**

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. LocationName

The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18cEv2LocationName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.18.1.1.1.2.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

# Web Service Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the Web Service Module.

- [AlreadyRegistered](#)  
The URI/port is already registered by the Web Service activity.
- [CleanUpMessage](#)  
Unable to process the request. Additional information about the error can be found on the Web Management Console.
- [DataMessageAccepted](#)  
SOAP message has been accepted by the Integration Appliance.
- [MissingProtocol](#)  
Please put the protocol used in front of input parameter location.
- [NotRegistered](#)  
The URI/port has not been registered by the Web Service activity.
- [OperationNameNull](#)  
Operation name must not be null or empty.
- [TransportInfo](#)  
The provide activity is started on local transport for the URI.
- [UriDeprecated](#)  
Web Service Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
- [WSFaultString](#)  
The fault string returned by the WebService activity.
- [WebServiceException](#)  
Error occurred while processing Web Service activity.

**Parent topic:** [Web Service Module](#)

## AlreadyRegistered

---

The URI/port is already registered by the Web Service activity.

Level : *Severe*

Log Message : *[URI: {Uri}, Port: {Port}, Operation Name: {OperationName}] Web Service has already been registered. Key: {RegistrationKey}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-WS-MIB::ciC18oAlreadyRegisteredEv7

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.18.1.2

SNMP Trap Number : 7

## Variables

---

The AlreadyRegistered message contains the following variables:

Table 1. AlreadyRegistered Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Uri</b>

The URI which is already registered.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv7Uri
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.18.1.2.1.7.1

## 6. Port

The port which is already registered.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv7Port
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.18.1.2.1.7.2

## 7. OperationName

The operation name which was specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv7OperationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.18.1.2.1.7.3

## 8. RegistrationKey

Key used to identify this URI/Port/Operation

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv7RegistrationKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.18.1.2.1.7.4

## CleanUpMessage

---

Unable to process the request. Additional information about the error can be found on the Web Management Console.

Level : *Severe*

Log Message : *Unable to process the request. Additional information about the error can be found on the Web Management Console.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-WS-MIB::ciC18oCleanUpMessageEv9

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.18.1.2

SNMP Trap Number : 9

## Variables

---

The CleanUpMessage message contains the following variables:

Table 1. CleanUpMessage Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## MissingProtocol

---

Please put the protocol used in front of input parameter location.

Level : *Warning*

Log Message : *Please put the protocol used (e.g. {Protocol}) in front of the input parameter location: {LocationName}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-WS-MIB::ciC18oMissingProtocolEv5

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.18.1.2

SNMP Trap Number : 5

## Variables

---

The MissingProtocol message contains the following variables:

Table 1. MissingProtocol Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Protocol

The protocol value that can be specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv5Protocol
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.18.1.2.1.5.1

## 6. LocationName

The location name parameter before which protocol has to be specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WS-MIB::ciC18oEv5LocationName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.18.1.2.1.5.2

## WSFaultString

---

The fault string returned by the WebService activity.

Level : Severe

Log Message : {Message}

System : Orchestration

SNMP Name : CASTIRON-COMP-WS-MIB::ciC18oWSFaultStringEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.18.1.2

SNMP Trap Number : 3

## Variables

---

The WSFaultString message contains the following variables:

Table 1. WSFaultString Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## WebSphere MQ Module

---

The WebSphere MQ module provides activities for communicating with IBM WebSphere MQ servers. This section contains details for the messages delivered from the WebSphere MQ Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the WebSphere MQ Module.

MIB Name : *CASTIRON-COMP-MQ-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.13

The following table provides an alphabetical list of all notifications that can be issued by the WebSphere MQ Module.

Table 1. Notifications issued by the WebSphere MQ Module

Notification	Level	System	Description
ConnectRetry	Warning	Orchestration	The MQ operation failed while trying to connect to the server. This will cause a retry.
ConnectionError	Severe	Orchestration	The MQ operation failed because a connection to the server could not be established.
DetailsOpen	Info	Orchestration	Opening the queue with set all privileges as specified.
DuplicateFound	Info	Orchestration	Discarding the duplicate message found in get activity.
FormatError	Severe	Orchestration	The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
FormatWarning	Warning	Orchestration	Activity expected string data (MQFMT_STRING), but the message is of another format.
GetFailure	Severe	Orchestration	The get activity was not able to get messages from queue.
InputParamNull	Severe	Orchestration	The input parameter specified is of zero length.
InternalFailure	Severe	Orchestration	There was an internal error in MQ activity.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
<a href="#">MQConnectionInfo</a>	Info	Orchestration	The complete information about MQ Endpoint details.
<a href="#">MQMDFormatError</a>	Severe	Orchestration	MQMD header input parameter format is incorrect.
<a href="#">MQProtocolWarning</a>	Warning	Orchestration	Received warning from queue manager with specified MQ reason code.
<a href="#">MQPutDetails</a>	Info	Orchestration	Putting in queue with set all privileges as specified.
<a href="#">MQPutFailure</a>	Severe	Orchestration	MQ was unable to put message on queue due to specified error code.
<a href="#">MQRFHHeaderError</a>	Severe	Orchestration	MQRFH2 header input parameter format is incorrect.
<a href="#">MessageDelivered</a>	Info	Orchestration	The MQ message was successfully delivered to the specified queue.
<a href="#">MessageRetrieved</a>	Info	Orchestration	Retrieved a message from the queue.
<a href="#">NoMessage</a>	Info	Orchestration	There is no message available on the queue.
<a href="#">NoMessageFailure</a>	Severe	Orchestration	The MQ operation failed as there was no message on queue on server.
<a href="#">NoMessageRetry</a>	Warning	Orchestration	The MQ operation failed as there was no message on queue on server. This will cause a retry.
<a href="#">PollFailure</a>	Severe	Orchestration	The poll activity was not able to get messages from queue.
<a href="#">RFHFormatError</a>	Severe	Orchestration	Error encountered unmarshaling the MQRFH2 header.
<a href="#">ReasonCode</a>	Info	Orchestration	The reason code for the MQ exception caught.

## ConnectRetry

---

The MQ operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to connect to the Queue Manager "{QueueManager}"*. MQ returned error code "*{ErrorCode}*". Attempt *{RetryAttemptNumber}* of *{TotalRetryAttempts}*. Will try again in *{IntervalForRetries}* second(s).

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13cConnectRetryEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.1

SNMP Trap Number : 2

## Variables

---

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. QueueManager</b>  The name of the queue manager which activity was not able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2QueueManager
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.1

## 6. ErrorCode

The error code returned by the MQ server.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2ErrorCode
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.2

## 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.3

## 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.4

## 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13cEv2IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.1.1.2.5

# WebSphere MQ Operation Notifications

---

Provides a comprehensive list of operation notifications sent from the WebSphere MQ Module.

- [DetailsOpen](#)  
Opening the queue with set all privileges as specified.
- [DuplicateFound](#)  
Discarding the duplicate message found in get activity.
- [FormatError](#)  
The message format field specified is invalid. Supported formats are MQSTR, MQHRF2, and no format.
- [FormatWarning](#)  
Activity expected string data (MQFMT\_STRING), but the message is of another format.

- [GetFailure](#)  
The get activity was not able to get messages from queue.
- [MQMDFormatError](#)  
MQMD header input parameter format is incorrect.
- [MQProtocolWarning](#)  
Received warning from queue manager with specified MQ reason code.
- [MQPutDetails](#)  
Putting in queue with set all privileges as specified.
- [MQPutFailure](#)  
MQ was unable to put message on queue due to specified error code.
- [MQRFHHeaderError](#)  
MQRFH2 header input parameter format is incorrect.
- [MessageDelivered](#)  
The MQ message was successfully delivered to the specified queue.
- [MessageRetrieved](#)  
Retrieved a message from the queue.
- [NoMessage](#)  
There is no message available on the queue.
- [NoMessageFailure](#)  
The MQ operation failed as there was no message on queue on server.
- [NoMessageRetry](#)  
The MQ operation failed as there was no message on queue on server. This will cause a retry.
- [PollFailure](#)  
The poll activity was not able to get messages from queue.
- [RFHFormatError](#)  
Error encountered unmarshaling the MQRFH2 header.
- [ReasonCode](#)  
The reason code for the MQ exception caught.

## DetailsOpen

---

Opening the queue with set all privileges as specified.

Level : *Info*

Log Message : *Opening the queue with set all privileges as {Value}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-MQ-MIB::ciC13oDetailsOpenEv18*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.13.1.2*

SNMP Trap Number : *18*

## Variables

---

The DetailsOpen message contains the following variables:

Table 1. DetailsOpen Message Variables

<b>1. SerialNumber</b>
------------------------

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Value

Value of set all privileges set to true or false.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv18Value
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.18.1

## DuplicateFound

---

Discarding the duplicate message found in get activity.

Level : *Info*

Log Message : *Duplicate message found, discarding.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13oDuplicateFoundEv14

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.2

## Variables

---

The DuplicateFound message contains the following variables:

Table 1. DuplicateFound Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>

## MQProtocolWarning

---

Received warning from queue manager with specified MQ reason code.

Level : *Warning*

Log Message : *Received warning from queue manager. MQ reason code is {ReasonCode}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13oMQProtocolWarningEv16

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.2

SNMP Trap Number : 16

## Variables

---

The MQProtocolWarning message contains the following variables:

Table 1. MQProtocolWarning Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. ReasonCode

The reason code for the MQ exception.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv16ReasonCode
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.16.1

## NoMessageFailure

The MQ operation failed as there was no message on queue on server.

Level : Severe

Log Message : *No message available on queue "{QueueManager}" after {NumberOfRetryAttempts} attempt(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13oNoMessageFailureEv2

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.2

SNMP Trap Number : 2

## Variables

The NoMessageFailure message contains the following variables:

Table 1. NoMessageFailure Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. QueueManager

The name of the queue manager which activity was not able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv2QueueManager
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.2.1

## 6. NumberOfRetryAttempts

The total number of attempted retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv2NumberOfRetryAttempts
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.2.2

## PollFailure

---

The poll activity was not able to get messages from queue.

Level : *Severe*

Log Message : *Unable to get message from queue {QueueName}. MQ returned error code {ErrorCode}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13oPollFailureEv6

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.2

SNMP Trap Number : 6

## Variables

---

The PollFailure message contains the following variables:

Table 1. PollFailure Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. QueueName

The name of the queue.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv6QueueName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.2.1.6.1

#### 6. ErrorCode

The error code returned by the MQ server.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-MQ-MIB::ciC13oEv6ErrorCode
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.13.1.2.1.6.2

## ReasonCode

---

The reason code for the MQ exception caught.

Level : *Info*

Log Message : *MQ Exception caught, reason code is {ReasonCode}*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13oReasonCodeEv13

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.13.1.2

## Variables

---

The ReasonCode message contains the following variables:

Table 1. ReasonCode Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li> </ul>
<b>4. Orchestration</b>
Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.
<ul style="list-style-type: none"> <li>• <b>Type</b> : OID</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li> </ul>
<b>5. ReasonCode</b>
The reason code for the MQ exception.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-COMP-MQ-MIB::ciC13oEv13ReasonCode</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.3.13.1.2.1.13.1</li> </ul>

## InternalFailure

---

There was an internal error in MQ activity.

Level : Severe

Log Message : *An internal error occurred: {Message}.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-MQ-MIB::ciC13iInternalFailureEv2

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.3.13.1.3

SNMP Trap Number : 2

## Variables

---

The InternalFailure message contains the following variables:

Table 1. InternalFailure Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## Workday Module

---

The Workday Module provides activities to act as a Workday client. This section contains details for the messages delivered from the Workday Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the Workday Module.

MIB Name : *CASTIRON-COMP-WD-MIB*

MIB OID : .1.3.6.1.4.1.13336.2.2.3.24

The following table provides an alphabetical list of all notifications that can be issued by the Workday Module.

Table 1. Notifications issued by the Workday Module

Notification	Level	System	Description
AlreadyRegistered	Severe	Orchestration	The URI/port is already registered by the Workday activity.
CleanUpMessage	Severe	Orchestration	Unable to process the request. Additional information about the error can be found on the Web Management Console.
ConnectFailed	Severe	Orchestration	The workday operation failed because a connection to the server could not be established.
ConnectRetry	Warning	Orchestration	The workday operation failed while trying to connect to the server. This will cause a retry.
DataMessageAccepted	Info	Orchestration	SOAP message has been accepted by the Integration Appliance.
MissingProtocol	Warning	Orchestration	Please put the protocol used in front of input parameter location.

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
NotRegistered	Severe	Orchestration	The URI/port has not been registered by the Workday activity.
OperationNameNull	Severe	Orchestration	Operation name must not be null or empty.
TaskContextError	Severe	Orchestration	Error occurred while processing Workday activity due to lost task context.
TransportInfo	Info	Orchestration	The provide activity is started on local transport for the URI.
UriDeprecated	Warning	Orchestration	Workday Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
WDFaultString	Severe	Orchestration	The fault string returned by the Workday activity.
WorkdayException	Severe	Orchestration	Error occurred while processing Workday activity.

- [Workday Connection Notifications](#)  
Provides a comprehensive list of connection notifications sent from the Workday Module.
- [Workday Operation Notifications](#)  
Provides a comprehensive list of operation notifications sent from the Workday Module.
- [Workday Internal Notifications](#)  
Provides a comprehensive list of internal notifications sent from the Workday Module.

## ConnectRetry

---

The workday operation failed while trying to connect to the server. This will cause a retry.

Level : *Warning*

Log Message : *Unable to send the SOAP request to {LocationName}. Error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will retry again in {IntervalForRetries} second(s).*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-WD-MIB::ciC24cConnectRetryEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.24.1.1

SNMP Trap Number : 1

## Variables

---

The ConnectRetry message contains the following variables:

Table 1. ConnectRetry Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. LocationName</b>  The specified location which was not being able to connect.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1LocationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.1

## 6. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.1.2.2

## 7. RetryAttemptNumber

The current number of retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1RetryAttemptNumber
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.3

## 8. TotalRetryAttempts

The specified number of attempts to connect to the server before stopping.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1TotalRetryAttempts
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.4

## 9. IntervalForRetries

The specified time interval between retries.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24cEv1IntervalForRetries
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.1.1.5

# Workday Operation Notifications

Provides a comprehensive list of operation notifications sent from the Workday Module.

- [AlreadyRegistered](#)  
The URI/port is already registered by the Workday activity.
- [CleanUpMessage](#)  
Unable to process the request. Additional information about the error can be found on the Web Management Console.
- [DataMessageAccepted](#)  
SOAP message has been accepted by the Integration Appliance.
- [MissingProtocol](#)  
Please put the protocol used in front of input parameter location.
- [NotRegistered](#)  
The URI/port has not been registered by the Workday activity.

- [OperationNameNull](#)  
Operation name must not be null or empty.
- [TransportInfo](#)  
The provide activity is started on local transport for the URI.
- [UriDeprecated](#)  
Workday Module has deprecated the input parameter httpheaders/uri. The specified value will be ignored.
- [WDFaultString](#)  
The fault string returned by the Workday activity.
- [WorkdayException](#)  
Error occurred while processing Workday activity.

**Parent topic:** [Workday Module](#)

## AlreadyRegistered

The URI/port is already registered by the Workday activity.

Level : *Severe*

Log Message : *[URI: {Uri}, Port: {Port}, Operation Name: {OperationName}] Workday has already been registered. Key: {RegistrationKey}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-WD-MIB::ciC24oAlreadyRegisteredEv7*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.24.1.2*

SNMP Trap Number : *7*

## Variables

The AlreadyRegistered message contains the following variables:

Table 1. AlreadyRegistered Message Variables

<b>1. SerialNumber</b>
The serial number of the appliance sending the trap.
<ul style="list-style-type: none"> <li>• <b>Type</b> : String</li> <li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li> </ul>
<b>2. Severity</b>
Severity of the Notification.
<ul style="list-style-type: none"> <li>• <b>Type</b> : Integer</li> <li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li> <li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li> </ul>
<b>3. JobID</b>
The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Uri

The URI which is already registered.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24oEv7Uri
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.2.1.7.1

#### 6. Port

The port which is already registered.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24oEv7Port
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.2.1.7.2

#### 7. OperationName

The operation name which was specified.

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24oEv7OperationName
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.2.1.7.3

#### 8. RegistrationKey

Key used to identify this URI/Port/Operation

- **Type** : String
- **SNMP Object Name** : CASTIRON-COMP-WD-MIB::ciC24oEv7RegistrationKey
- **SNMP OID** : .1.3.6.1.4.1.13336.2.2.3.24.1.2.1.7.4

## TaskContextError

---

Error occurred while processing Workday activity due to lost task context.

Level : *Severe*

Log Message : *Exception while processing Workday activity. Error message: {Message}. The task context is lost. The appliance may have been restarted, losing the task context that cannot be saved on the disk.*

System : *Orchestration*

SNMP Name : CASTIRON-COMP-WD-MIB::ciC24iTaskContextErrorEv1

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.24.1.3

SNMP Trap Number : 1

## Variables

---

The TaskContextError message contains the following variables:

Table 1. TaskContextError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

## 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

## 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

## 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

## 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## XML Module

The XML Module provides activities for generating and parsing XML content. This section contains details for the messages delivered from the XML Module.

This topic provides the MIB Name and MIB OID information, in addition to high-level details about each notification in the XML Module.

MIB Name : *CASTIRON-COMP-XML-MIB*

MIB OID : 1.3.6.1.4.1.13336.2.2.3.12

The following table provides an alphabetical list of all notifications that can be issued by the XML Module.

Table 1. Notifications issued by the XML Module

<b>Notification</b>	<b>Level</b>	<b>System</b>	<b>Description</b>
TransformError	Severe	Orchestration	There was an error while transforming the XML.
ValidateInitialize	Severe	Orchestration	There was an error while initializing the validate activity.
XMLParseError	Severe	Orchestration	There was an error while parsing the XML.
XMLQueryError	Severe	Orchestration	There was an error while querying the XML.
XMLSerializeError	Severe	Orchestration	There was an error while serializing the XML.

- [XML Operation Notifications](#)

Provides a comprehensive list of operation notifications sent from the XML Module.

## ValidateInitialize

---

There was an error while initializing the validate activity.

Level : *Severe*

Log Message : *Failed to initialize the Xml Validate Activity: {Message}*

System : *Orchestration*

SNMP Name : *CASTIRON-COMP-XML-MIB::ciC12oValidateInitializeEv5*

SNMP Enterprise : *.1.3.6.1.4.1.13336.2.2.3.12.1.2*

SNMP Trap Number : *5*

## Variables

The ValidateInitialize message contains the following variables:

Table 1. ValidateInitialize Message Variables

<b>1. SerialNumber</b>  The serial number of the appliance sending the trap. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-IA-MIB::ciIaPlatSerialNumber</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.2.1.1.3.3</li></ul>
<b>2. Severity</b>  Severity of the Notification. <ul style="list-style-type: none"><li>• <b>Type</b> : Integer</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.1</li></ul>
<b>3. JobID</b>  The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvJobID</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.4</li></ul>
<b>4. Orchestration</b>  Reference to an entry in the Orchestration table containing information about the orchestration associated with this event. <ul style="list-style-type: none"><li>• <b>Type</b> : OID</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.3</li></ul>
<b>5. Message</b>  Textual description of the error. <ul style="list-style-type: none"><li>• <b>Type</b> : String</li><li>• <b>SNMP Object Name</b> : CASTIRON-REGISTRATIONS-MIB::ciEvMessage</li><li>• <b>SNMP OID</b> : 1.3.6.1.4.1.13336.2.2.1.2.2</li></ul>

## XMLSerializeError

There was an error while serializing the XML.

Level : Severe

Log Message : Failed to serialize XML, error was: {Message}

System : Orchestration

SNMP Name : CASTIRON-COMP-XML-MIB::ciC12oXMLSerializeErrorEv3

SNMP Enterprise : .1.3.6.1.4.1.13336.2.2.3.12.1.2

SNMP Trap Number : 3

## Variables

The XMLSerializeError message contains the following variables:

Table 1. XMLSerializeError Message Variables

### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

#### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

#### 5. Message

Textual description of the error.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

## Uncategorized Notifications

This topic provides details about messages that have not formally been categorized in an existing module.

These notifications are used for events which have not yet been assigned their own OID. Use the information specified in the Message variable to identify individual notifications.

SNMP Name : CASTIRON-IA-MIB::ciIaUncategorizedEv

SNMP Enterprise : 1.3.6.1.4.1.13336.2.2.1.1.10

SNMP Trap Number : 1

## Variables

The uncategorized message contains the following variables:

Table 1. Uncategorized Message Variables

#### 1. SerialNumber

The serial number of the appliance sending the trap.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaPlatSerialNumber
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.1.3.3

#### 2. Severity

Severity of the Notification.

- **Type** : Integer
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvSeverity

- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.1

### 3. JobID

The ID of the job being run when an error occurred. If the error is unrelated to a specific job, this field is blank.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvJobID
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.4

### 4. Orchestration

Reference to an entry in the Orchestration table containing information about the orchestration associated with this event.

