## Mapping All Occurrences

---

### About this task

---

You can map all occurrences of a recurring source node to a recurring destination node as long as the nested levels of recurrence match or you have specified how any uneven levels should be handled.

To map all occurrences of a recurring source node:

- Drag a node in the Source tree to the appropriate node in the Destination tree. The Mapping Editor automatically creates mapping rules linking the Source occurrence nodes to the matching Destination occurrence nodes

Note: If the levels of recurrence in the source and destination schema trees do not match, you must [map specific occurrences](#) instead.

## Mapping Specific Occurrences

---

## About this task

---

When the recurring levels in the Source tree do not match those in the Destination tree, you must expand the recurring nodes and define mapping rules for specific occurrences to resolve cardinality differences:

- When source tree recurring levels are greater than destination tree levels, Select Source Occurrences
- When source tree recurring levels are less than destination tree levels, Expand Destination Occurrences

In addition, the following functionality is available for a recurring destination node that has already been expanded:

- Collapse Destination Occurrences - Removes all the occurrences of a recurring destination node, leaving just the recurring destination node.
- Add Destination Occurrence - Adds a single occurrence of a recurring destination node.
- Remove Destination Occurrence - Removes the selected occurrence.
- [Select Source Occurrences](#)

## Select a substitution type in a mapping pane

---

### About this task

---

To select a substitution type in a mapping pane:

### Procedure

---

1. [Upload an XML Schema](#) that contains an XML element based on derived types into the project.
2. In an activity that uses an XML Schema, select the node representing the XML element that is based on a derived type for the input or output parameter of the activity.

For example, the Read XML activity uses an XML Schema to define the output parameter of the activity. In the Configure task of the Checklist for the Read XML activity, select an XML variable that defines the node of the XML Schema to use the output parameter. Using example XML Schema shown in the preceding figure, a variable based on the `<shape>` element can be used to define the node of the XML Schema to use as the output parameter of the Read XML activity. Since the derived type for the `<shape>`

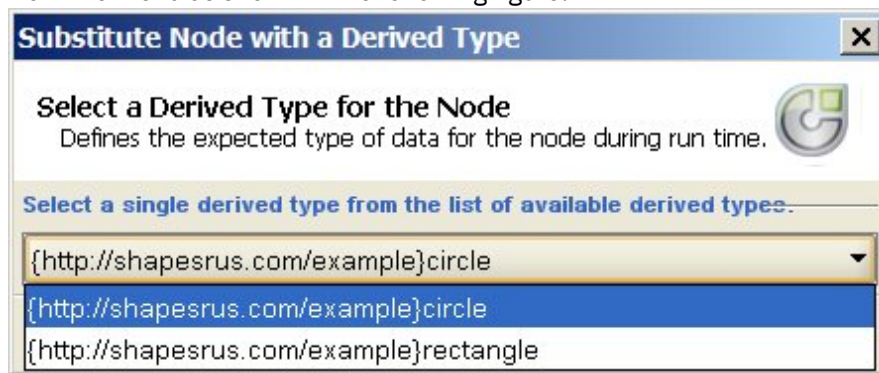

element is not selected, only the child element (named color) of the base type are displayed in the From

Activity pane as shown in the following figure:

Note that the child elements of the derived types are not listed in the mapping pane. In this example, the child element of circle which is named diameter is not listed, nor are the child elements of rectangle which are named width and length.

3. In the From Activity and To Orchestration panes of an activity, select the derived type expected during run time, by right-clicking on the node and from the menu selecting the Substitute Node With ... option. The Substitute Node with a Derived Type dialog box open the menu, the available derived types for the node as defined by the XML Schema are listed. For this example, the two derived types are available from the menu as shown in the following figure:

4. Select one of the derived types. The selected derived type determines the expected type of XML instance document during run time.

In this example, the circle derived type is selected, so the XML data expected for this node during run time is of type circle as shown in the XML instance document displayed at the top of this page.

In addition to the child elements of the base type, the child elements of the derived type show in the mapping panes. In this example, the child element named diameter is displayed with the child element named color (inherited from the base type) in the From Activity pane of the Read XML activity as shown

in the following figure:

## Mapping Destination Nodes

---

When you map a destination node, you indicate the data source used to complete the node and create a mapping rule. Mapping rules provide data to a destination node in various ways, as described in the following topics.

### From source nodes

---

Mapping from a source node to a destination node creates a link between them. This is the most common way to define a mapping rule. There are several ways to link source and destination nodes as described in these topics:

[Mapping Techniques](#)

[Mapping Recurring Nodes](#)

[Automapping Matching Nodes](#)

[Bulk Mapping Nodes](#)

### By assignment

---

Mapping by assignment means that you provide a default value or use functions to determine the value of the destination node. See [Assigning a Default Value for a Destination Node](#) and [Assigning a Function Without a Source Node Link](#) for more information.

### Using a combination of source nodes and functions

---

Mapping using a combination of source nodes and functions refers to manipulating the link between source and destination nodes with functions to convert data, calculate or assign data. See the [Assigning Function\(s\) to a Mapping Rule](#) for details

## Selecting a substitution type

---

The XML Schema specification supports the ability to derive complex types by extension.

In the XML instance document, you declare the type of an XML element from a set of types that are all derived from the same base type, rather than explicitly declaring the type for the XML element in the XML Schema. The

type for the element is defined using the type attribute as shown by the following example XML instance document:

```
<?xml version="1.0" encoding="UTF-8"?>
<shape xmlns="http://shapesrus.com/example"
        xmlns:xsd="http://www.w3.org/2001/XMLSchema-instance"
        xsd:type="circle">
  <color xmlns="">blue</color>
  <diameter xmlns="">10</diameter>
</shape>
```

In the preceding XML instance document, the <shape> element is declared as a `circle` type. The <shape> element in the XML instance document can also be defined as a `rectangle` type as defined in the following example XML instance document:

```
<?xml version="1.0" encoding="UTF-8"?>
<shape xmlns="http://shapesrus.com/example"
        xmlns:xsd="http://www.w3.org/2001/XMLSchema-instance"
        xsd:type="rectangle">
  <color xmlns="">blue</color>
  <length xmlns="">5</length>
  <width xmlns="">8</width>
</shape>
```

In this example, the <shape> element is based on one of the derived types of `shapeType` base type. The derived types of `shapeType` are named `circle` and `rectangle`, as shown in the following example XML Schema:

```

<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema"
            targetNamespace="http://shapesrus.com/example"
            xmlns:sru="http://shapesrus.com/example">
    <xsd:element name="shape" type="sru:shapeType"/>
    <xsd:complexType name="shapeType" abstract="true">
        <xsd:sequence>
            <xsd:element name="color" type="xsd:string"/>
        </xsd:sequence>
    </xsd:complexType>
    <xsd:complexType name="circle">
        <xsd:complexContent>
            <xsd:extension base="sru:shapeType">
                <xsd:sequence>
                    <xsd:element name="diameter" type="xsd:integer"/>
                </xsd:sequence>
            </xsd:extension>
        </xsd:complexContent>
    </xsd:complexType>
    <xsd:complexType name="rectangle">
        <xsd:complexContent>
            <xsd:extension base="sru:shapeType">
                <xsd:sequence>
                    <xsd:element name="length" type="xsd:integer"/>
                    <xsd:element name="width" type="xsd:integer"/>
                </xsd:sequence>
            </xsd:extension>
        </xsd:complexContent>
    </xsd:complexType>
</xsd:schema>

```

Defines an element based on one of the derived types of shapeType.

Base type named shapeType.

Derived type named circle that extends the base type named shapeType.

Derived type named rectangle that extends the base type named shapeType.

When an XML Schema defines an XML element based on derived types, you must specify the derived type (or substitution type) expected for the XML element during run time. For the preceding example XML Schema, you must specify the type of the <shape> element – either `circle` or `rectangle`. In Studio, you specify the expected substitution type of an XML element using the Substitute Node With ... menu option:

- For a variable based on a substitution type - Select the expected type of the XML element by right-clicking the node in the Schema of pane in the Variables tab and by selecting the Substitute Node With ... option from the menu. For more information see [Selecting a Substitution Type for Variables](#).
- For a node based on substitution type in a mapping pane - Select the expected type of the XML element by right-clicking the node in the Schema of pane in the Variables tab and by selecting the Substitute Node With ... option from the menu, as described in the following procedure.

In the preceding example XML Schema, the base type called <shapeType> is defined as abstract. An abstract base type cannot be used in the XML instance document to define the type for the element - one of the derived types must be specified instead. In this example, the <shape> element in the XML instance document cannot be declared as `shapeType`, it must be declared as one of the derived types; either `circle` or `rectangle`.

In the preceding example, the base type is defined as abstract but type substitution of derived types based on a base type that is not abstract is also supported. To make the complexType called `shapeType` not abstract in the example XML Schema, remove the `abstract=true` attribute as shown in the following XML Schema segment:

```

<xsd:complexType name="shapeType">
  <xsd:sequence>
    <xsd:element name="color" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>

```

A WSDL is a specific XML Schema that defines a Web Service. Using type substitution with a WSDL is also supported.

You can specify the substitution type for an [expanded occurrence](#) of a recurring destination node. This type substitution of an expanded occurrence is only supported for the recurring destination nodes. Destination nodes are located on the right side of mapping panes.

Attention: Type substitution of complex types is supported in the mapping panes of activities and for variables. However, deriving elements by extension using substitution groups is not supported in the mapping panes of activities or for variables. For more information, see [Unsupported XML Schema Features](#).

## Example XML Schema

---

The example XML Schema used in this topic is provided for reference:

```

<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  targetNamespace="http://shapesrus.com/example"
  xmlns:sru="http://shapesrus.com/example">
  <xsd:element name="shape" type="sru:shapeType"/>
  <xsd:complexType name="shapeType" abstract="true">
    <xsd:sequence>
      <xsd:element name="color" type="xsd:string"/>
    </xsd:sequence>
  </xsd:complexType>
  <xsd:complexType name="circle">
    <xsd:complexContent>
      <xsd:extension base="sru:shapeType">
        <xsd:sequence>
          <xsd:element name="diameter" type="xsd:integer"/>
        </xsd:sequence>
      </xsd:extension>
    </xsd:complexContent>
  </xsd:complexType>
  <xsd:complexType name="rectangle">
    <xsd:complexContent>
      <xsd:extension base="sru:shapeType">
        <xsd:sequence>
          <xsd:element name="length" type="xsd:integer"/>
          <xsd:element name="width" type="xsd:integer"/>
        </xsd:sequence>
      </xsd:extension>
    </xsd:complexContent>
  </xsd:complexType>
</xsd:schema>

## Select a substitution type in a mapping pane

### About this task

To select a substitution type in a mapping pane:

### Procedure

1. [Upload an XML Schema](#) that contains an XML element based on derived types into the project.
2. In an activity that uses an XML Schema, select the node representing the XML element that is based on a derived type for the input or output parameter of the activity.

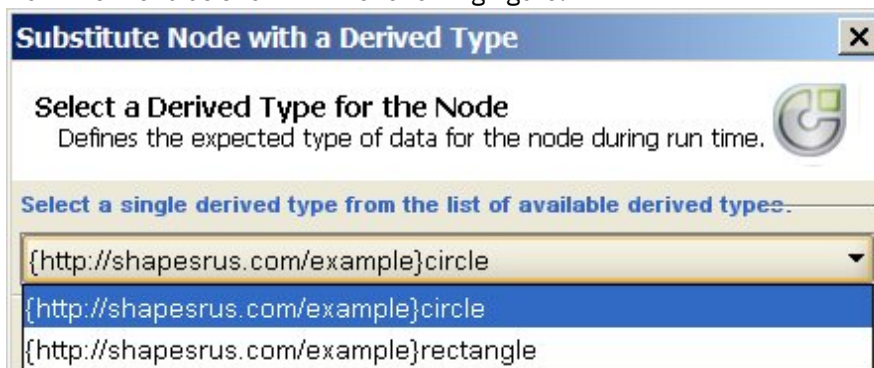

For example, the Read XML activity uses an XML Schema to define the output parameter of the activity. In the Configure task of the Checklist for the Read XML activity, select an XML variable that defines the node of the XML Schema to use the output parameter. Using example XML Schema shown in the preceding figure, a variable based on the `<shape>` element can be used to define the node of the XML Schema to use as the output parameter of the Read XML activity. Since the derived type for the `<shape>` element is not selected, only the child element (named `color`) of the base type are displayed in the From

Activity pane as shown in the following figure:

Note that the child elements of the derived types are not listed in the mapping pane. In this example, the child element of circle which is named `diameter` is not listed, nor are the child elements of rectangle which are named `width` and `length`.

3. In the From Activity and To Orchestration panes of an activity, select the derived type expected during run time, by right-clicking on the node and from the menu selecting the `Substitute Node With ...` option. The `Substitute Node with a Derived Type` dialog box opens, the available derived types for the node as defined by the XML Schema are listed. For this example, the two derived types are available from the menu as shown in the following figure:

4. Select one of the derived types. The selected derived type determines the expected type of XML instance document during run time.

In this example, the circle derived type is selected, so the XML data expected for this node during run time is of type circle as shown in the XML instance document displayed at the top of this page.

In addition to the child elements of the base type, the child elements of the derived type show in the mapping panes. In this example, the child element named diameter is displayed with the child element named color (inherited from the base type) in the From Activity pane of the Read XML activity as shown

in the following figure:

# Mapping Rules That Are Automatically Deleted

---

When you open a map, the Mapping Editor automatically deletes mapping rules from the map in two cases:

## Case 1: One or both of the XML Schemas that the map refers to have been changed.

---

Schemas can change due to changes in the connection activities or message definitions they are generated from. Schemas that you add to the project can also be edited directly.

Note: The warning message from the Mapping Editor lists the mapping rules that were deleted. This list might also include rules for property nodes, such as `ihmap:exists` for the optional property node.

Review the map and recreate or alter mapping rules to handle the schema changes properly.

## Case 2: One of the XML Schemas that the map refers to has been deleted from the project.

---

In this case, the Mapping Editor deletes all mapping rules, and the map cannot be recreated. Close the map and delete it from the project.

# Loading a Sample Message

---

## About this task

---

It is recommended that you test the mapping rules you set up in the Mapping Editor before mapping the next activity in your orchestration. You do this by loading a sample message into the project and testing against it to verify that the mapping rules are applied correctly.

To load a sample message into the project:

## Procedure

---

1. Click Test. The Test Files pane opens.
2. In the Find Test Files pane, click Browse and search for the message you want to load.
3. Select the XML file to use as a sample message in the window and click OK.

If the sample is valid, it displays in the Selected Test Files pane. If there are several source schemas for this map, test files are displayed in source schema order.

4. If the map uses several source schemas, you can load sample messages for other source schemas before you test the transformation. Repeat steps 2 and 3 for each sample you want to test

# Testing maps

---

You can test the transformation defined in a map using one or more sample messages that match the source schemas for the map.

## About this task

---

To test a map:

## Procedure

---

1. Click Test from either the Map Inputs or Map Outputs pane. The Test pane is displayed. The variables or parameters that show in the Select Input Test Files table depend on the type of task:
  - In the Test pane of a **Map Inputs** task, the variables that are mapped to the input parameters of the activity are displayed in the Select Input Test Files table.
  - In the Test pane of a **Map Outputs** task, input parameters of the activity are displayed in the Select Input Test Files table.
2. Get sample data to use as input to the map, using one of the following options:

- Generate sample data - To generate sample XML data valid against the source schema, select the Map > Generate Test Data from the toolbar menu.
  - Import sample data from files - For each parameter in the Find Test Files list, click [...] to [browse for a sample message](#) from your computer or a network drive. The selected message is displayed in the Selected Test Files table.  
Note: The sample message must be valid XML that meets the requirements defined in the source XML Schema for the map. If the map uses several source schemas, you can load a sample message for any or all of the schemas.
3. Click Run Test. The transformation defined in your map is run against the sample message you specified in the Location column. The result of the transformation is displayed in the Test Result pane.

### About this task

You can save the result of the map test to a file on your computer or a network drive. This can be useful if you would like to review the result using XML tools outside of Studio. It can also be useful if the result of the transformation is input to another activity, such as a message definition or another map.

To save the result of a map test:

---

### Procedure

1. Test your mapping. For more information, see [Testing maps](#).
2. Select Map > Save Results. The Save Results Message dialog box opens.
3. Navigate to the directory where you want to save the file and enter a file name.
4. Click Save.

## The Emit CData Option

---

### About this task

---

Select the Emit CData option for a destination node for the text in the destination XML element to be treated as an XML CDATA section and assigned to the destination node as a block and is not parsed during run time. It is equivalent to specifying data for an XML element using the following XML syntax:

```
<![CDATA [  
text  
]]>
```

The Emit CData option can be selected for any destination nodes (located on the right pane of the Mapping Editor). You can also select the Emit CData option for default values.

Note: The Emit CData option is not available for input nodes (located on the left pane of the Mapping Editor.)

To select the Emit CData option:

### Procedure

---

1. In the Mapping Editor, right-click a destination node that is linked (or mapped) or has a default value associated with it. Destination nodes are located in the right pane of the Mapping Editor either in the To Activity or To Orchestration pane
2. Select the Emit CData option from the list. During run time, the Integration Appliance treats that destination node as a CDATA section.

## Unsupported XML Schema Features

---

Using the following XML Schema features can cause maps to display or transform incorrectly, and can cause validation warnings:

## Choice

---

Limitations to mapping rules might not allow you to correctly define transformation requirements for nodes within a choice. The guaranteed status of mapping rules involving choice structures might be incorrect. Transformations to destination schemas that have choice structures might incorrectly include all choices.

## Mixed Content

---

Elements that allow mixed content can contain both data and other nodes. These nodes display correctly and can be mapped. However, transformation of messages with mixed content nodes might not be complete.

## Recursive Content

---

You cannot create a map with unlimited levels of recursive elements. You can specify mapping rules for no more than five recursive levels.

## Substitution Groups

---

Substitution groups support deriving elements by extension. Using substitution groups in an XML Schema to extend an `xs:anyType` element to different types of elements is not supported. For example, extending an `xs:anyType` element to either an element based on a simple type or an element based on a complexType is not supported.

The ability to derive complex types by extension using type substitution is supported. For more information, see [Selecting a substitution type](#) and [Selecting a Substitution Type for Variables](#).

## Unique, Key, or Keyref

---

The Mapping Editor does not provide information about elements that have unique, key, or keyref constraints and mapping rules do not evaluate.

## Various facets for restrictions or extensions

---

Information about the following facets is not available within the Mapping Editor and these facets are not considered when you create mapping rules:

- `minInclusive`, `maxInclusive`, `minExclusive`, and `maxExclusive`
- `length`, `minLength`, and `maxLength`
- `totalDigits` and `fractionDigits`
- `whitespace`
- `patterns`
- `enumeration`

## About Unmapped Destination Nodes

---

During transformations, the Integration Appliance includes all destination nodes in the result message. Destination nodes that are not mapped become empty nodes in the resulting message.

In most cases, this is desired behavior. With updates to databases, however, the Integration Appliance treats an empty node in the outbound message as a NULL value for the database.

To prevent NULL values from being saved to the database, you must remove the unmapped nodes from the XML Schema by clearing the columns from the database activity in the Configure pane. See the following topics for more details:

## Filter Recurring Nodes

---

By specifying an XPath predicate to filter against during run time, you can limit the recurring nodes returned by a mapping activity.

### About this task

---

Filtering using a predicate directly in the mapping panes of activities eliminates the need for the following activities:

- A While Loop or For Each activity that loops through the recurring structures
- An If...Then activity to test for values.

Eliminating the looping and If..Then activities improves orchestration performance.

For example, you can limit the books processed by the BatchOrderProcessingSample orchestration to only return book titles that start with the letter B using either of the following methods:

- After the Read Flat File activity which converts flat file data to XML, you can add a While Loop activity that contains an If..Then activity that tests for all book titles that start with the letter B. When the While

Loop activity completes at run time, it returns the set of recurring BookOrder nodes that have titles beginning with the letter B.

- Filter by specifying a predicate directly in the To Orchestration pane of the Map Outputs task of the Read Flat File activity that converts flat file data to XML. This is the preferred method because it reduces the processing during run time - improving orchestration performance. For example, you can specify the following predicate on the recurring BookOrder node to limit the Bookorder nodes returned during run time to only those titles that begin with the letter B: `*:title/starts-with(., 'B')`

This example predicate is explained in the following table:

Predicate Characters	Description
*:	Specifies this predicate applies to any namespace of the source node.
title/	Specifies to apply this predicate against the title node of the current source node.
starts-with(., 'B')	Specifies this predicate returns only nodes that have title nodes that start with the letter B. The starts-with function is a built-in XPath function.

For more information about the BookOrder sample, see the *Getting Started Guide*. If you accepted the defaults during the installation of Studio, you can find the reference implementation of the sample in the following directory: `C:\Program Files\IBM\WebSphere Cast Iron Studio 3.X\Samples\BookOrder`

To specify a predicate on a recurring node:

## Procedure

1. You can only apply a filter on a recurring destination node which is mapped to a recurring source node in the mapping panes of activities, as shown in the following Map Outputs pane of the Read Flat File activity in the BatchOrderProcessingSample orchestration:

2. Right-click on the destination occurrence node (in this example BookOrder/occurrence) and select Filter Recurring Nodes from the menu. The Filter Recurring Nodes dialog box opens.
3. Enter the XPath predicate. For this example, enter the predicate shown in the following figure:

4. Click OK. The predicate is evaluated to determine if it is valid:
  - If the predicate is invalid, an error message is reported.
  - If the predicate is valid, the filter icon (  ) shows next to the destination occurrence node.

## About Lookup Tables

---

Lookup tables define a set of key-value (name-value) pairs. During run time, these key-value pairs are used to translate the passed in key to the associated value.

A lookup table is similar to a function that has one input string parameter (the source value to translate) and a string return value (the result of the translation). In the Mapping Editor, a lookup table can be dragged onto a mapping rule in the same way that a function can be.

Lookup tables are available to use in any map in the project where they were defined.

## Assigning a Function Without a Source Node Link

---

### About this task

To define a mapping rule in which the input for the destination node is provided by the return value of a function and not from a source node:

## Procedure

---

1. Select the Functions tab. In the Functions tab, the list of available functions is displayed.
2. In the Functions tab, expand folder that contains the function to assign to the destination node. This function must have no input parameters. For example, the **Get Current® Date and Time** function has no parameters and returns the current date and time.
3. Select the function icon and drag it into the Mapping Editors middle pane, near the destination node you want to map.
4. In the Mapping Editor, drag from the function icon to the destination node. A link from the function to the destination node is displayed.
5. Optional: Test if the mapping rule is valid by right-clicking on the function in the mapping rule and selecting Apply Function Graph. If the mapping rule is valid, the square function icon in the graphical representation of the mapping link is not displayed and a function icon is shown to the left of the destination node icon, as shown in [Figure 1](#).

## Results

---

Figure 1. No source node function icon

## Assigning a Function While Creating Maps

---

### About this task

---

To assign a function while creating maps:

## Procedure

---

1. Select the Function tab. In the Function tab, the list of available functions is displayed.
2. From the Function tab, drag a function between the two nodes you want to map in the Mapping Editor.
3. Drag the source node onto the function icon to create a link. The source node is assigned to the first parameter of the function. During run time, the value of this source node is provided as the first parameter of the function.
4. Drag the destination node onto the function to create the link. During run time, the return value of the function populates the destination node.

5. If the function has more than one input parameter, you must assign the remaining input parameters using one of the following options:
  - Create links from other source nodes (as described in step 3) or from functions used in the current mapping rule.
  - Edit the assignment of input parameters using the Functions Properties dialog box. To open the Functions Properties dialog box, double-click the function in the Mapping Editor.
6. Optional: Add additional functions to the mapping rule using the procedure described in the topic [Adding a Function to an Existing Mapping Rule](#). For an example, see [Example: Chaining Multiple Functions](#).
7. Optional: If any functions are still associated with the mapping rule, test if the mapping rule is valid by right-clicking on the function in the mapping rule and selecting Apply Function Graph. If the mapping rule is *valid*, the square function icon or icons in the graphical representation of the mapping link are not displayed and a blue bar with small squares at each end is displayed (  ). If the mapping rule is not valid, the graphical representation of the mapping rule does not change, the function icons are still visible, (for example  ) and an error dialog opens.

Note: A mapping rule with function or functions is considered valid if all the input parameters of the function or functions are assigned with values of the correct datatype and if the return value of the last function matches the datatype of the destination node. The input parameters of a function can be provided by source nodes or by the return type of other functions associated with that mapping rule.

To add a function to an existing mapping rule:

## Procedure

---

1. Select the Function tab. In the Function tab, the list of available functions is displayed.
2. From the Function tab, drag a function onto an existing mapping rule in the Mapping Editor.

The source node of the mapping rule is assigned to the first parameter of the function. During run time, the value of the source node is provided to the first parameter of the function.

The destination node of the mapping rule is assigned to the return type of the function. During run time, the return value of the function populates the destination node.

3. If the function has more than one input parameter, you must assign the remaining input parameters using one of the following options:

- Create links from other source nodes (as described in step 3 of [Assigning a Function While Creating Maps](#)) or from functions used in the current mapping rule.
  - Edit the assignment of input parameters using the Functions Properties dialog box. To open the Functions Properties dialog box double-click the function in the Mapping Editor.
4. Optional: Add additional functions to the mapping rule using this same procedure. For more information, see [Example: Chaining Multiple Functions](#).
  5. Optional: Test if the mapping rule is valid by right-clicking on the function in the mapping rule and selecting Apply Function Graph. If the mapping rule is valid, the square function icon or icons in the graphical representation of the mapping link are not displayed and a blue bar with small squares at each end is displayed (  ). If the mapping rule is not valid, the graphical representation of the mapping rule does not change, the function icons are still visible, (for example:  ) and an error dialog opens.

# Example: Chaining Multiple Functions

---

## About this task

---

Multiple functions can be chained together in a single mapping rule. The flow of execution of the functions in the mapping rule is from left to right.

For example, you could build a mapping rule that uses multiple functions as described in the following sequence:

## Procedure

---

1. A source node of type: string is the input parameter to the **trim** function.
2. The **trim** function removes trailing and leading white space from the input parameter and the resulting string is returned.
3. The return string of the **trim** function is the input parameter to the **lowercase** function.
4. The **lowercase** function converts each of the uppercase characters of the input string into their lowercase form and the resulting string is returned.
5. The return string of the **lowercase** function populates the destination node of type: string.

## Results

---

In the Mapping Editor, this mapping rule is displayed as shown in the following figure.

## Math Functions with Node Set Constraints

The following math functions calculate values from sets of nodes:

- **Average**
- **Count**
- **Maximum**
- **Minimum**
- **Sum**

For example, the Sum function calculates the total value of all ItemPrice nodes when ItemPrice is a recurring source node.

You can use several node sets as parameters with these functions, including single nodes. You can also use literal numbers or the results of other math functions as parameters for functions that accept node sets.

---

## Limitations in Combining Other Math Functions or Literals

When using numbers or other functions to supply node set parameters, some math functions use the first occurrence of a node set in calculations. In a mapping rule, if you link functions that work with only one node of the set as a parameter to another function that works with the full node set, the final result will not include values from the full node set.

For example, the Multiply function is linked with the Sum function in a mapping rule and so during run time, the result of the Multiply function becomes the input to the Sum function. If the input to the Multiply function is a recurring item structure, the **Multiply** function multiplies the UnitPrice with the Quantity and then passes the

result to the Sum function. The result from Sum function would be the product of the first UnitPrice and Quantity – not the total extended price for all items.

Note: The Count function accepts any source node as a parameter, including structure or choice nodes which you usually cannot map.

# Specifying Default Values for Functions that Accept Recurring Nodes as Input

---

## About this task

---

The following math functions calculate values from sets of nodes:

- **Average**
- **Count**
- **Maximum**

## Mapping Function Syntax and Datatypes

Use the Mapping Function to describe the purpose of the function, set valid input parameters and syntax, and set what the function returns.

Mapping function topic descriptions include the following:

- A brief description of the purpose of the function.
- Valid input parameters. Parameters are listed in order as the order is significant for most functions. The following syntax is used with parameters:

datatype<sub>n</sub> – where n indicates an order if several parameters of the same type are allowed

[datatype] – where [ ] indicates that the parameter is optional.

- What the function returns.

Mapping functions can process the following datatypes:

anysimpletype

Any type of data is allowed including numbers, strings, dates, or boolean.

boolean

Either *true* or *false*.

date

A string representing a date in the format YYYY-MM-DD (see datetime for the component descriptions).

datetime

A string representing a date and time in the format:YYYY-MM-DDThh:mm:ss.ssss

Where:

- YYYY = year
- MM = month
- DD = day
- T = date/time separator character
- hh = hour
- mm = minute
- ss = second
- ssss = optional millisecond

day

A string representing the day portion of a date in the format: DD

dt

Several different date or time datatypes can be supplied. See the description of the parameter for a list of the datatypes that are valid.

- [-] = an optional minus sign
- P = period indicator
- nY = the number of years
- nM = the number of months
- nD = the number of days
- T = date/time separator
- nH = the number of hours
- nM = the number of minutes

- nS = the number of seconds

empty string

A string with no contents (for example, ""). This is typically returned for error conditions when the result is normally a string.

month

A string representing the month portion of a date in the format: MM

monthday

A string representing the month and day portion of a date in the format: MM-DD

## Average function

---

The **Average** function determines the average value for the sets of numeric nodes in all parameters.

If you use literal numbers or the results of other functions as parameters to this function, the numbers are added to the total. They are also counted as nodes to determine the average.

**Parameter:** input, input...

The numeric nodes to calculate an average from. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information, see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).  
 Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you may get an unexpected result. For more information, see [Limitations in Combining Other Math Functions or Literals](#).

**Returns:** number

The average value of all parameters. This returns NaN (not a number) in the following cases:

- If any parameters are not numeric nodes.
- If both the sum of all values and the count of node sets are zero (the average of 0 / 0).

## Base64 Encode and Decode functions

Base64 refers to a specific MIME content transfer encoding. Base64 encoding represents arbitrary sequences of octets in a form that requires case sensitivity but need not be humanly readable.

A 65-character subset of US-ASCII is used, enabling 6 bits to be represented per printable character. The 65th character, "=", is used to signify a special processing function.

The encoding process represents 24-bit groups of input bits as output strings of 4 encoded characters. Proceeding from left to right, a 24-bit input group is formed by concatenating 3 8-bit input groups. These 24 bits are then treated as 4 concatenated 6-bit groups, each of which is translated into a single digit in the base 64 alphabet.

Each 6-bit group is used as an index into an array of 64 printable characters. The character referenced by the index is placed in the output string.

### Base64 Alphabet

Value	Encoding	Value	Encoding	Value	Encoding	Value	Encoding
0	A	17	R	34	i	51	z
1	B	18	S	35	j	52	0
2	C	19	T	36	k	53	1
3	D	20	U	37	l	54	2
4	E	21	V	38	m	55	3
5	F	22	W	39	n	56	4
6	G	23	X	40	o	57	5
7	H	24	Y	41	p	58	6
8	I	25	Z	42	q	59	7
9	J	26	a	43	r	60	8
10	K	27	b	44	s	61	9
11	L	28	c	45	t	62	+

12 M	29 d	46 u	63 /
13 N	30 e	47 v	
14 O	31 f	48 w	(pad) =
15 P	32 g	49 x	
16 Q	33 h	50 y	

Special processing is performed if fewer than 24 bits are available at the end of the data being encoded. A full encoding quantum is always completed at the end of a quantity. When fewer than 24 input bits are available in an input group, zero bits are added (on the right) to form an integral number of 6-bit groups. Padding at the end of the data is performed using the '=' character. Since all base 64 input is an integral number of octets, only the following cases can arise:

- The final quantum of encoding input is an integral multiple of 24 bits; here, the final unit of encoded output will be an integral multiple of 4 characters with no "=" padding,
- The final quantum of encoding input is exactly 8 bits; here, the final unit of encoded output will be two characters followed by two "=" padding characters.
- The final quantum of encoding input is exactly 16 bits; here, the final unit of encoded output will be three characters followed by one "=" padding character.

## Concatenate function

---

The **Concatenate** function joins all parameter strings into a single result in the order you specify the parameters.

**Parameters:** string1, string2, [string3-string1000]

Each parameter can be a source node, the result of another function, or a value that you specify. The order of the parameters determines the order in which the parameters are joined (that is, the first parameter displays as left-most in the resulting string).

Note: You must specify at least two parameters in order for the function to be valid. While configuring the properties of the **Concatenate** function in the Function Properties dialog box, you cannot click Delete for the top two parameters in the list. (The Delete button is not active for the top two parameters.) You can only click Delete, if there are more than two parameters in the list and only for the parameters at the bottom of the list. To delete a parameter from the top two positions of the list, first move the parameter down the list clicking Down and then click Delete.

**Returns:** string

The joined strings.

## CopyOf function

The **CopyOf** function copies the entire contents of the source node to the destination node.

The **CopyOf** function () copies the entire contents of the source node (the entire subtree of the source node including all children) to the destination node.

Attention: The XML Schema of the destination node must match the XML Schema of the source node for the CopyOf function to correctly copy the values of the source nodes to the destination nodes.

For example, if the Call Procedure activity returns the following result set nodes (through the any node) during run time:

- results/result/resultSet/column1, where column1 is an integer.
- results/result/resultSet/column2, where column2 is an integer.

The XML Schema of the destination nodes in the To Orchestration pane, must match the expected XML Schema of the result set that is returned from the Call Procedure activity, as shown in the following figure:

In the preceding figure, the CopyOf function (  ) is linking the source result node and the destination result node.

**Parameter:** input

**Returns:** anySimpleType

## Count Function

---

The **Count** function determines the number of nodes in all of the sets of nodes in parameters.

For recurring nodes, this function determines the actual number of occurrences.

This function accepts any source node as a parameter. This includes structure or choice nodes which you normally cannot map.

If you use literal numbers as parameters in this function, the numbers are considered one node and incremented by a count of one.

**Parameter:** input, input...

The sets of nodes to count. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. ## Digest/Hash function

---

The **Digest/Hash** function produces a digital summary of information called a message digest. Message digests provide a digital identifier for a digital document. The message digest produced by the Digest/Hash function is Base64 encoded.

Message digest functions are mathematical functions that process information to produce a message digest for each unique document. Identical documents have the same message digest, which can be used to ensure that the message received is the same as the message sent.

There are three **Digest/Hash** functions in Studio:

- **Digest/Hash the Input Data with MD5**
- **Digest/Hash the Input Data with SHA-1**
- **Digest/Hash the Input Data with SHA-256**

The input is the document or string for which you want a digest. For example, MD5 ("Austin was happy that the band played on") =NjJhODJhNTViZmI3Y2YwZDc2NDkxYjc0ZTkzZDlmMTQ=

MD5 is defined in RFC 1321. IBM® Cast Iron® uses the MD5 algorithm included in the JDK security package. The algorithm takes a message of undefined length and outputs a message digest of 128 bits.

SHA-1 is defined by the Federal Information Processing Standards Publication 180-1 (FIPS PUB 180-1). IBM Cast Iron uses the SHA-1 algorithm included in the JDK security package. SHA-1 takes an input message of any length less than 264 bits and produces a message digest of 160-bits.

SHA-256 is a 256-bit hash function and is compliant with the National Institute of Standards SP 800-131a specification. IBM Cast Iron uses the SHA-256 algorithm included in the JDK security package. The input is the document or string for which you want a digest. For example, SHA-56 ("Sample Input") = `bEzV+7Tz6afzJhY0E5u0Zt1+9uBURb/2pgi2PT9Ms/s=`. The hash value is 32 bytes or 256 bits length.

Use **Digest/Hash the Input Data with MD5** function to create a Base64 encoded digest of the input data using MD5.

Use the **Digest/Hash the Input Data with SHA-1** function to create a Base64 encoded digest of the input data using SHA-1.

Use the **Digest/Hash the Input Data with SHA-256** function to create a Base64 encoded digest of the input data using SHA-256.

**Parameter:** `dateTime`

The date and time as a XML Schema data type: `xs:dateTime`.

**Parameter:** string

This string defines the format of the date and time string returned from this function. For example, the format string could be equal to MM/dd/yyyy. For more information about the supported date and time pattern strings see the SimpleDateFormat class in the Sun J2SE 1.4.2 JavaDoc:

<http://www.science.uva.nl/ict/osdocs/java/jdk1.3/docs/api/java/text/SimpleDateFormat.html>.

M	Month in a year	April	04
w	Week in a year	12	24
W	Week in a month	3	1
D	Day in a year	234	333
d	Day in a month	13	20
F	Day of week in a month	1	3
E	Day in a week	Monday	Friday
a	AM or PM designation	AM	PM
H	Hour in a day - a number between 0 and 23	12	13
k	Hour in a day - a number between 1 and 24	14	23

**Parameter:** string (Optional)

This string defines the locale. For example, the English United States locale is defined with the following string: en\_US.

The locale string can be defined by any of the following formats:

- LANGUAGE
- LANGUAGE\_COUNTRY
- LANGUAGE\_COUNTRY\_VARIANT

Where LANGUAGE represents a two letter code as defined by the ISO-639 standard, COUNTRY represents a two letter code defined by the ISO-3166, and VARIANT represents a vendor or browser-specific code, for example WIN for Windows.

This parameter is optional.

To add this parameter:

1. Drop the Format Date String function into the middle pane of the Mapping Editor.
2. Double-click the function. The Function Properties pane opens.
3. Click Add. The Locale input parameter shows in the list of parameters.

**Returns:** string

The passed in date and time as a string in the format defined by the second parameter.

For example, if the Format Date String function was called with the following input parameters:

dateTime: 2005-02-22T16:18:00.852-08:00

format string: MM/dd/yyyy

locale string: en\_US

## Format Number function

---

The **Format Number** function returns a string that is a number formatted to fit the specified pattern.

**Parameter:** number

The number to format. This can come from a source node, the result of another function, or a value that you specify.

**Parameter:** string

A pattern that specifies how the first parameter should be formatted. This pattern uses these symbols to define the pattern:

- Required digits = 0
- Optional digits = #
- Minus symbol = -
- Decimal symbol = .
- Grouping separator = ,. Typically used to separate groups of three digits.
- Percent symbol = %. When the percent symbol is present, the input number is multiplied by 100 and the result is shown as a percentage.
- Per mille symbol = ‰ (Unicode x2030). This symbol multiplies the number by 1000 and shows the result as a per mille.
- Positive/negative separator = ;
- Infinity = infinity
- Not a number = NaN

- \$ = \$

Patterns can have constant text as a prefix, suffix, or both. Common uses are to specify the currency symbol or some unit of measurement.

- \$#,##0.00 – formats a number in the standard format for United States dollars with the dollar sign, commas for separators and at least one dollar digit and two digits for cents.
- #0.000% – formats a decimal number as a percentage with at least three decimal places.
- #,##0.00;(#,##0.00) – formats negative number with parentheses, a format commonly used in accounting.

**Returns:** string

The first parameter reformatted to reflect the pattern specified by the second parameter.

## Examples

---

Patterns can have constant text as a prefix, suffix, or both. Common uses are to specify the currency symbol or some unit of measurement.

### Example 1

\$#,##0.00 – formats a number in the standard format for United States dollars with the dollar sign, commas for separators and at least one dollar digit and two digits for cents.

