

ILOG and WPS integration demo

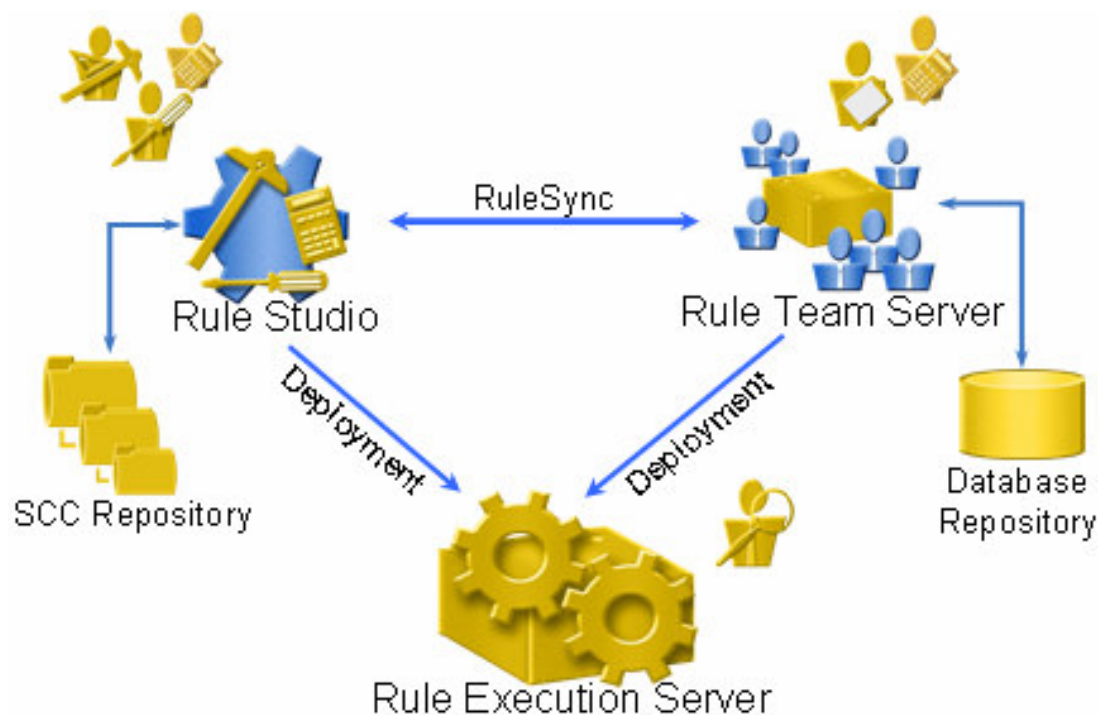

Demo content

- ILOG Jrules insurance quote scenario
- Products:
 - WPS 6.1
 - WID 6.1
 - Jrules 6.7
- The demo shows how a SOA BPM solution can be effectively enhanced by a full BRMS, externalizing the management of the business rules and allowing the customer to implement them in their full complexity

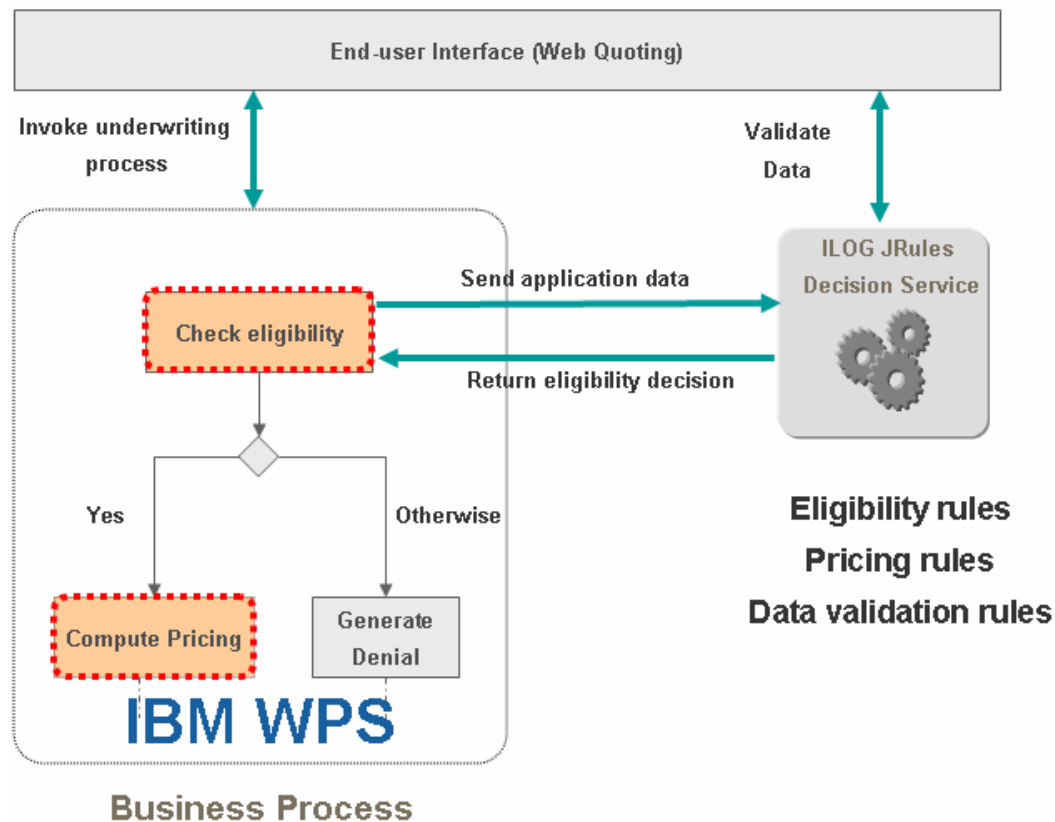

Business rules managed by JRules

- Business rules are visualized and edited using the Rule Team Server web UI

Jrules is integrated into WPS as a SCA component

- A BPEL process has been created in order to use decisions and values computed by Jrules environment with JMS interfaces to start and end process

Demo scenario steps

- A first “insurance quote” simulation is performed using the Web UI interfacing directly the JRules engine
- The same simulation is performed pushing input data to the JMS queues managed by the WPS engine
- Finally, business rules editing is performed and new simulations are run in order to obtain new results accordingly