- **Type** : OID
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvOrchestration
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.3

### 5. Message

Textual description of the error. See the table below for a list of descriptions.

- **Type** : String
- **SNMP Object Name** : CASTIRON-REGISTRATIONS-MIB::ciEvMessage
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.1.2.2

### 6. LoggerName

Name of the logger used to send the notification. See table below.

- **Type** : String
- **SNMP Object Name** : CASTIRON-IA-MIB::ciIaEvLoggerName
- **SNMP OID** : 1.3.6.1.4.1.13336.2.2.2.1.1.10.1.1

## Uncategorized Messages

This table lists the most commonly encountered uncategorized notifications. When one of these notifications is categorized, a replacement value is provided and the message remains in the uncategorized messages list for reference purposes.

Table 2. Uncategorized Messages

Severity	System	LoggerName	Message	Replacement
Severe	Orchestration	com.approuter.module.platform	Fan is not functional. Fan: {0} Current Speed: {1} rpm Min Required Speed: {2} rpm Max Allowed Speed: {3} rpm Machine ID: {4}	<a href="#">FanFailed</a>

## Log Message Reference

---

Alphabetized list of all log messages, with links to the details.

Message	Module	Level	Notification
A connection error occurred while sending the receive activity response. Exception: {Message}	HTTP	Server	<a href="#">ReceiveSendReplyError</a>
A connection error occurred while sending the response. Error is {Message}	HTTP	Server	<a href="#">ReplyConnectionError</a>
A general error occurred while sending the response. Exception: {Message}	HTTP	Server	<a href="#">ReplyGeneralError</a>
A select statement was issued to control table {TableName} to check for duplicate rows.	Database	Info	<a href="#">SelectStatement</a>
About to execute function {FunctionName}	SAP	Info	<a href="#">StartFunctionExec</a>
Access Violation by user: {Username}. Target: {Target}. Action Performed: {Action}.	Platform	Info	<a href="#">AccessViolation</a>
Activation of Get SAML 2.0 token failed	STS	Server	<a href="#">ActivationFailed</a>
Activity could not be converted into TwoPhase activity	Maestro	Server	<a href="#">ErrorTwoPhase</a>
Activity could not get activated. Error is: {Message}	Salesforce.com	Server	<a href="#">ActivateError</a>

Message	Module	Level	Notification
Activity expected string data (MQFMT_STRING), but the message is of format "{Format}".	WebSphere MQ	Warning	Format Warning
Activity failed as data to get is larger than activity can handle. Error is: {Message}	Salesforce.com	Severe	LargeDataError
Activity {ActivityName} activated successfully	JD Edwards	Info	Activate Successful
Activity {ActivityName} activated successfully	PeopleSoft	Info	Activate Success
Activity {ActivityName} activated successfully.	Domino	Info	Activate Success
Activity {ActivityName} could not find any record	PeopleSoft	Info	GetNoReturn
Activity {ActivityName} is stopped successfully.	Domino	Info	StopSuccess
Activity {ActivityName} not started as {Name} is blank	PeopleSoft	Severe	Activate FailureBlank
ActivityFactory (name - {ActivityName}, version - {ActivityVersion}) not registered	Mae stro	Severe	NoActivityFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) has multiple registrations, not loading	Mae stro	Severe	Multiple ActFactory
ActivityFactory (name - {ActivityName},version - {ActivityVersion}) returned wrong class {ActivityClass}	Mae stro	Severe	WrongActFactor y
Adding Connection Pool with name {PoolName}	SAP	Info	PoolAdd Info
Adding Server Gateway {GatewayName}.	SAP	Info	AddingServerInfo
Additional property {PropertyName} set to {PropertyValue} so setup connection pool.	Email	Info	NewConnectEverytime

Message	Module	Level	Notification
An I/O error occurred while processing the request. Exception: {Message}	HTTP	Server	ReceiveIOError
An error occurred handling a receive request. Exception: {Message}	HTTP	Server	CommonHandlerError
An error occurred while archiving job logs. The error message is: {Message}	Platform	Server	Orcmon ArchiveError
An error occurred while closing the connection in the exception path. The exception is {Message}	Database	Warning	JDBCCo nnection Close
An error occurred while connecting to the database. The exception is {Message}	Database	Warning	Connecti onError
An error occurred while connecting to the database. The exception is {Message} The job is retrying: {RetryAttemptNumber} out of {TotalRetryAttempts} attempts to connect to the database . Another attempt will be made after {IntervalForRetries} secs.	Database	Warning	Connecti onRetry
An error occurred while executing a query on the job log database. The error message is: {Message}	Platform	Server	Orcmon DatabaseError
An error occurred while processing the message for the parameterized query activity at row number {RowNumber}. The error is: {Message}	Database	Server	ParamQ ueryErro r
An error occurred while processing the request. Exception: {Message}	HTTP	Server	ReceiveInternalE rror
An error occurred while reading headers. Exception: {Message}	HTTP	Server	ReplyUn Marshal Header

Message	Module	Level	Notification
An error occurred while setting the key store. Exception: {Message}	HTTP	Severe	RegisterKeyStore
An error occurred while trying to execute activity {ActivityName}. Error is: {Message}	Domino	Severe	ActivityFailure
An error occurred while trying to process an unsupported Accept-Charset encoding. Exception: {Message}	HTTP	Severe	ReceiveOperationError
An exception occurred while activating the activity. The exception is :{Message}	HTTP	Severe	RequestActivate
An exception occurred while activating the parameterized query activity. The exception is: {Message}	Database	Severe	ParamQueryActivate
An exception occurred while activating the stored procedure activity. The exception is: {Message}	Database	Severe	StoredProcActivate
An exception occurred while deleting the row from the control table. The exception is {Message}	Database	Severe	ErrorDeletePost
An exception occurred while deleting the row from the control table. The exception is: {Message}	Database	Severe	DeleteRowsError
An exception occurred while processing a SingleTableNotification job. Data error at row number {RowNumber} of table {TableName}. The Error is {Message}	Database	Severe	ErrorSingleTableJob
An exception occurred while processing an outbound job in the stored procedure activity. Data error at row number: {RowNumber}. The error is {Message}	Database	Severe	StoredProcException

Message	Module	Level	Notification
An exception occurred while processing the inbound job: {Message}	Database	Severe	InboundOperationError
An insert statement was issued to the control table. {TableName}	Database	Info	InsertTableStatement
An internal error occurred: {Message}.	WebSphere MQ	Severe	InternalFailure
An unexpected result returned from the buffer table. Expecting rows to be present in the result, instead the result is empty.	Database	Warning	UnexpectedEmptyRows
An unknown exception occurred while sending the response to the client. Exception: {Message}	HTTP	Severe	ReplyUnknownError
Append data to file "{FileName}" completed with return code {ResponseCode}.	FTP	Info	AppendAfter
Appending data to file "{FileName}".	FTP	Info	AppendBefore
Archiver created successfully, now performing archiving.	Archive	Info	ArchiverCreated
Archiving done successfully.	Archive	Info	ArchiveDone
Attempt to upgrade Cast Iron firmware on appliance {AffectedAppliance} from version {OldVersion} to version {NewVersion} failed: {Message}.	Platform	Severe	UpgradeFailed
Authentication failure for user {Username}, from host {Host}.	Platform	Severe	AuthFailure
Authentication success for user {UserName}, from host {Host} with session id {SessionId}.	Platform	Info	AuthSuccess
Automatically added entry to /etc/hosts with hostname {Hostname} and IP address {IPAddress}.	Platform	Warning	NetworkAutohost

Message	Module	Level	Notification
Automatically converting old style FTP filename pattern from "{OldStylePattern}" to "{NewStylePattern}". Please republish project from Studio verison 3.6 or later to eliminate this warning.	FTP	Warning	FtpPatternConversion
Binding parameters supplied are invalid.	Archive	Severe	IncorrectParameters
Boundary attribute not set in input parameter 'mimeheader'. Input body being set as entityBody in first entity of 'parts' output parameter.	MIME	Info	BoundaryAbsent
Boundary delimiters longer than 70 characters. Ignoring the specified boundary value. Using auto-generated boundary.	MIME	Warning	BoundaryMoreThan70
Boundary is: \"{Boundary}\\".	MIME	Info	BoundaryInfo
Boundary specified in header but no boundary found in the body. Returning single body.	MIME	Warning	NoBoundaryFound
Call context created but task never started; destroying task {TaskID}	Mae stro	Info	CallContextDestroy
Call to function {FunctionName} is complete	SAP	Info	CompleteFunctionExec
Cancel of job {JobID} of Orchestration {OrchName} failed: {Message}.	Mae stro	Severe	LoaderCancel
Cannot complete this job due to low memory, please try redeploying this orchestration	Mae stro	Severe	LargeTotalVarSize
Cannot start an orchestration that is in transient state: {State}	Mae stro	Severe	ProgramStart
Caught exception while canceling job: {Message}	Mae stro	Warning	TaskCancelled
Changed directory to "{DirectoryName}" completed with return code {ResponseCode}.	FTP	Info	DirChangeAfter

Message	Module	Level	Notification
Changing to directory "{DirectoryName}".	FTP	Info	DirChangeBefore
Committing TID {TID}.	SAP	Info	TIDCommittingInfo
Completed activity and spewed out sessionInfo and {NameOfOutputParam} output parameter.	Salesforce.com	Info	ActivityOutput
Completed activity and spewed out sessionInfo output parameter and {NumberOfObjects} objects in output parameter {NameOfOutputParam}.	Salesforce.com	Info	ParameterOutput
Completed activity and spewed out sessionInfo output parameter and {NumberOfResults} result objects in output parameter {NameOfOutputParam}.	Salesforce.com	Info	ParameterResults
Composite media type {MediaType} cannot have any other Content-Transfer-Encoding apart from 7bit, 8bit or binary.	MIME	Severe	TransferEncodingError
Config Parameters: From: \"{From}\", To: \"{To}\", CC: \"{CC}\", BCC: \"{BCC}\", Subject: \"{Subject}\".	Email	Info	SmtpConfigParams
Config parameters: From Pattern: \"{FromPattern}\", Subject Pattern: \"{SubjectPattern}\".	Email	Info	Pop3ConfigParams
Connected to the POP3 server.	Email	Info	Pop3Connected
Connected to the SMTP server.	Email	Info	SmtpConnected
Connection Pool {PoolName} already exists, Using existing definition.	SAP	Info	PoolExistInfo
Connection error while executing activity {ActivityName}. The error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s)	JDEdwards	Warning	JDERetryError
Connection error while executing activity {ActivityName}. The error is: {Message}. Attempt {RetryAttemptNumber} of {TotalRetryAttempts}. Will try again in {IntervalForRetries} second(s)	PeopleSoft	Warning	ConnectionRetry
Connection exception in the subscriber. The exception is {Message}. Going to restart the subscriber after the {IntervalForRestart} secs	JMS	Severe	SubscriberConnect

Message	Module	Level	Notification
Connection exception while getting message from the provider. The error code is {ErrorCode} and message is {ErrorMessage}. The job is retrying {RetryAttemptNumber}, out of {TotalRetryAttempts} attempts to connect to JMS provider. The next attempt will be after {IntervalForRetries} seconds.	JMS	Warning	<a href="#">GetConnectRetry</a>
Connection exception while polling message. The exception is {Message}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.	JMS	Warning	<a href="#">PollMessageRetry</a>
Connection exception while sending message. The error code is {ErrorCode} and exception is {ErrorMessage}. The job is retrying {RetryAttemptNumber} out of {TotalRetryAttempts} attempt to connect to JMS provider. The next attempt will be after {IntervalForRetries} secs.	JMS	Warning	<a href="#">SendConnectRetry</a>
Connection handler retrieved from the call context is Null!	HTTP	ServerError	<a href="#">ReplyHandlerNull</a>
Content-Encoding header received: {ContentEncodingHeader}	HTTP	Info	<a href="#">IncomingContentEnc</a>
Content-Transfer-Encoding value for attachment {AttachmentNumber} is {EncodingValue} while the attachment body has lines greater than 998 characters in length. Changing the Content-Transfer-Encoding to binary.	MIME	Warning	<a href="#">TransferEncChanged</a>
Content-Transfer-Encoding value missing for attachment number {AttachmentNumber}. Guessing based on Content-Type and charset values.	MIME	Warning	<a href="#">TransferEncMissing</a>
Content-type not found. Taking default Content-Type as text/plain.	MIME	Info	<a href="#">DefaultContentType</a>
Could not add route to {DestinationIP} on {LinkName}.	Platform	Warning	<a href="#">NetworkInvalidRoute</a>
Could not clean up object with ID {ObjectID}, will try later	Maestro	Warning	<a href="#">DeleteObject</a>
Could not close output stream	Maestro	Warning	<a href="#">CloseOutputStream</a>

Message	Module	Level	Notification
Could not close reader	Mae stro	Warning	<a href="#">CloseInputStream</a>
Could not close reader	Mae stro	Warning	<a href="#">CloseReader</a>
Could not close writer	Mae stro	Warning	<a href="#">CloseWriter</a>
Could not delete file "{FileName}" after processing. Error is {Message}	FTP	Warning	<a href="#">UnableToDelete</a>
Could not execute query to preload lookup cache	Data Quality	Warning	<a href="#">BadPeloadQuery</a>
Could not find an Archiver for supplied archive type: {FormatName}	Archive	Server	<a href="#">InvalidArchiveFormat</a>
Could not find an entry point for the activity: [{ActivityName}] in the compiled orchestration	Mae stro	Server	<a href="#">EntryPath</a>
Could not get data for date range, because id limit exceeded	Salesforce.com	Server	<a href="#">LargeData</a>
Could not initialize FaultInfo	Mae stro	Server	<a href="#">FaultInfo</a>
Could not initialize JobInfo	Mae stro	Server	<a href="#">InitializeJobInfo</a>

<b>Message</b>	<b>Module</b>	<b>Level</b>	<b>Notification</b>
Could not log monitor events	Mae stro	Severe	<a href="#">Monitor Events</a>
Could not log monitor variable "{VariableName}"	Mae stro	Warning	<a href="#">Monitor Variable</a>
Could not log monitor variables	Mae stro	Warning	<a href="#">Monitor Variables</a>
Could not move file "{FileName}" after processing. Error is {Message}	FTP	Warning	<a href="#">UnableToMove</a>
Could not perform input map expression: {ExpressionName}	Mae stro	Severe	<a href="#">InputMapXPath</a>
Could not perform input map transform: {Message}	Mae stro	Severe	<a href="#">InputMapXSLT</a>
Could not perform output map expression: {Message}	Mae stro	Severe	<a href="#">OutputMapXPath</a>
Could not perform output map transform: {Message}	Mae stro	Severe	<a href="#">OutputMapXSLT</a>
Could not perform output map: {Message}	Mae stro	Severe	<a href="#">OutputMap</a>

## **WebSphere DataPower Cast Iron Management API Guide**

---

This information center provides information for WebSphere® DataPower® Cast Iron® Management API Guide .

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00000.html>

## Introduction

---

This information center provides information for WebSphere® DataPower® Cast Iron® Management API Guide .

### About WebSphere DataPower Cast Iron Management API Guide

---

The Management API guide is written for developers and IT personnel who want to manage Integration Appliance and the Cloud by using applications or scripts.

This guide assumes that you have an intermediate level of expertise in integration projects and some experience in supporting and managing an IT environment.

### Integration Appliance and Cloud documentation

---

To view PDF documents, download Adobe Reader version 5 or higher from Adobe Systems Inc., see <http://www.adobe.com>.

You can access documentation from the Documentation CD.

The documentation set includes the following books:

#### Command Line Interface Reference

Reference information about commands available from the Command Line Interface (CLI).

#### Getting Started Guide

An overview of Integration Appliance and Studio, and summary information about using Studio to create integration projects that run on the Integration Appliance

#### HA Overview Guide

A high-level overview about High Availability (HA) pairs. This guide includes information about HA pair states, configuration requirements, commands, and troubleshooting issues.

#### Management API Guide

Information for the Management API for the Cloud and Integration Appliances.

### Documentation conventions

---

The following table describes the conventions that are used in this document.

Convention	Description
<Hostname> command	Examples of using commands are shown in this document in this format.
enter exactly as shown	Procedures might also include instructions on what you should enter for particular fields, prompts, or commands. Information in this font must be typed exactly as shown.
net set interface dataaddress <port-address>	Placeholders are shown between angle brackets (<>) and generally indicate the type of information you should supply in the command.
Menu > Submenu	Instructions that use menu commands use the greater than symbol (>) to indicate submenus, for example, click Configuration > Notifications.

### Other resources

---

In addition to the product information, IBM® provides these other resources:

- Online help
- Information centers
- Knowledge Base

- Product Support

#### Online help

Online help is accessible from Studio and the Web Management Console.

#### IBM website

You can access the IBM Corporation website at: <http://www.ibm.com>.

The site contains information about the IBM Corporation, its background, and products. The site also provides contact information for sales and technical support.

#### Contacting IBM support

IBM support provides assistance with product defects. Before contacting IBM support, the following criteria must be met:

- Your company has an active maintenance contract.
- You are authorized to submit problems.

Submit the problem in one of two ways:

- Electronically through the Service Request (SR) problem submission tool. You must sign in with your IBM ID and password.
- Telephone. Refer to the directory of worldwide contacts in the IBM Software Support Handbook for the appropriate software support phone number to call.

## Overview of the Management API guide

An overview of the Management API. The API provides management capabilities for Clouds and Integration Appliances.

The Management API is implemented as a web service. This web service provides a way to manage WebSphere® DataPower® Cast Iron® Appliances (Integration Appliances) and WebSphere Cast Iron Cloud (Cloud) projects through your applications or scripts.

The API provides Integration Appliance and Cloud management in the following areas:

#### Deployment

Provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can import or export repositories.

#### Security

Provides operations to create, get, list, and delete users, roles, and permissions. You can log in and log out by using the security WSDL.

#### Staging

Checks whether the staging database is started and starts or stops the staging database. (Applies to appliances only.)

#### System Administration

Sets or gets the appliance name or network configuration. You can also run system commands or get system information. (Applies to appliances only.)

#### Job Monitoring

Searches for job, gets job count, and gets job details. You can also set and get job monitoring properties.

#### Logs and Notifications

Saves, gets, and deletes notification policies. You can also get and set email and SNMP endpoints, set and get log levels, and get log count.

The Management API complies with the following web services standards:

- Web Services Interoperability Organization (WS-I) Basic Profile 1.0
- SOAP 1.1
- Web Services Description Language (WSDL) 1.1
- XML Schema 1.1

You can create client applications that call web services operations to manage and monitor Integration Appliances and Cloud projects. Communication between the client application and the Integration Appliance orCloud project is accomplished by using HTTP or HTTPS.

The Management API is defined in WSDL files. Client applications call web services operations by sending SOAP messages. SOAP messages are formatted in XML and so are programming language neutral.

## Examples of SOAP messages

---

This section provides examples of logging in, getting a user and logging out using the Management API - Security WSDL.

The following code is an example of a SOAP request to log in.