```
format-number(12345.6789, '$#,##0.00') = '$12,345.67'
```

### Example 2

#0.000% – formats a decimal number as a percentage with at least three decimal places.

```
format-number(.67890123, '#0.000%') = '67.890%'
```

When the percent symbol is present, the input number is multiplied by 100.

### Example 3

#,##0.00;(#,##0.00) – formats negative number with parentheses, a format commonly used in accounting.

```
format-number(-12345.6789, '#,##0.00;(#,##0.00)') = '(12,345.67)'
```

## Modulo function

---

The **Modulo** function determines the remainder from dividing the first parameter by all subsequent parameters.

`modulo(42, 5) = 2`

`42 / 5 = 8 R2`

## Not function

---

The **Not** function is typically used in conditions to specify negative or complimentary conditions.

Returns true if the parameter evaluates as false. Returns false if the parameter evaluates as true.

**Parameter:** datatype

Any number, string, date, time, or boolean value. This can come from a source node, the result of a function, or a value you specify.

**Returns:** boolean

The boolean inverse of the parameter. The evaluation rules depend on the datatype of the parameter.

For number datatypes:

- Positive and negative zero evaluate as false
- Any other number evaluates as true

For string, any date or any time datatypes:

- An empty string evaluates as false
- Any other string, date or time evaluates as true

For the boolean datatype:

- The evaluation returns the inverse value

n. or -n.

n.n or -n.n

.n or -.n

## Padding String function

---

The **Padding String** function returns a padding string of the specified length and characters. Padding strings are used in alignment functions.

**Parameter:** number

The total length to make the padding string. This can come from a source node, the result of another function, or a value you specify.

**Parameter:** [string]

One or more characters to use to build the padding string. If you use multiple characters and the length of the padding string is not an even multiple, these characters are truncated at the end of the string to fit the overall length. This can come from a source node, the result of another function, or a value you specify. If you omit this parameter, it defaults to the space character.

**Returns:** string

The string to use for padding.

## Position function

---

The **Position** function is used with conditions to represent the index to the current node within the set of its siblings. The function works only within the context of a recurring node and has no parameters.

**Returns:** number

The index or number identifying the position of the current node within the set of its siblings.

## Read Date String function

---

The **Read Date String** function converts a string (that contains a date and time) to the XML Schema data type: `xs:dateTime`.

### Purpose

---

**Parameter:** string

The date and time as a string.

**Parameter:** string

This string defines the format of the date and time string of the first parameter. For example, the format string could be equal to `MM/dd/yyyy`. For more information about the supported date and time pattern strings see `SimpleDateFormat` class in the Sun J2SE 1.4.2 Javadoc:

<http://www.science.uva.nl/ict/osdocs/java/jdk1.3/docs/api/java/text/SimpleDateFormat.html>.

Pattern Letter	Description	Example1	Example2
G	Era designation	AD	BC
y	Year	2004	2001
M	Month in a year	April	04
w	Week in a year	12	24
W	Week in a month	3	1
D	Day in a year	234	333
d	Day in a month	13	20
F	Day of week in a month	1	3

Pattern Letter	Description	Example1	Example2
E	Day in a week	Monday	Friday
a	AM or PM designation	AM	PM
H	Hour in a day - a number between 0 and 23	12	13
k	Hour in a day - a number between 1 and 24	14	23
K	Hour in AM or PM - a number between 0 and 11	0	10
h	Hour in AM or PM - a number between 1 and 12	11	12
m	Minute in an hour	20	50
s	Second in a minute	10	30
S	Milliseconds	224	338
z	Time zone in General time zone designation	PDT	EDT
Z	Time zone in RFC 822 time zone designation	-0300	+0200

**Parameter:** string (Optional)

This string defines the locale. For example, the English United States locale is defined with the following string: en\_US.

The locale string can be defined by any of the following formats:

- LANGUAGE
- LANGUAGE\_COUNTRY
- LANGUAGE\_COUNTRY\_VARIANT

Where LANGUAGE represents a two letter code as defined by the ISO-639 standard, COUNTRY represents a two letter code defined by the ISO-3166, and VARIANT represents a vendor or browser-specific code, for example WIN for Windows.

This parameter is optional.

To add this parameter:

1. Drop the Format Date String function into the middle pane of the Mapping Editor.
2. Double-click the function. The Function Properties pane opens.
3. Click Add. The Locale input parameter shows in the list of parameters.

**Returns:** dateTime

The date and time as an XML Schema data type: xs:dateTime is returned. For example, if the Read Date String function was run with the following input parameters:

date and time string: 02/22/2005/12/20/44

format string: MM/dd/yyyy/HH/mm/ss

A dateTime representing February 22, 2005 at 12:20 and 44 seconds is returned from Read Date String Function.

## Replace function

---

The **Replace** function replaces individual characters with other individual characters.

The replacement is done at the individual character level and not the string level. Every occurrence of a character is replaced with specified replacement character as shown in the following example:

- list of characters to be replaced is equal to 'abc'
- list or replacement characters is equal to 'ABC'
- input string is equal to 'aWWWbYYYYcPPpabc'

The result string is equal to 'AWWWBYYYcPPpABC' because the replacement is done at the character level - every character is replaced. (If the replacement was done at the string level the resulting string would be equal to 'aWWWbYYYYcPPpABC'.)

**Parameter:** input

The string to search for characters to replace. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

**Parameter:** fromChars

A list of the character or characters to be replaced. If you need to replace several characters, they should be listed without any separation. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

**Parameter:** toChars

A list of character or characters to use as replacements. List the replacement characters in this parameter in the same order as characters to be replaced in the fromChars parameter because the first character from the fromChars parameter is replaced by the first character in toChars parameter and so on. For more information, see Example 2. The value for this parameter can be provided by a source node, the result of another function, or a value you specify.

Note: You can not directly replace a single character with an empty string because the toChars parameter cannot equal a empty string - a string with no characters. For a workaround, see Example 3.

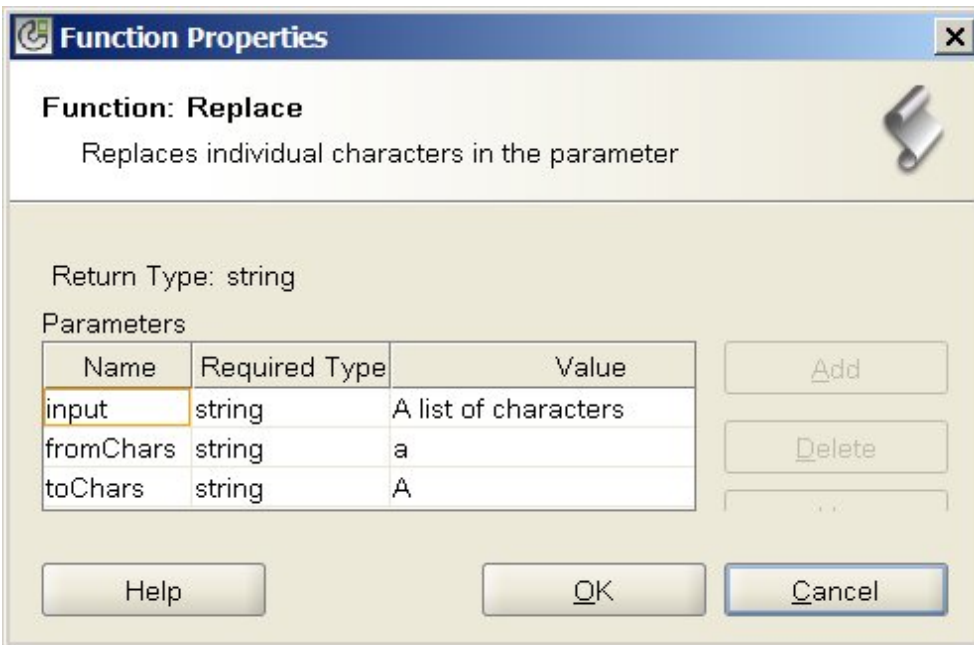

**Returns:** string

The result of replacing all occurrences of characters in the second parameter (fromChars) that are found in the first parameter (input) with the matching characters in the third parameter (toChars).

### Example 1

---

This example shows a simple one-to-one character replacement as shown in the following figure:

The run-time result of running this function is the following string:

```
A list of chArActers
```

All lowercase a characters are replaced with uppercase A characters.

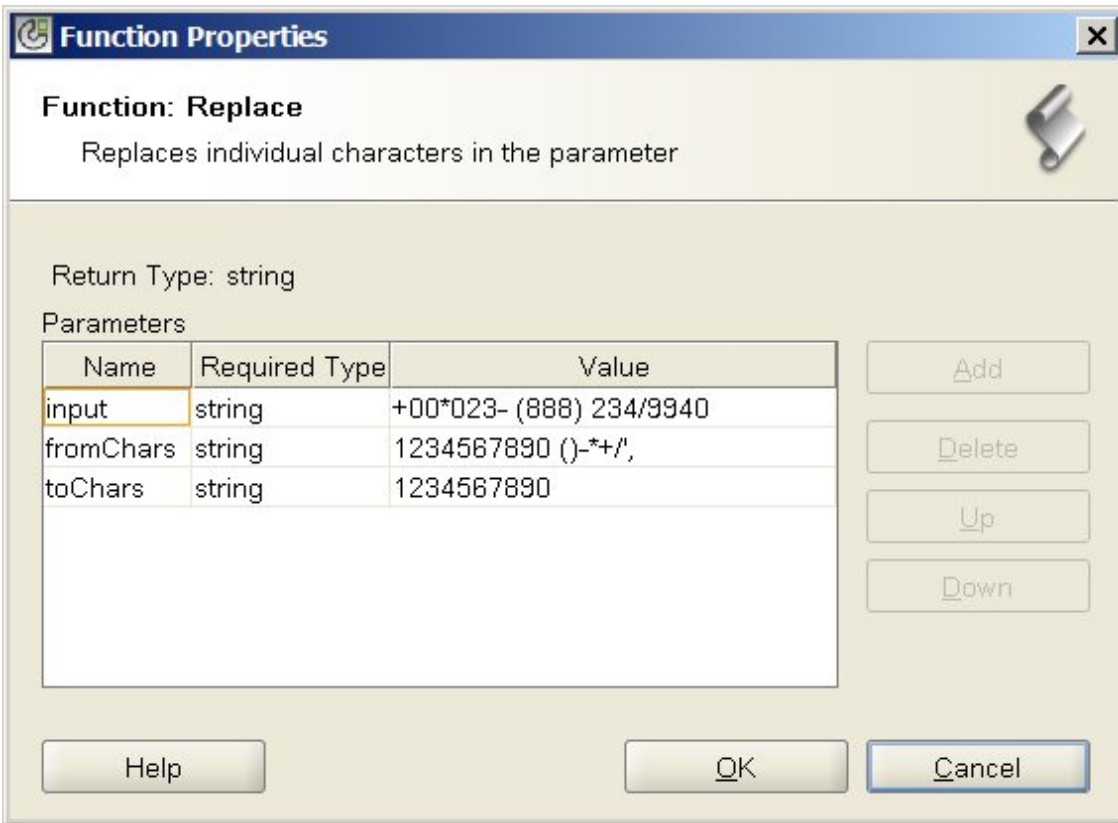

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

## Example 2

---

In this example, the first character from the fromChars parameter is replaced by the first character of the toChars parameter, the second character from the fromChars parameter is replaced by the second character of the toChars parameter, and so on. The replacement of multiple characters is shown in the following figure:

In this example, the non-numeric characters (specified at the end of the fromChars parameter) are removed from the phone number string. All the numeric characters are replaced with the same numeric character; for example, the 1 character is replaced by the 1 character. The other non-numeric characters at the end of the fromChars do not have a replacement character specified in the toChars, so they are removed from the returned string.

The run-time result of running this function is the following string:

000238882349940

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

### Example 3

This example shows a workaround to the limitation that you cannot replace a single character with an empty string. This limitation exists because the toChars parameter cannot be set to an empty string - a string with no characters. You can workaround this limitation by supplying a dummy character like a hyphen (-) that is not found in the input parameter. For example, you could specify the following values for the parameters of the **Replace** function as shown in the following figure:

In this example, the input parameter is equal to '1 2 3' (1, space, 2, space, 3), the fromChars parameter is equal to '-' (hyphen, space), and the toChars parameter is equal to '-' (hyphen). During run time, the **Replace** function with these values strips the spaces from input parameter and the run-time result is the following string:

123

Attention: When you specify the strings in the Value field of the Function Properties dialog box, do not enter the quotes. Enter just the hyphen and the space and not the quote characters.

Note: In this example, the input parameter is hardcoded to a specific value. Typically this value is supplied by a source node in a map.

## String function

---

The **String** function changes the datatype of the parameter to string.

**Parameter:** datatype

Any string, boolean, date, or numeric datatype. This can come from a source node, the result of another function, or a value that you specify.

**Returns:** string

The result of changing the parameter to string. The conversion rules depend on the datatype of the parameter:

- For boolean datatypes, returns the string *true* or *false*
- For date or time datatypes, returns the date or time as a string in the specific format for that datatype, such as '2003-01-20T05:00:00' for a datetime datatype.
- For number datatypes, this returns:
  - 'NaN' if the value is NaN (not a number)
  - '0' if the value is positive or negative zero.
  - 'Infinity' or '-Infinity' if the value is positive or negative infinity (respectively).
  - The corresponding numeral, with a minus sign if negative and no leading zeroes. Decimal values have at least one numeral before the decimal point and as many decimal places as needed.

**Parameter:** number1

The position of the first character to extract. Characters are numbered in the string beginning from 1.

**Parameter:** [number2]

**Returns:** string

The substring for the specified character places.

**Parameter:** string

The string to extract a substring from. This can come from a source node, the result of another function, or a value you specify.

## Sum function

---

The **Sum** function determines the sum of values in the numeric node, sets of numeric nodes, or numbers in parameters.

**Parameter:** input, input ...

The numeric nodes to add. These can come from recurring or nonrecurring source nodes, the results of other functions, or values that you specify.

You cannot specify a default value (or constant) for the input parameters of this function but you can specify a variable with a default value and then pass that variable as an input parameter to this function. For more information see [Specifying Default Values for Functions that Allow Recurring Nodes as Input](#).

Attention: In the Mapping Editor, if you chain together a recurring source node, a function that does not support recurring nodes, and then map that result to this function, during run time you might get an unexpected result. For more information see [Limitations in Combining Other Math Functions or Literals](#)

**Returns:** number

The total sum of all parameters. If any parameter is a nodeset, the total includes values for every node in the set. If any parameter is not a number or a numeric node set, returns NaN (not a number).

### **A**

#### Activity

A complete, functional unit of processing within an orchestration. Activities include flow-control (logic) activities; data activities to facilitate consumption and transmission of data; and activities that enable integration with database systems, enterprise systems, Web servers, email servers, and other systems. An orchestration comprises a series of activities.

#### Assets

Supplemental configuration files, scripts, or other materials associated with a specific activity. For example, the buffer table scripts created for a database insert activity are assets. Assets are controlled by the Web Management Console (WMC). Access privileges to assets can be given to users beyond the users of the WMC. For example, DBAs can be given privileges to the assets associated with a database activity so that they can create the required tables or triggers.

### **B**

#### Buffer table

An auxiliary table used in conjunction with various database activities, such as the single-table insert, update, or delete database activities. When you configure one of the database DML (data manipulation language) activities, Studio generates a SQL script that can be used to create the appropriate trigger on the database table; the buffer table gets populated when the triggering event (INSERT, UPDATE, DELETE) occurs. The buffer table provides the means to capture database changes and initiate processing by the orchestration.

### **C**

#### Cast Iron® Studio

An integrated development environment (IDE) for creating, configuring, and publishing integration projects and the orchestrations they comprise. Studio projects run on the WebSphere® Cast Iron Appliance.

#### Command-line interface

A text-based alternative to the Web Management Console (WMC) for configuring, managing, and querying an Integration Appliance.

## Control table

A database table that facilitates using database endpoints in integrations. As it does with buffer tables, Studio generates scripts to create control tables that can be used to ensure that inserts, updates, and deletes to specific tables occur once and only once.

## Copy parameters

Copy creates new default orchestration variables that match the output from the parameters.

## **D**

### Deploy

Create an instance of an integration project (instantiate) on an Integration Appliance.

## Document

Any of the XML Schema files, DTDs, and other configuration files that comprise integration projects.

## Dynamic delimiter

A delimiter that is obtained from within the fields of the message itself, such as an HL7 PID (patient ID) message header that denotes the beginning of a new record in a file containing a batch of electronic health records.

## **E**

### Empty Placeholder

Appears in activities that have multiple branches as an initial placeholder for the activities in that branch. Dropping other activities on this icon removes it.

## Endpoint

Represents the properties of an external system, such as a database server, FTP server, email system, or enterprise application that is either the source of data to the Integration Appliance or the target of processing by the Integration Appliance.

## **F**

### For Each

A function that iterates over a message structure.

## Flat File

A file containing non-XML data. Flat Files are typically of two types: delimited, in which a comma, tab, white space, or other delimiter is used to separate variable-length fields and records; or positional, in which fields and records have a fixed width.

## Flat File Schema

Defines how to interpret a specific set of Flat Files. Cast Iron Studio creates Flat File Schema (XML Schema) based on the configuration you define in the Flat File Schema Editor. A Flat File Schema is used by the Read Flat File activity to convert a source Flat File into XML.

## Function

String, mathematical, and miscellaneous functions provided by Studio that you can use in defining processing in your orchestrations. In addition to the pre-built functions, Studio lets you build your own custom functions and add lookup tables.

## **I**

### Integration project

The various inputs, outputs (endpoints), mapping and schema definitions (transformations, message formats), orchestrations, and configuration information that comprise an integration solution as designed in Studio and deployed to the Integration Appliance.

## **J**

## Job

A specific run-time instance of an orchestration.

## M

### Map

A component that lets you bind input parameters to variables, and variables to the orchestration. Many Studio activities contain embedded maps that you must configure at design time, in the context of an orchestration, to define how actual parameters should map to variables, and how the variables should be processed in the orchestration. In addition to the embedded activity maps, Studio has a stand-alone Map Variables activity that can be used to bind any type of input and output to the orchestration

## N

### Node

All data input to or output from the Integration Appliance is materialized in Studio as a series of nodes, as in a tree-like, hierarchical structure. In many cases, the nodes represent the structure and content of an XML document, but in many cases they don't (e.g., rows in a database table are displayed as nodes). Nodes in Studio convey information about structure; the type of content that can be supported; or additional characteristics of the data.

### Notification policy

Applies across an entire orchestration. Rules are based on event levels from 0 (no logging) to 9 for complete logging information.

## O

### Orchestration

The specific sequence of processing activities (such as data mapping, transformation, and control logic activities), endpoints, and data types defined and configured using Studio and deployed to run on the Integration Appliance.

## P

### Parameter

A value passed to an activity or to an orchestration. For example, Filename and data are two of the parameters that can be passed from an FTP endpoint to an orchestration.

### Parameterized query

A database SQL statement that contains input or output database parameters. The **Execute Query** activity supports parameterized queries.

### Parse

The converse of serialize. To convert to constituent pieces according to some established rules.

### Pick

An activity that chooses from two or more alternatives. Typically used to start an orchestration, the **Pick** activity can support either synchronous or asynchronous messaging.

### Project

An integration project defined and created using Cast Iron Studio. Each project has a properties file (filename.sp3) and several additional metadata files and folders that comprise all integration elements - orchestrations, endpoints, XML schemas, flat files - and their specific configuration (variables, parameters)

### Publish

Copy all project files from Studio to an Integration Appliance or to an intermediate staging area, such as a shared directory on a file server, for subsequent runtime configuration and deployment to a specific environment. The Publish process encompasses validating the project; creating a .par file of project configuration documents; and sending the package to the Integration Appliance specified.

## **R**

### Raw message

The configuration that defines the character encoding for raw messages

### Record identifier

A special field that delimits records in certain types of flat files, such as EDI (electronic data interchange) or HL7 (Health Level 7) files. For example, an HL7 PID (patient ID) number is a record identifier.

### Repetition delimiters

A delimiter in a flat file that is used when the data lacks a unique value, such as record ID, to distinguish one record from another.

### Replace

Appears in activity branches as an initial placeholder for the endpoint activity to receive a message for that branch. Dropping a **Receive endpoint** activity on this icon removes it.

### Reply

Sends an acknowledgement when it receives a message.

### Repository

Persistent storage for various types of data. Cast Iron Appliance has a configuration repository and a message repository.

## **S**

### Serialize

The converse of parse. Serialization assumes that the data is in XML format

### Stored procedure

A functional code unit that resides in a database and is started explicitly by name. Stored procedures can be used to populate buffer tables when specific insert, update, or delete activities occur on a particular database table.

### System store

A repository containing Appliance configuration information. Same as configuration repository.

## **T**

### Terminate

Stops orchestration processing.

### Toolbox

The five-tab-set of Project, Activities, Variables, Functions, and Verify available in the right corner of Studio. These tabs provide access to all the entities you need to create new projects, create new orchestrations within projects, and develop the processing logic.

### Trigger

A type of database stored procedure that is called implicitly when a triggering event occurs such as an INSERT, UPDATE, or DELETE on a table.

## **V**

## Getting started with Cast Iron Express

---

By using IBM® WebSphere® Cast Iron® Express®, you can quickly sign up for a free trial account, create integrations, and manage your Cast Iron Express environment securely. You can also analyze your integration usage by using the analytics provided.

### Why use Cast Iron Express?

---

WebSphere Cast Iron Express is a purpose-built solution for you to quickly create, define, run, and manage integration projects. Within minutes, you can create integrations between your salesforce.com account and other data sources.

The emphasis is on speed and simplicity, therefore, integrations are defined by using a configuration approach. You do not code the integration.

When complete, you can run your integration to move data in and out of salesforce.com, from remote databases, local files, and Dropbox.

At any time, you can extend the capability of your Cast Iron Express account by selecting one or more of the available add-on function packages.

You can invite other users to your Cast Iron Express account. You can also monitor and administer your account.

To Sign Up, go to the WebSphere Cast Iron Express home page <https://express.castiron.com/express/>.

### What do you need to know?

---

Depending on your role, there are different tasks that are outlined in the following documentation. Each task is explained in sequence, starting with how to register for a Cast Iron Express account.

For security reasons, your session times out if you leave your user name signed in and there is no activity.

Some of the Cast Iron Express function uses pop-up windows. Therefore, you might want to prevent pop-up windows from being blocked in your web browser.

Before you start, check that the browser you are using is supported and meets the required minimum levels:

- Google Chrome 18
- Mozilla Firefox 10
- Windows Internet Explorer 8

You can select the following tasks to learn about Cast Iron Express. Then you can start to create and manage your integrations, invite other users to your account, and monitor the activity within your account.

To learn how to create an integration from a local file to your salesforce.com account, see [Tutorial: Creating a local file to salesforce.com integration](#).

## Configuring the connection

---

You must provide the connection details of the system which the integration is going to connect to. The set of connection details must be given a name, which can then later be used to identify these connection details for reuse in other integrations.

For on-premise systems such as databases and FTP servers, the connection details require a secure connector to be specified. For more information, see [Managing secure connectors](#).

When the connection details are complete, click Connect to connect to the system to validate the connection details. A message is displayed at the top of the Connection Details panel to indicate whether the connection was successful.

## Connecting to a MySQL database

---

To successfully connect to a MySQL instance, the relevant MySQL JDBC driver must be installed in to the secure connector.

Attention: If Cast Iron® Express® detects that the secure connector does not have the driver available, an error message is displayed which contains information about how to install the driver.

### Procedure

---

1. Download the driver from [here](#).
2. Go to the machine where your Secure Connector is running and stop the Secure Connector.
3. Copy the file to *Secure Connector install root*\lib\plugins where *Secure Connector install root* is the directory in which the Secure Connector is installed. For example, C:\Program Files\IBM\Secure Connector.
4. Start the Secure Connector.

## Selecting an operation

The choice of operation determines how Cast Iron® Express® monitors and interacts with your Source and Target endpoints. Support for individual operations can vary between implementations. For example, FTP utilizes get and put operations, while salesforce.com supports the upsert and get updated operations.

Before selecting an operation, review the following information to ensure that the activity that you want to use, is supported by the specific endpoint that you are working with.

Table 1. FTP as a Source endpoint

Operation	Resulting activity
Poll directory	Monitors the chosen file for updates on a 30 second interval.

Table 2. Databases (MySQL, SQL Server, DB2®, Oracle) as a Source endpoint

Operation	Resulting activity
Get inserted rows	Retrieves newly inserted entries from the database table and triggers the integration.
Get updated rows	Retrieves newly modified entries from the database table and triggers the integration.
Get deleted rows	Passes newly deleted entries from the database table and triggers the integration.

Table 3. Databases (MySQL, SQL Server, DB2, Oracle) as a Target endpoint

Operation	Resulting activity
Insert rows	Creates database entries based upon the data flowing through the integration.
Update rows	Modifies database entries based upon the data flowing through the integration.
Delete rows	Deletes database entries based upon the data flowing through the integration.

Table 4. salesforce.com as a Source endpoint

Operation	Resulting activity
Get deleted objects	Passes newly deleted objects of the selected type from salesforce.com and triggers the integration.
Get updated objects	Passes newly modified objects of the selected type from salesforce.com and triggers the integration.

Table 5. salesforce.com as a Target endpoint

Operation	Resulting activity
Create objects	Creates object entries based upon the data flowing through the integration.
Update objects	Modifies object entries based upon the data flowing through the integration.
Upsert objects	Updates and/or inserts object entries based upon the data flowing through the integration.
Delete objects	Deletes object entries based upon the data flowing through the integration.

## Database trigger tables

---

When using a database system as a Source, Cast Iron® Express® requires a trigger table to be created within the database system.

When starting an integration which uses a table in a database for the first time, Cast Iron Express notifies the user that this trigger table needs to be created. An information dialog is displayed containing an explanation of what is required and two links. One link attempts to connect to the database, and automatically creates the trigger table on behalf of the user. To use this method means that the connection details configured in the integration include the required permissions within the database system to create the tables. If the configured user does not have the required permissions, a second link is displayed which makes available a DDL document for creating the required table.

This document link can be passed to the database administrator who can create the required table on behalf of the user.

Restriction: The Cast Iron Express buffer table uses the following field names:

- IH\_PK
- IH\_OPERATION\_NAME
- IH\_FLAG

Therefore, these field names are not supported when you create your own table because they clash with the trigger mechanism.

## Selecting an object

---

When a Source or Target is successfully connected, Cast Iron® Express® queries the system for the available objects with which it can work.

Objects can be files on an FTP server, database schemas and tables, or salesforce.com objects. All available objects are represented as a tree structure for navigation to the intended object for the integration.

At any time, the Source or Target system might change. For example, a new custom object can be added to the connected salesforce.com account, a new table might be added to a database schema, or a new file uploaded to an FTP server.

## Procedure

1. To choose an object with which to work, select the object from the available list.
2. To refresh the list of objects, click the refresh icon  in the Available Objects section.

## Selecting the fields

---

When an object is selected, Cast Iron® Express® automatically queries the Source or Target system to identify the fields within that object.

Fields within an object can be:

- Records in a CSV file.
- Columns in a table.
- Fields in a salesforce.com object.

The fields are displayed in a list with check boxes next to each field name.

Note: When the source endpoint is an FTP server, you have extra options on the Available Fields panel, where you can specify how Cast Iron Express interprets the selected file. These options are:

- Separator character. This identifies the character used to delimit individual fields within the file.
- Quote character. This identifies the character used to enclose field values, that may span more than one line.
- File has header row checkbox. This determines whether Cast Iron Express processes the first row of the file as a header row.
- Number of footer rows. This determines the number of rows at the bottom of the file to be ignored. For example, if the file contains totals or summaries.

Some fields are marked as optional by the Target system and some are marked as required. For example, you must provide a name to create an Account object using salesforce.com. Cast Iron Express pre-selects these

required fields and disables the check-box for that field to prevent de-selection. These fields are marked with an asterisk (\*) after their name.

Other fields may be optional but commonly used; Cast Iron Express pre-selects these fields to save time, but you can alter these selections.

Note: Select All and Clear All links are provided above the list of fields.

At any time, the Source or Target system may change; a new custom field may be added to the connected salesforce.com account, a new column may be added to a database table, or a new file format uploaded to an FTP server. Refresh the list of fields for a given object by clicking the refresh icon  in the Available Fields section.

Once field selections are complete, click the Done button.

The Source or Target is now completely defined and you are returned to the main integration overview. The Source or Target is marked as complete with a green tick .

## Using an external ID when connecting to salesforce.com

When connecting to salesforce.com, you can configure Cast Iron® Express® to use an external ID on an Upsert objects operation. You can also use external ID fields to relate target salesforce.com objects to other salesforce.com objects.

External IDs are used to identify objects in salesforce.com, based on identifiers or key values that originate in other systems. An external ID field can be added to salesforce.com objects by your salesforce.com administrator. For more information, see your salesforce.com documentation.

When a salesforce.com object is selected, Cast Iron Express automatically queries the target system to identify the fields within that object.

## Filtering source objects

---

The Cast Iron® Express® filtering capability lets you control which records are passed from your source application to your integration, based on field values displayed in the Integrations page.

For this task, you use the Integrations page to specify search criteria for what is retrieved from your source application. Each field in the Source area of the Integrations page has a filter icon displayed immediately next to it: 

When you click a filter icon, a pop-up window is displayed, enabling you to set parameters that control the data processed by your integration. You can specify single or multiple filters on a source field. For example, instead of retrieving all current sales orders, you may want to retrieve only orders with values that exceed a specific amount and originate in another country.

## Procedure

---

1. To filter a source object, click an object in the Source area of the Integrations page. A list of fields related to the source object is displayed.
2. In the list of source fields, find the field that you want to filter and click the filter icon next to it. The Filters pop-up window is displayed. The field that you selected in the Integrations window is displayed in the Filters window.
3. In the **Add new filter** section of the Filters window, click the drop-down menu and select a filtering option.  
Available options are:
  - is equal to
  - is not equal to
  - is less than
  - is greater than
  - is in the range
4. In the text field, enter your filter parameters.
5. Click **Add**. The new filter is displayed in the shaded area of the Filters window.
6. To add additional filters to a source field, repeat the preceding steps.
7. To control how multiple filters are applied to a source field, use the Match which filters button. If you wish to have *any* of your filter parameters used on the source, click Any. If you want *all* of your filters to apply to the source field, click the Any button to toggle it to All.
8. When you are finished, click Close.

The filter icon on the Integrations page next to the source field is shaded green to indicate that a filter is defined.

**Parent topic:** [Using the Integration editor](#)

## Modifying filters

---

You also use the Integrations page to modify an existing filter setting or to delete a filter.

## Procedure

1. Click the green filter icon that is next to the source field in the Integrations page. The Filters window is displayed.
  - a. To modify a specific filter, go to the filter definition and click Edit. The filter parameters are displayed. Use the drop-down menu and the text field to modify your filter settings. When you are finished, click Save.
  - b. To delete a filter, go to the filter that you want to delete and click the delete icon next to it.
2. Click Close to return to the Integrations page.

The modified filter is displayed in the shaded area of the Filters window. If you deleted a filter, it is removed from the Filters window and the filter icon next to the source field is no longer green in color.

## Setting up your integration

---

After the Source and Target endpoints are configured, you are ready to define the mappings. Understanding the Cast Iron® guidelines for implicit conversion between data types is key to setting up your integration. Before proceeding, familiarize yourself with the information in this section.

When you use the Integration editor to define your mappings, you are presented with a list of source and target fields with two columns of anchor points. You define mappings by connecting these anchor points. For more information about mappings, details on valid data types, and how to convert data types, see [Defining the mappings](#).

The following table shows the specific guidelines for implicit casting between data types. The Source column specifies the source data used in the mapping conversion. The Target column shows the derived target. The Comment column provides any necessary additional information about the selected operation.

Table 1. Cast Iron Express® guidelines for casting between data types.

Source	Target	Comment
Any	String	All data types are converted to string.

Source	Target Comment
Any Boolean	"T," "t," "true," "TRUE," "tRuE," "1" and similar are cast to "TRUE." Anything else is cast as "FALSE."
String	Converts a string that contains a numeric representation such as "10" or "3.14" into a decimal number type. Note: Strings which do not contain numbers result in a failure when the source data is processed.
String	Converts a string that contains an integer numeric representation such as "10" into an integer number type. Strings which do not contain integer numbers result in a failure when the source data is processed. Users can avoid this situation by using Round, Ceiling, or Floor functions to convert from decimal number strings to integer types.
Number	Converts a decimal number such as 10 or 3.14 into an integer. For non-integer numbers the value is automatically converted in the same way as if the user applied the Round function. Users can enforce more specific control of the conversion by using a Round, Ceiling, or Floor function.

## Defining the mappings

---

When both the Source and the Target are configured, you are presented with a list of source fields on the left, a list of target fields on the right, and two columns of anchors. You define mappings by connecting these anchor

points.

Each field has an anchor point displayed immediately next to it: ●

You use anchor points to map source fields to target fields by drawing a wire to connect them.

Mappings are displayed in one of three colors:

Green

Indicates that the source and target data types match and that the mapping is valid.

Amber

Indicates that there is a mismatch in data type, but it is possible to automatically convert from one data type to the other. For example, a numeric data type can be automatically converted to a string. In this situation, a warning icon ⚠ is displayed in the Result column on the right. Click this icon to see detailed information about the warning.

Red

Indicates that the source field cannot be mapped to the target field because of data type incompatibility.

You cannot save any integrations with red mappings. In this situation, an error icon ❌ is displayed in the Result column on the right. Click this icon to see detailed information about the error.

## Procedure

---

To draw a wire, either click the chosen source anchor followed by the intended target anchor or drag the source anchor and drop it on the target anchor.

A wire is drawn connecting the two fields. This signifies that when the integration is running and receives data from the source system, the value of the source field is copied unchanged into the target field. Cast Iron® Express® provides sample data from the Source system on the left side and uses this sample data to populate the results of the mapping in the Target Result column on the right side.

## Defining the functions

---

Simple mappings can copy data from a source field and place it in the target field. However, sometimes more complex transformations are required. All mappings have an add function icon which is used to define functions.

By default, when you register for a Cast Iron® Express® account, this function is disabled. To use this additional function, click Add-ons and select the *Mapping Functions* package. For more information, see [Adding function to your Express account](#).

The Add function icon  can be clicked to open a list of available functions. The functions are group in to the following categories:

- String
- Mathematical
- Boolean
- Date
- Utility

For more information about these functions, see the [Glossary](#).

## Procedure

---

Click the required function. A function box is inserted into the mapping.

## Example

---

This example shows a simple String Length function.

Also, the Result column on the right is updated to reflect the result of the function instead of a simple copy.

Some functions are more configurable and can accept multiple input fields. For example, the following screen capture shows a Concatenate function.

Additional source fields can be connected to the anchor point on the left side of the function, as shown in the following screen capture.

The Concatenate function also has configuration options which can be displayed by clicking the Edit icon . You can change the order of the inputs and specify configuration options for the Concatenate function such as prefix, defaultDelimiter, and postfix.

Click Apply to save your changes. The Target Results column on the right is updated.

Restriction: If the result is too long to display on the screen, it is truncated. Click the truncated result to see the full result in a tooltip.

4. In the Configure Function window, click the function that you want to apply to the mapping. If the function permits or requires additional information to be configured, the Edit icon  is displayed.
5. Click on the Edit icon. The Edit Source Fields window is displayed showing the source fields and parameters.
6. To edit a source field, click on a row in the Edit Source Fields window that contains the source field you want to edit. The field is highlighted.

4. In the Configure Function window, click the function that you want to apply to the mapping. If the function permits editing or requires additional information to be configured, the Edit icon  is displayed adjacent to it.

5. Click the Edit icon. A pop-up window is displayed containing Edit Composites, Edit Source Fields and Edit Parameters window sections.

Note:

- The Edit Composites window section displays the available composite functions.
  - The Edit Source Fields window section defines the source (input) to the first composite function.
  - The Edit Parameters window section displays the configured parameters for the composite that you selected in the Edit Composites section.
6. In the Edit Composites window section click **Concatenate**. A drop-down menu is displayed showing a list of available concatenate function parameters.
  7. Select a parameter from the drop-down menu. The window is updated with your selection.
  8. Click **Apply**. The composite function is updated.
  9. On the Integrations page, click **Save** to save the integration.

The composite function is updated with the new function.

Note: Because a **subsequent** function receives a single input, functions that require two or more inputs cannot be chosen as a **subsequent** composite function. Additionally, attempting to create a composite function within a composite is not allowed and is not displayed as an option.

## Editing composite functions

---

You can also edit composites to move, delete, or change the order of functions.

Complete the following steps to delete or move a composite function.

### Procedure

1. On the **Integrations** page, click the integration that you want to edit. The integration is displayed in the Integration editor with the fields that you previously selected shown in the Transformations view.
2. In the Transformations view, click the anchor point of a field from the source object and then click the anchor point of a field on the target object. The Add Function  icon is displayed.
3. Click the Add Function icon. The Configure Function window is displayed showing a list of available functions.
4. In the Configure Function window, click the function that you want to apply to the mapping. If the function permits editing or requires additional information to be configured, the Edit icon  is displayed adjacent to it.
5. Click the Edit icon. A pop-up window is displayed containing Edit Composites, Edit Source Fields and Edit Parameters window sections.
6. In the Edit Source Fields, select the function you want to delete or move. Use the  icon or the Up and Down arrows, to delete the function or move it up and down. The source (input) to the function is modified or moved to its new position.
7. When you are finished, click **Apply**.
8. On the Integrations page, click **Save** to save the integration.

## List of functions

Cast Iron® Express® offers a selection of functions for use within mappings. These functions can be used to manipulate the field values being mapped, such as altering the content of strings, performing numeric operations on numbers, and manipulating date and time values.

By default, when you register for a Cast Iron Express account, this function is disabled. To use this additional function, click Add-ons and select the *Mapping Functions* package. For more information, see [Adding function to your Express account](#).

Table 1. String functions. This table lists and describes string functions

Mapping function	Description
Concatenate	Accepts two or more arguments and casts them to string. Returns the string that is the concatenation of the values of its arguments after conversion. The user can also configure prefix and/or postfix strings, plus a delimiter that is inserted between each of the arguments.
Length	Returns an integer equal to the length in characters of the value of the argument. If the value of the argument is the empty sequence, the integer 0 is returned.
Lowercase	Returns the value of the argument after translating every character to its lowercase correspondent as defined in the appropriate case mappings section in the Unicode standard.
Uppercase	Returns the value of the argument after translating every character to its uppercase correspondent as defined in the appropriate case mappings section in the Unicode standard.
Replace	Returns the string that is obtained by replacing each non-overlapping substring of the input that matches the supplied pattern with an occurrence of the replacement string.
Starts with	Returns a boolean result indicating whether the value of the first argument starts with the value of the second argument.

<b>M a p p i n g f u n c t i o n</b>	<b>Description</b>
Str ing	Returns the value of the argument represented as a string. This value can be used to cast numeric data types into strings to prevent mappings from displaying a warning.
Su bs tri ng	Returns the portion of the value of the first argument beginning at the position indicated by the value of the second argument and continuing for the number of characters indicated by the value of the third argument. For substring, there is only one field as "input" to the function. However, for the function, the start index and length values are configured in the function dialog window. In the existing text (and all other descriptions) <i>argument</i> is used in both cases.
Tri m	Returns the value of the argument with white space normalized by stripping leading and trailing white space and replacing sequences of one or more than one white space character with a single space.

Table 2. Mathematical functions. This table lists and describes mathematical functions

<b>Mappi ng functi on</b>	<b>Description</b>
Absol ute value	Returns the numeric value (or modulus) of a number without regard to its sign.
Mean	Returns the average of the values in the input sequence, that is, the sum of the values divided by the number of values.
Ceilin g	Returns the smallest integer not less than X.
Divide	Returns a result value when the first argument is divided by the second.
Floor	Returns the largest integer not greater than X.

Mapping function	Description
Format	<p>The format-number function converts its first argument to a string by using the format pattern string specified by the second argument and the decimal-format named by the third argument, or the default decimal-format, if there is no third argument.</p> <p>The formatting options for the second parameter are as follows:</p> <ul style="list-style-type: none"> <li>• 0 - Digit</li> <li>• # - Digit (zero shows as absent)</li> <li>• . - The position of the decimal point. For example: ###.##</li> <li>• , - The group separator for thousands. For example: ###,###.##</li> <li>• % - Displays the number as a percentage. For example: ##%</li> <li>• ; - Pattern separator. The first pattern is used for positive numbers and the second for negative numbers</li> </ul> <p>The decimal format of the third parameter assists with localization of the number, and the following options can be used:</p> <ul style="list-style-type: none"> <li>• 0 - Digit</li> <li>• # - Digit (zero shows as absent)</li> <li>• . - Decimal separator or monetary decimal separator</li> <li>• - - Minus sign</li> <li>• , - Grouping separator</li> <li>• E - Separates mantissa and exponent in scientific notation. Need not be quoted in prefix or suffix</li> <li>• ; - Separates positive and negative subpatterns</li> <li>• % - Multiply by 100 and show as percentage</li> <li>• \u2030 - Multiply by 1000 and show as per mille value</li> <li>• ¤ (\u00A4) - Currency sign, replaced by currency symbol. If doubled, replaced by international currency symbol. If present in a pattern, the monetary decimal separator is used instead of the decimal separator</li> <li>• ' - Used to quote special characters in a prefix or suffix. For example, '#'# formats 123 to #123. To create a single quote itself, use two in a row: # o' 'clock</li> </ul>
Maximum	Returns the largest value of the nodes passed as the argument.
Minimum	Returns the smallest value of the nodes passed as the argument.
Modulo	Returns the modulus, or remainder value after the first argument is divided by the second.
Multiply	Returns the value of all arguments multiplied together.
Number	Converts the argument to a decimal.
Round	Returns the number with no fractional part that is closest to the argument. If there are two such numbers, then the one that is closest to positive infinity is returned.

<b>Mapping function</b>	<b>Description</b>
Subtract	Returns a value whereby the second argument is subtracted from the first
Sum	Returns a value obtained by adding the values in the argument.

Table 3. Boolean functions. This table lists and describes boolean functions

<b>Mapping function</b>	<b>Description</b>
Boolean	Computes the effective boolean value of the argument.
Not	Returns true if the effective boolean value is false, and false if the effective boolean value is true.

Table 4. Date functions. This table lists and describes date functions

<b>Mapping function</b>	<b>Description</b>
Date Time (Date)	The first argument must be in date format, the second argument is a time format. The result is a DateTime format that has both the date, and time, from the arguments
Date to String (Date)	<p>The second argument is a string that shows how to format the date/time. The following key characters are replaced by parts of the date/time:</p> <ul style="list-style-type: none"> <li>• <code>yy</code> - Last two digits of year. For example, 86 from 1986</li> <li>• <code>MM</code> - Two-digit month</li> <li>• <code>dd</code> - Two-digit date</li> <li>• <code>HH</code> - Two-digit hour</li> <li>• <code>mm</code> - Two-digit minutes</li> <li>• <code>ss</code> - Two-digit seconds</li> </ul> <p>For example, if the Format Date String function was called with the following input parameters:</p> <p>dateTime: 2012-02-22T16:18:00.852-08:00</p> <p>format string: MM/dd/yyyy</p> <p>locale string: en_US</p> <p>The following string would be returned: 02/22/2012.</p> <p>For more information about the Date to String function, see the Format Date String topic in the Studio help section.</p>

## Managing integrations

---

Cast Iron® Express® displays a list of all of the integrations defined in an account on the Integrations page.

The list contains the name of each integration, the date and time that the integration was last updated, and the sign-in name that made the last change.

The current status of the integration is also displayed:

- Running. The integration runs continuously until stopped.
- Stopped. By default, when an integration is defined the status is stopped. You must click Stopped to run the integration. When the integration status shows as stopped, no updates are made to the target system.

You can remove an integration by clicking the delete icon. You must confirm the deletion before any action is taken.

- [Modifying integrations](#)  
You can modify an integration at any time by clicking its name in the list on the Integrations page.
- [Deleting integrations](#)  
You can delete an integration at any time from the Integrations page.

## Monitoring integration activity

---

You can use the Cast Iron® Express® Activities page to see details of all of the activity within your account.

The Activities page shows a number of different types of events:

- Integration creation, modification, and deletion.
- The jobs that were run by the integration. A job is a single instance of data that arrives from the Source system that is transformed and then pushed to the Target system.
- Alerts detailing potential problems with the account. For example, if a secure connector is not available for a running integration, an alert is displayed indicating it must be started before any jobs can run.

The Activity feed can be filtered by clicking the three buttons at the top of the page. The options are:

- All Activity, which shows all the different types of activity message in one list.
- Integration Activity, which shows only activity messages that relate to jobs that are running in the system.
- Alerts, which shows only warnings and errors that might require user intervention.

The Activities page displays the most recent messages first.

This list is automatically updated every time the Activities page is opened and automatically, in the background every 60 seconds, to ensure that the latest information is available.

## Utilization Charts

---

Utilization charts allow you to quickly identify the most active integrations and endpoints for a specific tenant. A summary of job successes and failures and a breakdown of integration activity is presented in a monthly and yearly chart.

From the Integrations page, open the charts display by clicking the charts icon:

To close the utilization charts display, click the charts icon again.

You can use the left and right arrows to scroll through various utilization charts:

- Top most active integrations over the last thirty days
- Top most active endpoints over the last thirty days
- Total activity over the last twelve months

Information displayed in the utilization charts is refreshed every 60 seconds.

An example of a *Total activity over the last twelve months* chart is shown in the following screen capture:

## Top most active integrations over the last thirty days

This chart provides data on the integrations that processed the most jobs during the last 30 days. The top ten integrations display in the chart in order of activity: the most active integration is at the top of the chart descending the least active integration at the bottom of the chart. For each of the top ten integrations, the chart further breaks down the total number of successful jobs (represented by a green bar) and failed jobs (represented by a red bar). Click the green or red bar to see more detailed job information.

## Top most active endpoints over the last thirty days

This chart provides data on the endpoints that processed the most jobs during the last 30 days. The chart displays the most active endpoint at the top. For each endpoint, the chart further breaks down the total number of successful jobs (represented by a green bar) and failed jobs (represented by a red bar). Click the green or red bar to see more detailed job information.

## Total activity over the last twelve months

This chart provides a view of all integration activity that occurred during the last 12 months for a specific tenant. All integration activity that occurred over the last 12 months is displayed in monthly intervals. Click a specific bar to obtain more details about the breakdown of successful and failed invocations for that month.

## Tutorial: Creating a local file to salesforce.com integration

---

You can create and run integrations with IBM® Cast Iron® Express®. This tutorial describes how to create an integration from a local file to salesforce.com. You can quickly define the integration and upload your data in a one-off operation.

### Step 1: Create the Integration

---

After signing in to Cast Iron Express, click Integrations. With the Integrations view open, create an integration by selecting your source and target endpoints.

Tip: You might want to click Save at regular intervals when creating and defining an integration. Your work is not lost if you then experience web browser problems or you are signed out of Cast Iron Express because of inactivity.

For this tutorial, select Local File as the Source and salesforce.com as the Target.

**Create**

To start building an integration, choose your source and target endpoints from the selection below, then click the 'New Blank Integration' button

**Source**

Local File

**Target**

salesforce.com

**New Blank Integration**

Click New Blank Integration, which is displayed under the Target selection.

An outline integration is displayed in which the Source, Transformation, and Target, must be defined. The numerals indicate the integration definition sequence:

1. Define the source endpoint
2. Define the target endpoint
3. Define the transformation by mapping the data path from the source endpoint to the target endpoint

## Step 2: Configure the endpoints

In the Source header, click Edit.

The source endpoint configuration view opens.

Click Select File and choose the local file that you want to upload the data from. The file must be a delimited file.

For this tutorial, we are using a file named *accounts.csv*.

The file contains some account information and includes a field called "id" that uniquely identifies each of the account records in the file. The contents of the *accounts.csv* file used is included here:

```
id,name,streetAddress,city,postcode,phoneNumber
0,AcmeCo,10 Downing Street,London,SW1A 2AA,02012345678
1,MyOtherCompany,221b Baker Street,London,SW2B 3FG,020654321
```

If you want to select a different file, click Change.

Click Load Fields and verify the details that are automatically generated about your selected file. For example, the delimiter character used in the file.

For this tutorial, the *accounts.csv* file uses a comma as the delimiter character. Also, the remaining fields can be left with their default values.

The screenshot shows the 'Source' configuration page. At the top, there is a text input field containing 'Local File to salesforce.com' and a 'Save' button. Below this is a blue header bar with '1 Source' and a 'Done' button. The main area is divided into two sections. On the left, 'Step 1: Upload File' includes an upload icon, instructions to select a file from the local system, and a 'Load Fields >' button. Below the instructions, the file 'accounts.csv' is listed with a 'Change' link. On the right, the 'Available Fields' section contains configuration options: 'Separator character' (Comma (.)), 'Quote character' (Single quote (')), 'File has header row' (checked), and 'Number of footer rows' (0). A 'Continue' button is located at the bottom right of this section.

Click Continue to display all of the available fields within the selected file.

This screenshot shows the 'Source' configuration page after clicking 'Continue'. The 'Available Fields' section now displays a table of fields from the CSV file. The table has three columns: 'Field', 'Type', and 'Sample Data'. All fields are selected, as indicated by checked checkboxes in the first column. The 'Field' column includes a 'Record' header and a list of fields: id, name, streetAddress, city, postcode, and phoneNumber. The 'Type' column shows all fields are of type 'string'. The 'Sample Data' column provides example values for each field.

Field	Type	Sample Data
...		...

<input checked="" type="checkbox"/> id	string	0
<input checked="" type="checkbox"/> name	string	AcmeCo

<input checked="" type="checkbox"/> city	string	London
<input checked="" type="checkbox"/> postcode	string	SW1A2AA
<input checked="" type="checkbox"/> phoneNumber	string	02012345678

Select the fields that you want to upload the data from. By default, all of the fields are selected.

For this tutorial, we are using all of the selected fields.

When you are finished, click Done.

The source endpoint is defined for this integration.

You return to the integration overview and the selected Source fields are displayed.

**3 Transformation**

**Step 3: Map the Data** ✕

The middle panel is used to map the data between the source and target that you've selected. Come back to this step once you have filled in the Source and Target to complete your integration.

**2 Target** Edit

**Step 2: Define the Target** ✕

Click on the title bar or the number to expand the target definition pane, fill in the details for the connection you want to use, and select to object and fields that you would like to integrate.

You can now define the target endpoint.

In the Target header, click Edit. Enter the credentials required to sign in to salesforce.com.

These credentials are validated, and if correct, you are signed in to the salesforce.com account. The available business objects that you can use in your integration are listed.

For this tutorial, from the list of objects, select Account. The description of the Account object is presented in the Available Fields section which shows all fields in the Account object.

Note: You can select the fields that you are interested in and want to load with the data from your local file. You do not have to integrate the whole object, only the fields that are required for your integration definition.

Use the Operations option to specify the context of the data operation that you want for your integration.

For this tutorial, select Update objects as the operation. When the integration is running, it automatically updates the selected Accounts fields in salesforce.com.

Select the required Account fields as shown in the following screen capture:

When complete, click Done.

The target endpoint is defined for this integration.

You return to the integration overview. The integration is updated with the Target selected fields in salesforce.com.

In the integration overview, you can now see both the source and the target fields that are ready to be mapped.

### Step 3: Define the transformation

To complete the integration you must map the fields from the source to the target.

Connect the source and target fields as required. For each source field, click the anchor point and then click the corresponding target field anchor point.

In this tutorial, you map the data from the source fields to the target fields as shown in the following screen capture. You are not required to define functions on the data.

## Step 4: Run the integration

Now that integration is defined, you must run the integration to copy the data from the source endpoint to the target endpoint.

Click Run, displayed to the right of the integration that you created.

The integration runs and the data is uploaded from your defined source local file to the defined target salesforce.com object in a one-off operation.

For this tutorial, the following screen capture shows the completed integration details.

The screenshot shows a navigation bar with three tabs: 'All Activity' (12), 'Integration Activity' (4), and 'Alerts' (0). Below the tabs, a list item is shown for the integration 'Local File Accounts to salesforce.com Account', which completed Job 8211C9A1B1A89AC337CB654A34E64B42 at 2012-09-08 13:40:19.728. A second timestamp '08 September 2012 14:40:21' is also visible.

To verify the successful integration, go to the target system and check that the data arrived.

When the integration completes, a successful integration acknowledgment message is also displayed momentarily in the lower part of the view.

The screenshot shows a notification message with a green checkmark icon. The text reads: 'Integration Local File Accounts to salesforce.com Account completed Job 8211C9A1B1A89AC337CB654A34E64B42 at 2012-09-08 13:40:19.728'. There is a close button (X) on the right side of the message.

## About Environment Dashboards

An environment dashboard provides multiple snapshot views of project configurations and jobs, a list of unresolved critical system errors, and an overall project configurations summary, and status of Secure Connectors. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

To expand the views of the Critical Alerts and Secure Connector Summary, click the icon in the upper right corner. An expanded view of Project Configuration is available by selecting Repository > Configurations from the navigation pane. An expanded view of Results is available by selecting Repository > Job Log from the navigation pane.

A dashboard is available for each environment in a multi-environment cloud. The information the dashboard displays is specific to its environment.

## About the Cloud

The IBM® WebSphere® Cast Iron® Cloud (Cloud) administrator provisions a tenant for your organization and can create multiple environments for you to deploy your projects in. The Cloud administrator also provides a username and password for the tenant administrator.

After the tenant, and any environments are created, it is the tenant administrator that creates users and groups, and manages environments in the tenant.

## Cloud Tenants

---

The IBM WebSphere Cast Iron Cloud (Cloud) supports multiple organizations (tenants). Each cloud tenant is managed by a tenant administrator. The tenant administrator creates and manages users and groups, for a specific cloud tenant.

You can get a trial version or buy Cast Iron Live licenses using the IBM Marketplace:  
<https://www.ibm.com/marketplace/cloud/cloud-integration/us/en-us>.

## Cloud Environments

---

The Cloud supports multiple environments for each tenant. The environments allow you to stage project development or isolate project development.

For example, you can have a Development, Staging, and Production environment. These environments display as tabs in the Cloud Web Application. While the Cloud administrator, not the tenant administrator, creates these environments for each tenant, it is the tenant administrator that grants permissions to individual users/groups for each environment.

Note: Some connectors require you to install 3rd party libraries before you can deploy a project to an environment. In a multi-environment tenant, verify that the environment to which you deploy a project has all required libraries installed.

Note: To use Studio Verify in a multi-environment tenant, you must specify the environment from which Studio will retrieve connector libraries.

For example, SAP libraries are installed in the Development environment and Production environment. You specify the Development environment in your user profile. When you execute Studio Verify for your SAP project, Studio uses the libraries in the Development environment. You can then chose to deploy your project to the Development environment or Production environment.

To specify the environment from which Studio Verify retrieves connector libraries:

1. Click your username, located in the upper right corner of the console. The User Profile dialog is displayed.
2. Click Change Libraries Environment.
3. Select a libraries environment from the list.
4. Click Save.

## Studio Cloud

---

In addition to the desktop version of Studio, you can launch and work with the Studio directly in the Cloud. This cloud version of Studio (Studio Cloud) allows you to create and deploy projects from the cloud.

Functionally, Studio Cloud is similar to Studio Desktop with a few differences listed here:

- The Recently Opened Project option is not available in Studio Cloud.
- The Save Remotely toolbar is not available in Studio Cloud, but is available in Studio Desktop when you are logged in to the Cloud.
- For Studio Cloud, when you select Save As Project [Cloud] or Rename Project [Cloud], the wizard does not display the location on the local file system where the wizard saves a project.
- Instead of a New Project option, Studio Cloud has a New Project Local option. The new option creates a new project on the local file system.

- Instead of a Open Project option, Studio Cloud has an Open Project Local option. The new option opens a project from the local file system.
- Instead of the Save Project option, Studio Cloud has two new options, which depend on whether you are logged in. If you are logged in, the Save Project [Cloud] options saves projects to the cloud. If you are not logged in, Save Project [Local] saves the project locally.
- Instead of the Save As option, Studio Cloud has a Save As to Local option.
- In Studio Cloud, you can select the Save As To Cloud option, which saves a copy of a project to the cloud.
- Instead of Rename Project, Studio Cloud has two new options, which depend on whether you are logged in. If you are logged in, the Rename Project [Cloud] option renames the project locally and remotely. If you are not logged in, the Rename Project [Local] option only renames the project locally.

## Cloud TIPs Wizard

---

You can now access the TIP Wizard in the Cloud. The TIP Wizard steps you through an integration project template to help you quickly build your own integration project.

The Cloud Management Console allows you to search all the templates available in the Solutions Repository. When search results are returned, a check mark in the Certified column of the Solutions page identifies templates that Cast Iron has tested and certified. User rating information is also available in the Template Details pane. The final step in the TIP Wizard allows you to rate the template.

To launch the TIP Wizard:

1. In the cloud, select the Create tab. The Solutions page is displayed.
2. In the Search Templates by keyword(s) field, enter a keyword. For example: SAP.
3. Click Search. All templates that match the keyword display.

Note: You can select the Advanced Search option to filter templates by first endpoint or second endpoint.

4. Click the appropriate template. The Templates Details pane is displayed.
5. Click the Create a Project Based on this Template link.

## Secure Connector

---

The Secure Connector allows you to access the cloud using endpoints that sit behind your internal firewalls and transfers data using a secure protocol.

## Navigating the Management Console

---

The Management Console is a web-based tool that allows you to manage and monitor the various systems and resources of your integration environment. This environment can be a physical Integration Appliance or an environment in the WebSphere® Cast Iron® Cloud.

The navigation pane on the left of the Management Console displays a menu of pages that allow you to view, configure, and take actions on various systems and resources.

The back and forward buttons on browsers do not allow you to move through the Management Console pages in the order which you opened them. Use the back and forward arrows in the top right corner of the Management Console to move through the Management Console pages in the order you opened them.

The user that is currently logged in is also displayed in the top right corner. Click the username to open the User Profile window.

## Downloading and Installing SAP JAR Files and DLLs

---

### Before you begin

---

You must have an SAP User ID and password to enter the SAP Support Portal to download the files.

### About this task

---

In order to connect to an SAP system, you must install SAP DLLs and JAR files onto your development environment.

To download and install the SAP jar files and DLLs:

1. Contact SAP Technical Support to obtain the zip files for the following SAP Components:
  - If the secure connector is running on Windows:
    - SAP 32 bit JCo version 3.0.10 or later versions - Windows
    - SAP Java IDoc Class Library 3.0.10 or later versions
  - If the secure connector is running on Linux:
    - 32 bit SAP JCo 3.0.10 or later versions - Linux (for Intel compatible processors)
    - SAP Java IDoc Class Library 3.0.10 or later versions
2. Unzip the SAP JCo zip file:
  - Double-click the `sapj_idoc30P_x-1000xxxx.zip` file.

- Use the decompression tool to extract the contents of the compressed file to a temporary directory. This zip file contains another zip file `sapjco3-NTintel-3.0.x.zip`. Extract this zip also to a temporary directory, for example, in Windows: `C:\temp\sapjco3-NTintel-3.0.x`. This directory contains the required libraries `sapjco3.jar` and `sapjco3.dll`. For example in Linux: `/tmp/sapjco-linuxintel-3.0.x`. This directory contains the required libraries `sapjco3.jar` and `libsapjco3.so`.
3. Unzip the SAP IDoc JCo zip file:
    - Double-click the `sapjdoc30P_x-1000xxxx.zip` file.
    - Use the decompression tool to extract the contents of the compressed file to a temporary directory, for example, `C:\temp\sapjdoc30P_x-1000xxxx`. This directory contains the required library `sapidoc3.jar`.

## Procedure

---

1. Log on to the Management Console and select System > Connectors. The Connectors page is displayed.
2. Click Update Libraries. The Update Connector Libraries window is displayed.
3. Select SAP in the Connector column.
4. Click the plus (+) button and repeat the following substeps until you have imported all the jar files you just downloaded.
  - a. Locate one of the jar files you just downloaded.
  - b. Click Open to import the jar file. The file displays in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Management Console does not add the files you uploaded. If the Management Console times out before you click Update and commit the added files, repeat the last two steps.

## Results

---

You can now run SAP projects.

## Installing Vendor Supplied Libraries

---

### About this task

---

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

If you have a multi-environment tenant, you must install the 3rd party libraries in each environment where you deploy a project configuration with a connector that requires the additional libraries.

For example, you have a tenant with three environments: Development, Staging, and Production. You publish a project configuration for an SAP endpoint in the Development and Production environments. Before you can deploy the project configuration, you must install additional SAP libraries on both the Development and Production environments.

## Procedure

---

1. Click an environment tab.
2. Select System > Connector Libraries to open the Update Connector Libraries page.
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed display in the Installed Files column.

4. Click the ( + ) icon and select the library file or files to upload. In the cloud, . jar and .dll are valid library files types. The files you select display in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Cloud Management Console does not add the files you uploaded. If the Cloud Management Console times out before you click Update and commit the added files, repeat the last two steps.

## Scheduling Downtime

---

### About this task

---

Scheduling downtime allows you to perform maintenance on an environment or related system. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals. You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

By default, downtime rules are stored in GMT time zone. If an administrator modifies the system clock from GMT to another time zone, downtime rules are executed at the same absolute time. For example: You create a downtime rule to stop all orchestration between 4:00pm - 4:15pm GMT. The administrator then modifies the system clock to display PDT. Your downtime rule is modified to now stop all orchestration between 8:00am - 8:15am PDT. To execute the downtime rule at 4:00pm - 4:15pm PDT, you must edit the downtime rule. Times differences caused by daylight savings are automatically adjusted.

If the environment is offline when a downtime rule is scheduled to occur, all unexecuted rules are identified and executed in the appropriate order when the environment returns online. After all the backlogged downtime rules are executed, you regain control to modify the deployment state of a project configuration.

## Procedure

---

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtimes section, click New Rule. The New Downtime Rule dialog box is displayed.
4. Select one of the following actions from the list:
  - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows all jobs to end.
  - o **Stop (cancel running jobs)** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
  - o **Suspend** - At the specified time, prevents any new orchestrations from starting and pauses any jobs that are currently running. At the end of the scheduled downtime, the runtime processes the suspended job from the point it paused.
5. Specify the duration of the downtime by specifying a date and time for Start Downtime and End Downtime.
6. Optional: Select the Repeat option to create a repeat downtime rule.
  - a. Specify a repeat interval (numeric value).
  - b. Specify frequency from the list: Days, Weeks, Months, or Years.
7. Click Save.

## Results

---

The new downtime rule displays in the Scheduled Downtimes section and the Scheduled Downtime counter increases by one.

## Edit Downtime Rules

---

### Procedure

---

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. Click the project configuration, which contains the downtime rule you want to work with. The Configuration Details page is displayed.
3. In the Scheduled Downtime section, click the downtime rule you want to edit. The Edit Downtime Rule is displayed.
4. Select one of the following actions from the list:
  - o **Stop (allows jobs to finish)** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. This action allows all jobs to end.

## About Orchestration Settings

---

Orchestration settings allow you to configure properties for individual orchestrations in a project configuration. For each orchestration you can specify whether the orchestration is enabled, the logging levels, logging behavior, and the maximum number of jobs that the orchestration can simultaneously run.

When a project configuration is undeployed you can edit the following orchestration settings:

Orchestration Settings	Description
Enabled	Indicates whether an orchestration is enabled and can be deployed. At least one orchestration in a project configuration must be enabled to deploy a project configuration. By default, all orchestrations in a project configuration are enabled.
Logging Level	Allows you to specify the level of orchestration details that are logged in the System Logs. <ul style="list-style-type: none"><li>• <b>None</b> - Orchestration status and activity are not logged.</li><li>• <b>Initial Values</b> - Only the initial values of orchestration variables are logged.</li><li>• <b>Initial and Error Values</b>- Both the initial values of orchestration variables and orchestration errors are logged.</li><li>• <b>Error Values</b>- Only orchestration errors are logged.</li><li>• <b>Inline</b> - Orchestration job details are logged for suborchestrations inline with the job details of the calling orchestration.</li><li>• <b>All</b>- The highest level of logging. All orchestration activity is logged.</li></ul>
Log Synchronously	Allows the runtime to synchronize the writing of orchestration events to the orchestration monitoring logs as the orchestration is running.  By default, this orchestration setting is disabled and orchestration jobs are not synchronously logged.  Note: When you enable this orchestration setting, the time it takes to process an orchestration job increases.
Max Simultaneous Job	Allows you to specify the number of orchestration jobs that can run simultaneously.

## Editing Orchestration Settings

---

### Before you begin

---

To edit orchestration settings, the project configuration must be undeployed.

Tenant administrators, environment administrators (for the environment where the project is published), and publisher of a project can edit its orchestration properties.

### About this task

---

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration- the user will be able to create new versions of the project configuration, as well as edit and delete the project configuration.

### Procedure

---

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
  - o **Finish Jobs** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allow the jobs to end.
  - o **Cancel Jobs** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Undeploy the project Configuration, by clicking the  Undeploy icon in the Action Column.
5. Click the project configuration you want to edit. The Configuration Details page displays.
6. In the Orchestration section, click Edit to edit the orchestration settings. The Edit Orchestration Settings window is displayed.
7. Click Save.
8. Deploy the project configuration to begin processing orchestration jobs.

### Results

---

The updates you made display in the Orchestration section of the Configuration Details page and the runtime processes the orchestration as specified.

## About Project Configurations

---

Project configurations allow you to create multiple variations of the same integration project, so you can create and publish one project and deploy it to many different scenarios. Within a project configuration you can specify which orchestrations are enabled, modify configuration properties for endpoints, generate or modify assets, manage scheduled downtime rules, and control permissions for the project configuration.

Each project you publish has a Default project configuration. In the Management Console, you can create additional project configurations. The project name, project version, configuration name, and project state uniquely identify each project configuration.

You must have Administrator privileges or be the publisher of the specific project to create, edit, and delete project configurations. Administrators and publishers can grant users and groups permissions that allow them to create, edit, and delete project configurations.

## Enabling and Disabling Orchestrations

---

The runtime only runs orchestration jobs for enabled orchestration. Before you can deploy a project configuration, the project configuration must contain at least one enabled orchestration. By default, all

orchestrations are enabled.

Specifying the orchestration logging level allows you to control the type of orchestration errors that are written to the system logs. The Management Console also allows you to limit the number of jobs that run simultaneously. The number of jobs that run simultaneously can affect performance.

You must have administrator or publisher permissions to specify orchestration properties.

## Understanding Configuration Properties

---

You create these configuration properties for a project in Studio. For more information about creating project properties and specifying a project version, see the Studio online help.

When you publish the project, you can specify values for the configuration properties. The values you specify for the configuration properties determine how the project is deployed. For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

You must have administrator or publisher permissions to edit configuration properties in the Management Console.

## Modifying Assets

---

If your project configuration contains a database or WebServices endpoint, you must generate assets before you can deploy the project configuration. If your project does not contain a database or WebServices endpoint, assets are irrelevant to your project configuration.

You must have administrator or publisher permissions to generate or modify assets.

## Scheduling Downtimes

---

Scheduling downtime allows you to perform maintenance. You can create downtime rules for project configurations that stop or suspend all enabled orchestration jobs in that project configuration for a specified duration of time. The project configuration does not have to be undeployed to create or edit a downtime rule. Downtime rules can occur once or repeat at specific intervals.

You must have administrator or publisher permissions to create, edit, or delete a downtime rule.

## Editing Project Configuration Permissions

---

As an administrator or project publisher, you can grant permissions for project configurations to other users and groups. When you grant users or groups permissions to a project configuration they are able to create, edit, and delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher. For more information, see [Granting Project Configuration Permissions](#).

## About Projects

---

Projects contain components that the runtime needs to execute an integration scenario: orchestrations, endpoints, maps, and other documents. Use Studio to create and test projects without being connected to an integration environment.

Multiple people can publish multiple projects to the same integration environment. Use Studio to publish projects to an integration environment or export projects to a staging location. You can later use the Management Console to upload the exported project. You must have Administrator or Publisher privileges to publish or upload a project to the integration environment.

When you publish a project from Studio, the Management Console displays the project with default project settings; creating a default project configuration. You can clone this default project configuration to create new project configurations, which you can configure for separate development and production environments.

Use the Studio to create projects and specify endpoint configurations properties and then use the Management Console to specify project configurations and deploy project configurations.

## Cloning Project Configurations

---

### Before you begin

---

You must have Administrator privileges or be the publisher of a project to clone project configurations.

### About this task

---

Project configurations contain properties and assets that you can configure in the Management Console to create multiple variations of the same integration project. When you create a new configuration you can choose to clone an existing project configuration. A cloned project configuration inherits all the configurations from the

original project configurations. However, if you edit the original configuration project, the changes are not propagated to the cloned project.

Note: The project configuration you clone does not display on the Favorites view, unless you explicitly add the project configuration to the view.

## Procedure

---

1. From the Navigation pane, select Repository > Configurations. The Project Configurations page is displayed.
2. From the Configuration Filter list, select All. All project configurations display.
3. Locate the project configuration you want to clone.
4. Click the Clone icon . The Create Project Configuration dialog box is displayed.
5. Provide a unique name for the new project configuration.
6. Click OK.

## Results

---

The cloned project configuration is displayed on the Project Configurations page. The cloned project has all the same project configuration details as the original project configuration.

# Deploying Project Configurations

---

## Before you begin

---

To deploy or undeploy project configurations, you must have tenant administrator or environment administrator privileges, or be the publisher of the project configuration.

## About this task

---

The type of endpoint in an orchestration determines the steps you must complete to deploy a project configuration. A project configuration must contain at least one enabled orchestration before you can deploy the project configuration. If the orchestration contains a database or Web Services endpoint, you must also generate assets for the endpoints before you can deploy the project configuration.

By default, all the orchestrations in a project configuration are enabled. Therefore, if the orchestrations in a project configuration do not require additional configuration and do not access database or Web Services endpoints, you can deploy your project configuration by clicking the deploy icon next to the project configuration in any of the Project tabs. If your project configuration requires assets or additional configuration, see the following deployment procedure.

Note: A project configuration must be in the stopped state for you to undeploy the project configuration.

## Procedure

---

1. Select the environment tab to which you published your project.
2. In the Project Configuration section, select the project configuration you want to deploy. The Configuration Details page is displayed.
3. In the Orchestrations section, verify that at least one orchestration in the project configuration is enabled. Edit orchestration settings, as needed.

You cannot edit orchestration settings while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

4. In the Properties section, edit configuration properties, as needed.

You cannot edit configuration properties while a project configuration is running. Stop and undeploy the project configuration to edit configuration settings.

5. If the project configuration contains a Database or Web Services endpoint, you must generate assets for these endpoints.
6. Optional: Add a schedule downtime rule.
7. Optional: Assign permissions for the project configuration, which specify which group of users can edit and deploy a project configuration. By default, tenant administrators, environment administrators, and the publisher of a project configuration can edit and deploy a project configuration.
8. If you assign permissions, click Save.
9. In the Summary section, click the Deploy icon ► to deploy the project configuration.

## Results

---

The project configuration deploys, the runtime starts to process orchestration jobs, and the status is appropriately updated in the Summary section.

## Editing Project Configuration Properties

---

### Before you begin

For example, in a project that contains database endpoints, you can create properties for database connection parameters. This allows you to create a project configuration for a test environment connecting to a test database and then use the same project to create another project configuration for a production environment that connects to another database.

### Procedure

1. Select the environment tab, where the project configuration is published.
2. From the navigation pane, select Repository > Configurations. The Project Configuration page is displayed.
3. If the project configuration you want to edit is running, stop the project configuration by clicking the  Stop icon in the Actions column. When the Stop Configuration dialog box displays, click one of the following options:
  - o **Finish Jobs** - At the specified time, prevents any new orchestration jobs from starting while allowing current jobs to finish processing. Allow the jobs to end.
  - o **Cancel Jobs** - At the specified time, prevents any new orchestration jobs from starting and stops all currently running jobs. This action immediately stops all jobs.
4. Click the project configuration you want to edit. The Configuration Details page displays.
5. In the Properties section, click Edit to edit configuration property values.

## Uploading Project Configurations

---

### Before you begin

---

To upload a project configuration, you must have tenant administrator, environment administrator, or environment publisher permissions.

### About this task

---

When you upload a project configuration, you are publishing a project using a two-stage process. First, you export a project from Studio to an intermediate location. Then from the Management Console, you upload the project to a cloud environment.

### Procedure

---

1. Select the environment tab, to which you want to upload the project configuration.
2. From the Navigation pane, select Repository > Upload Project. The Upload Project Configuration dialog box is displayed.
3. In the Local Project File field, specify the path from which to upload the project. You can click Browse to select a file from your local machine.
4. Specify a project name. The name should not exceed 42 characters and should not contain any restricted characters.
5. Specify a product version number. This field is not populated with the project version you specified in Studio. However as a best practice, you should specify a project version that matches the version you specified in Studio.
6. Click Upload.

### Results

---

The project configuration is displayed in the cloud environment Project Configuration page.

## Working with Project Configurations

---

Various views are available for project configurations:

- **All** - Displays the deployment state and status of all project configurations, regardless of the state of the project configuration. You can clone or delete project configurations from this view.
- **Recent** - Displays the deployment state and status of the most recently published or modified project configurations. You can clone or delete project configurations from this view.
- **Favorites** - Displays the deployment state and status of project configurations for which you have permissions. By default, this view is not populated. You must explicitly add project configurations from either the Recent view or All view.

You can access these views from the Dashboard or by selecting the following path in the Navigation pane: Repository > Configurations. The Configuration Filter allows you to choose your view from a drop-down list.

The following table describes information available in the various project configuration views:

Columns in Project Configuration Views	Descriptions
Configuration	Displays published project configurations.
Running	Displays the number of currently running jobs for the project configuration.
Completed	Displays the number of orchestration jobs, for the project configuration, that were completely processed.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.
Errored	Displays the number of orchestration jobs where a runtime error occurred for the project configuration.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.
Total	Displays the total number of orchestration jobs, for the project configuration, that have run.  When orchestration monitoring data is purged, the number of orchestration jobs is reset to 0. For more information about modifying log purging parameters, see the purging help topics.

## About Environment Dashboards

---

An environment dashboard provides multiple snapshot views of project configurations and jobs, a list of unresolved critical system errors, and an overall project configurations summary, and status of Secure Connectors. The Dashboard also allows you to search for orchestration jobs by job key. The Search box is located in the Results section of the dashboard.

To expand the views of the Critical Alerts and Secure Connector Summary, click the icon in the upper right corner. An expanded view of Project Configuration is available by selecting Repository > Configurations from the navigation pane. An expanded view of Results is available by selecting Repository > Job Log from the navigation pane.

A dashboard is available for each environment in a multi-environment cloud. The information the dashboard displays is specific to its environment.

## Choosing a Notification Level

---

Notification levels define the severity of events that can trigger an alert. When you specify a notification level, an alert is only sent for errors that meet or exceed the level you choose. 

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

You can specify the following notification levels:

Notification Level	Description
Critical	Sends an alert when an error condition causes the a shutdown.
Error	Sends an alert when non-critical issues that must be handled immediately occur.
Warning	Sends an alert when potential error conditions occur.
Info	Sends an alert for informational usage.

## Creating Notification Policies

---

### About this task

---

Notification policies allow you to monitor potential errors in a specific system. When you create a notification policy, the notification policy monitors the system log for the system you specify. When a system log event occurs that meets or exceeds the notification level of a notification policy, an alert is sent to the specified users.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification or you did not enable the notification policy. For more information about specifying system log settings, see [Specify System Log Settings](#). For more information about enabling email notification policies, see [Enabling Email Notification Policies](#).

### Procedure

---

1. Click the environment for which you will create a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Click New Policy. The New Policy dialog box is displayed.
4. Specify a policy name.
5. From the Level Exceeds list, select a level. Alerts are only sent for errors that exceed the level you choose.
6. From the With System list, select the system you want the notification policy to monitor.
7. Specify the email address or addresses of the person or people that will receive the email notification. When you have multiple email addresses, add one email address per line.
8. Click Save.

### Results

---

The new policy displays on the Notifications page. You must enable email notifications before any alerts can be sent. If the Email status displays as (inactive), email notifications are not enabled.

1. Click the environment for which you will delete a notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. Select the check box next to the policy you want to delete.

To delete multiple policies, select the top check box. All the policies are selected.

4. Click Delete. The Delete Policies? confirmation window is displayed.

## Enabling Email Notification Policies

---

### About this task

---

When you create an email notification policy, you must enable the email notification policy for alerts to be sent. By default, email notifications are not enabled.

If you enable email notification policies, the settings you specified when you created the email notification determine when an email alert is sent.

**Note:** If you disable the email notification policy by clearing the Enable Email option, alerts are not delivered for any email notification policy.

### Procedure

---

1. Click the environment for which you will enable an email notification policy. The Navigation pane is displayed.
2. Select Logs > Notifications. The Notifications page is displayed.
3. At the top of the page, click the Email link. The Enable Email option is displayed.
4. Select the Enable Email option.
5. Optional: Provide a email subject line that will qualify the alert sent.
6. Click Save.

## Results

---

## Searching for Orchestration Jobs

---

### About this task

---

Job IDs and keys allow you to search for orchestration jobs. You define primary message keys in Studio, when you configure connectors. The primary message key must be a unique value. For example, the purchase order number for a purchase order message. If you do not define a primary key, the runtime uses the job ID, a unique number that the runtime generates, to identify an orchestration job.

From the Management Console, you can search orchestration jobs by job ID. By default, the Management Console searches only for completed orchestration jobs that match the job ID you specify. Use the Advanced Search option to search for all other orchestration jobs.

### Procedure

---

1. From the navigation pane, select Dashboard.
2. In the Results section, enter a job ID in the Key Search field.
3. From your keyboard, press Enter. The completed job with the matching job ID displays.

**Parent topic:** [Monitoring](#)

## Using Advanced Search

---

### About this task

---

Use the Advanced Search option to further refine your job search. If you enter values for multiple fields in the Advanced Search box, the Management Console uses AND logic to refine the search.

For example, you specify a time range in addition to selecting the errored status. The Management Console searches for all orchestration jobs that had an error within the time range specified.

Note: If you choose to search by date and time, you must specify a start and end date and time.

### Procedure

---

1. From the navigation pane, select Dashboard.
2. In the Results section, select an orchestration. The Orchestration Details page displays all the jobs associated with the orchestration.
3. In the Advanced Search box, specify values for Job ID, Key, Status, Start Date and Time, or End Date and Time as appropriate for your search.  
Note: If you choose to search by date and time, you must specify a start and end date and time.
4. Click Search.

## Results

---

The search results are displayed in the table.

## Viewing Orchestration Job Logs

---

The Dashboard displays information about orchestration jobs, including status, timestamp of job events, and key/job ID in multiple tabs:

- **All** - displays orchestration job information for all project configurations.
- **Recent** - displays orchestration job information for the most recently published or modified project configurations.
- **Favorites** - displays orchestration job information for the project configurations displayed in the Favorites filter. Orchestration job information displayed through this filter also displays in the Recent and All filters.

In some cases, the Management Console displays an orchestration job status of Unknown, even though the orchestration job completed successfully. Rebooting the environment, while orchestration jobs are processing, can result in the Unknown status because monitoring data is lost during the reboot. Stop all orchestration jobs before rebooting the environment to avoid an Unknown status.

Click an orchestration job to view the orchestration details for that orchestration. The Orchestration Details page displays all the jobs associated with the orchestration you selected and the status of each individual job. Use the Left and Right arrows (<< , < , > , >>) to view all orchestration jobs.

## About Built-In Groups

---

Built-in groups are predefined groups. In the cloud, in addition to a tenant administrator group, each environment has a built-in administrator, publisher, and user group.

For example: A tenant, named Cumulus, is created for your organization. Within this tenant there are two environments: Development and Production. The following built-in groups would be available:

- admin [cumulus.com]
- admin [Development]
- publisher [Development]
- user [Development]
- admin [Production]
- publisher [Production]
- user [Production]