Note: If you are using Management API for Cast Iron Live, use the IBM ID credential for the username and password fields.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header/>
<soapenv:Body>
<sec:login>
<sec:username>webuser@mycompany.com</sec:username>
<sec:password>D3nu9noB</sec:password>
</sec:login>
</soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP reply to the request to log in.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
<ns2:sessionId>8F059BEEA3611033D277773A95404641</ns2:sessionId>
</ns2:loginResponse>
</S:Body>
</S:Envelope>
```

The *sessionId* is required to perform other SOAP operations after you log in to an Integration Appliance or the Cloud.

The following code is an example of a SOAP request to get a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header>
<sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
</soapenv:Header>
<soapenv:Body>
<sec:getUser>
<sec:username>webuser</sec:username>
</sec:getUser>
</soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP response to the request to get a user.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
<ns2:user>
<ns3:id>8F059BEEA3611033D277773A95404641</ns3:id>
<ns3:name>webuser</ns3:name>
<ns3:encPasswd>{SHA}c1020r2ZJMJCDrNwXQzhWB8YcdI=</ns3:encPasswd>
<ns3:displayName>WebServiceUser</ns3:displayName>
<ns3:isActive>true</ns3:isActive>
<ns3:isMutable>true</ns3:isMutable>
<ns3:isVisible>true</ns3:isVisible>
<ns3:email>webuser@mycompany.com</ns3:email>
<ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
<ns3:failedLoginCount>0</ns3:failedLoginCount>
```

```

<ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
<ns3:scopeType>Tenant</ns3:scopeType>
</ns2:user>
</ns2:getUserResponse>
</S:Body>
</S:Envelope>

```

The following code is an example of a SOAP request to logout.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:logout/>
  </soapenv:Body>
</soapenv:Envelope>

```

## Cloud examples

---

The following examples apply to the Cloud only.

The previous examples used SOAP operations that ran in a tenant in the Cloud or an Integration Appliance. To run operations in environments within a tenant in the Cloud, you use the setCurrentScope operation to set the scope to the environment where you want to run SOAP operations.

The following example sets the scope to the development environment and then starts a project located in the development environment.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>63Y93HD6D856EB5812EB71216C3547W7</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScope>
      <sec:scopeName>Development</sec:scopeName>
    </sec:setCurrentScope>
  </soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeResponse>
  </S:Body>
</S:Envelope>

```

The following example is a SOAP request to start a configuration in the development environment.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>63Y93HD6D856EB5812EB71216C3547W7</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep: projectName>HTTP_363i</dep: projectName>
      <dep: version>1.0</dep: version>
      <dep: configName>HTTP_363j</dep: configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>

```

```
<ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
<ns2:success>true</ns2:success>
</ns2:startResponse>
</S:Body>
</S:Envelope>
```

## WSDL files

---

Client-side web services use the WSDL file to create stubs that enable client-side applications to interact with an Integration Appliance or Cloud project.

The WSDL files specify the operations that a client application can use to install, manage, and monitor an Integration Appliance or Cloud project.

The Management API is defined in six WSDL files:

- security.wsdl
- staging.wsdl
- deployment.wsdl
- system.wsdl
- orcmmon.wsdl
- lognotif.wsdl

You can download the WSDL files from the following locations for an Integration Appliance:

- Security: <https://<appliance>/ws/security?wsdl>
- Staging: <https://<appliance>/ws/staging?wsdl>
- Deployment: <https://<appliance>/ws/deployment?wsdl>
- System: <https://<appliance>/ws/system?wsdl>
- Orcmon: <https://<appliance>/ws/orcmon?wsdl>
- Lognotif: <https://<appliance>/ws/lognotif?wsdl>

You can download the WSDL files from the following locations for the Cloud:

- Security: <https://cloud2.castiron.com/ws/security?wsdl>
- Staging: <https://cloud2.castiron.com/ws/staging?wsdl>
- Deployment: <https://cloud2.castiron.com/ws/deployment?wsdl>
- System: <https://cloud2.castiron.com/ws/system?wsdl>
- Orcmon: <https://cloud2.castiron.com/ws/orcmon?wsdl>
- Lognotif: <https://cloud2.castiron.com/ws/lognotif?wsdl>

# Glossary of terms for WebSphere DataPower Cast Iron Management API Guide

---

This glossary defines WebSphere® DataPower® Cast Iron® Management API Guide terms that are used in this documentation.

This glossary contains terms specific to WebSphere DataPower Cast Iron Management API Guide .

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

## E

### environment

In the Cloud, an environment is a subdivision of a tenant. A typical tenant contains development, staging, and production environments. An environment has its own administrators, users, roles, and role groups. After a project is completed in the Modify tab, it is published to an environment where it can be deployed, tested, and run. The administrator role of an environment can assign users to roles and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the environment.

[TOP](#)

## R

### role

Role is a way to provide users with a pre-defined set of permissions. When an administrator assigns a role to a user the user is able to access all of the projects to which the role has permissions. The user can also perform all of the actions for which the role has permissions. In the Cloud, the user gets access to any tenants and environments to which the role has permissions.

### roleGroup

Use to combine roles into a single entity which can then be assigned to users. A user assigned to a roleGroup inherits all of the access and permissions that the roles in the roleGroup are given.

[TOP](#)

## S

### scope

In the Cloud, scope refers to either a tenant or an environment within a tenant. You use setCurrentScope to set the scope to where you want to run SOAP operations. Scope applies to the Cloud only.

[TOP](#)

## T

### tenant

The Cloud is a multi-tenant cloud as opposed to a single-tenant cloud. Each tenant can be divided into environments such as development, staging, and production. The administrator role of the tenant can assign users to environments, roles, and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the tenant and environments within the tenant.

## addRoleToRoleGroup

---

Adds the specified role as a member to the specified group.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**role**

The name of the role.

**group**

The name of the group to which the role is to be added.

Returns:

True if the role is successfully added to the group.

---

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00006.html>

## changePassword

---

Changes the password for the specified username.

### Parameters:

---

**username**

The username for which the password is to be changed.

**oldPassword**

The old password for the username.

**newPassword**

The new password for the username.

Returns:

True if the password was successfully changed.

### Examples:

---

The following example is a SOAP request to change the password for a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>B0097A43C5527FA552C3DBA7EF74CE9</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:changePassword>  
            <sec:username>webman</sec:username>  
            <sec:oldPassword>Oldpw12g</sec:oldPassword>
```

```

<sec:newPassword>Newpw24e</sec:newPassword>
</sec:changePassword>
</soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:changePasswordResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
<ns2:success>true</ns2:success>
</ns2:changePasswordResponse>
</S:Body>
</S:Envelope>

```

## [Feedback | Notices](#)

## clearPrivileges

Clears privileges for the specified target, such as a user.

Applies to Clouds and Integration Appliances.

### Parameter:

**target**

The specified target.

Returns:

True if the privileges are cleared for the specified target.

### Examples:

The following code is an example of a SOAP request to create a user.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" 
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header>
<sec:sessionId>B87CDEE24C7AE5EE4B1C00158EBC483D</sec:sessionId>
</soapenv:Header>
<soapenv:Body>
<sec:clearPrivileges>
<sec:target>pubuser</sec:target>
</sec:clearPrivileges>
</soapenv:Body>
</soapenv:Envelope>

```

The following code is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:clearPrivilegesResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
<return>true</return>
</ns2:clearPrivilegesResponse>
</S:Body>
</S:Envelope>

```

 Last updated: Thursday, 2 June 2016

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00008.html>

## createRole

---

Creates a role.

Applies to Clouds and Integration Appliances.

### Parameters:

---

role

The specified roleName for the role that you want created.

displayName

The name to be displayed in the WMC.

email

The email address for the role.

Returns:

True if the role is created.

### Examples:

---

The following example is a SOAP request to create a role. The input for the request is the session ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>85E3EB542F02449CE3FDC302A25E47F9</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:createRole>
      <sec:role>jobmonitor</sec:role>
      <sec:displayName>jobmonitor</sec:displayName>
      <sec:email>monitor@mycompany.com</sec:email>
    </sec:createRole>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRoleResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
      router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:createRoleResponse>
  </S:Body>
</S:Envelope>
```

## createUser

---

Creates a user name.

Applies to Clouds and Integration Appliances.

### Parameters:

---

username

The user ID to create.

password

The password for username.

displayName

The name to display in the WMC.

email

The email address for username.

Returns:

True if the username was successfully created.

### Examples:

---

The following code is an example of a SOAP request to create a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:createUser>
      <sec:username>webman</sec:username>
      <sec:password>Connect2WS</sec:password>
      <sec:displayName>WebServiceUser</sec:displayName>
      <sec:email>webman@mycompany.com</sec:email>
    </sec:createUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:createUserResponse>
  </S:Body>
</S:Envelope>
```

---

## currentScope

---

Returns the current scope for this thread.

Applies to Clouds only.

Returns:

The current scope.

### Examples:

---

The following example is a SOAP request for the current scope. The input for the request is the session ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>85F500F8283BBD9E4F31DCE3FD894442</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:currentScope/>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
    <S:Body>  
        <ns2:currentScopeResponse xmlns:ns2="http://www.approuter.com/  
            schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/  
            router/1000/security/03">  
            <ns2:scope>  
                <active>true</active>  
                <category>enterprise</category>  
                <displayName>mycompany.com</displayName>  
                <id>B47EAECF6AD14AA028B4EA038CB742D0</id>  
                <index>0</index>  
                <name>mycompany.com</name>  
                <parentId>00000000000000000000000000000000</parentId>  
                <type>TENANT</type>  
            </ns2:scope>  
        </ns2:currentScopeResponse>  
    </S:Body>  
</S:Envelope>
```

---

## deleteRole

---

Deletes a specified role.

Applies to Clouds and Integration Appliances.

### Parameter:

---

role

The specified roleName to delete.

Returns:

True if the role is deleted.

## Examples:

---

The following example is a SOAP request to delete a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>

## deleteUser

---

Deletes the user with the specified username.

Applies to Clouds and Integration Appliances.

### Parameter:

---

username

The user to delete from the tenant, environment, or project.

Returns:

True if the user was successfully deleted.

## Examples:

---

The following example is a SOAP request to delete a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>

## disableUser

---

Disables a username. A disabled username cannot authenticate.

Applies to Clouds and Integration Appliances.

### Parameter:

---

username

The username to disable.

Returns:

True if the user was successfully disabled.

### Examples:

---

The following example is a SOAP request to disable a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header>
<sec:sessionId>BAB25F1A2A1ADCC0BB0D455D41354509</sec:sessionId>

## enableUser

---

Enables a user. An enabled user can authenticate.

Applies to Clouds and Integration Appliances.

### Parameter:

---

username  
The user to enable.

Returns:  
True if the user was successfully enabled.

### Examples:

---

The following example is a SOAP request to enable a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BAB25F1A2A1ADCC0BB0D455D41354509</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:enableUser>
      <sec:username>webman</sec:username>
    </sec:enableUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:enableUserResponse xmlns:ns2="http://www.approuter.com/
    schemas/2008/1/security"
    xmlns:ns3="http://www.approuter.com/schema/
    router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:enableUserResponse>
  </S:Body>
</S:Envelope>
```

## filterNewUsers

---

Filters new users.

Applies to Clouds and Integration Appliances.

## Parameters:

---

### filter

The filter to run against the list of users.

### sinceDate

The date to use to determine new users.

### Returns:

Returns the new users.

---

## filterUsers

---

Filters users.

Applies to Clouds and Integration Appliances.

## Parameter:

---

### filter

The filter to run against a list of users.

### Returns:

The users.

## Examples:

---

The following example is a SOAP request to filter users that begin with a w.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A5D2F0294EACB36B70622B8EE0E94706</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:filterUsers>
      <sec:filter>w</sec:filter>
    </sec:filterUsers>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:filterUsersResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:users>webman</ns2:users>
    </ns2:filterUsersResponse>
  </S:Body>
</S:Envelope>
```

## getGrantedRoles

---

Returns a list of all the roles explicitly granted to the specified user.

Applies to Clouds and Integration Appliances.

### Parameter:

---

username  
The specified user.

Returns:  
The list of roles granted to the specified user.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00018.html>

## getImpliedRoles

---

Returns a list of all roles to which the specified user is a member. The list might contain roles that might not have been explicitly granted to the user, but are indirectly implied due to group memberships.

Applies to Clouds and Integration Appliances.

### Parameter:

---

username  
The specified user.

Returns:  
The role names.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00019.html>

## getKerberosRealm

---

Gets the Kerberos realm.

Applies to Clouds and Integration Appliances.

Returns:

The Kerberos realm.

---

## getKerberosServer

---

Gets the name of the Kerberos server.

Applies to Clouds and Integration Appliances.

Returns:

The Kerberos server name.

---

## getRole

---

Gets the specified role.

Applies to Clouds and Integration Appliances.

### Parameter:

---

role

The specified role to return.

Returns:

The specified role

### Examples:

---

The following example is a SOAP request to get a role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>BC77BA76E338CFA6B0063218A0AE4656</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:getRole>  
            <sec:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</sec:name>  
        </sec:getRole>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getRoleResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
<ns2:group>
<ns3:id>903273B869AC8CA9D99F4C8448694680</ns3:id>
<ns3:name>publisher@A347B0C49C8CFA462D4F28A4C05B47C2</ns3:name>
<ns3:displayName>Publisher Group</ns3:displayName>
<ns3:isActive>true</ns3:isActive>
<ns3:isMutable>false</ns3:isMutable>
<ns3:isVisible>true</ns3:isVisible>
<ns3:createdTime>2010-04-10T00:08:23Z</ns3:createdTime>
<ns3:scopeId>A347B0C49C8CFA462D4F28A4C05B47C2</ns3:scopeId>
<ns3:scopeType>Environment</ns3:scopeType>
<ns3:groupType>Publisher</ns3:groupType>
</ns2:group>
</ns2:getRoleResponse>
</S:Body>
</S:Envelope>
```

For each role the following information is returned:

**id**

The ID for the role.

**name**

The name of the role.

**displayName**

The name displayed in the WMC for the role.

**isActive**

True or false depending on whether the role is active.

**isMutable**

True or false. True means that the object can be updated.

**isVisible**

True or false. True means that the object is visible in the WMC.

**email**

The email address for the role.

**createdTime**

The date and time the role was created. The time is compliant with ISO 8601.

**scopeId**

The ID of the scope where the role is found. (Cloud only.)

**scopeType**

The type of scope, either tenant or environment. (Cloud only.)

**groupType**

The type of group to which the role belongs. If you create your own group, it is a custom group. For information about the built-in groups, see WMC Help > Permissions > About Built-in Groups.

## getRoleById

---

Gets the specified role.

Applies to Clouds and Integration Appliances.

### Parameter:

---

**id**

The specified ID for the role that you want returned.

Returns:

The role for the specified ID.

### Examples:

---

The following example is a SOAP request to get a role by the ID of the role.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/  
    schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:getRoleById>  
            <sec:id>8F52644BBA2491693D440F2FA12A4B3D</sec:id>  
        </sec:getRoleById>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is a SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
    <S:Body>  
        <ns2:getRoleByIdResponse xmlns:ns2="http://www.approuter.com/  
        schemas/2008/1/security"  
        xmlns:ns3="http://www.approuter.com/schema/  
        router/1000/security/03">  
            <ns2:group>  
                <ns3:id>8F52644BBA2491693D440F2FA12A4B3D</ns3:id>  
                <ns3:name>securitymonitor</ns3:name>  
                <ns3:displayName>monitor</ns3:displayName>  
                <ns3:isActive>true</ns3:isActive>  
                <ns3:isMutable>true</ns3:isMutable>  
                <ns3:isVisible>true</ns3:isVisible>  
                <ns3:email>security@mycompany.com</ns3:email>  
                <ns3:createdTime>2010-03-23T19:14:30.066Z</ns3:createdTime>  
                <ns3:scopeId>A6EFAF24DB7168A4206F605CA6E14B1D</ns3:scopeId>  
                <ns3:scopeType>Tenant</ns3:scopeType>  
                <ns3:groupType>Custom</ns3:groupType>  
            </ns2:group>  
        </ns2:getRoleByIdResponse>  
    </S:Body>  
</S:Envelope>
```

For each role the following information is returned:

**id**

The ID for the role.

**name**

The name of the role.

**displayName**

The name displayed in the WMC for the role.

**isActive**

True or false depending on whether the role is active.

**isMutable**

True or false. True means that the object can be updated.

**isVisible**

True or false. True means that the object is visible in the WMC.

**email**

The email address for the role.

**createdTime**

The date and time the role was created. The time is compliant with ISO 8601.

**scopeId**

The ID of the scope where the role is found. (Cloud only.)

**scopeType**

The type of scope, either tenant or environment. (Cloud only.)

**groupType**

The type of group to which the role belongs.

        <ns3:scopeId>B74A0FF293331AB2A7E4F21E15D143F3</ns3:scopeId>
        <ns3:scopeType>Environment</ns3:scopeType>
        <ns3:groupType>Admin</ns3:groupType>
      </ns2:roles>
      <ns2:roles>
        <ns3:id>B7DD994177067F9B6238B08AE6114F2A</ns3:id>
        <ns3:name>monitor</ns3:name>
        <ns3:displayName>Job Monitor</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>monitor@mycompany.com</ns3:email>
        <ns3:createdTime>2010-04-08T16:57:20.765Z</ns3:createdTime>
        <ns3:scopeId>B74A0FF293331AB2A7E4F21E15D143F3</ns3:scopeId>
        <ns3:scopeType>Environment</ns3:scopeType>
        <ns3:groupType>Custom</ns3:groupType>
      </ns2:roles>
    </ns2:getRolesResponse>
  </S:Body>
</S:Envelope>
```

For each role the following is returned:

**id**

The ID for the role.

**name**

The name of the role.

**displayName**

The name displayed in the WMC for the role.

**isActive**

True or false depending on whether the role is active.

**isMutable**

True or false. True means that the object can be updated.

**isVisible**

True or false. True means that the object is visible in the WMC.

**email**

The email address for the role.

**createdTime**

The date and time the role was created. The time is compliant with ISO 8601.

**scopeId**

The ID of the scope where the role is found. (Cloud only.)

**scopeType**

The type of scope, either tenant or environment. (Cloud only.)

**groupType**

The type of group to which the role belongs.

## getScope

---

Gets the specified scope in the specified parent scope.

Applies to Clouds only.

### Parameters:

---

scopeType

The type of scope, which is either tenant or environment.

name

The name of the scope.

parentScopeId

The ID of the parent scope.

Returns:

The specified scope.

### Examples:

---

The following example is a SOAP request to get the specified scope in the specified parent scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>AA91E56114D36B296D82660639B6482F</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:getScope>  
            <sec:scopeType>ENV</sec:scopeType>  
            <sec:name>Staging</sec:name>  
            <sec:parentScopeId>88673D5DF2583806B037576D94F34BBA</sec:parentScopeId>  
        </sec:getScope>  
    </soapenv:Body>  
</soapenv:Envelope>
```

```
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/

## getScopeById

---

Gets the scope as specified by the ID.

Applies to Clouds only.

### Parameter:

---

scopeID

The ID for the scope.

Returns:

The scope as specified by the ID.

### Examples:

---

The following code is an example of a SOAP request to get a scope by its ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

## [getScopesByParentId](#)

Using the ID of the parent scope, returns a list of all the child scopes.

Applies to Clouds only.

### **Parameter:**

parentScopeId

The ID for the parent scope.

Returns:

A list of child scopes.

### **Examples:**

The following example is a SOAP request to get scopes by using the ID of the parent scope.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
<ns2:parentScopeId>BB173AE61484BD7359D8910789EA4E88</ns2:parentScopeId>
<ns2:scopes>
<ns2:scope>
<active>true</active>
<category>environment</category>
<displayName>Staging</displayName>
<id>9378E8C3C5E5DCACA77D9F7B6BE24B98</id>
<index>0</index>
<name>castiron.com</name>
<parentId>00000000000000000000000000000000</parentId>
<type>TENANT</type>
</ns2:scope>
</ns2:scopes>

```

The following example is the SOAP response to the request. The parent scope is a tenant and the child scopes are the environments in the tenant.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getScopesByParentIdResponse xmlns:ns2="http://www.approuter.com/

```

For each child scope, the following information is returned:

#### active

True or false. True means that the scope is active.

#### displayName

The name displayed in the WMC for the role.

#### id

The ID for the child scope.

#### index

The position in the index of the child scope.

#### name

The name of the child scope.

#### parentId

The ID of the parent scope.

#### type

The type of scope.

## getUser

Gets the user for specified username.

Applies to Clouds and Integration Appliances.

### Parameter:

**username**  
The specified username.

**Returns:**  
The user corresponding to the specified username.

## Examples:

---

The following example is a SOAP request to get a user by using the specified username.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BF1E7729085BB066446DF913FAE34596</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getUser>
      <sec:username>webman</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>965AAB3FED8D3CCBEBE4DC8EE0E2944EA</ns3:id>
        <ns3:name>webman</ns3:name>
        <ns3:encPasswd>{SHA}c1020r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webman@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

For each user the following information is returned:

**id**  
The ID for the user.

**name**  
The name for the user.

**encPasswd**  
The SHA encoded password for the user.

**displayName**  
The name displayed in the WMC for the role.

**isActive**  
True if the user is logged in, false if not.

**isMutable**  
True or false. True means that the object can be updated, false if not.

**isVisible**  
True or false. True means that the object is visible in the WMC, false if not.

**email**  
The email address for the user.

#### createdTime

The date and time the user was created.

#### failedLoginCount

The number of failed attempts to log in by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled (15 - 30 - 60 - 120).

#### scopeId

The scope ID for the scope where the user is located. Does not apply for Integration Appliances.

#### scopeType

The type of scope, either tenant or environment. Does not apply for Integration Appliances.

## getUserById

---

Gets the user by the specified ID.

Applies to Clouds and Integration Appliances.

### Parameter:

---

#### id

The specified ID for the user.

Returns:

The user with the specified ID.