The same user can be a part of multiple groups. You can assign users to a built-in group or create a new group.

Note: If you grant project configuration permissions to a group, the users in that group will have full access to the project configuration- the user will be able to create new versions of the project configuration, as well as

edit and delete the project configuration.

The following list defines the permissions granted to each of the built-in groups:

- **Tenant Administrator Group.** Provides privileges to all environments, users, groups, and projects in a specific tenant. Permits users to create, edit, and delete users and custom groups in the tenant. Users in this group can add and delete users to and from any built-in or custom group in the tenant. Users in this group can view, edit, and delete permissions for all source projects in the tenant.

Users in this group can view all the environments in the tenant and have all the permissions of an environment administrator in each of the tenant environments.

- **Environment Administrator Group.** Provides privileges to all users, groups, and projects in a specific environment. Permits users to create, edit, and delete users and custom groups in a specific environment. Users in this group can add and delete users to and from any built-in or custom group in the environment.

Environment Administrators can also create and deploy project configurations for project that any environment publisher publishes, and view orchestration job details for any project configuration in the environment. With environment administrator group privileges you can edit permissions that publishers for the same environment set for their individual project configurations.

Even though members of the Environment Administrator group have Environment Publisher group and Environment User group privileges, the members of the Environment Administrator Group do not appear in other groups in the same environment until you explicitly add the user.

- **Environment Publisher Group.** Provides project privileges in a specific environment. Permits users to create, deploy, or delete project configurations for any project that they publish in the environment. Users in this group can also start and stop orchestrations and view orchestration job details for project configurations they deployed in the environment. As an environment publisher, you can grant permissions for individual project configurations you create to another user with environment publisher privileges for the same environment.

The members of the Environment Publisher Group are not displayed in the Environment User Group, until you explicitly add the user.

- **Environment User Group.** Permits users to monitor alerts and orchestrations in a specific environment. Users in this group can create and edit projects; however, they cannot publish the project to an environment. You must have Publisher privileges for the specific environment to which you want to publish a project. All users are automatically members of the Environment User group.

In a multi-environment tenant, users in this group only see the environment tab for environments of which they are a member. For example, a tenant has a Development, a Staging, and a Production environment. The tenant administrator or administrator of the Development environment adds a user to the User [Development] group. When the user logs in to the tenant, the user can only see the Development environment, even though the tenant has two other environments.

## About Libraries Environments

---

Libraries Environment is a user profile parameter that specifies the environment from which Studio retrieves connector libraries.

In a multi-environment tenant, each environment can potentially have different versions of connector libraries installed. Setting this parameter points Studio to the libraries you want to use while verifying your projects. This parameter is not as critical if your project does not use an endpoint that requires additional libraries to be installed. See the Connector Release Notes for a complete list of endpoints that require you to install additional libraries.

Note: The environment you select should match the environment of the primary group the user is a member of. For example: If you select the Development environment as the Libraries Environment, you should be a member of groups in the Development environment.

## Granting Project Configuration Permissions

---

### Before you begin

---

You must have Administrator privileges or be the publisher of a project to grant permissions to other users or groups to create, edit, or delete project configurations.

## About this task

---

Once you grant permissions to a user or group, they can edit or delete the project configuration. By default, permissions to project configurations are granted to only the Administrator Group. If you want to grant permissions to another group you must explicitly do so.

For example, you are a user with publisher rights and belong to the built-in Publisher group. You publish a project. Only the Administrator Group and you have permissions to the project configuration. Members of the Publisher group, of which you are a member, do not have permissions to the project configuration. You must edit the permission on the project configuration to include another group like Publisher.

## Procedure

---

1. Click on a project configuration. The Configuration Details page is displayed.
2. In the Permissions section, select users and groups to grant permissions to.
3. Click Save.

## Results

---

All the users and groups you select now have full access to the project configuration. These users and groups can now create new project configurations, edit the project configuration and any new project configurations they create, and delete the source project.

## Downloading Secure Connector Configuration Files

---

How to download Secure Connector configuration files.

### About this task

---

When you download a configuration file, the configuration file is saved to your default download directory. You can choose to save configuration files to different locations. Regardless of the number of configuration files you download, you can only use one configuration file during the Secure Connector installation process.

Once you select a configuration file to set up a Secure Connector, that configuration file will be used to configure any subsequent Secure Connector. It is not recommended to configure multiple Secure Connectors using the same configuration file. Instead, use a new configuration file or modify the existing configuration file. The Gateway, Listen to Port, and Transmit to Port parameters should have unique values for each Secure Connector.

The Secure Connector configuration file provides the Secure Connector installer with values for the following parameters:

- **Secure Connector Name** - Specify the name of the Secure Connector you created.

- **Tenant ID** - Specify the hexadecimal UUID for the tenant. You can retrieve this information by logging in to the cloud and selecting Setup > Support Information. The Support Information page is displayed. Copy the Identifier column value for the tenant. You can copy the value by selecting the cell value, right-clicking, and selecting copy from the menu.
- **Environment ID** - Specify the hexadecimal UUID for the environment. You can retrieve this information by logging in to the cloud and selecting Setup > Support Information. The Support Information page is displayed. Copy the Identifier column value for the environment where you want the Secure Connector installed. You can copy the value by selecting the cell value, right-clicking, and selecting copy from the menu.
- **Cloud Gateway** - Specify the gateway name.
- **Listen on Port** - Only modify this parameter if another service is using the port specified or you want to run multiple Secure Connectors on the box.
- **Transmit on Port** - Only modify this parameter if another service is using the port specified or you want to run multiple Secure Connectors on the box.
- **Secure Connector Auth Key** - Specify the Auth key from the Secure Connector you created in the cloud.
- **Secure Connector Private Key** - Specify the Auth private key, which you downloaded while creating the Secure Connector in the cloud.

## Procedure

---

1. Log into the Cloud Management Console as the tenant administrator.
2. From the Navigation pane of an environment tab, select System > Secure Connector.
3. In the Secure Connector window, click the Secure Connector that will communicate with an endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.
4. Click Download Secure Connector Configuration and click Download now. The Opening Secure Connector Configuration dialog box is displayed.
5. Choose Save File and click OK. The configuration file is saved to the default download directory of the current user.

## Installing Secure Connectors

---

Provides the procedures to download the Secure Connector installer and install the Secure Connector.

### Before you begin

---

For Windows installations, verify that you do not have an existing version of the Secure Connector installed. If you have an earlier version installed, you can upgrade it to the latest version using the Upgrade option. For more information about upgrading Secure Connectors, see [Upgrading Secure Connectors](#).

For Linux installations, while it is not required, it is good practice to uninstall previous Secure Connector installations.

For Linux machines, install a desktop environment, such as GNOME or KDE, to provide a graphical interface.

## About this task

---

After you create a Secure Connector in the cloud, you must configure a machine behind the firewall to facilitate communication between the Secure Connector and a specific endpoint behind the firewall. Use the Secure Connector installer to configure the machine behind the firewall.

Note: The machine on which you choose to run the installer must have access to the endpoint. You do not have to run the installer on the same machine as the endpoint.

### To download the Secure Connector installer:

1. Log on to the Cloud Management Console as the tenant administrator. The Home page is displayed.
2. Click one of the environment tabs, that is, Development, Staging, and Production.
3. From the Navigation pane of the selected environment tab, click System > Secure Connector.
4. In the Secure Connector window, if you have already created a Secure Connector, click the Secure Connector that will communicate with the endpoint behind the firewall. The Edit Secure Connector dialog box is displayed.

Note: If there are no Secure Connectors available in the Secure Connector window, create a new Secure Connector. For more information about creating a Secure Connector, see <creating secure connector>.

5. Click Download Installer and choose the operating system of the machine to which the installer is downloaded: Windows or Linux.
6. Click Save File. The file is saved to the default download directory.

### To install the Secure Connector:

1. Launch the Secure Connector installer you downloaded.
  - o windows-secure-connector-installer.exe (for 32-bit Windows machine)
  - o windows-secure-connector-installer\_64 (for 64-bit Windows machine)
  - o linux-secure-connector-installer.sh (for 32-bit Linux machine)
  - o linux-secure-connector-installer\_64.sh (for 64-bit Linux machine)

The Secure Connector Installer Wizard is displayed.

2. Select the Install option.
3. Click Next then read and accept the licensing agreement.
4. Click Next and choose an installation directory.
5. Click Next. A message window states the location where the target directory will be created.

Note: If an install directory exists, a warning message displays and you must confirm that you want to install and overwrite existing files.
6. Click OK.
7. Set up shortcut options to start, stop, and edit a Secure Connector.
  - a. Select one or both of the following options:
    - Create shortcuts in the Start menu.
    - Create additional shortcuts on the desktop.
  - b. Select a program group from which you will access the shortcuts.
  - c. Choose to create shortcuts for the current user or all users.
8. Click Next. The installation progress is displayed.
9. Select a Secure Connector configuration file. If you have not already downloaded a Secure Connector configuration file, download one now. For more information about how to download Secure Connector configuration files, see [Downloading Secure Connector Configuration Files](#).
10. Click Next.

11. For Windows installation, choose to install and run the Secure Connector as a Windows Service. If you choose install the Secure Connector as a Windows Service, you can control the Secure Connector using the Windows Services control panel (recommended). If you choose not to install and run the Secure Connector as a Windows Service, then the Secure Connector is installed as a Windows application. To run the Secure Connector as a Windows Service, you must specify the following service account information:
  - o Service Start Mode
  - o Service Account Domain
  - o Service Account User
  - o Service Account Password
12. Click Next. The installation is complete.
13. Click Done.

Note: If your endpoint, for example, SAP, requires additional libraries, you must install the additional libraries before you start the Secure Connector. For more information about installing additional libraries, see [Installing Vendor Supplied Libraries for Secure Connectors](#).

## Installing Vendor Supplied Libraries for Secure Connectors

---

Certain endpoints require additional libraries to be installed before the Secure Connector can communicate with them. This section provides information about using the Cloud Management Console to install these vendor supplied libraries. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page in the Cloud Management Console.

### About this task

---

If your integration project uses a connector that requires additional libraries, you must install the additional libraries before you deploy the project configuration. Deploying the project configuration before installing the additional libraries generates runtime errors. For a complete list of connectors that require vendor supplied libraries, open the Update Connector Libraries page. See the following procedure.

If you have a multi-environment tenant, you must install the 3rd party libraries in each environment where you deploy a project configuration with a connector that requires the additional libraries.

For example, you have a tenant with three environments: Development, Staging, and Production. You publish a project configuration for an SAP endpoint in the Development and Production environments. Before you can deploy the project configuration, you must install additional SAP libraries on both the Development and Production environments. For more information about installing SAP libraries, see [Downloading and installing the SAP Jar Files and DLLs](#).

### Procedure

---

1. Click an environment tab.
2. Select System > Connector Libraries to open the Update Connector Libraries page.
3. In the Connector column, select the connector for which you want to install additional files.

Any files that have already been installed display in the Installed Files column.

4. Click the ( + ) icon and select the library file or files to upload. In the cloud, . jar and .dll are valid library files types. The files you select display in the Files to Add column.
5. Click Update.

The files that display in the Files to Add column are not committed until you click Update. If you click Reset before you click Update, the Cloud Management Console does not add the files you uploaded. If the Cloud Management Console times out before you click Update and commit the added files, repeat the last two steps.

6. In the same environment tab, select: System > Secure Connectors.
7. Click Download Libraries and save the libraries.zip file to your workstation.
8. Unzip the libraries.zip file and find a \*.tp-1.0.0.jar for each connector module.
9. Use the .jar files in the libraries.zip to replace the files in the Secure Connector install directory: lib/plugins.
10. Copy all the remaining .zip files to following Secure Connector install directory: lib/thirdparty
11. Restart the Secure Connector by running one of the following files from a command line:
  - o For Windows: runclient\_osgi.bat
  - o For Linux: runclient\_osgi.sh

## Starting and Stopping Secure Connectors on Windows (Installed as a Windows Service)

---

This topic provides information about starting and stopping Secure Connectors on Windows machines, where you have a Secure Connector installed as a Windows Service.

### About this task

---

If you installed the Secure Connector as an automatic Windows Service, as recommended, use the Windows Services control panel to stop or restart the Secure Connector.

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

For steps to enable the interactive mode for a Windows service, see [Enabling Interactive Mode for Windows Services](#).

Note: If you use the **Start Secure Connector** Start menu shortcut or desktop shortcut to start a Secure Connector, the Secure Connector starts as a normal application rather than as a service. You must use the Windows Services control panel to start Secure Connectors as a service. You can use either the **Stop Secure Connector** Start menu shortcut or desktop shortcut to stop a Secure Connector.

**Starting and stopping Secure Connectors, using the Windows Services control panel:**

### Procedure

---

1. Open the Windows Services window : Start > Control Panel > Administrative Tools > Services.
2. Scroll down the list of services to locate the IBM® Secure Connector service.
3. Right-click on the IBM Secure Connector service and select the appropriate command: Start, Stop, Pause, Resume, or Restart.

## Enabling Interactive Mode for Windows Services

---

When the Secure Connector is installed as a Windows Service, enable the interactive mode for the service to view system tray icons and command window.

### About this task

---

By default, when a Secure Connector is installed as a Windows Service, the Secure Connector is not configured to interact with the Windows Desktop. However, if the Secure Connector service was installed under a local system account, you can enable an interactive mode that presents system tray icons and a command window when the Secure Connector service is running.

### Procedure

---

1. Open the Services control panel. For example: Start > Control Panel > Administrative Tools > Services.
2. Select the Cast Iron Secure Connector service.
3. Right-click the service name, and select Properties. The Service Properties window is displayed.
4. Select the Log On tab.
5. Select Local System account and then select Allow service to interact with desktop.
6. Click OK.
7. Click Restart.

### Results

---

When the Cast Iron Secure Connector service is restarted, system tray icons and a command window is displayed.

Note: You can minimize the command window. However, if you close the command window, the Cast Iron Secure Connector service will be stopped and terminated. Closing the command window is the equivalent of stopping the Secure Connector service from the Windows Services control panel.

## Troubleshooting Secure Connectors

---

This topic provides potential solutions for issues you have with the Secure Connector.

Secure Connector log files are available for your review. The Log directory is created after the initial start of the Secure Connector. The Log directory is located in the Secure Connector install directory. For example:  
C:\Program Files\IBM\Secure\_Connector\_1.development\logs

- **A port contention error occurs.** A port contention error can occur when two Secure Connectors are configured to use the same port and gateway. To resolve the issue, provide unique values for the Gateway, Listen on Port, and Transmit on Port parameters in each Secure Connector configuration file.
- **Unable to run .jar file to uninstall a Secure Connector.** Verify that the Java™ path is specified correctly and that you have Java version 1.6x or higher installed on the machine.

## About Certificates

---

Certificates enable secure communication between the Integration Appliance and endpoints located in your intranet and extranet. Use the Management Console to manage certificates.

From the Certificates page, you can generate, import, and update security certificates and security settings.

The following tables provides definitions for certificate terminology.

<b>Certificate Terminology</b>	<b>Definition</b>
Alias	A string of alphanumeric characters you assign to a KeyStore or TrustStore entry to provide a more user friendly name. Within a KeyStore or TrustStore you can use an alias to refer to the keys and certificates. Note: Aliases are not case sensitive. For example, MyCert and mycert refer to the same entry.
Certificate	A signed credential which identifies an endpoint or organization.
Key Pair	A public key and associated private key.
KeyStore	A Java™ data store that houses private keys and certificates used by a Java SSL endpoint. For example, a local Java endpoint supplies a certificate from its KeyStore as a credential to identify itself to a remote SSL endpoint.
PKI	Public Key Infrastructure is a system for managing encryption keys and identity information. The purpose of the system is to provide standards based system for protecting/securing communications over the internet.
Private Key	A key known only to a single endpoint used to encrypt and/or sign data.
Public Key	A key associated with a private key that can be distributed to anyone.
SSL	Secure Sockets Layer enables secure web communications and permits endpoints to optionally authenticate each other.
TrustStore	A Java data store that houses certificate authority signed certificates. For example, a local Java endpoint utilizes a TrustStore to authenticate the identity (certificate) provided to it by a remote SSL endpoint.

## Importing Certificates

---

### About this task

---

You can import a certificate or certificate chain into the IBM® WebSphere® Cast Iron KeyStore. You can also import trusted Certificate Authority certificates (CA Certs) to the TrustStore.

### Procedure

---

1. In the Key Store section, click Generate. The Generate Self-Signing Certificate dialog box displays.
2. In the Key Store or Trust Store section, click Import. The Import Certificates dialog box is displayed.
3. Specify an alias name. This name is used to identify the imported certificate or certificate chain.
4. Optional: Provide a key password.

The password protects the private key of the key pair associated with the alias. If you do not specify a password, the password defaults to the password protecting the KeyStore.

5. If you are importing a certificate from a trusted site, select the Trusted option.

If you select the Trusted option, the certificate is imported without checking for an existing chain of trust. If you do not select the Trusted option, the KeyStore and TrustStore is checked to ensure a chain of trust exists for the certificate being imported.

6. Choose to import the content from a file or from content in the clipboard that contains the certificate or certificate chain to be imported.

Supported formats include: CER/PEM (RFC 1421), DER, PKCS7, and PKCS12.

7. Click Import.

## Specify System Log Settings

---

### About this task

---

You can specify the level of details that appears in the system logs. The log level you specify affects alerts for notification policies. Alerts are only sent for events that meet or exceed the log level you specify.

Note: If you do not receive notifications for events, it might be that you do not have the system log level set to produce entries that would trigger a notification.

### Procedure

---

1. In the Navigation pane, select Logs > System Log. The System Log page is displayed.
2. Click Settings. The System Log Settings dialog box is displayed.
3. From the list, select a log level for each system.
4. Click Save.

### Results

---

A confirmation message displays. The system log logs all events that occur at the level you specified or higher for the specific system. For example, if you chose the Error level for Deployment, all events that were Error or Critical level in the Deployment system are logged.

## Viewing System Logs

---

### About this task

---

You can view system logs from the Management Console and use the system log filters to sort through system log entries.

When you upgrade, the Management Console does not persist system logs. To retain system log information, export system logs before you upgrade.

Note: The Management Console displays a maximum of 99,999 system log entries. When the number of system log entries exceeds 99,999, the oldest log entry is deleted from the system log.

### Procedure

---

1. From the navigation pane, select **Logs > System Log**. The System Log page is displayed.
2. Choose the filter values from the lists at the top of the System Log page.

You can filter the log entries according to the level of severity for the event, the environment system that generated the log event, dates, and resolution state. The filters use AND logic.

## System Log Content

---

The system log provides the following information:

System Log Content	Description
Level	Identifies the level of severity of the log event: <ul style="list-style-type: none"><li>• Critical</li><li>• Error</li><li>• Warning</li><li>• Info</li></ul>
System	Identifies the system where the log event occurred.
Message	Text messages that provides details about the log event.
Job	When available displays Job ID information for log events that occur in the Orchestration system.

System Log Content	Description
When	Records the time when the log event occurred.
Resolved On	Provides a time stamp of when you resolved a log event.
Resolved By	Identifies which user resolved a log event.
Resolved	Select this checkbox to acknowledge that you have resolved a log event. When a user resolves a log event, a time stamp documents the date and time the issue was resolved. Information about the user who resolved the log event is tracked in the Resolved By column. You can resolve all the system log issues, by clicking Resolve All. Clear the checkbox next to any log events that are not resolved and the Resolved On and Resolved By values are cleared.

## 로컬 스테이징 데이터베이스 정보

Studio에서, 데이터를 정리하고 빨리 대상 시스템으로 마이그레이션하기 위해 소스 시스템의 데이터를 정렬하고 병합하는 데이터 품질 활동으로 프로젝트를 빌드할 수 있습니다. 프로젝트의 데이터 품질 활동이 소스 시스템의 데이터를 반복적으로 처리("좋은" 데이터와 "잘못된" 데이터를 정렬)할 때, 통합 어플라이언스는 로컬 스테이징 데이터베이스에 데이터를 저장할 수 있습니다.

WMC에서 로컬 데이터베이스 테이블 및 검색 테이블을 보고 필요할 때 처리된 데이터에 추가 변경을 작성할 수 있습니다. 로컬 스테이징 데이터베이스의 테이블을 보고 조작을 수행하기 위한 적절한 권한이 있어야 합니다.

중요사항: 로컬 스테이징 데이터베이스는 WMC에서 데이터베이스 뷰어를 볼 수 있기 전에 시작되어야 합니다.

## 데이터베이스 뷰어 분할창

데이터베이스 뷰어는 다음의 세 분할창으로 구성됩니다.

### 데이터베이스 오브젝트 분할창

데이터베이스 뷰어의 왼쪽에 위치하는 이 분할창은 필드 및 행을 포함하여 로컬 스테이징 데이터베이스의 모든 테이블을 표시합니다.

### 조회 분할창

데이터베이스 뷰어의 우측 상단에 위치하는 이 분할창은 로컬 스테이징 데이터베이스에 대한 조회를 유효성 검증하고 제출하기 위한 작업공간을 제공합니다. 각 조회를 별도의 탭에서 관리할 수 있습니다. 각 탭에서 다음 조작을 수행할 수 있습니다.

- 조회 유효성 검증
- 조회 제출
- 조회 지우기
- 탭 닫기

### 요약 분할창

데이터베이스 뷰어의 우측 하단에 위치하는 이 분할창은 결과 및 히스토리의 두 탭을 포함합니다.

- **결과 탭** - 조회에서 리턴되는 행의 요약을 제공합니다.
- **히스토리 탭** - 로컬 스테이징 데이터베이스에서 발생한 이벤트의 로그를 제공합니다. 시간소인이 로그인된 각 이벤트를 표시합니다. 이벤트의 로그는 WMC가 열린 동안 지속됩니다. WMC를 닫은 후에는 히스토리 탭이

지워집니다.

## 메모리 관리 우수 사례

건전한 런타임 환경을 유지하고 메모리 부족 오류를 피하기 위한 메모리 관리 우수 사례를 약속합니다.

통합 어플라이언스는 오케스트레이션 작업을 실행하기 위한 메모리 풀을 확보합니다. 이 메모리 풀 관리가 건전한 런타임 환경을 유지하기 위한 핵심입니다.

사용되는 메모리의 양과 가비지 콜렉션 사이클 사이에는 직접적인 관계가 있습니다. 가비지 콜렉션은 완료된 작업이 보유하는 메모리 및 변수 데이터를 다시 모든 오케스트레이션 작업에 의해 사용된 메모리의 풀로 리턴하는 프로세스입니다. 이 가비지 콜렉션 프로세스는 통합 어플라이언스가 새 오케스트레이션 작업이 사용할 수 있는 사용 가능한 메모리의 일정한 공급을 갖도록 보장합니다.

가비지 콜렉션(GC)은 오케스트레이션 작업 성능에 대한 영향 없이 백그라운드에서 실행하는 연속 프로세스입니다. 그러나 메모리가 위험 임계값에 도달할 때 전체 가비지 콜렉션으로 알려진 더 깊이있는 프로세스가 발생합니다. 전체 가비지 콜렉션 프로세스는 모든 실행 중인 작업을 휴면 상태로 만들고 사용되지 않는 메모리를 다시 풀로 리턴합니다. 모든 오케스트레이션 작업이 전체 가비지 콜렉션 동안 중지하기 때문에 빈번한 전체 가비지 콜렉션은 오케스트레이션 성능에 영향을 미칠 수 있습니다.

자원 이용률 그래프의 GC 활동 값이 정기적으로 급등할 때, 통합 어플라이언스가 더 빈번한 전체 가비지 콜렉션 사이클을 시작하여 관리하려고 시도 중인 메모리에 대한 높은 수요가 있을 수 있습니다. 그러나 높은 메모리 사용량이 반드시 전체 가비지 콜렉션 사이클의 증가를 의미하지는 않습니다. 예를 들어, 짧게 실행하는 오케스트레이션의 많은 볼륨은 더 큰 백분율의 메모리가 사용되게 합니다. 그러나 끊임없이 백그라운드에서 실행하는 가비지 콜렉션 사이클은 아마도 전체 메모리 사용량이 전체 가비지 콜렉션을 트리거하기에 충분히 높지 않도록 충분히 빨리 메모리를 다시 메모리의 풀로 리턴합니다. 전체 가비지 콜렉션은 모든 오케스트레이션을 중지하므로, 빈번한 전체 가비지 콜렉션은 오케스트레이션 성능에 영향을 줄 수 있습니다.

높은 메모리 사용량이 빈번한 전체 가비지 콜렉션이 되는 시나리오는 오케스트레이션 유형의 혼합을 포함합니다. 예를 들어 대형 오브젝트를 처리하는 수많은 변수를 갖는 복수의 비지속적이고 장기 실행하는 오케스트레이션을 갖습니다. 이런 유형의 오케스트레이션은 메모리 풀로 빨리 리턴될 수 없는 많은 양의 메모리를 이용하며 연결합니다.

참고: 이런 유형의 오케스트레이션은 Cast Iron®에서 권장되지 않습니다.

다음 표는 메모리 사용량을 관리하고 건전한 런타임 환경을 유지하는 데 도움이 되는 우수 사례의 목록을 제공합니다.

표 1. 메모리 관리 우수 사례

우수 사례 원리	설명
----------	----

우수 사례 원리	설명
<p>로깅 레벨을 줄이십시오.</p>	<p>더 상세한 로깅은 데이터를 처리하고 저장하기 위한 더 많은 메모리가 필요하며 통합 어플라이언스 디스크에서 I/O 로드를 늘리므로 성능을 저하시킬 수 있습니다. 상세한 로깅 레벨은 디버깅 목적을 위해서만 권장되며 많은 볼륨의 데이터가 처리되는 프로덕션 환경의 경우에는 권장되지 않습니다.</p> <p>통합 어플라이언스는 시스템 로그와 오케스트레이션 작업 로그를 생성합니다.</p> <p>Cast Iron은 시스템 로그에서 추적되는 모든 컴포넌트에 대해 시스템 로그 레벨을 "경고"로 설정할 것을 권장합니다.</p> <ul style="list-style-type: none"> <li>• 하드웨어</li> <li>• 자원</li> <li>• 네트워크</li> <li>• 보안</li> <li>• 오케스트레이션</li> <li>• 배치</li> </ul> <p>다양한 시스템 컴포넌트에 의해 생성되는 경고 수가 높은 경우 메모리 사용량이 문제가 될 수 있습니다. 경고가 생성되도록 유발하고 있는 문제점을 해결하거나 시스템 로깅 레벨을 "오류"로 늘리십시오. 시스템 로그 레벨 설정에 대한 자세한 정보는 <a href="#">시스템 로그 설정 지정</a>을 참조하십시오.</p> <p>오케스트레이션 로깅 레벨은 프로젝트의 각 오케스트레이션에 대해 지정됩니다. Cast Iron은 통합 어플라이언스의 모든 프로젝트 아래의 모든 오케스트레이션에 대해 로깅 레벨을 "오류 값"으로 설정할 것을 권장합니다. 오케스트레이션 로그 레벨 설정에 대한 자세한 정보는 <a href="#">오케스트레이션 설정 편집</a>을 참조하십시오.</p>
<p>지속성이 모든 오케스트레이션에 대해 사용 가능한지 확인하십시오.</p>	<p>기본적으로 지속성이 오케스트레이션에 대해 사용으로 설정되고 변수 데이터가 메모리 대신 디스크에 기록됩니다. 지속성을 사용으로 설정하면 런타임 중에 결함이 발생하는 경우 특정 시점 데이터 복구 이점이 추가됩니다.</p> <p>오케스트레이션에 대해 지속성을 사용 안함으로 설정하는 경우 데이터는 메모리에 저장됩니다. 지속성 사용 안함이 성능을 개선할 수 있지만, 실행 중인 작업의 수가 늘어날 때 메모리 부족 가능성도 늘어납니다. 메모리가 부족할 위험이 매우 높기 때문에, 지속성을 사용 안함으로 설정할 것을 선택할 때 각별히 주의하여 진행하십시오.</p> <p>참고: 지속성을 끄면 통합 어플라이언스가 동시에 실행할 수 있는 오케스트레이션 작업의 수가 줄어듭니다. 한계는 통합 어플라이언스에서 사용 가능한 메모리에 의해 설정됩니다.</p>
<p>오케스트레이션 작업을 엇갈리게 하기 위해 웹 관리 콘솔(WMC) 및 Studio에서 사용 가능한 스케줄링 기능을 사용하십시오.</p>	<p>다른 시간에 시작하거나 피크가 아닌 시간 동안 실행하도록 메모리 집약적 작업을 스케줄하여 메모리의 일부 로드를 경감시키고 전체 가비지 컬렉션의 수를 줄이고 성능을 잠재적으로 개선합니다.</p> <p>Studio에서는 작업 스케줄 활동을 사용하거나 오케스트레이션에서 활동에 대한 폴링 간격을 구성하여 오케스트레이션 작업을 엇갈리게 하고 자원 이용률을 극대화할 수 있습니다. 또한 통합 어플라이언스가 오케스트레이션 작업을 실행할 시기를 제어하기 위해 WMC에서 스케줄을 작성할 수도 있습니다. 주어진 오케스트레이션 작업의 평균 실행 시간을 측정하여 작업 스케줄을 최적화할 수 있게 하십시오.</p>
<p>오케스트레이션에서 사용되는 변수의 수를 최소화하십시오.</p>	<p>오케스트레이션에서 더 많은 변수를 사용할수록, 데이터를 저장하기 위해 더 많은 메모리가 필요합니다. 이것은 다시 가비지 컬렉션 사이클의 수를 늘리고 성능에 영향을 줄 수 있습니다. 오케스트레이션을 검토하여 사용된 변수의 수를 줄일 수 있는지 확인하십시오.</p>

우수 사례 원리	설명
동시에 실행 중인 작업의 수를 줄이십시오.	<p>WMC에서 오케스트레이션에 대해 동시에 실행 중인 작업의 최대 수를 지정할 수 있습니다. 동시에 실행 중인 오케스트레이션의 수가 늘어날 때, 메모리 사용 백분율도 늘어납니다. 메모리가 과부하가 걸리고 있음을 알게 되는 경우 동시에 실행하는 작업의 수를 줄이십시오.</p> <p>동시에 실행하는 작업의 수를 줄이는 효과는 특히 많은 수의 변수를 포함하는 비지속적 장기 실행 오케스트레이션 작업에 영향을 미칩니다.</p> <p>참고: 이런 유형의 오케스트레이션은 Cast Iron에서 권장되지 않습니다.</p>
메모리에서 75% 로드를 초과하지 마십시오.	<p>WMC 자원 이용률 그래프에서 사용되는 메모리의 백분율을 추적할 수 있습니다. 사용되는 메모리의 백분율이 약 75% 이하일 때 통합 어플라이언스는 추가 오케스트레이션을 처리할 용량을 갖고 있습니다. 사용되는 메모리의 백분율이 약 75%를 초과할 때, 전체 가비지 콜렉션의 수가 늘어남에 따라 성능 문제가 발생할 수 있습니다.</p>
전체 가비지 콜렉션 사이클을 제한하십시오.	<p>WMC 자원 이용률 그래프에서 GC 활동 값을 사용하여 전체 가비지 콜렉션의 백분율을 추적할 수 있습니다. 이 백분율이 50%를 초과할 때 오케스트레이션 작업의 처리량의 축소를 의식할 수 있습니다. 메모리 관리 우수 사례를 구현하여 메모리 사용량을 줄이고 전체 가비지 콜렉션 사이클의 발생 가능성을 줄이십시오.</p>
환경에 추가 통합 어플라이언스를 추가하십시오.	<p>우수 사례 원리를 구현한 후, 메모리 사용량이 계속 높은 경우 사용자 환경에 다른 통합 어플라이언스를 추가할 시간일 수 있습니다.</p>

## 다른 공급업체의 라이브러리 설치

### 이 태스크 정보

통합 프로젝트가 추가 라이브러리가 필요한 커넥터를 사용하는 경우, 프로젝트 구성을 배치하기 전에 추가 라이브러리를 설치해야 합니다. 추가 라이브러리를 설치하기 전에 프로젝트 구성을 배치하면 런타임 오류가 생성됩니다. 공급업체 라이브러리가 필요한 커넥터의 전체 목록에 대해서는 커넥터 라이브러리 업데이트 페이지를 여십시오. 다음 프로시저를 참조하십시오.

다중 환경 테넌트를 갖는 경우 추가 라이브러리가 필요한 커넥터로 프로젝트 구성을 배치하는 각 환경에서 공급업체 라이브러리를 설치해야 합니다.

예를 들어, 배치, 스테이징 및 프로덕션의 세 환경을 갖는 테넌트가 있습니다. 개발 및 프로덕션 환경에서 SAP 엔드포인트에 대한 프로젝트 구성을 공개합니다. 프로젝트 구성을 배치할 수 있기 전에 개발 및 프로덕션 환경 모두에 추가 SAP 라이브러리를 설치해야 합니다.

1. 환경 탭을 클릭하십시오.
2. 시스템 > 업그레이드 > 커넥터 라이브러리 업그레이드를 선택하여 커넥터 라이브러리 업데이트 페이지를 여십시오.
3. 커넥터 열에서 추가 파일을 설치하려는 커넥터를 선택하십시오.

이미 설치된 모든 파일이 설치된 파일 열에 표시됩니다.

4. 더하기(+) 아이콘을 클릭하고 업로드할 라이브러리 파일을 선택하십시오. Linux 시스템에서 유효한 파일은 .jar 또는 .so이고, Windows 시스템에서 유효한 파일은 .jar 또는 .dll입니다. 사용자가 선택하는 파일이 추가할 파일 열에 표시됩니다.
5. 업데이트를 클릭하십시오.

추가할 파일 열에 표시되는 파일은 업데이트를 클릭할 때까지 커밋되지 않습니다. 업데이트를 클릭하기 전에 재설정을 클릭하면 WMC는 사용자가 업로드한 파일을 추가하지 않습니다. 업데이트를 클릭하고 추가된 파일을 커밋하기 전에 WMC가 제한시간 초과하는 경우 마지막 두 단계를 반복하십시오.

## 정지 시간 스케줄링

### 이 태스크 정보

정지 시간을 스케줄하면 환경 또는 관련 시스템에 유지보수를 수행할 수 있습니다. 지정된 지속 기간 동안 해당 프로젝트 구성의 모든 사용 가능한 오케스트레이션 작업을 중지 또는 일시중단하는 프로젝트 구성에 대한 정지 시간 규칙을 작성할 수 있습니다. 정지 시간 규칙을 작성하거나 편집하기 위해 프로젝트 구성이 배치 취소될 필요는 없습니다. 정지 시간 규칙은 한 번 발생하거나 지정된 간격으로 반복할 수 있습니다. 정지 시간 규칙을 작성, 편집 또는 삭제하려면 관리자 또는 공개자 권한이 있어야 합니다.

기본적으로, 정지 시간 규칙은 GMT 시간대로 저장됩니다. 관리자가 시스템 시계를 GMT에서 다른 시간대로 수정하는 경우, 정지 시간 규칙은 동일한 절대 시간에 실행됩니다. 예를 들어, GMT 오후 4:00 - 4:15 사이에 모든 오케스트레이션을 중지하는 정지 시간 규칙을 작성합니다. 관리자가 시스템 시계를 PDT(태평양 연안 표준시)로 표시하도록 수정합니다. 정지 시간 규칙은 PDT 오전 8:00 - 8:15 사이에 모든 오케스트레이션을 중지하도록 수정됩니다. PDT 오후 4:00 - 4:15에 정지 시간 규칙을 실행하려면 정지 시간 규칙을 편집해야 합니다. 일광절약시간에 의해 유발되는 시간 차이는 자동으로 조정됩니다.

정지 시간 규칙이 발생하도록 스케줄될 때 환경이 오프라인인 경우, 모든 실행되지 않은 규칙이 식별되고 환경이 다시 온라인이 될 때 적절한 순서로 실행됩니다. 모든 백로그된 정지 시간 규칙이 실행된 후 프로젝트 구성의 배치 상태를 수정할 제어를 다시 얻습니다.

## 자산 정보

관리 콘솔은 자산을 엔드포인트별로 그룹화합니다. 자산은 데이터베이스 및 다음 오케스트레이션 활동에 연결하는 웹 서비스 엔드포인트에 대해 생성되어야 합니다.

- 스타터 데이터베이스 활동.
- 정확하게 전달 옵션이 한 번만 지정되는 비스타터 데이터베이스 활동.
- 서비스 제공 활동.

각 데이터베이스 엔드포인트에 대해, 프로젝트 구성을 배치할 수 있기 전에 데이터베이스 자산과 연관된 구성 특성에 대한 고유한 값을 지정해야 합니다. 데이터베이스 자산은 제어 테이블, 버퍼 테이블, 순서 테이블 또는 트리거입니다. 모든 스타터 데이터베이스 활동은 하나의 버퍼 테이블에서 관리되는 반면, 개별 제어 테이블에서 전달 옵션이 정확히 한 번만 지정되는 각 비스타터 데이터베이스 활동에 대한 이벤트를 관리합니다.

서비스 제공 활동에 대한 WSDL은 통합 환경에 의해 생성됩니다. 관리 콘솔에서 이 웹 서비스 자산을 저장할 수 있습니다.

## 프로젝트 구성 정보

프로젝트 구성을 사용하면 동일한 통합 프로젝트의 복수 변종을 작성할 수 있으므로 하나의 프로젝트를 작성 및 공개하고 많은 상이한 시나리오에 배치할 수 있습니다. 프로젝트 구성 내에서 사용으로 설정된 오케스트레이션을 지정하고 엔드포인트에 대한 구성 특성을 수정하고 자산을 생성 또는 수정하고 스케줄된 정지 시간 규칙을 관리하고 프로젝트 구성에 대한 권한을 제어할 수 있습니다.

공개하는 각 프로젝트는 기본 프로젝트 구성을 갖습니다. 관리 콘솔에서 추가 프로젝트 구성을 작성할 수 있습니다. 프로젝트 이름, 프로젝트 버전, 구성 이름 및 프로젝트 상태가 각 프로젝트 구성을 고유하게 식별합니다.

프로젝트 구성을 작성, 편집 및 삭제하기 위해서는 사용자가 관리자 권한이 있거나 특정 프로젝트의 공개자여야 합니다. 관리자와 공개자는 사용자 및 그룹에 프로젝트 구성을 작성, 편집 및 삭제할 수 있는 권한을 부여할 수 있습니다.

요약 섹션은 저장소 > 구성에서 선택되는 프로젝트 구성의 세부사항을 표시합니다. 요약 섹션에는 프로젝트 구성 이름, 구성의 상태, 프로젝트가 마지막으로 공개된 날짜 및 시간, 프로젝트 구성을 공개 또는 복제한 사용자의 이름이 포함되어 있습니다. 또한, 요약 페이지는 오케스트레이션의 수, 특성, 자산 및 구성과 연관된 스케줄된 정지 시간을 표시합니다.

참고: 프로젝트 구성을 공개 또는 복제한 사용자의 이름이 다음 형식으로 표시됩니다.

- `username [groupname] - (groupname)`에 속하는 이 특정 사용자(username)가 프로젝트 구성을 공개 또는 복제한 사용자임을 표시합니다.
- `username {user does not exist}` - 사용자가 통합 어플라이언스에 존재하지 않음을 표시합니다.

## 오케스트레이션 사용 및 사용 안함 설정

런타임은 사용 가능한 오케스트레이션에 대해서만 오케스트레이션 작업을 실행합니다. 프로젝트 구성을 배치할 수 있기 전에 프로젝트 구성이 하나 이상의 사용 가능한 오케스트레이션을 포함해야 합니다. 기본적으로 모든 오케스트레이션이 사용으로 설정됩니다.

오케스트레이션 로깅 레벨을 지정하면 시스템 로그에 기록되는 오케스트레이션 오류의 유형을 제어할 수 있습니다. 관리 콘솔은 또한 동시에 실행하는 작업의 수를 제한할 수 있게 합니다. 동시에 실행하는 작업의 수는 성능에 영향을 줄 수 있습니다.

오케스트레이션 특성을 지정하려면 관리자 또는 공개자 권한이 있어야 합니다.

## 구성 특성 이해

Studio에서 프로젝트에 대한 이들 구성 특성을 작성합니다. 프로젝트 특성 작성 및 프로젝트 버전 지정에 대한 자세한 정보는 Studio 온라인 도움말을 참조하십시오.

프로젝트를 공개할 때 구성 특성에 대한 값을 지정할 수 있습니다. 구성 특성에 대해 사용자가 지정하는 값이 프로젝트가 배치되는 방법을 판별합니다. 예를 들어, 데이터베이스 엔드포인트를 포함하는 프로젝트에서 데이터베이스 연결 매개변수에 대한 특성을 작성할 수 있습니다. 그러면 테스트 데이터베이스에 연결하는 테스트 환경에 대한 프로젝트 구성을 작성한 후

동일한 프로젝트를 사용하여 또 다른 데이터베이스에 연결하는 프로덕션 환경에 대한 또 다른 프로젝트 구성을 작성할 수 있습니다.

관리 콘솔에서 구성 특성을 편집하려면 관리자 또는 공개자 권한을 가져야 합니다.

## 자산 수정

프로젝트 구성이 데이터베이스 또는 웹 서비스 엔드포인트를 포함하는 경우, 프로젝트 구성을 배치할 수 있기 전에 자산을 생성해야 합니다. 프로젝트가 데이터베이스 또는 웹 서비스 엔드포인트를 포함하지 않는 경우 자산은 사용자의 프로젝트 구성과 무관합니다.

자산을 생성 또는 수정하려면 관리자 또는 공개자 권한이 있어야 합니다.

## 정지 시간 스케줄링

정지 시간을 스케줄하면 유지보수를 수행할 수 있습니다. 지정된 지속 기간 동안 해당 프로젝트 구성의 모든 사용 가능한 오케스트레이션 작업을 중지 또는 일시중단하는 프로젝트 구성에 대한 정지 시간 규칙을 작성할 수 있습니다. 정지 시간 규칙을 작성하거나 편집하기 위해 프로젝트 구성이 배치 취소될 필요는 없습니다. 정지 시간 규칙은 한 번 발생하거나 지정된 간격으로 반복할 수 있습니다.

정지 시간 규칙을 작성, 편집 또는 삭제하려면 관리자 또는 공개자 권한이 있어야 합니다.

## 프로젝트 구성 권한 편집

관리자 또는 프로젝트 공개자로서, 다른 사용자 및 그룹에 프로젝트 구성에 대한 권한을 부여할 수 있습니다. 사용자나 그룹에 프로젝트 구성에 대한 권한을 부여할 때, 그들은 프로젝트 구성을 작성, 편집 및 삭제할 수 있습니다. 기본적으로, 프로젝트 구성에 대한 권한은 관리자 그룹에만 부여됩니다. 또 다른 그룹에 권한을 부여하려는 경우 명시적으로 수행해야 합니다.

예를 들어, 사용자가 공개자 권한을 갖는 사용자이고 기본 제공 공개자 그룹에 속합니다. 프로젝트를 공개합니다. 관리자 그룹과 사용자만 프로젝트 구성에 대한 권한을 갖고 있습니다. 사용자가 구성원인 공개자 그룹의 구성원은 프로젝트 구성에 대한 권한을 갖지 않습니다. 공개자 같은 다른 그룹을 포함하도록 프로젝트 구성에 대한 권한을 편집해야 합니다. 자세한 정보는 [프로젝트 구성 권한 부여](#)의 내용을 참조하십시오.

## 프로젝트 정보

프로젝트에는 런타임이 통합 시나리오를 실행하기 위해 필요한 컴포넌트인 오케스트레이션, 엔드포인트, 맵 및 기타 문서가 들어 있습니다. 통합 환경에 연결되지 않고 프로젝트를 작성 및 테스트하려면 Studio를 사용하십시오.

복수 사용자가 동일한 통합 환경에 복수 프로젝트를 공개할 수 있습니다. 통합 환경에 프로젝트를 공개하거나 스테이징 위치로 프로젝트를 내보내려면 Studio를 사용하십시오. 나중에 관리 콘솔을 사용하여 내보낸 프로젝트를 업로드할 수 있습니다. 프로젝트를 통합 환경에 공개하거나 업로드하려면 관리자 또는 공개자 권한이 있어야 합니다.

Studio에서 프로젝트를 공개할 때, 관리 콘솔이 기본 프로젝트 설정을 갖는 프로젝트를 표시합니다. 즉, 기본 프로젝트 구성을 작성합니다. 이 기본 프로젝트 구성을 복제하여 새 프로젝트 구성을 작성할 수 있는데, 별도의 개발 및 프로덕션 환경에 대해 구성할 수 있습니다.

프로젝트를 작성하고 엔드포인트 구성 특성을 지정한 후 관리 콘솔을 사용하여 프로젝트 구성을 지정하고 프로젝트 구성을 배치하려면 Studio를 사용하십시오.

## 데이터베이스 자산 정보

사용자가 사용하는 데이터베이스 엔드포인트의 유형이 생성되어야 하는 자산을 판별합니다. 다음 표는 각 지원되는 데이터베이스에 대해 생성되는 자산을 표시합니다.

참고: Cast Iron에서, 30문자의 ID 크기를 갖는 자산 테이블이 작성됩니다. 자산 테이블의 경우, Cast Iron이 따르는 형식은 다음과 같습니다. CI\_CT\_<respective-table-name>(제어 테이블의 경우) 및 CI\_BT\_<respective-table-name>(버퍼 테이블의 경우). 그러므로 최대 24문자를 갖는 이름을 갖는 테이블을 사용해야 합니다.

데이터베이스	생성된 자산
<ul style="list-style-type: none"><li>• DB2® AS/400</li><li>• Informix®</li><li>• Microsoft SQL</li><li>• Sybase</li></ul>	<ul style="list-style-type: none"><li>• 버퍼 테이블</li><li>• 제어 테이블</li><li>• 트리거</li></ul>
로컬 스테이징 데이터베이스	<ul style="list-style-type: none"><li>• 버퍼 테이블</li><li>• 제어 테이블</li><li>• 색인 테이블</li><li>• 트리거</li></ul>
Oracle	<ul style="list-style-type: none"><li>• 버퍼 테이블</li><li>• 제어 테이블</li><li>• 트리거</li><li>• 시퀀스</li></ul>

자산은 스타터 활동 및 정확히 한 번 전달 옵션을 지정하는 비스타터 활동에 대해서만 생성됩니다. 자산은 최소한 한 번 또는 많아야 한 번 전달 옵션을 지정하는 비스타터 활동의 경우에는 생성되지 않습니다.

참고: 모든 자산이 고유한 이름을 갖도록 하기 위해 활동 ID를 갖는 제어 테이블 이름이 추가됩니다. 이 숫자는 동일한 제어 테이블을 사용하는 오케스트레이션의 복수 엔드포인트를 구별하지 않습니다.

# 데이터베이스 자산 유효성 검증

## 이 태스크 정보

데이터베이스 자산을 생성하기 전에 자산을 유효성 검증하십시오. 자산을 유효성 검증할 때, 통합 환경이 버퍼 테이블 또는 제어 테이블이 소스 데이터베이스에 존재하는지 여부를 확인하고 테이블 구조가 올바른지 확인합니다.

참고:

트리거 및 시퀀스는 유효성 검증되지 않습니다.

## 프로시저

1. 탐색 분할창에서 저장소 > 구성을 선택하십시오. 프로젝트 구성 페이지가 표시됩니다.
2. 데이터베이스 자산이 필요한 프로젝트 구성을 클릭하십시오. 구성 세부사항 페이지가 표시됩니다.
3. 프로젝트 구성이 배치 취소된 상태에 있는지 확인하십시오.
4. 자산 섹션에서 데이터베이스를 클릭하십시오. 데이터베이스 자산 페이지가 표시됩니다.
5. 유효성 검증하려는 모든 자산을 선택하고 유효성 검증을 클릭하십시오.
6. 리턴된 결과가 다음 단계를 판별합니다. 다음 표는 피드백을 해석하는 방법과 진행 방법을 알려줍니다.
  - 초록색 선택 표시 - 유효함
  - 노란색 경고 부호 = 경고

## 데이터베이스 자산 유효성 검증 피드백

존재 여부	유효 여부	조치
유효함	유효함	자산이 데이터베이스에 존재하고 자산 구조가 Studio에서 작성한 프로젝트 구성과 일치합니다. 이제 프로젝트 구성을 배치할 수 있습니다.
유효함	경고	자산이 데이터베이스에 존재하지만, 자산 구조가 올바르지 않습니다. 데이터베이스 스크립트가 적절한 열을 포함하고 열이 올바른 순서로 되어 있는지 확인하십시오. 오류가 있는 경우 자산을 재작성하십시오.
경고	경고	자산이 소스 데이터베이스 테이블에 존재하지 않습니다. 프로젝트 구성을 배치할 수 있기 전에 자산을 작성해야 합니다.

경고: 고유 ID에서 끝나는 제한조건 이름이 생성됩니다. 그러나, 데이터베이스 테이블 이름의 크기가 18문자보다 큰 경우 제한조건 이름이 잘려서 이름 지정 충돌이 발생합니다. 데이터베이스 테이블 이름이 18문자보다 큰 경우 생성된 데이터베이스 자산 스크립트를 편집하고 제한조건 이름을 고유하게 만드십시오.

## 프로젝트 구성 중지

### 이 태스크 정보

실행 중인 프로젝트 구성을 중지하는 두 가지 방법이 있습니다.

- **중지(작업 완료 허용)** - 작업 완료를 클릭할 때, 현재 작업이 처리를 완료하도록 허용하면서 임의의 새 오케스트레이션 작업이 시작하지 못하게 합니다. 이 조치는 통합 어플라이언스가 완료 후 중지할 수 있게 합니다.
- **중지(실행 중인 작업 취소)** - 작업 취소를 클릭할 때, 임의의 새 오케스트레이션 작업이 시작하지 못하게 막고 현재 실행 중인 모든 작업을 중지합니다. 이 조치는 모든 작업을 즉시 중지합니다.

### 프로시저

1. 프로젝트 구성 페이지에서 프로젝트 구성을 선택하십시오.
2. 조치 열에서 중지 아이콘  을 클릭하십시오. 구성 중지 창이 표시됩니다.
3. 작업 완료 또는 작업 취소를 클릭하여 프로젝트 구성을 중지하십시오.

## 프로젝트 구성 업로드

### 시작하기 전에

프로젝트 구성을 클라우드로 업로드하려면 테넌트 관리자, 환경 관리자 또는 환경 공개자 권한이 있어야 합니다.

## 이 태스크 정보

프로젝트 구성을 업로드할 때 2단계 프로세스를 사용하여 프로세스를 공개 중입니다. 첫 번째, Studio에서 중간 위치로 프로젝트를 내보냅니다. 그런 다음 관리 콘솔에서 통합 어플라이언스나 클라우드 환경으로 프로젝트를 업로드합니다.

## 프로시저

1. 프로젝트 구성을 업로드하려는 환경 탭을 선택하십시오.
2. 탐색 분할창에서 저장소 > 프로젝트 업로드를 선택하십시오. 프로젝트 구성 업로드 대화 상자가 표시됩니다.
3. 로컬 프로젝트 파일 필드에 프로젝트를 업로드할 경로를 입력하십시오. 찾아보기를 클릭하여 로컬 머신에서 파일을 선택할 수 있습니다.
4. 프로젝트 이름을 지정하십시오. 이름은 42문자를 초과해서는 안되며 어떤 제한된 문자도 포함해서는 안됩니다.
5. 제품 버전 번호를 지정하십시오. 이 필드는 사용자가 Studio에서 지정한 프로젝트 버전으로 채워지지 않습니다. 그러나 우수 사례로서 Studio에서 사용자가 지정한 버전과 일치하는 프로젝트 버전을 지정해야 합니다.
6. 업로드를 클릭하십시오.

## 결과

프로젝트 구성이 프로젝트 구성 페이지에 표시됩니다.

## 프로젝트 구성에 대한 작업

프로젝트 구성을 위한 다양한 보기를 사용할 수 있습니다.

- **모두** - 프로젝트 구성의 상태와 상관없이 모든 프로젝트 구성의 배치 단계와 상태를 표시합니다. 이 보기에서 프로젝트 구성을 복제 또는 삭제할 수 있습니다.
- **최신** - 가장 최근에 공개 또는 수정된 프로젝트 구성의 배치 단계와 상태를 표시합니다. 이 보기에서 프로젝트 구성을 복제 또는 삭제할 수 있습니다.

## 웹 관리 콘솔 정보

---

웹 관리 콘솔(WMC)은 다음을 수행할 수 있는 웹 기반 관리 도구입니다.

- 통합 어플라이언스 관리
- 통합 프로젝트 관리
- 통합 프로젝트 모니터

복수 WMC에서 동일한 통합 어플라이언스에 액세스할 수 있습니다. 그러나, 각 WMC는 한 번에 하나의 통합 어플라이언스만 모니터링하고 관리할 수 있습니다. WMC에서 완료할 수 있는 태스크는 로그인한 사용자 계정에 따라 다릅니다. WMC는 기

본 제공 그룹을 갖는데, 통합 어플라이언스에 대한 액세스를 추가로 제어하는 데 사용할 수 있습니다. 그렇지 않으면 사용자 및 그룹 인증 및 권한 부여를 관리하기 위한 LDAP 서버를 지정할 수 있습니다.

WMC를 통해 통합 어플라이언스에 로그인할 때 대시보드가 나타납니다. 대시보드는 프로젝트 구성 및 작업의 복수 스냅샷 보기, 자원 이용률 그래프, 해결되지 않은 심각한 시스템 오류의 목록, 전체 프로젝트 구성 요약을 제공합니다. 대시보드를 사용하여 작업 키에 의해 오케스트레이션 작업을 검색할 수도 있습니다. 검색 상자는 대시보드의 결과 섹션에 위치합니다.

WMC는 현재 사용자의 이름뿐 아니라 통합 어플라이언스에서 설정된 날짜 및 시간소인을 표시합니다. 이 날짜 및 시간소인이 반드시 로컬 날짜 및 시간을 나타내지는 않습니다. 예를 들어, 통합 어플라이언스는 GMT로 설정됩니다. 그러나 PST 시간대에 있는 캘리포니아 샌프란시스코에 있는 WMC로부터 이 통합 어플라이언스에 로그인할 수 있습니다. 명령 인터페이스(CLI)를 사용하여 통합 어플라이언스의 시간대를 수정하십시오.

## 알림 레벨 선택

알림 레벨은 경보를 트리거할 수 있는 이벤트의 심각도를 정의합니다. 알림 레벨을 지정할 때, 사용자가 선택하는 레벨을 초과하는 오류에 대해서만 경보가 발송됩니다.

참고: 이벤트에 대한 알림을 수신하지 않는 경우 알림을 트리거하는 항목을 생성하도록 시스템 로그 레벨을 설정하지 않았을 수 있습니다. 예를 들어, 배치에 대해 오류 레벨을 선택한 경우 배치 시스템에서 오류 또는 위험 레벨인 모든 이벤트가 로그됩니다.

다음 알림 레벨을 지정할 수 있습니다.

알림 레벨	설명
위험	오류 조건이 시스템 종료로 유발할 때 경보를 발송합니다.
오류	즉시 처리되어야 하는 위험하지 않은 문제가 발생할 때 경보를 발송합니다.
경고	잠재적인 오류 조건이 발생할 때 경보를 발송합니다.
정보	정보 사용법에 대한 경보를 발송합니다.

## 오케스트레이션 작업 검색

---

### 이 태스크 정보

---

작업 ID와 키를 사용하여 오케스트레이션 작업을 검색할 수 있습니다. 커넥터를 구성할 때 Studio에서 기본 메시지 키를 정의합니다. 기본 메시지 키는 고유한 값이어야 합니다. 예를 들어 구매 주문 메시지의 경우 구매 주문 번호입니다. 기본 키를 정의하지 않은 경우 런타임은 런타임이 생성하는 고유한 번호인 작업 ID를 사용하여 오케스트레이션 작업을 식별합니다.

관리 콘솔에서 작업 ID로 오케스트레이션 작업을 검색할 수 있습니다. 기본적으로, 관리 콘솔은 사용자가 지정하는 작업 ID와 일치하는 완료된 오케스트레이션 작업에 대해서만 검색합니다. 다른 모든 오케스트레이션 작업을 검색하려면 고급 검색 옵션을 사용하십시오.

### 프로시저

---

1. 탐색 분할창에서 대시보드를 선택하십시오.

2. 결과 섹션에서 키 검색 필드에 작업 ID를 입력하십시오.
3. 키보드에서 Enter를 누르십시오. 일치하는 작업 ID를 갖는 완료된 작업이 표시됩니다.

## 고급 검색 사용

---

### 이 태스크 정보

---

작업 검색을 더 정제하려면 고급 검색 옵션을 사용하십시오. 고급 검색 상자의 복수 필드에 대한 값을 입력하면 관리 콘솔은 AND 로직을 사용하여 검색을 정제합니다.

예를 들어, 오류를 갖는 상태를 선택하는 것 외에 시간 범위를 지정합니다. 관리 콘솔은 지정된 시간 범위 안에서 오류를 가진 모든 오케스트레이션 작업을 검색합니다.

참고: 날짜 및 시간별로 검색할 것을 선택하는 경우 시작 및 종료 날짜 및 시간을 지정해야 합니다.

### 프로시저

---

1. 탐색 분할창에서 대시보드를 선택하십시오.
2. 결과 섹션에서 오케스트레이션을 선택하십시오. 오케스트레이션 세부사항 페이지가 오케스트레이션과 연관된 모든 작업을 표시합니다.
3. 고급 검색 상자에서 검색에 적합한 작업 ID, 키, 상태, 시작 날짜 및 시간 또는 종료 날짜 및 시간에 대한 값을 지정하십시오.  
참고: 날짜 및 시간별로 검색할 것을 선택하는 경우 시작 및 종료 날짜 및 시간을 지정해야 합니다.
4. 검색을 클릭하십시오.

### 결과

---

검색 결과가 테이블에 표시됩니다.

## 하드웨어 상태 보기

WMC에서 통합 어플라이언스 자원 이용률과 하드웨어 성능 상태를 모니터링할 수 있습니다.

### 자원 이용률 보기

---

통합 어플라이언스 CPU 사용량, 메모리 사용량, 디스크 공간 사용량을 보려면 시스템 > 하드웨어 상태를 선택하십시오. 자원 이용률 페이지가 표시됩니다.

## 오케스트레이션 작업 로그 보기

대시보드는 복수의 탭에 있는 상태, 작업 이벤트의 시간소인 및 키/작업 ID를 포함하여 오케스트레이션 작업에 관한 정보를 표시합니다.

- **모두** - 모든 프로젝트 구성에 대한 오케스트레이션 작업 정보를 표시합니다.
- **최근** - 가장 최근에 공개 또는 수정된 프로젝트 구성에 대한 오케스트레이션 작업 정보를 표시합니다.
- **즐거찾기** - 즐겨찾기 필터에 표시되는 프로젝트 구성에 대한 오케스트레이션 작업 정보를 표시합니다. 이 필터를 통해 표시되는 오케스트레이션 작업 정보는 최신 및 모두 필터에도 표시됩니다.

일부 경우에는 오케스트레이션 작업이 성공적으로 완료한 경우에도 관리 콘솔이 `Unknown`의 오케스트레이션 작업 상태를 표시합니다. 오케스트레이션 작업이 처리 중인 동안 환경을 다시 부팅하면 다시 부팅 중에 모니터링 데이터가 유실되기 때문에 알 수 없음 상태가 발생할 수 있습니다. 알 수 없음 상태를 피하기 위해 환경을 다시 부팅하기 전에 모든 오케스트레이션 작업을 중지하십시오.

해당 오케스트레이션에 대한 오케스트레이션 세부사항을 보려면 오케스트레이션 작업을 클릭하십시오. 오케스트레이션 세부사항 페이지는 사용자가 선택한 오케스트레이션과 연관된 모든 작업 및 각 개별 작업의 상태를 표시합니다. 모든 오케스트레이션 작업을 보려면 왼쪽 및 오른쪽 화살표(<<, <, >, >>)를 사용하십시오.

작업 ID로 오케스트레이션 작업을 검색할 수 있습니다. 프로젝트 구성 이름, 오케스트레이션 이름, 상태, 시간 또는 작업 ID 별로 오케스트레이션 작업을 정렬하려면 적당한 열 헤더를 클릭하십시오.

## SNMP 기본

SNMP(Simple Network Management Protocol)는 주로 네트워크 관리 시스템에서 관리 주의를 보증하는 조건에 대해 네트워크 디바이스를 모니터링하는 데 사용되는 인터넷 표준 프로토콜입니다. 일반적으로 SNMP를 지원하는 디바이스는 라우터, 스위치, 서버, 워크스테이션 및 프린터를 포함합니다. 이 절은 SNMP 기본을 소개하고 Cast Iron MIB의 개요를 제공합니다.

SNMP의 어휘에서, Cast Iron 통합 어플라이언스는 "네트워크 요소" 또는 "관리 디바이스"로 참조되어 네트워크의 구성원이며 관리할 수 있음을 표시합니다. 네트워크 요소에는 요소에 관한 정보를 제공하는 *에이전트*가 포함됩니다. 에이전트는 두 가지 핵심 기능을 수행합니다. 첫 번째, 관리 시스템의 요청에 응답하고 두 번째로 네트워크 요소의 이벤트에 관한 알림을 발송합니다. 에이전트에서 관리자로의 비동기 알림은 *트랩*으로 부릅니다.

SNMP 트랩은 에이전트가 요청되지 않은 SNMP 메시지를 통해 관리 스테이션에 중요한 이벤트를 알릴 수 있습니다. 폴링 또는 트랩을 통해 제공되는 정보는 MIB(Management Information Base)에서 정의됩니다. MIB는 통신 네트워크에서 엔티티 관리에 사용되는 가상 데이터베이스입니다. MIB는 고유한 오브젝트 ID(OID)를 갖는 각 오브젝트로 오브젝트 계층 구조를 정의합니다. OID는 마침표로 구분된 숫자로 지정됩니다(예: ".1.3.6.1.2.1.1"). OID를 때로는 공통 이름이라고 부릅니다. 예를 들어, 특정 OID .1.3.6.1.2.1.1을 "시스템"으로 참조할 수 있습니다. SNMP 프로토콜은 많은 공용 MIB를 정의하며, 조직이 사용자 정의된 애플리케이션 특정 MIB를 정의할 수 있게 합니다.

## Cast Iron MIB 이해

Cast Iron WMC에서 다운로드된 파일은 복수의 MIB DEFINITIONS = BEGIN - END 섹션을 갖습니다. 각 섹션이 고유한 계층 구조로 MIB를 구성합니다. Cast Iron 특정 정보를 폴링하려면 CASTIRON-IA-MIB를 사용하십시오. 각 MIB는 MIB 기능을 설명하는 MODULE-IDENTITY를 갖습니다. MODULE-IDENTITY 뒤에 오는 주석 섹션은 MIB 콘텐츠의 개요를 제공하며 모든 MIB 오브젝트의 이름과 OID를 나열하는 오브젝트 요약의 섹션을 포함합니다.

참고: NET-SNMP에 의해 제공되는 것 같은 일부 도구는 각 MIB가 단일 파일로 분할되어야 합니다. MIB 분할에 대한 자세한 정보는 [SNMP 수신기 설정](#)의 내용을 참조하십시오.

CASTIRON-IA-MIB의 오브젝트 요약의 섹션은 다음과 같습니다.

```
-- ciIaProjectSummary                ciia.1.1.1
-- ciIaNbrProjects                   ciia.1.1.1.1
-- ciIaNbrRunningOrchs               ciia.1.1.1.2
-- ciIaNbrStoppedOrchs              ciia.1.1.1.3
-- ciIaNbrRunningJobs                ciia.1.1.1.4
-- ciIaNbrCompletedJobs              ciia.1.1.1.5
-- ciIaNbrErroredJobs                ciia.1.1.1.6
```

표시된 것처럼, ciIaProjectSummary라는 조직 노드(이 경우에는 디렉토리나 비슷한 OBJECT-IDENTITY)가 프로젝트에 관한 일반 정보를 포함합니다. 해당 "디렉토리" 안에 프로젝트 수, 실행 중 및 중지된 오케스트레이션의 수 등을 포함하는 특정 항목(OBJECT-TYPE)이 있습니다. 이들 항목의 의미에 대한 자세한 정보를 알려면 항목의 이름에 대해 파일을 검색하십시오. 예를 들어, ciIaNbrRunningJobs에 관한 정보를 얻으려면 파일에서 다음과 같은 해당 문자열을 검색합니다.

```
ciIaNbrRunningJobs OBJECT-TYPE          -- ciia.1.1.1.4
    SYNTAX Unsigned32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "Total number of currently running jobs."
    ::= { ciIaProjectSummary 4 }
```

핵심 영역은 다음과 같습니다.

- ciIaNbrRunningJobs OBJECT-TYPE - 오브젝트의 이름을 정의합니다. 끝에 OID의 단축 양식을 제공하는 주석이 있음을 참조하십시오.
- SYNTAX Unsigned32 - 이것은 해당 값이 오르거나 내릴 수 있는 부호 없는 정수입니다.
- MAX-ACCESS read-only - 읽기 전용 값입니다. 관리자가 요청할 수 있지만 변경할 수 없습니다.
- DESCRIPTION - 오브젝트를 설명합니다.

다음 예는 ProjectSummary 정보에 대해 폴링할 때 표시되는 데이터를 설명합니다.

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"

SNMP 테이블이 인증 확인 중일 수 있습니다. SNMP 테이블은 데이터베이스 스키마와 비슷하게 어플라이언스의 각 프로젝트에 관한 이름, 버전, 구성, 상태 및 기타 정보를 표시합니다. 각 항목 이름(예: ciIaProjEntryName, ciIaProjEntryVersion)은 테이블의 열을 설명합니다. 각 항목에 대한 추가 정보를 찾기 위해 MIB에서 해당 문자열을 검색할 수 있습니다. 참고: 반복적인 방식으로 프로젝트 테이블을 "탐색"하려고 시도하면 문제가 발생할 수 있습니다. 대신, 테이블 정보를 볼 때 항상 테이블을 이해하는 도구 기능을 사용하십시오. 다음 예는 "탐색" 기술을 설명합니다. 이 경우에 프로젝트가 공개된 후에 새 구성을 작성하기 위해 복제되어 두 개의 테이블 행이 생성되었습니다. 출력이 표시하는 것처럼, 어떤 항목이 특정 행과 연관되는지를 이해하는 것은 어렵습니다. 이 경우 항목 및 행의 올바른 배열을 판별하기 위해 색인(OID의 마지막 부분)을 보아야 합니다.

# SNMP 수신기 설정

WMC를 사용하여 오케스트레이션, 보안, 하드웨어 및 기타 같은 런타임 컴포넌트에서 발생하는 이벤트에 대한 알림을 작성할 수 있습니다. 이들 알림에 대한 전달 메커니즘은 트랩이 이벤트에 대해 설정된 SNMP입니다. 이들 이벤트를 검색하려면 어플라이언스에 등록된 수신기나 관리자를 설정해야 합니다. SNMP 수신기를 설정하려면 이 절의 프로시저를 사용하십시오.

## 이 태스크 정보

SNMP 수신기를 설정할 때, MIB를 다운로드 및 분할하고 구성 파일을 작성하고 알림을 사용으로 설정하고 알림 정책을 추가한 후 시스템을 테스트합니다.

## 프로시저

1. **WMC: 로그-> 알림 -> SNMP**를 클릭하십시오.
2. 대화 상자에서 **MIB 다운로드**를 클릭하십시오.
3. 수신기가 되도록 지정한 머신에 MIB를 추가하십시오.
4. 다음 스크립트를 실행하여 MIB를 논리 장치로 분할하십시오. 참고: 스크립트는 파일이 로컬 디렉토리에 있고 다운로드한 파일이 castironsys.mib로 이름 지정된다고 가정합니다.

```
#!/bin/bash
```

```
sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castironsys.mib |
while read mib; do
    echo $mib
    sed -ne "/^$mib/,/^END/p" castironsys.mib > $mib
done
```

5. 선택한 SNMP 관리자를 설정하십시오.
6. **WMC: 로그-> 알림 -> SNMP**를 선택하여 SNMP 알림을 사용으로 설정하십시오. **SNMP 사용** 선택란이 선택되었는지 확인하십시오.
7. 수신기 호스트 이름을 추가하십시오.
8. 트랩 커뮤니티를 **public**으로 설정하십시오. 이것은 /etc/snmp/snmptrapd.conf에서 **authCommunity** 항목으로 정의됩니다.
9. **저장**을 클릭하십시오.

## 알림 정책 추가

알림 정책을 추가할 때, 관리자에게 경고, 정책 위반 및 작업 실행의 상태 변경을 알립니다. SNMP 트랩을 사용하면 알림 시스템이 사용자가 SNMP 가능 써드파티 애플리케이션으로 트랩을 전송할 수 있게 합니다. 알림 정책을 추가하고 이름을 지정하려면 다음 단계를 수행하십시오.

## 프로시저

1. **정책** 탭을 클릭하십시오.
2. 화면의 맨 아래 왼쪽에 있는 **새 정책** 링크를 클릭하고 정책에 이름을 부여하십시오.
3. **알림** 시기 행에서 레벨 및 시스템을 선택하십시오. **알림** 섹션의 **SNMP** 선택란이 선택되었는지 확인하십시오.
4. **저장**을 클릭하십시오.

다음 표는 미분류 트랩을 통해 전달되는 시스템, 레벨 및 메시지를 보여줍니다. 미분류 트랩은 CASTIRON-IA-MIB::ciIaUncategorizedEv, Enterprise 1.3.6.1.4.1.13336.2.2.2.1.1.10, Trap 1로 이름 지정됩니다.

## 자원 이용률 그래프 정보

자원 이용률 그래프가 용량 계획 및 런타임 환경의 성능 상태 이해를 위해 제공하는 데이터를 사용하는 방법을 설명합니다.

자원 이용률 그래프는 다음 변수를 추적하는데, 런타임의 전체 성능 상태를 분석하고 추가 프로젝트 및 오케스트레이션에 대해 사용 가능한 용량을 계산하기 위해 사용할 수 있습니다.

- 사용한 디스크 %
- 사용된 메모리 %
- GC 활동
- 실행 중인 작업 수

### 사용한 디스크 %

이 변수는 오케스트레이션 작업 변수 및 히스토리 데이터가 사용하는 디스크 공간의 백분율을 추적합니다.

오케스트레이션 작업을 실행할 때 런타임은 디스크를 사용하여 해당 작업에 대한 변수 데이터를 저장합니다. 지속성을 사용으로 설정할 때, 통합 어플라이언스가 런타임 재시작을 필요로 하는 결함을 만나는 경우 작업에 대해 저장된 변수 데이터는 통합 어플라이언스가 오케스트레이션 작업의 특정 시점 복구를 제공할 수 있습니다.

런타임은 또한 오케스트레이션 작업에 관한 히스토리 데이터를 저장하는데, 이것은 웹 관리 콘솔(WMC) 작업 로그 페이지에서 볼 수 있습니다.

사용 가능한 디스크 공간의 양이 너무 작아지는 경우, 통합 어플라이언스가 지정된 사용자로 알림을 발송하는 경보를 생성합니다.

### 사용된 메모리 %

통합 어플라이언스는 오케스트레이션을 실행하기 위한 고정된 양의 사용 가능 메모리를 갖습니다. 사용된 메모리 % 변수는 오케스트레이션 작업이 사용하는 이 고정 메모리의 양과 대응하는 변수 데이터를 추적합니다. 오케스트레이션 작업 및 변수 데이터에 할당된 메모리가 더 이상 사용되지 않고 있을 때, 메모리는 가비지 콜렉션이라고 부르는 프로세스를 사용하여 사용 가능한 메모리의 풀로 리턴됩니다.

사용되는 메모리의 양과 가비지 콜렉션 사이클 사이에는 직접적인 관계가 있습니다. 그러나 높은 메모리 사용량이 반드시 전체 가비지 콜렉션 사이클의 증가를 의미하지는 않습니다.

사용된 메모리의 양에 영향을 주는 요인에 대한 자세한 정보는 [메모리 관리 우수 사례](#)의 내용을 참조하십시오.

## GC 활동

가비지 콜렉션은 완료된 작업이 보유하는 메모리 및 변수 데이터를 다시 모든 오케스트레이션 작업에 의해 사용된 메모리의 풀로 리턴하는 프로세스입니다. 이 가비지 콜렉션 프로세스는 통합 어플라이언스가 새 오케스트레이션 작업이 사용할 수 있는 가능한 메모리의 일정한 공급을 갖도록 보장합니다.

GC 활동 변수는 1분에 발생하는 전체 가비지 콜렉션의 백분율을 추적합니다. 이 백분율은 전체 가비지 콜렉션의 수를 6으로 나누어서 계산됩니다. 이상적으로는 GC 활동은 50% 이하여야 합니다. 즉 분당 3개의 전체 가비지 콜렉션이 있습니다. 분당 6개 이상의 전체 가비지 콜렉션이 발생할 때 오케스트레이션 성능이 심각하게 저하됩니다.

가비지 콜렉션 및 가비지 콜렉션에 영향을 주는 요인에 대한 자세한 정보는 [메모리 관리 우수 사례](#)의 내용을 참조하십시오.

## 실행 중인 작업 수

통합 어플라이언스에서 현재 실행 중인 작업의 수를 표시합니다.

## 하드웨어 성능 상태

어플라이언스의 하드웨어 성능 상태를 기반으로 알림을 얻으려면 이 섹션의 정보를 사용하십시오.

첫 번째 미분류 트랩(CASTIRON-IA-MIB::ciIaUncategorizedEv .1.3.6.1.4.1.13336.2.2.2.1.1.10 #1)을 받도록 SNMP 관리자를 준비해야 합니다. 다음으로, 다음 항목을 폴링하도록 SNMP 관리자를 구성하고 조건이 만족될 때 알림을 생성합니다.

## 가비지 콜렉션

CASTIRON-IA-MIB::ciIaResNbrGarbageCollects는 시스템이 마지막으로 다시 시작된 이후에 발생한 가비지 콜렉션의 수를 셉니다. 가끔의 가비지 콜렉션은 정상이지만, 분당 6번이 넘는 콜렉션은 과도하며 어플라이언스가 과부하가 걸렸고 결국 성능 문제를 경험할 수 있음을 표시합니다.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com  
CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0 =  
Counter32: 149
```

## 메모리 사용량

CASTIRON-IA-MIB::ciIaResPctMemoryUsed는 100분의 1 퍼센트로 표현되는 사용 중인 메모리 총계의 백분율을 표시합니다. 이 숫자는 각 가비지 콜렉션 후에 업데이트됩니다.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 =
Gauge32: 1.84
```

이 값은 정수(이 경우에는 184)로 제공되지만, MIB가 SNMP 관리자가 그의 표시된 값을 변경하게 만드는 원인이 됨을 주의하십시오. 100분의 1 퍼센트로 표현되는 값은 *대개* 자동으로 수정됩니다. 예를 들어 이 경우에 '1234'는 '12.34'로 표시됩니다. 그러나 SNMP 관리 도구가 이것을 자동으로 처리함을 확인해야 합니다. 그렇지 않은 경우 값은 다음과 같이 나타납니다.