### Examples:

---

The following example is a SOAP request to get a user by the specified ID.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>BAB25F1A2A1ADCC0BB0D455D41354509</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getUserById>
      <sec:id>9707B975E42F2B6135D6FB0FA36C4E53</sec:id>
    </sec:getUserById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserByIdResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
      router/1000/security/03">
      <ns2:user>
        <ns3:id>9707B975E42F2B6135D6FB0FA36C4E53</ns3:id>
        <ns3:name>webman</ns3:name>
        <ns3:encPasswd>{SHA}gf/yUAZHwaZFHdCMaxDHVmmd4FE=</ns3:encPasswd>
        <ns3:displayName>Webuser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
      </ns2:user>
    </ns2:getUserByIdResponse>
  </S:Body>
</S:Envelope>
```

```

<ns3:email>webman@castiron.com</ns3:email>
<ns3:createdTime>2010-03-11T19:03:46.737Z</ns3:createdTime>
<ns3:failedLoginCount>0</ns3:failedLoginCount>
<ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
<ns3:scopeType>Tenant</ns3:scopeType>
</ns2:user>
</ns2:getUserByIdResponse>
</S:Body>
</S:Envelope>

```

For each user the following information is returned:

**id**

The ID for the user.

**name**

The name for the user.

**encPasswd**

The SHA encoded password for the user.

**displayName**

The name displayed in the WMC for the user.

**isActive**

True or false depending on whether the user is logged in.

**isMutable**

True or false. True means that the object can be updated. False means that the object cannot be updated.

**isVisible**

True or false. True means that the object is visible in the WMC.

**email**

The email address for the user.

**createdTime**

The date and time the user was created.

**failedLoginCount**

The number of failed attempts to log in by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled (15 - 30 - 60 - 120).

**scopeId**

The scope ID for the scope where the user is located. Applies to Cloud only.

**scopeType**

The type of scope, either tenant or environment. Applies to Cloud only.

<ns3:scopeType>Tenant</ns3:scopeType>
</ns2:users>
</ns2:getUsersResponse>
</S:Body>
</S:Envelope>

```

For each user the following information is returned:

**id**

The ID for the user.

**name**

The name for the user.

**encPasswd**

The SHA encoded password for the user.

**displayName**

The name displayed in the WMC for the user.

**isActive**

True or false depending on whether the user is logged in.

**isMutable**

True or false. True means that the object can be updated, false if not.

**isVisible**

True or false. True means that the object is visible in the WMC, false if not.

**email**

The email address for the user.

**createdTime**

The date and time the user was created.

**failedLoginCount**

The number of failed attempts to log in to the tenant by using this name. After five failures, the username is blocked for 15 seconds. For each successive failure, the blocked time is doubled.

**scopeId**

The scope ID for the scope where the user is located. Applies to Clouds only.

**scopeType**

The type of scope, either tenant or environment. Applies to Clouds only.

## grantRole

---

Grants a specified role to a specified user.

Applies to Clouds and Integration Appliances.

### Parameters:

---

userName

The specified userName to whom the specified roleName is to be granted.

role

The specified roleName to be granted to the specified userName.

Returns:

True if the role is granted to the user.

The following example is a SOAP request to grant a role.

Request:  
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
<soapenv:Header>

## hasPrivilege

Returns true if a privilege exists for the specified user, target, and action.

Applies to Clouds and Integration Appliances.

### Parameters:

**username**  
The specified user.

**target**  
The specified target.

**action**  
The specified action.

**Returns:**  
True if the privilege exists.

## isRealmUser

Returns true if the specified user belongs to the realm that corresponds to the session ID.

Applies to Clouds and Integration Appliances.

## Parameter:

---

username  
The specified user.

Returns:  
True if the user belongs to the realm.

## Examples:

---

The following example is a SOAP request to check if the specified user belongs to the realm.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
  <soapenv:Header>  
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>  
  </soapenv:Header>  
  <soapenv:Body>  
    <sec:isRealmUser>  
      <sec:username>admin@mycompany.com</sec:username>  
    </sec:isRealmUser>  
  </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
  <S:Body>  
    <ns2:isRealmUserResponse xmlns:ns2="http://www.approuter.com/

## isEnabled

---

Checks to see if the specified username is enabled. An enabled user is authenticated.

Applies to Clouds and Integration Appliances.

## Parameter:

---

username  
The username to be checked.

Returns:  
True if the specified username is enabled.

## Examples:

---

The following example is a SOAP request to check if the specified user is enabled.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">

## listGrantableRoles

Returns a list of roles that can be granted (excludes conditional roles).

Applies to Clouds and Integration Appliances.

Returns:  
The list of roles.

#### Examples:

The following example is a SOAP request to list the grantable roles.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>AA91E56114D36B296D82660639B6482F</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:listGrantableRoles/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```

## listPrivileges

---

Returns a list of privileges for the specified targets and action.

Applies to Clouds and Integration Appliances.

### Parameters:

---

targets

The specified targets.

action

The specified action.

Returns:

The list of privileges.

---

#### [Feedback | Notices](#)

## listRoles

---

Gets a list of all the role names.

Applies to Clouds and Integration Appliances.

Returns:

The role names.

## Examples:

---

The following example is a SOAP request to get the role names.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>84076B5B810064272043B5106EEE46C3</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:listRoles/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:listRolesResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:roles>user@B74A0FF293331AB2A7E4F21E15D143F3</ns2:roles>
      <ns2:roles>publisher@B74A0FF293331AB2A7E4F21E15D143F3</ns2:roles>
      <ns2:roles>admin@B74A0FF293331AB2A7E4F21E15D143F3</ns2:roles>
    </ns2:listRolesResponse>
  </S:Body>
</S:Envelope>
```

---

## listUsers

---

Returns a list of all users.

Applies to Clouds and Integration Appliances.

Returns:

A list of all users.

## Examples:

---

The following example is a SOAP request for the list of users.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:listUsers/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request for the list of users:

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:listUsersResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
<ns2:users>foo@mycompany.com</ns2:users>
<ns2:users>httpclient@mycompany.com</ns2:users>
<ns2:users>admin@mycompany.com</ns2:users>
<ns2:users>webman@mycompany.com</ns2:users>
<ns2:users>support@mycompany.com</ns2:users>
</ns2:listUsersResponse>
</S:Body>
</S:Envelope>

```

## [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016

file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00045.html>

## login

Logs in to an Integration Appliance or a Cloud.

### Parameters:

#### username

The user ID that you use to log in to an Integration Appliance or Cloud.

#### password

The password for username.

#### Returns:

The session ID.

### Examples:

The following code is an example of a SOAP request that you can use to log in to the web service:

Note: To login to the Cast Iron Live web service, use the IBM ID Credentials for the username and password fields in the SOAP request.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" 
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header/>
<soapenv:Body>
<sec:login>
<sec:username>webman@mycompany.com</sec:username>
<sec:password>My6word3S</sec:password>
</sec:login>
</soapenv:Body>
</soapenv:Envelope>

```

The password must be at least eight characters long and contain a combination of three of the following characters:

- Alphabet characters
- Uppercase alphabet characters
- Numbers
- Special characters

The following code is an example of a SOAP response to a successful login request:

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/

```

```
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
<ns2:sessionId>8F059BWEA3611033D277773A95404641</ns2:sessionId>
</ns2:loginResponse>
</S:Body>
</S:Envelope>
```

The session ID is required to run the other operations in the Management API after logging in.

## logout

---

Logs out of an Integration Appliance or Cloud.

Returns:  
Logs out of the Integration Appliance or Cloud

### Examples:

---

The following example is a SOAP request to log out.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
<ns1:sec="http://www.approuter.com/schemas/2008/1/security">
<soapenv:Header>
<sec:sessionId>BB93F99B80AC742BEE3BC81262C2486F</sec:sessionId>
</soapenv:Header>
<soapenv:Body>
<sec:logout/>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is a SOAP reply to a logout request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:logoutResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
<return>true</return>
</ns2:logoutResponse>
</S:Body>
</S:Envelope>
```

## **removeRoleFromRoleGroup**

---

Removes the specified role as a member of the specified group.

Applies to Clouds and Integration Appliances.

### **Parameters:**

---

**role**

The name of the role.

**group**

The name of the group from which the role is to be removed.

Returns:

True if the role is successfully removed from the group.

---

## revokeRole

---

Revokes a specified role from a specified user.

Applies to Clouds and Integration Appliances.

### Parameters:

---

userName

The specified userName to whom the specified roleName is to be revoked.

role

The specified roleName to be revoked from the specified userName.

Returns:

True if the role is revoked from the user.

---

## roleExists

---

Checks if the specified role exists. Returns true if the role exists.

Applies to Clouds and Integration Appliances.

### Parameter:

---

role

The specified role to be checked to see if it exists.

Returns:

True if the specified role exists.

### Examples:

---

The following example is a SOAP request to check if a role exists.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sec="http://www.approuter.com/schemas/2008/1/security">  
    <soapenv:Header>  
        <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sec:roleExists>  
            <sec:name>securitymonitor</sec:name>  
        </sec:roleExists>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is a SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
    <S:Body>  
        <ns2:roleExistsResponse xmlns:ns2="http://www.approuter.com/

## setCurrentScope

---

Sets the current scope for this thread.

Applies to Clouds only.

Returns:

True if the current scope was set.

### Examples:

---

The following example is a SOAP request to set the current scope.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <ns1:sec xmlns:ns1="http://www.approuter.com/schemas/2008/1/security">
    <soapenv:Header>
      <sec:sessionId>84B7E4D6D856EB5812EB71896C3547CC</sec:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <sec:setCurrentScope>
        <sec:scopeName>Development</sec:scopeName>
      </sec:setCurrentScope>
    </soapenv:Body>
  </ns1:sec>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
      router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeResponse>
  </S:Body>
</S:Envelope>
```

## setCurrentScopeById

---

Sets the current scope for this thread.

Applies to Clouds only.

Returns:

True if the current scope was set.

## Examples:

---

The following example is a SOAP request to set the current scope by the ID of the tenant or environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>84B7E4D6D856EB5812EB71896C3547CC</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScopeById>
      <sec:scopeId>8DA9ED360FCB9B3F6E867705490D4B9F</sec:scopeId>
    </sec:setCurrentScopeById>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeByIdResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeByIdResponse>
  </S:Body>
</S:Envelope>
```

## setKerberosConfiguration

---

Sets the Kerberos configuration.

You can use the Kerberos protocol to provide security on an unsecured network for communication between your server and Clouds or Integration Appliances.

Applies to Clouds and Integration Appliances.

### Parameters:

---

serverName

The name of the Kerberos server.

realm

The realm for the Kerberos server.

---

## **updateRole**

---

Updates the specified role.

Applies to Clouds and Integration Appliances.

### **Parameters:**

---

role

The specified roleName to be updated.

displayName

The name to be displayed in the WMC.

email

The email address for roleName.

Returns:

True if the role is updated.

---

## **updateUser**

---

Updates a user.

Applies to Clouds and Integration Appliances.

### **Parameters:**

---

**username**

The user name for the tenant associated with the session ID.

**displayName**

The name to display in the WMC.

**email**

The email address for the username.

**Returns:**

True if the user was successfully updated.

## Examples:

---

The following example is a SOAP request to update a user. The input for the request is the session ID and the username. The email address is being updated in this example.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>A85C21BB99E816D48800C90B2C5547D4</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:updateUser>
      <sec:username>webman</sec:username>
      <sec:displayName>?</sec:displayName>
      <sec:email>webman@mycompany.com</sec:email>
    </sec:updateUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:updateUserResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
      router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:updateUserResponse>
  </S:Body>
</S:Envelope>
```

The email address was successfully updated.

## Deployment

---

Information about the deployment WSDL.

The deployment WSDL provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can also import or export repositories.

This section contains the following topics:

- [cancelJob](#)
- [cloneConfiguration](#)
- [createAssets](#)
- [createConfiguration](#)
- [createRepeatingRule](#)
- [createRule](#)
- [createUserConfiguration](#)
- [deleteConfiguration](#)
- [deleteProject](#)
- [deleteRule](#)
- [deleteUserConfiguration](#)
- [downloadProject](#)
- [exportRepository](#)
- [getAllProjects](#)
- [getAssetGroupDisplayString](#)
- [getAssetGroupScript](#)
- [getAssetGroupWarnings](#)
- [getAssetProperties](#)
- [getAssetPropertiesBindings](#)

- [getConfiguration](#)
- [getConfigurationGroups](#)
- [getProject](#)
- [getRule](#)
- [getRules](#)
- [getUserConfiguration](#)
- [getUserConfigurations](#)
- [importRepository](#)
- [publishProject](#)
- [resume](#)
- [saveOrchestrationValues](#)
- [saveProperties](#)
- [setConfigurationGroups](#)
- [start](#)
- [stopAndCancel](#)
- [stopAndWait](#)
- [suspend](#)
- [undeploy](#)

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00092.html>

## cancelJob

---

Cancels the specified job group.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the project.

**Version**

The version number for the project.

**configName**

The name used to identify a configuration, such as Default.

**jobId**

The ID for the job.

Together projectName, Version, and configName uniquely identify a configuration.

You can obtain the jobId by first running the searchJobs operation (orcmon.wsdl).

## cloneConfiguration

---

Clones the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

oldConfigName

The name of the configuration being cloned.

newConfigName

The name of the cloned configuration.

Returns:

The cloned configuration.

### Examples:

---

The following code is an example of a SOAP request to clone a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
<soapenv:Header>
<dep:sessionId>855BE295392375C8551C8B98D6EA4774</dep:sessionId>
</soapenv:Header>
<soapenv:Body>
<dep:cloneConfiguration>
<dep:projectName>GenericProject_1_Cloud</dep:projectName>
<dep:version>1.0</dep:version>
<dep:oldConfigName>GenericProject_2_Cloud</dep:oldConfigName>
<dep:newConfigName>GenericProject_3_Cloud</dep:newConfigName>
</dep:cloneConfiguration>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:cloneConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/

## createAssets

---

Creates assets by using the specified script.

The endpoint is specified as a project URL, such as project-url:// Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http:// www.approuter.com/module/database/

Database assets must be enclosed as specified in the following table.

Database	Enclosure
DB2® AS/400	" "
Informix®	[ ]
Microsoft SQL	[ ]
Oracle	" "
Sybase	" "

The following table lists the assets that can be created for the databases.

Database	Asset
DB2 As/400, Informix, Microsoft, Sybase	Applies to Clouds, Integration Appliances. Buffer tables, control tables, and triggers.
Local Staging Database	Buffer tables, control table, index tables, and triggers
Oracle	Buffer tables, control tables, sequences, and triggers

Applies to Clouds and Integration Appliances.

## Parameters:

---

### projectName

The name of the specified project.

### version

The version number for the specified project.

### configName

The configuration name for the specified project.

### ModuleID

The module ID for the assets.

### endpointUrl

The endpoint URL for the assets.

### propNames

The names of the property assets.

### username

The user ID for the endpoint.

### password

The password for the endpoint.

### assetType

The type of asset.

### script

The script to run against the endpoint.

Together projectName, version, and configName uniquely identify a configuration.

### Returns:

Success or failure.

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00095.html>

## createConfiguration

---

Creates the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration.

### Examples:

---

The following example is a SOAP request to create a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363W</dep:configName>
    </dep:createConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createConfigurationResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:createConfigurationResponse>
  </S:Body>
</S:Envelope>
```

---

## createRepeatingRule

---

Creates a repeating rule for downtime for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### projectName

The name of the specified project.

#### version

The version number for the specified project.

#### configName

The configuration name for the specified project.

#### stopDate

The date the configuration is to be stopped.

#### restartDate

The date the configuration is to be restarted.

#### downtimeType

The type or reason for the downtime.

#### repeat

Specifies that the downtime rule be repeated.

#### repeatInterval

Specifies the amount of time between repeats of the downtime rule.

Together projectName, version, and configName uniquely identify a configuration.

#### Returns:

The new repeating rule for the specified configuration.

---

## createRule

---

Creates a downtime rule for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### projectName

The name of the specified project.

#### version

The version number for the specified project.

#### configName

The configuration name for the specified project.

**stopDate**

The date the configuration is to be stopped.

**restartDate**

The date the configuration is to be restarted.

**downtimeType**

The type or reason for the downtime.

Together projectName, version, and configName uniquely identify a configuration.

**Returns:**

The new downtime rule for the specified configuration.

## Examples:

---

The following code is an example of a SOAP request to create a rule. Dates must conform to ISO 8601.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:createRule>
      <dep:projectName>GenericProject_1_Cloud</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>Default</dep:configName>
      <dep:stopDate>2010-04-17T07:00:00.066Z</dep:stopDate>
      <dep:restartDate>2010-04-17T08:00:00.066Z</dep:restartDate>
      <dep:downtimeType>stop</dep:downtimeType>
    </dep:createRule>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRuleResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
      deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
      security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:ruleId>2</ns2:ruleId>
    </ns2:createRuleResponse>
  </S:Body>
</S:Envelope>
```

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00098.html>

## createRuleTZ

---

Creates a downtime rule for the specified configuration, which includes timezone as well.

Applies to Clouds and Integration Appliances.

## Parameters:

---

**projectName**

The name of the specified project.

**version**  
The version number for the specified project.

**configName**  
The configuration name for the specified project.

**stopDate**  
The date the configuration is to be stopped.

**restartDate**  
The date the configuration is to be restarted.

**downtimeType**  
The type or reason for the downtime. The values for this property are `stop`, `stopAndCancel`, and `suspend`

**Stop (allows jobs to finish)** - At the specified time, this action prevents a new orchestration job from starting, while allowing the current jobs to finish processing. This action allows all jobs to end.

**Stop (cancel running jobs)** - At the specified time, this action prevents a new orchestration job from starting and stops all jobs that are currently running. This action immediately stops all jobs.

**Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.

Together `projectName`, `version`, and `configName` uniquely identify a configuration.

**Returns:**

The new downtime rule for the specified configuration.

## Examples:

---

The following code is an example of a SOAP request to create a rule. Dates must conform to ISO 8601.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:createRuleTZ>
        <dep:projectName>GenericProject_1_Cloud</dep:projectName>
        <dep:version>1.0</dep:version>
        <dep:configName>Default</dep:configName>
        <dep:stopDate>2010-04-17T07:00:00.066Z</dep:stopDate>
        <dep:restartDate>2010-04-17T08:00:00.066Z</dep:restartDate>
        <dep:downtimeType>stop</dep:downtimeType>
          <dep:timeZone>PDT</dep:timeZone>
        </dep:createRuleTZ>
      </soapenv:Body>
    </soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:createRuleTZResponse xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
      xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types"
      xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment">
        <ns2:ruleId>1572864</ns2:ruleId>
      </ns2:createRuleTZResponse>
    </S:Body>
  </S:Envelope>
```

---

## Feedback | Notices

## createUserConfiguration

---

Creates the specified user configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified user configuration.

## deleteConfiguration

---

Deletes the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

### Examples:

---

The following code is an example of a SOAP request to delete a configuration.

```

## deleteRule

---

Deletes the rule for the specified ID.

Applies to Clouds and Integration Appliances.

### Parameter:

---

ruleId

The specified ID for the rule to be deleted.

### Examples:

---

The following code is an example of a SOAP request to delete a rule.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" 
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
<soapenv:Header>

## **deleteUserConfiguration**

---

Deletes the specified configuration for the specified user.

Applies to Clouds and Integration Appliances.

### **Parameters:**

---

**userName**

The name of the specified user.

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

### **Examples:**

---

The following example is a SOAP request to delete the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AAC96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:deleteConfiguration>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:deleteConfiguration>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:deleteConfigurationResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:deleteConfigurationResponse>
  </S:Body>
</S:Envelope>
```

## **downloadProject**

---

Downloads the specified project as a byte array.

Applies to Clouds and Integration Appliances.

## Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified project in a compressed file.

## getAssetGroupDisplayString

---

Gets the asset display string for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset display string.

---

### Feedback | Notices

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00107.html>

## getAssetGroupScript

---

Gets the asset script for the given configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset script.

---

## getAssetGroupWarnings

---

Gets the asset warnings for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset warnings.

 Last updated: Thursday, 2 June 2016

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00109.html>

## getAssetProperties

---

Gets the asset property values for the specified configuration and endpoint.

The endpoint is specified as a project URL, for example project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The values for the asset properties.

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00110.html>

## getAssetPropertiesBindings

---

Gets the asset properties for the specified configuration, endpoint, and property names.

The endpoint is specified as a project URL, such as project-url://Endpoints/TargetDB. The module ID is typically either http://www.approuter.com/module/webservice/ or http://www.approuter.com/module/database/

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

ModuleID

The module ID for the assets.

endpointUrl

The endpoint URL for the assets.

propNames

The names of the property assets.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The asset properties.

---

## getConfiguration

---

Gets the specified project.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

Version

The version number for the specified project.

Returns:

The specified project.

### Examples:

---

The following example is a SOAP request to get a specified project:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">  
    <soapenv:Header>  
        <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <dep:getConfiguration>  
            <dep:projectName>HTTP_363i</dep:projectName>  
            <dep:version>1.0</dep:version>  
            <dep:configName>HTTP_363j</dep:configName>  
        </dep:getConfiguration>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getConfigurationResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
<ns2:configuration>
<envId>
<guidString>A51EDD44BE6C10B2D1335A9D634D407D</guidString>
</envId>
<lastmodified>2010-04-08T20:58:49.694Z</lastmodified>
<name>HTTP_363j</name>
<orchestrationValues>
<orchestrationValue>
<enabled>true</enabled>
<syncLoggingEnabled>false</syncLoggingEnabled>
<loggingLevel>errorValues</loggingLevel>
<maxJobs>1</maxJobs>
<orchestrationRelativeurl>project-url://Orchestrations/
Post</orchestrationRelativeurl>
<state>stopped</state>
</orchestrationValue>
<orchestrationValue>
<enabled>true</enabled>
<syncLoggingEnabled>false</syncLoggingEnabled>

## getConfigurationGroups

---

Gets the display names for the groups with permission for the given configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The group display names.

## Examples:

---

The following example is a SOAP request to get configuration groups with permission for the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>AACAA96757B36C2B4582C811197EE43C0</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:getConfigurationGroups>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:getConfigurationGroups>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
  <ns2:getConfigurationGroupsResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
    <ns2:groupDisplayNames>
      <ns4:id>8D8D61C4EF435FDB63E543509B9F4978</ns4:id>
      <ns4:name>admin@A51EDD44BE6C10B2D1335A9D634D407D</ns4:name>
      <ns4:displayName>Administrator Group</ns4:displayName>
      <ns4:isActive>true</ns4:isActive>
      <ns4:isMutable>false</ns4:isMutable>
      <ns4:isVisible>true</ns4:isVisible>
      <ns4:createdTime>2010-04-02T22:44:46Z</ns4:createdTime>
      <ns4:scopeId>A51EDD44BE6C10B2D1335A9D634D407D</ns4:scopeId>
      <ns4:scopeType>Environment</ns4:scopeType>
      <ns4:groupType>Admin</ns4:groupType>
    </ns2:groupDisplayNames>
  </ns2:getConfigurationGroupsResponse>
</S:Body>
</S:Envelope>
```

## getProject

---

Gets the specified project.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

Version

The version number for the specified project.