```
$ snmpwalk -On -v 2c -c public pebbles2.sanjose.ibm.com
.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0 = Gauge32: 184
```

권장사항: 이 값이 80%(원시 값은 8000)를 넘는 경우에 경보하십시오.

## 디스크 사용량

CASTIRON-IA-MIB::ciIaResPctWipFull은 퍼센트의 100분의 1 단위로 표현되는 사용 중인 진행 중인 작업(WIP) 디스크 공간의 총계의 백분율을 표시합니다. 이 숫자가 작업 영구 제거 활동 예측을 위한 키입니다.

```
$ snmpwalk -On -v 2c -c public -M +. -m +CASTIRON-IA-MIB pebbles2.sanjose.ibm.com
CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0 = Gauge32:
6.00
```

권장사항: 이 값이 75%(원시 값은 7500)를 넘는 경우에 경보하십시오.

## 기본 제공 그룹 정보

기본 제공 그룹은 사전 정의된 그룹입니다. 클라우드에서 테넌트 관리자 그룹 외에, 각 환경은 기본 제공 관리자, 공개자 및 사용자 그룹을 갖습니다.

예를 들어, Cumulus라는 테넌트가 사용자 조직을 위해 작성됩니다. 이 테넌트 내에는 Development 및 Production이라는 두 환경이 있습니다. 다음 기본 제공 그룹이 사용 가능합니다.

- 관리자 [cumulus.com]
- 관리자 [Development]
- 공개자 [Development]
- 사용자 [Development]
- 관리자 [Production]
- 공개자 [Production]
- 사용자 [Production]

동일한 사용자가 복수 그룹의 일부일 수 있습니다. 사용자를 기본 제공 그룹에 지정하거나 새 그룹을 작성할 수 있습니다.

참고: 프로젝트 구성 권한을 그룹에 지정하는 경우, 해당 그룹의 사용자는 프로젝트 구성에 대한 전체 액세스 권한을 갖습니다. 즉, 프로젝트 구성의 새 버전을 작성할 뿐 아니라 프로젝트 구성을 편집 및 삭제할 수 있습니다.

다음 목록은 각 기본 제공 그룹에 부여되는 권한을 정의합니다.

- **테넌트 관리자 그룹.** 특정 테넌트의 모든 환경, 사용자, 그룹 및 프로젝트에 대한 권한을 제공합니다. 사용자가 테넌트의 사용자 및 사용자 정의 그룹을 작성, 편집 및 삭제하도록 허용합니다. 이 그룹의 사용자는 테넌트의 모든 기본 제공 또는 사용자 정의 그룹에서 사용자를 추가 및 삭제할 수 있습니다. 이 그룹의 사용자는 테넌트의 모든 소스 프로젝트에 대한 권한을 보기, 편집 및 삭제할 수 있습니다.

이 그룹의 사용자는 테넌트의 모든 환경을 볼 수 있으며 각 테넌트 환경에 있는 환경 관리자의 모든 권한을 갖습니다.

- **환경 관리자 그룹.** 특정 환경의 모든 사용자, 그룹 및 프로젝트에 대한 권한을 제공합니다. 사용자가 특정 환경의 사용자 및 사용자 정의 그룹을 작성, 편집 및 삭제하도록 허용합니다. 이 그룹의 사용자는 환경의 모든 기본 제공 또는 사용자 정의 그룹에서 사용자를 추가 및 삭제할 수 있습니다.

환경 관리자는 또한 환경 공개자가 공개하는 프로젝트에 대한 프로젝트 구성을 작성 및 배치하고 환경에 있는 모든 프로젝트 구성에 대한 오케스트레이션 작업 세부사항을 볼 수도 있습니다. 환경 관리자 그룹 권한이 있으면 동일한 환경에 대한 공개자가 개별 프로젝트 구성에 대해 설정하는 권한을 편집할 수 있습니다.

환경 관리자 그룹의 구성원이 환경 공개자 그룹 및 환경 사용자 그룹 권한을 갖지만, 환경 관리자 그룹의 구성원은 명시적으로 해당 사용자를 추가할 때까지 동일한 환경의 다른 그룹에 표시되지 않습니다.

- **환경 공개자 그룹.** 특정 환경에서 프로젝트 권한을 제공합니다. 사용자가 환경에서 공개하는 모든 프로젝트에 대한 프로젝트 구성을 작성, 배치 또는 삭제하도록 허용합니다. 이 그룹의 사용자는 또한 오케스트레이션을 시작 및 중지하고 환경에서 배치한 프로젝트 구성에 대한 오케스트레이션 작업 세부사항을 볼 수 있습니다. 환경 공개자는 자신이 작성하는 개별 프로젝트 구성에 대한 권한을 동일한 환경에 대한 환경 공개자 권한을 갖는 다른 사용자에게 부여할 수 있습니다.

환경 공개자 그룹의 구성원은 명시적으로 해당 사용자를 추가할 때까지 환경 사용자 그룹에 나타나지 않습니다.

- **환경 사용자 그룹.** 사용자가 특정 환경의 경보 및 오케스트레이션을 모니터링하도록 허용합니다. 이 그룹의 사용자는 프로젝트를 작성 및 편집할 수 있지만, 프로젝트를 환경에 공개할 수 없습니다. 프로젝트를 공개하려는 특정 환경에 대한 공개자 권한이 있어야 합니다. 모든 사용자는 자동으로 환경 사용자 그룹의 구성원입니다.

복수 환경 테넌트에서는 이 그룹의 사용자가 자신이 구성원인 환경에 대한 환경 탭만 봅니다. 예를 들어, 테넌트가 Development, Staging 및 Production 환경을 갖고 있습니다. 테넌트 관리자 또는 Development 환경의 관리자가 사용자를 User [Development] 그룹에 추가합니다. 해당 사용자는 테넌트에 로그인할 때 테넌트가 두 개의 다른 환경을 갖고 있지만 Development 환경만 볼 수 있습니다.

## 라이브러리 환경 정보

라이브러리 환경은 Studio가 커넥터 라이브러리를 검색하는 환경을 지정하는 사용자 프로파일 매개변수입니다.

복수 환경 테넌트에서, 각 환경은 잠재적으로 여러 버전의 커넥터 라이브러리가 설치되어 있을 수 있습니다. 이 매개변수를 설정하면 Studio에 프로젝트를 확인하면서 사용하기 원하는 라이브러리를 가리킵니다. 프로젝트가 추가 라이브러리가 설치되어야 하는 엔드포인트를 사용하지 않는 경우 이 매개변수는 중요하지 않습니다. 추가 라이브러리를 설치해야 하는 엔드포인트의 전체 목록에 대해서는 커넥터 릴리스 Notes<sup>®</sup>를 참조하십시오.

참고: 사용자가 선택하는 환경이 사용자가 구성원인 기본 그룹의 환경과 일치해야 합니다. 예를 들어, Development 환경을 라이브러리 환경으로 선택하는 경우 Development 환경에 있는 그룹의 구성원이어야 합니다.

다음 테이블은 인증서 용어에 대한 정의를 제공합니다.

인증서 용어	정의
별명	보다 사용자에게 친숙한 이름을 제공하기 위해 키 저장소 또는 신뢰 저장소 항목에 지정하는 영숫자 문자의 문자열입니다. 키 저장소 또는 신뢰 저장소 내에서 별명을 사용하여 키와 인증서를 참조할 수 있습니다. 참고: 별명은 대소문자를 구분하지 않습니다. 예를 들어, MyCert와 mycert는 동일한 항목을 참조합니다.
인증서	엔드포인트 또는 조직을 식별하는 서명된 신임 정보입니다.
키 쌍	공개 키 및 연관된 개인 키입니다.
키 저장소	Java™ SSL 엔드포인트가 사용하는 개인 및 인증서를 수용하는 Java 데이터 저장소입니다. 예를 들어, 로컬 Java 엔드포인트는 자신을 원격 SSL 엔드포인트에 식별하기 위해 키 저장소의 인증서를 신임 정보로서 제공합니다.
PKI	공개 키 인프라(PKI)는 암호화 키 및 식별 정보를 관리하기 위한 시스템입니다. 시스템의 목적은 인터넷을 통한 통신 보호/보안을 위해 표준 기반 시스템을 제공하는 것입니다.
개인 키	데이터를 암호화 및/또는 서명하는 데 사용되는 단일 엔드포인트에만 알려지는 키입니다.
공개 키	누구에게나 분배될 수 있는 개인 키와 연관된 키입니다.
SSL	SSL(Secure Socket Layer)은 보안 웹 통신을 가능하게 하고 엔드포인트가 선택적으로 서로 인증하도록 허용합니다.
신뢰 저장소	인증 기관 서명 인증서를 수용하는 Java 데이터 저장소입니다. 예를 들어, 로컬 Java 엔드포인트는 신뢰 저장소를 이용하여 원격 SSL 엔드포인트에 의해 제공되는 ID(인증서)를 인증합니다.

## 보안 설정 편집

### 프로시저

1. 설정 섹션에서 편집을 클릭하십시오. 설정 편집 대화 상자가 표시됩니다.
2. 대응하는 카테고리에서 사용할 인증서를 선택하십시오. 예: 클라이언트 SSL, 데이터 NIC를 통한 서버 SSL, mgmt NIC를 통한 서버 SSL.
3. 적절한 경우 VPeer 선택란을 선택하십시오.
  - VPeer 선택은 통합 어플라이언스가 피어에 의해 제공되는 인증서를 사용하여 SSL 피어의 ID를 인증함을 의미합니다.
  - 클라이언트 SSL 카테고리에 대해 선택될 때, 통합 어플라이언스는 서버가 전송하는 인증서를 사용하여 SSL 서버의 ID를 인증합니다.
  - 데이터 NIC를 통한 서버 SSL 카테고리에 대해 선택될 때, 통합 어플라이언스는 통합 어플라이언스에 연결하는 SSL 클라이언트가 인증서를 전송해야 함을 요구합니다.
4. 적절한 경우 VHost 선택란을 선택하십시오.
  - VHost 선택은 통합 어플라이언스가 SSL 세션에 있는 서버의 호스트 이름이 서버 인증서에 포함된 이름과 일치함을 확인함을 의미합니다. 이 선택은 중간자(man-in-the-middle; MITM) 공격을 막기 위해 설계되며 RFC 2818 *HTTP Over TLS* Section 3.1 *Server Identity*에서 설명됩니다.
  - VHost 선택은 클라이언트 SSL 카테고리에만 적용할 수 있습니다.
  - VHost 선택은 VPeer도 선택될 때만 적용할 수 있습니다.
5. 암호화 수준을 선택하십시오.
  - 표준
  - 강함

## LDAP 디렉토리 서버 사용 설정

### 이 태스크 정보

WMC에서 LDAP 서버가 사용자 인증 및 권한 부여를 처리하게 할 것을 선택할 수 있습니다. LDAP 디렉토리 서버를 사용으로 설정할 때, LDAP 디렉토리 서버의 인증 및 권한 부여가 기본 제공 관리 사용자의 경우를 제외하고 WMC를 통해 지정한 모든 사용자, 그룹 또는 권한을 대체합니다. 그러므로 관리 사용자는 예외로 하고 LDAP 디렉토리 서버 또는 WMC를 통해

(둘 다는 아님) 사용자 및 그룹을 인증 및 권한 부여할 수 있습니다. LDAP을 사용으로 설정하는지 여부와 상관없이, CLI를 통해 관리 사용자 비밀번호를 업데이트할 수 있습니다.

참고: LDAP 사용자는 스테이징 데이터베이스에 액세스할 수 없습니다.

## 프로시저

1. 탐색 분할창에서 보안 > LDAP을 선택하십시오. LDAP 구성 페이지가 표시됩니다.
2. LDAP 사용 옵션을 선택하십시오. 이 옵션을 선택하지 않는 경우, 통합 어플라이언스는 사용자가 WMC에서 정의한 기본 제공 그룹 및 사용자를 사용하여 사용자 및 WMC에 대한 액세스를 인증 및 권한 부여합니다.
3. 호스트 정보를 지정하십시오.
  - a. LDAP 디렉토리 서버의 호스트 이름과 포트 번호를 입력하십시오.
  - b. 기본 DN(기본 식별 이름)을 선택하거나 폐치 DN을 클릭하십시오. WMC는 LDAP 디렉토리 서버로부터 모든 디렉토리 정보 트리(DIT)의 기본 DN을 폐치합니다. 권한 부여하려는 사용자를 포함하는 DIT의 기본 DN을 선택하십시오.
4. 다음 보안 옵션 중 하나를 선택하십시오.
  - **보안 연결(SASL) 사용** - LDAP 디렉토리 서버가 지원하는 SASL(Simple Authentication and Security) 메커니즘을 사용으로 설정합니다. 이것이 가장 안전한 옵션입니다.
  - **단순 인증 사용** - 단순 인증을 사용으로 설정하지만, 신임 정보를 암호화하지 않습니다.
  - **익명 바인딩** - LDAP 디렉토리 서버에 대한 익명 바인딩을 사용으로 설정합니다. 이것이 가장 덜 안전한 옵션입니다.
5. 보안 연결(SASL) 사용 보안 옵션을 선택한 경우, 메커니즘을 지정하고 메커니즘 특성 및 메커니즘 정책을 구성하십시오.
6. LDAP 디렉토리 서버가 디렉토리 검색을 위한 인증을 요구하는 경우, 신임 정보 섹션에 있는 프린시פל 및 비밀번호에 대한 값을 지정하십시오. 작성된 DN 모드 인증 모드를 선택할 때는 이 단계가 필요하지 않습니다. 그러나 이 단계는 LDAP 디렉토리 서버가 익명 검색을 허용하지 않을 때 DN 또는 메커니즘을 폐치하기 위해 필요할 수 있습니다.

비밀번호를 지정하지 않는 경우, WMC는 익명 사용자로서 LDAP 서버로의 초기 바인딩을 작성하려고 시도하며 LDAP 서버는 사용자가 지정한 프린시פל 신임 정보를 무시합니다.

7. 다음 인증 모드 중 하나를 선택하십시오.
  - 작성된 DN 모드
  - 검색된 DN 모드
8. 사용자 컨테이너 RDN을 지정하십시오. 사용자가 지정하는 인증 모드가 여기에서 지정해야 하는 값을 판별합니다.
  - 작성된 DN 모드를 선택한 경우, 사용자 컨테이너 RDN이 사용자 DN의 하나 이상의 속성으로 작성됩니다. 사용자의 바로 위 조상부터 기본 바로 아래의 항목까지 트리를 따라 이동하고 경로에 각 항목의 RDN을 추가하여 사용자 컨테이너 RDN을 구성하십시오.

예를 들어,

```
User DN = "uid=JohnK,ou=emp,dc=xyz,dc=com"
```

인 경우

```
사용자 컨테이너 RDN = "ou=emp"
```

- 검색된 DN 모드를 선택한 경우 사용자 컨테이너 RDN은 대개 공백으로 남는데, 이것은 LDAP 디렉토리 서버가 루트(기본)에서 시작하여 전체 DIT를 검색하게 만듭니다. 그렇지 않으면, LDAP 디렉토리 서버가 DN = User Container RDN + BaseDN을 갖는 항목에 루트를 갖는 서브트리를 검색합니다.
9. 검색된 DN 모드를 선택한 경우, LDAP 디렉토리 서버가 사용자 DN을 검색하기 위해 사용하는 사용자 검색 필터를 지정하십시오(검색 DN 모드를 선택하는 경우에만 필수임). 이 항목은 LDAP 검색 필터 스펙을 허용하며 또한 \$USERNAME 양식의 사용자 이름도 허용합니다. 예를 들면,
    - MSAD에서 이 항목은 "(samAccountName=\$USERNAME)"일 수 있습니다.

- o SunOne에서 이 항목은 "(uid=\$USERNAME)"일 수 있습니다.
10. LDAP 디렉토리 서버가 검색 후에 바인드하는 사용자의 DN을 지정하는 사용자 프린시플 DN을 지정하십시오.  
\$USERNAME 또는 \$DN을 지정하여 사용자 이름 및 식별 이름을 나타낼 수 있습니다. 여기서 \$DN은 작성 DN 모드  
의 경우 (RDN+BaseDN) 및 검색 DN 모드의 경우 검색된 DN을 나타냅니다. 대부분의 경우 \$DN은 항목입니다. 그  
러나, MSAD에서 SASL을 사용할 때는 \$USERNAME만 지정해야 할 수 있습니다. SunOne의 SASL의 경우  
"dn:\$DN"만 지정해야 할 수 있습니다.
  11. 그룹 맵핑 정보를 지정하십시오.
    - a. 관리 그룹 필터를 지정하십시오.
    - b. 공개자 그룹 필터를 지정하십시오.
    - c. 그룹 필터를 지정하십시오.
  12. 저장을 클릭하십시오.

## 아카이브된 로그 정보

---

로그는 로컬로 아카이브하거나 FTP 서버로 내보낼 수 있습니다. WMC에서 로컬로 아카이브된 로그를 다운로드할 수 있습니다(로그 > 아카이브 로그).

오케스트레이션 모니터링 로그를 아카이브 또는 영구 제거할 수 있습니다. 오케스트레이션 모니터링 로그 파일을 아카이브 하도록 매개변수를 구성할 때, 통합 어플라이언스는 추가 오케스트레이션 모니터링 데이터를 영구 제거하도록 통합 어플라이언스를 트리거하는 조건을 풀링하기 전에 로그 파일을 아카이브합니다. 통합 어플라이언스의 로컬 디스크로 오케스트레이션 모니터링 데이터를 아카이브하거나 FTP 서버로 아카이브를 내보낼 수 있습니다. 아카이브 설정을 구성하지 않는 경우, 통합 어플라이언스는 기본 영구 제거 트리거 조건을 만족하는 모든 오케스트레이션 모니터링 데이터를 영구 제거합니다.

탐색 페이지에서 로그 > 아카이브 로그를 선택하여 아카이브된 로그 파일을 볼 수 있습니다. 로그를 내보낼 때 통합 어플라이언스가 `orcmon_export_<timestamp>.xml` 규약을 사용하여 내보낸 오케스트레이션 모니터링 로그의 이름을 지정합니다.

## 오케스트레이션 모니터링 로그를 로컬로 아카이브

---

### 이 태스크 정보

로컬 파일에 영구 제거된 모니터링 데이터 아카이브 옵션을 선택하고 로그 영구 제거 트리거 조건 중 하나가 만족될 때, 통합 어플라이언스는 오케스트레이션 모니터링 로그를 통합 어플라이언스의 로컬 디스크로 내보냅니다.

참고: 오케스트레이션 모니터링 로그를 로컬로 아카이브할 때, 통합 어플라이언스의 디스크 공간의 가용성을 줄입니다. 디스크 공간이 채워질 때 영구 제거 트리거 조건이 더 빨리 아카이브를 생성합니다.

### 프로시저

1. 탐색 분할창에서 로그 > 작업 로그를 선택하십시오. 결과 페이지가 모든 오케스트레이션 모니터링 로그를 표시합니다.

2. 설정을 클릭하십시오. 작업 로그 설정 대화 상자가 표시됩니다.
3. 아카이브를 클릭하십시오.
4. 아카이브 설정 섹션에서 로컬 파일이 되도록 영구 제거된 모니터링 데이터 아카이브를 선택하십시오.
5. 이전에 내보낸 오케스트레이션 모니터링 로그를 대체하려면 내보낸 파일 대체를 선택하십시오. 이 옵션을 선택하지 않는 경우, 통합 어플라이언스는 오케스트레이션 모니터링 로그를 누적해서 저장합니다. 이것은 통합 어플라이언스가 매우 빨리 디스크 공간이 부족하도록 실행하고 성급하게 영구 제거를 트리거하게 만들 수 있습니다.
6. 저장을 클릭하십시오.

## 결과

통합 어플라이언스는 오케스트레이션 모니터링 로그를 로컬로 아카이브합니다. 아카이브 목록에서 아카이브를 선택하고 다운로드를 클릭하여 로컬로 저장된 아카이브를 다운로드할 수 있습니다.

## FTP 서버로 이용률 데이터 아카이브

### 이 태스크 정보

통합 어플라이언스는 디스크 사용량, 메모리 사용량, 가비지 콜렉션 및 실행 중인 작업 수에 관한 데이터를 수집합니다. 이 자원 이용률 데이터는 런타임의 전체 성능 상태를 분석하고 추가 프로젝트를 위한 사용 가능 용량을 계산하는 데 도움이 될 수 있습니다. 통합 어플라이언스는 이 데이터를 maestro.stat라는 파일에 저장하며 데이터의 스냅샷을 FTP 서버로 아카이브하는 옵션을 제공합니다. 적절한 옵션을 선택할 때, 통합 어플라이언스에서 사용 가능한 모든 이용률 데이터가 수집되며 지정된 FTP 서버로 아카이브됩니다.

아카이브 파일이 작성되고 FTP 서버로 전송된 후, 통합 어플라이언스는 계속해서 새 이용률 데이터를 히스토리 이용률 데이터에 집계합니다. 히스토리 이용률 데이터는 아카이브가 FTP 서버로 전송될 때 통합 어플라이언스에서 영구 제거되지 않습니다.

FTP 서버로 아카이브 전송 옵션을 선택하면 매일 자정에 이용률 데이터의 스냅샷을 전송합니다. 다음 프로시저는 옵션 선택 방법을 설명합니다.

## 프로시저

1. 탐색 분할창에서 로그 > 작업 로그를 선택하십시오. 결과 페이지가 모든 오케스트레이션 모니터링 로그를 표시합니다.
2. 설정을 클릭하십시오. 작업 로그 설정 대화 상자가 표시됩니다.
3. 아카이브를 클릭하십시오.
4. FTP 서버로 아카이브 이용률 데이터를 전송(자정에)을 선택하십시오.

## 오케스트레이션 모니터링 로그 영구 제거

오케스트레이션 모니터링 로그를 영구 제거 및 아카이브할 수 있습니다.

### 이 태스크 정보

통합 어플라이언스가 오케스트레이션 모니터링 데이터를 영구 제거할 때, 대시보드가 업데이트된 작업 계수를 표시하는 데 몇 분이 걸릴 수 있습니다.

기본적으로, 통합 어플라이언스는 다음 조건 중 하나가 통합 어플라이언스에서 발생할 때 30일이 지난 오케스트레이션 모니터링 로그를 영구 제거합니다.

- 사용 가능한 디스크 공간의 양이 50% 아래로 떨어집니다.
- 마지막 영구 제거 이후 하루가 지났습니다.
- 5,000개가 넘는 오케스트레이션 작업이 완료되었습니다.
- 1,000개가 넘는 오케스트레이션 작업이 오류를 포함했습니다.

WMC를 사용하면 통합 어플라이언스에서 다음을 판별하는 작업 로그 영구 제거 매개변수를 구성할 수 있습니다.

- 트리거 조건 - 오케스트레이션 모니터링 데이터를 영구 제거하기 위해 통합 어플라이언스를 트리거하는 조건입니다.

- 빈도 - 오케스트레이션 모니터링 데이터를 영구 제거하는 빈도입니다.
- 작업 범위 - 영구 제거할 오케스트레이션 모니터링 데이터의 유형입니다.

## 작업 로그 영구 제거 매개변수

### 트리거 조건

통합 어플라이언스의 디스크 여유 공간의 크기, 마지막으로 오케스트레이션 모니터링 로그가 영구 제거된 이후의 경과 시간, 완료된 작업 수, 오류를 포함하는 작업의 수가 모두 오케스트레이션 모니터링 로그의 영구 제거 또는 아카이브를 시작할 수 있는 모든 트리거입니다. 통합 어플라이언스는 트리거 조건 중 하나가 발생할 때 "OR" 로직을 사용하고 오케스트레이션 모니터링 데이터를 영구 제거합니다.

## 시스템 로그 설정 지정

시스템 로그에 나타나는 세부사항의 레벨을 지정할 수 있습니다. 사용자가 지정하는 로그 레벨이 알림 정책에 대한 경보에 영향을 줍니다. 경보는 사용자가 지정하는 로그 레벨을 만족하거나 초과하는 이벤트에 대해서만 전송됩니다.

## 이 태스크 정보

시스템 로그 레벨이 다음 표에 표시됩니다. 설명 열은 각 레벨의 설명을 제공하며 Cast Iron 관리 API 로그 레벨에 대응하는 방법을 설명합니다.

심각도	설명
INFO	정보 메시지. (Cast Iron 관리 API "INFO" 로그 레벨에 대응합니다.)
WARNING	경고 메시지. (Cast Iron 관리 API "WARNING" 로그 레벨에 대응합니다.)

## 어플라이언스 관리

이제 웹 관리 콘솔에서 다른 어플라이언스를 관리할 수 있습니다. 이 기능은 복수 어플라이언스를 가질 때 유용하며, 단일 콘솔에서 이들 어플라이언스를 관리할 수 있습니다.

한 어플라이언스가 마스터 어플라이언스로 지정되는데, 이것은 다른 어플라이언스를 관리하는 데 사용됩니다.

다음 기능이 어플라이언스 관리의 일부로 사용 가능합니다.

- 어플라이언스는 마스터 어플라이언스에 등록 및 등록 해제될 수 있습니다.
- 마스터 어플라이언스에서 각 어플라이언스의 자원 이용률 세부사항을 볼 수 있습니다. 자원 이용률 그래프에 대한 자세한 정보는 [자원 이용률 그래프 정보](#)의 내용을 참조하십시오.
- 마스터 어플라이언스에서 각 어플라이언스의 게시되는 프로젝트 및 각 프로젝트/오케스트레이션의 상태를 볼 수 있습니다.
- 마스터 어플라이언스에서 각 등록된 어플라이언스의 업그레이드를 수행할 수 있습니다.
- 물리적 및 가상 어플라이언스를 둘 다 지원합니다.
- 관리 및 모니터링을 위해 Cast Iron® 버전 7.0 및 이전 버전(6.0.0.x, 6.1.x.x, 6.3.x.x, 6.4.x.x)을 지원합니다. Cast Iron의 이전 버전은 이 기능 사용을 위한 필수 패치 레벨에 있어야 합니다.
- 마스터 어플라이언스의 사용자는 이 기능을 사용할 관리자 권한을 가져야 합니다.
- 이 기능은 또한 어플라이언스가 고가용성에 대해 구성될 때도 사용할 수 있습니다.
- [어플라이언스 등록, 편집 및 등록 해제](#)
- [Cast Iron 어플라이언스 업그레이드](#)

## 명령 인터페이스에 대한 정보

Cast Iron® 명령 인터페이스(CLI)를 통해 관리자는 통합 어플라이언스를 관리하고 해당 구성 정보를 유지보수 및 업데이트 할 수 있습니다.

CLI는 통합 어플라이언스에 미리 설치되며, 이 문서에서 설명하는 명령에 응답할 수 있습니다.

참고: CLI는 대소문자를 구분합니다. 일반적으로 소문자를 사용하여 명령과 키워드를 입력해야 합니다.

관리자로 로그인한 사용자만 CLI를 사용할 수 있습니다. 둘 이상의 관리자가 동시에 통합 어플라이언스에 로그인할 수 없습니다.

### CLI에 로그인

SSH(Secure Shell) 세션, 터미널 에뮬레이션 또는 Telnet을 사용하여 통합 어플라이언스에서 CLI에 로그인할 수 있습니다. 기본적으로, 보안 관리는 통합 어플라이언스에서 사용 가능하며, 통합 어플라이언스에 액세스하려면 보안 연결을 사용해야 합니다. 보안 연결은 통합 어플라이언스 설치에서 제공한 기본 호스트 키를 사용합니다.

SSH 클라이언트 또는 Telnet 클라이언트를 사용하여 CLI에 로그인하는 경우 연속해서 로그인에 5회 실패하면(사용자 또는 시간에 상관없이) 잠금이 트리거됩니다. 잠금은 사용자에 상관없이 분당 1회의 로그인 시도로 제한됩니다. 로그인에 성공하면 로그인 실패 횟수가 재설정되고 잠금이 종료됩니다.

### CLI에서 로그아웃

명령 프롬프트에서 `exit` 명령을 사용하여 CLI에서 로그아웃합니다. 그러면 터미널 에뮬레이션 또는 Telnet 세션 연결도 닫힙니다.

### CLI 도움말 보기

CLI에서 `help` 또는 `?`를 입력하여 명령 카테고리 목록을 볼 수 있습니다. 특정 카테고리에 있는 명령에 대한 구문 도움말을 보려면 `Category help`를 입력합니다. 예를 들어, `net help` 또는 `net ?`는 각 네트워크 명령에 대한 구문 정보를 나열합니다.

Tab 완성으로 CLI 구문을 안내하기도 합니다. CLI에서 부분 명령을 입력하고 Tab 키를 누르면 됩니다. Tab 키를 누르면 명령이 완성되거나 명령 구문을 완성할 옵션 목록을 제공합니다.

참고: Tab 완성은 CLI 구문에서 공백을 인식합니다. 예를 들어, CLI에 `system show`를 입력하고 Tab 키를 누르면 결과가 나타나지 않습니다. `show` 뒤에 공백을 추가하고 Tab 키를 눌러야 올바른 명령 매개변수가 표시됩니다.

### 명령 규칙

다음 규칙을 사용하여 명령 구문 규칙을 설명합니다.

표 1.

규칙	설명
----	----

규칙	설명
keyword <value>	대부분의 명령 매개변수는 키워드 및 값을 결합합니다. 일부 매개변수에는 값이 필요하지 않을 수도 있습니다.
<value>	매개변수의 값은 꺾쇠괄호로 묶습니다. 대부분의 경우 표시된 텍스트는 사용자가 제공한 정보 유형(예: <hostname>)을 나타냅니다. 값은 명시적일 수 있습니다(예: <yes>).
[x]	선택적 매개변수는 대괄호로 묶습니다.
{x y z}	필수 매개변수 그룹은 중괄호로 묶습니다.
x / y / z	선택사항은 막대로 분리되며 하나만 선택합니다.
x...	두 번 이상 나타날 수 있는 매개변수는 말 줄임표가 뒤에 나옵니다.

### 프로시저

1. 직렬 케이블을 사용하여 콘솔 또는 랩탑 컴퓨터를 통합 어플라이언스에 연결하십시오. 통합 어플라이언스에서 직렬 포트에 대한 터미널 에뮬레이션 소프트웨어를 실행하는 PC 또는 ASCII 터미널 사이에 직렬 연결이 존재해야 합니다.
2. 포함된 직렬 케이블을 사용하여 통합 어플라이언스에서 직렬 커넥터에 터미널 또는 PC를 연결하십시오. 터미널 또는 PC에 직렬 포트가 없고 USB 포트만 있는 경우 USB 및 직렬 간 변환기 케이블(포함되지 않음)을 사용하십시오.
3. 플로우 제어 조작이 없는 표준 9600 8N1에 대해 터미널 또는 PC를 구성하십시오. 8N1은 비동기 모드에서의 직렬 구성에 대한 표기이며, 여덟 개의 데이터 비트(8), 패리티 비트 없음(N), 하나의 정지 비트(1)를 나타냅니다. 터미널 또는 PC에 권장되는 터미널 에뮬레이션은 VT100입니다.

### 결과

통합 어플라이언스에 로그인하면 통합 어플라이언스의 호스트 이름으로 프롬프트가 변경됩니다.

통합 어플라이언스는 다음 모드 중 하나일 수 있습니다.

### 활성

활성 모드에서 데이터를 처리하는 고가용성(HA) 쌍의 통합 어플라이언스입니다. 이 모드에서는 모든 CLI 명령을 실행할 수 있습니다. 활성 통합 어플라이언스는 다음 상태 중 하나일 수 있습니다.

- 활성 1 - 활성 통합 어플라이언스가 해당 HA 피어와 통신하지 않습니다. 피어 통합 어플라이언스가 다시 부팅되거나 R1 및 R2 케이블 연결이 끊어진 경우 이 상태가 나타날 수 있습니다.
- 활성 2 - 활성 통합 어플라이언스가 해당 HA 피어와 통신하고 있습니다.

### 유휴

사용자 조치를 필요로 하는 오류가 발생하면 통합 어플라이언스가 유휴 모드로 설정됩니다. 이 상태는 활성이 아닌 통합 어플라이언스가 활성 또는 대기 모드로 설정될 수 없음을 나타냅니다. HA 쌍에 포함된 통합 어플라이언스만 유휴 모드로 설정됩니다. 이 모드에서는 `diagnet`, `ha`, `netspect`, `system` 명령을 실행할 수 있습니다.

### 독립형

모든 메시지를 처리하는 단일 통합 어플라이언스입니다. 독립형 통합 어플라이언스는 HA 쌍에 포함될 수 없습니다. 이 모드에서는 HA 쌍과 연관된 명령을 제외한 모든 명령을 실행할 수 있습니다.

### 대기

HA 쌍에서 대기 모드로 실행되는 활성 통합 어플라이언스의 처리를 모니터하는 통합 어플라이언스입니다. 대기 모드에서 실행 중인 통합 어플라이언스는 활성 모드에서 실행 중인 통합 어플라이언스와 동기화 상태를 유지하며, 활성 통합 어플라이언스가 중단된 경우 처리를 인계할 준비를 합니다. 이 모드에서는 `ha` 및 `system` 명령을 실행할 수 있습니다.

### 알 수 없음

HA 쌍에서 활성 통합 어플라이언스가 대기 통합 어플라이언스의 상태를 알 수 없는 경우입니다.

## 일반적인 HA 쌍 모드 조합

---

HA 쌍에 대한 작업을 수행하는 경우 다음 모드 조합이 일반적입니다.

- `ACTIVE_2` 및 `STANDBY` - 활성 시스템이 해당 피어와 통신하거나 그 반대의 상황입니다. 대기 피어가 활성 피어에서 모든 데이터를 동기화한 후에만 쌍이 고가용성입니다.
- `ACTIVE_2` 및 `IDLE` - 사용자가 `ha disconnect` 명령을 실행했을 수 있기 때문에 활성 시스템이 피어 시스템과 연결이 끊어졌습니다. `ha connect` 명령을 실행하여 HA 쌍을 복원합니다.
- `ACTIVE_1` 및 `UNKNOWN` - 피어가 다시 부팅되거나 전원이 꺼졌거나 케이블 연결이 끊어졌을 수 있기 때문에 활성 시스템이 해당 피어와 통신하지 않습니다.

net set 및 net show 명령의 경우 다음 주제를 참조하십시오.

- **net set 명령**  
통합 어플라이언스, DNS 서버, 호스트 이름, 기본 게이트웨이의 네트워크 인터페이스에 대한 구성을 설정합니다. net set autohost 명령을 선택하여 통합 어플라이언스에 호스트 이름/IP 주소를 자동으로 추가합니다. 또한 유실된 캐리어를 보고하기 전에 시간을 설정할 수도 있습니다.
- **net show 명령**  
이 명령은 통합 어플라이언스에 대한 모든 네트워크 구성을 표시합니다. 또한 이 명령은 네트워크 인터페이스, DNS 서버, 호스트 이름, 기본 게이트웨이, 라우팅 테이블, 소켓 연결에 대한 특정 구성 정보를 표시합니다. net set autohost 명령을 사용하는 경우 net show autohost를 사용하여 autohost의 현재 설정을 봅니다.

## net set 명령

통합 어플라이언스, DNS 서버, 호스트 이름, 기본 게이트웨이의 네트워크 인터페이스에 대한 구성을 설정합니다. net set autohost 명령을 선택하여 통합 어플라이언스에 호스트 이름/IP 주소를 자동으로 추가합니다. 또한 유실된 캐리어를 보고하기 전에 시간을 설정할 수도 있습니다.

DHCP 서버가 없는 네트워크에서 시작 시간을 향상시키기 위해 모든 항목을 특정 값으로 구성하거나 값을 구성하지 않습니다. 그러면 통합 어플라이언스는 DHCP 서버를 검색하지 않습니다.

DHCP를 통해 값을 얻도록 구성한 경우 통합 어플라이언스는 사용 가능한 DHCP 서버를 찾기 때문에 시작 시간이 지연될 수 있습니다.

통합 어플라이언스의 네트워크 인터페이스는 다음 이름을 사용합니다.

- edata - 모든 통합 데이터를 처리하는 인터페이스의 경우
- emgmt - CLI 및 웹 관리 콘솔(WMC) 모두를 포함하여 관리 트래픽을 처리하는 인터페이스의 경우

표 1.

옵션	설명
autohost	통합 어플라이언스가 고유한 호스트 이름에서 해당 IP 주소를 찾을 수 있습니다. 이 옵션을 사용하는 경우 통합 어플라이언스가 DNS 또는 수동으로 /etc/hosts 디렉토리에 입력한 항목을 통해 해당 호스트 이름에 대응하는 IP 주소를 찾을 수 없으면 통합 어플라이언스는 CIOS가 정상적으로 작동하도록 /etc/hosts 디렉토리에 항목을 자동으로 추가합니다. net set autohost 명령을 통해 이 옵션을 사용하거나 사용 해제합니다.
carrier	누락된 이더넷 링크 캐리어가 오류로 보고될 때까지 시간(초)을 지정합니다. 값을 0으로 설정하면 캐리어 검사를 사용하지 않으며, 오류는 보고되지 않습니다.
domain	이 통합 어플라이언스에 대한 도메인 이름을 설정합니다. 그 결과, 이 도메인에서 이름에 대한 대부분의 조회는 로컬 도메인에 상대적인 간단한 이름을 사용할 수 있습니다.
gateway	게이트웨이 및 해당 게이트웨이에서 사용할 인터페이스를 지정합니다. 통합 어플라이언스는 관리 및 데이터 트래픽 모두에 대해 하나의 기본 게이트웨이만 지원하지만(인터페이스당 하나의 게이트웨이와는 반대됨), 추가 라우트를 별도로 추가할 수 있습니다.
hostname	통합 어플라이언스의 이름을 설정합니다. 도메인 이름 없이 간단한 호스트 이름이어야 합니다.
interface	지정된 인터페이스에 대한 IP 주소, 넷마스크, 브로드캐스트 주소를 설정합니다.
link	autonegotiate(기본값) 또는 특정 값으로 이더넷 링크를 설정합니다. 대부분의 경우 autonegotiate가 선호되지만, 특정 값을 설정하면 네트워크 조건이 최적이지 아닌 경우에 처리량을 향상시키는 데 도움을 줄 수도 있습니다.
mtu	MTU(Maximum Transmission Unit) 크기를 (68-9000)의 범위로 설정합니다. 기본 MTU는 1500입니다.

옵 션	설명
n a m e s e r v e r	DNS 서버 목록(최대 2개)을 설정합니다.
nt p	시간 서버를 설정합니다.
s e a r c h	검색 목록을 지정합니다. 이 옵션을 설정하지 않으면 검색 목록은 도메인 설정의 값과 동일합니다.

## 시간 명령

시간 명령을 사용하면 통합 어플라이언스에서 날짜 및 시간을 설정하거나 동기화할 수 있습니다.

참고: 가상 어플라이언스에서 시간 차이를 방지하기 위해 호스트 및 게스트에서 NTP를 실행합니다. NTP를 실행하면 시스템 시간이 UTC로 설정됩니다. 가상 어플라이언스에서 시간을 재설정하는 데 time set clock 명령을 사용하지 마십시오.

## 고가용성 쌍에 대한 정보

고가용성(HA) 쌍은 두 개의 물리적 통합 어플라이언스를 함께 연결하는 통합 어플라이언스 구성으로, 이를 통해 이 두 통합 어플라이언스에서 데이터를 동기화하고 장애 복구 조작을 수행할 수 있습니다. HA 쌍을 구성하는 시스템은 동일한 MAC 및 IP 주소를 공유하므로, 단일 네트워크 ID를 작성합니다.

HA 쌍에는 하나의 활성 통합 어플라이언스와 하나의 대기 통합 어플라이언스가 있습니다. 오케스트레이션을 활동적으로 처리하는 통합 어플라이언스는 활성 시스템입니다. 자동으로 데이터를 동기화하고 장애 복구 조작을 수행하는 통합 어플라이언스는 대기 시스템입니다. HA 쌍을 구성하는 시스템이 처음에 서로 연결되어 있는 경우 즉시 서로 동기화하고 활성 역할을 맡은 시스템과 대기 역할을 맡을 시스템을 판별합니다. 초기 동기화 조작 중에 활성 시스템은 오케스트레이션을 처리할 수 있지만, HA 쌍이 완전히 동기화되기 전에는 장애 복구가 수행되지 않습니다. HA 쌍이 동기화되면 HA 쌍은 데이터를 지속하고 두 시스템 사이에서 이 데이터를 자동으로 동기화합니다.

활성 시스템에서 장애가 발생하면 대기 시스템이 인계 프로시저를 시작하고, 활성 시스템이 되며 다른 시스템이 중지했던 바로 그 위치에서 오케스트레이션 처리를 재개합니다. 인계 프로세스는 일반적으로 완료하는 데 1분 미만이지만, DHCP 응답 시간으로 인해 인계 프로세스가 느려질 수 있습니다. 인계 프로시저 중에 대기 시스템은 활성 시스템의 전원 사이클을 수행하여 활성 시스템이 오케스트레이션을 계속 처리하지 않도록 보장합니다. 대기 시스템이 성공적으로 장애가 발생한 활성 시스템의 전원 사이클을 마칠 수 있는 경우에만 활성 시스템이 됩니다. 대기 시스템이 활성 시스템의 전원 사이클을 마칠 수 없으면 대기 시스템은 IDLE 상태가 됩니다.

HA 장애 복구가 나타날 수 있는 장애의 예로는 다음 장애가 포함됩니다.

- CPU, 하드 드라이브, RAM, 마더보드, 네트워크 인터페이스, 전원 공급 장치, RAID 컨트롤러에서 생성된 하드웨어 장애.
- 통합 어플라이언스 런타임 장애(예: 처리 중 심각한 오류).
- 복제 포트 네트워크 인터페이스 문제 또는 복제 케이블 문제로 인해 발생하는 통합 어플라이언스 간 통신 장애.

활성 시스템이 대기 시스템과 연결이 끊어지면 활성 시스템은 비동기 데이터 커미트를 방지하고 대기 시스템이 인계 프로시저를 시작하는지 확인하기 위해 오케스트레이션 실행을 중지합니다. 대기 시스템이 활성 시스템의 전원 사이클을 마치지 못하면 활성 시스템이 오케스트레이션 처리를 재개합니다. 대기 시스템이 활성 시스템에 다시 연결할 수 있으면 대기 시스템은 활성 시스템과 동기화됩니다.

WMC를 통해 HA 쌍의 상태를 모니터하고 HA 쌍에서 통합 어플라이언스의 역할을 조작할 수 있습니다.

## 통합 어플라이언스 상태에 대한 정보

고가용성(HA) 쌍에서 통합 어플라이언스는 여러 상태 중 하나일 수 있습니다. 다음은 HA 쌍에서 통합 어플라이언스 상태입니다.

다음은 HA 쌍에서 통합 어플라이언스 상태입니다.

### ACTIVE\_1

활성 시스템이 대기 시스템과 통신할 수 없지만 활성 시스템이 계속 데이터를 처리합니다.

### ACTIVE\_2

활성 시스템이 데이터를 성공적으로 처리하고 피어 HA 시스템과 통신할 수 있습니다.

### IDLE

활성 시스템 또는 대기 시스템에서 하드웨어 또는 소프트웨어 문제점이 발생한 경우를 표시합니다. IDLE 상태는 HA 쌍에서 데이터 무결성을 보장하는 데 도움을 줍니다. IDLE은 항상 오류 상태인 것은 아닙니다.

예를 들어, 활성 시스템의 전원 사이클이 작동 중이면 활성 시스템은 IDLE 상태로 설정되고 대기 시스템의 상태를 확인할 수 있을 때까지 계속 이 상태로 남아 있습니다.

### STANDBY

대기 시스템이 활성 시스템과 성공적으로 동기화 중입니다.

### TRANSITIONING

다시 부팅 전이나 후 즉시 나타날 수 있습니다. 일반적으로 HA 쌍의 한 시스템은 일부 초기화를 수행하고 해당 피어를 찾은 후 적절한 상태로 전이할 수 있도록 다시 부팅한 후 충분한 기간만큼 이 상태를 유지합니다.

### UNKNOWN

피어 시스템이 사용 불가능한 경우 나타납니다. 예를 들어, 대기 시스템 전원이 꺼지면 활성 시스템은 피어 시스템(대기 시스템)의 상태가 UNKNOWN임을 명시합니다.

## 고가용성 쌍 구성에 대한 요구사항

고가용성(HA) 쌍에는 매우 특정한 하드웨어 구성이 필요하며 두 개의 통합 어플라이언스가 특정 요구사항을 만족해야 합니다.

HA 쌍으로 작동하려면 두 개의 통합 어플라이언스가 다음 요구사항을 만족해야 합니다.

- 두 통합 어플라이언스 모두 동일한 버전의 Cast Iron® 운영 체제를 사용해야 합니다. 하나의 통합 어플라이언스에 패치를 적용하면 동일한 패치가 HA 쌍의 다른 통합 어플라이언스에 자동으로 적용됩니다.
- 한 시스템의 복제 인터페이스는 다른 시스템의 대응하는 인터페이스에 케이블로 연결해야 합니다.
- 각 통합 어플라이언스의 관리 네트워크 포트는 동일한 서브넷에 연결해야 합니다.
- 각 통합 어플라이언스의 데이터 네트워크 포트는 동일한 서브넷에 연결해야 합니다.

참고: 고가용성 쌍 및 HCI(Hybrid Cloud Integration) 지원에 대한 참고 - HCI 기능을 사용하고 있으며, 두 개의 통합 어플라이언스를 HA로 변환하려는 경우 HCI 기능은 더 이상 지원되지 않습니다.

## 고가용성 쌍 설정

## 이 태스크 정보

다음 단계를 수행하여 고가용성 쌍을 설정합니다.

### 프로시저

1. 9005 어플라이언스를 사용하여 HA 쌍을 설정하는 경우 1a 단계의 프로시저를 수행하십시오. 9004 어플라이언스를 사용하는 경우 1b 단계의 프로시저를 수행하십시오.

참고: 고가용성은 동종의 어플라이언스를 연결해서만 획득할 수 있습니다. 서로 다른 어플라이언스(예: 9005 어플라이언스 및 9004 어플라이언스)를 연결하여 고가용성을 획득하려고 시도하지 마십시오.

- a. 9005 어플라이언스의 경우 - HA 쌍을 작성하려면 권장 직렬 콘솔 케이블 외에도 총 6개의 이더넷 케이블이 필요합니다. 두 개의 이더넷 케이블을 사용하여 두 어플라이언스의 복제 인터페이스를 직접 연결합니다.