Returns:

The specified project.

## Examples:

---

The following example is a SOAP request to get the specified project.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">

## getRule

---

Gets the downtime rule for the specified downtime rule ID.

Applies to Clouds and Integration Appliances.

### Parameters:

---

ruleId

The specified downtime rule ID.

Returns:

The downtime rule.

### Examples:

---

The following code is an example of a SOAP request to get a rule.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <ns1:dep xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:getRule>
        <dep:ruleId>2</dep:ruleId>
      </dep:getRule>
    </soapenv:Body>
  </ns1:dep>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRuleResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
    deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/

## getRules

---

Gets the downtime rules for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### projectName

The name of the specified project.

#### Version

The version number for the specified project.

#### configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

#### Returns:

The downtime rules for the specified configuration.

### Examples:

---

The following code is an example of a SOAP request to get rules.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <ns1:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>8FDBC8ED7A014272714D23D14794473A</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:getRules>
        <dep:projectName>GenericProject_1_Cloud</dep:projectName>
        <dep:version>1.0</dep:version>
        <dep:configName>Default</dep:configName>
      </dep:getRules>
    </soapenv:Body>
  </ns1:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getRulesResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
      deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/
      security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">

```

```
<ns2:rules>
<ns3:configUrl>config-url://GenericProject_1_Cloud:1.0:Default</
ns3:configUrl>
<ns3:downtimeType>stop</ns3:downtimeType>
<ns3:envId>
<guidString>A7FFE81243A1E319FCAED0DFABF9470B</guidString>
</ns3:envId>
<ns3:isActive>true</ns3:isActive>
<ns3:repeatInterval>0</ns3:repeatInterval>
<ns3:repeatType>none</ns3:repeatType>
<ns3:repeatingRule>false</ns3:repeatingRule>
<ns3:restartDate>2010-04-17T08:00:00.066Z</ns3:restartDate>
<ns3:ruleId>2</ns3:ruleId>
<ns3:stopDate>2010-04-17T07:00:00.066Z</ns3:stopDate>
</ns2:rules>
</ns2:getRulesResponse>
</S:Body>
</S:Envelope>
```

## getUserConfiguration

---

Gets the specified configuration for the specified user.

Applies to Clouds and Integration Appliances.

### Parameters:

---

userName

The name of the specified user.

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

The specified configuration for specified user.

## importRepository

---

Imports the project repository in XML format.

Applies to Integration Appliances only.

## Parameters:

---

importType

The type of import.

data

The project repository in XML format.

Returns:

Success or failure

---

## publishProject

---

Publishes the given project and creates a default configuration.

Applies to Clouds and Integration Appliances.

## Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

content

The project in a compressed file (a .par file).

Returns:

Success or failure.

---

## resume

---

Resumes the specified configuration

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

### Examples:

---

The following example is a SOAP request to resume running a configuration that was paused.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:resume>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:resume>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>

## saveOrchestrationValues

---

Saves the specified values for the specified orchestration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

values

The specified values to save for the specified orchestration.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

### Examples:

---

The following example is a SOAP request to save the values for the specified orchestration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>AAC96757B36C2B4582C811197EE43C0</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:saveOrchestrationValues>
        <dep:projectName>HTTP_363i</dep:projectName>
        <dep:version>1.0</dep:version>
        <dep:configName>HTTP_363j</dep:configName>
        <dep:values>
          <enabled>true</enabled>
          <syncLoggingEnabled>false</syncLoggingEnabled>
          <loggingLevel>errorValues</loggingLevel>
          <maxJobs>1</maxJobs>
          <orchestrationRelativeurl>orchestrationRelativeurl>project-url://
Orchestrations/
Receive</orchestrationRelativeurl>
<state>stopped</state>
</dep:values>
      </dep:saveOrchestrationValues>
    </soapenv:Body>
  </soapenv:Envelope>
```

The following example is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:saveOrchestrationValuesResponse xmlns:ns2="http://
```

```
www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://
www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://
www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://
www.approuter.com/schemas/2008/1/util/types">
<ns2:success>true</ns2:success>
</ns2:saveOrchestrationValuesResponse>
</S:Body>
</S:Envelope>
```

---

## saveProperties

---

Saves the specified properties for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**Version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

**properties**

The specified properties to save for the specified configuration.

Together projectName, version, and configName uniquely identify a configuration.

---

## setConfigurationGroups

---

Sets the groups with permission for the specified project.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

**groupIds**

The IDs for the groups.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

---

## start

---

Starts the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

### Examples:

---

The following example is a SOAP request to start a configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
```

```

<ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
  <ns2:success>true</ns2:success>
</ns2:startResponse>
</S:Body>
</S:Envelope>

```

---

## stopAndCancel

---

Stops and cancels all the jobs for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

**projectName**

The name of the specified project.

**version**

The version number for the specified project.

**configName**

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

**Returns:**

Success or failure.

### Examples:

---

The following example is a SOAP request to stop and cancel the configuration.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <ns1:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:stopAndCancel>
        <dep:projectName>HTTP_363i</dep:projectName>
        <dep:version>1.0</dep:version>
        <dep:configName>HTTP_363j</dep:configName>
      </dep:stopAndCancel>
    </soapenv:Body>
  </ns1:dep>
</soapenv:Envelope></soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:stopAndCancelResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:stopAndCancelResponse>
  </S:Body>
</S:Envelope>

```

```
</S:Body>
</S:Envelope>
```

---

## stopAndWait

---

Stops and waits for jobs for the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName  
The name of the specified project.

version  
The version number for the specified project.

configName  
The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:  
Success or failure

### Examples:

---

The following example is a SOAP request to stop the configuration and wait.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
    <soapenv:Header>
      <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <dep:stopAndWait>
        <dep:projectName>HTTP_363i</dep:projectName>
        <dep:version>1.0</dep:version>
        <dep:configName>HTTP_363j</dep:configName>
      </dep:stopAndWait>
    </soapenv:Body>
  </soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:stopAndWaitResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/

## suspend

---

Suspends the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

### Examples:

---

The following example is a SOAP request to suspend the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:suspend>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:suspend>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:suspendResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:suspendResponse>
  </S:Body>
</S:Envelope>
```

## undeploy

---

Withdraw the specified configuration.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the specified project.

version

The version number for the specified project.

configName

The configuration name for the specified project.

Together projectName, version, and configName uniquely identify a configuration.

Returns:

Success or failure.

### Examples:

---

The following example is a SOAP request to withdraw the specified configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>85EBDCE6FF0685C296D79CD55D86405F</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:undeploy>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:undeploy>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:undeployResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/deployment" xmlns:ns3="http://www.approuter.com/schemas/2008/1/deployment/types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03" xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:undeployResponse>
  </S:Body>
</S:Envelope>
```

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00129.html>

Information about the orcmmon WSDL.

Using the orcmmon WSDL, you can search for jobs, get a job count, and get job details. You can also set and get job monitoring properties.

This section contains the following topics:

- [getJobCount](#)
- [getJobDetails](#)
- [getMonitoringProperties](#)
- [purgeJobs](#)
- [searchJobs](#)
- [setMonitoringProperties](#)

---

#### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00130.html>

## getJobCount

---

Returns the number of jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### projectName

The name of the project that contains the configuration where the jobs run.

#### version

The version number of the project.

#### configName

The name of the configuration that contains the orchestration where the jobs run. For the default configuration, this value should be 'Default'.

#### orchName

The name of the orchestration where the jobs run.

#### jobId (optional)

The ID of the jobs for which a count is returned.

#### jobKey (optional)

The job key for the jobs for which a count is returned.

#### minStartDate

The earliest date that the jobs started.

#### maxStartDate

The latest date that the jobs started.

#### status

The status of the jobs.

â€“Setting status as negative gets all status.

â€“Setting specific status value (number or lowercase keyword) gets jobs with that status:

- success = 0
- errored = 1

- running = 2
- cancelling = 3
- terminated = 4
- cancelled = 5
- suspended = 6
- crashed = 7
- suspending = 8
- unknown = 101

Returns:

The number of jobs.

---

## getJobDetails

---

Returns the details for the job with the specified parameters.

Applies to Clouds and Integration Appliances.

### Parameters:

---

projectName

The name of the project that contains the configuration where the job runs.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the job runs.

orchName

The name of the orchestration where the job runs.

jobId

The ID of the job for which the details are returned.

Returns:

The job details for the job that has the specified parameters.

---

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00132.html>

## getMonitoringProperties

---

Gets the properties for managing orchestration monitoring data.

Applies to Integration Appliances only.

Returns:

The monitoring properties.

---

## purgeJobs

---

Purges jobs that have the specified parameters.

Applies to Integration Appliances only.

### Parameters:

---

projectName

The name of the project that contains the configuration where the jobs run.

version

The version number of the project.

configName

The name of the configuration that contains the orchestration where the jobs run.

orchName

The name of the orchestration where the jobs run.

jobId

The ID of the job to be purged.

jobKey

The job key for the jobs to be purged.

minStartDate

The earliest date that the jobs started.

maxStartDate

The latest date that the jobs started.

status

The status of the jobs.

exportJobs

Whether to return the purged jobs - true or false.

Returns:

The purged jobs if exportJobs is set to true.

---

#### [Feedback](#) | [Notices](#)

 Last updated: Thursday, 2 June 2016

## searchJobs

---

Returns the jobs that have the specified parameters.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### projectName

The name of the project that contains the configuration where the jobs run.

#### version

The version number of the project.

#### configName

The name of the configuration that contains the orchestration where the jobs run.

#### orchName

The name of the orchestration where the jobs run.

#### jobId

The ID of the jobs to be returned.

#### jobKey

The job key for the jobs to be returned.

#### minStartDate

The earliest date that the jobs started.

#### maxStartDate

The latest date that the jobs started.

#### status

The status of the jobs.

#### page

0-based page numbering.

#### pageSize

The number of lines per page.

#### Returns:

The jobs that have the specified parameters.

### Examples:

---

The following code is an example of a SOAP request to search jobs.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:orc="http://www.approuter.com/schemas/2008/1/orcmon">  
    <soapenv:Header>  
        <orc:sessionId>834133D57E9259C94D44E53A5F6B43C2</orc:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <orc:searchJobs>  
            <orc: projectName>CloudProvideProject_2</orc: projectName>  
            <orc: version>1.0</orc: version>  
            <orc: configName>Default</orc: configName>  
            <orc: orchName>ProvideOnCloud</orc: orchName>  
            <orc: jobId></orc: jobId>  
            <orc: jobKey></orc: jobKey>  
            <orc: minStartDate></orc: minStartDate>  
            <orc: maxStartDate></orc: maxStartDate>  
            <orc: status>errored</orc: status>  
            <orc: page>0</orc: page>  
            <orc: pageSize>1</orc: pageSize>
```

```
</orc:searchJobs>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>

## setMonitoringProperties

---

Sets the properties for managing orchestration monitoring data.

Applies to Integration Appliances only.

### Parameter:

---

properties

The properties for managing orchestration monitoring data.

Returns:

A list of warning and error messages.

---

## createNotificationPolicy

---

Creates and saves a notification policy.

Applies to Clouds and Integration Appliances.

### Parameter:

---

policy

The name of the policy.

Returns:

The notification policy ID of the policy was successfully created. If not successful, returns a -1.

### Examples:

---

The following example is a SOAP request to create a notification policy.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">  
    <soapenv:Header>  
        <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <log:createNotificationPolicy>  
            <log:name>TestNotif</log:name>  
            <log:logComponent>orchestration</log:logComponent>  
            <log:logLevel>error</log:logLevel>  
            <log:emailAddresses>user@mydomain.com</log:emailAddresses>
```

```

<log:isSnmp>false</log:isSnmp>
</log:createNotificationPolicy>

## deleteNotificationPolicy

Deletes a notification policy.

Applies to Clouds and Integration Appliances.

### Parameter:

#### policyId

The specified ID for the notification policy to be deleted.

#### Returns:

Success or failure.

### Examples:

The following is a SOAP request to delete the notification policy with the specified ID.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
<ns1:log="http://www.approuter.com/schemas/2008/1/lognotif">
<soapenv:Header>
<log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
</soapenv:Header>
<soapenv:Body>
<log:deleteNotificationPolicy>
<log:policyId>688128</log:policyId>
</log:deleteNotificationPolicy>
</soapenv:Body>
</soapenv:Envelope>

```

The following is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:deleteNotificationPolicyResponse xmlns:ns2="http://
www.approuter.com/schemas/2008/1/lognotif" xmlns:ns3="http://
www.approuter.com/schemas/2008/1/lognotif/types">
<ns2:success>true</ns2:success>
</ns2:deleteNotificationPolicyResponse>
</S:Body>
</S:Envelope>

```

## getEmailEndpoint

---

Gets the email endpoint for notifications based on the session ID.

Applies to Integration Appliances only.

Returns:

The email endpoint.

### Examples:

---

The following example is a SOAP request to get an email endpoint.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getEmailEndpoint/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getEmailEndpointResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
      lognotif/types">
      <ns2:emailEndpoint>
        <ns3:active>true</ns3:active>
        <ns3:credentials>
          <ns3:password>test</ns3:password>
          <ns3:user>test</ns3:user>
        </ns3:credentials>
        <ns3:host>hq-exch-01</ns3:host>
        <ns3:port>123</ns3:port>
        <ns3:sender>user@mydomain.com</ns3:sender>
        <ns3:subject>Notification</ns3:subject>
      </ns2:emailEndpoint>
    </ns2:getEmailEndpointResponse>
  </S:Body>
</S:Envelope>
```

 Last updated: Thursday, 2 June 2016

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00140.html>

## getLogCount

---

Gets the number of logs for the specified parameters.

Applies to Clouds and Integration Appliances.

## Parameters:

---

### logComponent

The specified component for which logs are generated.

### logLevel

The level of logging to be done for the specified component.

### maxDaysOld

The maximum number of days to go back to get logs. Use 1 for no maximum.

### status

The specified status of logs to be included in the count. The default values are:

- All
- Resolved
- Unresolved

Returns:

The number of logs that match the specified parameters.

## Examples:

---

The following example is a SOAP request to get a log count.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getLogCount>
      <log:logComponent>orchestration</log:logComponent>
      <log:logLevel>error</log:logLevel>
      <log:maxDaysOld>3</log:maxDaysOld>
      <log:status>all</log:status>
    </log:getLogCount>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getLogCountResponse xmlns:ns2="http://www.approuter.com/
    schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
    lognotif/types">
      <ns2:logCount>8</ns2:logCount>
    </ns2:getLogCountResponse>
  </S:Body>
</S:Envelope>
```

---

### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

<http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.api.doc/ci00141.html>

## [getLogLevel](#)

---

Gets the log level for the specified log component.

The default log levels are:

- All. (Note: The actual level of logs retrieved for the All level is determined by the logging level set in the WMC. For more information, see "Specify System Log Settings" in the WMC).
- Fatal
- Severe
- Warning
- Info

Applies to Clouds and Integration Appliances.

## Parameter

---

### logComponent

The specified component for which logs are generated.

Returns:

The log level for the specified component.

## Examples

---

The following example is a SOAP request to get the log level for orchestrations.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
  <soapenv:Header>
    <log:sessionId>AD2E025868AC1392A44E6E27E4594EF9</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:getLogLevel>
      <log:logComponent>orchestration</log:logComponent>
    </log:getLogLevel>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP reply to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:getLogLevelResponse xmlns:ns2="http://www.approuter.com/
      schemas/2008/1/lognotif/types" xmlns:ns3="http://www.approuter.com/
      schemas/2008/1/lognotif">
      <ns3:logLevel>warning</ns3:logLevel>
    </ns3:getLogLevelResponse>
  </S:Body>
</S:Envelope>

## getNotificationPolicy

---

Gets the notification policy that is using the specified notification policy ID.

Applies to Clouds and Integration Appliances.

### Parameter:

---

policyId

The specified ID for the notification policy.

Returns:

The notification policy.

## Examples:

---

The following example is a SOAP request to get a notification.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">  
  <soapenv:Header>  
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>  
  </soapenv:Header>  
  <soapenv:Body>  
    <log:getNotificationPolicy>
```

```

<log:policyId>688129</log:policyId>
</log:getNotificationPolicy>
</soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getNotificationPolicyResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
lognotif/types">
<ns2:notificationPolicy>
<emailAddresses>user@mydomain.com</emailAddresses>
<id>688129</id>
<logComponent>orchestration</logComponent>
<logLevel>error</logLevel>
<name>TestNotif</name>
<snmp>false</snmp>
</ns2:notificationPolicy>
</ns2:getNotificationPolicyResponse>
</S:Body>
</S:Envelope>

```

## getSnmpEndpoint

Gets the SNMP endpoint for notifications.

Applies to Integration Appliances only.

Returns:

The SNMP endpoint.

### Examples:

The following example is a SOAP request to get an SNMP endpoint.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" 
xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif">
<soapenv:Header>
<log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
</soapenv:Header>
<soapenv:Body>
<log:getSnmpEndpoint/>
</soapenv:Body>
</soapenv:Envelope>

```

The following example is the SOAP response to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns2:getSnmpEndpointResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/
lognotif/types">
<ns2:snmpEndpoint>
<ns3:active>true</ns3:active>
<ns3:community>Test</ns3:community>
<ns3:host>hq-exch-01</ns3:host>
</ns2:snmpEndpoint>
</ns2:getSnmpEndpointResponse>

```

```
</S:Body>
</S:Envelope>
```

---

## searchLogs

---

Gets the logs for the specified parameters.

Applies to Clouds and Integration Appliances.

### Parameters:

---

#### logComponent

The specified component for which logs are generated. **logComponent** is one of:

- hardware
- resources
- network
- security
- orchestration
- deployment
- all

#### logLevel

The level of logging to be done for the specified component. **logLevel** is one of:

- critical
- error
- warning
- info
- all

#### maxDaysOld

The maximum number of days to go back to get logs. Use -1 for no maximum.

#### status

The specified status of logs to be included in the search. **status** is one of:

- resolved
- unresolved
- all

#### page

Uses 0-based page numbering. Log pagination starts with zero. Maximum size of page should be documented as 2,147,483,647.

#### pageSize

Specifies the size of the log pages that are returned. Maximum size of pageSize should be documented as 2,147,483,647.

#### Returns:

The logs that match the specified parameters.

### Examples:

---

The following example is a SOAP request to search the logs for logs that match the specified parameters.

```

<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <ns1:log="http://www.approuter.com/schemas/2008/1/lognotif">
    <soapenv:Header>
      <log:sessionId>AD2E025868AC1392A44E6E27E4594EF9</log:sessionId>
    </soapenv:Header>
    <soapenv:Body>
      <log:searchLogs>
        <log:logComponent>orchestration</log:logComponent>
        <log:logLevel>error</log:logLevel>
        <log:maxDaysOld>6</log:maxDaysOld>
        <log:status>all</log:status>
        <log:page>1</log:page>
        <log:pageSize>5</log:pageSize>
      </log:searchLogs>
    </soapenv:Body>
  </soapenv:Envelope>

```

The following example is the SOAP reply to the request.

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns3:searchLogsResponse xmlns:ns2="http://www.approuter.com/

## setEmailEndpoint

---

Sets the email endpoint for notifications.

Applies to Integration Appliances only.

### Parameter:

---

**emailEndpoint**  
The email endpoint.

Returns:  
Success or failure.

### Examples:

---

The following example is a SOAP request to set an email endpoint.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:log="http://www.approuter.com/schemas/2008/1/lognotif" xmlns:typ="http://www.approuter.com/schemas/2008/1/lognotif/types">
  <soapenv:Header>
    <log:sessionId>910D9A7B441C97AC2FCC54E3F1274AA7</log:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <log:setEmailEndpoint>
      <log:emailEndpoint>
        <typ:active>true</typ:active>
        <typ:credentials>
          <typ:password>test</typ:password>
          <typ:user>test</typ:user>
        </typ:credentials>
        <typ:host>hq-exch-01</typ:host>
        <typ:port>123</typ:port>
        <typ:sender>user@mydomain.com</typ:sender>
        <typ:subject>Notification</typ:subject>
      </log:emailEndpoint>
    </log:setEmailEndpoint>
  </soapenv:Body>
</soapenv:Envelope>
```

The following is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setEmailEndpointResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/lognotif" xmlns:ns3="http://www.approuter.com/schemas/2008/1/lognotif/types">
      <ns2:success>true</ns2:success>
    </ns2:setEmailEndpointResponse>
  </S:Body>
</S:Envelope>
```

## System

---

Information about the system WSDL.

The system WSDL applies to Integration Appliances only. Using system WSDL you can set or get an appliance name or network configuration. You can also run system commands or get system information.

This section contains the following topics:

- [downloadPostmortem](#)
- [executeCommand](#)
- [getApplianceName](#)
- [getNetworkConfiguration](#)
- [getResourceUtilizationData](#)
- [setApplianceName](#)
- [setNetworkConfiguration](#)

## downloadPostmortem

---

Downloads the postmortem file.

Use the information in this file to resolve Integration Appliance issues.

Applies to Integration Appliances only.

Returns:

The postmortem file.

---

## executeCommand

---

Runs the specified system command.

Applies to Integration Appliances only.

### Parameter:

---

command

The specified system command to run.

Returns:

Success or failure.

## Enums:

---

The system commands are defined as enumerated constants.

The following table lists the system commands.

Command	Description
removeJobHistory	Removes job histories from the Integration Appliance.
removeProjects	Removes projects from the Integration Appliance.
removeRunningJobs	Stops and removes running jobs from the Integration Appliance.
generatePostmortem	Generates an archive of information gathered from Integration Appliance logs, orchestration logs, and transaction stores. Use this information to debug Integration Appliance issues. Run this command before rebooting the Integration Appliance.
restart	Restarts the Integration Appliance routing subsystem.
reboot	Shuts down all routing services and then reboots the Integration Appliance.

---

## getApplianceName

---

Gets the appliance name.

Applies to Integration Appliances only.

Returns:

The appliance name.

## Examples:

---

The following code is an example of a SOAP request to get the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getApplianceName/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
  <ns3:getApplianceNameResponse xmlns:ns2="http://www.approuter.com/schemas/router/1000/NetConfig02.xsd" xmlns:ns3="http://www.approuter.com/schemas/2008/1/system" xmlns:ns4="http://www.approuter.com/schemas/2008/1/
```

```
util/types">
<ns3:applianceName>TheIntegrator</ns3:applianceName>
</ns3:getApplianceNameResponse>
</S:Body>
</S:Envelope>
```

---

## getNetworkConfiguration

---

Returns the status of the current network configuration.

Applies to Integration Appliances only.

Returns:

The network status.

### Examples:

---

The following code is an example of a SOAP request to get the network configuration.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
<soapenv:Header>
<sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>
</soapenv:Header>
<soapenv:Body>
<sys:getNetworkConfiguration/>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<ns3:getNetworkConfigurationResponse xmlns:ns2="http://www.approuter.com/schemas/router/1000/NetConfig02.xsd"

## getResourceUtilizationData

---

Gets the resource utilization data for the given appliance.

Applies to Integration Appliances only.

Returns:

Appliance resource utilization data.

### Examples:

---

The following code is an example of a SOAP request to get the Integration Appliance resource utilization data.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:sys="http://www.approuter.com/schemas/2008/1/system">
  <soapenv:Header>
    <sys:sessionId>9705D42CDA8D28BA04CEBAB3D9C44B5A</sys:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sys:getResourceUtilizationData/>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getResourceUtilizationDataResponse xmlns:ns4="http://www.approuter.com/schemas/router/1000/NetConfig02.xsd" xmlns:ns3="http://www.approuter.com/schemas/2008/1/util/types" xmlns:ns2="http://www.approuter.com/schemas/2008/1/system">
      <ns2:applianceUtilization>
        <diskPercentUsed>6</diskPercentUsed>
        <usedMemory>35813024</usedMemory>
        <maxMemory>1509949440</maxMemory>
        <collectionCount>1</collectionCount>
        <totalRunningJobs>0</totalRunningJobs>
        <time>
          <ns3:offset>0</ns3:offset>
          <ns3:time>1379634870597</ns3:time>
        </time>
      </ns2:applianceUtilization>
    </ns2:getResourceUtilizationDataResponse>
  </S:Body>
</S:Envelope>
```

## setApplianceName

---

Sets the appliance name.

Applies to Integration Appliances only.

## Parameter:

---

applianceName  
The specified name for the appliance.

Returns:  
Success or failure.

## Examples:

---

The following code is an example of a SOAP request to the Integration Appliance name.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:sys="http://www.approuter.com/schemas/2008/1/system">  
    <soapenv:Header>  
        <sys:sessionId>91997FBCE89093792D40DEF8FDB345DD</sys:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <sys:setApplianceName>  
            <sys:applianceName>TheIntegrator</sys:applianceName>  
        </sys:setApplianceName>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
    <S:Body>  
        <ns3:setApplianceNameResponse xmlns:ns2="http://www.approuter.com/  
            schemas/router/1000/NetConfig02.xsd"  
            xmlns:ns3="http://www.approuter.com/schemas/2008/1/system"  
            xmlns:ns4="http://www.approuter.com/schemas/2008/1/util/types">  
            <ns3:success>true</ns3:success>  
        </ns3:setApplianceNameResponse>  
    </S:Body>  
</S:Envelope>
```

## setNetworkConfiguration

---

Sets the current network configuration.

Applies to Integration Appliances only.

Returns:  
Success or failure.

## Example:

---

The following code is an example of a SOAP request to set the network configuration for an Integration Appliance. Enter the values for your network and appliance.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

## Staging

---

Information about the staging WSDL.

The staging WSDL applies to Integration Appliances only. Using the staging WSDL, you can check whether the staging database is started. You can start or stop the staging database.

This section contains the following topics:

- [isStagingDatabaseStarted](#)
- [startStagingDatabase](#)
- [stopStagingDatabase](#)

---

## [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016

## isStagingDatabaseStarted

---

Returns whether the staging database is started (True or False).

Applies to Integration Appliances only.

Returns:

True if the staging database is started.

### Examples:

---

The following code is an example of a SOAP request to check if the staging database is started.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">  
    <soapenv:Header>  
        <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>  
        <stag:isStagingDatabaseStarted/>  
    </soapenv:Body>  
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">  
    <S:Body>  
        <isStagingDatabaseStartedResponse xmlns="http://www.approuter.com/  
            schemas/2008/1/staging">  
            <isStarted>true</isStarted>  
        </isStagingDatabaseStartedResponse>  
    </S:Body>  
</S:Envelope>
```

## startStagingDatabase

---

Starts the staging database. Returns success if the database starts or failure if the database fails to start.

Applies to Integration Appliances only.

Returns:

Success or failure.

### Examples:

---

The following code is an example of a SOAP request to start the staging database.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">  
    <soapenv:Header>  
        <stag:sessionId>91997FBCE89093792D40DEF8FDB345DD</stag:sessionId>  
    </soapenv:Header>  
    <soapenv:Body>
```

```
<stag:startStagingDatabase/>
</soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
<S:Body>
<startStagingDatabaseResponse xmlns="http://www.approuter.com/
schemas/2008/1/staging">
<success>true</success>
</startStagingDatabaseResponse>
</S:Body>
</S:Envelope>
```

## stopStagingDatabase

---

Stops the staging database. Returns success if the database stops or failure if the database fails to stop.

Applies to Integration Appliances only.

Returns:

Success or failure.

### Examples:

---

The following code is an example of a SOAP request to stop the staging database.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" 
xmlns:stag="http://www.approuter.com/schemas/2008/1/staging">

# Introduction

---

The IBM® Cast Iron® Connector Development Kit (CDK) Developer's Guide is for developers who want to use the Cast Iron Studio (Studio) development platform to develop and deploy plug-in connectors that extract data from application systems or other data sources..

Connectors enhance the core functionality of Studio by exposing the API of an external application to the Cast Iron development platform. API's extend the scripting engine with new libraries and object types and publishes notification events from the external system to a Cast Iron physical or virtual integration appliance. Cast Iron appliances support connecting to endpoints of many types including FTP, SFTP, HTTP, HTTPS, Email (SMTP, POP), SAP, MQ, Web Services and many commercial database systems.

Each connector has an associated XML descriptor file that allows the connector to be used in Studio at design time. XML schema definition (XSD) files define the elements and attributes of the XML file.

The Cast Iron development platform features a CDK Connector Wizard that guides you through the development process. Studio provides an intuitive drag-and-drop interface that can dramatically shorten your development time.

This guide provides an overview of connectors, introduces the Cast Iron development platform components and supplies the step-by-step procedures you require to develop and deploy your own connectors.

## Prerequisites

---

Much of the work involved in developing a connector takes place inside Studio, meaning that you should have a working knowledge of Studio and the Cast Iron products. You should also be familiar with the following languages and file formats:

- Extensible Markup Language (XML)
- Web Services Description Language (WSDL)
- Extensible Stylesheet Language Transformations (XSLT)

Note: For many activities, Studio supports a "discovery" process to determine the structure of parameters sent to, or received from an endpoint. If your input activity will be discovered at design time, you must utilize an abstract WSDL or schema element type.

Declaring an element as abstract requires the use of a substitution group. If an abstract version is not available, you must modify your WSDL file or schema. Your abstract file is then substituted for the actual data type at design time. For more information on abstract files, see [Using the Add Activities window](#).

---

### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_intro.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_intro.html)

## Design considerations

---

The recent explosive growth of application-oriented software delivered as a service over the Web makes implementing effective guidelines for your project critically important. Careful planning of design activities can help ensure the success of your project.

Before you start your development, carefully consider the following guidelines:

- Task and user analysis - Consider what tasks you want to your end-users to perform before you start your project. Using the elements supplied by your schema files and the configuration properties of your XML file, you can control the level of access your users have to Studio and its functions. For example, by defining an endpoint for your users, you can limit or increase the number of activities they can add to their orchestrations. It's also important to understand *how* your end-users perform their tasks. Providing them with information in the order they are likely to require it will help your project integrate smoothly and will result in a unified user experience.
- Naming conventions - Sometimes, when working on a project with tight deadlines, it's tempting to label the components of an application hurriedly. For example, when designing your endpoint panel, you may be inclined to define a 'type' field quickly so that you can move on to more important functional tasks. However, the benefits of intuitive naming practices are often not evident until later, when users are confronted with arbitrary and confusing naming schemes. Remember, once deployed, your connector will be used again and again, so be sure to utilize logical, consistent and intuitive naming conventions.

## Before you begin

---

Before you begin your project, collect the following information. Having it accessible will make your development process go more smoothly:

- Connection fields - Be prepared to specify the connection field details you'll need to connect to your endpoints, such as name and type.
- Input activities - Determine which of your input activities will be discovered dynamically at design time and which will be static.
- Input and output data types - Be prepared to indicate which input and output data types will be supported by each of your activities.

---

## How this guide is organized

---

This document is designed to get you started on your development project with a minimum of delay. Chapter One introduces the CDK Connector Wizard and provides the procedures you need to get your project underway. However, if you prefer to familiarize yourself with the CDK development platform before starting your development, take a few minutes to review the information in Chapter Four [CDK Components](#) before you begin.

This guide is organized into the following sections.

- [Getting started with the CDK Connector Wizard](#)

Introduces the CDK Connector Wizard and provides step-by-step instructions for building your connector.

- [Test and debug](#)

Provides procedures for testing and debugging your connector.

- [Exporting and importing a connector project](#)

Provides information on how to export or import connector projects.

- [Cast Iron CDK components](#)

Provides an overview of the Studio development platform and introduces the CDK components.

- [FAQ](#)

Provides some answers to frequently asked questions.

- [Getting help](#)

Provides information on IBM resources and tells you how to get help.

---

# Getting started with the CDK Connector Wizard

The CDK Connector Wizard guides you through the development process by presenting you with a series of three windows into which you enter basic details about your connector. The Wizard then generates orchestrations that you can test, certify and deploy to Studio.

## Procedure

1. Start Studio.
2. Select **File -> New Connector Project**.

## Results

The Wizard opens in the Studio workspace and the Connector Information window is displayed.

## What to do next

In the next phase, you work with the Connector Information window to add basic information about your connector.

### Feedback | Notices

>Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_wizard.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_wizard.html)

## Connector Information window

During this phase, you add general information about your connector, such as name, version and description into the Connector Information window and add the WSDL or schema file that is used for your connector activity.

## About this task

The Connector Information window is where you enter basic details about your connector project. The Connector Information window looks like:

Figure 1. Connector Information window

The screenshot shows the 'Connector Information' window. At the top, there's a yellow box labeled 'Provide Connector Name, Version and Description'. Below it, another yellow box labeled 'Provide Basic Connector Detail' contains fields for 'Name' (SampleSalesforceConnector) and 'Version' (1.0.0). To the right of these fields is a 'Description' box containing 'Salesforce sample connector'. A large orange arrow points from the 'Provide Basic Connector Detail' box down to the 'Add WSDL Or Schema Files' section. This section includes a 'Add WSDL/Schema' input field with the value '/WSDLs/SalesforceNew' and a 'Browse' button. An orange box at the bottom labeled 'Add Schema or WSDL file' has an orange arrow pointing up towards the 'Add WSDL/Schema' field.

## Procedure

1. In the Name text field, enter a name for your connector.  
Note: Due to the practical restrictions of NCName, characters in the Name text field cannot contain symbol characters such as :, @, \$, %, &, /, +, ., ;, whitespace characters or different parenthesis. Additionally, characters in the Name text field cannot begin with a number, dot or minus character although they can appear later in an NCName.
2. In the Description text field, enter a description for your connector.
3. In the Version text field, enter a version number for your connector.
4. To add a WSDL or a schema file, click on the **Browse** button and navigate to the file you want. The selected file displays in the Add WSDL/Schema Files field.  
Note: If your input activity will be discovered dynamically at design time, you must provide a WSDL or schema containing an abstract type for this step. For information on abstract files, see [Using the Add Activities window](#).
5. Click **Next**.

## Results

The Add Connection Fields window is displayed.

## What to do next

In the next phase, you work with the Add Connection Fields window to specify endpoint connection properties.

[Feedback | Notices](#)

>Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_connectinfowindow.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_connectinfowindow.html)

## Using the Add Connection Fields window

The Add Connection Fields window is where you specify the endpoint connection parameters that are exposed to your users. Your users will use these values to connect to their endpoints.

## About this task

During this design phase, you add the connection fields and corresponding details needed to connect to endpoints. The Add Connection Fields window looks like:

Figure 1. Add Connection Fields window

The screenshot shows the 'Add Connection Fields' window. At the top, a header reads 'Add Connection Fields' and a sub-instruction says 'Provide the Endpoint Connection Fields - These fields are used to connect to the endpoint'. Below this is a table titled 'Add Endpoint Connection Fields' with two rows: 'UserName' and 'Password'. A tooltip above the table says 'Double-click table cell to edit the Connection Field Name. Press ENTER to complete editing.' To the right of the table is a vertical toolbar with a '+' icon for adding new fields and a 'X' icon for deleting existing ones. A tooltip for this toolbar says 'Add/Delete endpoint connection fields.' Below the table, there's a section titled 'Endpoint Connection Fields Details' containing fields for 'Name' (set to 'UserName'), 'Format' (set to 'STRING'), 'Type' (set to 'STRING'), and 'Field Constraints' with a checked 'Enable Constraints' checkbox. Below these are input fields for 'ValueMinLength' (0), 'FieldMinRange' (0), 'ValueMaxLength' (250), and 'FieldMaxRange' (250). A large red box at the bottom right of the window contains the instruction 'Provide details for the fields selected in the table shown above.'

## Procedure

---

1. Click the **plus icon (+)**. A blank connection field is displayed in the Add Endpoint Connection Fields panel.
2. In the Add Endpoint Connection Fields panel, enter the field type, for example: Password, to specify the password associated with a username. To begin editing, double click on a row in the Connection Field Name cell to activate it, then enter your information. When you are done, press **Enter**. The field type information is displayed in the Name field.
3. In the Endpoint Connection Fields Details panel, click on the **Type** and **Format** drop-down menus and select the categories that correspond to the information you entered in the Add Endpoint Connection Fields panel. In the Add Endpoint Connection Fields panel, enter the field type, for example: Password, to specify the password associated with a username.
4. Repeat these steps to add additional connection fields. After you have added the additional fields, click **Next**.

## Results

---

The Add Activities window is displayed.

## What to do next

---

In the next phase, you work with the Add Activities window to define your connector activities.

---

### [Feedback | Notices](#)

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_addconnectfieldswindow.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_addconnectfieldswindow.html)

## Using the Add Activities window

---

The Add Activities window is where you create and define your connector activities and enter input and output data information.

## About this task

---

During this phase, you specify if your input data will be discovered statically or dynamically at design time. For example, if your data will be discovered at design time, a **Create** activity can be used to create different object types such as Account, Contact or User. The input to the **Create** activity will vary depending on which object you want to create. In this situation, **Create** is considered to be a *browseable* activity, where input differs depending on the object you want to generate.

Note: If you want your input activity to be discoverable at design time, you must provide an abstract WSDL or schema type. An abstract WSDL or schema type describes web services in implementation-neutral terms, as opposed to a concrete WSDL or schema type that defines how an endpoint implementing a service is exposed on a network. [Figure 1](#) shows an example of a WSDL with an abstract type definition:

Figure 1. WSDL with abstract definition

```

<DescribeObjectResponse baseType="sObject"
    baseTypeNS="urn:sobject.partner.soap.sforce.com" name="sObject"
    typeNS="urn:sobject.enterprise.soap.sforce.com" xmlns="http://www.approuter.com/schemas/cdk/api/"
    xmlns:con="http://www.approuter.com/schemas/cdk/config/" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <object label="result" maxCount="1" minCount="1" name="result"
        used="true">
        <con:field configurable="true" label="StreetNumber"
            maxCount="1" minCount="1" name="StreetNumber" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="StreetName" maxCount="1"
            minCount="1" name="StreetName" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="Zip" maxCount="1"
            minCount="1" name="Zip" used="true">
            <con:type>string</con:type>
        </con:field>

        <con:field configurable="true" label="Id" maxCount="1"
            minCount="1" name="Id" used="true">
            <con:type>boolean</con:type>
        </con:field>
    </object>
    <responseObject label="result" maxCount="1" minCount="1"
        name="result" used="true">
        <con:field configurable="true" label="AccountNumber"
            maxCount="1" minCount="1" name="AccountNumber" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="Name" maxCount="1"
            minCount="1" name="Name" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="#Website" maxCount="1"
            minCount="1" name="#Website" used="true">
            <con:type>string</con:type>
        </con:field>