```
1 x ethernet cable for emgmt of Appliance A
1 x ethernet cable for emgmt of Appliance B
1 x ethernet cable for edata of Appliance A
1 x ethernet cable for edata of Appliance B
1 x ethernet cable for repl1 between Appliance A and Appliance B
1 x ethernet cable for repl2 between Appliance A and Appliance B
```

다음과 같이 연결됩니다.

```
Appliance 1                Appliance 2
Repl 1 <-----> Repl 1
MGMT                        MGMT
Data 1                      Data 1
Data 2                      Data 2
Data 3                      Data 3
Repl 2 <-----> Repl 2
```

두 어플라이언스의 MGMT 및 Data 1을 적절한 관리 및 데이터 네트워크에 연결합니다. Data 2 및 Data 3은 연결되지 않은 상태여야 합니다.

- b. 9004 어플라이언스의 경우 - Cast Iron 어플라이언스에서 외부에 레이블이 지정된 네트워크 인터페이스는 서로 다른 내부의 인터페이스에 매핑됩니다.

```
External Label            Internal designation
MGMT                      emgmt
ETH0                      r1
ETH2                      edata
ETH1                      r2
```

두 개의 이더넷 케이블로 어플라이언스를 연결합니다.

```
Appliance 1                Appliance 2
MGMT (internal:emgmt)      MGMT (internal:emgmt)
ETH0 (internal:r1) -----> ETH0 (internal:r1)
ETH1 (internal:r2) -----> ETH1 (internal:r2)
ETH2 (internal:edata)      ETH2 (internal:edata)
```

두 어플라이언스의 MGMT(emgmt) 및 ETH2(edata)는 적절한 관리 및 데이터 네트워크에 연결해야 합니다.

2. 초기 활성 피어로 설정할 어플라이언스를 선택하십시오. 두 번째 어플라이언스는 대기 피어가 됩니다.
3. 선택한 Cast Iron 어플라이언스에 직렬 콘솔을 연결하십시오. 활성 피어 어플라이언스에서 사용자 `admin`으로 Cast Iron 명령 인터페이스(CLI)에 로그인하십시오. 기본 `admin` 비밀번호는 `!n0r1t5@C`입니다. 다음과 유사한 명령 프롬프트를 얻어야 합니다. `none/Standalone>`.
4. 정적으로 지정된 IP 주소를 사용하도록 관리 및 데이터 네트워크를 구성하십시오. CLI에서 `net set interface` 명령 및 `net restart`를 순차적으로 실행하여 이를 수행합니다.

```
appliance name/Standalone> net set interface emgmt address <MGMT IP ADDRESS> mask <MGMT NETMASK> bcast <MGMT BROADCAST>
```

```
appliance name/Standalone> net set interface edata address <DATA IP ADDRESS> mask <DATA NETMASK> bcast <DATA BROADCAST>
```

```
appliance name/Standalone> net restart
```

5. 문제점을 방지하려면 Cast Iron 어플라이언스를 최신 소프트웨어 버전으로 업그레이드해야 합니다. 소프트웨어는 IBM Fix Central 웹 사이트(<http://www.ibm.com/support/fixcentral/>)에서 찾을 수 있으며 업그레이드할 Cast Iron 어플라이언스에서 액세스할 수 있는 시스템으로 다운로드해야 합니다. Cast Iron 소프트웨어 업그레이드는 Cast Iron 웹 관리 콘솔(WMC) 또는 명령 인터페이스에서 실행할 명령을 통해 수행할 수 있습니다. 소프트웨어 레벨을 확인하려면 선택한 Cast Iron 어플라이언스에 직렬 콘솔을 연결하고 활성 피어 어플라이언스에 사용자 admin으로 Cast Iron 명령 인터페이스에 로그인합니다. 기본적으로 admin 비밀번호는 !n0r1t5@C입니다. 다음 명령을 실행하여 소프트웨어 레벨을 확인합니다.

```
none/standalone>system show version
```

업데이트가 필요한 경우 업데이트 명령을 실행하고 이때 필요한 ftp 위치 및 사용자 신임 정보를 제공합니다. 예를 들어, 다음과 같습니다.

```
none/standalone>system update cios image from ftp 10.10.17.166 user billbloggs file Downloads/fixcentral/castiron/myciupdate
```

업그레이드 프로세스 중에 어플라이언스가 다시 부팅됩니다.

6. 대기 어플라이언스에서 3 - 5단계를 반복하십시오. 업그레이드 중 임시로 어플라이언스에 두 IP 주소가 필요하므로 대기 피어에서 4단계를 수행해야 할 수도 있습니다.

참고: HA 설정을 완료한 후에는 HA 쌍에 대해 두 개의 IP 주소만 필요합니다(관리 및 데이터에 대해 하나씩). 이 단계에서 대기 피어에 사용된 IP 주소는 HA 설정을 완료하면 버립니다. 네트워크 환경의 다른 위치에서 사용될 수도 있습니다.

7. 두 피어에서 다음 명령을 실행하여 설치된 소프트웨어 레벨이 동일하고, 필요한 소프트웨어 레벨인지 확인하십시오.

```
none/standalone>system show version
```

8. 활성 어플라이언스를 HA로 구성하십시오.

```
none/standalone> system haconfig enable active
```

어플라이언스가 다시 부팅되고 활성 어플라이언스로 다시 시작됩니다.

9. 활성 어플라이언스에 로그인하십시오. 명령 프롬프트는 어플라이언스가 활성임을 표시합니다.

```
none/Active>
```

또는

```
appliance name/Active>
```

10. 직렬 콘솔을 선택한 대기 어플라이언스에 연결하고 대기 피어에 로그인한 후 다음 명령을 실행하여 이를 HA로 구성하십시오.

```
none/standalone> system haconfig enable standby
```

11. 다시 대기 어플라이언스로 로그인하십시오. 명령 프롬프트는 어플라이언스가 대기 상태임을 표시합니다.

```
none/Standby>
```

12. 활성 어플라이언스에서 HA 쌍의 상태를 확인하십시오.

```
appliance name/Active>ha show pairstatus
```

출력에는 어플라이언스가 고가용성인지를 표시합니다. 예를 들어, 다음과 같습니다.

```
appliance name/Active>ha show pairstatus
```

```
Pair Status
-----
NOT Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: 74%
```

```
Appliance Services
-----
Network: Up
Runtime: Starting
```

```
Command complete
```

이 예제에서 디스크의 동기화가 74%밖에 완료되지 않았으므로 HA 쌍은 고가용성이 아닙니다. 명령을 다시 실행하면 상태가 변경됩니다.

```
appliance name/Active>ha show pairstatus
```

```
Pair Status
-----
Highly Available
Local State: ACTIVE_2
Peer State: STANDBY
Sync Status: Synced
```

```
Appliance Services
-----
Network: Up
Runtime: Up
```

```
Command complete
```

13. 동기화를 완료하면 필요한 경우 HA 쌍이 올바르게 역할을 전환할 수 있도록 확인하는 것이 중요합니다. `ha show pairstatus`를 사용하여 쌍이 고가용성이고, 네트워크 및 런타임 어플라이언스 서비스가 가동 상태로 보고되는지 확인하십시오. 현재 활성 상태인 어플라이언스의 일련 번호를 식별하십시오.

```
appliance name/Active> system show version
```

다음 명령을 실행하여 HA 쌍의 역할을 전환합니다.

```
appliance name/Active> ha switch
```

대기 피어가 인계를 수행하고 활성 상태가 됩니다. (일반적으로 이 프로세스에는 2분 정도가 소요됩니다.) 이전에 활성인 피어는 대기 피어가 됩니다. `system show version` 명령을 사용하여 활성 어플라이언스의 일련 번호를 보고 변경되었는지 확인합니다. "`ha show pairstatus`" 명령을 사용하여 HA 쌍이 고가용성 상태로 돌아갔는지 확인합니다.

14. HA 쌍이 한 방향으로 역할을 전환할 수 있는지 확인한 후에(예: 피어 A -> 피어 B) 다시 13단계를 수행하여 HA 쌍이 다른 방향(피어 B -> 피어 A)으로 역할을 전환할 수 있는지 확인하십시오.

참고: 고가용성 쌍 및 HCI(Hybrid Cloud Integration) 지원에 대한 참고 - HCI 기능을 사용하고 있으며, 두 개의 통합 어플라이언스를 HA로 변환하려는 경우 HCI 기능은 더 이상 지원되지 않습니다.

## 고가용성 쌍에 대한 작업

고가용성(HA) 쌍은 두 개의 통합 어플라이언스(활성 시스템 및 대기 시스템)로 구성됩니다. 그러면 이 HA 쌍은 단일 엔티티로 오케스트레이션을 처리할 수 있습니다.

대기 시스템이 장애 복구 작업을 수행해야 하는 경우 대기 시스템이 자동으로 활성 시스템과 데이터베이스를 동기화하는 동안 활성 시스템이 오케스트레이션을 처리합니다. 적절한 시나리오가 나타나는 경우 활성 시스템 및 대기 시스템은 역할을 전환할 수 있습니다.

WMC를 통해 HA 쌍에서 통합 어플라이언스의 상태나 역할을 변경할 수 있습니다.

## 고가용성 명령

이 명령은 고가용성(HA) 쌍에서 실행할 수 있습니다.

표 1.

시스템 제어 명령	설명
H A C o n n e c t	활성 및 대기 통합 어플라이언스가 어플라이언스 작업을 재개할 수 있도록 이 둘을 다시 연결합니다.

시스템 제어 명령	설명
H A D i S C O n n e c t	대기 시스템이 활성 시스템을 인계하지 않도록 임시로 HA 쌍 연결을 끊습니다. 이 조치를 통해 오케스트레이션 처리를 인터럽트하지 않고도 대기 시스템에서 필요한 하드웨어 또는 소프트웨어 유지보수를 수행할 수 있습니다. 이 조치를 선택하면 대기 시스템이 유휴 상태로 전환됩니다. 활성 시스템을 다시 부팅하거나 연결 조치를 실행하여 HA 쌍 사이의 통신을 다시 설정하고 데이터 동기화 및 장애 복구 조작을 재개합니다. 활성 시스템에서 유지보수를 수행하려면 전환 조치를 사용합니다. 활성 시스템이 대기 시스템이 됩니다. 이때 오케스트레이션 처리를 인터럽트하지 않고도 연결 끊기 조치를 사용하고 통합 어플라이언스 유지보수를 수행할 수 있습니다.
H A S w i t c h	HA 쌍의 통합 어플라이언스가 역할을 전환합니다. 활성 시스템은 대기 시스템이 되고, 대기 시스템은 활성 시스템이 됩니다.

상위 주제: [고가용성 쌍에 대한 작업](#)

## 고가용성 쌍 문제점 해결

활성 및 대기 시스템이 모두 IDLE(유휴) 상태로 설정되면 CLI를 사용하여 문제를 해결합니다.

### 프로시저

IDLE/IDLE 상태를 해결하려면 다음을 수행하십시오.

1. 활성 시스템 및 대기 시스템 모두의 CLI에서 `ha show lastaccess`를 입력하십시오.
2. 최신의 유효한 데이터 세트를 포함하고 있는 통합 어플라이언스를 판별하십시오. 일반적으로 최근 활동을 포함하는 통합 어플라이언스가 최신 시간소인을 생성합니다.
3. 최신의 유효한 데이터를 포함하도록 판별한 통합 어플라이언스에서 `ha active`를 입력하십시오.

### 결과

이 통합 어플라이언스는 이제 HA 쌍에서 활성 시스템이 됩니다.

고가용성 쌍에 대한 구체적인 기술 지원이 필요한 경우 IBM 기술 지원에 문의하십시오.

시스템입니다.

Cast Iron® 제품은 가상 및 실제 환경에서 동일하게 수행됩니다. 하나의 통합 프로젝트를 실행 중인 단일 가상 머신 또는 여러 프로젝트를 실행 중인 다중 가상 머신에서 CIOS(Cast Iron Operating System)를 설치하여 데이터 센터 인프라를 작성할 수 있습니다. CIOS를 게스트 운영 체제로 사용하여 가상 어플라이언스를 작성하는 데 대한 정보는 [OVF 템플릿 배치](#)의 내용을 참조하십시오.

가상 어플라이언스 환경은 다음으로 구성되어야 합니다.

## IBM WebSphere Cast Iron Hypervisor Edition 시작하기

이 안내서에서는 IBM® WebSphere® Cast Iron® Hypervisor Edition(HVE)을 소개하고 가상화 기술에 대한 개요를 설명합니다. 가상화는 가상 어플라이언스가 가상 환경에서 실행되고 게스트 운영 체제 및 선택적 애플리케이션 소프트웨어와 함께 패키징된 하드웨어 가상화를 참조합니다.

가상화를 사용하면 동일한 실제 하드웨어 피스에서 운영 체제의 여러 인스턴스를 동시에 실행할 수 있습니다. 가상화는 *하이퍼바이저*라는 기술을 통해 수행됩니다. 하이퍼바이저를 사용하는 경우 동시에 실행 중인 여러 운영 체제가 하나의 실제 서버에서 동일한 실제 자원 세트(메모리, CPU, 디스크 및 네트워크)를 공유할 수 있습니다. 가상화 소프트웨어가 실행되는 실제 머신은 *호스트*이며 호스트에서 실행되는 가상 머신은 *게스트*입니다.

Cast Iron 제품은 가상 및 실제 환경에서 동일하게 수행됩니다. 하나의 통합 프로젝트를 실행 중인 단일 가상 머신 또는 여러 프로젝트를 실행 중인 다중 가상 머신에서 CIOS(Cast Iron Operating System)를 설치하여 데이터 센터 인프라를 작성할 수 있습니다. CIOS를 게스트 운영 체제로 사용하여 가상 어플라이언스를 작성하는 데 대한 정보는 [OVF 템플릿 배치](#)의 내용을 참조하십시오.

- [요구사항](#)

## 요구사항

이 절에서는 가상 어플라이언스 환경을 구축하는 데 필요한 요구사항 및 자원에 대해 간략하게 설명합니다. 자원 간 맵핑에 대한 자세한 정보는 [자원 맵핑](#)의 내용을 참조하십시오.

요구사항:

- 호스트 머신(데스크탑 컴퓨터 또는 서버).
- 가상화 기술이 사용된 CPU(예: Intel® VT-x 또는 AMD®-V. 일부의 경우 BIOS를 통해 가상화 기술을 사용으로 설정할 수 있어야 함).
- 60GB 디스크 공간.
- 지원되는 구성: 1 CPU, 4GB RAM 또는 2 CPU, 8GB RAM. 선택된 구성을 실행하도록 충분한 실제 RAM이 있는지 또는 시스템 성능에 영향을 미칠 수 있는지 확인하십시오.
- VMware® ESX® 또는 ESXi 버전 5.0 이상. VMware 제품 및 ESX에 대한 자세한 정보는 <http://kb.vmware.com/selfservice/microsites/microsite.do>의 내용을 참조하고 *VMware ESX 및 ESXi 비교*를 클릭하여 보십시오.
- Cast Iron® Hypervisor Edition 설치 파일(OVA 형식).
- VMware vCenter® Server, 4.0.0, 258672(선택사항).
- VMware VMotion® 및 VMware High Availability 추가 기능(선택사항). 설치에 추가되면 VMware 추가 기능은 가상 머신에서의 워크로드를 관리하고 조정하며, 가상 머신의 최적 데이터 센터 위치를 찾고, OS 관련 장애를 관리할 수 있습니다. 추가 기능 및 가상 환경 설정 팁에 대해서는 VMware 문서를 참조하십시오.

참고: 공유 스토리지(예: SAN)는 선택적입니다. 공유 스토리지는 VMware 기능(예: VMware VMotion 및 VMware High Availability)을 사용하도록 설정하는 데 필요합니다.

## 자원 맵핑

이 절에서는 가상 머신을 프로비저닝할 때 가상 및 실제 자원 간 맵핑에 대한 정보를 제공합니다.

새 가상 머신을 인스턴스화하여 Cast Iron HVE를 실행하는 경우 먼저 가상 머신의 크기를 선택해야 합니다. [요구사항](#)에 따르면 지원되는 크기는 다음과 같습니다.

- 1 CPU, 4GB RAM, 최소 60GB 디스크 공간(표준 구성).
- 2 CPU, 8GB RAM, 최소 60GB 디스크 공간(고급 구성).

위의 자원 크기는 실행 중인 가상 머신에 표시될 수 있는 자원 양을 참조합니다. 표준 구성의 경우 1 CPU 및 60GB 디스크 공간은 가상 머신이 볼 수 있어야 하는 가상 CPU 수 및 디스크 공간 크기를 참조합니다. 가상화를 사용하면 다른 운영 체제 인스턴스를 실행하는 여러 다른 가상 머신이 동일한 실제 자원을 공유하기 때문에 실제 호스트 환경의 크기를 실행 중인 가상 머신의 수로 지정하는 것이 중요합니다.

## 메모리

또한 호스트 환경의 크기 뿐 아니라 실제 호스트의 크기를 실행 중인 게스트에 필요한 메모리 크기로 적절하게 지정하는 것도 중요합니다. 우수 사례에서는 호스트의 실제 메모리가 동시에 실행 중인 게스트에 대해 설정된 메모리 합보다 더 커야 함을 설명합니다. 예를 들어 표준 및 고급 구성 둘 다를 실행하도록 실제 호스트 크기를 지정하는 경우 호스트 크기가  $4 + 8 + 2 \Rightarrow$  최소 14GB RAM이어야 합니다. (하이퍼바이저 프로세스를 위해 추가로 2GB의 RAM을 권장함)

## CPU

가상 CPU를 실제 CPU에 맵핑하는 경우 동시에 실행되는 가상 CPU당 하나의 실제 CPU 코어가 있어야 하며 하이퍼바이저 프로세스를 위해 최소한 하나 이상의 코어가 버퍼로 있어야 합니다. 예를 들어 표준 및 고급 구성 둘 다를 실행하도록 실제 호스트 크기를 지정하는 경우 호스트 크기가  $1 + 2 + 1 = 4$  실제 CPU 코어 수여야 합니다. 대부분의 실제 CPU가 멀티코어이므로 하나의 쿼드코어 CPU가 있는 실제 호스트는 구성을 실행하기에 충분합니다. Cast Iron HVE가 64비트 커널을 사용하므로 호스트는 가상화 기술 지원이 사용 가능하고 사용으로 설정된 실제 CPU를 가지고 있어야 합니다(예: Intel VT-x 또는 AMD AMD-V). 일부의 경우 BIOS를 통해 가상화 기술을 사용으로 설정할 수 있어야 합니다.

## 디스크

일반적으로 디스크는 가상화된 환경에서 가격이 가장 싼 자원입니다. 우수 사례에서는 나중에 디스크를 확장할 때 성능에 문제가 생기지 않도록 가상 머신이 실제 디스크에 필요한 디스크 크기를 사전 할당해야 함을 설명합니다. 디스크 크기를 지정할 때 동시에 여러 개의 일시중단된 가상 머신을 저장하여 하나로 인스턴스화하려면 디스크를 현저하게 크게 지정해야 합니다. 예를 들어 표준 및 고급 구성 둘 다를 실행하도록 실제 호스트 크기를 지정하는 경우 디스크의 최소 크기 요구사항은  $60 + 60 + 5 = 125\text{GB}$ 입니다. (나머지 5GB의 공간은 하이퍼바이저 프로세스용임) 그러나 우수 사례에서는 고객 요구가 증가함에 따라 더 많은 비활성 가상 머신을 저장할 수 있도록 더 큰 디스크가 있는 실제 호스트를 사용합니다.

## 어플라이언스 패치 업로드

어플라이언스 패치를 업로드하여 최신 버전의 Cast Iron® 운영 체제를 업그레이드하고 최신 기능을 액세스할 수 있습니다.

### 시작하기 전에

## 가상 어플라이언스 백업 및 복구

VMware Consolidated Backup 추가 기능을 구매하여 가상 환경에 대한 재해 복구 시나리오를 다루거나 가상 어플라이언스의 기능을 내보내거나 가져올 수 있습니다.

VMware Consolidated Backup에 대한 자세한 정보는 VMware Consolidated Backup 안내서를 참조하십시오.

다음 주제에서는 가상 어플라이언스 저장소를 내보내고 가져오는 방법에 대해 설명하고 이 조작에 영향을 받는 가상 어플라이언스의 컴포넌트에 대한 자세한 설명을 제공합니다.

- **가상 어플라이언스 저장소 내보내기**

프로젝트 저장소를 내보내어 가상 어플라이언스의 백업을 작성합니다. WMC에서 다른 위치로 모든 프로젝트 구성 및 사용자 설정을 내보낼 수 있습니다. 저장소를 내보낼 때 가상 어플라이언스 시스템 로그는 내보내지지 않습니다.

- **가상 어플라이언스 저장소 가져오기**

저장소를 가져올 때 WMC는 모든 기존 프로젝트, 프로젝트 구성 및 작업 히스토리를 삭제합니다. 가상 어플라이언스 시스템 로그는 영향을 미치지 않는 상태로 남아 있습니다. 저장소를 가져오면 이전 저장소로 롤백할 수 없습니다.

## 가상 어플라이언스 저장소 내보내기

프로젝트 저장소를 내보내어 가상 어플라이언스의 백업을 작성합니다. WMC에서 다른 위치로 모든 프로젝트 구성 및 사용자 설정을 내보낼 수 있습니다. 저장소를 내보낼 때 가상 어플라이언스 시스템 로그는 내보내지지 않습니다.

### 이 태스크 정보

실행 중인 프로젝트 구성과 함께 저장소를 내보낼 수 있습니다. 그러나 이 저장소를 가져오는 경우 프로젝트 구성은 배치되지 않은 상태가 됩니다.

WMC를 사용하여 가상 어플라이언스 저장소를 내보내십시오.

참고: 가상 어플라이언스 디스크의 암호화는 가상 어플라이언스의 VMware 지정 UUID를 사용합니다. 복제/복사 조작을 통해 새 UUID를 얻게 되므로 결과적으로 가상 어플라이언스 복제 및/또는 복사 조작은 기능이 없는 복제/복사 조작이 됩니다. 백업 어플라이언스를 작성하려면 동일한 구성(예: 표준 또는 고급)을 사용하여 새 가상 어플라이언스를 작성하고 CLI 명령 `config save/load`를 사용하여 가상 어플라이언스 설정 및 WMC 저장소 기능을 가져오기/내보내기하십시오. (그러나 해당 조작은 변수와 같은 데이터, 디스크에 저장된 데이터 또는 오케스트레이션 프로세스 파트의 메모리에 있는 데이터는 내보내기/가져오기를 수행하지 않음).

참고: VMotion에는 가상 어플라이언스를 새 호스트로 마이그레이션하는 데 유효한 조작이 남아 있습니다.

### 프로시저

---

1. 배치 탭에서 저장소 내보내기를 선택하십시오. 파일 다운로드 창이 표시됩니다.
2. 저장을 클릭하십시오. 다른 이름으로 저장 창이 표시됩니다.
3. 내보낸 저장소를 저장할 위치를 지정하십시오.
4. 저장을 클릭하십시오. WMC가 저장소 사본을 .tar.gz 파일로 내보냅니다.

### 결과

---

Cast Iron Docker 컨테이너를 작성했습니다.

이 태스크를 사용하여 Docker 이미지에서 새 Cast Iron 컨테이너를 작성합니다.

참고: 컨테이너가 Docker 호스트의 네트워크 자원을 사용하는 경우 단일 Docker 호스트당 하나의 Cast Iron 컨테이너만 작성하여 사용할 수 있습니다.

## 프로시저

Docker 이미지가 있는 Ubuntu 서버에서 다음 명령을 실행하십시오.

```
docker run --net=host --pid=host -t -i -d <cast iron docker image ID>
```

예를 들어, 다음과 같습니다. `docker run --net=host --pid=host -t -i -d castironv7510/20160302-1535`. 여기서 `castironv7510/20160302-1535`는 Cast Iron Docker 이미지 ID입니다.

다음 명령에서 CI 컨테이너 ID를 사용하여 Cast Iron 컨테이너에 로그인합니다.

```
docker exec -it <CI Container ID> /bin/bash
```

예를 들어, 다음과 같습니다. `docker exec -it`

## Integration Appliance Monitoring Options

---

Overview of monitoring options available on the Integration Appliance.

The Integration Appliance logs system events, such as a fan failing or Standby machine assuming the active role in an HA pair. You can view these system events from the Web Management Console (WMC). When system events occur, individual users as well as network management systems can receive notification alerts from the Integration Appliance via email and SNMP traps respectively. Using SNMP, network management systems can also poll an Integration Appliance to actively monitor resources such as disk usage, memory usage, and garbage collection cycles. For more information about systems and notification severity levels you can monitor from the WMC, see the management console online help.

While any user can view the systems events log and monitor disk and memory usage from the WMC, you must create a notification policy to receive alerts from the Integration Appliance. Use the WMC to create a notification policy. Notification policies contain details about which systems to monitor, notification levels to monitor, and notification alert recipients. The Integration Appliance only sends alerts when an event meets or exceeds the notification level specified in a notification policy. For more information about creating notification policies and notification levels, see the management console online help.

The Cast Iron Notifications Reference provides details about reading and using Cast Iron SNMP MIB and individual messages from each Cast Iron MIB module. The version of SNMP is SNMPv1. (Although the MIBs are set to SNMP version 2, Cast Iron generates SNMPv1 traps only.)

## About the Cast Iron SNMP MIB

---

An overview of the Cast Iron SNMP MIB and a list of available MIB modules.

As a network element, the Integration Appliance is able to respond to requests from a network management system. The Integration Appliance is also able to send notifications to the network management system about events that occur on the Integration Appliance. This communication between the Integration Appliance and your network management system allows you to use traps to monitor the Integration Appliance.

Whether you choose to receive notification alerts from the Integration Appliance by enabling SNMP traps or you choose to actively monitor Integration Appliance activities like memory usage by polling the Integration Appliance, the Cast Iron MIB provides data structure and defines content type for the information exchange.

When you use the WMC to download the Cast Iron MIB, you are downloading one file that contains multiple MIB definitions. Some SNMP MIB parsers are unable to read a file that contains multiple MIB modules, so you must separate each MIB module into individual files. For more information about generating separate MIB module files, see [Downloading the Cast Iron SNMP MIB](#).

The Cast Iron MIB contains notification messages for the following modules:

- [Downloading the Cast Iron SNMP MIB](#)  
Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.
- [Reading the Cast Iron SNMP MIB](#)  
Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

## Downloading the Cast Iron SNMP MIB

---

Provides information about downloading each MIB module in the Cast Iron SNMP MIB as a separate file.

Use the Web Management Console (WMC) to download the Cast Iron SNMP MIB from an Integration Appliance. For more information about how to use the WMC to download the Cast Iron SNMP MIB, see the management console online help.

The WMC downloads the Cast Iron SNMP MIB as a single text file. This text file is comprised of multiple sections, where each section is a full MIB module. For example, the NetSuite Module is defined in one section and the Salesforce Module is defined in another section.

Note: If your SNMP MIB parser is unable to read a file that contains multiple MIB modules, separate each section (MIB module) into individual files. On Linux, you can use the following script to generate a separate file for each MIB module in the Cast Iron SNMP MIB.

```
#!/bin/bash

sed -ne 's/DEFINITIONS ::= BEGIN.*//p' castironsys.mib |
while read mib; do
echo $mib
sed -ne "/^$mib/,/^END/p" castironsys.mib > $mib
done

## Reading the Cast Iron SNMP MIB

---

Provides examples of how to read and organize the content of Cast Iron SNMP MIBs.

Each MIB module has a module-identity, which describes the purpose for the MIB. For example, the NetSuite Module provides access to the NetSuite online service. Each MIB module also contains a comment section that

provides a high-level overview of its contents. Content like the Object Summary lists the name and OID of every object in the MIB, much like a table of contents, and allows you to examine the layout and the type of data that is being provided.

In the following example, `ciIaProjectSummary` is an organizational node that contains general information about projects on the Integration Appliance. Like a directory, the `ciIaProjectSummary` organizational node contains object types that provide information about the number of projects, number of running orchestrations, number of stopped orchestrations, number of running jobs, number of completed jobs, and number of errored jobs.

```
-- ciIaProjectSummary          ciia.1.1.1
-- ciIaNbrProjects             ciia.1.1.1.1
-- ciIaNbrRunningOrchs        ciia.1.1.1.2
-- ciIaNbrStoppedOrchs        ciia.1.1.1.3
-- ciIaNbrRunningJobs         ciia.1.1.1.4
-- ciIaNbrCompletedJobs       ciia.1.1.1.5
-- ciIaNbrErroredJobs         ciia.1.1.1.6
```

To get more information about the meaning of one of the objects, search the file for the name of the object. For example, searching for `ciIaNbrRunningJobs` returns the following block of information:

```
ciIaNbrRunningJobs OBJECT-TYPE          -- ciia.1.1.1.4
    SYNTAX Unsigned32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "Total number of currently running jobs."
        "
 ::= { ciIaProjectSummary 4 }
```

where:

- **ciIaNbrRunningJobs OBJECT-TYPE** - Defines the name of the object.  
Note: Next to the object name, there is a shortened form of the OID (– `ciia.1.1.1.4`).
- **SYNTAX Unsigned32** - An unsigned integer whose value could go up or down over time.
- **MAX-ACCESS read-only** - A read-only value that the system manager can ask for but cannot change.
- **STATUS** -
- **DESCRIPTION** - Describes the object.

Polling for ProjectSummary information retrieves data that is similar to the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

`ciIaProjectTable` is another example of an organizational node that contains information about each project on the Integration Appliance. Like a directory, the `ciIaProjectTable` organizational node contains object types that provide information like the project name, project version, project configuration, project state, and so on.

```
-- ciIaProjectTable          ciia.1.1.2
-- ciIaProjectEntry          ciia.1.1.2.1
-- ciIaProjEntryIndex        ciia.1.1.2.1.1
-- ciIaProjEntryName         ciia.1.1.2.1.2
-- ciIaProjEntryVersion      ciia.1.1.2.1.3
-- ciIaProjEntryConfig       ciia.1.1.2.1.4
-- ciIaProjEntryState        ciia.1.1.2.1.5
```

```
--      ciIaProjEntryNbrRunning          ciia.1.1.2.1.6
--      ciIaProjEntryNbrCompleted        ciia.1.1.2.1.7
--      ciIaProjEntryNbrErrored          ciia.1.1.2.1.8
--      ciIaProjEntryTimePublished       ciia.1.1.2.1.9
```

Polling for ProjectTable information retrieves data that is similar to the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectSummary
CASTIRON-IA-MIB::ciIaNbrProjects.0 = Gauge32: 2
CASTIRON-IA-MIB::ciIaNbrRunningOrchs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrStoppedOrchs.0 = Gauge32: 14
CASTIRON-IA-MIB::ciIaNbrRunningJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrCompletedJobs.0 = Gauge32: 0
CASTIRON-IA-MIB::ciIaNbrErroredJobs.0 = Gauge32: 0
```

The object types are much like columns in a table that store data generated by events that occur on the Integration Appliance. For example, publishing and cloning projects are events that generate ProjectTable data. You can poll the Integration Appliance to retrieve this data. Data for two events: publishing a project and cloning a project are displayed in the following example:

```
$ snmpwalk -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
CASTIRON-IA-MIB::ciIaProjEntryName.98304 = STRING: OnlineLicensing

CASTIRON-IA-MIB::ciIaProjEntryConfig.98305 = STRING: OnlineLicensingClone
CASTIRON-IA-MIB::ciIaProjEntryState.98304 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryState.98305 = INTEGER: undeployed(1)
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98304 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrRunning.98305 = Gauge32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrCompleted.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98304 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryNbrErrored.98305 = Counter32: 0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98304 = STRING: 2009-6-
12,16:36:20.0,+0:0
CASTIRON-IA-MIB::ciIaProjEntryTimePublished.98305 = STRING: 2009-6-12,16:36
```

As more events occur, the output can become increasingly difficult to read. To generate a more readable output, it is recommended to use the `snmptable` command to display the data in a table format. Data for each event displays as a new row.