        <con:field configurable="true" label="Id" maxCount="1"
            minCount="1" name="Id" used="true">
            <con:type>boolean</con:type>
        </con:field>
    </responseObject>
</DescribeObjectResponse>

```

The Add Activities window looks like:

Figure 2. Add Activities window

## Procedure

---

1. Click the **plus (+) icon**. A blank text field is displayed in the Add Connector Activities panel.
2. In the Add Connector Activities panel, add the new activity name. To begin editing, double click on a row in the Activity Name cell to activate it, then enter your information. When you are done, press **Enter**.  
Note: Due to the practical restrictions of NCName, characters in the Name text field cannot contain symbol characters such as :, @, \$, %, &, /, +, ,; whitespace characters or different parenthesis. Additionally, characters in the Name text field cannot begin with a number, dot or minus character although they can appear later in an NCName.
3. In the Add Connector Activities panel, select the Starter Activity check box to indicate if the selected activity is a starter activity.
4. In the Dynamic Input/Output Requirement panel, specify if the input parameter, output parameter or both require dynamic discovery. If you want your input activity to be discoverable at design time, you must provide an abstract schema type.
5. If a parameter or parameters require dynamic discovery, in the Select Input/Output Data panel, use the **Select Input** or **Select Output** buttons to select input and/or output data for each activity. **Note:** Do not assign a specific input data type to more than one activity.  
Note: Starter Activity only has output types. Therefore, you are allowed to select only the Output Type in the Activity Details section.
6. Repeat these steps for each new activity.
7. When you are done, click **Next**.

## Results

---

The Final Summary window is displayed.

### What to do next

---

View your results in the Final Summary window.

---

#### [Feedback](#) | [Notices](#)

## Final Summary window

---

At the conclusion of the development phase, the Final Summary window alerts you that you're ready to complete the generated orchestrations and export the project to a connector repository.

The Final Summary window confirms that your connector activities have been generated successfully. The Final Summary window looks like:

Figure 1. Final Summary window

## Feedback | Notices

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_finalsummary.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_finalsummary.html)

## Completing your orchestrations

You complete your orchestrations so you can export them into Studio. In addition to your connector orchestrations, you must also complete orchestrations for the Cast Iron connector interfaces.

### About this task

After your development work is complete, perform the following procedure to complete your connector orchestrations. In [Cast Iron connector interfaces](#) you are introduced to the Cast Iron TestConnection, ListObjects and DescribeObjects connector interfaces and provided with procedures for completing orchestrations for each.

In the steps that follow, you complete your connector orchestrations by reading input data from the Web Services Provide Service activity, adding logic and then responding using the Send Reply output activity. The Provide Service activity supplies a web service that can be started from an outside client. During run time, the Send Reply activity returns a response to the client.

### Procedure

1. In the Project toolbox tab, select an orchestration, for example CreateObjects. The orchestration is displayed in the Studio workspace.
2. In the orchestration, click on the **Provide Service** activity. The Map Outputs panel is displayed.
3. In the Map Outputs panel, click on **body**. The node type window is displayed showing the input data.
4. Using the information in the node type window, map the body data and use the data to create the object in your endpoint.
5. Select **Orchestration -> Validate**.

Note: The orchestration generated for **Starter Activity** has Provide Service and Invoke Service activities. As a part of implementing the **Starter Activity**, fetch the required data and pass the values to the pregenerated Invoke Service Activity, in

the end. The Invoke Service activity must be the last activity in the orchestration. Also, populate the optional parameter location to the callbackURL received as a part of the ConnectionFields header of the pregenerated Provide Service Activity.

## Results

---

The Validation Results window is displayed, showing the results of the validation.

## What to do next

---

Complete orchestrations for the Cast Iron TestConnection, ListObjects and DescribeObjects connector interfaces.

---

### Feedback | Notices

 Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/cdk\\_completeorchestration.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/cdk_completeorchestration.html)

## Cast Iron connector interfaces

---

Cast Iron connectors use three standard interfaces that you implement as orchestrations: TestConnection, ListObjects and DescribeObjects.

Orchestration templates for the TestConnection, ListObjects and DescribeObjects interfaces are automatically created by the Wizard during the Add Activities phase. You must complete the orchestrations based on your individual connector requirements. This section introduces the TestConnection, ListObjects and DescribeObjects interfaces. In [Completing the connector interface orchestrations](#), you complete an orchestration for each.

### TestConnection

---

The TestConnection interface reflects the values you added to the Connection Information window and is used by your connector to establish an endpoint connection. After a connection is made, the connection status is returned as a boolean operator.

### ListObjects

---

The ListObjects interface reflects the values you added to the Add Activities window and returns a list of all objects supported by a specific connector activity. For example a Salesforce create operation might support such objects as Account, Customer, Contact, Opportunity and User, among others. The return list should correspond to a ListObjects Reply Activity schema. Below is an example of a ListObjects response in XML format:

```
<ListObjectsResponse
  xmlns="http://www.approuter.com/schemas/cdk/api/">
  <objectType
    label="Customer"
    xmlns="http://www.approuter.com/schemas/cdk/api/">Account</objectType>
  <objectType
    label="Account Object"
    xmlns="http://www.approuter.com/schemas/cdk/api/">Customer</objectType>
  <objectType
    label="Customer details"
    xmlns="http://www.approuter.com/schemas/cdk/api/">Contact</objectType>
  <objectType
    label="Opportunity details"
    xmlns="http://www.approuter.com/schemas/cdk/api/">Opportunity</objectType>
  <objectType
    label="User details"
    xmlns="http://www.approuter.com/schemas/cdk/api/">User</objectType>
</ListObjectsResponse>
```

### DescribeObjects

---

The `DescribeObjects` interface provides the input and output that enables your users to successfully work with an object exposed through a connector activity. For example if a Salesforce create operation is selected, the input schema is discovered dynamically based on an object selected from `ListObjects`. Here is an example of a response returned by `DescribeObjects`:

```

<DescribeObjectResponse baseType="sObject"
    baseTypeNS="urn:sobject.partner.soap.sforce.com"
        name="create" typeNS="http://example.com/stockquote"
        xmlns="http://www.approuter.com/schemas/cdk/api/"
        xmlns:con="http://www.approuter.com/schemas/cdk/config/"
        xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <object label="createInput" maxCount="1" minCount="1" name="createInput"
        used="true">
        <con:field configurable="true" label="ObjectName" maxCount="1"
            minCount="1" name="ObjectName" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="FirstName" maxCount="1"
            minCount="1" name="FirstName" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="LastName" maxCount="1"
            minCount="1" name="LastName" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="Phone" maxCount="1"
            minCount="1" name="Phone" used="true">
            <con:type>string</con:type>
        </con:field>
    </object>
    <responseObject label="createOutput" maxCount="1"
        minCount="1" name="createOutput" used="true">
        <con:field configurable="true" label="Id" maxCount="1"
            minCount="1" name="Id" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="ObjectName" maxCount="1"
            minCount="1" name="ObjectName" used="true">
            <con:type>string</con:type>
        </con:field>
        <con:field configurable="true" label="Status" maxCount="1"
            minCount="1" name="Status" used="true">
            <con:type>string</con:type>
        </con:field>
    </responseObject>
</DescribeObjectResponse>

```

## Dynamic schema discovery

---

The `DescribeObjects` schema discovery feature lets you dynamically discover a schema at runtime. The schema is imported into your orchestration when any connector activity uses a schema element as input or output. If previously imported schemas need to be discovered using `complexType QName` and substituted dynamically as input or output activities, set the attributes in `DescribeObject` response as shown in the following schema:

```

< xsd:schema targetNamespace = " urn.sample.stock
" xmlns:xsd = "http://www.w3.org/2001/XMLSchema" >
< xsd:element name = "TradePriceRequest" >
< xsd:complexType >
< xsd:all >
< xsd:element name = "tickerSymbol" type = "xsd:string" />
</ xsd:all >
</ xsd:complexType >
</ xsd:element >
< xsd:complexType name = "ciObject" ></ xsd:complexType >
< xsd:complexType name = " tradingPartner " >
< xsd:sequence >
< xsd:element name = "partnerName" type = "xsd:string" />
</ xsd:sequence >
</ xsd:complexType >

```

For example, to substitute the `complexType tradingPartner` in the preceding schema, set the information to discover the schema and substitute it dynamically as shown in the following example:

```

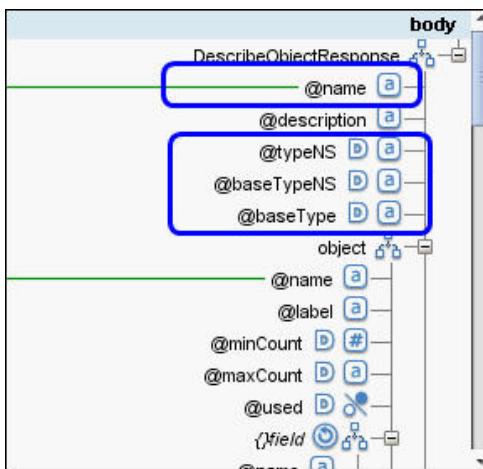

DescribeObject Response value to
@name -> tradingPartner [complexType name to be discovered]

```

```

@typeNS -> url.sample.stock [complexType namespace ]
@baseType -> http://www.approuter.com/schemas/cdk/api/ [CDK default]
@baseType -> cObject [CDK default]

```

## Completing the connector interface orchestrations

---

During this phase, you add business logic to the Cast Iron TestConnection, ListObjects and DescribeObjects orchestrations.

---

#### [Feedback | Notices](#)

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_completetestlistdescribe.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetestlistdescribe.html)

## Completing the TestConnection orchestration

---

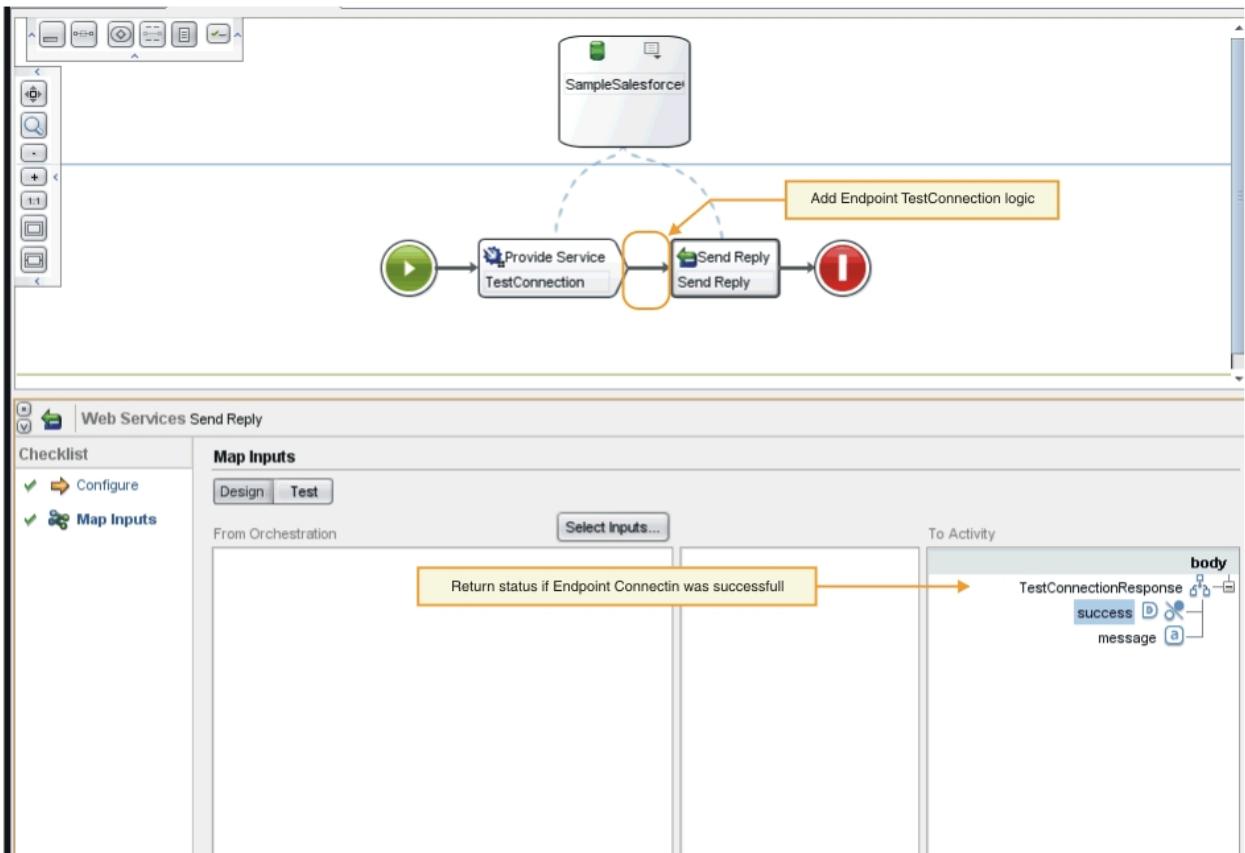

In the following steps, you map values to object types and invoke orchestration activities to test your endpoint connections.

### Procedure

---

1. In the Studio Project toolbox tab, click on the **TestConnection** orchestration. The orchestration is displayed in the Studio workspace.
2. In the orchestration, add the logic needed to connect to your endpoint, as shown in [Figure 1](#).
3. In the orchestration, click on the **Send Reply** activity. The inputs are displayed in the From Orchestration panel.

Figure 1. TestConnection

4. Map the values displayed in the From Orchestration panel to the object types in the To Activity panel. You are now ready to test the orchestration.
5. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
6. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
7. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button. When the test is completed, the results are displayed in the Verify toolbox tab.
8. If the connection is successful, the test response will show a "true" value. To complete the orchestration, map "true" to the **success** field of the **TestConnectionResponse** parameter in the To Activity panel.

## What to do next

If your connector activity is discoverable at design time, complete the procedures in [Completing the ListObjects orchestration](#). If your connector activity is not discoverable, you can move ahead to [Completing the DescribeObjects orchestration](#).

---

### [Feedback | Notices](#)

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/cdk\\_completingtestconnection.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.doc/cdk_completingtestconnection.html)

## Completing the ListObjects orchestration

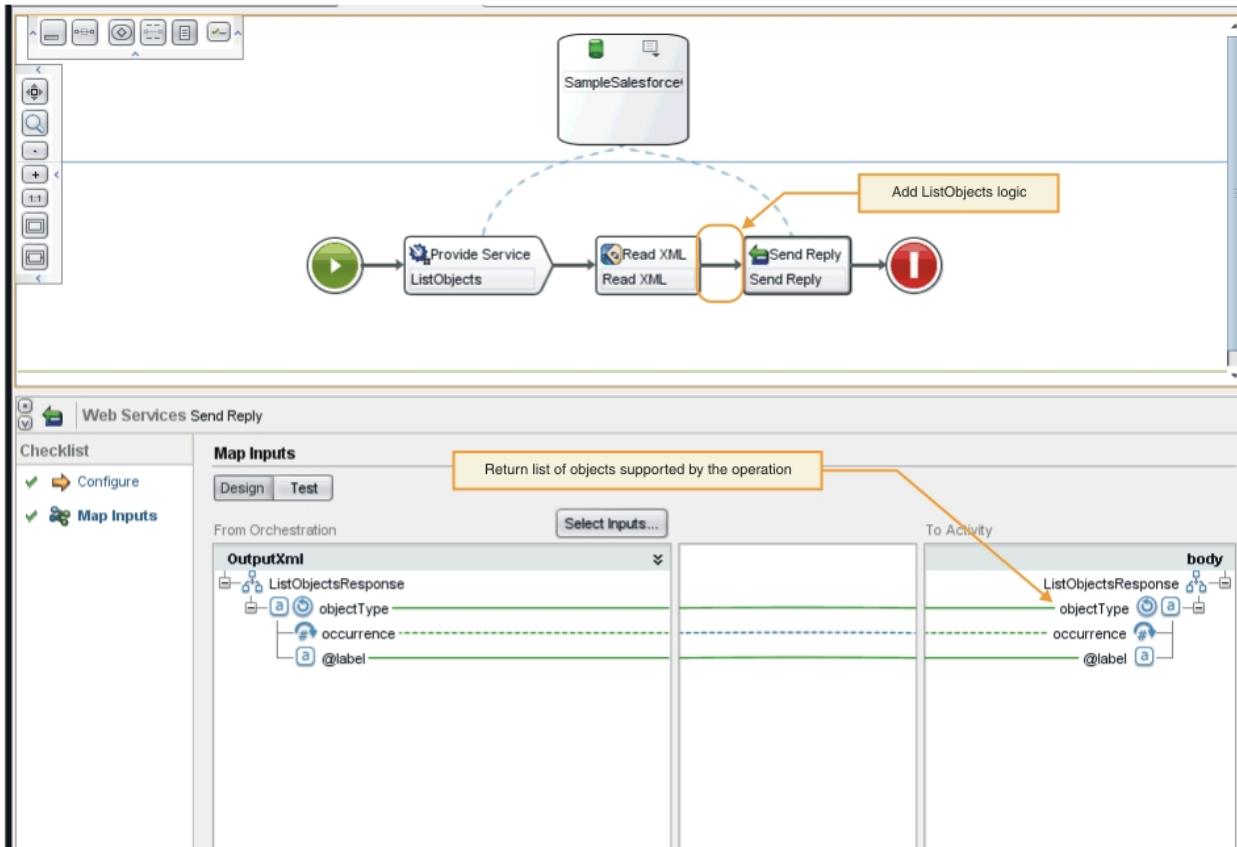

In the steps that follow, you add business logic to your ListObjects orchestration, map values to object types and invoke orchestration activities to test your endpoint connections. Only complete the procedures in this section if your orchestration activity is discoverable at design time.

---

### Procedure

- In the Studio Project toolbox tab, click on the **ListObjects** orchestration. The orchestration is displayed in the Studio workspace.
- In the ListObjects orchestration, add your logic as shown in [Figure 1](#). A list of objects supported by the connector for the provided endpoint are displayed in the To Activity panel.

Figure 1. ListObjects

- In the orchestration, select the **Send Reply** activity. The inputs are displayed in the From Orchestration panel.
- In the From Orchestration panel, click on an activity. A list of objects supported by the operation is displayed in the To Activity panel.
- Map the values displayed in the From Orchestration panel to the object types in the To Activity panel under **ListObjectsResponse**, as shown in [Figure 1](#). You are now ready to test the orchestration.
- In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
- In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
- In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

## Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

## What to do next

Complete the **DescribeObjects** orchestration.

---

### Feedback | Notices

Last updated: Thursday, 2 June 2016

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_completetest\\_describe\\_list.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completetest_describe_list.html)

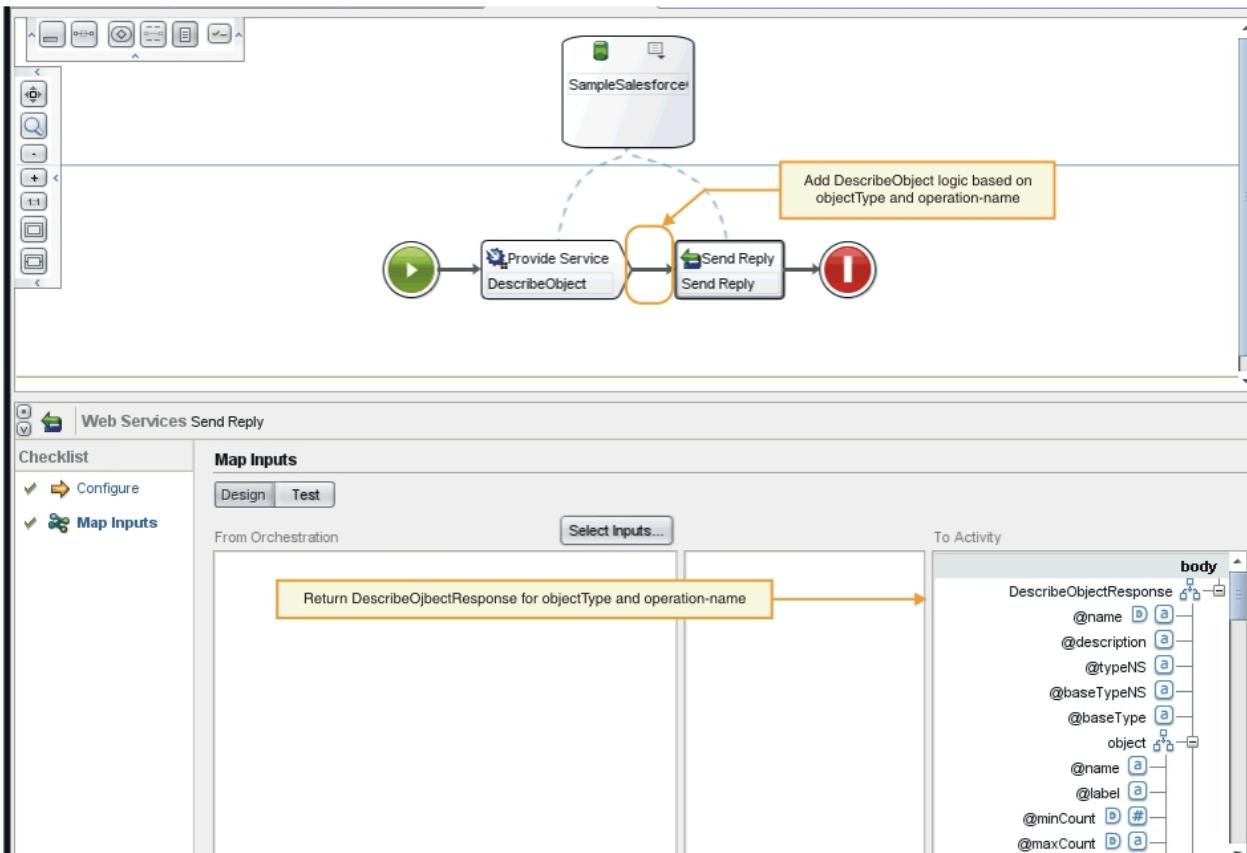

# Completing the DescribeObjects orchestration

To complete the DescribeObjects orchestration, you map outputs to input data, transform the object metadata to XML format to conform to the `ci-connector-api.xsd` file, then test the orchestration.

## Procedure

1. In the Studio Project toolbox tab, click on the **DescribeObjects** orchestration. The orchestration is displayed in the Studio workspace.
2. In the orchestration, click on the **Provide Service** activity. The Map Outputs panel is displayed.
3. In the Map Outputs panel, click on **body**. The node type window is displayed showing the input data.
4. Add logic to the orchestration based on `object` and `operation_name`, as shown in [Figure 1](#) to obtain the object metadata.

Figure 1. DescribeObjects

5. Transform the object metadata to XML format to conform to the `ci-connector-api.xsd` file described in [Cast Iron CDK schema files](#). After the metadata is transformed to XML, your schema looks like this:

```
< DescribeObjectResponse
baseType = "sObject"
baseTypeNS = "urn:sobject.partner.soap.sforce.com"
name = "create"
typeNS = "http://example.com/stockquote"
xmlns = "http://www.approuter.com/schemas/cdk/api/"
xmlns:con = "http://www.approuter.com/schemas/cdk/config/"
xmlns:xsi = "http://www.w3.org/2001/XMLSchema-instance" >
< object
label = "createInput"
maxCount = "1"
minCount = "1"
name = "createInput"
used = "true" >
< con:field
configurable = "true"
label = "ObjectName"
maxCount = "1"
minCount = "1"
name = "ObjectName"
used = "true" >
```

```

< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "FirstName"
maxCount = "1"
minCount = "1"
name = "FirstName"
used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "LastName"
maxCount = "1"
minCount = "1"
name = "LastName"
used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "Phone"
maxCount = "1"
minCount = "1"
name = "Phone"
used = "true" >
< con:type > string </ con:type >
</ con:field >
</ object >
< responseObject
label = "createOutput"
maxCount = "1"
minCount = "1"
name = "createOutput"
used = "true" >
< con:field
configurable = "true"
label = "Id"
maxCount = "1"
minCount = "1"
name = "Id"
used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "ObjectName"
maxCount = "1"
minCount = "1"
name = "ObjectName"
used = "true" >
< con:type > string </ con:type >
</ con:field >
< con:field
configurable = "true"
label = "Status"
maxCount = "1"
minCount = "1"
name = "Status"
used = "true" >
< con:type > string </ con:type >
</ con:field >
</ responseObject >
</ DescribeObjectResponse >

```

6. In the DescribeObjects orchestration, select the **Send Reply** activity. The Map Inputs panel is displayed.
7. In the Map Inputs panel, map the generated XML to the DescribeObjectResponse parameter in the To Activity panel. You are now ready to test the orchestration.
8. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
9. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed.
10. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

## Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

## What to do next

In the next phase, you learn how to publish your connector project to a local repository.

### Feedback | Notices

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_completingdescribeobjects.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_completingdescribeobjects.html)

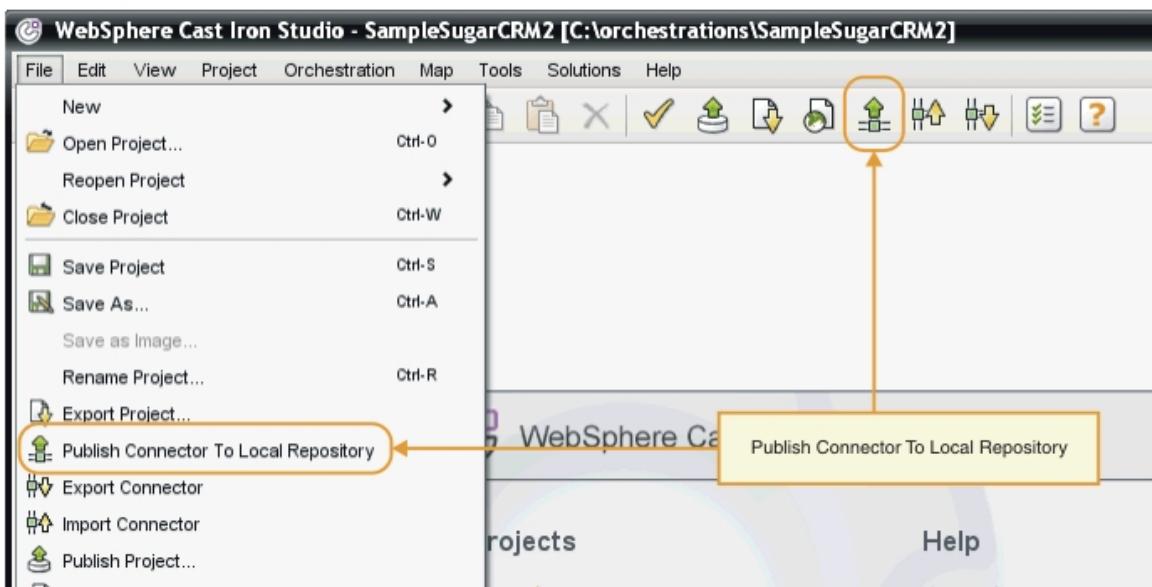

## Publishing to a local repository

During this phase, Studio validates your orchestrations. If validation is successful, you can publish your connector to a repository on your local computer for testing and debugging.

### Procedure

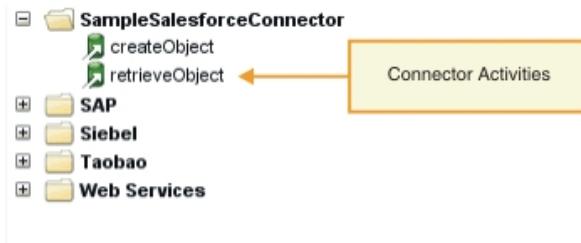

1. Select **File -> Publish Connector to Local Repository** or click the **Publish** toolbar icon as shown in [Figure 1](#). Studio validates the orchestrations. If validation is successful, the connector is published to the connector repository at `<user_home>/castiron/connector-repository`. If the validation fails, error messages are displayed. Correct the problems and re-publish.
2. Restart Studio. Your connector activities are displayed in the Studio Activities toolbox tab and are available for use.

Figure 1. Publish connector to a local repository

After the conclusion of your development work, your connector and connector activities are displayed in the Studio Activities toolbox tab, as shown in [Figure 2](#).

Figure 2. Connector and connector activities displayed in Studio Activities toolbox tab.

Note: Do not attempt to deploy a connector project directly to an appliance, as this will result in an error. For best results, only deploy connector projects that are displayed as endpoints inside Studio.

## What to do next

---

In the next section, you perform runtime validation and test your endpoints.

---

### Feedback | Notices

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_deployconnector.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_deployconnector.html)

## Test and debug

---

Studio provides several facilities to test your connector components. During the test and debug phase, you perform runtime validations that test your connector and diagnose configuration or data errors. All outbound endpoints should be tested.

When you test your connector, the Studio build process checks that your XML file is well-formed and validates it against your schema files. It then generates outbound mappings, creates and sends an outbound message, receives a response and executes the inbound mappings. The CDK performs two types of tests:

- Unit testing
- Integration testing

---

### Feedback | Notices

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_testdebug1.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_testdebug1.html)

## Unit testing your connector components

---

Unit testing is key to the success of any development project and is basically a pass/fail test that verifies that components of your connector perform as expected.

### About this task

---

During this phase, you perform a unit test that simulates the communication between a client and a web service that is exposed as a Web Service Provide activity.

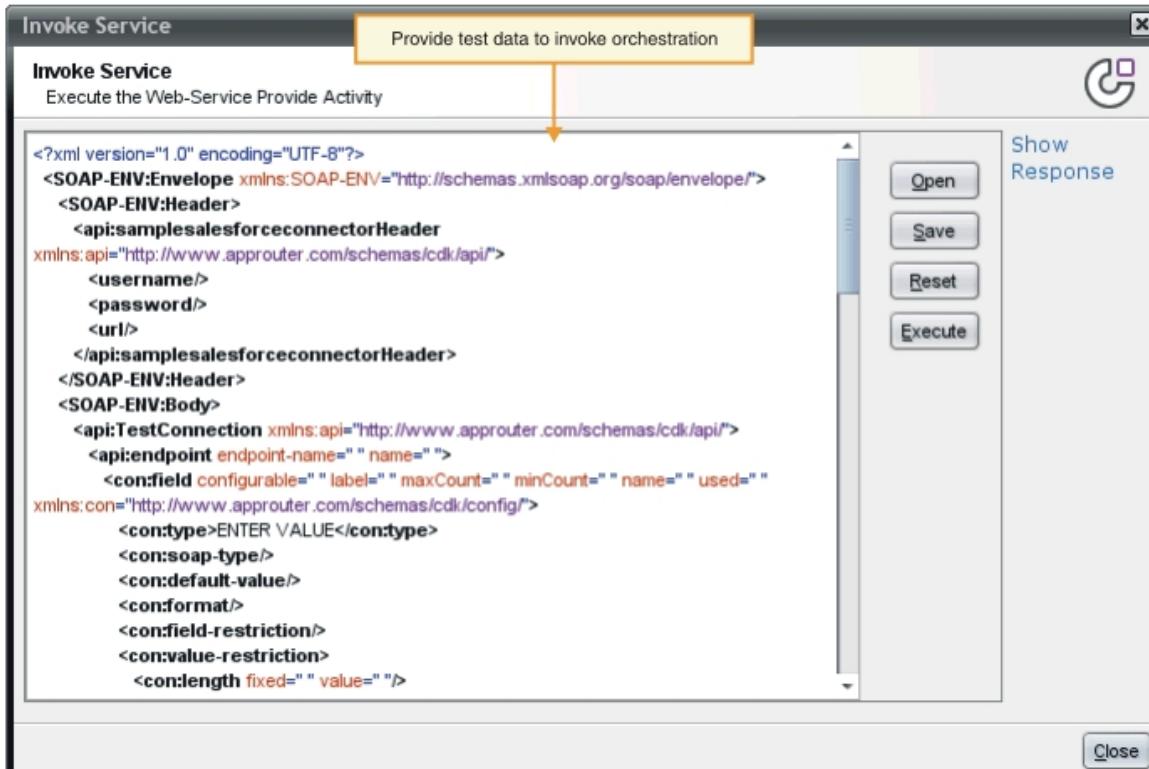

### Procedure

---

1. In the Projects toolbox tab, select an orchestration. The orchestration is displayed in the Studio workspace.

2. In the orchestration, right-click on the **Provide Service** activity. The Verify Activity menu is displayed.
3. In the Verify Activity menu, select **Invoke Service**. The Invoke Service window is displayed, as shown in [Figure 1](#).
4. In the Invoke Service window, enter the header and body data and click **Execute** to start the test. To view the test activity, click the **Show Response** button.

Figure 1. Invoke Service window

Note: Be cautious when using the Reset button. It erases the existing content in the Invoke Service window and repopulates it with web service template information. Only click Reset when you want to start over with unit testing.

## Results

When the test is completed, the results are displayed in the Verify toolbox tab. If errors are present, make the necessary corrections, then re-run the unit test.

## What to do next

Perform integration testing to determine if your connector components are performing properly.

---

### Feedback | Notices

Last updated: Thursday, 2 June 2016  
file:///dcs/markdown/workspace/Transform/out.html

[http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk\\_unittest.html](http://pic.dhe.ibm.com/infocenter/wci/v7r0m0/topic/com.ibm.wci.cdk.doc/cdk_unittest.html)

## Integration testing your connector services and activities

During integration testing, you validate that your connector services, messages and interfaces are performing properly.

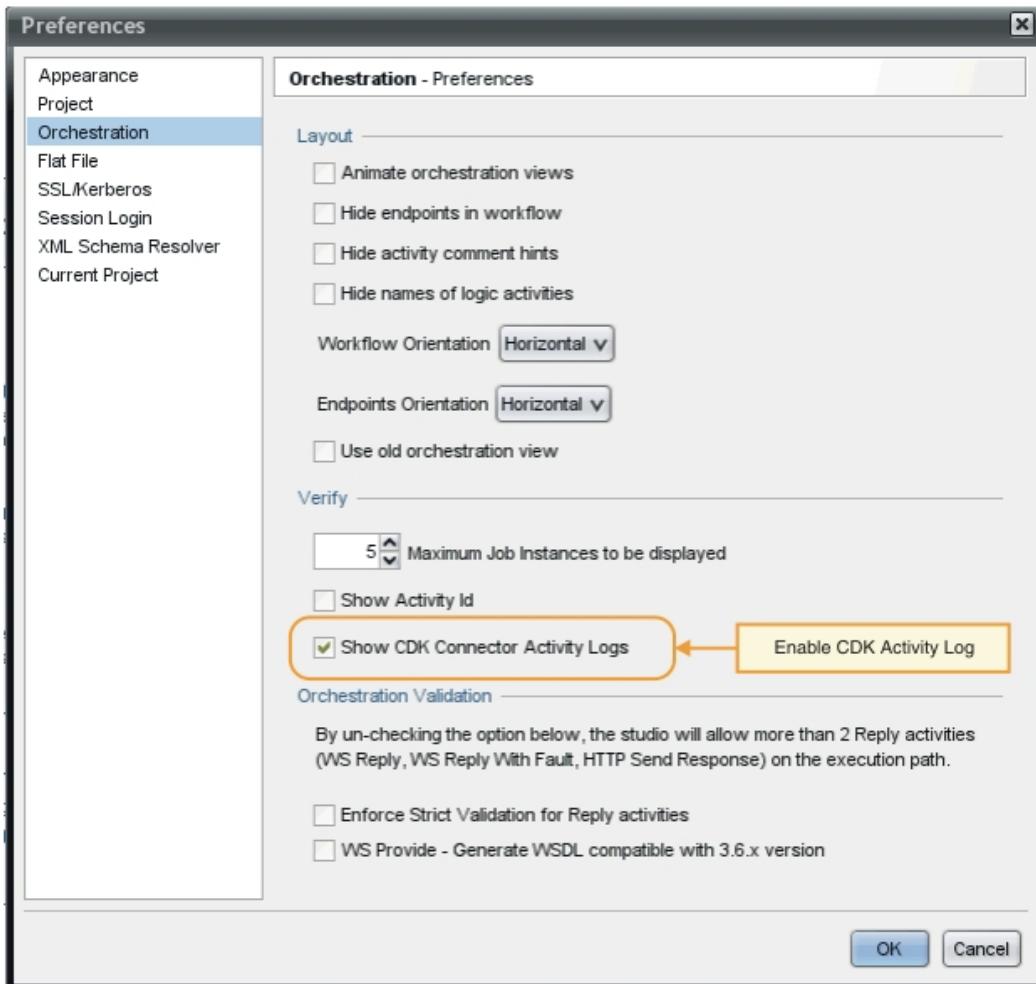

---

## Procedure

1. In the Projects toolbox tab, select an orchestration. The orchestration is displayed in the Studio workspace.
2. In the Activities toolbox tab, select an activity and drag and drop it into your orchestration.
3. In the Studio workspace, click on the activity. The activity is highlighted.

4. In the Checklist panel, click **Pick Endpoint**. The Pick Endpoint panel is displayed.
5. In the Pick Endpoint panel, click **New**. The Create Endpoint panel is displayed.
6. In the Create Endpoint panel, enter the connection information and click **TestConnection**.
7. If the connection is successful, click **OK**.
8. In the Checklist panel, click **Configure**. The Configure panel is displayed.
9. Optional: In the Configure panel, click **Browse** to search for browseable activity. (This step is not necessary for non-browseable activity). The ListObject dialog window is displayed.
10. In the ListObjects dialog window, select a schema to become the input for the selected activity.
11. Complete the input and output mapping.
12. Test the orchestration. If you wish to view the processor activity, check the **Show CDK Connector Activity Logs** option in the Studio Preferences window, as shown in [Figure 1](#).

Figure 1. Preferences window

## Results

Processor activity and final test results are displayed in the Studio Verify toolbox tab.

## What to do next

In the next section, you learn how to export and import connector projects.

---

### Feedback | Notices

# Exporting and importing a connector project

---

Once you have created and tested your connector, you can export it to an external location so it can be used by others. You can also import a connector archive file into Studio.

You export and import connector projects using the Studio menus or by clicking on the Export or Import toolbar icons.

Note: Do not attempt to deploy a connector project directly to an appliance, as this will result in an error. For best results, only deploy connector projects that are displayed as endpoints inside Studio.

## Exporting your connector project

---

When you export your completed connector from Studio to an external location, it can be loaded and used by others. Exported connectors are packaged as standard .zip files.

### About this task

---

You use Studio menu options or the toolbar to export your connector. If you don't specify a directory, your exported connector project is placed in a subdirectory of your project directory. If you choose to export to an archive file, the project is packaged in a .zip archive beneath your project directory.

### Procedure

---

1. Select **File -> Export Connector** or click on the **Export Connector** toolbar icon. The File dialog window is displayed showing a list of available connectors.
2. In the File dialog window, select your connector and click **OK**. The Save dialog window is displayed.
3. In the Save dialog window, browse for a location to export your project, then click **Save**.

### Results

---

Your connector is exported as a standard .zip archive.

### What to do next

---

In the next section, you learn how to import a connector project.

---

## Importing a connector project

---

You can use Studio to import a connector project that has been developed as a standard compressed file archive.

### About this task

---

You use Studio menu options or the toolbar to import a connector into Studio.

## Procedure

---

1. Select **File -> Import Connector** or click on the **Import Connector** toolbar icon. The File dialog window is displayed.
2. In the File dialog window, select a connector and click **OK**.

## Results

---

The connector is imported into Studio as a .zip archive.

## What to do next

---

In the next section, an overview of the CDK components is presented.

---

## Cast Iron CDK schema files

XML schema files provide the syntax and define how elements and attributes are represented in XML files. You import the Cast Iron CDK schema files into your Studio development environment, then create your endpoints and connections by dragging schema elements from the **Project** toolbox tab into your orchestration.

The CDK schema files are:

**ci-connector-config.xsd** - This file is used by Studio and the deployment engine to define the basic configuration options available to your connector. Plug-in metadata is stored as elements in your XML file and once configured, the endpoint properties define what your end-users see and the activities they are exposed to. Here is the `ci-connector-config.xsd` file:

```
<xss:schema
    id="_dcs_markdown_workspace_Transform_htmlout_0_com.ibm.wci.cdk.doc_cdk_schemas_ci-cdk-config"
```

```

## Cast Iron CDK XML file

Your XML file defines what activities your plug-in performs. Every activity in your XML file must be mapped to an operation defined in the WSDL file.

XML has emerged as the universal language for representing and transmitting structured data that is independent of programming language, software platform, and hardware. For your development project, you can use any text editor or a XML-compliant authoring tool to create your XML file. Your file must conform to the rules of your schema files or your plug-in will fail.

## Cast Iron CDK WSDL file

A WSDL file is an XML-format file that defines network services as a set of endpoints. WSDL files describe how to access a web service and specify what operations that service performs. WSDL's are usually developed by a web service provider and may be made available through a UDDI (Universal Description, Discovery and Integration) registry.

At the outset of your project, you must import a WS-I (Web Service Interoperability)-compliant WSDL file into your development platform so your development environment can generate the objects needed to build client web service applications. Web service API's provide a set of objects or WSDL-type definitions and a set Web service operations.

## Cast Iron CDK .par file

---

Your plug-in is packaged as a .par file. Your .par is a standard .zip file that you rename and import into Studio.

The .par file contains your plug-in. It is exported from your Studio project and is where you implement the interface operations that enable you to identify and inventory objects contained in your plug-in. When your .par is delivered, it automatically expands into a directory for your plug-in.

## FAQ

---

Below are some frequently asked questions that can help solve problems that may arise during your development process.

**Q.** How do I determine if my input activity is discoverable at design time?

- **A.** If input to the activity varies based on object type, you should select discoverable and use an abstract WDSL or schema element type for input.

**Q.** My schema or WSDL does not contain an abstract element type. How do I add that to my file?

- **A.** WSDL's and schema's provide a mechanism to force substitution for a particular element or type. To add an abstract element to your file, add the following `complexType` element to your WSDL or schema: `complexType name="MyObject."` Be sure you define it in the same namespace as your input types.

**Q.** Can I modify an existing connector?

- **A.** As long as the connector was built using the CDK Connector Wizard, you can update it by simply launching the Wizard and adding new activities to it or by revising existing activities.

**Q.** I have existing project. Can I run the Wizard on top of it and use the orchestrations to expose the connector activities?

- **A.** Yes. You can run the Wizard on top of existing projects, but be sure your activity names do not conflict with existing orchestration names.

**Q.** My connector is not displayed in Studio. Why?

- **A.** Many errors can be corrected by simply checking for errors. Check the log file under `Studio_Install_dir` for failures.

## Getting help

---

This section tells you how to get information on IBM and its products and how to reach sales and technical support personnel.

You can access the IBM Corporation web site at: <http://www.ibm.com>.

The site contains information about the IBM Corporation, its background, and products. The site also provides contact information for sales and technical support.

Before contacting IBM Support, verify that you have met the following criteria:

- Your company has an active maintenance contract.
- You are authorized to submit problems.
- You have the appliance serial number.
- You have the customer number that was used to purchase the appliance.

You can submit a software problem report to IBM in one of two ways:

1. Use the service request (SR) problem submission web page. You will need to sign in with your IBM user ID and password.
2. Contact IBM via telephone. Refer to this directory of worldwide contacts in the IBM Software Support Handbook for the appropriate software support phone number.