```
$ snmptable -v 2c -c public -M "+/home/choller/mibs" -m "+CASTIRON-IA-MIB"
flintstone2 ciIaProjectTable
SNMP table: CASTIRON-IA-MIB::ciIaProjectTable

## Using Traps to Monitor Appliance Health

Recommendations for configuring alerts that monitor appliance health.

When monitoring the health of the Integration Appliance, you can use one or both of the following methods:

- **Poll** - Actively monitor runtime resource usage including appliance garbage collection cycles, appliance memory usage, and appliance disk usage.
- **Trap** - Receive notifications indicating hardware situations such as failed fans, high temperatures, or failed disks. For more information about hardware related SNMP traps, see [About the Platform Module](#).

For more information about creating and enabling notification alerts, see the WMC Online Help or the Cast Iron Web Management Console Guide in the IBM WebSphere Cast Iron Information Center.

[Table 1](#) provides recommended thresholds for notifications regarding garbage collection, memory usage, and disk usage.

- **Garbage Collection** - This parameter counts the number of garbage collections that have occurred since the last system restart. Garbage collection that occurs at a rate over the recommended threshold can indicate that the appliance is overworked and might start to experience performance issues.
- **Memory Usage** - This parameter measures the percentage of total memory in use, expressed in hundredths of a percent. This number is updated after each garbage collection.  
 Note: This value is provided as an integer, but the MIB causes the SNMP Manager to alter its displayed value by a hundredths of a percent. For example: a value of '1234' displays as '12.34'." The SNMP Management tool should handle this automatically, but verify that it does so.
- **Disk Usage** - This parameter measures the percentage of total work-in-progress (WIP) disk space that is in use, expressed in hundredths of a percent. The percentage of disk usage determines job purging activities for the appliance.

Table 1. Recommended Notification Thresholds

Parameters to Monitor	Recommended Thresholds	SNMP Name and OID
Garbage Collection	Create a notification that triggers an alert if this value changes quickly, by more than 6 counts in a 1-minute time period.	CASTIRON-IA-MIB::ciIaResNbrGarbageCollects .1.3.6.1.4.1.13336.2.2.2.1.1.2.1.0
Memory Usage	Create a notification that triggers an alert if this value goes over 80% (raw value of 8000).	CASTIRON-IA-MIB::ciIaResPctMemoryUsed .1.3.6.1.4.1.13336.2.2.2.1.1.2.2.0
Disk Usage	Create a notification that triggers an alert if this value goes over 75% (raw value of 7500).	CASTIRON-IA-MIB::ciIaResPctWipFull .1.3.6.1.4.1.13336.2.2.2.1.1.2.3.0

Note: The parameters to monitor, described in the table above, are for SNMP polling only.

## FanFailed

---

A cooling fan is not operating correctly.

The most likely cause is that the fan has become disconnected or has failed. The recommended action is to 1) confirm the appliance with the corresponding AffectedAppliance serial number has an indicator LED (usually orange), 2) confirm the fan is properly connected, and 3) contact Cast Iron Support for assistance replacing the fan.

# SystemRecoveryReboot

---

Operational failure was detected. System is rebooting to recover.

The Cast Iron appliance continually monitors the health of components within the system. If a component has a momentary failure, the system may choose to reboot to recover from the situation. In the case of a recurring error, further reboots are not used until an hour has passed; instead the runtime is restarted. See the CLI command "system autoreboot" for information about controlling this behavior.

# NetworkAutohost

---

The Autohost feature has added the appliance's hostname and IP address to /etc/hosts.

The appliance requires the ability to resolve its own hostname to an IP address. The mapping is validated each time the appliance's network subsystem is started, and may be determined by DNS lookup or from an entry

which was manually added via the CLI. If the appliance cannot determine the mapping this way, the autohost feature automatically adds a "best-guess" entry. While this automatic entry may work in many circumstances, it is not guaranteed to allow proper appliance operation in all environments. This notification may indicate a misconfiguration in the network. Therefore it is recommended that the user examine the appliance's network configuration and either enter the appliance's IP address and hostname to DNS, or manually add an entry to /etc/hosts by using the CLI command "net add etchost".

Level : *Warning*

## Documentation conventions

---

The following table describes the conventions that are used in this document.

Convention	Description
<Hostname> command	Examples of using commands are shown in this document in this format.
<code>enter exactly as shown</code>	Procedures might also include instructions on what you should enter for particular fields, prompts, or commands. Information in this font must be typed exactly as shown.
<code>net set interface dataaddress &lt;port-address&gt;</code>	Placeholders are shown between angle brackets (<>) and generally indicate the type of information you should supply in the command.
Menu > Submenu	Instructions that use menu commands use the greater than symbol (>) to indicate submenus, for example, “click Configuration > Notifications”.

## Overview of the Management API guide

---

An overview of the Management API. The API provides management capabilities for Clouds and Integration Appliances.

The Management API is implemented as a web service. This web service provides a way to manage WebSphere® DataPower® Cast Iron® Appliances (Integration Appliances) and WebSphere Cast Iron Cloud (Cloud) projects through your applications or scripts.

The API provides Integration Appliance and Cloud management in the following areas:

#### Deployment

Provides operations to create, get, and delete configurations, rules, and projects. You can start, pause, stop, and cancel jobs. You can import or export repositories.

#### Security

Provides operations to create, get, list, and delete users, roles, and permissions. You can log in and log out by using the security WSDL.

## Staging

Checks whether the staging database is started and starts or stops the staging database. (Applies to appliances only.)

## System Administration

Sets or gets the appliance name or network configuration. You can also run system commands or get system information. (Applies to appliances only.)

## Job Monitoring

Searches for job, gets job count, and gets job details. You can also set and get job monitoring properties.

## Logs and Notifications

Saves, gets, and deletes notification policies. You can also get and set email and SNMP endpoints, set and get log levels, and get log count.

The Management API complies with the following web services standards:

- Web Services Interoperability Organization (WS-I) Basic Profile 1.0
- SOAP 1.1
- Web Services Description Language (WSDL) 1.1
- XML Schema 1.1

You can create client applications that call web services operations to manage and monitor Integration Appliances and Cloud projects. Communication between the client application and the Integration Appliance or Cloud project is accomplished by using HTTP or HTTPS.

The Management API is defined in WSDL files. Client applications call web services operations by sending SOAP messages. SOAP messages are formatted in XML and so are programming language neutral.

## Examples of SOAP messages

---

This section provides examples of logging in, getting a user and logging out using the Management API - Security WSDL.

The following code is an example of a SOAP request to log in.

Note: If you are using Management API for Cast Iron Live, use the IBM ID credential for the username and password fields.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header/>
  <soapenv:Body>
    <sec:login>
      <sec:username>webuser@mycompany.com</sec:username>
      <sec:password>D3nu9noB</sec:password>
    </sec:login>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP reply to the request to log in.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:loginResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:sessionId>8F059BEEA3611033D277773A95404641</ns2:sessionId>
    </ns2:loginResponse>
  </S:Body>
</S:Envelope>
```

The *sessionId* is required to perform other SOAP operations after you log in to an Integration Appliance or the Cloud.

The following code is an example of a SOAP request to get a user.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:getUser>
      <sec:username>webuser</sec:username>
    </sec:getUser>
  </soapenv:Body>
</soapenv:Envelope>
```

The following code is an example of a SOAP response to the request to get a user.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:getUserResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/
security" xmlns:ns3="http://www.approuter.com/schema/router/1000/security/03">
      <ns2:user>
        <ns3:id>8F059BEEA3611033D277773A95404641</ns3:id>
        <ns3:name>webuser</ns3:name>
        <ns3:encPasswd>{SHA}clO20r2ZJMJcDrNwXQzhWB8YcdI=</ns3:encPasswd>
        <ns3:displayName>WebServiceUser</ns3:displayName>
        <ns3:isActive>true</ns3:isActive>
        <ns3:isMutable>true</ns3:isMutable>
        <ns3:isVisible>true</ns3:isVisible>
        <ns3:email>webuser@mycompany.com</ns3:email>
        <ns3:createdTime>2010-03-02T22:11:32.935Z</ns3:createdTime>
        <ns3:failedLoginCount>0</ns3:failedLoginCount>
        <ns3:scopeId>B47EAECF6AD14AA028B4EA038CB742D0</ns3:scopeId>
        <ns3:scopeType>Tenant</ns3:scopeType>
      </ns2:user>
    </ns2:getUserResponse>
  </S:Body>
</S:Envelope>
```

The following code is an example of a SOAP request to logout.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>8F059BEEA3611033D277773A95404641</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:logout/>
  </soapenv:Body>
</soapenv:Envelope>
```

## Cloud examples

---

The following examples apply to the Cloud only.

The previous examples used SOAP operations that ran in a tenant in the Cloud or an Integration Appliance. To run operations in environments within a tenant in the Cloud, you use the `setCurrentScope` operation to set the scope to the environment where you want to run SOAP operations.

The following example sets the scope to the development environment and then starts a project located in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:sec="http://www.approuter.com/schemas/2008/1/security">
  <soapenv:Header>
    <sec:sessionId>63Y93HD6D856EB5812EB71216C3547W7</sec:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <sec:setCurrentScope>
      <sec:scopeName>Development</sec:scopeName>
    </sec:setCurrentScope>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:setCurrentScopeResponse xmlns:ns2="http://www.approuter.com/
schemas/2008/1/security" xmlns:ns3="http://www.approuter.com/schema/
router/1000/security/03">
      <ns2:success>true</ns2:success>
    </ns2:setCurrentScopeResponse>
  </S:Body>
</S:Envelope>
```

The following example is a SOAP request to start a configuration in the development environment.

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:dep="http://www.approuter.com/schemas/2008/1/deployment">
  <soapenv:Header>
    <dep:sessionId>63Y93HD6D856EB5812EB71216C3547W7</dep:sessionId>
  </soapenv:Header>
  <soapenv:Body>
    <dep:start>
      <dep:projectName>HTTP_363i</dep:projectName>
      <dep:version>1.0</dep:version>
      <dep:configName>HTTP_363j</dep:configName>
    </dep:start>
  </soapenv:Body>
</soapenv:Envelope>
```

The following example is the SOAP response to the request.

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:startResponse xmlns:ns2="http://www.approuter.com/schemas/2008/1/

types" xmlns:ns4="http://www.approuter.com/schema/router/1000/security/03"
xmlns:ns5="http://www.approuter.com/schemas/2008/1/util/types">
      <ns2:success>true</ns2:success>
    </ns2:startResponse>
  </S:Body>
</S:Envelope>
```

## WSDL files

---

Client-side web services use the WSDL file to create stubs that enable client-side applications to interact with an Integration Appliance or Cloud project.

The WSDL files specify the operations that a client application can use to install, manage, and monitor an Integration Appliance or Cloud project.

The Management API is defined in six WSDL files:

- security.wsdl
- staging.wsdl
- deployment.wsdl
- system.wsdl
- orcmon.wsdl
- lognotif.wsdl

You can download the WSDL files from the following locations for an Integration Appliance:

- Security: <https://<appliance>/ws/security?wsdl>
- Staging: <https://<appliance>/ws/staging?wsdl>
- Deployment: <https://<appliance>/ws/deployment?wsdl>
- System: <https://<appliance>/ws/system?wsdl>
- Orcmon: <https://<appliance>/ws/orcmon?wsdl>
- Lognotif: <https://<appliance>/ws/lognotif?wsdl>

You can download the WSDL files from the following locations for the Cloud:

- Security: <https://cloud2.castiron.com/ws/security?wsdl>
- Staging: <https://cloud2.castiron.com/ws/staging?wsdl>
- Deployment: <https://cloud2.castiron.com/ws/deployment?wsdl>
- System: <https://cloud2.castiron.com/ws/system?wsdl>
- Orcmon: <https://cloud2.castiron.com/ws/orcmon?wsdl>
- Lognotif: <https://cloud2.castiron.com/ws/lognotif?wsdl>

This glossary defines WebSphere® DataPower® Cast Iron® Management API Guide terms that are used in this documentation.

This glossary contains terms specific to WebSphere DataPower Cast Iron Management API Guide .

## **E**

### environment

In the Cloud, an environment is a subdivision of a tenant. A typical tenant contains development, staging, and production environments. An environment has its own administrators, users, roles, and role groups. After a project is completed in the Modify tab, it is published to an environment where it can be deployed, tested, and run. The administrator role of an environment can assign users to roles and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the environment.

[TOP](#)

## **R**

### role

Role is a way to provide users with a pre-defined set of permissions. When an administrator assigns a role to a user the user is able to access all of the projects to which the role is has permissions. The user can also perform all of the actions for which the role has permissions. In the Cloud, the user gets access to any tenants and environments to which the role has permissions.

### roleGroup

Use to combine roles into a single entity which can then be assigned to users. A user assigned to a roleGroup inherits all of the access and permissions that the roles in the roleGroup are given.

[TOP](#)

## **S**

### scope

In the Cloud, scope refers to either a tenant or an environment within a tenant. You use `setCurrentScope` to set the scope to where you want to run SOAP operations. Scope applies to the Cloud only.

## **T**

### tenant

The Cloud is a multi-tenant cloud as opposed to a single-tenant cloud. Each tenant can be divided into environments such as development, staging, and production. The administrator role of the tenant can assign users to environments, roles, and roleGroups. In addition, the administrator role can create, deploy, run, clone, and delete projects and configurations in the tenant and environments within the tenant.

## 소개

IBM® Cast Iron® CDK(Connector Development Kit) 개발자 안내서는 Cast Iron Studio (Studio) 개발 플랫폼을 사용하여 애플리케이션 시스템 또는 기타 데이터 소스에서 데이터를 추출하는 플러그인 커넥터를 개발하고 배치할 개발자를 위한 서적입니다.

커넥터는 외부 애플리케이션의 API를 Cast Iron 개발 플랫폼에 노출시켜 Studio의 핵심 기능을 향상시킵니다. API는 새 라이브러리 및 오브젝트 유형을 사용하여 스크립팅 엔진을 확장하고, 외부 시스템에서 Cast Iron 실제 또는 가상 통합 어플라이언스로 알림 이벤트를 공개합니다. Cast Iron 어플라이언스는 FTP, SFTP, HTTP, HTTPS, 이메일(SMTP, POP), SAP, MQ, 웹 서비스 및 여러 상용 데이터베이스 시스템과 같은 유형의 엔드포인트로의 연결을 지원합니다.

각 커넥터에는 디자인할 때 커넥터가 Studio에서 사용할 수 있는 연관된 XML 디스크립터 파일이 있습니다. XSD(XML Schema Definition) 파일은 XML 파일의 요소 및 속성을 정의합니다.

Cast Iron 개발 플랫폼에서 개발 프로세스를 안내하는 CDK 커넥터 마법사를 실행합니다. Studio에서는 개발 시간을 획기적으로 줄일 수 있는 직관적인 끌어서 놓기 인터페이스를 제공합니다.

이 안내서에서는 커넥터의 개요를 제공하고, Cast Iron 개발 플랫폼 컴포넌트에 대해 소개하고, 커넥터를 개발하고 배치하는 데 필요한 단계별 프로시저를 제공합니다.

## 전제조건

커넥터 개발에 포함된 많은 작업은 Studio에서 수행되는데, 이는 Studio 및 Cast Iron 제품에 대해 알고 있어야 함을 의미합니다. 또한 다음 언어 및 파일 유형에 대해서도 알고 있어야 합니다.

- XML(Extensible Markup Language)
- WSDL(Web Services Description Language)
- XSLT(Extensible Stylesheet Language Transformations)

참고: 여러 활동에 대해 Studio는 매개변수 구조를 엔드포인트로 보내거나 엔드포인트로부터 받을지 여부를 판별하는 "발견" 프로세스를 지원합니다. 디자인할 때 입력 활동을 발견하면 추상 WSDL 또는 스키마 요소 유형을 사용해야 합니다. 요소를 추상으로 선언하면 대체 그룹을 사용해야 합니다. 추상 버전을 사용할 수 없는 경우 WSDL 파일 또는 스키마를 수정해야 합니다. 그런 다음 디자인할 때 추상 파일을 실제 데이터 유형으로 대체합니다. 추상 파일에 대한 자세한 정보는 [활동 추가 창 사용](#)의 내용을 참조하십시오.

## 디자인 고려사항

웹에서 서비스로 제공되는 애플리케이션 지향 소프트웨어에 대한 최근의 폭발적인 성장으로 인해 매우 중요한 프로젝트에 대한 효율적인 가이드라인을 구현하게 되었습니다. 디자인 활동을 주의깊게 계획하면 프로젝트 성공을 도울 수 있습니다.

개발을 시작하기 전에 다음 가이드라인을 주의깊게 고려해 보십시오.

- **태스크 및 사용자 분석** - 프로젝트를 시작하기 전에 일반 사용자가 수행할 태스크를 고려하십시오. 스키마 파일에서 제공한 요소 및 XML 파일의 구성 특성을 사용하여 Studio 및 해당 기능에 대한 사용자 액세스 레벨을 제어할 수 있습니다. 예를 들어 사용자에게 대한 엔드포인트를 정의하여 오케스트레이션에 추가할 수 있는 활동 수를 제한하거나 늘릴 수 있습니다. 또한 일반 사용자가 태스크를 수행하는 **방법**에 대해 이해하는 것이 중요합니다. 사용자가 필요로 하는 순서대로 정보를 제공하여 프로젝트가 문제없이 통합되도록 돕고 사용자 경험을 통합할 수 있습니다.
- **이름 지정 규칙** - 최종 기한이 임박하여 프로젝트를 수행할 때 가끔 애플리케이션의 컴포넌트 레이블 지정을 급하게 시도합니다. 예를 들어 엔드포인트 패널을 디자인할 때 더 중요한 기능 태스크로 이동할 수 있도록 '유형' 필드를 빨리 정의하려고 하는 경향이 있을 수 있습니다. 그러나 임의의 혼란스러운 이름 지정 스키마가 발생할 때 직관적인 이

를 지정 예시의 이점은 지금은 알 수 없을 때가 많습니다. 일단 배치하면 커넥터가 계속해서 사용되므로 반드시 논리적이고, 일관되며, 직관적인 이름 지정 규칙을 사용하십시오.

## 시작하기 전에

---

프로젝트를 시작하기 전에 다음 정보를 수집하십시오. 다음을 액세스할 수 있으면 개발 프로세스를 더 순조롭게 진행할 수 있습니다.

- 연결 필드 - 엔드포인트에 연결하는 데 필요한 연결 필드 세부사항(예: 이름 및 유형)을 지정하기 위해 준비하십시오.
- 입력 활동 - 디자인할 때 입력 활동을 동적으로 발견하는지 여부와 입력 활동이 정적인지 여부를 판별하십시오.
- 입력 및 출력 데이터 유형 - 각 활동에서 지원하는 입력 및 출력 데이터 유형을 표시하기 위해 준비하십시오.

## CDK 커넥터 마법사 시작하기

---

CDK 커넥터 마법사는 커넥터에 대한 기본 세부사항을 입력하는 일련의 세 개의 창을 통해 개발 프로세스를 안내합니다. 이 마법사는 Studio에 대한 테스트, 보충 및 배치를 수행할 수 있는 오케스트레이션을 생성합니다.

## 프로시저

---

1. Studio를 시작하십시오.
2. 파일 -> 새 커넥터 프로젝트를 선택하십시오.

## 결과

---

Studio 작업공간에서 마법사가 열리고 커넥터 정보 창이 표시됩니다.

## 다음에 수행할 작업

---

다음 단계에서는 커넥터 정보 창을 사용하여 커넥터에 대한 기본 정보를 추가합니다.

- **커넥터 정보 창**  
이 단계에서 커넥터에 대한 일반 정보(예: 이름, 버전 및 설명)를 커넥터 정보 창에 추가하고 커넥터 활동에 사용되는 WSDL 또는 스키마 파일을 추가합니다.
- **연결 필드 추가 창 사용**  
연결 필드 추가 창에서 사용자에게 노출되는 엔드포인트 연결 매개변수를 지정합니다. 사용자는 이러한 값을 사용하여 엔드포인트에 연결합니다.
- **활동 추가 창 사용**  
활동 추가 창에서 커넥터 활동을 작성 및 정의하고 입력 및 출력 데이터 정보를 입력합니다.
- **최종 요약 창**  
개발 완료 단계에서 최종 요약 창은 생성된 오케스트레이션을 완료하고 프로젝트를 커넥터 저장소로 내보낼 준비가 되었음을 알립니다.
- **오케스트레이션 완료**  
오케스트레이션을 완료하면 이를 Studio로 내보낼 수 있습니다. 커넥터 오케스트레이션 이외에 Cast Iron 커넥터 인터페이스에 대한 오케스트레이션도 완료해야 합니다.
- **Cast Iron 커넥터 인터페이스**  
Cast Iron 커넥터는 오케스트레이션으로 구현되는 표준 인터페이스입니다(예: TestConnection, ListObjects 및 DescribeObjects).

활동 추가 창에서 커넥터 활동을 작성 및 정의하고 입력 및 출력 데이터 정보를 입력합니다.

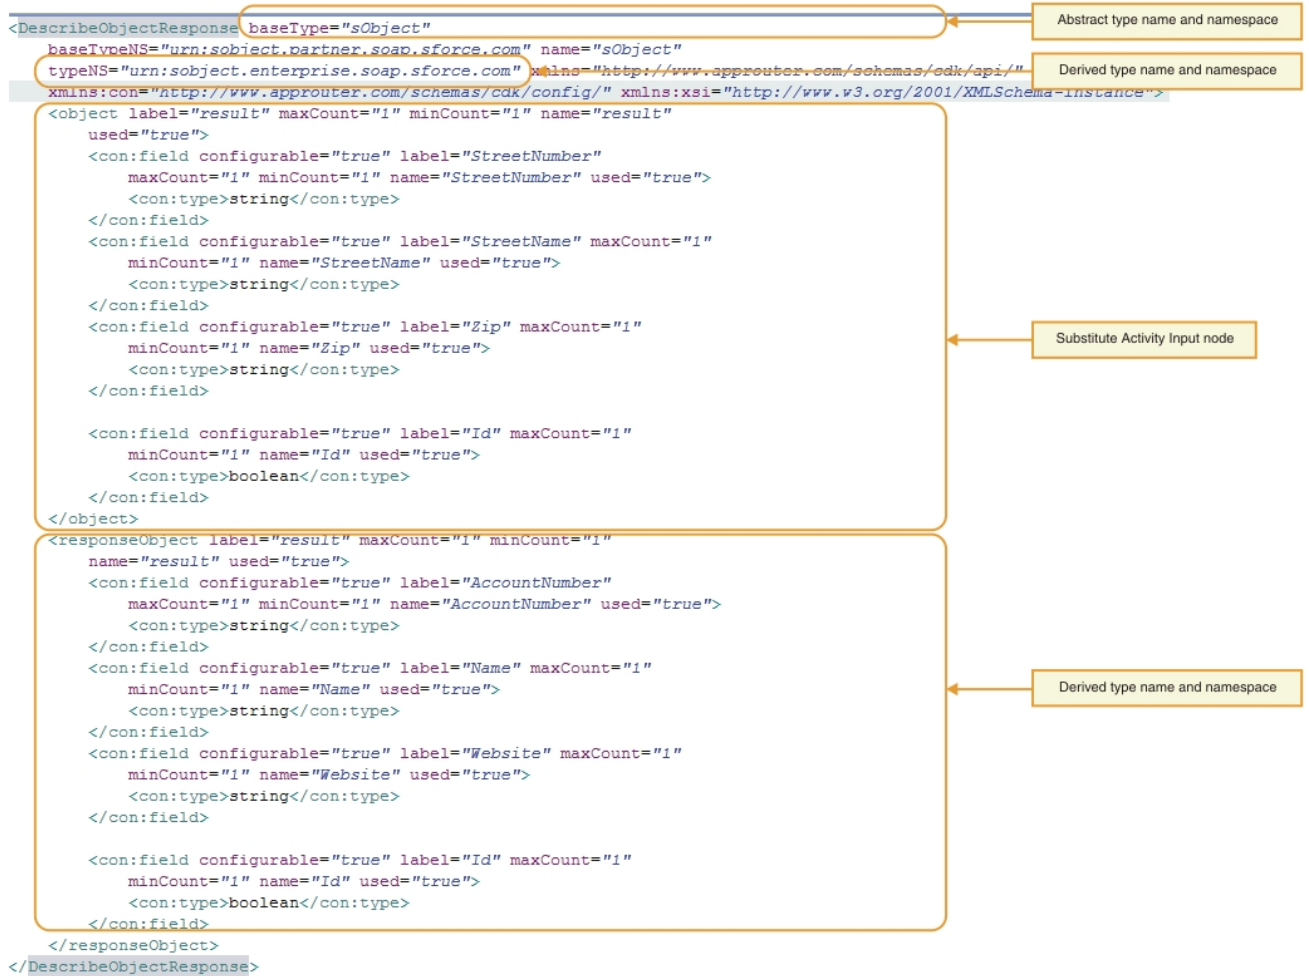

## 이 태스크 정보

이 단계에서 디자인할 때 입력 데이터를 정적 또는 동적으로 발견할지 여부를 지정합니다. 예를 들어 디자인할 때 데이터를 발견하면 작성 활동을 사용하여 계정, 담당자 또는 사용자와 같은 다른 오브젝트 유형을 작성합니다. 작성 활동에 대한 입력

데이터는 작성할 오브젝트에 따라 다릅니다. 이러한 상황에서 작성은 검색 가능 활동으로 인식되며 입력 데이터는 생성할 오브젝트에 따라 다릅니다.

참고: 디자인할 때 입력 활동을 검색 가능으로 설정하려면 추상 WSDL 또는 스키마 유형을 제공해야 합니다. 엔드포인트에서 서비스를 구현하는 방법을 정의하는 구체적인 WSDL 또는 스키마 유형이 네트워크에서 노출되는 것과 반대로 추상 WSDL 또는 스키마 유형은 구현 중립적인 관점에서 웹 서비스에 대해 설명합니다. 그림 1에서는 추상 유형 정의가 있는 WSDL의 예를 보여줍니다.

## 오케스트레이션 완료

오케스트레이션을 완료하면 이를 Studio로 내보낼 수 있습니다. 커넥터 오케스트레이션 이외에 Cast Iron 커넥터 인터페이스에 대한 오케스트레이션도 완료해야 합니다.

### 이 태스크 정보

개발 작업이 완료되면 다음 프로시저를 수행하여 커넥터 오케스트레이션을 완료하십시오. [Cast Iron 커넥터 인터페이스](#)에서는 Cast Iron TestConnection, ListObjects 및 DescribeObjects 커넥터 인터페이스를 소개하고 각각에 대한 오케스트레이션을 완료하기 위한 프로시저를 제공합니다.

이 단계에서 웹 서비스 서비스 제공 활동에서 입력 데이터를 읽고, 로직을 추가하고, 응답 발송 출력 활동으로 응답하여 커넥터 오케스트레이션을 완료합니다. 서비스 제공 활동은 외부 클라이언트로부터 시작될 수 있는 웹 서비스를 제공합니다. 런타임 중에 응답 발송 활동은 클라이언트에 응답을 리턴합니다.

### 프로시저

1. 프로젝트 도구 상자 탭에서 오케스트레이션(예: CreateObjects)을 선택하십시오. Studio 작업공간에 오케스트레이션이 표시됩니다.
2. 오케스트레이션에서 서비스 제공 활동을 클릭하십시오. 출력 맵핑 패널이 표시됩니다.

Cast Iron TestConnection, ListObjects 및 DescribeObjects 커넥터 인터페이스에 대한 오케스트레이션을 완료하십시오.

상위 주제: [CDK 커넥터 마법사 시작하기](#)

## Cast Iron 커넥터 인터페이스

Cast Iron 커넥터는 오케스트레이션으로 구현되는 표준 인터페이스입니다(예: TestConnection, ListObjects 및 DescribeObjects).

TestConnection, ListObjects 및 DescribeObjects 인터페이스에 대한 오케스트레이션 템플릿은 활동 추가 단계에서 마법사에 의해 자동으로 작성됩니다. 개별 커넥터 요구사항을 기반으로 오케스트레이션을 완료해야 합니다. 이 절에서는 TestConnection, ListObjects 및 DescribeObjects 인터페이스에 대해 소개합니다. [커넥터 인터페이스 오케스트레이션 완료](#)에서 각각에 대한 오케스트레이션을 완료합니다.

### TestConnection

TestConnection 인터페이스는 연결 정보 창에 추가된 값을 반영하고 커넥터가 엔드포인트 연결을 구축하는 데 사용됩니다. 연결이 작성되면 연결 상태가 부울 연산자로 리턴됩니다.

### ListObjects

ListObjects 인터페이스는 활동 추가 창에 추가된 값을 반영하고 특정 커넥터 활동이 지원하는 모든 오브젝트 목록을 리턴합니다. 예를 들어 Salesforce 작성 조작이 계정, 고객, 담당자, 기회 및 사용자와 같은 오브젝트를 지원할 수 있습니다. 리턴 목록은 ListObjects 응답 활동 스키마에 해당해야 합니다. 다음은 XML 형식의 ListObjects 응답 예입니다.

## DescribeObjects

DescribeObjects 인터페이스는 사용자가 커넥터 활동을 통해 노출된 오브젝트를 사용하여 작업할 수 있는 입력 및 출력을 제공합니다. 예를 들어 Salesforce 작성 조작이 선택되면 ListObjects에서 선택된 오브젝트를 기반으로 하여 입력 스키마가 동적으로 발견됩니다. 다음은 DescribeObjects에서 리턴된 응답의 예입니다.

```

<DescribeObjectResponse baseType="sObject"
  baseTypeNS="urn:object.partner.soap.sforce.com"
    name="create" typeNS="http://example.com/stockquote"
    xmlns="http://www.approuter.com/schemas/cdk/api/"
    xmlns:con="http://www.approuter.com/schemas/cdk/config/"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">

## 동적 스키마 발견

DescribeObjects 스키마 발견 기능을 사용하여 런타임 시 스키마를 동적으로 발견합니다. 커넥터 활동이 스키마 요소를 입력 또는 출력으로 사용할 때 이 스키마를 오케스트레이션으로 가져옵니다. `complexType QName`을 사용하여 이전에 가져온 스키마를 발견하고 이를 입력 또는 출력 활동으로 동적으로 대체해야 할 경우 다음 스키마에서와 같이 DescribeObject 응답에서 속성을 설정하십시오.

```

< xsd:schema targetNamespace = " urn.sample.stock
  " xmlns:xsd = "http://www.w3.org/2001/XMLSchema" >
  < xsd:element name = "TradePriceRequest" >
  < xsd:complexType >
  < xsd:all >
  < xsd:element name = "tickerSymbol" type = "xsd:string" />
  </ xsd:all >
  </ xsd:complexType >
  </ xsd:element >
  < xsd:complexType name = "ciObject" ></ xsd:complexType >
  < xsd:complexType name = " tradingPartner " >
  < xsd:sequence >
  < xsd:element name = "partnerName" type = "xsd:string" />
  </ xsd:sequence >
  </ xsd:complexType >

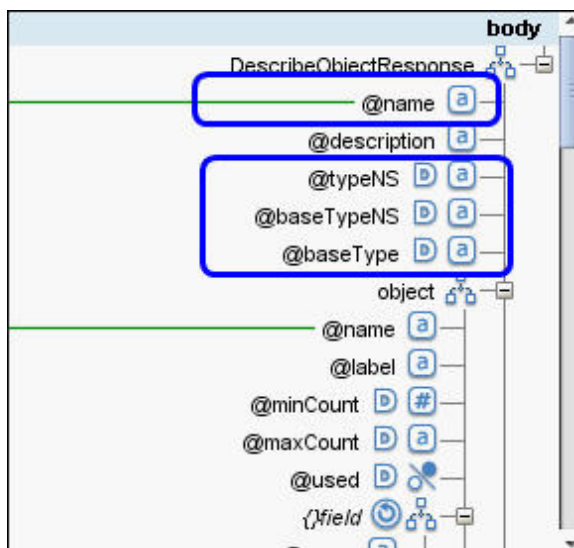

```

예를 들어 앞의 스키마에서 `complexType tradingPartner`를 대체하려면 스키마를 발견할 정보를 설정하고 다음 예에서 표시된 대로 이를 동적으로 대체하십시오.

```

DescribeObject Response value to
@name -> tradingPartner [complexType name to be discovered]
@typeNS -> url.sample.stock [complexType namespace ]
@baseType -> http://www.approuter.com/schemas/cdk/api/ [CDK default]
@baseType -> cObject [CDK default]

## 테스트 및 디버그

Studio에서는 커넥터 컴포넌트를 테스트하는 몇 가지 기능을 제공합니다. 테스트 및 디버그 단계에서는 커넥터를 테스트하고 구성 또는 데이터 오류를 진단하는 런타임 유효성 검증을 수행합니다. 모든 아웃바운드 엔드포인트를 테스트해야 합니다.

커넥터를 테스트할 때 Studio 빌드 프로세스는 XML 파일의 양식이 올바른지 확인하고 스키마 파일에 대해 XML 파일을 유효성 검증합니다. 그런 다음 아웃바운드 맵핑을 생성하고, 아웃바운드 메시지를 작성하고 보내며, 응답을 받고, 인바운드 맵핑을 실행합니다. CDK는 다음 두 가지 유형의 테스트를 수행합니다.

- 단위 테스트

## Cast Iron CDK XML 파일

XML 파일은 플러그인에서 수행하는 활동을 정의합니다. XML 파일의 모든 활동은 WSDL 파일에 정의된 조작에 맵핑되어야 합니다.

XML은 프로그래밍 언어, 소프트웨어 플랫폼 및 하드웨어에 독립적인 구조체 데이터를 표시하고 전송하기 위한 유니버설 언어입니다. 개발 프로젝트의 경우 텍스트 편집기 또는 XML 준수 작성 도구를 사용하여 XML 파일을 작성할 수 있습니다. 사용자 파일은 스키마 파일의 규칙을 준수해야 하며 그렇지 않으면 플러그인이 실패합니다.

## Cast Iron CDK WSDL 파일

WSDL 파일은 네트워크 서비스를 엔드포인트 세트로 정의하는 XML 형식 파일입니다. WSDL 파일은 웹 서비스에 액세스하는 방법에 대해 설명하고 서비스가 수행하는 조작을 지정합니다. WSDL은 일반적으로 웹 서비스 제공자에 의해 개발되고 UDDI(Universal Description, Discovery and Integration) 레지스트리를 통해 사용 가능하게 됩니다.

개발 환경에서 클라이언트 웹 서비스 애플리케이션을 빌드하기 위해 필요한 오브젝트를 생성할 수 있도록 프로젝트의 아웃 세트에서 WS-I(Web Service Interoperability) 준수 WSDL 파일을 개발 플랫폼으로 가져와야 합니다. 웹 서비스 API는 오브젝트 또는 WSDL 유형 정의 세트와 웹 서비스 조작 세트를 제공합니다.

## Cast Iron CDK .par 파일

플러그인은 .par 파일로 패키징됩니다. .par은 이름을 바꾸어 Studio로 가져오는 표준 .zip 파일입니다.

.par 파일에는 플러그인이 포함되어 있습니다. 이 파일은 Studio 프로젝트에서 내보내며 식별할 수 있는 인터페이스 조작 및 플러그인에 포함된 인벤토리 오브젝트를 구현합니다. .par이 전달되면 플러그인에 대한 디렉토리로 자동으로 펼칩니다.

## FAQ

다음은 개발 프로세스 중에 발생할 수 있는 문제점을 해결하는 데 도움을 주는 자주 질문되는 내용(FAQ)입니다.

Q. 디자인할 때 내 입력 활동을 찾을 수 있는지 여부를 판별하는 방법은 무엇입니까?

- **A.** 활동에 대한 입력이 오브젝트 유형에 따라 다른 경우 찾을 수 있음을 선택하고 입력에 추상 WDSL 또는 스키마 요소 유형을 사용하십시오.

**Q.** 내 스키마 또는 WSDL에 추상 요소 유형이 없습니다. 추상 요소 유형을 어떻게 내 파일에 추가합니까?

- **A.** WSDL 및 스키마는 특정 요소 또는 유형을 대체하도록 강제하는 메커니즘을 제공합니다. 파일에 추상 요소를 추가하려면 `complexType` 요소 `complexType name="MyObject"`를 WSDL 또는 스키마에 추가하십시오. 동일한 네임스페이스를 사용하여 입력 유형으로 정의하십시오.

**Q.** 기존 커넥터를 수정할 수 있습니까?

- **A.** CDK 커넥터 마법사를 사용하여 커넥터를 빌드한 경우 단순히 마법사를 시작하여 새 활동을 추가하거나 기존 활동을 재개하여 커넥터를 업데이트할 수 있습니다.

**Q.** 기존 프로젝트가 있습니다. 프로젝트의 맨 위에서 마법사를 실행하고 오케스트레이션을 사용하여 커넥터 활동을 노출시킬 수 있습니까?

- **A.** 예. 기존 프로젝트의 맨 위에서 마법사를 실행할 수 있지만 활동 이름이 기존 오케스트레이션 이름과 충돌하지 않도록 확인하십시오.

**Q.** 내 커넥터가 Studio에 표시되지 않습니다. 이유가 무엇입니까?

- **A.** 오류를 확인하는 것만으로 많은 오류가 정정될 수 있습니다. `Studio_Install_dir`에 있는 로그 파일에서 실패를 확인하십시오.

이 절에서는 IBM 및 해당 제품에 대한 정보를 얻는 방법 및 개인용 영업 및 기술 지원을 얻는 방법에 대해 설명합니다.

<http://www.ibm.com>에서 IBM Corporation 웹 사이트를 액세스할 수 있습니다.

이 사이트에는 IBM Corporation, 경력 및 제품에 대한 정보가 있습니다. 또한 이 사이트에서는 영업 및 기술 지원을 위한 담당자 정보를 제공합니다.

IBM 지원 센터에 접속하기 전에 다음 기준을 충족하는지 확인하십시오.

- 회사에서 사용 중인 유지보수 계약이 있습니다.
- 문제점을 제출할 권한이 있습니다.
- 어플라이언스 일련 번호가 있습니다.
- 어플라이언스를 구매하는 데 사용된 고객 번호가 있습니다.

다음 두 방법 중 하나로 IBM에 소프트웨어 문제점 보고서를 제출할 수 있습니다.

1. 서비스 요청(SR) 문제점 제출 웹 페이지를 사용하십시오. IBM 사용자 ID 및 비밀번호로 로그인해야 합니다.
2. 전화로 IBM에 문의합니다. 해당 소프트웨어 지원 전화번호를 얻으려면 IBM 소프트웨어 지원 핸드북에서 이 월드와이드 담당자 디렉토리를 참조하십시오.
